17796. Is there anything you could wish to say; if so we shall be glad to hear it?—I merely wish to point out the fact that there is no selection of cases, and it is entirely due to the competition for money. I do not think that one hospital in London is one bit worse than another; they all have to do it; and you cannot expect one hospital to disarm, if I may use the term, when another hospital is, as it were, fighting it for the contributions of the wealthy.

17797. Then the only means for combating that, is that there should always be a large supply of money available for the hospitals?—Quite so; if a hospital is independent of the Saturday and Sunday Funds, and voluntary contributions, I think you will find that its number of out-patients begins to diminish; there are exceptions to that rule I admit.

17798. Then would there be no fear of diminishing the usefulness of the hospital?—No; if the cases were selected and sent up to a physician for proper treatment, they would be treated better, and they would have more attention; the method of life suitable for them would be explained to the patients; whereas now they go away with medicine in a bottle, and think that that is going to cure them.

17799. And then, assuming they come back again, they try, I understand you, to keep on as long as they can, and, therefore, that tends to increase the number of attendances of which you speak?—I am not throwing stones at any hospital. The authorities of the hospital I speak of have met me in a very liberal way with regard to any complaints I have made, and they are doing their very best. I find it is the same with other out-patient hospitals. A man comes to me with serious heart disease; he gets no more time nor attention than another person who wants merely a box of pills, and the former being a labourer, whose right method of living should be explained to him, how best he can prolong life, what he should avoid and what he should not do, he gets none or very little of that advice, because he is crowded out by the next patient, who may be a dyspeptic.

17800. Therefore, I understand you to say, that the crowding of the out-patient department acts badly upon the patients themselves?—Certainly. If I may put it again, with all respect to your Lordship, I would suggest, that supposing you had a simple cold, you would not go up to Harley-street and pay a guinea or two guineas for a consultant's opinion; you would go to a general practitioner, and he would be perfectly competent to treat it. Then if this cold develops into something more serious, you say, "I think I must have a consultant's opinion upon this." In the out-patient department in hospitals the most trivial complaints get consultant's opinion for nothing

Z z

12 March 1891.]

Mr. TAYLOR, M.D.

[Continued.]

Chairman—continued.

nothing, because the patients have a governor's letter.

17801. If they consulted a better class physician at first, they might save the malady becoming more serious might they not?—No, I think not. I am convinced that the general practitioner can treat ordinary simple complaints quite as well as the consultant physician.

17802. Then your case against the out-patient department is, that owing to the rapidity of treatment and the crowd in the out-patient room real justice cannot be done to the patient?—Quite so.

17803. In looking at it in another point of view do you consider that the present out-patient system is very hard upon what you may call the poor practitioners?—I do.

17804. You mean that a great number of these people whose circumstances have not been investigated could afford to pay small fees?—Yes, they want sixpennyworth of advice; they can easily get sixpennyworth of medical advice, and many can afford it.

17805. But then is that advice worth sixpence?—Yes, there are scores of patients who have absolutely the most trivial complaints.

17806. That is to say in your out-patient department?—Yes.

17807. With a slight cold or a cut finger, for instance?—I have nothing to do with a cut finger; but they come with a slight cold or an indigestion from drinking too much tea, and require a box of pills; it is the case of Colonel Burnaby, who took Cockle's Pills during his ride to Khiva, over and over again.

17808. Is there anything else you can criticise in regard to the out-patient department?—No, except that it has an effect not only upon the patient, not only upon the general practitioner, but it has an effect upon the clinical teaching in this country, and it has an effect upon clinical observation in this country. If I am seeing a hundred people in an afternoon it is a matter of impossibility for me to make an accurate observation of how my drug is acting in a certain case of heart disease. I have sometimes people in my out-patient room till half-past seven at night.

17809. Beginning at what time?—At two o'clock.

17810. Then in your out-patient room, do you see any description of disease?—Every medical patient that comes with a governor's letter is seen by the assistant physician of the day. If they have not a governor's letter the house physician sees the patient as a casualty and prescribes for the case. If he finds the patient is seriously ill, he then gives the patient a letter, and detains the patient till my arrival, or the arrival of the physician of the day.

17811. Then does he dislike discharging a large number of patients, because he does not want the responsibility to rest upon him of sending away cases that ought to be treated?—No.

17812. Does he not act rather in the light of a sifting officer?—No, the patients who comes to see us are patients with governor's letters; there may be on an ordinary day 10 or 12 others, and they probably have slight ailments; if he finds that some have a serious ailment then he sifts as it were, and gives these patients a

Chairman—continued.

governor's letter, or a letter to the hospital, and they are kept till my arrival.

17813. Is this West London Hospital situated in a poor district?—Yes, it is the only hospital between Hounslow and Hyde Park Corner.

17814. Do you know if there are any dispensaries in the neighbourhood of it?—Yes. There is one at Hammersmith.

17815. Then also owing to these crowded rooms instruction is rendered extremely difficult, because you must go through the patients in the course of a day?—Yes; but we have not at present a medical school in the West London.

17816. What hospital school used you to be in?—I am already a teacher at St. Thomas's; I was a student there, and I am a teacher in the medical school there.

17817. Did the present system of out-patients exist at St. Thomas's when you were there as a student?—Yes.

17818. And there you found that there was no difficulty about the teaching?—No difficulty.

Earl Cathcart.

17819. Would you have any opportunity of testing the urine of the patients?—I do not test the urine of every patient; I only test the urine of a patient where I think it is desirable.

17820. That is often an essential part of the diagnosis, is it not?—Yes.

17821. You said that patients with these trivial ailments could get medical advice for sixpence: where would they get it?—There are dispensaries, for instance, within a stone's throw of this place where they could get it.

17822. I rather gather that you would limit the cases so that there should be at every hospital a limit to the number of new cases?—Yes, like they have at St. Thomas's.

17823. And that limit must depend upon the nature of the locality and the circumstances; but there ought in your view to be a fixed limit of new patients?—Yes.

17824. Would you disregard hard cases and draw the line and say that no hard cases should be admitted beyond the limit?—I would not do that; I would say that urgent cases coming to the out-patient room should be seen, but I would not draw a hard line at 12 or 15.

17825. Now with regard to what you said about the touting of different hospitals and their struggling with each other, and you used some such phrase as an armed neutrality, for instance, St. Bartholomew's has no reason to tout, but they have a very large out-patient department?—And they have a very special staff to meet it.

17826. But they have in point of fact a very large out-patient department, and they do not go to the public for money at all?—Quite so, but there is a large staff to meet it.

17827. And, therefore, the presumption is, is it not, that they think their out-patient department is, in itself, doing a great deal of good?—Yes. I have no authority to speak on behalf of St. Bartholomew's; I have seen the charity, and have admired the work done there, and I think I know some other reasons; but I have no authority to speak on behalf of that hospital.

17828. There may be another reason you think?—There may be.

17829. That

12 March 1891.]

Mr. TAYLOR, M.D.

[Continued.]

Earl Cathcart—continued.

17829. That is instruction, I suppose?—And training in observation.

17830. In everything in human life, in fact, as we are well aware, there are mixed motives?—Yes.

Lord Monkswell.

17831. You said that the authorities of your hospital did meet you in reference to the difficulties of your out-patient department; in what sort of way did they meet you?—They have given me a second room.

17832. Then is there anybody to see the patients in the second room beside yourself?—No.

17833. Then I understand that everybody who comes with a governor's letter must see you, or if he does not come with a governor's letter, he goes to somebody else and gets one?—He goes to the house physician, and if the house physician thinks it is a serious case he is kept for me.

17834. So that the abuse is due to the practice of giving governor's letters when they are not required, I suppose?—That is it.

17835. You have not tried to meet it in that respect at all?—No.

17836. Have you made any suggestion to that effect?—Yes.

17837. I suppose there are plenty of people who will not be satisfied till they get medicine, even though they do not require it?—Yes; women are the great offenders in that matter.

Chairman.

17838. Do you think that the great number who come to the out-patient department is at all owing to the fact that people go there for purposes of conversation, and as a sort of club?—No, I think not; but many of these women who come to us, have a certain complaint one week, and they come back the next week, and they will have another complaint, the third week a third complaint, and so on till the sixth week; because the letter lasts six weeks.

17839. That is a very faulty system of organization, is it not?—It is practically the fault of the way the charities are supported in London.

17840. But do you mean that that applies universally, that every out-patient can go for six weeks to the out-patient department?—Yes, on most of the advertisements there is a statement that the letter is available for six and for sometimes eight weeks, and "after that you must get a new letter." The women take care that they have their six weeks' medicine.

17841. Does that remark apply generally to the hospitals?—I think, generally; when I heard that this Committee was likely to be appointed, I went round and inspected several of the hospitals.

17842. Is there any other point you wish to speak on?—No.

Lord Monkswell.

17843. You would say, I suppose, that the system of the out-patient letter is simply a nuisance, and should be done away with?—No.

17844. You think it is abused?—It is very much abused.

Chairman.

17845. By people giving them away to those

Ordered, That this Committee be adjourned till Monday next, at Twelve o'clock.

(24.)

who are not fit subjects of relief?—Yes; it is easy to get rid of an importunate beggar sometimes by that means.

Lord Monkswell.

17846. If a man has something the matter with him he can always go to the house physician; would not that be sufficient for him?—No; my committee of management say to me, "If the patient comes with a governor's letter, the governor wants the patient seen by the head doctor."

17847. But that is why I asked you whether it is desirable that the system of governor's letters should be kept up at all; what reason do you suggest that it should be; I do not understand it, except that you say people would not give money to the hospital without it?—I do not think that the majority of the charitable public would give money unless they had a *quid pro quo*.

17848. That is the only reason you can suggest why the system should be kept up, of having governors' letters at all?—Yes.

Earl Cathcart.

17849. We were told that the clubs especially will have their full number of letters in return for their subscriptions, and that they will use them all?—Yes, and the same with the clergymen. A clergyman preaches his sermon and gets a collection of 20*l.*, and will have his letters.

Lord Zouche of Haryngworth.

17850. You said that you would not enforce a limit of new cases for out-patients in cases of urgency. Would it not require a little time to find out whether it was an urgent case or not?—No, it does not take very long for a trained man to find out that.

17851. It would lose no time, in fact, you think?—No, not much time; only he must be a man of more experience than, of course, the house physician or house surgeon.

Chairman.

17852. The ordinary house physician or house surgeon may be very young?—Yes.

17853. Then your principal remedy for the evil you have pointed out is that there should be a very careful system of sifting?—Yes.

17854. Though you do not approve of limiting the numbers applying?—No, I do not approve of strictly limiting the number; I should say it ought not to exceed a certain number. If you were one of 30 people seen in a consulting room, and you were the thirtieth person, you would have to stay there along time.

17855. I understand your evidence is that the time does not suffice for teaching purposes, and that possibly some improved arrangement might be made by a system of sifting?—Yes.

17856. And that you would have a resident or other officer of high standing to be able to determine what cases might be suitable for the out-patient department?—Yes. In other words, I look upon a hospital as practically a consulting centre rather than an ordinary institution for the distribution of medical aid, and the officers of it are consulting surgeons or consulting physicians.

The Witness is directed to withdraw.

Die Lunæ, 16° Martii, 1891.

LORDS PRESENT :

Earl CATHCART.
 Earl of KIMBERLEY.
 Lord ZOUCHE OF HARYNGWORTH.
 Lord SAYE AND SELE.

Lord CLIFFORD OF CHUDLEIGH.
 Lord SANDHURST.
 Lord MONKSWELL.
 Lord THRING.

THE LORD SANDHURST, IN THE CHAIR.

Mr. PIETRO MICHELLI, is called in ; and, having been sworn, is Examined, as follows :

Chairman.

17857. YOU are the secretary of Greenwich Hospital, are you not?—Yes.

17858. How long have you occupied that position?—I have been just four years there as full secretary.

17859. And previous to that had you any hospital experience?—I was five years secretary of St. Mary's Hospital, Paddington.

17860. And previous to that?—I was assistant secretary and steward at the Seamen's Hospital for four years.

17861. You have had a very extensive experience, therefore, of hospital management?—About 13 years. I had some slight experience before that when I was in the consular service.

17862. Would you tell us what the Greenwich Hospital is; is it a free hospital?—Entirely free.

17863. Where is it situated?—Its head office and largest hospital is at Greenwich; it has branches also.

17864. What is the special function of it?—It is for seamen suffering from any class of disease or accident.

17865-6. Does it take every description of case?—Every class of case.

17867. And what is the size of this hospital; how many beds have you?—Two hundred and twenty-five beds at Greenwich. Will you take the branches now.

17868. If you please?—The branch hospital at the Victoria and Albert Docks will accommodate 14 beds; and there are dispensaries, one at the London Docks and one at Gravesend.

17869. Are those all supported out of the funds subscribed for the Greenwich Hospital?—For the Seamen's Hospital Society.

17870. Is this hospital a sort of head quarters of the branches?—At Greenwich is the head quarters; it is really the Seamen's Hospital Society.

17871. And how is that hospital supported?—It is supported in the greatest measure by voluntary contributions.

17872. Are there any endowments?—Yes; we have a certain amount of funded and landed

Chairman—continued.

property, which brought in an income last year of 3,600*l.*

17873. That is the landed property?—Stock and land; land itself only brought in 707*l.*

17874. Where is your land situated?—We have some at Richmond, some at Kingston-on-Thames, some at Ilford, some at Hackney, and two houses in different parts of the City.

17875. How is that land managed; by agents?—No, entirely by myself.

17876. Then may I ask what your salary is as secretary?—My salary is 400*l.* a year.

17877. And board and lodging?—No board; but I have a house.

17878. And then do you receive other fees or commissions for managing these estates?—I get a small commission once in the year; that averages, as I have brought it out for the last two years, 47*l.* a year.

17879. And that is the total of the amount of the commission that you receive for managing these landed estates?—That is not alone for managing the landed estates; it is part of the remuneration I receive for conducting the business of the society. It is in fact an old rule that I only get a commission if the income reaches a certain sum, and it has been over that sum for a long time, and it is a regular source of income to me of 40*l.* to 50*l.* a year.

17880. Do you take in other patients than seamen at these hospitals?—Only those that are urgent cases, and then we take in a landsman or woman or child.

17881. Then what is the constitution of this hospital?—We are governed by our own Act of Parliament, the 3 Will. 4, c. 9; we were incorporated in 1833.

17882. And then what are the various courts; can you tell us what the constitution is exactly?—We are governed by an annual meeting, by four quarterly courts, and by a committee of management which is appointed at the annual meeting. The annual meeting is held in the month of February, at which any governor (and a governor is a subscriber of a guinea or a donor

16 March 1891.]

Mr. MICHELLI.

[Continued.]

Chairman—continued.

of ten guineas) can attend, and also any other person who is interested in the charity; but at the quarterly courts only such as are governors can attend. The quarterly court quorum is 15. Of the ordinary meetings of the committee of management the quorum is three, and the general attendance varies from seven to nine.

17883. Is that the executive of the hospital, then?—That is the executive of the hospital.

17884. What are their duties; do they examine all these small books?—No, that is deputed to a finance sub-committee, which meets once a month, generally on the Thursday preceding the first meeting in the month, because there are two committee meetings every month.

17885. Are there any other sub-committees besides that finance sub-committee?—Only such as are special. There has just now been a sub-committee in connection with the branch hospital, and at our last meeting there was a sub-committee appointed in connection with one of the dispensaries.

17886. Then are those dispensaries managed from the Greenwich Hospital?—Yes, they are administered by myself under the committee.

17887. Did I rightly understand you to say that this committee of management meets twice a month?—The committee of management meets twice a month; the finance sub-committee once a month.

17888. When they check all these small bills to which I referred just now?—The finance sub-committee check all matters with regard to salaries, wages, petty cash, and such matters once a month; and once a quarter they examine all the accounts and bills that have come in.

17889. Then are there any other books that come before that finance committee?—I think the finance committee may be said to have control over all the books of the hospital; they do not always examine them, but at times they call for certain books, and do examine them.

17890. The books are laid on the table?—Yes, a good many of them; not all of them, because our meetings are held in town, a distance from our hospital; that is one reason why we do not bring all the books to the Committee.

17891. Do you think that that is really an efficient check?—I think we have a very efficient check as regards our small expenditure, and, of course, our quarterly examinations are very complete.

17892. As to the quarterly examination, is that an examination by vouchers, and so forth?—Yes, all the vouchers are examined in connection with each account, and examiners compare the expenditure sometimes between one quarter and another; which is evidenced by their drawing the attention of the committee to what they consider an excess of expenditure in certain items. Such was done only a few months ago in regard to wine.

17893. But do you keep a book to note down all the various stores that are used day by day or week by week?—Yes, we have rather an elaborate arrangement of that kind, and I have brought a leaf out of the book to present to the Committee (*producing a leaf*). It includes every item of receipt on the one side, and how it is

Chairman—continued.

expended on the other, showing the balance at the end of the month of the stock in hand.

17894. But now is that examined by this committee?—Not as a rule; the house visitors can examine it.

17895. But they do not examine it, I understand?—As a matter of fact they do not frequently examine it. I have known them to see it.

17896. It is not a part of the ordinary routine that they should be looked through and initialed by one of the governing body?—No, it is not.

17897. Therefore the governors leave that responsibility practically with you?—Yes, they leave that practically with me.

17898. Then with regard to such things as the alcoholic return, does that come before them?—Yes, that comes before them; and they frequently call for returns to show the increase and decrease, and that goes before the general committee, not the finance committee.

17899. Does that pass through a medical committee first?—We have no medical committee, but we have a principal medical officer. We are rather peculiar in that respect, because, being so far from London, our principal medical officer is a surgeon of some standing in his profession and receives a good salary and resides on the spot.

17900. Your principal medical officer is a surgeon, you say?—He is a surgeon.

17901. Then, as far as I understand it, the whole of the responsibility of these accounts really rests with you, and not with the committee, because they very seldom check them?—As regards the receipts and issue, yes; but as regards the money, the committee check all that.

17902. But as regards the detail, the study of which can alone tell you whether your expenditure is extravagant, or increasing, or decreasing, that is not looked to at all by the committee?—It is not looked to any more than that returns are called for; that is the only way in which the committee interest themselves in that particular.

17903. You have 225 beds, you told us; what is your working number of beds?—One hundred and ninety-seven last year.

17904. And as regards seamen, you take any sort of case?—Every class of case.

17905. Not infectious cases?—Everything with the exception of smallpox and typhus.

17906. And measles?—Yes, we have measles.

17907. You told us that you had 3,600 *l.* a year from landed and funded property, of which 700 *l.* came from land, and that the great bulk of your money came from voluntary contributions; is not that so?—Yes, that is so. We have an annual subscription list of 3,605 *l.*

17908. Donations?—In donations we had 1,321 *l.*; Hospital Sunday Fund, 708 *l.*; and Hospital Saturday Fund, 126 *l.* Then there are collections from ships' passengers and crews of vessels; they come to 1,137 *l.*

17909. Are those a sort of boxes?—They are principally lists taken by the captains of merchant vessels who make collections on behalf of the society.

17910. And have you profited at all by legacies?—Yes,

16 March 1891.]

Mr. MICHELLI.

[Continued.]

Chairman—continued.

—Yes, we have profited by legacies. The total amount of legacies during last year was 7,094 *l*.

17911. Was that an exceptionally good year? —It is an exceptionally good year. Our average for the last 10 years is about 1,700 *l*.

17912. That makes a total of receipts of what? —Our total receipts last year, including the legacies, was nearly 18,000 *l*.

17913. And your expenditure?—Our expenditure was 12,765 *l*. for ordinary expenditure, not including building, because we built.

17914. That building came out of the extraordinary expenditure?—Yes.

17915. But that was met, partially only, by the large amount you received in legacies?—The legacies were more than enough to cover it.

17916. More than enough to cover the extraordinary expenditure, you mean?—Yes.

17917. And that was an exceptionally good year?—Yes, an exceptionally good year, the average for the last 10 years having been about 1,700 *l*.

17918. Now, in the case of your having a deficit, you have to draw upon your capital?—Yes, we draw upon our capital. As a matter of fact we allow a balance to hang over; we allow it to remain as a sort of debt hanging over us for a bit, and it generally gets worked off without our having to sell out; but sometimes we have to sell.

17919. You mean you have to borrow money from your bankers?—Sometimes we have done so, especially if we find that we can borrow money at a lower rate than our invested money is bringing us.

17920. Who is the treasurer of your hospital? —Mr. John Deacon.

17921. Is he a banker?—Yes; he is of Williams, Deacons and Company, bankers.

17922. And with regard to anything which has to do with investments or withdrawal of investments, are these treasurers consulted?—As regards the best stock to dispose of they are consulted, but not as regards the expediency of selling it; that would rest with the general committee.

17923. Are these accounts of yours audited by a professional auditor?—By a professional auditor.

17924. Have you studied the accounts of other hospitals besides your own?—Yes, I think I have studied the accounts of almost all the hospitals in England, Scotland, and Ireland, and a great many of the colonies, and also I know the working of a great many of the Italian hospitals.

17925. What is your opinion as regards hospital accounts in general?—I think we want some uniformity of accounts; I think we ought to have a system by which accounts are kept in somewhat the same way in each institution; at the present moment the Hospital Sunday Fund are endeavouring to introduce some such scheme; I do not know if your Lordships are aware of that fact, but they have sent out a form to the different charities in London, asking them for their opinion as to whether it is a suitable one to be adopted

(24.)

Chairman—continued.

by the great majority of the hospitals; and our opinions have been asked on such points as that

17926. Was that lately?—Within the last month; and I have given it as my opinion that it is most desirable that a uniform scheme should be adopted. With regard to the uniformity, I do not mean that it should necessarily carry with it control. I see that in Question No. 15042, which was put to Mr. Quennell, it appeared to be the opinion of this Committee that uniformity would necessarily entail control. I think the reason why those men whose opinions are worth having object to anything like an inspection of accounts is, that they think it will injure the receipts from voluntary sources. But I think that is hardly borne out by what takes place at present in Dublin and the Australian Colonies where there is an inspection. In those places a great deal of money comes into the exchequer of the hospitals from voluntary sources, and they are examined. I think that where Dublin has the advantage in the examining point is that the hospitals are examined by a committee composed of laymen and medical men, whereas in the colonies and in India it is entirely done by one man, who is very frequently a doctor.

17927. Do you think that it would be possible to have any central body to audit accounts?—I think it would. I think it would be a very good thing indeed if we had one authority to audit the accounts; and unless we do have something of that sort, and the allocation of the items of expenditure controlled by a glossary, the mere matter of getting a form, such as the Hospital Sunday Fund are now advocating, will not do much. I daresay your Lordships know that I have published a glossary in the Hospital Annual, and my object is not alone, as was stated at this Committee by one of the witnesses, that it should be merely a help to those people who keep accounts, but that it should allocate certain items of expenditure to certain heads, so that the heads could be compared. This brings one to the point that some people think it a fallacy to compare hospitals on the cost per bed occupied; because the hospitals differ very materially in the class of patients that they have and so on. I admit that it is not fair to take the cost per bed entirely on the total expenditure; but it is obvious, that if you take a certain head of expenditure, such as provisions, and you know that in that is included always the same items, you will be able to see whether a hospital spends an undue amount in provisions; in like manner you can compare domestic expenses, surgery and dispensary, &c; whereas if you took the entire expenditure you might be a little at sea. In support of the glossary I would say that the Local Government Board send an auditor to audit all accounts of poor law infirmaries, and whenever this official is changed it gives rise in the infirmaries, I understand, to the question, Why has such and such an item gone up? The reason is that one auditor, for instance, will put down mineral waters under "surgery and dispensary," whereas another one will put it under provisions and so on. Gluten bread and the expensive extracts that are now used instead of meat all give rise to this difficulty.

z z 4

Brand's

16 March 1891.]

Mr. MICHELLI.

[Continued.]

Chairman—continued.

Brand's essence of beef is no doubt meat; it is only meat in another form; but I think you will find that for want of a glossary the great majority of hospitals put it under "surgery and dispensary." In these cases it will appear that the hospital is high in surgery and dispensary; whereas if you really investigated it you would find that such is not the case.

17928. Take the case of hospitals taking certain diseases; we will instance the Middlesex Hospital, which takes in cancer cases; that necessarily drives up the cost, does it not?—It necessarily drives up the cost. That is the great drawback to comparison.

17929. You have seen, I daresay, the Charity Organization Society's memorandum, have you not?—Yes, I have.

17930. Have you a copy of it there?—I have a copy of it here.

17931. Perhaps you will turn for a moment to page 10; now here we see that the cost per occupied bed varies very much indeed; take Westminster; it is 63 l. that is put down as the cost per occupied bed there?—Yes.

17932. And then we come to St. Thomas's here, which is put at 99 l. odd; then we get to Middlesex, 81 l.; Charing Cross, 66 l.; and University College, 59 l.?—Yes.

17933. There is great variety, is there not, there?—There is. I have not worked these figures out to compare them, but I did not know that University College Hospital was a cheap hospital in that respect.

17934. But still taking it for what it is worth, that is the result according to that memorandum; now do you consider that taking the thing in this sort of line is a fair way of comparison?—No, I think it is not; I think on the total figures you cannot form a just comparison. But you see cancer cases would not really cost much more for provisions than other cases; therefore if you could compare the item for "provisions," you would have gained something.

17935. What you want is some uniform basis?—Some uniform basis; but not a uniform basis that would include all expenditure; it must be chopped into portions so that you can judge whether a hospital is expensive as regards provisions or whether it is expensive as regards drugs.

17936. Then have you ever considered the out-patients at all as regards matters of expense?—Yes, I have considered them, and I find it is one of the most difficult things to find out how much has been expended on out-patients. I put it, roughly speaking, at 1 s. for an ordinary out-patient, and 10 s. for a lying-in woman.

17937. That is good enough, you think, for comparative purposes?—I think that good enough for purposes of comparison. If the numbers get too high, as is the case in the Miller Hospital, where the number of out-patients is large, it does affect the cost per bed; I mean the cost per bed is then hardly a fair way of comparison.

17938. The Miller Hospital at Greenwich is put down in this memorandum as the Miller Memorial; is that what you mean?—Yes.

17939. The cost of the occupied bed is stated

Chairman—continued.

there to be 139 l.?—Yes, that is very high, and it is difficult to make out how much the Miller Hospital does spend per bed. They have an enormous number of out-patients (14,372), compared with the number of beds, and there are a large number of attendances that are not included here.

17940. Supposing you had some central body for auditing accounts, do you think that they might also be entrusted with licensing power to prevent unrequired hospitals springing up?—Yes, I should like to see them have power to license a hospital. There is no reason why a hospital should not be built and established if it is wanted; but to put that hospital under the windows almost of our great metropolitan hospitals is a great mistake. I know a case in point; I do not know if I should mention names, but this small hospital to which I am now referring was established while I was at St. Mary's.

17941. By all means state the name of it?—It is the Paddington Green Children's Hospital. It was established when I was secretary at St. Mary's. When opened it had 26 cots, and at the same time we had 36 cots. It appears to me obviously wrong that this children's hospital should be established there when I know that Camberwell and all that district south of London has got no hospital accommodation at all. It seems to me that if there had been a central body then they might have suggested, "If you want to build a hospital for children, don't put it there, St. Mary's has plenty of cots."

17942. They might indicate, you mean, the locality where the hospital was required?—Yes, they might indicate the locality where the hospital was required, or at any rate they might discuss the matter. The special hospitals, as explained to this Committee I think, grew out of an uncomfortable feeling existing between the staff and the governing bodies of the great hospitals in consequence of the governing bodies refusing to sanction special departments a good many years ago. St. Peter's Hospital for Stone, I believe, is an instance of that which has grown up to a flourishing institution; because a medical man who was anxious to develop that particular branch of his profession was refused special appliances for the purpose in his hospital; he then left the institution and went and got his friends to help him and opened this hospital.

17943. But that is all changed now, is it not; the big general hospitals have special departments?—To a great extent, but there are still general hospitals which are lacking in certain special departments.

17944. Is it the case that the general hospitals with schools have special departments?—Mostly. The hospitals with schools, I think, are the best off in that respect.

17945. Then, according to you, the requirement of special hospitals is not absolutely done away with?—It is not absolutely done away with; and certainly not as regards the hospitals which receive those cases which are not admissible in the large general hospitals. For instance, consumption is only taken in in a very small way in the general hospitals; I am always grieved when I see a large general hospital or a special hospital increasing its size in London. It appears

16 March 1891.]

Mr. MICHELLI.

[Continued.]

Chairman—continued.

appears to me that the proper plan would be to extend the work of the charity outside London.

17946. You are speaking now of consumption?—I am speaking now of hospitals in general. Since this Committee has been sitting I have taken the trouble to go into the subject with several medical men, as to the class of cases that might without danger be removed into the country, and I find they are of opinion that nearly two-thirds of the cases that are admitted into the general hospitals in London might, with safety, be removed to hospitals in the country or a little way outside the town.

17947. That might be so, but would there not be great difficulty about the medical attendance outside the town?—Yes; that is the great difficulty, and you want to keep in London enough patients for clinical purposes. In London there are 6,000 beds, and about 3,500 used for clinical purposes. It seems a pity to retain the 2,500 beds in London when they might be out of London.

17948. Because there are a large number of beds which afford no instruction at all?—No instruction at all. Everybody admits that there are certain classes of disease, which might with great advantage be treated outside London.

17949. You would like to keep this either licensing or auditing body free of Government control, would you?—I should not like them to have control, but would like them to be able to examine and report, and let public opinion then judge how matters stand; in fact, very much in the same way as the Dublin Board of Examiners do at the present moment. There is no doubt they keep the Dublin hospitals up to the mark very much.

17950. Would not that cause a falling off of subscriptions?—I think very slight.

17951. You do not think the idea would get abroad in consequence that they were State-supported institutions?—Yes, I think that idea might, but I do not think it would do harm; I think there are many people who do not now subscribe but who would subscribe if they had more confidence in the way in which the accounts of the hospitals were kept. This would be the case if there were an official report published.

17952. Is it your experience that people locally situated close to a big hospital do not support that big hospital at all?—On the contrary; when I was at St. Mary's I raised the annual subscriptions in five years over 1,000 £., and I think the great mass of that money came from the immediate neighbourhood. I of course put it to the people that it was the only hospital in their neighbourhood.

17953. Do you mean that an energetic secretary can increase his local subscriptions?—Yes, he can increase his local subscriptions. I put it to them that it was the only hospital in their neighbourhood, and I hoped they would support it.

17954. We had evidence from the secretary of St. George's Hospital, I think, that a large number of residents in that locality did not support the hospital, but their servants were often treated in the hospital?—That is the case very often no doubt; but still if you take the large London hospitals, the West End ones particularly,

(24.) e

Chairman—continued.

you will find that they are supported from their own neighbourhood. I am confident St. Mary's was.

17955. Of what class are your subscribers chiefly; are they the small shopkeepers?—No, I think the best class are the City merchants.

17956. Have you ever thought out how such a licensing body could be constituted?—Yes; I should like to see it an elective body, but I should like to see it in conjunction with the Charity Commissioners in some way. I think that all hospital trust funds ought to be placed in the hands of the Charity Commissioners. At the present time St. George's and ourselves and a good many other hospitals do so.

17957. Do you mean that it would necessitate tying up the money?—Only the trust funds.

17958. It could be invested in that way if so directed by the person leaving it?—As a rule he directs that the money shall be invested in the hands of two or more trustees; but I know a case in point as regards William Hollins's Fund which you see in almost every report in London. A Mr. William Hollins about 20 years ago left a sum of money to the various London hospitals, and I know that this money has in cases got into the hands of the trustees of the institution, and in one instance the money got mixed with the other Consols of the hospital, and the consequence was that if that hospital had got into low water that money would, in all probability, have been sold out like any other investment; whereas had it been in the hands of the Commissioners it could not have been sold out.

17959. But some hospital authorities hold this opinion, that the money is given you to spend and not to hoard, and that you may spend all that you have got, and when you have done so go to the public for more?—There is a very strong feeling among governors in that direction, and I think there is some reason in it. The opinion is held strongly by many hospital governors who attend committees. But that, of course, only refers to ordinary investments, and not to money left on trust.

17960. You mean governors who take an active part, whereas there are so many who do not attend?—Yes.

17961. I should like to read something to you from last year's evidence; will you turn to page 219, Question 3250; I asked Sir Henry Longley: "Do you think it would be desirable to have a central body for audit purposes with reference to the accounts of all hospitals?" and his reply was, "I think, speaking rather as a private individual than as a Charity Commissioner, that some supervision over the accounts, of what I may call voluntary charities, is very much needed. Having read the recent report of the Charity Organization Committee on that subject, one cannot help agreeing with it. (Q.) In your own mind, could you shadow out any plan as to how that could be carried out?—(A.) It has sometimes struck me that perhaps the central governing body established under the City of London Parochial Charities Act, which will be a very important body, might be charged with such a function. (Q.) Would you kindly explain what that central governing body is?—(A.) It is constituted by a section of that Act; the 48th section

3 A

16 March 1891.]

Mr. MICHELLI.

[Continued.]

Chairman—continued.

section. It is established in order to administer by one hand all these charities, when they are regulated by schemes that we make, instead of the numerous hands by which they have been regulated hitherto; and it is to be constituted in this way: it is to consist of 21 persons, of whom five shall be nominated by the Crown, four by the Corporation of the City of London, and the remainder (four of whom shall in the first instance be chosen from among the persons who are now trustees of the parochial charities of the City of London) in such manner, or by such persons or bodies as the Commissioners shall by scheme provide; and what we have done in our scheme in that respect I think I happen to have here. In our scheme the body stands thus: five by the Crown, four by the Corporation of the City of London, four by the London County Council, two by the Ecclesiastical Commissioners (that is only a temporary provision; they will cease to have an interest after a time), one by the University of London, one by the Council of University College, London, one by the Council of King's College, London, one by the Council of the City and Guilds of London Institute, one by the governing body of the Bishopsgate Foundation, one by the governing body of the Cripple-gate Foundation; and when the Ecclesiastical Commissioners cease, as they will in a few years, to appoint, the London School Board are to appoint to those two vacancies." Now, glancing at that, is that the sort of body that might answer the purpose in your opinion?—Yes, I think it is; but for audit and inspection alone, not for control.

17962. Would the control go as far as licensing?—Yes, of new hospitals distinctly. I could hardly call that control.

17963. Then is it this, that you wish to preserve the individuality of the hospitals?—Yes, that is the great difficulty, to preserve the individuality of the hospitals, and at the same time to keep some little check on accounts as published. I also think (I do not know if it has been mentioned in this Committee) that it is just as important to audit numbers of patients, &c. I have found mistakes in numbers in going through hospital accounts, and there are no doubt many mistakes arising which it is impossible for me to check in going through hospital accounts.

17964. But you do not think the difficulty is an insuperable one, do you?—Not at all.

Earl of Kimberley.

17965. With regard to such a body as has just been alluded to, do not you think that any such power of official or semi-official control would tend very much indeed to discourage the public from giving voluntary subscriptions to these institutions?—No, I hope it would not; I hope that if it did discourage some, as it no doubt would, it would make others feel that they had a greater confidence in the work being properly done.

17966. Is it not almost a universal tendency that the moment you commence to exercise an official control over institutions, the public seem to think that public money ought to be supplied to maintain those institutions?—I should prefer

Earl of Kimberley—continued.

that it was not called control, but simply inspection. I should like to keep the two distinct.

17967. Can you distinguish inspection from control?—It is a great difficulty, of course.

17968. Does not inspection, if it be efficient, mean control?—I can only look at what has taken place in the colonies and in Dublin, and I do not find that they exercise any control whatever; they simply publish a report. The Hospital Sunday Fund of Dublin also publishes a report which is very much more complete than that of the London Sunday Fund, because there they state that a certain number of gentlemen visit each institution, and they give their views on the various points.

17969. Could you tell me exactly how that board in Dublin is constituted?—Yes, I think I have the papers here. (*The Witness referred.*) No, I have a list of the board, but I do not see how they are appointed; but I believe that they are appointed, a certain number by the Corporation of Dublin, a certain number by Dublin Castle, and, I think, there are one or two representatives of the hospitals themselves. You may like to see the list (*handing in the list*).

17970. But I daresay you are aware that the whole system of government in Ireland is throughout one of much greater Government interference than in England?—I am aware of that.

17971. Do you think it is at all desirable to import that system into this country?—But in the colonies the Government interference is very much less, and yet they do it there.

17972. I do not like to contradict you, but is it a fact that in the colonies it is much less?—I thought so.

17973. You are speaking of the self-governing colonies?—Yes.

17974. Is there not a strong tendency there to conduct these things by public bodies rather than leave things to voluntary management?—I did not know that.

17975. You know that all the railways, for instance, are under public control?—Yes.

17976. That is only one instance; this Dublin body simply inspects the accounts which the hospitals furnish?—Yes.

17977. Supposing that the hospitals do not correct any mistakes which have been found, or comply with any recommendations which the board may make, have the board any power to enforce those recommendations on the hospitals?—I do not think they have.

17978. Do they audit the accounts?—No, but they examine them, and make those extracts which you have in your hand.

17979. I understand this proposal of yours is merely with a view to see that the accounts are well drawn up, and that they are thorough satisfactory?—Yes. I should like to see added to that a medical opinion as to the class of case admitted, the death rate, the sanitary condition, and so forth.

17980. Take the accounts first. All that is wanted to secure that the accounts are *bonâ fide* accounts, and properly rendered, is an independent auditor, thoroughly competent for his work?—Yes.

17981. Such, for instance, as the auditor who goes

16 March 1891.]

Mr. MICHELLI.

[Continued.]

Earl of Kimberley—continued.

goes round on behalf of the Local Government Board to audit the accounts of all the different local authorities?—Yes.

17982. Might not that be secured by each hospital itself employing an independent auditor, so far as the accuracy of the accounts is concerned?—Yes, so far as absolute accuracy goes; but the auditor never audits anything else but bare figures; he never expresses an opinion.

17983. What you would like is a scheme of accounts to which the auditors should have authority to compel all the hospitals to conform?—Yes.

17984. And in point of fact the auditor would, as all auditors I have observed do, exercise some control over the policy of the board because on him would rest the interpretation, would it not, of the general orders?—Yes.

17985. And I daresay you are well aware that auditors are very apt indeed to stretch their powers to something considerably beyond merely looking to the accuracy of the accounts?—Yes, but I do not see why they should not be controlled.

17986. Would that be an evil, their so stretching their powers?—Not necessarily.

17987. Might not a general body be formed from the hospitals of London themselves without bringing in, in any sense, Government control?—Yes, I have thought of that, but there is such a rivalry between one institution and another that I think it would be a little difficult to carry that out.

17988. You suggest that it would be desirable to give the Charity Commissioners control over all funds left in trust to these different hospitals?—Yes.

17989. Do you think that the public have confidence in the Charity Commissioners?—I cannot say that I think the Charity Commissioners are popular now.

17990. Do you think that the public have confidence in them?—I should think they have.

17991. Have you ever had dealings with that body?—Our trust funds are with them.

17992. And you have found them an agreeable body to deal with?—Yes.

17993. Do they usually give you an answer within a reasonable time?—Yes.

17994. They do not usually keep you six months before you get an answer?—No.

17995. You are fortunate then in your experience with them. No doubt the Charity Commissioners have done excellent work, but do not you think that if the Charity Commissioners had control of these funds there would be a great deal of danger, owing to the feeling there is in some quarters that it might diminish your subscribers?—Yes, I would not give it alone into the hands of the Charity Commissioners; I would prefer to see it elective, some members of the Charity Commissioners and some others.

17996. Are there not two systems which may be followed: You may have a system of hospitals supported by the public money, inspected by public officers, and which the municipal or the general Government look to, and see that it is sufficient; that is a system which might easily be established; but if you have the other, a voluntary system, must you not trust to a

(24.)

Earl of Kimberley—continued.

voluntary effort and to the general feeling of the public that the institution should be well managed; can you mix the two systems without the danger of spoiling both?—I have heard that argument very frequently, that there is that danger a-head.

17997. But is it not a very great tendency, particularly in the present day, directly anything goes wrong to say, Let us put it in the hands of a Government authority to see that everything goes right?—Perhaps it is.

17998. Do not you think that the public is under a great delusion when they think that the moment they have set up that authority they need not trouble themselves any more about it?—I have not thought so.

17999. Would not your experience lead you to this: That though it might be desirable possibly cautiously to introduce some additional control with regard to these great institutions, so long as they remain voluntary bodies, it is better to interfere as little as possible with them?—No, I certainly could not have expressed my views as I have done if I thought so.

18000. I want to ask you a question as to your system of a glossary which seems a very good one; you would separate the different items; amongst other things you would have, of course, the expenses of collecting the money on which the hospital has to depend?—I would.

18001. And that would be very important, would it not, in order to show the exact position of the hospital?—Yes.

18002. Have you ever made out for your own hospital a comparative statement extending over a considerable number of years?—A great many years.

18003. You find it very useful?—Very useful.

18004. In order that statistics of hospitals should be valuable it is necessary that they should be on the same basis?—Yes.

18005. And that is why it is necessary that there should be some general system of accounts?—Yes.

Lord Clifford of Chudleigh.

18006. What is the system of hospitals generally existing in the Australian colonies; is it entirely a free system, entirely dependent on voluntary support?—No, not entirely. They get a Government grant and the larger the towns the smaller the Government grants in proportion to the subscriptions; and the further in the country the larger the Government grant and the smaller the subscriptions.

18007. Therefore, the Australian system combines the two principles that Lord Kimberley has just set forth, that of voluntary subscription and State support?—Yes.

18008. And, therefore, it is necessary in that case for the public, if they assist it from the public funds, to have some State guarantee of the management?—Yes, quite so.

18009. And, in fact, it is very much the same system as is carried on here with regard to voluntary schools?—Yes, exactly.

18010. And that system you think would be advantageous?—It has not injured the schools I think.

3 A 2

18011. I think

16 March 1891.]

Mr. MICHELLI.

[Continued.]

Lord Monkswell.

18011. I think you stated that any person interested could attend the annual meeting of your hospital; what do you mean by "any person interested"?—It is absolutely open; anybody can come in; we would refuse nobody.

18012. What business is done at these annual meetings?—The report of the Committee of Management is read and the balance sheet, and the officers are elected.

18013. Therefore, you mean that any member of the public outside could come in and take part in the election of officers, whether a subscriber or not?—No, he could not take part unless he were a governor or a subscriber.

18014. Then you have an annual meeting at which anybody can come in, but he cannot take part unless he is a governor or a subscriber?—A governor, or a subscriber of a guinea and upwards.

18015. You said, with regard to the provisions, you might have a comparative statement, showing pretty accurately whether a hospital was or was not extravagant in the matter of provisions, and you mentioned that the Cancer Hospital, for instance, would not cost more in provisions than other hospitals. But is that so; surely in certain classes of diseases you have to give the patient more generous diet than in others?—Yes.

18016. Would not that be particularly so in the case of cancer?—Yes, you do have to give cancer patients a generous diet; but I think all the hospitals do give all their patients a generous diet, especially in consumption cases.

18017. Supposing a hospital was almost entirely full of cases of fever we will say, where the patients for a long time were incapable of taking anything, or only capable of taking very little, would not that make a great difference?—I think an ordinary fever hospital would have to be taken on its merits; but I should like to be able to compare one consumption hospital with another consumption hospital, and one general hospital with another general hospital.

Chairman.

18018. Your comparison would not be between one kind of hospital and another, but between one hospital for a certain kind of case and another hospital for that same kind of case?—Yes.

Earl Cathcart.

18019. You were the parent of the system of accounts and audit which was adopted at St. Mary's?—I introduced those there, but they are really Mr. Burdett's invention.

18020. You introduced that system of account and audit, and you worked it for some time at St. Mary's?—Yes, the system of the books and the ledgers and the general accounts of the hospital, and I worked it for five years.

18021. And you are the author of this system of accounts in Mr. Burdett's book?—It is really his system again.

18022. Your name is mentioned in connection with it?—The glossary is the part that belongs to me, that is all I claim to be original.

18023. Will you be so good as to take that Dublin report and will you glance at the end of the report and give their Lordships an idea of

Earl Cathcart—continued.

the sort of names that make up the Board of Superintendence of the Dublin hospitals?—Lord Powerscourt, Sir Francis Brady, Bart.; Dr. William Colles, Mr. J. W. Murland, Mr. Samuel Boyd, Lord Ardilaun, Sir James Mackey, Knight; Sir George H. Porter, Bart.; Dr. Samuel Gordon, Mr. John Barry, Mr. Joseph Woodlock, and Sir Percy Grace, Bart.; Mr. William Martin, Secretary.

18024. Those are probably gentlemen who who would have the great confidence of the subscribers to the hospitals?—Yes.

18025. I take it their names would command respect and confidence?—Yes, certainly.

18026. Would you be so good as to turn to the estimates of beds there, showing the comparative cost of beds in the Dublin hospitals?—Yes, I have the page.

18027. There are three columns?—Quite so.

18028. The first column relates to the cost of expenditure on the beds for what is called maintenance, and the items are given below there somewhere?—That is so.

18029. Would you say what the items are?—They comprise, "Provisions, groceries, alcoholic stimulants, drugs, leeches, surgical instruments, medical appliances, and clothing of patients."

18030. The second column gives the establishment charges?—Yes.

18031. Will you read what that is?—"Establishment charges include salaries of officers, wages of servants, rations of officers and servants, clothing of servants, rent, taxes, insurance, soap, candles, fuel, gas light, furniture, repairs, straw bedding, utensils, buildings, and furnishing such buildings, stationery, printing, advertising, burials, coffins, pensions, incidentals, and laundry expenses."

18032. And then the third column is the total of the two previous columns?—That is so.

18033. Supposing another column were added for remarks, showing why the beds were more expensive in one case than another, such column as that might be a very valuable addition, might it not?—Very great value.

18034. If you had a return of that sort, would it be satisfactory for the London hospitals?—I should prefer to see them further divided.

18035. In what direction would you have them further divide the cost of the bed?—I should prefer to see them divided in the same way as they are in the annual, but with this addition, the management expenses brought out. I am bound to do that, because I find that the general consensus of opinion is so strongly in favour of showing up the management.

18036-7. But do you think that that Dublin return is an improvement on anything we have at present as regards the metropolitan hospitals?—Very much; we have absolutely nothing in comparison except what has been published by the Charity Organisation Society, or such a book as the "Hospital Annual."

18038. Then you are of opinion that such a return as that would make a basis of comparison for the metropolitan hospitals with regard to the cost of beds?—I do think so; I am not particularly wedded to that system, however.

18039. With regard to the venereal disease, that

16 March 1891.]

Mr. MICHELLI.

[Continued.]

Earl Cathcart—continued.

that is treated in your hospital?—We have 42 beds.

18040. And are they usually full?—They are.

18041. And how do you arrange your lying-in cases?—We do not treat lying-in women.

18042. I understood you to say that 10s. was the charge for lying-in women?—I was asked the cost of an out-patient in general, and I said 1s., and 10s. for lying-in women.

18043. Ten shillings is not an excessive estimate, inasmuch as a private practitioner would get not more than 10s. 6d. a case for a poor lying-in woman?—Yes; but I consider that the ordinary lying-in patient from the hospital, as a rule, gets a certain amount of beef-tea, and meat, and a bag of linen.

18044. Did you ever hear of a Government Audit Board; is there such a thing as a Government Audit Board in London in connection with the Government?—No, I do not think I know it.

18045. Did you ever have any trouble in any hospital you have been connected with from pilfering, or have you heard of pilfering in any hospitals?—Yes, by patients.

18046. Things being lost and not accounted for?—Yes.

18047. Is that common?—I have had two cases brought before me in the last three years.

18048. Then it would not be common?—I do not suppose I have had more than five or six cases brought before me altogether.

Lord Zouche of Haryngworth.

18049. Have you had any great increase of venereal patients in the last few years?—I cannot say that we have, but we always have our wards overflowing with the disease.

18050. I suppose you sometimes have to turn away people who have that disease?—Yes, it is about the only case that we sometimes have to turn away.

18051. You have more applications in that particular complaint than any other, I suppose?—I should hardly like to say that, but I think there is a very great amount of applications for the treatment of that disease.

Lord Thring.

18052. You say, I understand, that as part of your inspecting system you would like to have a central medical opinion to control each hospital?—I should like whatever board was appointed, if anything is done in that way, that it should comprise medical men as well as laymen.

18053. That they should give an opinion on the course adopted in each hospital?—Not as to the treatment in the least, but that they should be able to give an idea as to the sanitary condition of the hospital, and as to the nature of the cases and classify them, and so on.

18054. But not give an opinion as to whether the patients were well or ill-treated?—No, it would not do to interfere with medical opinion.

18055. Then as to the rivalry between the different hospitals, you seem to think that an evil; I should have thought it the contrary?—I did not mean to convey that it was an evil.

18056. I thought you meant to say that the

(24.)

Lord Thring—continued.

rivalry, the competition, between the hospitals would prevent their concurring in a central body?—Yes, I did think so.

18057. I wanted to put this to you: whether there was not another side of the question; whether that rivalry was not one of the first things to be encouraged amongst the hospitals?—I have no objection to the rivalry whatever, but as it exists I think it is a little difficult to get people to combine.

18058. With respect to the Charity Commissioners, do you or not know that throughout what is commonly called the provinces the greatest possible resistance is made to vesting money in the hands of the official trustees on the ground, as is alleged, that it dries up the sources of charity?—I know that it is not popular; that is all I can say; but I cannot see how it can possibly dry up the sources of charity to appoint trustees that never die.

18059. I will put it in another way: are you not aware that in the country the managers on whose zeal the whole charity depends, say over and over again that if they are not allowed the control of their own funds they will take no interest in the institution?—I did not know it went to that extent; I only knew that the commission was unpopular.

18060. Do not you think it is quite possible that gentlemen who have had the management of money for a long time should object to have it taken from them, and put in the hands of Government trustees, however able the gentlemen may be?—I should not disturb the existing arrangements during the life of the present trustees.

18061. You must be aware that in England there is a certain horror of Government interference in any private institution whatever?—Yes, I know it is not a very popular idea.

18062. Then with respect to the colonies, you are aware that in the colonies these hospitals are subsidised by Government?—They nearly all receive grants.

18063. And, therefore, as in England, wherever there is a subsidy by Government, they are of course inspected by the Government?—Yes

18064. There is no analogy between that and inspecting a hospital that has no grant?—Excepting that I say that it does not dry up the sources of charity.

18065. Are you certain of that?—We see the large amount received in subscriptions by these hospitals.

18066. With respect to the licensing of hospitals, would it not be a very strong power to give anybody to say that people may not if they like subscribe their money to put a hospital in a particular place?—Yes, I think they are quite at liberty to do that, but they must not appeal to the general public on that ground.

18067. Why not?—As the law stands at the present moment, of course they can do it and do it.

18068. Why should there be a law in England that I and any friends of mine may not subscribe if we like to put up a beneficial institution and ask other people to subscribe?—If it were beneficial, I should say you would soon get permission to do it.

3 A 3

18069. That

16 March 1891.]

Mr. MICHELLI.

[Continued.]

Lord *Thring*—continued.

18069. That does not follow at all, because of the existence of that very rivalry that you talk about; you do not imagine that one of these great hospitals would like me to go and put under their noses a rival hospital, and yet it might be a very right thing to do; their hospital might be conducted very badly, and mine might be conducted very well; what I mean is, that I cannot understand the principle; why we should have a law to prevent private benefactors doing anything they like that is not injurious to the State?—I can only say that I think if there were such a licensing body as that, we might have a hospital at Camberwell now. If a man came up and said, "I would like to provide a hospital," and there was an inquiry into it, they might say, "It is not wanted here, but is wanted there."

18070. And you really think that any set of men who wanted to put up a hospital in Paddington might put up a hospital in Camberwell because a licensing body told them so?—I think if they showed good cause it might influence them.

Earl of *Kimberley*.

18071. With respect to the medical inspection which you wish, what is the sort of subject that you would allow the inspector to report upon?—As to whether the place was kept in a healthy condition, and as to the different classes of disease that are under treatment.

18072. What would you have him report as to those classes, the fact that there were certain diseases?—Yes.

18073. And the number of cases treated in the different diseases?—Yes, and the number of deaths and so on; I think that is better dealt with by a medical man than by a layman.

18074. You would distrust the reports made by the different hospitals themselves?—I should not like to say that I absolutely distrust them.

18075. You think that the present reports are not satisfactory, and therefore it would be better to have a report from an inspector?—You cannot compare them now; they are not uniform.

18076. Then the point is uniformity?—Yes, the point is uniformity.

18077. But how could you dissociate the opinion of a medical officer as to treatment from the sanitary condition of a hospital, or the ventilation of the hospital; is not the provision of good air about as important a part of the treatment of the patient as almost anything?—I am sure it is, or ought to be.

18078. Would it not be a matter of opinion in what particular way the sufficient air should be provided, for example at Brompton; there might be various modes of doing it?—Yes, that is a matter of opinion.

18079. Then would it not, in point of fact, come to this: that you would give to this medical officer a control over the mode of ventilating the Brompton Hospital?—Yes, I suppose it would.

18080. Would not the result of that be a most vexatious interference in the management of the hospital itself with the person better qualified, it might be supposed, to determine it than the inspector?—Yes, but again I almost think that the heat of a ward would be more a matter of treatment.

Earl of *Kimberley*—continued.

18081. I said the ventilation of the ward. Then would it be very unnatural that if this medical officer went round a hospital and found that, in his opinion, the wards were kept too hot or too cold, he should express the opinion?—No, it would not.

18082. Would it not come to this: that this very medical officer would soon assume a superintending control over the whole management of the hospital?—Yes, that is the drawback to the working of it.

18083. Or if it were not so, would not his inspection become a mere form?—Yes, I suppose it would.

Chairman.

18084. Have you ever made a calculation as regards the proportion of money that goes in the administration of a hospital as compared with that which goes to defray the expenses of the patients?—Yes, I have.

18085. Will you tell us the result?—It is not always easy to draw the exact line.

18086. Have you any idea what the percentage is?—In the year 1889, which is the last I have got, the proportion of management to maintenance was 9·17.

18087. Is that taking an average of hospitals, or one or two institutions?—Yes, this is taking my particular one.

18088. Is that at Greenwich?—At Greenwich.

18089. And not at St. Mary's?—No; at St. Mary's it was less.

18090. And did you follow it out, too, at other hospitals?—I have followed it out at a great many hospitals, but I have not got those figures with me now.

18091. Is 9·17 a fair proportion in your opinion?—I think that it is a little high, but not perhaps higher than is absolutely necessary in the case of a hospital such as ours, where we have to get our money in from all over the country as we do; it is a little difficult to get it in that way.

18092. Do you happen to know what is the highest percentage you found?—Speaking from memory, I think one was 15; that was some time ago.

18093. Now a question or two as to your own hospital: who admits to your hospital?—The principal medical officer.

18094. Is it done by governor's letter?—No, we have no governor's letter at all; it is absolutely free.

18095. The cases are just taken on their merits?—And as they present themselves.

18096. Who makes the contracts for the food?—The general committee itself.

18097. Is that done by open tender?—By open tender and advertisement.

18098. And who receives the food?—It is really received by the steward.

18099. Then he gives an opinion as to quality?—Yes, he does. I see the bread and milk myself every day; I see the meat and other provisions at intervals.

18100. Does the steward take in the coals too?—Yes, he takes in the coals.

18101. Is the steward under you?—Yes, he is immediately under me.

18102. What

16 March 1891.]

Mr. MICHELLI.

[Continued.]

Chairman—continued.

18102. What salary does he receive?—He receives 100 *l.* a year.

18103. And board and lodging?—And board and lodging.

18104. Do you get any complaints from your patients as regards the food?—Not many; we have complaints.

18105. You have complaints as to quality?—At times.

18106. Because we have been told by several witnesses that they were so fortunate at their hospitals as never to have complaints; that is not your experience?—I have not been so lucky as that.

18107. And what course is pursued as soon as a complaint is made by a nurse or a patient?—As a rule the steward brings the food about which the complaint is into my office on a plate just as it is. First of all the sister goes and sees the steward, and then the steward, unless it is a very plain case, brings it to me; then as a rule I send for the principal medical officer, and between us we come to a decision whether the food is good or bad.

18108. At any rate you have a chance of knowing when complaints are made?—I hope that I know all cases of complaint.

18109. And how is your hospital nursed, by a sisterhood, or do you train your own nurses?—We train our own nurses, but we do take in nurses from outside too.

18110. Do you mean that you send out to institutions for them?—No, but we engage fully trained nurses; we do not keep a sufficiently large training school to train enough for our wards.

18111. Who is the head of your nursing staff?—The matron, Miss Cooke, acting under the principal medical officer.

18112. What salary does Miss Cooke receive?—She receives 100 *l.* a year.

18113. And anything else?—And board and residence.

18114. And what is the staff of nurses?—We have one matron, four sisters, 11 nurses, eight probationers, two paying probationers, and three mission nurses.

18115. How many does that make altogether?—We have besides two male nurses, making a total of 30.

18116. What are the mission nurses?—They are nurses who work in mission work in London, and they come to us to be trained, or get greater experience. They remain with us a certain number of months, during which time they are of value to us, and at the same time are learning on their own account.

18117. They are connected with a mission outside the hospital?—Yes, it is a special arrangement between two charities, in fact.

18118. Will you explain to us what this mission is?—These nurses work under the clergy in the neighbourhood, and they go about tending the sick and nursing them in their own homes when they have left us.

18119. Are they in connection with any particular denomination?—I do not think they are; I think I could tell you the name of the lady who manages the mission.

(24.)

Lord Thring.

18120. They are parish nurses?—Yes, they are parish nurses.

Chairman.

18121. Then your staff is 30?—Thirty with the two male nurses.

18122. Do these mission nurses pay you?—They do not pay anything at all; we give them board and lodging.

18123. A lady probationer pays?—She pays 25 *l.* a year; and the only advantage she has over another nurse is that she gets a room to herself; she is not bound to us after the period of her training.

18124. That is the whole staff, 30; what hours do they come on to their work in the day?—The sisters are on duty at 9 in the morning, the day nurses from 7.30 to 9, and every alternate day till half-past 5, and every alternate Sunday till half-past 1, and one day every month till half-past 1.

18125. Have you ever made out how much that is per day as a rule?—Yes, I have done so. Deducting hours for meals and so on, we reckon that a sister is on duty for 10 hours and 40 minutes.

18126. And a staff nurse?—I should include in that length of time the sister, the day nurses, and the mission nurses. Probationers are on duty about the same, 10 hours and 45 minutes. Night nurses are on 11 hours and 54 minutes.

18127. Do you have ward maids, as they call them?—Scrubbers and ward maids, yes.

18128. Do the nurses have to perform any menial duties?—None whatever, I hope.

18129. You do not know?—I always oppose that, and I do not believe that there is any menial work done by our nurses in the hospital.

18130. The matron would be in a position to know whether it is done or not?—Yes, she would, and I have discussed the matter with her pending this inquiry. There is no menial work done. People vary as to their opinion of menial work; but our nurses do not have to black the grate or scrub the floors or tables; they have to do, what some people consider menial work, such as removal of bed pans and that sort of thing.

18131. And bed making?—Yes, and bed-making of course.

18132. You think it is essentially a bad thing that a nurse should have to do a lot of scrubbing?—Yes, I do not see why you should get a high class person and pay her a good wage to do work which can be done by an inferior class of people.

18133. And which into the bargain interferes with her nursing duties?—Yes, it makes her hands dirty. I may say that our nurses have an easy time as all our patients are not serious cases.

18134. Then how long have they for dinner?—Nominally half-an-hour, but I find from the steward that it is considerably over that time.

18135. Is there not some limit of time by which they must be back in the wards?—They are generally granted 10 minutes grace, I find; it is very nearly three-quarters of an hour really.

3 A 4

18136. Do

16 March 1891.]

Mr. MICHELLI.

[Continued.]

Chairman—continued.

18136. Do your nursing arrangements work well?—I think very well indeed.

18137. Does the matron go round the wards?—Yes, every day.

18138. Then at night what nurses have you on duty; is there a nurse in every ward?—We have a nurse in every ward, or set of wards; our wards were very curiously constructed; the average ward in our hospital only contains three patients; they are very small, and there are a number of these small wards arranged in corridors, and the total number probably is from 35 to 40 on each floor.

18139. Do you consider your hospital a conveniently constructed one?—Very conveniently for our purpose; I do not think it would be good as a large general hospital, and it would be very objectionable for clinical purposes.

18140. You have no students in your hospital?—No students; but our principal medical officer is allowed to take a certain number if he chooses.

18141. Does he, as a matter of fact, take any?—As a matter of fact he does take a certain number of men, who are senior men, for the fellowship of the College of Surgeons.

18142. As regards these night nurses, when do they go on duty?—They go on at nine o'clock at night, and go off at nine in the morning.

18143. Therefore the first two hours in the morning the day nurses and the night nurses overlap?—Yes; the night nurses have one night off every month.

18144. Have you a staff of nurses for private nursing?—No, we have not.

18145. Then supposing you are short of nurses, do you have to send out for them?—We do; we send to a nursing institution and get a nurse.

18146. Have you met with any difficulty in that respect?—No, I do not think we have had any difficulty whatever.

18147. The supply of these nurses is quite equal to the demand you make?—Quite, and generally very good.

18148. Then as regards the holidays of your nurses; what holidays do they get?—The matron gets a month, the sisters a month, the nurses three weeks; the male nurses get a fortnight; probationers nominally get a fortnight, but that is only their first year.

18149. And have you a separate kitchen for these nurses?—No, the one hospital kitchen, which is a distinct building of itself in the institution, supplies everything.

18150. Does any high official dine with the nurses?—Not at the hospital at Greenwich; the matron dines with the nurses at the branch. At our large hospital the matron is generally present at one meal in the day, but she does not actually dine with them.

18151. And the housekeeper does not dine with them?—She is called the needlewoman in our place; she is a superior class of woman, and acts as a sort of head to the table.

18152. Will you tell us what the range of wages is?—The sisters' are from 30 *l.* to 35 *l.* a year at our hospital, and it includes washing; and the ordinary nurses' from 20 *l.* to 25 *l.*, and the probationers', 12 *l.* to 18 *l.* They are only two years at that. The male nurses rise from 12 *s.* to 15 *s.* a week, and the night male nurse

Chairman—continued.

from 8 *s.* to 10 *s.* a week. Each nurse is entitled to half of the premium for a 15 *l.* policy in the Royal National Pension Fund for Nurses.

18153. That is paid by the hospital?—Yes; half the premium.

18154. Have you any knowledge as to the average length of service of your nurses?—I am sorry to say I have not brought that.

18155. Do you happen to know whether their period of serving is increasing or decreasing?—I should think there are always some who will remain with you a long while, and there are others who will go directly they possibly can after their training.

18156. In the hopes of getting better appointments?—Yes; in the hopes of getting better appointments.

18157. Have you a chaplain?—Yes; we have a chaplain.

18158. Is he resident?—He is not resident, but he is bound to live within half-a-mile of the hospital.

18159. Does he receive a salary?—Yes; 250 *l.* a year.

18160. Has he anything else to do but to attend to the spiritual wants of the patients in the hospital?—Absolutely nothing else.

18161. Have you a samaritan fund?—Yes; we have. That is administered really by me. Mr. Adams, the assistant secretary, does the ordinary work of it. If there is any special case it is brought to my attention, and I attend to it.

18162. But how many cases do you relieve from the samaritan fund?—Nearly every man who leaves our hospital leaves it in a state of health, as he is retained during convalescence; but if he is not able to go to sea again, he is treated by the samaritan fund.

18163. Then what medical officers are there in the hospital?—There is the principal medical officer resident.

18164. Is he a salaried officer?—He is a salaried officer.

18165. What does he get?—£. 350 a year and a house.

18166. He is the man you mentioned just now of some standing in his profession?—Yes; he is a man of considerable standing in his profession.

18167. And are there any other residents?—A house physician, and a house surgeon.

18168. Are those short appointments?—Nominally, they are for a year; but, as a rule, our men stay with us very much longer; they are eligible for re-appointment at the end of the 12 months.

18169. Have they any salaries?—Yes, the house physician gets 70 *l.*, and the house surgeon 50 *l.*

18170. Do any of these gentlemen take private practice?—They are not allowed to; but we do not inquire very strictly about it.

18171. What is your position and authority as regards those officers in the hospital?—I consider that I am the representative of the committee when it is not sitting, the head of the entire institution, both at home and in the branches.

18172. Therefore, supposing, which very seldom occurs, that there was some grave breach of

of

16 March 1891.]

Mr. MICHELLI.

[Continued.]

Chairman—continued.

of discipline by one of these medical gentlemen, you would have the power of suspending him, would you?—I should not have that power according to my rules. According to my rules I should have to call an immediate committee, which I can do within 24 hours, for the purpose of considering the conduct of any medical officer, or any officer. As a matter of fact this has never occurred.

18173. I did not suggest that it had, but I wanted to know what the powers which you possess are in case anything of the sort happens?—Those are the powers.

18174. Will you tell us what you are assessed at?—£. 609.

18175. And who is responsible for the healthy condition of the hospital building?—Really the principal medical officer is; he reports on that periodically to the committee.

18176. Have you got any skilled sanitary authority in the pay or on the staff of the hospital?—Not actually in the pay of the hospital; but our buildings, as I daresay you know, are official buildings; they really belong to the Crown; and there is attached to that a civil engineer, a man of some standing as an engineer, and he inspects anything that we draw his attention to from time to time, but our drains are entirely new.

18177. Then that comes to no expense to the hospital?—No, not unless a gratuity is given in that way.

18178. Is that so?—That has occurred.

18179. Do you have a number of out-patients?—Yes, we have a number of out-patients; last year altogether we had 8,552 out-patients.

18180. Were those new cases?—Those were all new cases.

18181. Is that out-patient department quite free?—Quite free.

18182. Do you make any inquiry as to the condition of the patients?—Entirely as to whether a man is a sailor; he has to show his discharge. If it were a woman or child suffering from injuries we would attend to them at once.

Earl of Kimberley.

18183. Have you ever had any complaint that patients do not get the food which is ordered for them?—I have heard a patient complain that he had not enough to eat.

18184. But have you ever had any complaint that they did not get the food which was allotted to them, that it was never served to them?—I do not think I have.

18185. Do you provide your patients with all provisions, tea and sugar for example?—Absolutely everything, and body linen.

18186. Have you had any complaint as to your nurses, as to their conduct?—Well, I have heard complaints, of course, occasionally in my time as secretary.

18187. But have you complaints sometimes of their want of attention to patients?—Yes, I have had such a complaint; and I have had complaints of the patients against the nurses.

18188. And have they been well founded in any cases?—I do not think I have ever found a case of real unkindness of a nurse to a patient.

(24.) e

Earl of Kimberley—continued.

I have found them sharp to a patient sometimes, perhaps a little unduly sharp.

18189. Have you had cases of neglect of patients?—No, never actual neglect.

18190. Not neglect in giving them their food or seeing to their attendance?—No, I do not think I have ever had that.

18191. Have you ever had complaints reach your ears after patients have left the hospital?—Yes.

18192. Have you ever investigated them?—I have; I have had letters written to me by patients after they have left the hospital.

18193. Have you found in many instances that there was good reason for the complaint?—No, never any more than perhaps a little sharpness of temper on one occasion.

18194. You have never found anything serious?—No; I have really never found anything serious.

18195. Have you any committee of the hospital that is termed a nursing committee?—No; none.

18196. Then supposing that anything goes wrong with the nurses, has the matron power of suspending?—Yes, the matron has power of suspending them, but she cannot dismiss a nurse.

18197. Does she select the nurses?—She really selects, but she cannot appoint without the principal medical officer. Our principal medical officer is endowed with greater power in that respect than is usual in hospitals.

18198. Does he appoint?—The matron cannot put anybody on as nurse without his absolute approval.

18199. And after that the appointment is reported formally to the committee?—It is reported formally to the committee which approves.

18200. Amongst your probationary nurses have you any that fail from health or other causes to go on with their nursing?—Not many; some have done so, but I cannot tell you what the percentage is.

18201. Is the health of your nurses good as a rule?—Very excellent. I have had this report drawn up on the condition of their health, if you like to hear it.

18202. Yes?—The cases of serious illness in the nursing staff during 1889 and 1890 and up to date are these: Alice Mountfield, a paying probationer, who had typhoid fever from the 23rd of August to the 1st November 1889; then another probationer, who had scarlet fever from the 28th December 1889 to 5th March 1890; then 11 nurses were ward for influenza during the epidemic; then there was a nurse, Mary Sturgess, who had typhoid fever from 14th October 1890 to the 19th January 1891. Then there is the general remark: During the last 10 years there have been three cases of typhoid fever, two of scarlatina; one of the typhoid cases proved fatal. The nurses in the hospital have nursed diphtheria very frequently, but no nurses ever contracted the disease.

18203. Are your diphtheria patients kept separate from other patients?—Occasionally they are, but not unless the principal medical officer thinks it absolutely necessary; sometimes I know that they are not.

18204. In case of other infectious diseases,
3 B have

16 March 1891.]

Mr. MICHELLI.

[Continued.]

Earl of Kimberley—continued.

have you separate wards for them?—Yes, we have separate wards to any extent, in consequence of the formation of our hospital.

18205. Have you many diphtheria cases?—We have. There were six cases in 1888; that is the nearest statistics I have.

18206. Have you had any case caused by the person having mixed with other patients who had an affection of the throat?—No, we have no record of such a thing having occurred.

18207. And have any of the nurses contracted it?—No nurses have contracted it during the last 10 years, during the period I have mentioned.

Lord Saye and Sele.

18208. Have you any shipping officer attached to your hospital for convalescent cases that are re-shipped?—No; we principally pass them on to the Sailors' Home, and they go into the Sailors' Home, where they have a shipping agent, who really passes them on board the vessels. The men have particular ports from which they ship, and very often we send them to Gravesend, Cardiff or other out-ports.

Earl Cathcart.

18209. Will you tell us where you got your matron from?—She was trained at St. George's, I think.

18210. It is the first time that permanent male nurses have been mentioned; will you kindly explain about them?—They are for the venereal ward.

18211. Entirely?—Entirely.

18212. Do you not employ female nurses at all in the venereal ward?—No, none whatever.

18213. And the reason is that you think it is not fit?—It is hardly decent, I think.

18214. Is there any tradition as regards the old "Dreadnought;" did the patients thrive in the old "Dreadnought," as they do now in the hospital ashore?—No; it was considered that the old "Dreadnought" was unhealthy.

Lord Thring.

18215. You say that the nurses do no menial duty; is it not the fact that there are metal basins used which require a great deal of scrubbing and rubbing?—I do not think we use any metal basins, nearly always crockery.

18216. Then all they have to do is to wash these things, not polishing?—There is no polishing, as far as I know.

18217. With regard to your floors, what are they?—Only the old wooden floors, I am sorry to say.

18218. Then you washed them, not polish them?—No, they are washed, not polished.

Lord Thring—continued.

18219. Do your nurses not sweep out the wards?—They just dust and sweep round the wards.

18220. But they do no polishing or scrubbing, and no work that could be called hard work?—No; I should say that our nurses do no menial work.

18221. I should like to know the diet they have?—They have a certain amount of bacon allowed in the week, which they can use as they like, and they can have, in lieu of that, jam or marmalade, and various other things of that kind for their breakfast; and coffee and tea, and bread as much as they like.

18222. What is the next meal?—The next meal is dinner, when they have always a hot joint, such as boiled mutton one day and roast beef the other.

18223. No variety beyond joints?—Yes; on Saturday there is always a made dish of some sort; and they have puddings every day.

18224. As a general rule, they have the same joint every day or every other day?—There is a roster of joints for every day in the week, excepting Friday and Saturday; when fish is good they have fish on Friday. Then they have tea of bread and butter and jam, and so on; and they have supper.

18225. And do they ever complain of their food?—Yes; I have had complaints of their food. I had complaints about five or six months ago. We went into the question, and I think they had a grievance.

Chairman.

18226. Is your staff an honorary staff?—The visiting medical staff is.

18227. Is there anything else you wish to state to the Committee?—I should like, before I go, to call the attention of the Committee to the fact that out-patients are allowed to remain outside in the wet at nearly every hospital in London; the door is opened at a certain hour, and the patients accumulate round it before that time. If you go to see any hospital before the out-patient doors are opened on a wet day, you see women and children standing out in the cold. It seems a pity that the doors are not opened and the patients allowed to go in.

18228. That is speaking of general hospitals?—Yes, in fact, nearly all the London hospitals.

18229. Would you mind putting in a return of the number of your employes and their wages?—I will do that with much pleasure (*handing in the Return, see Appendix*).

18230. Is there anything else you wish to put in?—I do not think anything else.

The Witness is directed to withdraw.

MR. BUXTON SHILLITOE, is called in; and, having been sworn, is Examined, as follows:

Chairman.

18231. You are on the staff of the Lock Hospital, are you not?—Yes, Senior Surgeon.

18232. Does that comprise both sides, the male and female?—The female only. You see the juniors generally attend the male, the seniors

Chairman—continued.

the female. I have been at the female hospital for the last 12 years.

18233. Would you tell me what qualification you hold?—Fellow of the Royal College of Surgeons, England.

18234. You

16 March 1891.]

Mr. SHILLITOE.

[Continued.]

Earl Cathcart.

18234. You mentioned the female department; the cases are more serious in the female department than in the male; is that so?—The cases that we take in are more serious than the male certainly, at least they are more important.

18235. Is it the case that in the female system the disease runs with more violence than in the male system?—No, I think not.

18236. We are very anxious to have some statistics to show the prevalence of the disease in the metropolis and the country generally; have you any statistics of that sort?—I have a few statistics of the hospitals in London, and I have had letters from one or two in the country: but statistics you know are very misleading; you cannot be certain about the statistics at all.

18237. But still, if you could give us any very general idea about the prevalence of the disease in the metropolis, or in the country, we should be glad. Perhaps you will give us such information as you have?—I took three years for comparison of the inmates of the female hospital.

18238. You are speaking of your own hospital now?—Yes; in 1879, 1880 and 1890. In 1870 there were 385 in-patients; in 1880, there were 627; and in 1890, there were 731.

18239. What causes the great difference in the numbers?—In 1870 the hospital was very poor, and it was at the time when the Contagious Diseases Acts were in force, and a certain portion of the hospital was taken up by the Government for those cases; a certain number of the beds were taken definitely for the Government, and they were not always filled. No doubt that accounts for the difference.

18240. That would apply in the year 1880 as well?—That would apply in 1880 also; but then, from some reason or other, there were more patients.

18241. Then you must have turned away patients from your doors; if those beds were left empty, probably you turned away patients?—I have no doubt that the beds could have been filled if we could have afforded it; but the difficulty was to keep the hospital going.

18242. Have you any statistics with regard to these diseases in the metropolis generally?—No, except my own private cases. I do not see how it is possible to get proper statistics.

18243. Do you think that your hospital is large enough to take in all the patients that ought to be taken into the hospital, suffering from these diseases?—No.

18244. You think there is great want of Lock accommodation?—The difficulty is in getting patients to go in. If a woman has the disease and has caught it surreptitiously, she does not wish it known, and she will do anything that she can to keep out of the hospital, because directly she goes into the Lock ward her friends know it.

18245. Another great difficulty, according to your secretary, is, that when you get them in you cannot keep them in?—We have no power to keep them.

18246. As a medical man, is it not, in your opinion, a horrible thing that a number of women should be released uncured to go about (24.)

Earl Cathcart—continued.

the streets?—It is a most horrible condition of things.

18247. They must spread the disease far and near?—They do.

18248. What is the origin of the term "Lock" Hospital?—The founder of the hospital, I believe, had that name.

18249. These venereal diseases do prevail to a great extent over all the country, more than people suspect?—To a very great extent; and till the last 15 or 20 years there were many diseases connected with it that were not recognised as having a syphilitic origin, which are now perfectly recognised as such.

18250. Dr. Steele told us of a disease which prevails in all the hospitals; I think he called it the gummatous disease; and that disease prevails in all the general hospitals?—That is only a manifestation of late syphilis; that is the tertiary condition.

18251. It struck me that I would take from the last Army Medical Reports, that is for 1888, the cases of venereal disease in the army merely as a sort of standard by which one might form some sort of estimate. You are aware that in the army the soldiers do not propagate the venereal disease?—No, they do not.

18252. That is to say there are regular weekly inspections, and that they must therefore contract the disease from women who are affected outside, in the civil population?—Yes.

18253. I find in the return for 1888, that during the year there were 22,842 admissions in the United Kingdom alone, and that the men constantly inefficient at the present moment are equal to a small brigade, or two small regiments actually laid up at the present moment from venereal disease; that is to say 1,850 men (that was rather below the average) were laid up at that time with venereal disease, that is 18·19 per thousand. In the Channel Islands there is the greatest amount of the disease, namely, 306·7 per thousand; in the Southern district, 285·7. Now this is what I am coming to: In the Home district, that is the London district, 273·1 per thousand were affected with the venereal disease, and that is 33·3 less than it was in the previous year. Now if so many men in the Home district are affected with venereal disease, surely there must be a large amount of the same disease prevailing amongst the civil population?—Yes; if I might be allowed to say so, there may be a little difference. You see in the army a man is examined periodically, weekly; and directly anything is found to be the matter with him he is put in the hospital.

18254. But still what I am quoting this for is to show that as he does not cause infection, but receives infection, there must be a very great number of infected women going about?—Yes, certainly.

18255. And a great many more certainly than your hospital could accommodate?—Yes, excepting that you must remember that one woman may be the means of infecting an infinity of men.

18256. Do not these figures go to show that the venereal disease prevails very greatly amongst
3 B 2 the

16 March 1891.]

Mr. SHILLITOE.

[Continued.]

Earl Cathcart—continued.

the civil population?—I believe it does to a great extent.

18257. And that the syphilitic taint in the whole population must be very considerable indeed?—That is so.

18258. So much so that the nidus is becoming exhausted and the disease is not nearly so virulent as it used to be?—I do not think I can quite agree with you there. We have had two or three times sudden accessions of the intensity of the disease, notably after the Paris Exhibition. I noticed that in my own practice particularly.

18259. That is from importation?—That is from importation. The more severe forms of the disease are still prevalent, I think, though we do not get the very aggravated cases that we used to do, partly from the spread of education, people know what it is more, and so get treatment earlier that may check it.

18260. Then seamen probably bring into the country a very virulent type of the disease?—No doubt.

18261. And you think occasionally there are accessions of the virulent type?—Yes, it is the same disease increased in intensity from some extraneous circumstances.

18262. You think it is an importation?—I think so.

18263. Then with regard to the specific virus of all the varieties of the disease, namely, gonorrhœa, and chancroid and syphilis, they are all microbe organisms of the same kind?—They are supposed all to have some organism.

18264. But you cannot trace them as in tubercles?—We cannot trace the microbe of syphilis.

18265. And can you in regard to gonorrhœa?—Yes.

18266. And chancroid?—I should say not.

18267. Is the mercurial treatment followed now?—Yes.

18268. On a large scale; is it much used?—I should think it is the only treatment that is of any avail for syphilis; the only difference being that there is a less severe treatment with mercury than used to be the case.

18269. I thought there was some new treatment of corrosive sublimate?—That is another form of mercury.

18270. And you do not hold with what some people say, that the type of the disease is not so severe as it was?—I believe the type of the disease is very much the same?—I believe that there is a greater amount of real syphilitic disease.

18271. Some people say it is like an epidemic on the decline, but that is not your view?—That is not my view.

18272. Now there is a great deal of disease contracted among women and perhaps respectable women, by means of the syphilisation of the fœtus?—Yes.

18273. And that affects the women too?—Yes.

18274. And all these facts, taken together, would go to show that the Lock Hospital is one of the most important, if not the most important, of all the special hospitals?—I believe it is.

Earl Cathcart—continued.

18275. Because in all families and in the nursery, women or children are liable to be infected by these microbes?—Yes.

18276. A diseased person may infect others?—Yes.

18277. And I knew myself a case where a whole family, the wife and children, were diseased by means of a lodger who had the disease, and they were all diseased from having come in contact with something used by him?—Yes, sponges, or something of that sort.

18278. Have you any cases of infection in your establishment at the Lock Hospital; have you had any people who contracted the disease there?—I have known one case there; only one.

18279. But it is said that the medical men sometimes contract the disease from operating?—Yes, I have known one of our house surgeons as well, and one case in the hospital of a patient.

18280. From these facts and circumstances which I have mentioned, have you any observation which you would make to their Lordships on the subject, which is a speciality of yours, with regard to the Lock Hospitals or the disease?—I have dotted down a few rough notes if I may give them to the Committee.

18281. If you please. It is a disagreeable subject, but from having been in the Army, I have become interested in it, and also since then in civil life, and any observations you may make would be very interesting to me, and, I believe, to the noble Lord in the chair?—First of all, with regard to the necessity for the Lock Hospital, I will just say that I am quite sure that it is more justified as a special hospital than any other special hospital. Of course, a Lock Hospital requires separate nurses, separate closets, separate beds, and separate eating and drinking utensils; if the cases were in general hospitals, it would be very difficult entirely to exclude the risk of contagion. Surgeons in general hospitals generally prefer operative cases; they rather shirk syphilitic cases and give them over to the treatment of a house surgeon; that is general, I think, in most hospitals where they have syphilitic wards, that these cases are very much given up to the treatment of the house surgeon and are not treated by the surgeon. The surgeon of course visits any special cases; then with regard to the out-patient department, the male cases are the great number of course amongst the out-patients, and they might be generally utilised for teaching purposes. In a general hospital it is very difficult to keep venereal cases away from the others, in the out-patient department. They look very disagreeable; their features are very often affected and so forth, and it is very distasteful to the other patients who come in contact with them. Then with regard to the female out-patient department, that cannot very well be utilised for teaching; even the female hospital cannot be utilised for teaching; not to students, only to qualified medical men. Any qualified medical man coming to our hospital and giving a card would be admitted to see the practice of the hospital.

18282. But

16 March 1891.]

Mr. SHILLITOE.

[Continued.]

Earl Cathcart—continued.

18282. But why should not students be admitted in other cases?—You see you would get a crowd of young students; and almost all the necessary diseases can be seen in the male just as well as in the female.

18283. That is a very good explanation; that is what I did not understand before?—Then the chief objection to the out-patient department in the case of the women is that you see they get partially cured and so far cured that apparently they are comfortable and they still go on carrying on their evil courses to the risk of the general public. They do not wait to get well; that is the misfortune. The treatment lessens the tenderness of the parts, and really enables them to carry on prostitution; in that way that is a very serious matter.

18284. And have you any suggestion to make in regard to that?—None, except that by enlarging your hospital all cases of that kind should be taken in and kept in.

18285. But public opinion would not allow you to have power to keep the patients in?—I should hope that the public opinion would gradually veer round and allow us to keep them; I hope to see the day when we shall again be able to shut up women.

18286. Is it, in short, a great misfortune in your judgment that there is not some power, as there was, to detain these cases?—A very great misfortune to the nation at large.

Chairman.

18287. Were you always in favour of the Contagious Diseases Acts?—Always.

18288. And has that opinion become intensified since your connection with the Lock Hospital?—It has. Even with the in-patient females there is some difficulty; we cannot keep them in until they are absolutely cured; we keep them in till all the manifestations have disappeared, and they are apparently well, but we know that they probably will have further outbreaks; we are obliged to send them out giving them that caution, and telling them to attend at the out-patient department directly there is anything wrong when they will be sent on to the in-patient hospital. Secondaries very often do not develop for some time; or if they come into the hospital with secondaries they may get cured of this and be apparently well two or three months together, and then they may go out, and may very readily get a relapse and be again infectious without having contracted any fresh disease.

Earl Cathcart.

18289. But they do not refuse gummatous cases in the general hospitals?—No, you see that is one of the forms of tertiary syphilis.

18290. They do not mind warding these with other cases?—They do not mind warding these with other cases; there is no infection usually from these.

18291. Will you please go on with your observations?—Of course the difficulty would be, if we were to keep these patients in the hospital, that we should have to keep them in for probably 12 months at least; and that is the great advantage

Earl Cathcart—continued.

that we have in the asylum, which is a sort of offshoot from the hospital. We first of all try and see that the patients are cured before we send them into the asylum; then they go into the asylum, but they are still under the care of the house surgeon, and directly there is the least manifestation of the disease they are taken back again to the hospital.

18292. You take them back again?—We take them back again without any let or hindrance.

18293. And do you find that there is much difficulty in getting these cases into the asylum?—No, because a great number of them are very glad to go.

18294. Do you think they are well treated when they are there?—Yes, very well.

18295. Do you visit them there?—No, they come to be inspected every now and then.

18296. Would you go on?—The only other thing I think that I would mention would be the fact which you were mentioning just now, as to the difficulty that we have in keeping patients in the hospital when they want to go out, whether they are well or not. You see, in 1870, there were 24 per cent. discharged at their own request uncured; in 1880 there were 17·9 per cent.; in 1890 there were about 31 per cent.

18297. And can you trace that to any special cause, such as anything going on; fairs or such circumstances as the Derby week?—At that time some few always go out, and no doubt if you get one woman who is inclined to go out, and have, as they say, a spree, she will almost always lead others to take the same view, and to think that they are sufficiently well to go out.

18298. Do they come back again sometimes?—Yes.

18299. Generally after long intervals?—Occasionally.

18300. Have you known in your private practice, or in your practice at the hospital, many cases of indirect contagion from venereal diseases?—Yes, many.

18301. For example?—Of course I have known several surgeons; I have known nurses from suckling children; and I have known two or three cases of ladies that, I believe, can only be traced to the water-closets.

18302. And travelling and that sort of thing?—Yes, as I fully believe, having carefully investigated it.

18303. Some day or other people may read these questions and answers, and people who are so rabidly against any precautions being taken, may become alive to the fact that as they travel and go about they are liable to meet these dangers in many directions which they would not think of?—That is so.

18304. Have you a great difficulty in getting nurses to undertake these cases; do they dislike the kind of case?—We very often are changing them; they very often leave us.

18305. Have you any difficulty in attracting them at all?—That hardly comes under my department. If they were not suitable of course I should speak about it at once.

18306. Then you think there is an inclination naturally in all the general hospitals to shunt all these disagreeable cases on to you?—Most of them.

3 B 3

18307. Or

16 March 1891.]

Mr. SHILLITOE.

[Continued.]

Earl Cathcart—continued.

18307. Or wherever they can get rid of them; that is only natural?—Yes.

18308. They do not do much credit to anybody that has them?—Not as a rule.

18309. There are some awfully bad cases, are there not, every now and then. I read in the "Lancet," I think it was, of a horrible case of a poor woman who was almost eaten away; I believe you have got it in the hospital now?—Yes.

18310. There are those horrible cases every now and then?—Every now and then.

18311. Utterly incurable?—Well, apparently so.

18312. At least they are people who, if they survive, can only drag on a miserable existence, a nuisance to themselves, their friends, and everybody around them?—Yes.

18313. And what do you do with those miserable cases?—We endeavour to cure them as far as we can; if they are found to be absolutely incurable and they have no friends they go to the workhouses; then, if after a time the workhouses send them in again, we should take them in for a time at all events.

18314. Then I gather that, taking the whole of the circumstances, it is your opinion that the public are not sufficiently alive to the danger

Earl Cathcart—continued.

which they run, and the deterioration to the whole population which occurs from the spread and continuance of these horrible diseases?—That certainly is so.

Chairman.

18315. What is the average of the mortality in the Lock Hospital?—It is very slight indeed; I do not think we have had more than three or four deaths in the year.

18316. One per cent., should you think?—Not 1 per cent. I should think.

18317. You mentioned the fact that patients contracted the disease one from another?—There has been one circumstance only of that kind.

18318. What was that patient brought in for?—She was brought in for gonorrhœa, and contracted syphilitic sores, probably from her own carelessness.

18319. Do you take all cases at the Lock Hospital other than those contracted by sexual connection?—Yes, however contracted. We have a certain number of cases of infantile syphilis; but those cases mostly go to the Children's Hospital; we have also a certain number of cases of congenital syphilis.

The Witness is directed to withdraw.

MR. ALGERNON COOTE, re-called; and further Examined, as follows:

Chairman.

18320. You wish to correct something in your former evidence, I believe?—I wish if I might, to make one or two remarks. I had not time at the end of my evidence on the last occasion, as it was just four o'clock to look through my notes. One question was in reference to the finance: you asked me how the receipts of our hospital were made up for the year. The year which I quoted was an exceptional year. I think you will recollect that there was a Dinner mentioned which we had; I omitted also to refer to the grants that are made us by the Hospital Sunday Fund and the Hospital Saturday Fund. My attention was drawn to this afterwards. The Hospital Sunday Fund has made us grants of much the same amount, about 330 *l.* a year, for a good many years past, which I then included amongst the donations, instead of specifying them; and the Hospital Saturday Fund has been making us an increased grant every year lately. They gave us last year 155 *l.* as compared with 108 *l.* the year before, and 53 *l.* the year before that, so that they gave us treble the grant last year that they had given us two years before. Our receipts do not meet our expenditure each year by about 2,000 *l.* This is just how we really stand, that we require about 2,000 *l.* more; and it can only be obtained by special appeals, which we find a very great difficulty to get a response to, because of the nature of the hospital. There was one point with regard to the amounts we used to receive from the War Office when the Acts were in force. That of course has entirely ceased; we received from the War Office about 1,100 *l.* a year for patients, and 200 *l.* for our asylum home, and the 200 *l.*, as well as the payment for

Chairman—continued.

patients has absolutely ceased, so that it makes the hospital about 1,300 *l.* worse off than it was at that time.

18321. Even with all that, you still had a deficit of about 700 *l.* or 800 *l.* a year?—Our present deficit is nearly 2,000 *l.*

18322. But you account for 1,300 *l.* by the withdrawal of your grant?—Yes, but we have made that up a great deal by the union payments which I have already referred to.

18323. Even in your most flourishing days you had a deficiency of 750 *l.*?—More than that, because we did not receive the cases from unions then as we receive them now, with payment for them.

18324. Are you in debt now to your tradesmen?—We are in debt to our tradesmen. Since the beginning of the year in response to our special appeal we have received a large amount and are not so largely indebted as we were at the end of last year. We were owing 3,000 *l.* to tradesmen at the end of the year.

18325. What do you call a large amount?—Do you mean in response to the appeal; It amounts, I hope, to about 1,000 *l.*; a great deal of this is in annual subscriptions, but still we want 1,500 *l.* more to carry on the work as it is.

Earl Cathcart.

18326. And you have a debt of 4,000 *l.*?—That is altogether.

Chairman.

18327. Supposing that you do not get more than your 4,000 *l.* from this appeal, what then; are

16 March 1891.]

Mr. COOTE.

[*Continued*]*Chairman—continued.*

are the tradesmen anxious to be paid?—The tradesmen are anxious to be paid, and the only way will be to issue another appeal; that is the difficulty, continually appealing and appealing; and it is a very difficult cause to appeal for.

18328. Then if you did not get the money you require you would have to shut up your beds?—Yes, that will be the only thing to be done.

18329. At present you are working all your available beds?—We are working all our available beds and refusing no cases. Our beds are not full; we can make up 140 beds; we have 103 or 104 patients in the hospital at the present time. I do not know whether I might mention why the Hospital Saturday Fund have increased their grant, trebled their grant, to our hospital. They take a very great account of the evening attendances for out-patients among the working classes, and as we opened in the evenings they have increased their grant; their own contributions have doubled, and their grant to us has trebled within three years.

18330. Is that very popular with patients, opening it in the evening?—Extremely so; formerly there were numbers who had to give up their day's work to come to the hospital.

Earl Cathcart.

18331. I do not know why you are so entangled with your chaplain's house and chapel; could not those be converted into part of the hospital if they were wanted?—There is no doubt of it, but the chapel we have nothing to do with now.

18332. You give the chaplain a house?—What we give him corresponds to 200 *l.* a year; I do not think we could give him less. The chapel is quite independent of the hospital at the present time; the congregation meeting there relieve the hospital altogether, so that we do not take it into account.

18333. And a house?—No, that house is in lieu of 100 *l.* a year.

18334. The chapel might be converted into part of the hospital some day if you have no money:—It would be possible but we have two large empty wards now.

18335. But your Lock patients never go into the hospital chapel?—Our Asylum Home patients have accommodation provided for them in the chapel.

18336. Then you have distinctly given up the idea of selling land?—We have never had a definite offer to sell. The board have been asked whether they would be willing to sell; we heard then that 1,200 *l.* would have been offered, but we were told that we should have to invest it in Consols, and it would have been of very little purpose to us.

18337. But in your opinion it would be a misfortune if that land were sold?—I think it would be a very great misfortune to the hospital.

Earl of Kimberley.

18338. What is the principal difficulty in your subscriptions?—Undoubtedly the character of the hospital. It is very difficult to mention the needs and the claims of the hospital in such a

Earl of Kimberley—continued.

way as to draw the interest and support of the public.

18339. Do you think that people have been influenced against subscribing to the hospital by the strange theory that some people hold, that people who contract these diseases ought to suffer the punishment of them without any relief from charity?—No doubt there is that; and there is another view held by some people; that they do not like to subscribe to a hospital when they know that part of the money they subscribe may go to propagate the very evil that they want to cure, because a certain number of our patients go out uncured.

18340. The fact being that it does not aggravate the evil in those cases, but that it leaves the disease where it was?—One or two who have given liberally to other hospitals have said they would not give because a third of their money might go to propagate the very evil which they wished to cure.

18341. Their argument is that if the disease is palliated, the woman can return to her evil courses, whereas if she was left diseased she could not?—Yes, but she often does.

Earl Cathcart.

18342. There are many pious people who think that this disease is sent by Providence to prevent sin, and therefore it is a wicked thing to interfere with it; that is said?—That is distinctly said.

Chairman.

18343. Have you any idea what proportion your expenses of administration form as compared with the whole expense?—I cannot give it you in percentage, but it is not heavy. Our management expenses are not heavy as compared with other hospitals.

18344. How can you compare them with other hospitals when you do not know what they are?—To begin with we have two clerks and my own salary, which are practically the management expenses, because we would include in the maintenance expenses the nurses and the matron, also we include the cost of the residential medical officers in the maintenance expenses; so that our management expenses are not heavy.

18345. Are they 10 per cent. of the whole expense?—Certainly not the actual management expenses.

18346. Is there anything else you wish to say?—If I might be permitted to say so, I have had the statistics made out for the last 12 months. I was asked the other day if we could tell at all what proportion of those who come to us were rescued. Last year there were 731 admitted to the Female Hospital; 83 of those entered our own Asylum Home; 181 were sent by us to other homes, and 290 were received by their friends; so that out of the 731 cases that came to us last year we only really lost sight of 177.

18347. How long do they stay in the Asylum Home?—They stay in our home 12 months, sometimes longer; but that is the rule, that they should stay there for 12 months.

18348. Is that Asylum Home adjoining the hospital?—It is under the same roof, part of the same building, but under a different matron.

3 B 4

18349. Have

16 March 1891.]

Mr. COOTE.

[Continued.]

Earl of Kimberley.

18349. Have you been able to follow those cases afterwards at all, so as to know whether these women remained reformed?—Those who go through our own home we are able to follow, and do follow them. I had statistics the other day for 10 years, very satisfactory statistics indeed. They had been followed for 10 years. Some of them are respectably married; one woman respectably married to a tradesman came back to us for a servant to the very home she had been trained in, saying she would rather have a servant from the home she had been through than from anywhere else. We have had many cases like that in the home. We had last year 83 that we passed into the home from the hospital; 44 of these were sent to service, 15 were restored to their friends, and eight of them were passed by us on to other homes.

18350. And with regard to your subscriptions, are they for the two separate objects, or are they for one?—Our rule is that we divide the subscriptions in this way: if they are sent for general purposes we give one-third to the home, if it is not specified to the contrary, and two-thirds to the female hospital.

18351. Then you may fairly use this argument that they are not subscribing merely for the purpose of curing the disease, but also for the benevolent purpose of reforming them?—We do use the argument as far as we possibly can.

18352. In point of fact it is an essential that there should be a hospital in connection with the asylum?—We receive no patients into the asylum unless they have previously passed through the hospital; then they are under hospital medical treatment, when required, as long as they are in the home.

18353. What is your practice in passing them on to your home?—The moment a patient expresses a wish to reform, we use every effort we can to induce her to go there; she is moved from whatever ward she may be in into what is called our Kinnaird Ward (called after the late Lord Kinnaird, who took a great interest in the work, as also does the present Lord); she is placed in that ward, taken away from her old surroundings. We have 12 to 20 patients in that ward; they are kept in that ward until they are practically cured of the disease, at least, as far as the medical men can say that they are cured; they are then passed on into our home, but not passed into the home till they are really relieved of the disease. There they have a year's training, are provided with an outfit, and go into service.

18354. If they have a recurrence of the disease are they still kept in the home?—If there is a bad recurrence we have a home ward in the hospital on purpose for those cases, so that they do not get mixed up with the hospital cases; and if it is not a bad recurrence, they are seen by the house surgeon from time to time as required.

Earl Cathcart.

18355. But the women in the home, I suppose every now and then go away?—Yes, a few of them do; they take their own discharge, perhaps five or six in the year.

Earl Cathcart—continued.

18356. You are obliged to let them go?—Yes.

18357. And every now and then when you think you have almost completed your work, at the last moment some bad woman comes and takes a lot of them away?—That is in the hospital, but in the home such women would not have any communication with them.

Chairman.

18358. Have you anything further to add?—If I might mention the male hospital, the out-patient department, I find that we have now 1,200 men who are under treatment, 1,200 men who come probably once a fortnight until they are cured; we only have 150 women; whilst in the in-patient department we have, as I mentioned, only 20 beds for men, and 140 for women.

18359. Your male beds are always full, are they not?—Not always; they are generally full; there was an average of 14 full last year.

18360. And the female beds?—An average of about 100.

Earl of Kimberley.

18361. How does that great difference arise?—It is rather a medical question. I mentioned the other day that the work of the men is different, of course, from the way in which the women earn their living; because the men are most of them in employment, and they do not like to be kept out of employment, so they will attend as out-patients as long as they can possibly go on with their regular occupation.

Earl Cathcart.

18362. The reason that women do not go to the out-patient department, I suppose, is that they do not like the publicity?—No, they do not like the publicity; we tried an evening for females, thinking we might get them to come in the evening; but they would not come then; probably there was a reason for that; we have two afternoons in the week for them now. They are kept entirely distinct, of course, from the males, and are seen on different days. We do not give any of the contributions given to us to the males; unless they are specially given us for the male hospital, we do not give them to the male hospital. I was asked the other day whether I did not consider that it increased our working expenses having the two hospitals. Of course to a certain extent it does. Your Lordship has asked me whether we could have the male hospital up at Harrow-road. We could not have the out-patient department up at Harrow-road.

18363. That question was suggested to me, but I saw that it would be much more convenient at Soho, and it would be difficult to have it at the Harrow-road?—Yes. There may be a little more working expenses from there being the two hospitals, but we cannot combine them. We should be obliged to have a separate place for out-patients.

18364. I quite agreed with you in that respect?—Then I was asked the other day about the nurses' hours. Our nurses are on practically for

16 March 1891.]

Mr. COOTE.

[Continued.]

Earl Cathcart—continued.

for about 13 hours a day, but they have time off for meals; they have from eight to nine for breakfast, one till two for dinner, and from half-past four to five o'clock for tea.

Chairman.

18365. I think the question was asked last time you were here, but I do not happen to find it. Do you make any inquiry into the circumstances of the people?—We do make inquiry into that; we always make inquiry as to the class of patients whether in or out; we do not take cases in if they appear to be suitable for a medical practitioner. We have had cases sent us from all parts of the country. I was mentioning the other day that we had many sent us from country unions. We received one this morning from Dartford, one on Saturday from Tenterden in Kent. We often have this said when a case is sent to us: "Whatever you do, do not send that case back to our neighbourhood," and are implored to keep the case and pass it through our home. We cannot always do that, but we do so as far as we can. We had a case sent from Hay in Brecknockshire the other day; a poor girl, an orphan, living with her grandfather; it was a terrible case, and they said they would not have her back on any consideration. She went into our home and is now doing well, and came back for her guinea after a year's service. The board always give a gratuity of one guinea for the first 12 months' faithful service.

18366. Does that come out of the funds of the home?—It may be reckoned to come out of the funds of the home; it is always charged to the home.

Earl of Kimberley.

18367. Do you think that such a law as this is practicable; I mean, would public opinion be likely to sanction it; that when a case of the kind we have been speaking of occurs in the workhouse, the patient should not be able to discharge himself or herself, until he or she was cured?—I do not know what public opinion would be about that; I am sure it would be a very good thing. You mean unless they were passed into some kindred institution.

18368. Yes. Supposing that anybody who has relief in the workhouse as being destitute is then afflicted with this disease, my question is, whether it is not possible to say that that person should have no power to discharge himself till he is cured?—Very few unions have lock wards.

18369. But still unions are obliged to take in destitute persons, and amongst those destitute persons there are certain to be from time to time some afflicted with venereal diseases?—We receive cases from nearly all the metropolitan unions sent to us on their order.

Earl of Kimberley—continued.

18370. That is voluntarily; but I meant this, a person comes into the workhouse and remains there till he discharges himself, which he has a right to do; the question is whether you might not treat that disease as a reason for not allowing him the discharge of himself till he was cured?—I only meant that a very great number of these cases are sent to us by the workhouses, and we have to settle with them. The workhouse would not keep the case in all probability.

18371. But if such a regulation was made it would naturally apply to persons wherever they were maintained, whether it was in the workhouse or not?—If it did it would be a very good rule.

18372. But it would apply only to persons who had gone into the workhouse voluntarily because they wished for relief?—Yes.

18373. It might not be open to some of the objections that are made, because it might be argued that it is simply an infectious disease, and that a person having an infectious disease ought not to be discharged from the workhouse till cured?—That might be argued.

Earl Cathcart.

18374. I thought of a magistrate having the power of issuing a warrant for detention; but in the case of a voluntary hospital that would tend to prevent people going there?—It would.

Lord Thring.

18375. Supposing you made it a condition that when a woman came in of her own will into your hospital she should remain there till she was cured, do you think that would be an absolute prohibition on their coming in?—Do you mean in reference to the women themselves?

18376. The women I am referring to principally now: supposing you made it a condition, "If you come into this hospital it is understood that you are not to go out till you are cured," do not you think that that would prevent women coming in?—I should think it would; they would probably look upon it in the nature of a prison.

Chairman.

18377. Did you furnish us with the number of out-patients last year?—I gave the total number of out-patients. There is another point which I should like to mention. I was asked a question in reference to the number of prostitutes; I made a mistake in my answer, but corrected it in the proof which was sent to me. About 80 per cent. probably of those who come to us are known to be prostitutes.

18378. Is there anything else you wish to state to the Committee?—No, there is nothing else.

The Witness is directed to withdraw.

16 March 1891.

[*Continued.*]

Mr. BUXTON SHILLETTOE is re-called ; and Examined, as follows :

Earl *Cathcart*.

18379. Do you happen to know anything about the prevalence of quackery in connection with this disease ?—There is a great deal of that, of course. In the beginning of these diseases they are often treated by chemists.

18380. But there is not only the chemist ; there is also an especial class of quack who advertises all over the country ?—Yes, they used to do so.

18381. Upon every gatepost and dead-wall, and retiring place those advertisements are placed ?—They used to be ; that is stopped now to a large extent.

Earl *Cathcart*—continued.

18382. But they use dangerous and violent remedies, do they not ?—I know very little about that. I do know the fact that the advertisements to which you refer used to be very much more prevalent than now ; handbills used to be distributed in the street.

18383. You do not know anything about the improper treatment of the disease by violent injections ?—No ; they used to use very strong injections. It was the absence of proper treatment I think that did the harm, rather than neglect.

The Witness is directed to withdraw.

Ordered, That this Committee be adjourned to Thursday next, Twelve o'clock.

Die Jovis, 19^o Martii, 1891.

LORDS PRESENT:

The LORD ARCHBISHOP OF CANTERBURY.
 Earl of LAUDERDALE.
 Earl SPENCER.
 Earl CATHCART.
 Lord ZOUCHE OF HARYNGWORTH.
 Lord SAYE AND SELE.

Lord CLIFFORD OF CHUDLEIGH.
 Lord SANDHURST.
 Lord SUDLEY (*Earl of Arran*).
 Lord MONKSWELL.
 Lord THRING.

THE LORD SANDHURST, IN THE CHAIR.

MRS. FLORENCE MARIE TAYLOR, is called in; and, having been sworn, is Examined, as follows:

Chairman.

18384. You were formerly matron at the Consumption Hospital at Brompton, were you not?—Yes.

18385. How long did you hold that appointment?—For nine years and-a-half.

18386. And were you a trained nurse before that?—Yes; I had charge of a hospital before that.

18387. Where was that?—In Tasmania.

18388. And did you learn your nursing there?—No, in Sydney; I was trained in Sydney under some sisters whom Miss Nightingale sent out; and from the Sydney Hospital I was appointed matron of the Hospital in Tasmania.

18389. Was it the Alfred Hospital in which you were, in Sydney?—No, the old hospital in McQuarrie-street. The Alfred Hospital was not built then.

18390. How long is it since you resigned your appointment at the Brompton Hospital?—A fortnight.

18391. Therefore the rules that are in force now were in force when you held the office of matron?—Yes, as far as I know; I have not been to the hospital since, but I do not know that any change has been made.

18392. Would you tell us what your staff was at the Brompton Hospital?—I should think about 70 or 75. It varies a little; sometimes we have extra probationers.

18393. Is that because of the wants of the hospital, or merely because they happened to be engaged?—We have several nurses whom we send out to private cases, and we train a great many of them ourselves.

18394. How many nurses have you on your private nurses' training list?—About 40.

18395. Would you ever take a nurse out of the wards to go out as a private nurse?—I do not know that I have ever done so since the

(24.)

Chairman—continued.

private nursing has been regularly established. I may have done so, but, at this present moment, I really could not remember to tell you. I would not say that I had not done it; but it is not the usual thing to do at any rate. They are quite separate, the private nurses and the hospital nurses.

18396. But there is no rule that nurses should not be taken from the wards, and sent out as private nurses?—No, there is no rule to that effect; but the doctors dislike changes in the wards.

18397. And if you did take nurses from the wards to send out to private cases, would it not rather denude your wards of nurses?—Yes; the doctors dislike frequent changes in the hospital very much. If I constantly took nurses away to go to private cases they would make a complaint.

18398. We were told that your working average of beds was about 300, I think?—I fancy about 321. They are nearly all occupied; we seldom have an empty bed.

18399. And your staff, you say, is about 70 or 75?—Yes.

18400. Do you consider that sufficient?—For our patients, I do; because they are nearly all of them able to be about. There are very few of our patients in bed, they are nearly all of them about; and many are able to go down into the grounds, and they help themselves a great deal, and they wait upon themselves and do light duties in the wards; they dust and do little things like that.

18401. You spoke of the hospital in McQuarrie-street, Sydney; is that a general hospital?—That is a general hospital; and the hospital I was at in Tasmania was the only one in Hobart, which is the capital; they took in every sort of

3 C 2

case

19 March 1891.]

Mrs. TAYLOR.

[Continued.]

Chairman—continued.

case because it was the only hospital. I was there for five and a-half years.

18402. You have had experience, therefore, of general hospitals. Do I rightly understand you to say that at the Brompton Special Hospital for Diseases of the Chest, &c., the nursing staff need not be so large as in the general hospitals?—No, it need not. In a general hospital you give one nurse to every eight patients; we give one nurse to about every 12 patients.

18403. What do you charge for your nurses who go out to private cases?—The highest charge for special cases is two guineas a week, but the general charge is a guinea-and-a-half; but when we nurse for institutions we charge them very much less than that. We nurse for a great many institutions.

18404. When you say institutions, do you mean small hospitals?—When hospitals, like St. Mary's, and the various children's hospitals all over London, want extra nurses we supply nurses to them; and we always reduce our terms for hospitals.

18405. How long do you train your nurses before sending them out?—They are supposed to be trained for three years, but occasionally I have sent out a nurse before that time. For instance, in the case of a nurse who is trained in rubbing, I send her out during her first year, because Massage is quite a separate thing. You learn it and you do not want three years' experience.

18406. But you send your nurses out to all sorts of cases?—Yes, all sorts of cases.

18407. Surgical as well as medical?—Yes.

18408. Do they get their surgical training in your hospital?—No, very little surgical training in our hospital. Some of the private nurses come to me already trained; quite half of my private nurses were trained at other hospitals; and then others get their experience by nursing in general hospitals. They take it in turns to go to these general hospitals that we nurse for, and they stay as long as they are wanted. I generally give each nurse three months at a general hospital.

18409. Do you consider that that is enough to enable her to learn surgical nursing?—Yes, if she is a good medical nurse to begin with.

18410. At any rate you have no misgiving in your mind that your nurses are insufficiently trained in that respect?—I have never sent one out that I considered insufficiently trained, and I have never had one complaint of a nurse that I have sent out to a private case.

18411. Supposing there were an epidemic amongst your own nurses in your hospital would you draw upon your private nursing institute to fill up their places?—We never had such a thing; but my private nurses have taken their places when they have gone away on their holidays. I may say that we have never had an epidemic in the hospital since I have been there.

18412. Suppose, for some reason or other, some of your hospital nurses were off duty, how would you supply their places?—Then I should put some of the extra probationers on. We have a great many extra probationers.

Chairman—continued.

18413. Quite sufficient to meet any possible demands?—Quite.

18414. But then those probationers might have had very little training, might they not?—We pick out the best, you see, to put on staff nurse's work, and leave the other probationers to do their own. We always give the staff nurses' work to the probationer who has been longest in the hospital. For instance, if a nurse is away for a holiday and we are a little pressed, we make a staff nurse for the time being of a probationer.

18415. Are those paying probationers?—No, they are not; we pay our probationers. We pay them all; we have no unpaid probationers. We occasionally have what we call voluntary helpers; those are ladies who give their services for one year and receive no salary. We provide them with a home and uniform and training, and they give their services for the first year; but we have very little room, and we only can have three of those at the most; we never should keep more than three.

18416. They receive their board and lodging and give their services?—Yes.

18417. And get their washing and their uniform?—Yes.

18418. At the end of that year do you give them a certificate?—No; if they are suitable for staff nurses we put them on as staff nurses and then we pay them a salary; if they are not suitable then they leave at the end of that year, but they receive no certificate. We never give a certificate under three years' training.

18419. Will you tell us what salaries your nurses get. First of all, will you state what are the different grades; there are sisters?—There are sisters; those begin at 30 *l.* a-year and increase to 40 *l.*

18420. First of all, there is the matron?—Yes, as matron, I receive 150 *l.*

18421. And who was under you?—My house-keeper comes next; she has 40 *l.* Then there is the home sister, who begins at 35 *l.* and increases to 40 *l.* a-year, with washing and uniform.

18422. Then, are there any night superintendents?—Yes, two night superintendents; they are generally called sisters. They have been with me some time; but they began at 30 *l.* and increased 2 *l.* a-year up to 40 *l.*

18423. How many of those are there; two?—Two night superintendents; seven day sisters, beginning at 30 *l.* and increasing 2 *l.* until they reach 40 *l.*

18424. And then staff nurses?—Staff nurses; they generally begin at 20 *l.*, but occasionally we give them a little more, and they increase to 25 *l.*

18425. Also they have uniform and washing?—Yes, all have uniform and washing; and the private nurses begin at 25 *l.* and increase to 30 *l.*

18426. Do the private nurses get any commission on the money that earn?—No, that would be hardly fair; because some of the nurses are sent to long cases at a guinea a week, and then if the other nurses are nursing two or three fever cases at two guineas a-week it would be very unfair to give the nurse who is only receiving a guinea a-week because she has a long case a less commission

19 March 1891.]

Mrs. TAYLOR.

[Continued.]

Chairman—continued.

commission than the other; so that we decided not to give a commission on the money earned.

18427. Do they get any bonus at all?—No. They have always been perfectly satisfied; they have never asked for anything, or for anything extra, at all.

18428. How many staff nurses do you employ in the hospital?—Night and day, together do you mean?

18429. Yes?—About 17 or 18.

18430. And then probationers, how many?—They vary so; sometimes we have about 20, and sometimes 16; they are always varying. We train a good many for our private nursing, and I could not exactly tell you how many there are of them, because we have no fixed number. Some few are not suitable; then they go, and others take their places, and so the probationers are always changing; so that you could not fix the numbers for them.

18431. And what salary do they begin at?—They begin at 10 *l*.

18432. They begin at 10 *l*, and do they continue at that till they become nurses?—No, it just depends upon the nurse's own capabilities. If she is a capable good nurse, at the end of six months her salary is increased to 18 *l*, and if she is rather slower, more troublesome to teach, they do not increase her salary till the end of the year, till her 12 months is up. It entirely depends upon the nurse herself, and what her capabilities are. Some of the nurses who are rubbers are sent out to rub patients before their year is up, and then we always increase their salaries, because, of course, their expenses are greater.

18433. Do your nurses get any pensions at all?—We have never had such a thing; we have some nurses who have been 20 years with us. When they get disabled, of course they will get a pension, but we have never had any reason to pension a nurse.

18434. Then, in the event of these nurses who have been with you a very long time leaving, their cases would be considered by the committee?—Yes, because in other cases that were deserving pensions have been given. We have a former gate porter who still has a pension from the hospital; and also a matron who was resident there for many years, still has a pension from the hospital. So that I am quite sure there would be a pension provided for a nurse who had been a long time in the hospital.

18435. But your committee do not take part in the National Pension Fund?—No, not that I know of; and I should know it if they did.

18436. Can you tell us the hours of the nurses?—The nurses go on duty at seven in the morning, and they come off at nine at night; and they have half-an-hour for every meal.

18437. How many meals have they?—Dinner and tea.

18438. Breakfast?—The breakfast is at half-past six; they have that before they go on duty. Breakfast is at half-past six, and prayers; and they go on duty at seven, and then they have half-an-hour to dress; they go off duty for half-an-hour to dress.

18439. At what time is that?—The staff nurses go off at half-past 10 and have half-an-hour to dress, and then half-an-hour for dinner. They

(24.)

Chairman—continued.

are off duty from half-past 10 to half-past 11; and the probationers in the same way; their dinner (that is the second dinner) is at 12; they go off from half-past 11 to half-past 12.

18440. They have an hour?—Yes, in the morning. Then in the afternoon the probationers have their recreation time from 2 till 4, and they go on duty at half-past 4, because at 4 o'clock they have tea; so that is two hours and a-half in the afternoon. And then the staff nurses have tea at half-past 4, and stay up during the tea or go to their rooms till 5.

18441. So that they have half-an-hour for tea?—Yes, they have half-an-hour for tea. Then they have recreation from 6 till 8 every other evening; and I believe they have two hours every day now; it was to have been arranged directly our building was opened again that they were to have two hours every day.

18442. When was that alteration made, within the last year?—No, because we have not had bedrooms to get the extra nurses; we had to close the hospital, you see, for cleaning, but the alteration was to have been made, and I think it has been made since the hospital has been opened again. I know it was all to be arranged when I spoke to the new matron about it.

18443. Do they have any supper?—Yes, they have supper at nine; they all have supper together. The night nurses go on at nine, and the day nurses are relieved, and come over and have supper.

18444. Now, as to the night nurses?—They go on at nine in the evening, and they come off at half-past eight in the morning.

18445. What meal do the night nurses have?—When they get up they have their supper, at half-past eight.

18446. In the evening, you mean?—In the evening, before they go on duty. Then, they have two meals in the night, and they have a hot dinner at 11 o'clock, with the day nurses.

18447. And where are these meals in the middle of the night taken?—They generally like to take them in the recess; they can either have them in the little kitchen, or in the recess. But our hospital is rather differently built from a general hospital; we have galleries, and in the gallery there is a large recess where the patients have their meals, and the nurse generally sits in the recess, so that she can hear any one who knocks or rings, and she generally has her meals there.

18448. Are the meals for the nurses cooked in a separate kitchen from the general hospital kitchen?—No.

18449. There is only one kitchen for both purposes?—We have two kitchens, one in each building, but the food of the nurses and of the doctors and of all the officials is cooked in the same kitchen as the patients' food. They are most beautiful kitchens.

18450. Does any high official dine with the nurses?—No; the home sister presides at their table; the home sister carves all their dinners and gives them their supper and their breakfast.

18451. Does she dine there too?—Yes, she takes the head of the table and carves for them.

3 C 3

18452. Then

19 March 1891.]

Mrs. TAYLOR.

[Continued.]

Chairman—continued.

18452. Then supposing that there was anything wrong in the food the home sister would discover it, for she dines at the same table?—She would discover it instantly. And the housekeeper takes one meal; she takes the first dinner and the home sister takes the second, and I have never, during all the years I have been there, had any complaint of the food at all. We give our nurses a very varied diet; they have puddings every day, and vegetables twice a week; soup twice a week, and vegetables in the soup; so that they have vegetables four times a week. I have never had one complaint about the nurses' food.

18453. Never in all your nine years' experience?—Never one single complaint.

18454. Do you think any complaint has been made to the home sister or the housekeeper?—I am perfectly certain if it had I should have heard it directly, because they would have told me directly. Moreover, it is of course part of our treatment for the patients that their diet should be especially good; and we all fare alike. All the nurses have fresh butter; they always have bacon or an egg every morning for their breakfast; they always have hot joints, or occasionally a made dish, or steak or so for their dinner, and vegetables twice a week, and puddings always, and always very varied; not only egg puddings, but rolled jam, and jam tarts, and whatever there is that is going they always have.

18455. You have never had any complaint about the bacon or eggs?—No, never.

18456. In all the nine years you have been there?—I have never had one complaint, and I am quite sure I should have heard of it if there had been the least little complaint, because the home sister would have told me directly; and when our nurses have nursed at other hospitals they have been very glad indeed to return to the food that we have given them, and they have always remarked that it is very much better served. Two maids always wait on the nurses.

18457. What do they drink out of, glass or mugs?—Glass.

18458. You mentioned just now that these probationers qualified, as it were, some after six months and some after a year, for nursing?—Not exactly qualified after six months; but what I mean is this: Some of our nurses are very slow to learn, and some are much quicker to take in their work, and to those we are able to give more responsible duties sooner. Their dress is not changed; they are still probationers, but on account of their being able to take other work, more responsible work, we are able to give them rather a better salary. If they go out to rub patients, that means, perhaps, that they go twice a day to a lady's house, they have then to dress a little better, and they wear out more things constantly going out twice a day; and of course we make it up to them in that way; we give them rather a higher salary, because, you see, they are earning money for the hospital by rubbing, and it would not be fair to them not to give them a little more; so we always increase their salary.

18459. Who tests their qualifications to become nurses; do they undergo examination by the staff?—No; the matron can judge by their

Chairman—continued.

work. She goes round every day, and she sees the sister every day, and the sisters are all trained nurses, experienced women, and the matron has to rely a great deal upon what they tell her, as well as upon what she sees for herself. When you are going round a hospital every day in the year you know exactly how a ward ought to be kept, and which nurse is doing her work well, and which nurse is not.

18460. Then practically they are nominated by the matron?—By the matron.

18461. Do they attend any lectures?—Yes, always. The resident medical officer gives two courses in the year, and I used to give them lessons also. The resident medical officer takes the whole of the nurses, half one time, and then all the new ones the next time; but I found it very much easier teaching a small number, so that I always had a class going on; I prefer teaching four or six at a time; you know individually then exactly what a nurse has learnt, so that I prefer to do it in that way. The matron is only supposed to give two courses in the year.

18462. Did you know all your nurses individually?—Oh yes, every one. Then they are taught bandaging in the wards; there are bandaging classes always; in the wards one of the sisters teaches them bandaging. And then they have lectures on testing; those things are always taught in the wards. Then every nurse at the end of her year has a printed paper to fill in, and it is my duty to see that she fills it in, so that I may know exactly what each nurse has learnt in the year.

18463. Do you vary the occupations of your nurses from day to night from time to time?—Yes, they take four months in the women's ward and four months in the men's, and four months on night duty in their first year.

18464. Do you think that is a frequent enough change from night duty?—Yes. Perhaps a nurse will only have one four months in two years, and that same nurse will not go on night duty for two years; but occasionally I have a nurse who prefers night duty and will only come to me as a night nurse. My night superintendent has been on for seven years; and one of my nurses who has never received any pay from the hospital (she is very fond of the work, and she has a little private means) has been on for three years as a night nurse only; she does not care for day work.

18465. As regards the number of night nurses that you have on duty, you told us that the hospital was built in galleries?—Yes.

18466. And how many nurses would you have on one gallery?—Only one on each gallery, unless there were special cases on that gallery.

18467. How many beds would there be on a gallery?—Forty-eight.

18468. Do you consider one person at night sufficient for that number of beds?—Yes, that has always been quite sufficient. If there were a bad case, like tracheotomy, or a bad operation, a special nurse is always put on.

18469. You say that there is one night nurse on each gallery. Has that nurse got any means of communicating with any other part of the hospital?—Yes, there are speaking tubes all over the

19 March 1891.]

Mrs. TAYLOR.

[Continued.]

Chairman—continued.

the building, and there is a night superintendent who goes round every hour.

18470. So that there would be no danger of a nurse having to go away from her gallery to get assistance?—No, she is never allowed to leave her gallery on any pretence whatever; if she wants a sister or any assistance she goes to the speaking tube.

18471. You said just now that your nurses had recreation for a couple of hours?—The probationers from two till four every day, except Sunday, and then they take it in turn to have Sunday evening or afternoon.

18472. And with regard to the nurses, what recreation have they?—They used to have from six to eight three times a week. I believe they have two hours every day now.

18473. Have you ever considered that it might be wise to give the nurses their recreation at an earlier hour, if possible, in the winter time, because it gets dark before six?—Yes; they have two half days in the month, from two in the afternoon to ten in the evening one day, and from twelve in the morning until ten in the evening another day.

18474. What amount of holidays do the nurses get?—Sixteen days; the private nurses get a little more.

18475. Do you think that 16 days is sufficient?—It always has been. My nurses are particularly strong and healthy looking girls; we have very little sickness; and they often get a little extra leave; if their friends are coming up in the day, or if they want to do a little shopping in the daylight, they ask for a couple of hours, and they are never refused.

Earl Cathcart.

18476. You mentioned that you had a long experience in the Colonies, in the Antipodes; did you observe any special feature in those hospitals in the Antipodes that might be of any use to us in London?—No, I do not think so. They are very much smaller hospitals, most of them out in Australia, than we have here.

18477. And much more rough and ready?—Some of them are very much so. Some of them are very far behind the times; they have not thoroughly trained nurses, all of them, yet.

18478. To go to another matter. We have had two examples here of hospitals, which are nursed by religious sisterhoods. Now, speaking from your experience generally in nursing, do you think that where hospitals are nursed by religious sisterhoods they are likely to get as good a class of nurse under them, bearing in mind that the nurses never can rise in such hospitals to be sisters?—I should not think so; I should not think they would get any better nurses, but I have never lived in such a hospital.

18479. I am asking you whether, from your general experience of nursing and nurses, it must not be to some extent a drawback where a nurse entering one of those hospitals can never hope to get to the top of her profession in that hospital; that is to say, she can never aspire to be a sister, because the sisters are all persons belonging to that religious community?—I do not know very much about those hospitals.

(24.)

Earl Cathcart—continued.

18480. But if you were a nurse yourself, you would rather go to a hospital where you could rise by degrees to be at the head of your profession; that is to say to be a sister in charge of a ward?—Yes, I think hospitals are much better not to be nursed by a sisterhood.

18481. In a hospital where the subscriptions are from people of mixed religions and the patients are of mixed religions, it is better, you think, that there should not be any obtrusive religious nursing system?—Very much better, from my point of view.

18482. A lady who was here, whose name I have not the pleasure of knowing, but who is known as Sister Cecilia, told us that all nurses entering hospitals must make up their minds to sacrifice some ten years of their life. Now that is not your experience?—Not at all.

18483. And I hope and trust that the length of your valuable life will not prove to have been abbreviated by your hospital career?—I have had nearly 17 years' hospital experience, but I did not go into it with the feeling that I was going to make any sacrifice at all. It was a very great pleasure to me from the first day until the last.

Earl of Arran.

18484. I suppose in the Brompton Hospital the nurses get no experience in surgical cases?—They are sent to nurse for other hospitals; and there are some of the hospitals that we exchange probationers with. To the matron of the Margate Infirmary, where there is nothing else but surgical work, I send two probationers of mine for three months; and she sends me two of hers for three months to learn medical work; in choosing the nurses whom I send in that way I always pick out those two nurses who are training specially for private work, so that they may have the advantage of that three months. Then at Ipswich there is a little hospital of about 80 beds; I have made arrangements with the matron there; they are nearly always short-handed from one cause or another; and she takes one of my probationers always for three months; sometimes she is there a little longer. In such a case they do not pay that probationer of ours anything; we still pay her her salary, and they keep her in the surgical wards for about three months for me.

18485. Would the training in your hospital be sufficient to qualify a nurse for employment as an army nurse, if she chose?—Oh, yes. I do not think there is any system you could find that grounds nurses better than ours, and my nurses have always been able to get work at other hospitals. I have never had a nurse refused when she applied to get into another hospital.

18486. Have any of your nurses ever gone to the Army Corps?—No.

Lord Thring.

18487. You told us, I think, that the number of nurses you had was in the proportion of one nurse to 12 patients?—Yes.

18488. And that that was rather less than in most hospitals, because they have about eight patients, I think you said, to one nurse?—Eight

3 c 4

is

19 March 1891.]

Mrs. TAYLOR.

[Continued.]

Lord Thring—continued.

is the proper number; a nurse is not able to manage more than eight.

18489. And you account for your hospital only having one nurse to every 12 patients by the fact that your patients are not like those of other hospitals?—Our patients are up and about, so many of them. If they are very ill they require as much, or more, nursing as the patients of other hospitals; but then you see, perhaps, amongst the twelve, there are only three patients who are very ill, and the other nine are up, walking about in the grounds, and being able to help themselves a little bit and help the nurses.

18490. Then, in the number of nurses, do you include probationers; when you say one nurse to 12 patients, do you include probationers in that?—Yes, I include probationers. Every gallery has two nurses and two probationers; some galleries have only 46 patients, but most of them have 48.

18491. When you say a nurse to each 12 patients, is that a staff nurse to each 12 patients?—There is a staff nurse to each part of a gallery with a probationer under her, and a ward maid for the rough work, and a sister who superintends the whole of it. One sister in charge, two staff nurses, two probationers, and one ward maid for each gallery.

18492. And that you consider to be sufficient?—Yes, it always has been. Sometimes there are more probationers; we find that the work is done equally well with that number.

18493. Then at night, what have you?—We have only one nurse on duty at night on each gallery, and one sister in each building; one sister in charge or night superintendent in each building.

18494. And how many patients did you say that there are in a gallery?—Forty-six in some and 48 in others.

18495. Then, as I understand it, at night to 46 patients there is really only one nurse?—Yes, unless there is a very bad operation case, and then there is an extra nurse put on; or if there is a patient delirious there is an extra nurse.

18496. Supposing in a gallery you happen to have three or more patients very ill, do I understand that you think one nurse is sufficient then?—One nurse has always been sufficient with the help of the sister.

18497. But how can that be; surely consumptive patients when they are really very ill, are terribly ill, are they not?—Yes, but their wants are not so urgent as the wants of some of the other patients. They lie very quietly you know. Sometimes if we have a bad heart case the patient is restless and that; but as a rule our consumptive patients are very very quiet, never restless or anything like that.

18498. Are consumptive patients never delirious?—They wander a little, but seldom to the extent of getting in and out of bed, or anything like that.

18499. Then I understand you to say that in your opinion one nurse is sufficient at night for these 46 or 48 cases?—It always has been; we have plenty of nurses; if there is an extra one

Lord Thring—continued.

wanted she is put on immediately. If a heart case becomes troublesome in the night (they are our worst, and we sometimes have a great many of them), then an extra nurse is got up; and if a case suddenly becomes troublesome in the daytime, or is bad in the daytime, then an extra nurse is called, generally a probationer.

18500. Then with regard to the food, I understand that in the nine years that you have been there you have never had any complaint of the food at all?—Never one.

18501. Not on the part of the patients?—Yes; but I was not asked about the patients; I have only been asked about the nurses.

18502. You are quite right. You have had complaints on the part of the patients about the food?—Several times.

18503. And those have been attended to?—Always inquired into at once.

18504. But you have never had any complaint on the part of the nurses?—Never, or the servants.

18505. With reference to the nurses' food, what is their breakfast?—Always bacon or a boiled egg; they never have any variety at breakfast. They have cold boiled bacon on Sunday, eggs twice in the week, and fried bacon every other day.

18506. It is quite impossible then that they could ever have had bread and dripping for breakfast?—No, they never have had that.

18507. There has never been such a thing at the hospital as bread and dripping given to a nurse for breakfast?—Not for breakfast. One or two of them have occasionally asked for some dripping for tea; but that is never put on unless it is asked for, and never for breakfast.

18508. They have never on any occasion, except they asked for it, had dripping?—Never on any occasion, unless they have asked for it.

18509. You are quite certain of that?—I am quite certain of it, quite positive of it.

18510. Then, do I understand you to say that the bacon and eggs themselves are good; who is responsible for their being good?—My housekeeper; it all comes through her hands, and we use the same at the table of the officials.

18511. Do I understand you to say that the housekeeper has never told you that the bacon and eggs were bad?—No. Occasionally there is a bad egg, and it is always returned to the store. You cannot always be sure beforehand whether it is good; but if there is a stale egg (and you cannot help there being several), then the contractor will exchange them always.

18512. But it is quite impossible that any nurse could ever have cause to say that the bacon was frequently bad, and the eggs frequently bad?—I never heard a nurse say so; and I know she could not say so of the bacon because I had it always myself. We have exactly the same bacon at our own table now.

18513. You are quite certain, by your own personal experience, that it is quite impossible that the nurses have had cause to complain that the bacon was either habitually or often bad?—Quite positive.

18514. Then

19 March 1891.]

Mrs. TAYLOR.

[Continued.]

Lord Thring—continued.

18514. Then what do they have for dinner?—They sometimes have joints and sometimes they have steak, or rabbit sometimes; we always vary it.

18515. I think we were told that you have a great deal of mutton?—Yes, for the patients nearly every day; but not for the nurses.

18516. Then, with regard to supper, what do the nurses have for supper?—Bread and cheese, or meat or hash; if there is any cold meat it is minced for them, or made into a little hash and sometimes into a pie.

18517. What do they have to drink at supper?—The night nurses have tea and the day nurses have milk or water, whichever they like.

18518. Is milk always provided for the supper?—Every nurse is allowed a pint of milk a day, if she likes; she is allowed half of it for dinner and half for supper, if she drinks milk; they do not all drink it.

18519. If not, they have water?—Yes.

18520. When you say a pint of milk a day, you mean exclusive of what they use for breakfast and for tea?—Yes, the milk for the tea and the breakfast is quite separate from that.

18521. And you never heard any complaint of the food being insufficient from the nurses?—Never.

18522. Or the milk not being supplied in the proper quantity, the pint?—Never. It is all helped out before they come into the room.

18523. You are as certain as the head of an establishment can be of anything, that it is not so, at least that it has not been so?—I have never heard any complaints as to the food, the quantity or the quality, since I have been there, and I am quite certain that I should have heard if there had been any reason for them to complain.

18524. And to whom would they have complained?—The nurse probably would come to me herself, or she might tell the home sister, and then in that case the home sister or the house-keeper would tell me; but very probably the nurse herself would come to me.

18525. Then I understand on this point that you are certain of two things; you are quite certain that if there was anything to complain of the complaints would have been made to you?—Yes, I have always found that when there have been complaints to make of other things, they have never been at all backward in making them to me. I was always there every morning from half-past nine to see every nurse who liked to come to me.

18526. And therefore you are certain this cannot have occurred?—I am quite certain any nurse would have come to me if it had occurred, or would have told the home sister; I am sure of it.

18527. How many ward maids have you; do you distribute them according to these galleries which you have spoken of?—We have seven, one for each gallery.

18528. And what are the duties of the ward maids?—The ward maid scrubs or polishes. The old hospital has boarded floors and the new hospital, the south wing, has polished floors.

18529. I will take the new hospital please; (24.) e.

Lord Thring—continued.

what does the ward maid do there?—She does washing up for the patients, the greasy things and dishes, and she cleans all the wards and the grates.

18530. Take the washing up; if the ward maid happened not to be there, would the nurse be called in to wash up?—No; if anything happens to a ward maid, a charwoman comes; we employ seven charwomen, and a charwoman is sent up in such a case.

18531. Therefore it is never the duty of a nurse to wash up?—No.

18532. You are certain?—Never, unless perhaps in this way: a ward maid has her day off occasionally, and on her day off the nurses wash up; that comes once a month.

18533. Then the washing up by nurses is confined to once a month?—Yes, the day that the ward maid is off duty the nurses wash up for her.

18534. Then with respect to the polishing of the wards, who polishes them?—The ward maid does them all.

18535. Supposing that the ward maid is away and that the charwomen also is away, does not the nurse do it?—No.

18536. Never?—There is a certain amount of polishing that the probationers do always.

18537. I may have made a mistake in saying "nurse" instead of "probationer." What amount of polishing do the probationers do?—There is a large recess, that is always done by the ward maid; and then there are two little passages leading round the corner which are done by the probationer. The new building is the shape of an E; the recess forms the little stroke going across the centre of the E; that is done by the gallery maid; and the other part, the angle at each end, the probationer does.

18538. Why does the probationer do it, surely it wastes the time of the probationer to do that work?—Every probationer has to learn to do a certain amount of dirty work; she is learning to teach others.

18539. How many years does she polish the floors?—For one year.

18540. And how does she polish them?—She has a polisher; it only really wants rubbing over; the gallery maid does it once a week; that is to say, she lays on the polish for her once a week and does it thoroughly, and then the probationer has to rub it up and see that it is kept clean for the rest of the week; that applies to the angle at each end.

18541. With regard to the way in which it is done, it is done, is it not, as it is abroad; it is done by a brush on the foot?—No, we do not do that; that is the way it is done abroad.

18542. How do they do it there?—We have one of those heavy weighted things with a joint at the end of the handle which swings.

18543. It is extremely heavy work, is it not?—It is quite a knack; until you get into it, it is a little heavy.

18544. Is it not extremely heavy?—I should not call it extremely heavy, because I had to do very much worse when I was training.

18545. That may be; but is it not heavy work?—I should not really call it heavy work.

3 D

18546. Do

19 March 1891.]

Mrs. TAYLOR.

[Continued.]

Lord Thring—continued.

18546. Do you think it fit work for a young girl?—I do; I think it very good that they should begin at the beginning, and work their way up, and learn how to do the work, so that they may teach others. If they do not learn they will never be sharp nurses.

18547. What on earth has polishing floors to do with nursing?—Cleanliness is the very first thing in nursing. If a woman cannot keep her wards and her lavatories and galleries clean she will never make a good nurse.

18548. I thought that the ward-maid did all that is commonly called dirty work?—It would take one ward-maid all day long to polish those immense galleries and all those wards; and if she gets a little help she is able to get off for about two hours in the afternoon.

18549. Then the probationer is sacrificed to the ward-maid?—We do not call it sacrifice, because in every hospital you will find, I am sure, that the matron will tell you the same thing, that a nurse has to learn herself to be able to teach others.

18550. Do the probationers ever polish the grates?—No.

18551. Does she ever clean the grate?—No, never.

18552. You are quite certain?—Certain; she never has done such a thing. If the ward-maid happens to be ill, always one of the charwomen is sent up. We have seven who come in every day.

18553. But would it be too much for a large hospital like Brompton to have another ward-maid, instead of the probationers during this polishing?—There would not be sufficient work for another ward-maid; it is only half-an-hour that the work you refer to takes.

18554. Then if it only takes half-an-hour, why should not the ward-maid do it?—That is how the work is divided; the nurses do their own little lavatory, and then a little polishing in the angle at each end of the gallery.

18555. Now to go to another matter: Who is the present chaplain of the hospital?—Mr. Hall.

18556. How long has he been there?—He has been there a year last January.

18557. Do you know why the former chaplain was removed?—He resigned.

18558. With respect to the attendance on people dying, does the chaplain attend regularly, always?—Yes, certainly; he is round the galleries every day of his life, and for a sick patient he is constantly up three and four times a day.

18559. And if the chaplain is wanted, he is accessible at all times?—Yes, we always send for him night or day; if there is the least wish expressed to see him in the middle of the night he is instantly sent for, both our own chaplain and Father Morris, the Roman Catholic priest; they are sent for at all hours.

18560. And as a matter of fact when people of the Church of England persuasion are dying, do you usually send for the chaplain?—He always knows the sick ones, unless it is something very sudden, because he is there every day.

18561. Then I may take it from you that the

Lord Thring—continued.

chaplain attends as a general rule the death-bed of every person of his own persuasion?—Every one.

18562. You know that of your own knowledge?—I know that; I have seen him every day when I was going round, myself, and I have seen him every day on the galleries.

18563. Have you got a mortuary?—Yes.

18564. And when the patients die, is there a post-mortem examination held?—I believe that is at the discretion of the pathologist. I do not know much about that department, but we have a pathologist, and if he thinks it is necessary, I believe he holds a post-mortem examination, but I never knew whether there was a post-mortem examination held or not.

18565. You do not know anything about the disposition of the body after the post-mortem examination is held?—No, I never knew anything more about it after it left our ward. It is in our care till it leaves the ward, but I have never been in the post-mortem room; I never knew anything about that.

Earl of Lauderdale.

18566. Have you had any difficulty in procuring probationers?—Never; all the years I have been there I have only once had to advertise.

18567. And do you retain any of the probationers after they are fully trained, for service in the hospital?—Yes, all who are willing to stay; we keep nearly all of our nurses.

18568. Is there a large number of them?—Yes.

18569. Out of your whole staff, for instance, how many do you suppose have been trained by yourselves?—Out of all the staff nurses, I think there are two who have been trained at other hospitals; all the others are our own.

Earl Spencer.

18570. Are you confident that in all cases any complaint would be made to you?—From the nurses, you mean? Yes, I am quite sure of that.

18571. Complaints as to the food?—As to food.

18572. There would be no delicacy or fear on their part to come to you?—Not the least; there never has been.

18573. Perfect confidence exists?—Perfect. The nurses come to me about all sorts of trivial things, about their own affairs, or if they think they have a little more work to do; any little at all; there never has been any fear on their part.

18574. Have you known any cases where nurses have left and have made complaints?—To me, do you mean?

18575. Or to other people?—I have never heard of them, if they have.

18576. You would not think it possible that there would be a difficulty about the chaplain, for instance, being brought to the bed of a dying person?—Not the present chaplain.

18577. But could that have happened in former times?—I should not think so; I have never known it happen.

18578. Why

19 March 1891.]

Mrs. TAYLOR.

[Continued.]

Earl Spencer—continued.

18578. Why did you say that with the “present” chaplain there could be no such difficulty?—Because he is so very attentive; he is in the wards every day, and often three or four times a day; but the chaplain that has left did not always go up every day, and he sometimes had to be sent for.

18579. Then you do not think it is possible that a serious complaint could have been made against the chaplain without its coming to your ears?—It might have happened; but in a hospital like that you hear everything; it is like a household.

18580. But everything does not come to the right ears sometimes?—I think I should have heard if there had been anything. I know that nothing has ever happened with this present chaplain because he is there every day; and when a patient is taken suddenly ill he is always sent for and always comes directly.

18581. You have not had any complaint, I understand you to say, of the nurses having to do work like polishing or anything of that sort?—Occasionally when they first come they object to it.

Lord Clifford of Chudleigh.

18582. Is there anybody whose duty it is to inspect the food supplied to the patients?—Sometimes the resident medical officer will go up to see that it is all right; sometimes I go up myself and see that it is all right.

18583. And the nurses?—The sister carves and distributes the food herself to the nurses; the sister in charge of the ward always does that.

18584. And any complaint would be made to her?—Yes; she sees the food and if the bacon has been a little too much done, it has always been saved for me to see. Sometimes it gets a little burnt.

18585. Is the food that is sent to the patients inspected?—Yes; my housekeeper weighs it out in the kitchen before she sends it to each gallery, where the sister distributes it; so that I should either hear from the housekeeper, who weighs it out and divides it to each separate gallery, or from the sister who has to distribute it to the patients.

18586. And you do not think, from your experience, that, as a rule, nurses break down oftener than people in other walks of life?—No, I do not think so; I think that, as a rule, the nurses are a most healthy set of women; their life is a very regular one, and (at least this is my experience) they are very seldom overworked; they may have for one or two days a little extra work to do, and feel a little tired in consequence, but they are never kept at it for a week or a fortnight at a time as people are at other work.

18587. And those who retire from it retire in good health?—As a rule. Most of ours have either married or gone home; it sometimes happens that they are required at home. No nurse since I have been in the hospital has ever broken down, nor have we ever had a death in that hospital, since I have been there, of a single one of our nurses or probationers.

18588. Your hospital is rather, to some extent, (24.)

Lord Clifford of Chudleigh—continued.

a special one?—It is, of course, a special hospital.

18589. Are the nurses trained there regarded as being as fully trained as if they had been trained in a general hospital?—Not unless they can say that they have had a certain experience at other and general hospitals.

18590. But you say they go for three months to some general hospital?—Yes, always.

18591. And in that case they are considered fully experienced?—They always get plenty of work; if they leave us to go to a general hospital, they can get in always.

18592. I suppose you see every probationer?—I know every one of them. They all come to me to be taught, first of all, their lessons.

18593. They come to you when they first come to the hospital, and apply to be received as probationers?—Yes, I engage them all.

18594. And you are guided, in a great measure, by their physical condition?—Yes; I never take a nurse who has had rheumatic fever or who has any delicacy in the chest, or who has a parent consumptive.

18595. But beyond that, do you make any inquiry into their position in life?—They have to give two references; every nurse fills in a paper, saying what illnesses she has had, and if her sight and hearing are good; and her height and weight, and all that you know, the usual hospital paper; and then she has to give me two references, and I send these printed forms, which they have to fill in and sign, and they have to answer all those questions.

18596. We were told that at some hospitals there is a question put to them as to their religious belief; is that so with you?—Yes, and we fill in that too.

18597. That is only for Protestants?—As a rule we are not supposed to take in any but Protestants; but on our private staff we take anybody.

18598. As probationers?—As probationers they are supposed to be all Protestants; it is not a hard-and-fast rule.

18599. There may be exceptions to it, but that is the general rule?—Yes, the general rule is, I believe, Protestants only. We have taken Roman Catholics; there is no hard-and-fast rule about religion.

18600. Have you had many complaints about that rule on the part of the probationers who under that rule are not admitted?—There was one young girl once who rather made a complaint, but there were other reasons for which I did not wish to take her.

18601. I only wanted to know whether, as a fact, much complaint had been made of that rule?—No.

Lord Monkswell.

18602. When you say “Protestants,” do you mean members of the Church of England?—No, Baptists and Wesleyans, and any of them.

18603. Nonconformists, in short?—Yes, Nonconformists; we have several.

18604. Do you ever go round while the nurses are at dinner, and see them for yourself at dinner?—Yes, I have often carved their meals, not

19 March 1891.]

Mrs. TAYLOR.

[*Continued.*]*Lord Monkswell—continued.*

not so much lately, because I have been more busy; but I have many times carved their meals myself. Besides that, I have often been in to see that they are regular; now and then they want keeping up to the mark; I mean that now and then they are not punctual at their meals.

18605. And that is the only thing you have sometimes found wrong?—That I am very strict about, and occasionally I go down myself to see that they are all there.

18606. You say that you have a less proportion of nurses than other hospitals have because there are not so many nurses required for consumptive cases; but have you not some wards with no consumptive cases in them, only heart disease cases?—No, every ward has some cases of phthisis always. Of heart disease, perhaps, there are only four cases on a gallery; and, perhaps, two may have bronchitis and asthma, or something like it; but in every ward there are some cases of consumption.

18607. The doctor told us that he tested the air in the ventilating apparatus, and that he found in the wards where there were no consumptive patients, no consumption bacilli?—But that was only a trial, I understood.

18608. He moved the consumptive patients out of those wards on purpose, you think?—Yes; I remember that being done, quite well.

18609. Then you consider that there are no wards in which there is a sufficient proportion of what might be called acute cases, cases of heart disease, and so on, to make it necessary to have a larger proportion of nurses than you have?—No; every gallery has what we call a special ward; that is a little ward with one bed to itself; and if we have any bad cases like heart disease, as a rule those are noisy patients, and they keep the others awake; then they are always moved into that little ward of which I have spoken.

18610. And do you see no objection to keeping little children, even very little children, in the wards with grown-up patients?—We have always found that when children are in the same wards it is better for both.

18611. You do not find that they cry and keep the others awake?—No. They are very much spoiled by our patients as a rule, and in that respect it is very bad for them when they go to their homes, I think.

Lord Saye and Sele.

18612. The chairman sees all patients before leaving, does he not?—Yes.

18613. Does he not always ask the question: "Has your food been good"?—Yes.

18614. And he also asks as to other matters, and the patient has every opportunity of making complaints?—Yes; he asks if they have any complaints to make, if they have been kindly treated, if their food has been sufficient and good; there is a list of questions that he puts.

Chairman.

18615. You said just now that the nurses had an opportunity of going to the matron; does that apply also to the probationers?—Yes, everybody. If they want to give me notice, or if

Chairman—continued.

they want to see their friends, or if they want what we call a pass to admit visitors out of hours they come down to me between half-past 9 and 10 every morning.

18616. I only wanted to get from you whether the term "nurse" in that answer included "probationer"; I understand you to say that the term "nurse" includes probationer?—Yes.

18617. Do your ward-maids lodge in your building?—Yes.

18618. Is it the duty of the matron to go round the hospital frequently?—Every day; she is supposed to go round every day.

18619. Is that generally in the morning, before dinner, or is it after dinner?—As a rule we always go round in the morning, because there are the physicians in the wards in the afternoon, and therefore at that time the matron would not have the sister to go round the ward with her, and if the matron had complaints to make she would have to take them to a nurse, and of course that would not be desirable at all.

18620. Do you consider that the matron is in a position to know everything that goes on in the hospital?—She ought to be, certainly.

18621. Do you have to get rid of many nurses or probationers for inefficiency?—No; sometimes they are not strong, or they have not an aptitude for the work; and a great many women take up the work for the mere sentiment of the thing, and when they have tried it, they find that it is not all sentiment, and they are very glad to go at the end of their month, and sometimes before their month is up.

18622. Then when you engage them do you engage them for a certain time?—I engage them for one month on trial, but they are at liberty to leave any day they like during that month; or if we find that they are quite unsuitable (as we sometimes do the very first week), we give them a week's notice to make arrangements with their friends.

18623. In the case of a nurse misbehaving herself, should you have power to suspend her?—I can dismiss her. Then I should report to the committee at the next meeting. The nursing staff are entirely under the matron; she engages them and dismisses them.

18624. You have had considerable experience in Sydney and Tasmania, you have told us?—Yes, I was trained in Sydney, and I had charge of a hospital in Tasmania for five years and a half.

18625. Do you think that the London hospitals have much to learn from those Australian hospitals?—I think that some of the London hospitals are very behindhand, and I think some of the Australian hospitals are very much worse. There is a great difference between the two Australian hospitals I have mentioned. Speaking of the Alfred Hospital, in Sydney, I do not suppose anything could be more perfect. All the modern improvements are carried out there. The old hospital, on the other hand, in McQuarriestreet, is a very old place indeed, with none of the modern improvements at all.

18626. Is there anything else you would like to say to the Committee?—No.

18627. I under-

19 March 1891.]

Mrs. TAYLOR.

[Continued.]

Earl Cathcart.

18627. I understand that you have a constant stream of lady visitors, who are always coming to the hospital at Brompton?—Each ward is supposed to have its own visitor.

18628. Only one?—Only one.

18629. And they come regularly?—Yes, they come regularly. They go occasionally out of town, and sometimes they supply their place; but sometimes, if they are only away for a fortnight, they just send a line to say so.

18630. Are these visitors ever the medium for conveying complaints from the patients to you or anybody else?—They never have been.

18631. And it would be discouraged, would

Earl Cathcart—continued.

it?—I have never had any experience in that way; they have never done so. We have two Roman Catholic lady readers, who come very regularly indeed three or four times a week, one for each building, and they see to the Roman Catholic patients.

18632. But you have never had any complaints from any of these ladies who visit with regard to the treatment of the patients, as to their food or anything else?—No; they have never complained to me, either a written complaint or verbally.

The Witness is directed to withdraw.

THE REVEREND HENRY WACE, D.D., called in; and, having been sworn, is Examined, as follows:

Chairman.

18633. You are the Principal of King's College; are you not?—Yes.

18634. And are you equally the head of the hospital?—By election. I am *ex officio* a member of the committee of management; they elect their own chairman.

18635. How long have you acted as chairman?—Since October 1886.

18636. Would you tell us when King's College Hospital was founded?—The account of the foundation of King's College Hospital is to be found in its Act of Parliament of the Session of 1851, which recites that it was founded in the year 1839: "And whereas before the year 1839 the said Council" (that is the Council of King's College) "had succeeded in forming a considerable medical school in the said college by reason of the large number of students in attendance upon the lectures and examinations in the several branches of medicine and surgery delivered and conducted there by Professors appointed and remunerated by the said Council; And whereas the said Council finding that hospital practice in connection with and in the vicinity of the said hospital was indispensable for the complete education of its medical students did in the year 1839, take measures for the formation in the parish of Saint Clement Danes, in the county of Middlesex, of a public hospital for the relief of poor sick and infirm persons to be supported by voluntary contributions, and to which the students of medicine and surgery belonging to the said college might, under proper regulations, for ever have access."

18637. Therefore, having a school of medicine at the college they built the hospital to provide material for instruction?—That is so. The students were permitted formerly to be taken to the Charing Cross Hospital and to the Middlesex, but there were natural difficulties in taking the students of another institution to those hospitals.

18638. Will you tell us what the constitution of this hospital is, the various responsible committees and so forth. Is there an annual meeting, for instance, of governors?—Yes, there is an annual court held every February. A governors' special court can be held at any time, with due notice. The constitution of the hospital is laid down by that Act of 1851 which I have just mentioned. The property of the hospital is vested in the Council of King's College; there is a committee of management annually elected.

(24.)

Chairman—continued.

18639. What constitutes a governor?—The payment of three guineas a year or a donation of 30 guineas.

18640. Then what maintains you principally; endowments, or voluntary contributions?—We have have scarcely any endowments; practically I may say none; we have general trust funds amounting to 9,500 *l.*, and funds for Samaritan purposes amounting to about 7,000 *l.* We depend mainly upon annual subscriptions and donations and legacies.

18641. Much the same as every other general hospital in London?—Yes, just so, except that we really have no endowment to be mentioned.

18642. Can you tell us what your items of receipt were last year?—Our annual subscriptions were 2,292 *l.* (omitting the shillings and pence). The general public donations were 5,150 *l.* There is a small grant from the Craven Charity Trustees of 300 *l.* a year, and another grant of 300 *l.* a year from the Holborn Estate Charity Trustees. Then our capital account, that is to say all the endowment that we have, brought us in dividends 332 *l.*

18643. What is that principally invested in; is it invested in ground rents or stock?—I can tell you exactly what it was on the 1st of January last: We then held in Canada Government 3 per Cent. Inscribed Stock, 2,000 *l.*; in Queensland 3 per Cent. Stock, 2,000 *l.*; freehold ground rents valued at 9,100 *l.*, less a charge for the Samaritan Fund, &c., 7,880 *l.*; leaving 1,219 *l.* available for the general purposes of the hospital. Then, to resume the items of our annual receipts: The dividends and rents from our General Trust Fund and Legacy Account brought in 400 *l.* 9 *s.*, and 423 *l.* 6 *s.* 11 *d.* respectively. From collections after sermons we had 103 *l.* The grant from the Hospital Sunday Fund was 1,406 *l.*; from the Hospital Saturday Fund, 232 *l.*; poor boxes, 104 *l.*; payments on behalf of patients, 45 *l.*; and various smaller items make the total of our ordinary receipts up to 11,288 *l.*

18644. And what was your expenditure last year?—Our expenditure last year was 17,126 *l.*

18645. So that you had a deficit therefore of 6,000 *l.*?—The exact excess of ordinary expenditure over income for the year made up on the 31st of December last was 5,837 *l.* 17 *s.* 10 *d.*

18646. In this list that you have given us you did not mention legacies; did you receive any?

3 D 3

—We

19 March 1891.]

Rev. H. WACE, D.D.

[Continued.]

Chairman—continued.

—We received legacies, but they are always carried to a special account, and then the leave of the Council of King's College has to be asked to use them for current purposes. As a matter of fact we did not require to do that in the course of the year, because we started the year without any debt, and therefore we had not occasion to sell them out till the beginning of this year.

18647. I will just ask you, how then did you meet the deficit?—It was met by some legacies and by the sale of stock. We had in the course of the year 2,464 *l.* in legacies which the council gave us leave to use, and for the rest we sold about 4,000 *l.* stock.

18648. You have certain funds that you cannot sell out, have you not?—We can sell out no funds without the consent of the council.

18649. But have you got any money so tied up that you could not sell it out even with the consent of the council?—Yes, we have certain general Trust Funds amounting to about 9,500 *l.*; and we have the Reardon Samaritan Trust Fund to the amount of 5,380 *l.*, and other Samaritan funds, amounting with the Reardon Fund to about the sum of 7,000 *l.*, which I mentioned just now.

18650. Then is there anything else which you could not sell out?—We have vacant land around the hospital which unfortunately at present is unproductive. We bought it for 10,500 *l.*, but there cannot be any reasonable doubt that it is worth a very much larger sum than that now; but for many years it has been lying idle, and under the advice of our surveyor we have thought it prudent not to do anything with it till the great changes that are being made in the property round there are further developed.

18651. Then with the exception of the 7,880 *l.*, Reardon, &c., Trust Funds and the 10,500 *l.*, invested in this land, of which you have just spoken, you can sell out any other property you hold?—Yes, that is to say the council can.

18652. And that you would have to do, supposing there was a great diminution of the subscriptions or donations?—Perhaps.

18653. Do you know whether there was any special reason for your deficit of 5,837 *l.*, last year?—No, I do not know what the reason was. It was a good deal heavier than our deficit had been for some time past. Our deficit last year, as you have said, was 5,837 *l.*; the year before it was only 3,415 *l.*; the year before that 4,183 *l.*; in 1887 it was 3,371 *l.*; in 1886 it was 2,900 *l.*. So that this last year it is a larger deficit than usual.

18654. Then these larger annual deficits are gradually eating into your capital, are they not?—We have got no capital. What practically happens is that we have a steady influx of legacies. A great number of those we have used for the permanent establishment of the hospital. We had one about five years ago of 8,000 *l.* We were reconstructing our nursing arrangements; that required re-building, and that money was practically invested in the hospital. But the average of our legacies since our foundation has been 3,060 *l.* a year, and the average of the legacies of the last 10 years has been 4,020 *l.*

18655. And the average of the deficit for the last 10 years, what has that been?—I have

Chairman—continued.

not reckoned it up, but I should think it was about 4,000 *l.*

18656. So that your annual deficit is made up you may say by your annual legacies?—That is so. We were in great difficulties six years ago; the Lord Mayor had a meeting in the Mansion House, and we had a bazaar in the College, and cleared it off.

18657. Do you appeal to the public much?—Yes, very considerably. We have a clerk in the office whose sole business it is to write letters for that purpose.

18658. And is it your experience as a hospital administrator that the more you appeal the more money you get?—Certainly.

18659. In the same way as with any other advertisements in trade?—Yes, exactly. At the same time it requires a good deal of judgment. There are certain persons who are thought likely to take an interest in the institution, and we appeal to them.

18660. But still I suppose that, as is the case with other hospitals, you frequently get letters in reply to your appeals, enclosing only three or four postage stamps?—Very rarely.

18661. Has that occurred?—Yes.

18662. This last year the public donations, you have told us, were 5,150 *l.*; is that an exceptionally good year?—No, by no means. Last October our accounts gave us every reason to think that we should have no such deficit; but some cause or other has, I am afraid, diverted public money from these institutions within the last few months, and our expectations were rather disappointed. Our donations, for example, in 1883, were 6,800 *l.*; then in 1884 they fell to 3,700 *l.*; in 1885 they were 5,300 *l.*; in 1886 they were 8,200 *l.*; in 1887 they were 5,900 *l.*; in 1888 they were 6,900 *l.*; and in 1889 they were 7,100 *l.*. So that you will see we are about 2,000 *l.* less than the last three years gave us reason to expect.

18663. What do you consider your most reliable source of income; your annual subscriptions?—Subscriptions and donations. I regard donations as practically subscriptions. There are a great many people who prefer to give money donations, and not to bind themselves by calling them subscriptions, but who practically give to us year after year. Another regular source of income on which we rely considerably is our annual festival dinner.

18664. What amount did you collect on that occasion last year?—I have got the figures here; last year we collected about 2,500 *l.*

18665. Was that exceptionally good or the average?—That was a fair average. When the Prince of Wales came we collected 4,000 *l.* It varies between 2,000 *l.* and—when there is any special cause—4,000 *l.*

18666. Do you ever have to keep any beds empty, because of your want of funds?—I am sorry to say that five years ago we were obliged to close two wards, and to reduce the number of beds in other wards; but the munificence of one gentleman, Mr. Whiting, enabled us to avoid reducing beds in other wards, and our position has been gradually improving during these last five years; until in October last we felt justified in

19 March 1891.]

Rev. H. WACE, D.D.

[Continued.]

Chairman—continued.

in re-opening the last ward, so that the hospital is now entirely open.

18667. How many beds have you?—The committee, of course, meet every week, and we have always a weekly statement of the number of beds full in each ward in the hospital, and the exact state of the wards at that date. Here (*handing in a paper*) is a specimen of that weekly statement.

18668. The question I put was how many beds have you in your hospital?—As you see by that statement the total number of beds available is 220; the total number occupied last week is 215.

18669. Is 215 what you call about your working average?—It is above what our average has been of late, because two wards have been closed till quite recently; but I should say that our average now might be considered something over 200.

18670. And how are those divided as regards medical and surgical beds?—We have 90 surgical, 90 medical, and the rest are special, ophthalmic and obstetric, and so on.

18671. Can you tell me what the administrative staff of your hospital is. You have a secretary, have you not?—We have a secretary, and that gentleman now is also the chaplain and the warden. The warden has really no special duties as distinct from those of the secretary and the chaplain; but our chaplain, who has been at the hospital for many years, is an exceedingly valuable officer; so that when the secretaryship last fell vacant we were glad to engage his services as secretary, and to give him more general control over the hospital; and for that purpose we called him the warden.

18672. What salary does he receive?—£. 500 a year.

18673. And residence?—No.

18674. And no board?—Yes, whenever he likes; so far as he likes.

18675. What is there above him, a weekly committee?—Yes, a weekly committee.

18676. Composed of governors?—Elected by the governors at the annual court in February; a committee of management consisting of 24 members is elected to serve for the year.

18677. They themselves being governors?—They themselves being governors, some of them official governors; the Principal of King's College is always an official governor; the treasurer, of course, is always an official governor.

18678. And this committee of management is the executive of the hospital?—Yes.

18679. And does every matter of detail come before them, as regards accounts and administration?—Every matter.

18680. Are there any medical men members of that committee?—Yes, several. We always take care that there shall be several of the leading physicians and surgeons on the committee. At the present moment, for example, we have on the committee, Dr. Lionel Beale, Dr. Curnow (the Dean of our medical school), Dr. Duffin, Dr. George Johnson, Sir Joseph Lister, Dr. Playfair, Mr. Rose, and Mr. John Wood, who was recently the senior surgeon.

(24.)

Chairman—continued.

18681. How many does that make?—Of the medical men, you mean? That makes eight.

18682. Eight out of 24?—Yes.

18683. Is there any medical committee, as it is called in other hospitals?—Yes.

18684. And how many does that consist of?—All the doctors who are in the hospital.

18685. What would that number be?—About 25.

18686. With regard to those medical gentlemen who are members of your lay committee of the hospital, have they votes at that committee?—Those physicians and surgeons who are on the committee of management have votes upon it, but the medical committee have no votes upon it. I daresay your Lordship was surprised by my not answering your former question at once, but the reason is that the medical committee is not a body that is in continuous action. We only refer to it on any special occasion; and never since I have been chairman have we once, I think, had occasion to refer to it.

18687. But supposing that something went wrong with the nursing, or that you received some complaint about the ill-treatment of some case, would you determine that at your committee, or would you send it to the medical committee for inquiry?—We should not refer it in the first instance to the medical committee; we should, no doubt, appoint a sub-committee of the committee of management, which would be mainly composed, in a case of that kind, of the surgeons and physicians; and they would report to the committee of management. No doubt if that report were not sufficient to satisfy the committee of management altogether they would go further; but practically we have found that that has not been necessary.

18688. Do you ever have to turn patients from your hospital because you have not space for them?—Oh, yes, especially when those two wards were closed; it was very lamentable.

18689. And even now, though you have got all your wards open, do you think that the medical relief is lamentably deficient in your district?—More come to us than we can admit.

18690. Will you tell us exactly where your hospital is situated?—It is situated in Portugal-street, immediately at the back of Lincoln's Inn Fields; it is a street at the back of the College of Surgeons.

18691. Have you any other large hospital near you?—Charing Cross is the nearest. We are immediately at the back of the new Bankruptcy buildings of the Law Courts.

18692. Then at the meetings of this committee of management of which you have spoken, you have all the books of your hospital put upon the table?—They are all at hand.

18693. That is all the supply books and the housekeeper's books and petty cash books?—Those are not gone into at each weekly meeting; but we have a variety of committees to do all the detailed work, and report to the committee of management; we have, first of all, a finance committee; secondly, a nursing committee; thirdly, a works committee; fourthly, a com-

3 D 4

mittee

19 March 1891.]

Rev. H. WACE, D.D.

[Continued.]

Chairman—continued.

mittee for raising funds; fifthly, a dispensary committee, and sixthly, a Samaritan fund committee. Those are the committees.

18694. How often does the finance committee meet?—Once a month.

18695. Do they undertake all the finance books of the hospital?—Yes.

18696. All the petty cash books, and so forth?—Yes, they are always on the table.

18697. Are they examined by this finance committee?—Yes.

18698. And initialed?—And initialed.

18699. Do you consider that checking those things once a month is a sufficient check?—Quite so; we used until a year ago to check them fortnightly, and we found no advantage in it, but a great deal of inconvenience, because a great number of the payments being made monthly, they were much more easily followed when checked monthly.

18700. It gave less trouble to the committee, you mean?—Not only gave less trouble to the committee, but we saw more readily and exactly the comparison of the payments and the receipts.

18701. Who are the members of the finance committee; is the treasurer a member of the finance committee?—Yes, always.

18702. He is an *ex-officio* member, I suppose?—Yes, the chairman, the vice-chairman, the treasurer, and five other members nominated by the committee.

18703. And the nursing committee is in the same way elected from this weekly committee?—That is so.

18704. And also the committee for collecting funds?—Yes.

18705. Their duties are of a very arduous nature, I suppose?—No, their duties are not of a very arduous nature, because they give general directions as to what is to be done, and it is only on certain occasions that they are called together to take special measures. Practically, I beg your Lordships to understand that this deficit does not occasion us anxiety, because our experience is that we always catch it up. There is a fixed general average of liberality among the public to this institution, and now and then we have to make a special appeal, and call their attention to it; but we have a large body of supporters who, in case of emergency, will give us some help.

18706. You hold then the same belief that a great many other hospital financiers hold; that if the public believe in a hospital they will always support it?—Yes.

18707. Then the works committee, does that sit frequently?—No, only when there are special works to be carried on. If, for example, we had a complaint of any drain going wrong, or anything of that sort, then we should refer it to the works committee to investigate the matter, and recommend what should be done.

18708. Does the hospital employ any skilled sanitary engineer or surveyor?—We have a surveyor, Mr. Salter, the architect, who is retained for the hospital by an annual retaining fee; and we call him in, in a matter of any difficulty.

18709. Do you keep a plan of your drains?

Chairman—continued.

—Yes. The drains have been very carefully attended to indeed, and an entirely new system was introduced in 1882 under the direction of Mr. Rogers Field, and his plans are here. Here are all the plans (*producing some plans*), so that the position of every drain is known.

18710. That is kept up to date?—Yes.

18711. Is this architect of yours an honorary officer, or do you pay him?—We give him a very small retaining fee of 20 guineas, I think; but he is paid like any other architect for any work that he does.

18712. Now in the case of a nurse, or the sister of the ward perceiving some bad smell of some description, to whom would she naturally apply?—She would naturally apply to the sister matron, first of all, and the sister matron would report to us.

18713. To the secretary that is?—Yes, to the secretary.

18714. What I mean is that you only sit once a week, and this might be on the day after your sitting?—In a case of any emergency, the secretary would not scruple to act for himself; and if it were a matter rather beyond what he thought his responsibility he would come to me, and I should not scruple to act if I thought it important.

18715. With whom does the admission of patients rest?—With the resident medical officers.

18716. Have you any system of letters?—Yes.

18717. Governors' letters?—Governors' letters.

18718. And do those people bringing governors' letters have any priority over patients who came without them?—No priority as against the urgency of the case; but *primâ facie* a governor's letter has a claim to be attended to. A doubt arose lately, and we made a rule that no patient coming with a governor's letter is to be sent away without first consulting the warden.

18719. But in the event of an urgent case coming to the hospital without a governor's letter and a patient coming with a governor's letter, but not an urgent case, would the patient suffering from the serious disease get priority of admission?—Yes, certainly.

18720. Then there is a resident medical officer with whom the admission rests?—I should rather say resident medical officers.

18721. How many of those are there?—Seven.

18722. They are very young men?—Yes, they are recently qualified.

18723. Are they in a position to know who ought and ought not to be admitted?—Yes, they are very thoroughly trained; they are our best men; they are chosen by examination; they are men of 23 or 24 years of age, as a rule.

18724. Who is the principal resident medical officer?—The house physician.

18725. And of what standing is he?—He is 26 years of age.

18726. Is he in the pay of the hospital?—No, only so far as he has the privilege of living there, and has board and lodging there during the time of his office.

18727. But you have no medical officer, resident or otherwise, who is the servant of the board,

19 March 1891.]

Rev. H. WACE, D.D.

[Continued.]

Chairman—continued.

board. Of your committee, I mean?—All these young men are; all these young men are subject to the committee.

18728. Are they members of the staff?—Yes.

18729. Therefore they are members of the staff as well as being subject to the committee; but you have no medical officer resident, or non-resident, who is independent of the staff, and paid by the committee?—No.

18730. Has it ever occurred to you to appoint such an officer?—That has sometimes been suggested to us, but there is a very strong opinion among all who are acquainted with our hospital against making such a change. Perhaps I am exaggerating when I say “all,” but certainly there would be strong and general opposition to any change.

18731. By the medical staff?—By the medical staff; and I think that the committee generally would be of the same opinion.

18732. Do you not think it is a good thing to have your own officer responsible to the committee independent of the medical staff?—No; all the members of the resident staff are responsible to the committee directly—immediately responsible. If they misconduct themselves in any way, or if they showed any serious error of judgment which might lead us to think that they were not qualified for their post, they could be suspended, and certainly they would not be appointed to superior posts. I do not know whether it is a peculiarity, but it is a feature of our hospital, which is very much prized.

18733. These appointments you mean?—Yes.

18734. But that applies, does it not, alike to all general hospitals which have these resident appointments?—But what your Lordship was asking me just now was whether we have a paid resident medical officer. In hospitals which have such an officer, he is superior to the ordinary resident medical officers, and consequently in these hospitals they have neither the responsibility nor the experience which they gain in our hospital.

18735. Yes; but your men are very young, are they not?—Well, as I have just mentioned to your Lordship, the senior one is about 26 years of age.

18736. But is not that about the average age at which gentlemen hold these appointments?—Yes, about that time.

18737. Have you any out-patients?—Yes.

18738. A very large number?—I can give you the exact number.

18739. I will just ask you this question: Will you give me the number of in-patients you treated last year, and of out-patients?—The number of in-patients admitted during the year was 2,331; there were remaining in the hospital at the beginning of the year, 187; so that the total number treated during the year as in-patients was 2,518.

18740. And out-patients?—In out-patients the total number was 9,650 treated in the ordinary out-patient department; but there is also what we call the casualty department, which is only another branch of the out-patient department, and those cases were 10,337. In addition to that

(24.)e

Chairman—continued.

607 poor married women were attended during confinement in their own homes.

18741. Then that makes practically very nearly 20,000 out-patients?—That is so.

18742. In addition to the 600 maternity cases?—Yes.

18743. With regard to the 20,000 cases, are those all new cases?—Yes, all new cases admitted during the year.

18744. Do you keep any register of the attendances at the out-patient department?—Yes.

18745. Can you tell us the number of attendances?—The total number of attendances during the year was 29,556; that does not, however, include the casualties; we do not keep a record of the casualties, nor how many times they attend; we keep a record when they come.

18746. Will you define what a casualty is?—An accident.

18747. The patient might attend half-a-dozen times if he had got a severe accident?—He might do so.

18748. Then the work in your casualty department is very heavy, is it not?—It is heavy.

18749. So that in your returns you do not make the most of the heavy work in your out-patient department?—Not in point of attendances; we do in point of numbers; we state exactly the numbers admitted on each side. The number admitted as out-patients is as has been stated to your Lordships; and the number admitted as casualties is as has been stated.

18750. I quite understand that, but still it is quite possible that these casualties might average two or three attendances, is it not?—They average about two.

18751. Therefore, you understate the work of your department by half?—If that is the measure of the work.

18752. Now, I will come back to the out-patients afterwards. Who makes the contracts for your food?—They are all made by the finance committee.

18753. And is that by advertised tender?—Yes.

18754. And do you ever compare your tenders and prices with those of other places?—No; not with those of other places; we carefully compare them among themselves. We have, perhaps, half-a-dozen tenders on each occasion when we make the arrangements; and we compare them before we decide.

18755. Who receives the stores?—The steward of the hospital.

18756. What does he receive; the meat and the bread?—He is responsible for receiving everything, he and those who are under him; and he examines everything, all stores without exception.

18757. Including groceries, for instance?—Yes.

18758. What is this steward; what sort of a position does he hold?—He has an income of 250*l.* a year. He used to be called the clerk; he used to assist in keeping all the accounts of the hospital and so on. He has been with us 20 years, and is increasing in value, and since the time when my chairmanship began, I forget the

3 E

exact

19 March 1891.]

Rev. H. WACE, D.D.

[Continued.]

Chairman—continued.

exact year, he was advanced to the office of steward and given more responsibility.

18759. Is he under the warden and secretary?—Yes, the warden and secretary is the head officer of the hospital; everybody is under him.

18760. And, therefore, he would have the right to suspend any officer during the absence of the committee?—Certainly.

18761. Do you find that there is much cause for complaint by patients; do the patients complain ever?—I do not think I can remember a complaint.

18762. Would a complaint naturally come to the chairman?—Yes, certainly; any complaint whatever would come to the committee.

18763. Would there not be a certain number of complaints which the secretary would settle off-hand?—Yes, little minor things would come to him and he would deal with the complaint by remedying it.

18764. Have you any house visitors, as they are called in some hospitals?—Yes; from the committee of management two gentlemen are told off every fortnight, it practically becomes every month, as house visitors, and their names are posted in the hall, so that patients and all persons who come may know to whom to apply in case of emergency. They visit the hospital, and go over it at their convenience, generally together, in order to see that all things are carried on right.

18765. How often do they go over it as a rule?—About once a week.

18766. Do you find that the class of person you treat in the hospital does complain much; I mean to say do you find that they are ready to find fault?—No, they are very reasonable indeed; the patients are extremely contented and good-humoured.

18767. That is your opinion, that is to say?—It is not our opinion simply, I think it is more than that; it is our knowledge.

18768. Supposing that a patient had occasion to find fault with his food, rightly or wrongly, or supposing that the nurse in charge of the ward found fault with the food, what course would she pursue?—The nurse would complain to the sister of the ward. The patient should also complain to the sister of the ward.

18769. And then what would she do?—The sister would report to the sister matron, and the sister matron would either remedy it, or, if it was a thing beyond her, which she could not deal with and remedy satisfactorily, she would report it to the secretary for the information of the committee.

18770. Is it your experience that sisters of wards complain rather readily as regards food?—Not at all.

18771. I mean to say that they are rather jealous as to the quality of the food prescribed for the patients in their wards?—They report anything that is wrong, but they are not at all given to complain.

18772. But still have you perfect confidence that your sisters are sufficiently jealous to make complaint if they think there is any occasion for it?—Perfect confidence.

18773. Are you yourself in a position to speak

Chairman—continued.

about the nurses?—Yes, generally; in regard to details I would ask the sister matron to speak.

18774. The questions as to the nurses which I have put with regard to other hospitals do enter into details; therefore, perhaps I had better reserve my questions on that subject for the sister matron. There is only one general point about the nursing which I might mention, independent of the actual administration of it. Until about six years ago the nursing of the hospital was conducted by the sisters of St. John's House; from various causes St. John's House felt unable to continue it; I think it was as much because they had more on their hands than they could do as for any other cause; and we thought there were many advantages in having our nurses in a distinct department of the hospital, and entirely under the control of the committee of management. A change accordingly was made, and during the last six years the nursing department has been a department of the hospital, entirely under the control of the committee of management.

18775. Did you find, when you had a sister hood of nursing, that there was a difficulty caused by divided authority?—Yes, there was.

18776. Now you train your own nurses?—Yes.

18777. Do you admit nurses of any and every denomination?—No.

18778. Must they all be of the Church of England?—Yes, to this extent: that it is a rule of the establishment that they must attend service in the chapel, and so on.

18779. Then you might have Nonconformists coming as nurses?—Just as they like.

18780. But they must attend, and anybody in the place must attend the Church of England service?—Yes.

18781. Who has the appointment of all servants, and the dismissal of all servants and officials?—The secretary.

18782. He has the appointment and dismissal of all servants in the hospital?—Yes, as distinct from the nurses.

18783. In that question I was putting the nurses aside. Who has the appointment of the nurses?—The sister matron; but always, both the secretary and the sister matron, under the control of the committee of management.

18784. In fact, they propose an individual for appointment; is not that it?—With respect to the nurses themselves, the sister matron is left to act on her own discretion; but with respect to the sisters, and the special probationers also, their names are submitted to the nursing committee for recommendation to the committee of management.

18785. Then, does the committee appoint the secretary, or does the quarterly board?—The committee of management.

18786. Have you got any children's ward in your hospital?—Yes, we have one ward called the Pantia Ralli ward, founded by a Greek gentleman of that name; that has 16 beds.

18787. And do you put any cots in the general wards?—In the surgical ones, not in the medical ones. This Pantia Ralli ward is entirely a medical ward for children.

18788. Is

19 March 1891.]

Rev. H. WACE, D.D.

[Continued.]

Chairman—continued.

18788. Is that for both sexes of children?—Yes.

18789. Do you take every description of disease at your hospital?—Yes, every description, with the exception of small-pox.

18790. And scarlet fever?—We take that, but subject to the limitation than that there shall not be more than 10 cases of infectious disease in the hospital at one time, so that they may be duly distributed among the wards.

18791. Do you take diphtheritic cases?—Yes.

18792. And do you isolate diphtheritic cases?—Not usually; nor scarlet fever either.

18793. Have you found that people catch it much?—No case of its spreading has been known, within my recollection.

Earl Cathcart.

18794. You mentioned Mr. Pantia Ralli, Greek gentleman, who founded a ward, and you take as patients persons of all religions if they are urgent cases?—Yes.

18795. Is it a fair rule, exactly, to have any test with regard to the religion of the nurses?—Perfectly fair if it is known beforehand. It is sufficiently well known what is the constitution of King's College and its hospital, and people give their money to it knowing what the constitution is.

18796. Is it judicious to have such a test?—We find it works well.

18787. You might exclude, by that means, a Presbyterian, who might be as good a nurse, or even a better nurse, than one who was a member of the Church of England?—But we find that the Church of England, or at least those who are willing to conform to our rules, (for we have had Presbyterians among our nurses) can supply us with enough clever nurses.

18798. Have you in reference to your hospital what is called the aerial zone; that is, a circulation of air all round the hospital?—Yes, we have. I think the hospital always had a certain amount of air round it, but buildings have now been pulled down all round.

18799. There is nothing that impinges upon you?—Nothing.

18800. Would you give a little sketch of the hospital, to give us an idea how it is arranged; perhaps you might say whether it is on the pavilion system, or in what form is the hospital built?—The hospital centres round a large centre hall, which goes from the bottom to the top; a very large hall indeed. It was made large at the instance of Sir William Ferguson, who was surgeon at the hospital when it was built, and from that central hall all the wards radiate. There are what we call the east wing wards and the west wing wards. The west wing wards radiate longitudinally, the others horizontally. There are three floors of wards, and above these are the residences of the nurses.

18801. Then you have windows on both sides of the wards?—Yes; all through, with one exception. There is one ward on the ground floor which has windows only on one side, because there has to be a passage on the other side.

18802. Do you know what cubic space per patient you allow?—Yes; in that lower ward of which I spoke, the cubic space is 1,624 feet, but
(24.)

Earl Cathcart—continued.

the average cubic space in all the other wards is 2,000 feet.

18803. Have you any difficulty in keeping up the temperature of the wards?—None at all.

18804. And have you a temperature book of the wards?—There is a thermometer kept in each ward.

18805. You have no difficulty in keeping the temperature up to 60 degrees?—None at all.

18806. Have you a constant water supply, or is it intermittent?—A constant water supply.

18807. If you would kindly let me see the plans I should understand in a moment all about it?—That is the ground plan (*handing in a plan*), and that is the first floor (*handing in another plan*).

Lord Clifford of Chudleigh.

18808. I think you were asked the rule as to religious belief of the nurses, and you said that they were obliged to attend the services of the Church of England. Supposing that rule was adopted in every hospital in London, what opening would there be to anyone who could not conform to that rule, ever to learn to be a nurse?—I suppose there would be none.

18809. Do not you think it would be rather injudicious, therefore, to make it the rule in every hospital?—Yes; but because it is the rule for one hospital there is no reason why it should be the rule for all.

18810. Therefore the principle of your rule is a bad one except for the fact that it is not universally adopted?—I think not. It is not a bad one under the circumstances; the circumstances are such that it is possible; and it is the case that hospitals are founded on different principles; and I believe it is very much better that there should be some particular hospitals founded on this principle. We find it extremely advantageous for the general and harmonious working of the whole institution.

18811. And your contention is that the evil which might result from that rule does not, because it is a rule not adopted universally?—Decidedly.

Lord Monkswell.

18812. I suppose you have other patients besides Church of England patients; or do you not make inquiry into that?—We do not make any inquiry; but any patient can ask to see a minister of his own denomination.

18813. And that request is always acceded to?—Yes; the Roman Catholic priest and the Nonconformist minister have the right to come to patients. It is entered against the patient's name in the porter's book, and the priest is allowed to come in, subject to the general necessities of the hospital, whenever he likes. No questions about that are asked of the patients when they come; they are admitted without inquiry.

18814. There is a recognised Roman Catholic priest sent for?—There is a Roman Catholic establishment close to us.

18815. And they send somebody from their number?—Yes.

18816. And the same with regard to Nonconformists, I suppose?—Yes.

18817. The hospital people know where to go

19 March 1891.]

Rev. H. WACE, D.D.

[Continued.]

Lord Monkswell—continued.

to for a Nonconformist minister?—The patient would have his own minister, probably.

18818. And you do occasionally see Nonconformist ministers there?—Yes.

18819. You are a member of the finance committee?—Yes.

18820. I see here, in the financial statement which you have put before us, among the liabilities, “Loan, Messrs. Twining, 1,000 l.” at the same time you have a balance at Messrs. Twining’s of over 500 l. on the general account and a balance on the legacy account of 1,000 l. Do you know what percentage you are paying on the loan to Messrs. Twining?—They let us have the money at 3 per cent.

18821. Then that is as broad as it is long?—Yes.

18822. As to this legacy that is in the balance at Messrs. Twinings’, do they pay interest on that?—No, it is only on deposit.

18823. Then you do not get interest on it?—Not on that; but we are bound by the laws of the hospital to invest all legacies received of above 100 l.; and, preliminarily, we put them to a separate legacy account and invest when our treasurer advises us that it is desirable to do so.

18824. Then it would only remain in this account for a short time?—Yes.

18825. I should have thought it would have been better, while it did remain, to have annulled this overdraft on Messrs. Twining?—One reason why we are not particular about that is that our bankers deal very liberally with us, and we do not like to invest everything that we have on deposit the moment it comes; and then, some-

Lord Monkswell—continued.

times, we leave it with the treasurer for this reason, that we cannot deal with a legacy without the consent of the council of the college, and the council only meet once a month, so that we may have to keep the legacy waiting till we can get their consent.

Chairman.

18826. Does that cause a loss of interest?—It may for a short time; for two or three weeks.

18827. Do you wish to say anything more?—I hope I have explained to the Committee that the hospital is really a branch of King’s College and under the control of the council; that its property is really possessed by the council.

18828. Are you prepared to speak about out-patients?—Yes, generally.

18829. In that case I will ask you a question or two about that. You have a large number of out-patients, you told us?—Yes.

18830. Will you tell us what the system pursued is as regards these out-patients, from the first moment that a man presents himself at the door of the hospital?—On those points I think I will ask your Lordship to consult the dean of the medical school, who is in attendance.

18831. Have you anything else that you wish to say?—I beg to put before your Lordships the Calendar of King’s College for 1890–91 (*handing in copies of the Calendar*) in which, under the Medical Department, you will find the rules which relate to the hospital.

The Witness is directed to withdraw.

MISS KATHERINE HENRIETTA MONK, is called in; and, having been sworn, is Examined, as follows:

Chairman.

18832. You are the lady superintendent of King’s College Hospital?—Yes.

18833. Is that your proper title, lady superintendent?—I am matron of the hospital and lady superintendent of the nursing department.

18834. How long have you held that position?—Nearly six years, from August 1885.

18835. And before that what was your position?—I had no formal position, except under St. John’s House as assistant superintendent.

18836. And where did you get your training at nursing?—I began my nursing life in 1875 in Edinburgh, and afterwards I was at St. Bartholomew’s Hospital.

18837. And may I ask what salary you receive as matron?—I began with 100 l.; it was then increased, I think two years afterwards, to 150 l.; it is now 200 l.

18838. And you reside in the hospital and have board and lodging?—Yes.

18839. You train your own nurses, do you not, at King’s College Hospital?—Yes.

18840. Have you, in addition to the nurses who nurse in the wards, any private nursing system?—Yes, we have a private nursing staff of our own training, but quite apart from the

Chairman—continued.

hospital. Every ward in the hospital has a regulation number of nurses, which number may never be varied. Supposing, for instance, that one of them were ill, her place would be at once filled; or, if a staff nurse were placed or desired to go on the private staff, she could do so, but another staff nurse would be put in her place, probably one taken on from the private staff to have her knowledge a little freshened up; so that the actual number in the wards would never suffer in any way whatever.

18841. How long do you keep your nurses before giving them a certificate?—We consider them trained at the end of two years. They are probationers for two years; at the end of that two years, unless they have been very slow in their training, we would give them the promotion of a staff nurse, who is a trained nurse; but we bind them in the first instance for three years, and they get their certificate at the end of their term.

18842. And how long do you train your private nurses?—The same; they are all trained alike, and they are not put out on the private staff until fully trained.

18842*. What is the number of the staff in your hospital, that is to say of the nurses actually engaged

19 March 1891.]

Miss MONK.

[Continued.]

Chairman—continued.

engaged in the hospital?—May I read the list out and then you will see?

18843. Please do so?—We have one Home sister to begin with, who is the teacher or instructress of the nursing school; one night sister, eight ward sisters; 15 staff nurses, who are fully trained nurses; 41 probationers; and in addition to that we have what we call an extra staff of 12 to fill the vacancies of any who may fall short in the wards from illness or other reasons. We have eight ward maids, 21 female servants, and 16 scrubbers.

18844. Do the ward maids reside in the hospital?—They do.

18845. And do the scrubbers live in the hospital?—No, they come in by the hour. The total number of nurses for the use of the hospitals is 68; that of course does not include sisters or ward maids or private nursing staff.

18846. Then the total staff altogether, exclusive of the ward maids, who have nothing to do with the patients, have they?—They have nothing to do with the patients.

18847. Your whole staff is 68, in addition to eight sisters?—And eight ward maids.

18848. That is excluding yourself and the home sister?—Yes, and the night sister.

18849. Do you keep day-nurses and night-nurses at their respective day and night duties for a long period?—Never longer than three months if we can help it. The rule is three months on day duty and three months on night duty; but sometimes they are only a few weeks on night duty. If we find for instance that a nurse does not stand the night duty very well, we have no hesitation in taking her off and putting on another in her place.

18850. As to the 12 extra nurses what is their duty?—They are to nurse special cases; some operations, for instance, require one nurse by day and one by night. Then should any of the staff of the wards fall ill, one of the extra 12 would be sent to take her place.

18851. Is it the case that you can always find employment for these extra nurses?—Yes, we generally do; in fact even with those 12 extra we are sometimes short; but rather than that our wards should be under nursed, we keep in some of the private nurses.

18852. You prefer keeping the extra staff of nurses to getting nurses from outside?—Yes, we prefer to have our own material, our own trained nurses, and then we know where we are.

18853. Do you ever have to send out for nurses?—Never.

18854. Will you tell us what the wages of these nurses are, beginning with the night sister and the sisters?—The night sister receives 45*l.* the first year; 50*l.* the second and subsequent years of service. The sisters' salaries begin at 35*l.* for the first year; the second year they are 40*l.*; the third year 45*l.*; and the fourth and any subsequent year 50*l.*; and in addition to that they are given uniform, which we roughly calculate at a cost of 5*l.* per head per annum.

18855. Then you have 15 staff nurses?—We have 15 staff nurses; the staff nurses develop from probationers, and their wages are as follows: the first year we do not pay them at all as probationers, because they do not know very much, and we wish to go on the principle of

(24.)

Chairman—continued.

paying them better when they are qualified; so that they begin the second year at 15*l.*, the third year they have 20*l.*, the fourth year 30*l.*, the fifth year 33*l.*, and the sixth year 36*l.*; and there is out-door uniform as well as in-door found for them.

18856. Is that 36*l.* their maximum wage?—That is their maximum wage; but if they work on the private staff they have a percentage on their earnings; the first year they get at the rate of 10 per cent., the second year 15 per cent.

18857. And is that their maximum commission, 15 per cent.?—Yes.

18858. And their wages are in the same ratio as those of the staff nurses?—Yes.

18859. Do they get any pension?—Yes; we have joined the National Pension Fund for them.

18860. Does the hospital pay any proportion of the premium?—It pays half.

18861. How much is that as a rule?—£. 22. 10*s.* is the annual pension for which they insure; the annual premium is about 7*l.* or 8*l.*; of this the hospital is willing to pay half.

18862. And the nurse pays the other half?—Yes; and with regard to the pension fund, the committee have been very liberal about that; I mean in this way, that should a nurse be in the position, as some of them are, to begin joining the pension fund from the very beginning as probationers, the committee at the end of their third year would pay the half of all they had paid, provided they joined under our regulations.

18863. How long do your nurses stay as a rule?—We never lose them, except for better appointments. Of course, you must bear in mind that our school is very young; we only commenced in August 1885; then it was that the St. John's Sisterhood severed from the hospital, so that we have had to found our nurse-training school, and to lay the basis of the training. It is scarcely six years old, and almost yearly we have done something to the advantage of their domestic and professional life.

18864. But as your nurses' school has only been going six years there has hardly been opportunity yet to see how long they stay?—Those nurses who have left us are only those who have gone to a better position, such as that of ward sister; we have not lost any nurse voluntarily. Of course it is natural that after four or five years they try to get better positions; and that is the only cause, to my recollection, for which any of our nurses have left.

18865. At what age do you admit nurses to your nursing school?—Our lowest age is 23; we prefer them 25 or 26.

18866. And what is the maximum age at which you take them?—Not over 35.

18867. Could you tell us the hours that you employ your nurses?—Yes. Every nurse in the building now has four hours off duty daily, probationers and staff nurses alike.

18868. What time in the day is that?—It varies. I will give you the recreation card, and then you will be able to see (*handing in a card*). The first looks rather astonishing; it is four hours off duty, from 7 to 11 in the morning. I will explain that. It is a very great advantage to a probationer, especially a probationer new to her

3 E 3

works

19 March 1891.]

Miss MONK.

[Continued.]

Chairman—continued.

work, and new to the life altogether, to have a little rest from getting up very early in the morning, and for that reason we arrange that one of the periods of four hours shall be from 7 to 11. That means that it is not necessary for her to get up until half-past 8 in the morning, and there is a second breakfast at half-past 9; she does not enter the ward that day till 11. The next time is from 10 to 2, which is again four hours off duty. The next from 2 to 6, also four hours off duty; the next is from 5 to 9.

18869. But what time do they begin duty in the wards?—Those who do not go on at 11 begin at 7 in the morning; then they get the other off-duty hours, either from 10 to 2, or from 2 to 6, or from 5 to 9.

18870. But when they begin early in the morning; that is to say, when they begin at 7, they go on till what o'clock on duty?—It just depends; we have to arrange it so that it is perfectly fair for them all round; one nurse may go on at 7 and come off at 10, and another may go on at 7 and may come off at 2.

18871. When do they dine?—There are two distinct dinners, one at a quarter to one, and the other at 20 minutes past one.

18872. Who dines at a quarter to one?—The sisters and staff nurses, as a rule, and some of the probationers; we always have to leave some of the probationers in the wards to take care of the patients.

18873. You leave probationers in the wards during the time the nurses and sisters are at dinner?—Yes, the most advanced probationers, as a rule, and should there be serious cases in the wards, the sisters and staff nurses would go to dinner alternately.

18874. Then there is tea, which is the next meal?—There are two teas; there are five meals a day, and tea is at half-past four and also at five; and then there is supper at 9 o'clock for everybody.

18875. And then is the day's work done at that time?—Yes, it is done at 9 o'clock.

18876. Is there no meal between breakfast at half-past six and their dinner at a quarter to one?—Yes there is a luncheon between 9 and 10, when they can have hot coffee or milk, and bread and cheese.

18877. Is the food all cooked in the hospital kitchen?—Yes, everything.

18878. Then, at night, what staff have you in each ward?—Two nurses; a fully trained nurse and a probationer.

18879. That is to say, one trained nurse and a probationer?—Yes.

18880. And what is the size of your wards, as a rule?—The largest contain 30 beds.

18881. They are large wards?—Yes, we calculate five to six patients to a nurse; for instance, in a ward of 30 beds we should have seven nurses, five by day and two by night. Of course, in the day they have a great deal more to do, naturally.

18882. What time do the night-nurses come on, at 9 o'clock?—Yes.

18883. And they work till when?—Till nine the following morning; but we have a very firm rule with regard to the night-nurses, that they shall alternately during the night leave the ward and go into the ward kitchen to have two distinct meals, half-an-hour being given for each.

Chairman—continued.

18884. When do they take them?—One at 12 o'clock and the other at four in the morning.

18885. And you make a distinct rule that they shall go to the kitchen for those meals?—Yes; those are the only meals taken in the wards at all. You see they cannot go down to the dining-room at night; so they are obliged to take their meals in the ward kitchen.

18886. How do you arrange about your eight ward sisters; how many wards have you?—We have nine wards; in the ninth ward, which is a very small ward, we have no sister but a charge nurse.

18887. Do you dine with your nurses?—Always, and so do the ward sisters; we all dine at one common table in the middle of the day, and the nurses have no meal alone except supper. The night sister takes the breakfast; the Home sister, the ward sisters, and I myself dine with them; and the home sister takes tea with them.

18888. Then you would know if they were discontented?—Yes.

18889. Have you ever had any complaints?—Not to my knowledge.

18890. Do you give any holidays?—Yes. The probationers get three weeks every year; staff nurses four weeks; and in addition to that we frequently send them away; if a little below par we have no hesitation in sending them away, either to our own Convalescent Home or to their friends, in addition to their annual holiday; and besides, once a month, probationers have one day; staff nurses go off on the Saturday afternoon and return on the following Monday morning, once a month; night nurses, on account of night duty, get two days a month, to make it fairer for them as compared with the day staff.

18891. Do you take any paying probationers?—Yes, but they are always considered part and parcel of the staff of the ward; we train them on exactly the same principles as the other nurses, and they are part and parcel of the complement of the ward; they are not put down as extras or treated as extras.

18892. What do they pay?—If they come for one year they pay 13 guineas a quarter. We sometimes have applications from ladies who have been perhaps in children's hospitals or in provincial hospitals for two or three years, and one year of London training is considered sufficient for them on the top of that, and for that one year they pay 13 guineas a quarter. But if they have had no training whatever we prefer that they should join for three years, and then they pay 10 guineas a quarter for the first year, and five guineas a quarter the second year; the third year we give them free training.

18893. There is a society, is there not, for the registration of nurses?—Do you mean the British Nurses' Association. I think that is the society you allude to. Yes.

18894. Do you know anything about it?—Not very much.

18895. You have no reason to think that such a system of registration is necessary?—I am opposed to it very much. I think you will find that in most hospitals there is a very correct register kept of the nurses' training, and that therefore it is not necessary that such a registration as that which you refer to should exist; because

19 March 1891.]

Miss MONK.

[Continued.]

Chairman—continued.

because I cannot see how an outside body can possibly judge whether a nurse is a good nurse or not; because her characteristic points are quite as important as her efficiency to nurse; in fact, of the two I think the former is the stronger point. And I should say that before we consider that our nurses are trained, they go through a very strict examination from the dean and sub-dean of our school, who examine them in the subjects they have been taught; and then every ward sister has from time to time, as nearly as possible every two months, to send in a report of their work. There are printed papers in which questions are asked, for the ward sister to answer, so that we may be sure that the probationer nurses have been properly taught.

18896. Have you a register there?—Yes, I shall be very glad indeed to show it (*handing in a form*). I have given you just a rough copy. You see each ward has its staff, and I have drawn out what the register board of the hospital is like. We always keep the complement; we are hardly ever short-handed.

Earl Cathcart.

18897. Do you suffer much in regard to nurses taking small bribes from patients; because I notice that one heading is, "Honesty, especially as to taking petty bribes from patients": have you trouble in that matter?—No, we have no trouble about it, but very often you are very much worried by patients; they think it is the right thing to do to give a present to a nurse; that is the explanation of that heading.

18898. You have not much to complain of on that score?—No; when they do receive a present of that kind they bring it to me, and I return it to the patient; very often the patient has already left the hospital, and we have to return it by post.

18899. On the form which you just now handed in you have a very comprehensive schedule of queries with regard to a probationer: "Is she punctual, quiet, neat, clean, active, truthful, careful, obedient, patient, good-tempered, observant, intelligent?" and there is the ward sister's signature to that?—Yes, I will explain that.

18900. How often is that required?—When a probationer comes to us she is first put on a month's trial; at the end of that month, that short paper which you have read is sent to the ward sister to fill in, that we may see the probationer's characteristic points. If that is satisfactory she signs an agreement for three years; and after that the other paper, which you are now reading, is sent frequently to the ward sister, who fills it in.

18901. The next sheet is a most elaborate one. First, there is, "Punctuality," which means "as to administration of food, wine, and medicine." Then, "coming on and going off duty; trustworthiness, truthfulness, carefulness," and then, under Section 4, you test their "observation" with regard to "secretions, expectorations, pulse, skin, appetite, intelligence as to delirium, &c., breathing, sleep, state of wounds, eruptions," and so on; and you find it easy, do you, to have this form kept going?—Yes; I

(24.)

Earl Cathcart—continued.

think it is a help because then you can guarantee what your nurse knows.

18902. But that entails a great deal of clerical work on the sister, does it not?—Our sisters are nursing sisters. I mean that they are appointed with the understanding that they have to take a very active part in the nursing of the patients, and in the teaching of the nurses.

18903. Then I notice that you even go in for particulars as to "sick cooking," under which head I find, "gruel, arrowroot, egg flip, puddings, drinks"?—Yes.

18904. And then No. 15 in the sheet relates to what is very trying to us all, "presence of mind"?—Yes.

18905. Then "obedience, patience, temper"?—Yes.

18906. Going to another matter, have you ever heard, amongst patients or visitors, any complaints of pilfering in the building?—No, not to my knowledge.

Lord Zouche of Haryngworth.

18907. Have your nurses to do any cooking operations in the wards?—No, the great meal of the day, the dinner, is done in the kitchen.

18908. But have they to prepare any smaller things either for themselves or for the patients?—No; the only thing they have to do is to cut the bread and butter for the breakfast and tea, that is all.

18909. Have you ever had any cases of nurses having caught any infectious diseases in the hospital when on duty?—One case I think we had of a nurse who contracted typhoid from a patient; then it was a very bad case of typhoid.

18910. I ask that question because I think Dr. Wace said that you take cases of scarlet fever pretty freely into the hospital?—Yes.

18911. And you do not isolate them from other patients?—No.

18912. Have you ever had any cases among the nurses of infection with scarlet fever?—Very few; and I think I may say that those nurses who have taken scarlet fever have not taken it from patients, because they have been in other wards. The other was a nurse who took typhoid from a patient, but it was an unusually bad typhoid case. Our precautions in infectious cases are very strict; we are a great anti-septic hospital; there are very hard-and-fast rules for the nurses with regard to the linen; and my experience has been that we have fewer nurses ill from infectious diseases than other hospitals. We have an excellent arrangement for our linen, which, I think, is a great safeguard to them in each ward. There are circular hermetically sealed drain pipes; one is for infectious linen only, and the moment the linen is removed from the patient's bed it is thrown down this drain-pipe shoot and so dropped instantly into carbolic acid; the other is for ordinary linen, non-infectious; so that the infectious linen is never kept two seconds in the ward after removal from the bed, but simply dropped down this shoot into the carbolic acid.

18913. Is all the linen washed on the premises?—No; it is taken away every day.

18914. The infected linen is, first of all, put into

3 E 4

19 March 1891.]

Miss MONK.

[Continued.]

Lord Zouche of Haryngworth—continued.

into this bath of carbolic acid, and then is taken away to some public laundry?—Yes.

Earl of Lauderdale.

18915. You say that after one month's trial the probationers make an engagement for three years?—Yes.

18916. What sort of an engagement is that; are they bound to stay for the three years?—No; supposing they have to break it for any reason; if, for instance, their health will not allow of their undergoing the hard work, or anything else, they can go.

18917. Have they to give you any notice for that purpose?—Yes; it would come before the nursing committee; not an absolute notice; we should let them go when they wished to go; we should meet their wishes in the matter.

Lord Monkswell.

18918. You say that the day nurses' hours are from seven to nine, with four hours off duty at different times; you have not told us how long they have for meals?—Half an hour for each meal.

18919. Those therefore who do not come on till 11 in the day have, if I am right, an hour for meals, besides the four hours off duty. They would be on duty from 11 to 9; what amount of time would they have off for meals?—Half-an-hour for dinner and half-an-hour for tea.

18920. An hour altogether?—Yes; their working hours a day are nine and a half.

Chairman.

18921. Is there anything more that you wish to state?—No. I hope I have been clear that the nurses do no cooking; the only cooking that they do is sick cooking, such as making beef-tea. Of course it is essential that a nurse should know how to make good beef-tea. The ordinary beef-tea is made in the hospital kitchen, and the beef-tea that the nurses make is what is called the strongest beef-tea for very critical cases.

18922. They do no what are called menial duties?—No, this sheet (*producing it*), which is

Chairman—continued.

also very elaborate, will show you that they do not do any menial work; that is to say, there is a complete system through all the wards of the hospital. There are ward maids to do the menial work; the cleaning of grates and tins, and that kind of thing, and the sweeping.

18923. Is the health of your nurses good?—Very good indeed.

18924. It was said the other day by a witness that she considered when the nurses undertook nursing they took into view that it curtailed their lives by 10 years; has that ever occurred to you?—I do not think so. I have had nearly 16 years of it, and never was so well in my life. I think on the contrary, that it often makes those who have a little delicacy to begin with stronger women. The regularity and discipline of the life I mean, have that effect.

18925. At the same time they do require, do they not, to become acclimatised?—Yes, they do; there is no doubt about that.

Lord Monkswell.

18926. I cannot make out your nine and a-half hours. You say that a person comes on at 11, and that she goes on from 11 in the morning to 9 in the evening, and you say she has an hour off for meals; that would be nine hours?—Yes, it really is that; but I thought it fairer to give you the broadest reckoning, because sometimes the half-hour for one meal may occur in the four hours' leave of absence, as when they are off from two till six p.m. they lose the half hour for tea; they can come in for it if they like.

18927. Sometimes they may have an extra half-hour of duty, do you mean?—No; but for instance, at luncheon time they get 20 minutes to go down and drink some hot coffee or anything they like; that would make it even less than the nine-and-a-half hours.

18928. So that you would be rather inclined to alter your last answer and say that nine and a-half hours is rather longer than the actual time on duty?—It is a very full time; I thought it fairest to give the very fullest time.

The Witness is directed to withdraw.

MR. JOHN CURNOW, M.D., is called in; and, having been sworn, is Examined, as follows:

Chairman.

18929. You are on the staff of King's College Hospital, are you not?—I am.

18930. Would you tell me precisely what position you hold there?—I am physician to the hospital, dean of the medical Faculty, and professor of anatomy in the medical department of the College.

18931. And what qualifications do you hold?—I am a doctor of medicine of the University of London, a fellow of the Royal College of Physicians, a member of the College of Surgeons, and licentiate of the Society of the Apothecaries.

18932. Are you acquainted with the system of out-patients at the hospital?—I am. I would like to state to your Lordships that since 1864, when I began as a student, I have been at work at King's College, with the exception of a year, in the hospital and in the college in different posi-

Chairman—continued.

tions; so that my whole professional life has been practically, with the exception of that year, spent in King's College.

18933. Could you just explain to the Committee what your system is as regards out-patients from the moment that a man presents himself for treatment at all?—You must divide them into first, out-patients proper, as we should call them; and secondly, the casualties. I will take first an out-patient proper. There is a definite hour at which the out-patients are admitted, namely, from one to two; there is a register kept in the out-patient department, and they are registered. They are sent up to the out-patient physician or surgeon, or the physician for diseases of women and children, as the case may be; they are then seen by him and prescribed for; their medicines are given to them and they leave

19 March 1891.]

Mr. CURNOW, M.D.

[Continued.]

Chairman—continued.

leave. That is what happens in the case of an ordinary out-patient.

18934. Then how long does that medicine last him for?—It varies with the disease; we have power to give medicines up to a fortnight, and perhaps, if it was a very special case, for instance a case of epilepsy, which we have been treating for a year or two, by our special signature the dispenser would dispense it for a longer period, say three weeks; but anything above a week the physician himself has to initial.

18935. Are they admitted by letters?—No, they are admitted free, but occasionally they come with a letter. If a subscriber to the hospital sends a patient with a letter it is registered in our book that he comes with a subscriber's letter, but that is all.

18936. Do the governors make much use of subscribers' letters?—Not to any extent; particularly among out-patients, very little indeed.

18937. Are those all medical cases?—No; medical, surgical, and diseases of women and children.

18938. Do you teach in the out-patient department?—Up till last year I did. I was promoted to an in-patient appointment, but up to that time had done so ever since 1874.

18939. Did you find that the number of patients inconvenienced you either as regards teaching or diagnosis?—Certainly not in my time.

18940. Had you enough material for teaching purposes?—The surgeons rather complained that they had not enough than too much; the physicians, because a medical case took somewhat longer, had a tolerably fair amount of work, and they simply did not complain one way or the other.

18941. Is that paucity of material owing to the out-patient department being open for so short a time?—No; in 1875 there was a committee of investigation, because the out-patient department was too large. As the result of that committee of investigation (it was practically open then to any extent) the rules about the limitation of hours and the rules by which, for instance, in medical cases, men are seen on Tuesday, Thursday, and Saturday; and women on Monday, Wednesday, and Friday, had a very great effect in bringing down the numbers as soon as they were known. Then, your Lordships will see that the immense amount of clearances in the way of law courts and so on, has diminished the number of people as out-patients who would be around the district; and the registration, of course, to a very great extent has also caused it. I mean that there are several causes combining to keep the out-patients numbers down.

18942. Then is that registration accompanied by inquiries as to circumstances?—Yes.

18943. And do you keep an officer to make those inquiries?—Yes, we have since 1875.

18944. And do you know whether any people have been refused treatment because they have been possessed of the ability to pay a fee?—Such cases have been known, but they are extremely rare.

18945. Is it your experience that the people who visit your hospital are very poor?—Very

Chairman—continued.

poor indeed. I should like, if I might so far trouble your Lordships, to read a list which I have had taken quite promiscuously out of our register of occupations of the persons as there put down, because it will tell you the class of people much better than I can. "Tie-maker, frame-maker, dressmaker, stonemason, labourer, labourer, labourer, child, labourer, labourer, labourer, clerk, fitter, printer, compositor, ship's steward (out-of-work), carman, labourer, labourer, fur-worker, charwoman, lithographer, labourer, printer, labourer, shop-assistant, manager of works, tailorress." That is just a page, as it stands; so that you see they are very poor.

18946. How do you make your inquiries, or how does this person who keeps that register, make the inquiries?—He keeps that book, and with regard to every patient, as he comes in, before he gives him a card to admit him upstairs, he makes these inquiries, and he takes down the name, address, occupation, and by whom he has to be seen.

18947. Does he make any inquiry as to the wages?—He did for a considerable number of years; but we found that the wage limit was a very fallacious one, because there were many circumstances connected with the number of children, position, and so on to be considered, and therefore it was given up. If a patient at all seemed to be in a superior position he was asked direct about his circumstances rather than his wage limit.

18948. And do you agree that the dress is no criterion at all of the ability to pay?—I am afraid the hospital being pretty near the middle of Clare Market, it is of very little account. An out-patient who came dressed in the sense you mean would immediately be asked questions. It is the rarest thing for people to come to that department who can pay a fee. I may say that since I have been physician, since 1874, there have been three people only, so far as I know, who have come to that out patient department who have been able to pay a fee, a guinea fee, for being attended; and they came not because they were poor, but because they wanted the opinions they said of a physician to a hospital, exactly as you would go to a private house. They were not seen in the hospital; the names of all the physicians in the hospital were given to them, and they were told to go and see the physician at his own house the next morning.

18949. Do you know if they did that?—I can answer for two because it was I who saw them. The third I do not know anything about, but it is quite possible that one of the other physicians might have seen him. That is my experience since 1874.

18950. You said that the alterations of the buildings in the neighbourhood and so forth had to do with the diminution of out-patients attending?—Yes.

18951. Is it your experience that people do go to the hospital in their own immediate locality?—Very much so. I think that even when the addresses that you will find in the list I have shown you are not in our immediate locality, the people are at work on some occupation that will bring them up into the Strand district. The

19 March 1891.]

Mr. CURNOW, M.D.

[Continued.]

Chairman—continued.

hospital has more or less a certain reputation and that will affect people. For instance, our hospital has more or less of a reputation at Woolwich, and we get stray contingents of people from Woolwich who do not go to a Woolwich Hospital.

18952. Is there a hospital at Woolwich?—A hospital or dispensary, I cannot say which. There are hospitals *en route* between Woolwich and King's.

18953. Do you not often find that out-patients prefer to come to a hospital some distance from them, having to pass perhaps three or four other hospitals on their way?—Yes; there are two or three hospitals on the way between Woolwich and King's. A great deal depends on how they can get up. They come up to us by river, which is an extremely cheap method of travelling; and it is immaterial whether they go to London Bridge or go on to the Temple pier; and, of course, the South Eastern Railway brings us up patients, who just have to come across from Charing Cross.

18954. But you think the majority of your patients come from the locality?—Either are occupied in the locality or live in the locality.

18955. Will you tell us now about the casualties?—The casualties are admitted at all times. They simply come to the door of the hospital and are admitted at once by the porter. From the porter they are sent into the front surgery, as we call it, in contradistinction to the out-patient department. There they are seen by an accident dresser; and the accident dresser's duty, if the accident is at all severe or doubtful, is to call the house surgeon who is on duty for the day, and they would be seen by the house surgeon; or by the house physician, of course, if it is a medical case.

18956. Then the medical men who see the out-patients are members of the staff?—Quite so, but the casualties are seen by the resident medical officers. With regard to that, I also thought that it would be very much better that you should have the actual statement of just what happens in a day at our hospital to show you the nature of the cases, rather than that I should give it from memory. I took here again a page from the porter's book, who registers these cases, and it runs in this way: "Bad arm, bad knee, hurt hand, eye, ill, hurt hand, ill, ill" (those described as "ill" are medical cases), "Hurt ribs, cut thumb, hurt shoulder, cut hands, hurt finger, cut head, cut head, sprained ankle, cramps, hurt arm, hurt ribs, kicked in the chest, ill, ill, cut leg, diarrhoea, hurt finger, bone in throat, a fall, a fall, cut head, child ill, throat, hurt arm." That is as they came in.

18957. Then those cases are liable to be seen at any time?—Those are liable to be seen at any time. Obviously such cases could not be kept waiting.

18958. Then do you find a great number of very trivial cases come to you as casualties?—Some of them are trivial and some of them are, of course, very severe; I mean a cut finger case from the neighbourhood just the same as a man who is crushed in the Strand.

18959. Do you make any inquiries as to the

Chairman—continued.

circumstances of these "casualties" at all?—We make no inquiries as to them; our feeling is that we could not by any possibility turn away anybody who was bleeding until inquiries could be made, we must treat the case at the time; or, if a man has cramps in the stomach, you must treat him when he comes.

18960. Now in the case of a person coming with a cut finger, who is the first official that he sees?—The accident dresser.

18961. But he sees a porter before that, does he not?—The porter first, yes.

18962. The porter would not tie it up?—No; certainly not.

18963. Is there any nurse there?—There is a nurse in that department.

18964. But she would not tie it up, would she?—No; it is her duty to call the accident dresser.

18965. He being a qualified student?—No, not necessarily; very often he is. Every student of the hospital has to take an in-patient dressership, and every dresser has to take accident duty; and a rota is made out day by day of them. Of course some of them are not qualified, but as the six months go on many of them get qualified. That is a six months' appointment; so that they may or may not be qualified.

18966. This officer then is called down by the nurse; but supposing that the case is more complicated than he supposed, what then?—There is a house surgeon on duty.

18967. And the dresser sends for the house surgeon, does he?—Yes.

18968. So that, as far as you can ascertain, a student has not to deal with any serious cases?—Most certainly not. If it were known that he had dealt with any serious cases he would be suspended.

18969. Is there no fear of their taking any serious case?—You cannot answer for it that any man shall show absolute discretion; but he would be suspended if anything of the sort was known; and there are plenty of other dressers round who would soon let the authorities know.

18970. Supposing a man came in the middle of the night?—There is no accident dresser at night; that is the house surgeon's duty; the accident dresser is only on duty in the day.

18971. So that there are always plenty of other people about when the dresser is on duty?—Plenty.

18972. Now you have in your hospital a number of resident medical officers?—Yes.

18973. How many are there?—Seven.

18974. What are those?—There is a house physician and an assistant house physician; there are three house surgeons, and a physician accoucheur's assistant, and his assistant.

18975. The hospital attended, we were told, I think, 607 cases last year for women confined outside?—Yes.

18976. In those cases is there any limit of radius that you go to from the hospital?—Yes, there is an absolute radius. Taken on the east, it is bounded by Farringdon-street; taken on north, it is bounded by Guildford-street; taken on the west, it is bounded by Wellington-street; and

19 March 1891.]

Mr. CURNOW, M.D.

[Continued.]

Chairman—continued.

and taken on the south, it is bounded by the Thames.

18977. Then these cases are attended by students, are they not?—They are attended by students.

18978. Are these resident medical officers paid at all?—No; they have their board and lodging. When I was a resident medical officer I paid, in addition; I paid 50 £. for my resident officership. The other is a rule that has come in recently; at least when I say that, for about 10 to 15 years. Formerly, we paid 50 £. for the appointment.

18979. To whom did you pay the 50 £.?—It went to the committee of management; into the hospital funds.

18980. Is there any fee to any officer on the staff?—No fee whatever; they are all free.

18981. But I mean, is any fee given by these men getting the appointments to any officer on the staff?—No, there is no fee paid to anyone. When a student has been his two years dissecting and engaged in his physiological work, a record of that is put before a committee of the medical school, and then he is sent up as an out-patient dresser; from the out-patient dresser he becomes an in-patient dresser; and then, from that, out-patient clerk and in-patient clerk. He has to go through the whole of those offices, and the senior ones are competed for, the lower ones being given on the record of the work done.

18982. Are all your staff required to have the qualification of the College of Physicians or Surgeons of London?—Do you mean the visiting staff or the resident staff?

18983. What they call the staff?—The visiting staff; yes, they are compelled to obtain the membership of the College of Physicians within a year, or the Fellowship of the College of surgeons of England within the same time on the surgical side.

18984. Do you see any advantage in that rule?—With regard to the membership of the College of Physicians, that is a disciplinary board, and deals with matters of etiquette; I rather see an advantage there. The fellowship of the College of Surgeons is acknowledged, I think, to be the best surgical examination in England, with perhaps one or two qualifications. I mean to say the degree of master of surgery, for instance, of the University of London, I should put quite as high as the fellowship of the College of Surgeons of England.

18985. Is that a degree given only by the London University?—It is given by other universities, but the London University has quite a different examination for it from any other university in the kingdom. At Edinburgh a master of surgery goes with a bachelor of medicine. Here a master of surgery requires to pass an examination in surgery some years after his other examinations.

18986. Do you think that the fact of obliging medical men to have the London colleges' qualifications has ever caused you to lose a good man at your hospital because he had not got one?—I should say that if the few universities for instance exercised any disciplinary powers over their graduates I should see no reason whatever why a man should become a member of the College of

Chairman—continued.

Physicians. For instance I am a doctor of medicine of the University of London; they exercise no disciplinary power over me in any shape or form; but I am a fellow of the College of Physicians, and that body exercises a disciplinary power. It is a question of etiquette; that is the reason.

Earl Cathcart.

18987. We were told at our last meeting that there was rather a grievance in a matter associated with all the hospital out-patient departments more or less, namely, that poor people were kept waiting, out in the rain it might be, before the doors were opened in the morning; have you noticed anything of that sort?—They can be only kept if they are before the hour at which they are admitted; I mean that they do not come before one o'clock and they are admitted up to two. We have no covered shelter for them.

18988. But suppose they come a little time before the door is open?—Then there is no shelter.

18989. Did you ever observe them standing out in a crowd in rain in that way?—No. You see the number of patients that are seen at King's (if I might refer to that for a moment) as out-patients is 9,650; if you divide that by 312 it is only an average of 30 daily; it is a very small number.

18990. It might well be a grievance at other hospitals without being so at yours?—Yes, quite so. I should say that its not occurring at our hospital was due to the small number.

18991. With regard to your outside midwifery cases, do you give bags of linen and beef-tea, and that kind of thing?—Occasionally; and we have sent out a nurse.

18992. It is not your rule to give bags of linen?—No.

Lord Zouche of Haryngworth.

18993. Your students are allowed to go, I think, to the fever hospitals of the Metropolitan Asylums Board?—That is only very recently indeed; the regulation has only come in within scarcely six months; it is not really in good working order yet.

18994. And do you think that privilege is likely to be greatly used?—It is very difficult to say, because, of course, some of these Asylums Board hospitals are at a great distance. For instance, we ourselves should have to send either to Homerton or to Fulham. Where infectious cases can be seen by the student in his own hospital he probably would not go to the Asylums Board hospital. In the next place he would not consider that the teaching at the Asylums Board hospital by means of a superintendent, although it might be most efficient, was equal to that of the visiting staff of his own school. Besides the material he must have the teaching. There are, of course, asylum superintendents who do teach and I believe they are extremely efficient teachers; still it would be difficult to persuade the student of that.

18995. The question is important, because we have been told several times that there is such a very inadequate provision for teaching the treatment of infectious diseases to students in London;

19 March 1891.]

Mr. CURNOW, M.D.

[Continued.]

Lord Zouche of Haryngworth—continued.

I suppose you bear that out?—We have at King's a standing rule of admitting ten cases; so that our students have a better chance of seeing infectious diseases than the students in any other general hospital in London.

18996. You are rather in an exceptional position then in that way?—Quite so. Except small pox we take in anything that is bad. I should explain with regard to that, that it is extremely difficult in my experience to keep out an infectious case. A person with scarlet fever may not be admitted as a case of scarlet fever but he may have Bright's disease, and it may be that in a day or two the scarlet fever is peeling; you cannot send that case out.

Earl of Lauderdale.

18997. Do not you find that inconvenience arises to the other patients from that system of taking in infectious cases?—No; I never knew infectious diseases spread in the hospital, except in the one case of typhoid just now referred to by the matron; and that was not clear.

18998. You spoke of peeling. Usually speaking, in scarlet fever cases it is thought necessary to take special precautions against the spread of infection, but you do not isolate them, you say?—In the first place the air space at King's is enormous, and that has a great deal to do with preventing the spread of infection; and the further the patient would be put at the end of the ward where he would not have any patient on one side, and on the side where there was a bed that bed would not be filled unless it were absolutely necessary. We do not have ten such cases absolutely in the same condition at the same time.

18999. But the convalescent of scarlet fever are the worst for the danger of spreading the infection?—Yes; but we should never have ten cases of scarlet fever at once.

19000. You would refuse them you mean before it came to that number?—Yes.

Earl Spencer.

19001. Are they in the same wards as the ordinary patients?—Yes, unless there is anything special in the cases; we have two isolation wards, and we do frequently isolate them as a matter of fact.

19002. In regard to the question which the noble Lord asked you about the infirmary hospital and the want of teaching power there, was not the idea rather that students should be taken round with their own teachers to see these cases?—No, they have to be taught by the Superintendent of the Asylums Board hospital.

19003. That is so now; but has there not been some idea that the other system might be adopted?—As far as I am aware there is some legal difficulty in the way with their Act of Parliament; but I am not quite sure on that point.

19004. I thought there was some special clause introduced into the Act in order that those infirmaries might be thrown open for the purpose of teaching?—I believe there was; but I have always understood, and certainly it is the process now, that the teaching is done by the resident superintendent of the asylum.

Earl Spencer—continued.

19005. But is there a legal difficulty in a teacher from a hospital taking pupils round?—The regulations that were laid down certainly never took the form of the teachers going from their school to the Asylums hospital to teach there; but whether it is a legal regulation or one made by the Asylums Board I could not tell your Lordship.

19006. Would there, in your opinion, be a difficulty in carrying it out under proper regulations?—I see great difficulties. You would have a dual control. It would be the most difficult thing possible for a physician to one hospital to take a large number of his students into another hospital over which he had no control and teach on another person's cases.

19007. If he taught a large number, certainly there would be a difficulty; but under regulations it might be arranged I suppose?—I should tell your Lordship that the general medical council has now insisted upon an extra year being added to the medical students' education, and of course it is quite possible that a certain number of medical students will take part of that year in going to a fever hospital. The student will have a year more for getting instruction extra to what he gets now; it is not laid down how he shall spend it, but certainly it is contemplated that the study of fevers shall form part of it.

19008. Now with regard to the class of people who come for out-door relief, are there any provident dispensaries in your district?—None. I think there is one perhaps on the other side of Holborn, at Lamb's Conduit-street; there was one there I believe, but there is none immediately close to us.

19009. Has there been any attempt to get them up?—No, not in our neighbourhood.

19010. You do not think it is possible that the fact of your giving this free treatment to so many people prevents their being established in your neighbourhood?—I do not think it affects them in the slightest. I can scarcely imagine that one per cent. of these people would be likely to join a provident dispensary. There may be a few in superior work in the Strand who might join one, but certainly the people in Clare Market could not do it.

19011. They are too poor, you think, to pay the very small sum that they would have to pay to join a provident dispensary?—We had an investigation as to whether we could charge our out-patients two or three years ago, and it was at the instance of Mr. Kinglake, a barrister, then and now a member of the committee; we came to the conclusion that we could not charge them more than a penny a head, or twopence at the most, and that it would not be worth while, with our small number of out-patients, to charge them.

19012. You have discussed the question then whether you could do it?—Most certainly.

19013. Did the establishment of the work-house infirmaries at all diminish the number of patients that came to you?—Not at all; our hospital, only now containing 220 beds, has really never been otherwise than full, except when

19 March 1891.]

Mr. CURNOW, M.D.

[Continued.]

Earl Spencer—continued.

when we were obliged to close the two wards of which the Chairman spoke, for want of funds.

19014. I suppose among your out-patients there are those who come, not to get a skilled opinion or a consultative case, but merely as cases of ordinary illness?—Of course the greater part of them are cases of ordinary illness; a few are sent by old students, and so on, for consultative purposes, but the greater number come in the ordinary way.

19015. But that is rather a valuable part of the out-patient system; getting consultative cases sent by old students, is it not?—Yes, old students frequently do it; they are always perfectly well aware that we are very glad to see them. They might be cases in which the people might be able to pay; but that question never comes into consideration if they are sent by old students.

19016. And those are valuable cases to you for teaching purposes?—They are valuable cases; but then the students in after-life will have to treat a large number of ailments, and we must have trivial cases as well as serious ones.

Lord Monkswell.

19017. Have you anything to say with regard to the question of general and special hospitals?—In regard to that, it depends, I should say, entirely upon the class of special hospital. For instance, a special hospital like the Brompton Hospital for Consumption is for a class of cases which are undoubtedly extremely numerous, and it is a question of accommodation. They send patients out every two months just exactly, I believe, as we should do. We should take a limited number of chest cases; but unfortunately the disease is so prevalent that you must have accommodation for them; so that in that way you are bound to provide asylums for them. A certain number of other hospitals are absolutely asylums for incurables; you have to relieve them, and you must send them to other places. Then a third class of special hospitals that you have are those that were founded, like the Moorfields Ophthalmic Hospital, before ophthalmic and other special branches were common in general hospitals. Now that the general hospitals have special departments, for the throat, for the eye, for the ear, and such classes of cases, I see no necessity for the special hospitals; but you cannot do away with the old institutions. Most of the recent ones I should say were useless.

19018. You would say that the special departments of a general hospital could treat this class of cases just as well as the special hospitals?—I should even go further, and say that they could do it better, because in the general hospital the physician or surgeon has a greater general knowledge. Take the hospital for fistula, for instance; you must examine a man's chest to see whether he is consumptive before you operate on him. It is simply parcelling the body out into pieces as if the one had nothing to do with the other.

19019. It has been suggested as a reason for having a special hospital for consumption that a very peculiar system of ventilation is necessary for consumptive persons that is not necessary for other kinds of diseases?—I think the more you

(24.)

Lord Monkswell—continued.

can expose them freely to the open air, and even send them to the country, where there are fewer people, the better for them.

19020. For cases of consumption, we were told, it is necessary to have the air at a certain temperature which it is not in other diseases, and so in the Brompton Consumption Hospital they have rather an elaborate system of ventilation?—We, at King's, kept what was called a warm ward for three or four years, where we put cases of consumption, bronchitis, and very serious complications of heart disease, and it was about the most fatal thing we ever did. The patients were no better for the treatment and we were obliged to give it up.

19021. I think we had it in evidence that in the Brompton Hospital they have four towers, and that by their system of ventilation the air there is changed about once in every one-and-a-half hours?—I was in Brompton for six months; but a cross ventilation which you can have with windows on both sides I think is very much more advantageous. For instance, there are small wards at Brompton, and I should very much prefer the system of ventilating that we have, having the windows freely opened.

19022. You do not consider, then, that the ventilation of Brompton Hospital is a very peculiar success?—They have changed it since I was there. It is a long time ago since I was there.

19023. Do you think that special hospitals are desirable for diseases of children?—With regard to that, I should put it very much as I do the question of a consumption hospital. There are undoubtedly so many children suffering from children's diseases, medical and surgical, that I am afraid the children's wards in general hospitals will never be sufficient to overtake the demand, and therefore there must be of necessity children's hospitals. But of course that they are no better *per se* than the children's wards of a general hospital I am perfectly clear; but then it is a question of how many children's beds you can take in in a general hospital.

19024. It is simply a question of how the accommodation can be best distributed?—That is exactly my idea.

Chairman.

19025. You are dean of the medical school at King's College?—I am.

19026. Will you tell us on what basis the medical school is?—The medical school is simply a medical department of the college under the general supervision of the college and the principal of the college, and is worked exactly on the same lines as for instance the applied science department, the engineering department, the theological department, and so on; it is not an independent school.

19027. Can you tell us at all about the fees, and how the expenses are met. To whom are the fees paid first of all; to the college?—To the college; everything is paid in to the secretary of the college. Since 1883, when I was appointed dean, the total receipts of the medical department have varied a little, from about 2,500 *l.* to about 3,500 *l.* The highest total receipts have been nearly 3,700 *l.*

3 F 3

19028. Is

19 March 1891.]

Mr. CURNOW, M.D.

[Continued.]

Chairman—continued.

19028. Is that in one year?—In one year.

19029. And how many students does that represent?—That would mean an average of between 30 and 40 matriculated students entering every year. The number of matriculated students we have at present is just over 200; it is 205.

19030. Is that an increasing or a decreasing number?—It is variable. During the last year or two it has been increasing; but there was a drop previous to that. The smallest entry that we had was in 1888; that was a drop, and now we are gradually recovering from it.

19031. Was there any particular reason for that drop?—Not that I am aware of.

19032. Has it anything to do with other hospitals having residential colleges?—No, I should rather say it had to do with the unfortunate fact that we were obliged to shut up two wards of our hospital, and therefore could not give the same amount of instruction as before. We have always had a residential college from the foundation of the college in 1839, but it is not limited to medical students; students from any department may live in it.

19033. Then the medical fees at King's College Hospital do not rest with the medical committee, or with the medical members of the committee of management, but with the authorities of the college?—No. A certain proportion, namely, a quarter of all our fees, goes to the general expenses of the college, before there is any question of dividing among the professors themselves; and a certain amount of our expenses is paid from the general funds of the college; and if our expenses go above a certain amount, that is again supplemented by the college. Again if our expenses are not so great we supplement the other departments.

19034. Are the fees of lecturers and teachers paid by the college?—Yes; in fact, scarcely one of us knows what the fees of the others are, until they are divided between us.

19035. Then who selects the teachers and lecturers?—The council of the college.

19036. But now you say you give one-fourth part of the fees to the council of the college?—Yes.

19037. What becomes of the other three-fourths?—The expenses are taken out of that up to a certain extent.

19038. How much would that be?—The expenses have varied from 1,800 *l.* practically down to 1,400 *l.*; the lowest sum is 1,405 *l.* and the highest is 1,798 *l.*19039. And what were the expenses last year?—Last year the expenses of the medical department were 1,700 *l.* A quarter of the fees goes to the expenses of the college generally.19040. Then that means to say that dividing your 2,700 *l.*, if that is the amount of your fees, into four, 670 *l.* odd is to go to the council?—Yes; but I mean that of what are called our total receipts, the fourth has been taken off previously.

19041. Then, what becomes of the rest?—That is divided, of course, among the professors.

19042. But I thought that these gentlemen received all the fees from the council?—Yes, they are paid through the council, but of course

Chairman—continued.

they must be the fees which come in from the medical students.

19043. Then you are handed over a certain sum by the council to pay the teachers and lecturers?—Yes. I want your Lordships to understand that the fees are all fixed in this calendar; that is all paid to the secretary in the office, who in the officer of the council; and then yearly, after taking out the expenses due to the medical department he divides the rest of it amongst the professors.

19044. And what is the maximum that any professor gets; I do not want his name, but what is the maximum?—In some subjects if he is devoting his whole time to the college he could get from 400 *l.* to 500 *l.* a year.

19045. Are they paid by the number of students that they teach?—It depends. The sum is divided among them in this way: In the first place, a certain amount, a third, is taken over for the clinical teaching of the hospital, and that is divided, of course, amongst the clinical teachers, out-patient as well as in-patient, the other two-thirds are paid to the professors who lecture in the college on physiology, anatomy, and so on; and they are divided among them according to the amount of fees which the importance of each subject is supposed to entitle it to. For instance, if one subject is charged nine guineas per course, and another subject is charged five guineas, the man who is the professor with the nine-guinea fee will get a corresponding proportion. That is all divided by the secretary of the council; it is laid before the council, and is then paid to us; we have no control over it.

19046. Then the medical men have no control over it at all?—Not the slightest.

Earl Spencer.

19047. Then you have not got a medical committee of the council to manage the medical school?—Not to manage the medical school; but there is a medical committee. If you notice the list of the council you will find some medical men there; but they are none of them present professors, but past professors, who form a medical committee to whom the council of the college relegate any question connected with the medical school.

19048. And they appoint the professors?—They recommend them to the council, and the council appoints them. I should explain to your Lordship that there is a meeting of the medical staff for the discussion of the ordinary medical routine of the hospital once a month, called the medical board, of which I am dean; and part of my duties as dean is to present the ordinary business that comes up to that board once a month; and if they have anything to recommend, they recommend it at once to the council.

19049. Then your school differs from other schools connected with some of the large London hospitals in this; that in your case there is a large element of lay managers, whereas in other hospitals I suppose it is almost entirely managed by the medical staff?—It is a different thing in our

19 March 1891.]

Mr. CURNOW, M.D., and Dr. WACE, D.D.

[Continued.]

Earl Spencer—continued.

our case from what it is in theirs; ours is a medical department of the college managed by the council of the college; the other medical schools are simply an association made by themselves for teaching purposes. They grew differently; but in our case the medical department grew as a department of the college. In the other hospitals a medical school has been formed by the gentlemen who are on the staff of the hospital, and they form a society of their own. We are a chartered corporation of course, and they are not.

19050. And should you say that the council of King's College does justice to all the requirements of medicine, surgery, and so on?—Most certainly.

19051. Then there is a difference as compared with the hospitals; but the system of management is a good one in your opinion?—I prefer it infinitely to a private system.

Earl Cathcart.

19052. But there is some analogy between your system and that of University College, is there not?—University College Hospital is under exactly the same system, so far as I know.

19053. And those two are single instances amongst the medical schools; your college and University College?—Yes.

19054. It rather struck me that University College had more freedom; but it is not, so I now gather from you?—I do not think so.—(Dr. Wace.) I think it is just possible that there may be some differences in the organisation, in the direction that your Lordship means.

Earl Spencer.

19054. (To Dr. Curnow.) Would you like to develop this system further, and have one large board to manage all the schools in London?—I think such a system would be most disastrous. You must have at least three or four; and of course the chief objection that I should have is that all our scientific studies now are so practical that I cannot understand a teacher teaching a practical science with more than 100 pupils to superintend. I should say, when it got beyond that it got cumbrous; that it had to be left to demonstrators and assistant demonstrators. It is not so much the lecture system as the practical work that must be superintended.

19056. Then you attach importance to the independent individuality of each school?—Yes. I should say that I am firmly convinced that for the teaching of science, some of the schools in London might be amalgamated; but of course from amalgamating two or three schools, and so making four or five science colleges, as it were, it is a very long step to central institutions.

19057. But you think that some little centralisation might be carried out in regard to some of the arrangements, though not with regard to the clinical subjects?—Quite so. I am strongly of opinion that there is a great waste of teaching in some of the science subjects in London, which might be avoided if some of the schools could, to a certain extent, combine. I should say that the great advantage of King's College and University College as colleges over the medical schools of

(24.)

Earl Spencer—continued.

the other hospitals is that we can send our students into, perhaps, one of the finest physical laboratories in the kingdom. Our chemist is not dependent upon medical fees; he has a large amount of fees also from the Applied Science Department. We are enabled to keep up a good biological school from the same circumstance, because where a medical school has to keep up a chemist and a physicist, a physiologist and a biologist, and to stock all their laboratories, it is almost an impossible thing, unless it is extremely rich. I mean that it is attempting to do the work of a science college, for which they are not fitted. (Dr. Wace.) Might I add something to a piece of evidence given before you by Mr. Bousfield, a valued member of our committee? He was under the impression that the connection of the hospital with the college in these science schools led to a greater expense of hospital working. I think your Lordships will see that from the working of our system our medical school teachers have access to laboratories and the other forms of teaching which they could not have merely in connection with the hospital.

Chairman.

19058. (To Dr. Curnow.) Is there anything else you wish to say to the Committee?—There are one or two small points which I should like to call your Lordships' attention to. That (*producing a form*) is a form which is used throughout the college, not in the medical department only, for our students. These forms are sent to the parents and guardians regularly three times a year; and I have taken an example of one form relating to an extremely unsatisfactory student and an example of a satisfactory one; and we keep permanent returns of that nature; so that our discipline is perhaps very much stricter, as it is collegiate discipline, than that of most of the medical schools.

19059. Who is responsible for the discipline?—I am.

19060. Under the principal?—Under the principal. The only other point that I wanted to call your Lordships' attention to was that Mr. Bousfield, who is a member of our committee, said in his evidence that we often saw patients for about half a minute only.

19061. Do you know at what number in the evidence that was?—It was given on the 15th of May last year. The first answer I wish to refer to was at No. 1324; he says there that there is no classification between casualties and out-patients; "the classification is made by the people themselves; it depends upon which door of the hospital they apply at." Upon that I venture to say that I hope I have made it clear to your Lordships in my evidence that unless they were real emergencies they would not be treated from the surgery of the hospital; that there is a distinct classification; that it is only emergencies that are treated as casualties; and that it is quite a mistake to describe them as being ordinary out-patients. And then with regard to Nos. 1373 and 1374 on page 91 in Mr. Bousfield's evidence, there again it is stated by him that the physicians and I presume it refers partly to myself, for I was

19 March 1891.]

Mr. CURNOW, M.D.

[Continued.]

Chairman—continued.

physician to the out-patients at the time) treat patients very quickly. He says, "I think there is a tendency to treat patients very quickly"; and he also says, "I cannot tell exactly what the average amount of time devoted to each patient is, but I should suppose not more than half a minute." I demur entirely to that. Our out-patients do not average more than 30 in a day, and they are divided between three men, and they have three assistants. Those are the new cases; the attendances do not average more than three times. If a patient comes and says he is better, and you have an assistant close to your hand and you tell him to repeat the medicine, it may take half a minute; but otherwise the cases take quite as long and are examined as thoroughly as they can be anywhere. It is not a question of whether they are interesting or

Chairmn—continued.

not. If a person comes with phthisis or anything like that we make it a principle for the instruction of the student, as well as for our own satisfaction, to make a thorough examination of the patient's chest.

19062. Do the assistants attend on the same day as the surgeons?—They work by the surgeon's side.

19063. And how long does the work of the out-patients' department go on, till it is finished?—Till it is finished. Practically one is rarely in the out-patient department after four; from two to four often; sometimes not so long.

19064. Is there anything else you would like to say?—No.

The Witness is desired to withdraw.

Ordered, That this Committee be adjourned to Thursday, 16th April, at Twelve o'clock.

Die Jovis, 16^o Aprilis, 1891.

L O R D S P R E S E N T :

Earl of WINCHILSEA AND NOTTINGHAM.
Earl of LAUDERDALE.
Earl CATHCART.
Earl of KIMBERLEY.
Lord ZOUCHE OF HARYNGWORTH.

Lord SAYE AND SELE.
Lord SANDHURST.
Lord SUDLEY (*Earl of Arran*).
Lord MONKSWELL.
Lord THRING.

THE LORD SANDHURST, IN THE CHAIR.

MR. JOHN WILLIAM MOORE, M.D., is called in; and, having been sworn, is Examined, as follows :

Chairman.

19065. You are a Member of the Royal College of Physicians of Ireland?—Fellow and Registrar.

19066. You are not the President of that Association?—I am not the President, but I am a Fellow of it, and the Registrar.

19067. Are you Physician to the Meath Hospital, Dublin; Consulting Physician to Cork-street Fever Hospital, Dublin; and Professor of Medicine in the Royal College of Surgeons, Ireland?—Yes.

19068. And you wish to hand in to the Committee a statement with regard to the exclusion of members of your body from the medical institutions in London unless they obtain an extra qualification in London; is that so?—Quite so.

19069. Of course we shall be very glad to hear anything you have to say on that particular point, but you may have observed that our instructions from the House of Lords do not permit us to go into matters affecting Ireland generally, as regards medical institutions there; anything affecting the particular point mentioned we shall be happy to hear from you, but at present our inquiry is limited to the metropolis?—I understand that.

19070. It is the case, is it not, that no member of your College can obtain an appointment on the staff of any London hospital without the qualification of the London College of Surgeons or Physicians?—I do not think that that exclusive rule is universal, but there are many hospitals where it applies.

19071. Do you know of any hospital where it does not apply?—I do not, but I should be sorry to say that it was universal. It is largely prevalent.

19072. At the same time you cannot call to mind any hospital where such a gentleman without a London qualification would obtain an appointment?—I cannot.

(24.) e.

Chairman—continued.

19073. Do you know of any medical men who have made application and been refused on that account?—In the case of a provincial hospital a graduate of the University of Dublin not very long ago sent in an application, and it was found that he was ineligible; and on the last page of those minutes of evidence which are before you I have culled at random from the British Medical Journal of the last few weeks a number of exclusive advertisements. In not a single case there would one of our men have been eligible without undergoing a further examination on this side of the water.

19074. What sort of an examination would that be?—It would have been an examination for the lowest qualification of the Royal College of Physicians here.

19075. And had he already obtained a higher qualification than that which he would have obtained on this side?—Some of our candidates would have perhaps been Fellows, or Members at all events of our College. We have three grades, Fellows, Members, and Licentiates; and to qualify for those appointments, the lowest qualification here would have had to be taken.

19076. Which is a lower qualification than the one the candidate would probably already possess when making the application?—Quite so. In my own case, as a Fellow of the Royal College of Physicians, I should have had to undergo the examination for the license in medicine of the Royal College of Physicians of London. Now, I saw that Dr. Allchin of the Westminster Hospital had stated before this Committee that he considered that would be no grievance; but I know it would have been a grievance. None of our Fellows would think of looking for a hospital where such an exclusive rule exists; I have no hesitation in saying that.

19077. How does the grievance come about?—The grievance comes about in this way, that
3 G a man

16 April 1891.]

Mr. MOORE, M.D.

[Continued.]

Chairman—continued.

a man who had been perhaps 20 or 25 years in practice, holding the highest qualification from his own College, would be very reluctant to subject himself to the lowest grade examination in a sister College, in order to qualify for an appointment.

19078. Do you mean that from the loss of dignity it would be derogatory?—I do not think that anyone would like to run the gauntlet; it would be very unpleasant.

19079. A man of a certain age would not so easily qualify as if he had gone straight from college?—Exactly; his practical experience would be very much increased, but his opportunities for passing examinations do not improve as time goes on.

19080. Have you ever made any representation to the Colleges of Surgeons and Physicians that any alteration should be made in reference to this matter?—We have not approached the Colleges, but we have sent that statement which is now before you to various institutions in England; this printed statement I mean, headed "Hospital Appointments in England," which is embodied in my minutes of evidence on page 2.

19081. Could you give the Committee a copy of that?—A number of copies are here. I merely wish to explain this in reference to that statement. It is headed, "King and Queen's College of Physicians in Ireland." Last year Her Majesty granted us a supplementary charter, changing the name of the college to "Royal College of Physicians of Ireland." We date from 1667.

19082. Then are you disposed to think that the reason of the necessity of medical men who wish to hold these appointments, obtaining this extra qualification, is that it is practically a kind of protection to the medical men who study in London?—It secures for them the hospital appointments. I should like very much to bring out a point on that subject, if you will permit me. Up to the year 1876 an exclusive rule existed in Ireland in the case of all the county infirmaries. The President of the Royal College of Surgeons will probably explain the matter more fully; but I may say that this exclusive rule required that every successful candidate for one of our county infirmary appointments in Ireland should be a licentiate of the Royal College of Surgeons of Ireland; and that rule was abrogated in the year 1876 by an Act of Parliament, of which there is a copy before your Lordships; it is towards the end of those minutes of evidence. The appointments in all the county infirmaries which are most eagerly sought after by the very leading men in the provinces of Ireland, are now open to all registered medical practitioners; the licentiates of the Royal College of Surgeons of England are put on exactly the same level as the licentiates of the Royal College of Surgeons of Ireland; so that we are asking merely for reciprocity of privilege.

19083. Do you find that you have any applications from Englishmen?—I will mention one instance; it is in connection with my own hospital, the Meath Hospital. One of our surgeons holds no Irish qualification at all in surgery; he is a licentiate of Edinburgh; and that I think is

Chairman—continued.

proof positive that the exclusive rule does not exist.

19084. When that exclusive rule did exist, was it the experience that able men were excluded?—It was; and it was in consequence of that that it was altered; at all events it was felt to be an injustice and a wrong.

Lord *Monkswell*.

19085. It is suggested that one reason why the exclusive rule is adopted in London, is that the Colleges of Physicians and Surgeons here exercise certain powers of discipline over their members which they would not be able to exercise unless they belonged to those colleges?—Quite so; but I can assure you that the powers of discipline exercised by the Irish colleges are even more stringent than those here. We have within the last two months (I have mentioned it in those minutes of evidence), erased from our roll of licentiates the name of a gentleman who was accused and convicted of unprofessional conduct; and from time to time it has been my duty as Registrar of the College of Physicians to require explanations from erring licentiates, and you have no idea of the stringency of our powers of discipline.

19086. Of course it might be a matter of opinion whether your views of the conduct of your members were more stringent or less stringent than those of the Colleges in London; but would you object to its being done in this way: would you object to the London authorities only appointing your men on condition of their putting themselves, as Lord Kimberley has suggested, under the jurisdiction of the Colleges of Physicians and Surgeons in London without undergoing any examination?—Well, I do not think there would be the slightest occasion for that. In the first place, their own Colleges possess these powers; but, in addition to that, the General Medical Council has now very full and determined powers in cases of this kind; and the General Medical Council, I need not say, exercises its powers in connection with all the licensing bodies.

19087. Then you think that the powers of the General Medical Council would prove quite sufficient?—Quite sufficient.

19088. But then I suppose the Colleges of Physicians and Surgeons in London have certain other powers irrespective of those exercised by the General Medical Council, have they not?—Just as we have, but no more.

19089. But the London people might not know much of how you exercised those powers; they might be more inclined to put a gentleman who served in the staff of one of these hospitals under their own jurisdiction than under yours; you can quite understand that that might be their view?—But I see insuperable difficulties in the way of subjecting licentiates of one college to any jurisdiction from the other colleges.

19090. Then in point of fact you would not agree with Lord Kimberley's suggestion; you would think it impracticable?—I think it is quite impracticable.

19091. You say that up to 1876 there was an exclusive rule in Ireland similar to the one which now obtains in London; you said it was abrogated

16 April 1891.]

Mr. MOORE, M.D.

[Continued.]

Lord Monkswell—continued.

abrogated by Act of Parliament; but I suppose you had power to abrogate the rule before?—No, because a special Act of George III. provided for the exclusive rule. The Act is before the Chairman.

19092. So that it was necessary to have an Act of Parliament to abrogate the rule?—Yes. The county infirmaries of Ireland were subject to an Act of Parliament of George III. which provided for this exclusive rule.

19093. Were you in favour of its abrogation by Act of Parliament, or not?—Thoroughly. I do not approve of exclusive rules at all, and there is no occasion for them now since the Medical Act of 1886. That has quite changed the aspect of affairs.

19094. Have we got that Act before us?—I am sure it is in the room. It is the Act which combines certain medical licensing authorities for purposes of examination and for qualifications.

19095. It has only to do with examination, not with powers of discipline?—The powers of discipline are maintained under it.

19096. But they are not altered in any way?—They are not altered in any way.

Earl Cathcart.

19097. Your arguments would apply equally to Scotland?—Quite so.

19098. And there is, in point of fact, the same feeling of dissatisfaction in Scotland in reference to what you complain of with regard to Ireland?—I have no doubt of it.

19099. Are you aware that where a man is an eminent man, the examination is made exceedingly easy for him; we were told that in the case of a very eminent French practitioner who wanted to be made a Fellow of the College of Physicians in London, his examination was merely going round a hospital and explaining some clinical cases?—I can answer only for our own Irish College with regard to that; and I can assure you that the Charter which gives us the power of examination for Membership leaves no loophole for escape; we must subject every man to a very stringent and searching examination.

19100. But I am talking of the College of Physicians in London; we were told that the College of Physicians in London makes the examination easy for eminent men, that they merely make it a practical examination; were you aware of that fact?—I was not aware of it.

19101. Does that make any alteration in your views at all, if the case is so?—I cannot say that it does; because it is really an objection to the undergoing of an examination of any kind. It is the idea that would be present to my mind that I was thought not qualified for the appointment I was seeking.

19102. To go to another subject, can you give their Lordships any information about the Board of Control of Hospitals in Dublin?—Yes, that is the Dublin Hospitals Board; it is presided over by Lord Powerscourt, and the secretary is Dr. William J. Martin.

19103. Does that modified system of control work well?—I have no doubt that, as far as it goes, it does work well, but I do not know that

Earl Cathcart—continued.

it is perhaps as strong a board as one would like.

19104. How is the board nominated or elected, or how is the board constituted?—As well as I recollect, it is nominated by his Excellency the Lord Lieutenant; I am not quite sure of that; I am not on very safe ground about that.

19105. They would be persons eminent for philanthropy, and so on?—Exactly.

19106. And they probably have the confidence of the subscribers to the various hospitals?—Yes, they have. There is a very important voluntary supervision over hospitals in Dublin at present, in connection with the Dublin Hospital Sunday Fund.

19107. That is analogous to the London fund of the same nature, is it not?—Yes; but I do not know the rules of the London fund.

19108. In point of fact, you have no very intimate knowledge of this central board in Dublin?—I know very well what they do.

19109. But you have not been connected officially with them in any way?—No, I have not.

Chairman.

19110. Still, it is your opinion that if that board were a strong board it might be a very useful body?—Certainly; and a necessary body.

Earl of Lauderdale.

19111. Have many medical men taken appointments in Ireland since the abrogation of this rule of which you have been speaking; men who do not belong to Ireland, I mean?—That I am not quite prepared to say; but we have a very large number of Scottish qualified men practising in Ireland.

19112. Have you any men from London that you can fix upon who have taken appointments in hospitals in Ireland?—I cannot recall any cases.

19113. What I mean is, when this rule was abrogated in 1876, was it done, do you suppose, with the intention of getting better men by opening a broader field for these appointments?—Not at all; I am satisfied of that.

19114. How did it come about?—It was simply an improvement; it was simply the removal of what was felt to be an unfair exclusive rule.

Chairman.

19115. Then to sum it up, is it your opinion that, both in regard to opportunities of education and the advantages of experience, there is a loss to Irishmen by reason of these exclusive rules?—The way I look at it is this: that we have from the Royal College of Physicians of Ireland 700 or 800 of our licentiates practising in England, and these men are excluded from reaping the reward of their professional knowledge and standing by this exclusive rule.

19116. But is not their education interfered with by it to a certain extent, and their experience?—Of course it would be.

19117. Then your answer to my question would be in the affirmative?—It would.

3 G 2

19118. Are

16 April 1891.]

Mr. MOORE, M.D.

[Continued.]

Earl of Arran.

19118. Are there any appointments in the Dublin hospitals given at this moment to English and Scotch practitioners who have come over?—Yes; in my own hospital one of our surgeons holds no Irish qualification in surgery; he is one of our surgeons, and he is an Edinburgh qualified man.

19119. But, as a rule, I suppose you would prefer having men who had been brought up in your own hospital to having strangers?—As a matter of fact, the competition for the Dublin hospitals does not materially extend to England and Scotland. We have got very good men, of course, in Dublin; but I am quite satisfied that if a first-rate man came over from London his candidature would receive every consideration; and if he proved to be the better man he would get the appointment.

Earl of Arran—continued.

19120. I mean, that there are other considerations which have to be thought of in making the appointment; his moral qualifications, I mean, whether he is a good man to act with or a pleasant person to act with, or one likely to take a great interest in his work; that would, to a certain degree, weigh in making the appointment?—Undoubtedly.

19121. And such knowledge can only be got by frequent intercourse with a gentleman?—Of course, that stands to reason.

19122. Therefore, it stands to reason that naturally you would probably prefer a man who had been brought up in the hospital, and whom you had known for a long time, to a perfect stranger?—Certainly.

The Witness is directed to withdraw.

MR. HENRY GRAY CROLY, is called in; and, having been sworn, is Examined, as follows:

Chairman.

19123. You are the President of the Royal College of Surgeons of Ireland?—Yes.

19124. You may have heard what I said to the last witness, at the beginning of his examination, that we cannot go into the question of hospitals as affecting Ireland, but we shall be glad to receive your evidence on the particular point with reference to which he was examined?—We feel, in the Royal College of Surgeons of Ireland, that, with regard to our licentiate (that is, the lowest degree that they get, what we call the licentiate in Ireland, and is analogous to the membership in England), the examination is a very stringent one, so stringent that I remember myself, and it is very well known in Dublin, that some years ago young men who were rejected in Dublin came over in the boat and passed in London, and came back (this was at the time of the Crimean war) in 48 hours with their diplomas; and at that time the examination for our College of Surgeons diploma was considered by us, and it was considered everywhere, to be a very stringent examination; there were more subjects included in the examination, which was the reason of a great many young men failing there, and passing in England. They were not examined alone in anatomy, and surgery, and physiology, but they were examined in medicine and other subjects as well; and then our fellowship examination has always been a very stringent examination; and we felt that the advertisements which have been inserted with regard to the Liverpool Infirmary, and, I think, with regard to the Bristol Infirmary, that no one holding any qualification except an English one, could compete for the appointments, reflected on our examinations and on our teaching generally, and practically shut our men out from competing.

19125. Although your examinations are in no way inferior to those for the English qualifications?—We think our standard quite equal to any other; it is not nice to say that we think it better than any other, but we think it quite as high a standard as could be given. Both for the licence and for the fellowship we make it very stringent; we protect the public in every way

Chairman—continued.

by our examinations. I was an examiner in surgery for a good many years myself, and also in anatomy, and I am able to say that we give a very stringent examination both for the licence and for the fellowship; a very extensive examination.

19126. And have you ever known any distinguished medical men who have been refused these staff appointments owing to the want of the London qualification?—I do not know the names of any; but if I went to Bristol to look for an appointment in the Bristol Infirmary, I would be told that I could not compete for the appointment. A member of the London College might be elected and a fellow of our college might be against him; and even the president of our college would have to go away, saying, "I am not eligible." That is what I feel.

Earl Cathcart.

19127. As we have the great advantage and pleasure of seeing you here, I want to ask if you can tell us anything about the Dublin Board of Control; not to go into the matter deeply?—I do not know much about it. The Dublin Hospital Board has very little to say, I think, to the general management of our hospitals. We have a board of governors and medical men, as they have in London, and we manage our own affairs.

19128. But as to the board of control, you have nothing to say on the subject?—I do not think it has ever affected the hospital which I am senior surgeon to, the City of Dublin Hospital; I do not know that it has had anything to say to that.

19129. That may be much to the credit of the board of that hospital?—It would look as though we did not want their attention.

Lord Monkswell.

19130. You heard Dr. Moore say that he considered it would be impossible for you to allow the fellows and members of your colleges to be put under the disciplinary rules of the colleges in London; do you agree with him in that?—

16 April 1891.]

Mr. CROLY.

[Continued.]

Lord Monkswell—continued.

that?—If I came to practise in London, I do not think I would object to any control of any board I was working with. If I were surgeon of a London hospital I would feel myself bound to abide by their rules in every way.

19131. Then you would agree to put yourself under the disciplinary control of the London College of Physicians or Surgeons, as the case might be?—I do not think it would be derogatory to any surgeon coming from any place, from Dublin to London or from London to Dublin, to say that he would submit to the rules of the president and vice-president, and the council of the college, as to his behaviour.

19132. You do not, as a matter of fact, make that condition in Dublin as to anybody who comes from London?—We do not, because we think that a man who would compete for a hos-

Lord Monkswell—continued.

pital appointment would be a man who would not be likely to require very close watching; and if he did require it he would get it.

Earl of Kimberley.

19133. That condition might be made, might it not, by the hospital authorities themselves, in their election of the medical man, without any difficulty?—Yes.

Earl of Winchelsea and Nottingham.

19134. It would have this advantage, would it not, that a man who was guilty of unprofessional conduct would be either transferred to the jurisdiction of the London authority, or would remain under the Irish one?—Yes.

The Witness is directed to withdraw.

MAJOR-GENERAL T. W. MERCER, is called in; and, having been sworn, is Examined, as follows:

Chairman.

19135. You are the Chairman of the Board of Management of the West End Hospital for Paralysis and Epilepsy, are you not?—I am.

19136. When was that hospital founded?—About 12 years ago.

19137. Was it always a hospital from its commencement, or was it a dispensary to start with?—It arose in this way: Dr. Tibbitts may be looked upon as the founder of the hospital; he was connected with another hospital, and for certain reasons unknown to me, he thought proper to leave that hospital, and take active measures for raising and establishing this hospital, the West End Hospital; and it continued to flourish for some time. In connection with this hospital at first a school of massage was also established in the same street by Dr. Tibbitts, that school of massage continues to this day, but that school of massage was a source of some little difficulty to our hospital. It has been, your Lordship must understand me, of great service, and has been the means of obtaining for the hospital the services of masseurs and masseuses, to a very large extent; and the treatment which was introduced by Dr. Tibbitts was most successful and was very much aided by the students of that school of massage. But for certain reasons (I must just put in here that I have only been connected with the hospital for 14 months myself), I was asked to join the committee, and to become the permanent chairman of the committee on the same day.

19138. Who was your predecessor?—There had been no permanent chairman for some time. Lord Robert Montagu was the chairman of the hospital, but I am not quite certain, without looking up the minutes, when Lord Robert Montagu resigned. There had been some little misunderstanding, and he resigned.

19139. I will come to that a little later. Is this hospital of yours a free hospital?—Not entirely free; there is a free ward, and no one is ever refused admittance; but as many desire to pay something towards the treatment they receive, they are permitted to do so. But on

Chairman—continued.

the first application to enter the hospital they are not asked for anything. Then a little inquiry is made as to their means, and such information as it is possible to obtain is obtained from them, or from their friends, or from those that recommend them, and a small fee per week, varying from 1 s. to 5 s. (not exceeding 5 s.), is taken from them; and this has been found to work better than if it were entirely free. It gives more satisfaction to the class of patients that come into the hospital, and is found in every respect satisfactory. Moreover, it brings a certain amount of money into the hospital and therefore assists in its support.

19140. How many beds have you?—At the present moment the hospital is under repairs, and therefore there are no beds; in fact it is not under repairs, but it is being entirely rebuilt from the very foundation, and it was found necessary to send all the patients to their homes, and that has been the state of things ever since I have been chairman of the committee. We are now approaching completion, and we shall then have certainly room for 45, probably 60 beds.

19141. Then I understand that whilst you have been chairman of the committee the hospital has been closed?—It has been closed for in-patients but opened for out-patients, and the number of out-patients attending has been very large indeed, and the treatment, I may say (if this is the appropriate place for mentioning it), has been, as far as I can judge, most successful.

19142. Are the out-patients free?—The out-patients are not free; they are dealt with just in the same way as I have already described; they are asked if they are able to pay anything and willing to pay anything; and they say that they are or are not able, and a little inquiry is made. Of course it is not possible to go very deeply into such a matter, but, generally speaking, we find that they are willing to pay, on an average, up to half-a-crown a week.

19143. Do you keep an inquiry officer to make the inquiries?—No, there is no inquiry officer

16 April 1891.]

Major-General T. W. MERCER.

[Continued.]

Chairman—continued.

officer kept, but it is done, in the first instance, through the dispenser. Then he reports to the medical officer who has to take charge of the case; then it comes to the secretary, and the secretary writes to the person recommending the case; and by rather a roundabout process they arrive at last, within a week or so, at the ability of the patient to pay.

19144. This hospital was started about 14 years ago, I think you say?—About 12 or 14 years ago; that is not a particular point that I have looked into, but as far as I can remember, that is so.

19145. Do you know where the funds were procured from to start it, first of all?—I cannot give that information, but the secretary is here and has been connected with it for a long time, and no doubt he will be able to give that information.

19146. Will you tell me what the system of management of your hospital is. You have your board?—We have our board.

19147. How often does it meet?—Once a month. The board consists of about 15; I think there are 15 names down on the list of the committee; and we generally have a very good attendance, especially since I have had the honour of being there. I have seen eight or nine members of the board present on almost every occasion, and I consider the board itself, the committee of management itself, very satisfactory.

19148. Have you any other committees which meet more frequently than once a month?—A sub-committee meets alternately in the alternate or intermediate fortnight. It is a sub-committee for determining all points of finance or internal arrangements and organisation; it meets once a fortnight; and there is a chairman appointed for that sub-committee.

19149. But is that the only body of authority that does meet, that committee meeting once a fortnight?—It is now. It was the practice before to have a committee of the medical staff, but it was found to work so very unsatisfactorily that on revising the rules, which was done in my time, and which has been done by me, for I myself drew out the draft of rules, we considered it desirable to dispense with the medical committee. There was generally such a conflict of opinion amongst them, coming up to the committee, that it was difficult to arrive at any conclusions at all; and we, therefore, dispensed with the medical committee, but determined that the senior physician *ex officio* should be a member of our committee of management, and that one other member of the medical staff should be elected by themselves to come up to represent whatever might be required.

19150. Is the committee of management the board that meets once a month, or is it the sub-committee?—The committee of management meets once a month, and the sub-committee meets in the intermediate fortnight; that is to say, there is a committee sitting every fortnight of some kind or other.

19151. Now, how many members are there of this fortnightly committee?—I forget whether it is three or four, but it is either three or four.

19152. How many attend as a rule?—They

Chairman—continued.

are very regular in their attendance on the sub-committee; but that has only been introduced, I may say, within the last few months, since my time. Sub-committees were appointed before, but only from time to time as they might consider necessary, not as a regular thing. This has now become a standing committee.

19153. That is practically the executive of the hospital then?—That is practically the executive of the hospital.

19154. And do they have to do with all the details of management?—All the details of management, except the management of what you might call the bed arrangements.

19155. I will put my question differently: Do they have to do with the management from the administrative point of view?—Entirely.

19156. And all books such as stock books and account books of every description come before them?—Every one.

19157. Now are those examined?—They are examined closely; they have been so ever since I have been in charge of the hospital. I make a point of looking over with the secretary all the account books and checking off the items. No money is paid except under a cheque signed by two members of the committee, and countersigned by the secretary; and, in fact, to my belief, it is done in a perfectly business-like manner.

19158. Are you a member of this sub-committee?—No; I am not on the sub-committee. I did put myself on a sub-committee, or was elected on a sub-committee last year, to inquire into certain little irregularities which had arisen amongst the medical staff, and I went most carefully into the affair.

19159. Now have you any treasurer?—The treasurer is also the secretary.

19160. Is the secretary a salaried officer?—The secretary is not a salaried officer. That requires a little explanation; he is an officer who was well known as being the secretary of other institutions, and he has rendered most valuable service. He was asked to become the secretary of this institution, and at once said that he could not become a salaried servant, because he was receiving some other salary, I think, or allowance, from the Government; therefore, he could not become a salaried servant. He was, however, remunerated by a commission on all the moneys that he brought in to the hospital; and that arrangement has been found to be most satisfactory.

19161. Does he live in your hospital?—No; he is not a resident.

19162. Who is the person in control or authority when there is no board or committee sitting?—The person in control as regards the female department is the matron; the person in control as regards all connected with the male department is the dispenser. There is an assistant secretary who attends for a few hours in the day, and who is paid by the secretary himself; he attends for the purpose of keeping up the accounts, and all such details as belong to the management.

19163. He is a clerk, practically?—He is a clerk, practically.

19164. But how much is the secretary himself

16 April 1891.]

Major-General T. W. MERCER.

[Continued.]

Chairman—continued.

self at present in the hospital?—It must not be entirely viewed in that way; his attendance is not, I will confess, as frequent as it should be, and it has been already proposed by me, and at the secretary's own suggestion, that some arrangement should be made for having a resident secretary. We are now deliberating whether that should be a lady secretary or a gentleman, and what arrangement should be made; but we did not consider it necessary to be in haste about that, as the hospital itself has been closed now for a whole year, and the work required to be done by our secretary is efficiently performed as it is now.

19165. Then the person in supreme authority, in the absence of the board, is the dispenser?—Yes; except that, of course, the medical staff have authority. They are in the dispensary, and are fully authorised to give orders; and one or other of them is present nearly all the day.

19166. Among the hospital improvements that you are making at this time, are you increasing your number of beds?—Very largely; the former number of beds was only 10. I should like, if you would do so, that you should see the plan; I think that one of the gentlemen of the hospital has brought the plan with him. The plan of the hospital will give you an idea at once of the important building that it will become.

19167. How do you admit your patients; is it done by letter, or how?—By letters of recommendation; but no one is refused if it is a proper case. I may say even if they come up to the hospital of their own accord they are looked at and examined, and if it is a case that is considered proper for treatment, they are admitted at once, and letters of recommendation are asked for afterwards.

19168. Do you treat any other cases besides epilepsy and paralysis?—All cases of nervous diseases. The epileptic cases themselves are few; in fact, I believe there is a prohibition against the admission of a downright epileptic; they would not be admitted into the hospital except for treatment as out-patients; they would not be admitted as in-patients, but all other nervous diseases of every kind are admitted; and the electrical appliances and instruments and machines that are in use at the hospital are of a very intricate and expensive nature, and have proved, I am satisfied, most efficacious in the treatment of the different diseases.

19169. Where do you get your funds from?—By public subscription entirely.

19170. And how far do the fees that patients pay go to defray the cost of their treatment; can you form any idea. I understand you to say that each patient pays something?—You mean the proportion; that is small; but perhaps, if you would not mind deferring that question for the secretary, he would be able to answer it better. I may just point out that the balance sheet which I have put in before your Lordship shows that the receipts from out-patients and in-patients were 497*l.* 12*s.* 9*d.* in 1890.

19171. Have you got another of these balance sheets or a copy of the report?—I have no doubt
(24.)

Chairman—continued.

that there is another here if the secretary is asked.

19172. I had better take this examination when the secretary comes, had I not?—I think so; on those points. I have not particularly worked myself up, and he would give you more correct information.

19173. Have you any system of visiting in your hospital by certain governors or members of your committee from time to time?—Yes; we have an annual meeting of the governors. Governors are made life governors by the payment of a certain subscription; a guinea makes a governor; five guineas gives him certain other privileges, and 10 guineas and upwards certain further privileges, that is to say, the privilege of sending so many more to the hospital; it is rather an empty privilege.

19174. Is it the business of these visiting governors to go round the hospital?—It is not required of them by any of the rules.

19175. Then how are you, as chairman, satisfied that things are going on correctly?—From constant attendance and constantly asking questions, and from a very long experience of all kinds of institutions, as an old Indian officer and deputy commissioner of a district, I am able to acquaint myself in a very short time with the working of an institution of that kind; it does not take me long to do that.

19176. Were you chairman of a hospital before you undertook this one?—No; I had not been chairman of a hospital.

19177. But you had had experience of institutions?—I have had hospitals in India over and over again to look after; several under me at one time; but then, of course, differently organised and differently managed.

19178. Do you apply to the Hospital Sunday Fund?—We did apply, but we were refused.

19179. On what ground was that?—Well, it is difficult to say. I put the question. I went to the Mansion House myself and asked if they would give us the reasons; but evidently Sir Sydney Waterlow, I think it was, was not prepared to tell me the reasons. In every respect as far as their rules for averages and so forth were concerned, we had satisfied the board, but there was something which caused him to make a very cautious remark to me. He said, "Well, I am not prepared to give you my reasons, but we have reasons for not giving you a grant"; and I have not been able to ascertain since why it was.

19180. Have you made a further application since then; when was that?—It was about seven or eight months ago.

19181. That was the last occasion?—Yes, that was the last occasion.

19182. And what about the Hospital Saturday Fund?—The Saturday Fund, we were also refused by, I think.

19183. Were you given any reason why you were refused?—No; the reason was in the same way mysterious; and I have not understood it to this day, except that I have reason to think that they had received unfavourable reports regarding something which I do not know.

3 G 4

19184. Something

16 April 1891.]

Major-General T. W. MERCER.

[Continued.]

Chairman—continued.

19184. Something which had occurred before you were chairman?—Something which had occurred before my time.

19185. Have you any idea what it was?—Well, I have an idea.

19186. As regards administration?—It was rather a delicate question.

19187. We are merely speaking of matters of fact; can you state what it was?—Well, there had been a difference of opinion between the former chairman and the medical staff, and it led to very great and disagreeable differences on the board, and it ended first of all in the board resigning all in a body, and then the chairman resigning. Then a special meeting of the governors was convened, and they overruled everything that had been done; they appointed a new committee and restored the doctor, the senior physician, who had been in conflict with the chairman; and from that time things assumed altogether a different aspect, and there was a new committee and a new chairman.

19188. Did any other members of the medical staff resign?—They did not resign then, but they have resigned since; but that was in consequence of action that I, myself, took.

19189. What was the difference of opinion which caused the whole board to resign *en bloc*?—It is not clearly laid down in the minutes, and I have always been led to understand that it was almost a private disagreement which took place between Lord Robert Montagu and the senior physician, Dr. Tibbitts, the nature of which I do not know, and I think, perhaps, it should not appear, if I may be allowed to say so, in print.

19190. You were not the chairman then?—I was not the chairman then.

19191. Is there any official connected with the hospital now who was there then?—Yes, the secretary.

19192. Then we shall be able to get our information on that point from the secretary?—Yes.

19193. May I ask you how you nurse your hospital?—At present there are only two nurses, but when there are in-patients they are of course increased to the number that may be necessary.

19194. Do you train those nurses?—They have not been trained by us hitherto, but we have received most valuable assistance from the school of massage. I should like to be allowed to say a few words about that school of massage.

19195. I will just ask one question about the school of massage; is that a commercial speculation?—It is entirely a private arrangement of Dr. Tibbitts's, but how he works it I do not know. I do not know whether it may be called a commercial speculation or not, but it is entirely independent; we have nothing to do with the internal arrangements of that school of massage, nothing more than receiving students from the school of massage to attend our patients, and also to attend for their own benefit the lectures that are given in the hospital.

19196. I put it in this way, because nearly all the big hospitals have what they call private nursing institutes, from which they let out nurses for hire?—We have not that at present, but that has been contemplated, having our own arrange-

Chairman—continued.

ments with regard to the nurses, and doing the very thing your Lordship has suggested, letting them out for hire; but that is under consideration at present; therefore I do not know exactly what may happen with this school of massage.

19197. Do you pay for the services of the nurses from the school of massage?—Hitherto there has been no payment; but that fact seems to have led to some misapprehensions in the eyes of the public, which we gathered from certain remarks which were made to us by the Charity Organisation Society, and the subject was very closely discussed by us in committee, and we determined at last to make this arrangement, that the school of massage should not be considered to be an integral part of the hospital in any respect, and that it should be lawful (you will find a clause entered in No. 31, I think it is, or somewhere close to it, making it lawful) for us to pay for the services of masseurs and masseuses attending the hospital, and also lawful to require fees from the students for attending the lectures. But at present that has been a dead letter; it has not been carried out; we from month to month keep putting that subject off, for we do not yet see our way to fixing the fees. What we wanted to do was this: we did not wish that the hospital should be in any way a burden upon Dr. Tibbitts's school of massage; on the contrary, if it were possible, we wished to give him every encouragement there, as he had been so very kind in permitting these masseurs and masseuses to attend the hospital. Of course they gain by it; they gain great experience in the hospital; but we wished to make everything go perfectly smoothly for their attendance, and for their acquiring knowledge by the lectures; and therefore we have not been able to determine yet what fees should be paid; but the thing that we had in view was that the payments should be as nearly equal as possible, that is to say, that the amount paid to the students for attendance, and the amount paid by the students for attending our lectures, should be as nearly equal as possible; but we have not yet up to the very last meeting settled the matter; I think on the very last occasion I had to request the committee to defer the settlement of that question about the fees for another month.

19198. When do you expect to open your hospital?—It is very nearly completed now, part of it is quite finished; the face on the Welbeck-street side is not yet quite complete. We hope to open in June or July, and it will then be a most satisfactory building. I should like your Lordships to see the plan of the building. We have paid for this, I may say, entirely out of our subscriptions and donations that have been made specially for it. As far as it has gone, and has been finished, it has been entirely paid for, and will be completed for the sum of about 9,000 £.

19199. You would call your hospital a special hospital, would you not?—Certainly; it is for special treatment entirely.

19200. And do you constantly appeal to the public?—Yes, there is a constant system of appeals; and it is there, I may say, that we have found the extreme value of our secretary, who, from

16 April 1891.]

Major General T. W. MERCER.

[Continued.]

Chairman—continued.

from his connection with other institutions, knows so many people, and is able to reach them.

19201. Perhaps you would rather I went through the accounts with the secretary?—I think so; I shall be happy to answer any question, but I think he would give you the figures better than I could.

19202. Because I understand that since you have been chairman the hospital has been closed as regards beds?—Entirely, as regards beds; I have never seen an in-patient in the hospital, much to my regret.

19203. Do you pay your assistant secretary any commission beyond the commission which you said you paid to the secretary?—No, not to the other secretary; no commission is paid to anyone beyond that I have mentioned.

19204. Have you any collector?—No collector.

19205. Have you any architect?—Yes.

19206. As regards the sanitary condition of your hospital?—As regards the building. We have a separate building committee (I forgot to mention that) who have had all the arrangements of the building under them; they are formed out of the body of the committee of management, but they have separate duties to perform, and arrangements to make regarding the approval of the estimates, and so forth; entirely separate from the committee of management. Then they come up to the committee of management for the passing of the finances.

19207. You have had no experience as to how the contracts are made in the hospital, as the whole hospital is closed; the contracts for food, and so on, I mean?—No, I cannot say that I have, but I have gone into the question.

19208. In connection with that hospital?—Yes, by asking the question of the matron, the dispenser, and the different doctors (I am constantly in communication with them) I know pretty well what it is.

19209. Would the contracts be by open tender; would you advertise them?—No, I think not; I think it is done by private arrangement with different tradesmen.

19210. Who suggests the different tradesmen to be employed?—I cannot answer that question; I think, if you would ask the secretary, he might be able to do so.

Earl of Winchilsea and Nottingham.

19211. When you were going to rebuild the hospital, was it ever suggested to you that it would be better for the patients if you were to move it into the country?—Not in that form; I never heard that proposed, but I may mention that a gentleman from the neighbourhood of Salisbury recently made us a very handsome offer of giving a plot of land free for the building of a convalescent hospital or any branch that we might like to build there.

19212. I did not mean so far from London as that, but simply far enough to be within reasonable distance of London doctors?—I never heard that proposed.

19213. Your hospital is for the treatment of nervous diseases entirely?—Nervous diseases entirely.

19214. Therefore they might be supposed, if (24.) e.

Earl of Winchilsea and Nottingham—continued.

any would, to suffer in recovery from the noises of London; do you find that they do?—No; I may mention that they are only children who are admitted as in-patients.

19215. You have not that point before you at all?—No, never.

Lord Monkswell.

19216. You say that the secretary is not very often there; is there any rule as to the attendance of the secretary laid down?—No. I may mention that the secretary's services have been so very valuable to us in the point of getting subscriptions and donations, that we were obliged to make an exceptional rule, that is to say, to overlook the fact that he was unable to attend very often. His mode of doing business is perfect; the accounts are all most satisfactorily kept, that I will answer for myself; and everything as regards the account books, and minute books, and general arrangements of that kind, is quite complete, but his attendance, for the reason that I have given, has not been as constant as I should desire; he is himself conscious of it, and I have no doubt will say himself that he has a great desire that some arrangement should be entered into by which there is either a house surgeon constantly present who is willing to take such secretarial duties as may be necessary, or a secretary; but that point has yet to be determined.

Earl Cathcart.

19217. With reference to what has been said about going into the country, your out-patient department is an essential feature of your hospital?—Yes.

19218. And that would render the country impossible?—Quite impossible.

19219. Twenty thousand out patients in the year you are said to have had?—Twenty-seven thousand attendances, I think you will find it is, which, I think, means about 1,500 new patients during the year. Of course one patient attends very frequently; and they are all accounted as attendances during the year; but, as far as the new patients go, I think they will be found to be about 1,500.

19220. I gathered, from the tone of your views, that there had been something unpleasant in the severance between the hospital and the School of Massage?—There has been.

19221. What was that?—In the first place there were several members of the Committee who suggested what appeared to me, as Chairman at the time, something very impracticable and impossible; they threw out hints that things were not what they ought to be, which I could not see; but proposed at once that there should be an entire separation of the school of massage from the hospital, meaning by that that their students should not be allowed to attend the hospital. Now that would have involved us at once in an expenditure of, I calculated at the time, nearly 600 £; because I calculated that the services rendered by those students, if they had been done by our own nurses and trained nurses, would have cost about 600 £.

19222. Was it thought that in the school of massage they were going too far with the Swedish system of massage or any other system of that nature?

16 April 1891.]

Major General T. W. MERCER.

[Continued.]

Earl Cathcart—continued.

nature?—No, I never heard that; on the contrary.

19223. There were no complaints, on moral grounds, that that system had been carried too far?—No, I never heard that.

19224. Then you mentioned that there had been irregularity amongst the medical staff, and that you were employed on a sub-committee in regard to that matter; what was the nature of the irregularity?—The irregularity was this. It was brought to my notice that patients were discharged in a very loose and unsatisfactory way, and that afterwards they were admitted as private patients of certain doctors on the medical staff of the hospital, and that certain fees were received by them. I, therefore, brought it before the notice of the committee, and we had a very close investigation. We formed a sub-committee; we went into it; we passed some very severe strictures upon what we considered to be these irregularities, and it ended in certain members of the staff resigning, which was just what we wished.

19225. And those were subordinate members of the staff?—Those were subordinate members of the staff.

19226. Did your principal medical officer, your founder, find this out and represent it to you, or how was the matter brought forward?—I may say that he gave me all information; he was one of the leading persons who gave me the information at that time.

19227. You mentioned the fact to us that Dr. Tibbits was the founder of the institution?—Yes.

19228. And what part did Dr. Tibbits take in that matter; did he serve on your committee?—Yes, he was present at the committee, he spoke whenever he was asked to speak; but he suffers, as I do, from deafness, and he is even more deaf than I am, and therefore there is a little difficulty in keeping up a running conversation with him, in that respect.

19229. But he was an objector to this nefarious system?—Oh, yes, he was an objector to this nefarious system.

19230. Now, when you were appointed chairman, how were you nominated?—I will tell you exactly the circumstances; Mr. Dowell, the secretary (I had been on institutions with him in Brighton) came to me and he said: "General, we are rather in distress about a chairman for our committee, and things are not going on as well as I should like on the committee." Now I know you to be (as he called it) "a ready-made chairman; would you consent to join our committee and take the chair? I think that I should be able to persuade the committee to elect you," and I said "You must give me a little time to think, I have not thought over it"; and it ended in my accepting it, in my going before the committee and their asking me and electing me then and there.

19231. Then you were applied to by the secretary, and negotiations were made through the secretary; but are you in any sense a nominee of the founder, Dr. Tibbits?—Not in any sense whatever.

19232. You have the Duke of Portland for the president of this hospital?—Yes.

Earl Cathcart—continued.

19233. Has he been long the president?—I think he has been president from the beginning.

Earl Cathcart.] Thank you very much for the candid way in which you have answered my questions.

Earl of Arran.

19234. Is there any special mode of treatment employed in the hospital; I mean other than the ordinary way of treating these diseases?—Yes, quite distinct; I may say that there is a treatise which has been written by Dr. Tibbits on the subject. In justice to him, I must say that he is very clever and very able indeed, and he has written a book regarding the treatment.

19235. Then may I understand that the treatment is one that is not generally employed by the profession?—No, it is not generally employed.

19236. Have the other members of the medical profession ever expressed any objection to the mode of treatment employed by Dr. Tibbits?—My experience is, that there has been immense jealousy amongst the medical profession about this treatment; not only that, but jealousy amongst the medical staff themselves. In fact, I may say, that the only trouble I have had in the hospital has been with the officers of the medical staff.

19237. May I take it then that this hospital was established, in the first place, to give facilities for the employment of this particular mode of treatment instituted by Dr. Tibbits?—Yes.

Chairman.

19238. Has there ever been any difficulty, or any complaint made, as to the nature or quality of the lectures given at your hospital to the students of massage?—I have not heard that there have been any complaints made, but I have had reason to think that they have not been as frequent and as satisfactory as they should have been, for some months past.

19239. I believe it is sometimes objected, that there is very little use in lectures upon massage at all?—Yes, I believe it is so.

19240. Would you agree with that?—Yes, I should agree with that as regards teaching the system of massage. But the treatment is not confined to that. The first part of the treatment is the electric treatment, received by the aid of machinery of a very complicated nature.

Lord Thring.

19241. Do I rightly understand that your in-patients are only children?—Only children.

19242. Then you are in fact, *qua* your in-patients, a children's hospital only?—Yes, a children's hospital only.

19243. And what do you call children; what is the maximum age?—I think I am right in saying that they cannot remain after 14 or 15 years of age. I believe that that is in consequence of some particular covenant that there is in the lease, under which we hold the hospital buildings. I think that there is something of the sort; I have not looked into it, but I have been told that it is in connection with that, that

we

16 April 1891.]

Major General T. W. MERCER.

[Continued.]

Lord Thring—continued.

we are prohibited from having adults in the hospital.

19244. But among your out-patients you have adults as well as children?—Yes; all classes I may say.

19245. Your cases are chronic, are they not, cases of paralysis?—Chronic cases.

19246. You require to keep the children in a very long time, do you not?—No, they are limited to two months under our rules, except under some particular recommendation of the senior physician or the physician in charge.

19247. Then you find the treatment efficacious in two months, do you?—Yes, very efficacious.

Earl of Lauderdale.

19248. With regard to the Hospital Sunday Fund, you say you were refused assistance on the last occasion on which you applied?—Yes.

19249. Had you ever applied before?—That was the first occasion on which I had to do with it.

19250. Therefore you do not know?—I think application had been made before, and it was refused before.

19251. Then you have never had assistance from it?—As far as I know, we have not had any.

Chairman.

19252. What position does Dr. Tibbits occupy at the present moment?—He is the senior physician.

19253. Is he in the room here?—Yes.

19254. Then we shall have the advantage of his evidence later. You have been chairman for 14 months; during the whole of that time your hospital has been practically shut up?—It has been.

19255. That is the reason I have not gone fully into the question of nursing with you, as you have not been chairman before; have you anything else you wish to state to the Committee?—No, I have nothing else particularly to state.

19256. Do you know whether you have any other hospitals in the close vicinity of yours?—Yes, there is the hospital with which Dr. Tibbits was connected in Bloomsbury, in Queen Anne's-street?—I think.

19257. Is that a special hospital too?—That is a special hospital too.

19258. Then you are quite close to three or four very large general hospitals?—Yes, we are.

19259. Where exactly is this hospital of yours?—It is in Welbeck-street; one front of it opens into Welbeck-street, and the other into Marylebone-lane; it runs right through.

19260. Should you think it was an exaggeration to say, that there were about 2,000 beds within a mile, for the assistance of the sick?—I could not answer that question; I have never gone into it.

19261. You have St. Mary's quite close?—Yes.

19262. You have the Middlesex Hospital quite close?—Yes.

19263. University College not far off?—Not far off.

(24.)

Chairman—continued.

19264. St. George's is not more than a mile?—Yes.

19265. Charing Cross is hardly more than a mile?—Yes.

19266. And there are a certain number of dispensaries, are there not?—Yes there are, I believe.

19267. Then there is the parish infirmary, with 700 beds, of St. Marylebone?—Yes; I may say that our reason for adopting this place was because of the terms on which we first got it; and what we consider the great success that attended the treatment there, and the success of the hospital altogether, induced the Committee, before my time, to make permanent arrangements. We are now under a long lease with the Portland estate; for a long series of years.

19268. Before you commenced to rebuild, what sort of a building was your hospital?—I only saw it when it was actually pulled down.

19269. Then I will not pursue that, if you do not know; do not you think that it is rather a waste of force building a large hospital, or a good-sized hospital, in a district where you are so surrounded by hospitals and dispensaries?—My own opinion, after the little experience I have had is, that it will be successful, whether or no; that both as regards the in-patients and out-patients, if it is only properly conducted by the medical officers, it will be a perfect success, and that people will flock to it.

19270. Because of its special nature?—Because of its special nature.

19271. Who is supreme, the board of lay governors or a board of professional men?—The board of lay governors.

19272. That being the case it will be the fault of the lay governors if the thing does not succeed?—Do you mean the lay governors as distinct from the committee of management?

19273. No, I mean as distinct from the professional men?—Yes, it will be the fault of the lay governors if it does not succeed now.

19274. Then the professional men are entirely under the control of the lay governors?—Entirely; but it was a very difficult thing to get them under control.

After a short adjournment.

19275. I believe you wish to make a correction in your evidence?—I am told by some gentlemen who have heard my evidence that I stated that the sub-committee had full charge of the administration during some time; if so, it was a defect of my hearing; I did not intend that the least; I meant to say the committee. The sub-committee have no authority whatever except to inquire into such points as are laid down distinctly by the committee, and to report upon them. Then, again, as to the Saturday Fund, I am afraid I made a great mistake, which I regret, but I find that we have received sums from the Saturday Fund (I do not know how that escaped my memory) from year to year, and increasing each year, but not from the Sunday Fund. Then, it seems that I made a mistake in stating what I did about the committee's and sub-committee's meetings. I should have said that the committee and the sub-committee meet alternately

16 April 1891.]

Major General T. W. MERCER.

[Continued.]

Chairman—continued.

alternately every month, but whenever any special meetings have been necessary the committee have been summoned, and meetings have taken place; and I have found it necessary to call several special meetings myself to inquire into certain matters; that is to say, that meetings are called whenever they may be necessary, but that the usual standing meetings are every fortnight, one of the sub-committee and one of the committee. Then, again, I am supposed to have stated that Dr. Tibbits was not present at the committee when the conduct of the doctors was discussed; he was present at the committee, but he was not present at, or a member of, the sub-committee which was appointed to inquire into

Chairman—continued.

that business. Then, I may mention that the doctor who principally objected to the system of massage, was at one time perfectly satisfied with it, and in alliance with Dr. Tibbits in the establishment of it. They separated, and under circumstances best known to themselves and after that particular doctor left the hospital, under pressure, he has established a private school of massage himself.

19276. There is one question I should like to ask; are your accounts audited by a chartered accountant?—Yes.

The Witness is directed to withdraw.

MR. HERBERT TIBBITS, M.D., called in; and, having been sworn, is Examined, as follows:

Chairman.

19277. You are the Honorary Medical Superintendent of the Hospital for Paralysis and Epilepsy in Welbeck-street?—Yes.

19278. Were you the founder of the hospital?—Yes.

19279. Previous to its being a hospital, what was this institution?—It was founded as a hospital alone in 1878; there was no other institution there; it was a butcher's shop previously.

19280. Where did the money come from to found it?—From the subscriptions of friends of mine who wished to assist me in founding a hospital for the objects that we contemplated in 1878. Her Royal Highness the Princess of Wales gave 20 guineas.

19281. What are "the objects" that you mean?—In 1878 there was no hospital for paralysis and diseases of the nervous system that admitted young children; at that time children, to be admitted, had to be 11 years of age. It was the opinion of the founders of the hospital that infants of a few months old should be admitted; that was one of its objects. Another object was this: I entertained a strong opinion that patients suffering from epilepsy should never be treated in the wards of a hospital; that the influence upon one epileptic of seeing another epileptic have a fit was deleterious to a degree; and, therefore, that epileptics should only be treated as out-patients. Again, at that time (I beg to say that I only refer to the year 1878, for many improvements have taken place since), it was my opinion that the localised methods of treatment, treatment by what is known as massage, by electricity, by what is termed nerve vibration, and now by Charcot's suspension, were more important in diseases of the nervous system than the mere drinking of physic. All these objects were stated at a public meeting in 1878, and, upon that basis, the hospital was founded; not to ignore the drinking of physic, but to consider these localised methods of treatment as of very great importance, to be carried out in a special institution with special appliances and advantages for patients that a general hospital, with its crowd of various diseases, does not afford.

Chairman—continued.

19282. Then your meeting and your appeal to the public were so successful that you were able to build the hospital?—No, I regret to say it was not; it is only now that we are building the hospital. It only enabled us to purchase the lease, and adopt the premises most imperfectly. It is only after 10 years that we have been enabled to build a proper hospital. We rented these rooms, and did the best we could, hoping to be able to build a proper hospital, which I am thankful to say we have now succeeded in doing.

19283. How do you maintain your hospital?—By voluntary contributions, and donations, and subscriptions.

19284. Do you ever have a great festivity to procure funds?—Most undoubtedly so. We had the ice carnival; that enabled us two years ago to present the hospital with 1,400 £. It was a bazaar. In fact, we have several bazaars.

19285. What was the ice carnival; how was it arranged?—I requested the permission of the board of management to organise a bazaar; the board of management replied that as trustees for the public they were unable to render the hospital or the committee of the hospital in any way responsible, but if I liked to do it upon my own responsibility they would thankfully receive anything I gave them from it. They would take what I got, but they would be responsible for nothing. On that basis the ice carnival was arranged. I took the entire responsibility, and Mr. Whiteley organised it, and we handed over 1,400 £. to the hospital; but the committee of the hospital declined to be responsible for anything except that they would take anything I could get out of the bazaar.

19286. And that was the net profit, 1,400 £.?—Yes, I mean that was the sum obtained over and above the expenses.

19287. Then have you had another thing of this kind?—Yes, we have just had one on the same basis, "The Coming Race" at the Albert Hall a month ago.

19288. Was that a bazaar?—Yes, I presume it was a bazaar; ladies held stalls and sold things.

19289. What was the net profit upon that?—That

16 April 1891.]

Mr. TIBBITS, M.D.

[Continued.]

Chairman—continued.

That has been a loss altogether, a most unfortunate loss; it is upon my shoulders.

19290. It fell upon your shoulders and not upon the hospital?—Upon my shoulders alone, I regret to say. No, I do not regret it, but it is upon my shoulders alone; I hoped it would be a success. It was the Queen's Drawing Room, on our opening day; the weather was bad and nobody went. I do not know why, but people are sick of bazaars.

19291. When the governing body contemplated building the hospital, was it ever suggested that it should be put out in the country?—No, not to my knowledge; I never heard such a suggestion.

19292. Would not that have been advantageous?—No, most certainly not.

19293. What are the objections?—The objections are these: It is more convenient to patients to come to a central position than to go to some out-of-the way place in the country; that is the chief objection. It is easier to get to Welbeck-street than it is to get to any site in the country. And again, the medical staff cannot go into the country to attend patients; their private practice is, as a rule, carried on entirely in London, and if the hospital were in the country, probably men of no practice would become attached to it, but men who had practice in London would not.

19294. Have you any idea why grants were refused by the Hospital Sunday Fund?—I have no idea. I wrote to my Lord Sandhurst a letter upon the question; I have no idea why they refused, and it has been my most earnest endeavour to know why. Sir Sydney Waterlow, as appears in a published report, was asked if he knew any hospitals in London (I only speak from the published report) that a grant had been refused to. He said he could only recollect one at the moment, but he could get others; the hospital in Welbeck-street. He was asked by your Lordship's Committee, Would that hospital be unworthy of support? and he said, Yes, that is one of the best advantages of the Sunday Fund, that when they do not give a grant that hospital is known to be unworthy of support. I have never been able to get any reason why the grant has been refused, and why so damaging a statement should have been allowed to be published in the Press.

19295. The last witness told us that there had been some considerable difficulty at the hospital, which had caused the whole board to retire, and also caused the withdrawal of some of the staff; what was that?—The circumstances were these: In the year 1884, Lord Robert Montagu (who was then the Chairman of the Committee) and myself disagreed. I wrote a letter placing my resignation in the hands of the board, with Lord Robert Montagu's, subject to investigation. They had no investigation, and they kept me out of the hospital for six months. Then at our annual meeting (which this medical staff put off till they were obliged to hold it; they put it off till two or three months after our usual time), Lord Robert Montagu said he never made any charge against Dr. Tibbits of any sort whatever. The medical staff retired, and why I do not now know, but the committee of management were

Chairman—continued.

not re-elected; the subscribers refused to re-elect them. It is an annual election; they never retired, but the subscribers refused to re-elect them, for their grossly unfair treatment of Dr. Tibbits; they were not re-elected, but a fresh committee was elected in their place.

19296. I understand you to say that the meeting was put off by the staff; are the staff all powerful as to when the meetings are to be held?—It was customary to hold the meeting earlier; I cannot say who put it off, because Dr. Tibbits had notice that he was not to go to the hospital, and if he went to the hospital they would give him into custody, and that they had a policeman at the door for the purpose. Some of the subscribers wrote week by week, to ask when the annual meeting would take place; they had no reply, they complained, and some of our most influential supporters wrote again and again, till at length the board of management at that time were compelled to call a meeting; and when they called the meeting they were simply turned out. Lord Robert Montagu said that he had never made any insinuation against Dr. Tibbits, that he had been entirely misinformed; but a new committee was elected, and a new staff.

19297. Are you yourself a Governor of the hospital?—Yes, by donation.

19298. That being the case, you had a perfect right to go in, had you not?—I do not know the legal aspect of the question. I brought an action for slander against Lord Robert; he had been acted on by jealous medical men I believe, and we amicably settled it; I did not ask him for costs, and he did not ask me for costs; and after it had been going on for six months the action was taken off the file.

Earl of Kimberley.

19299. We do not understand what the subject of disagreement was; can you tell us what it was?—I have never been able to find out what it was. I wrote to every member of the medical staff who had resigned, asking him to give reasons for his resignation, but not one of them would give any reason whatever; I told them they ought to give reasons. Some of the younger members of the staff thought that there must be something behind or else the others would not have resigned; but not from one single member of the staff could I get any reason. I wrote to Lord Robert Montagu, but I could get no reasons from him. I was told by my solicitor that if you write reasons it may be a slander, whereas if you say things to a committee, they may be privileged. I have no more notion than your Lordship has what were the reasons.

Chairman.

19300. Who were the members of the medical staff who resigned?—Myself, senior physician; Dr. Heron, Dr. Huddart, and Dr. Wolfenden. The surgeon was Mr. Alfred Cooper, of Henrietta-street. Mr. Alfred Cooper did not resign until the others had resigned, and he told me that he had had about 20 letters from various medical men, asking how he could remain attached to such a disreputable institution. Doctors are given to writing such letters. The institution

16 April 1891.]

Mr. TIBBITS, M.D.

[Continued.]

Chairman—continued.

institution is one of the best in London, and Sir Crichton Browne was one of our consulting physicians, and Dr. Broadbent and Mr. Brudenell Carter were on the consulting staff. Dr. Crichton Browne told me they were plaguing him about it, and Dr. Broadbent could give me no reason whatever; he said that it had only provoked controversy. So that, practically, not one of these men would give me the slightest reason for their resignation.

Earl of Kimberley.

19301. Is there now a board which approves entirely of the proceedings of the hospital?—The present committee of management, I believe, does so. I think there is no dissentient opinion whatever, nor has there been ever since the year 1884. For seven years I believe there has been the most perfect agreement. Or rather, I will not say the most perfect, nor for so long a time; but at present I believe the board is in entire agreement with the management of the hospital.

19302. Has there been a new medical staff since 1884?—No; there have been elections to the staff since then. Mr. Pearse, our surgeon, resigned to practise in the country, but Dr. Armitage who was elected then, and Dr. Winslow, who was subsequently elected, are on the medical staff still. The only resignation is that of Dr. Stretch Dowse and Dr. Herschell.

19303. But in 1884 I thought there was an entirely new medical staff?—In 1884 there was an entirely new medical staff, after the annual meeting.

19304. And has there been no difficulty with the medical staff since; has the conduct of all concerned been satisfactory?—No difficulty, with only one exception, that of Dr. Dowse who has retired, as also has Dr. Herschell. I was not aware that there was any difficulty with Dr. Herschell, but there was with Dr. Dowse, and I suppose Dr. Herschell went with him, and disapproved of the school of massage being associated with the hospital; there was no other difficulty.

19305. Why did they disapprove of the school of massage being associated with the hospital?—I really think they must give their own reasons.

19306. Did they give no reasons to you?—None.

19307. Is it the custom of this hospital that nobody gives any reason to anybody else about what they do?—It is a most extraordinary exception to everything else I have ever met with, a most extraordinary thing, and always has been.

19308. But when there was this general resignation no reasons were given, and it seems that this practice goes on?—Undoubtedly; apparently so.

19309. How do you account for it?—I do not like to say it, but if I am asked the question I must say that I account for it by the intense jealousy of the staff of the hospital which I succeeded from when I founded this hospital, and by their influence in the profession, and my not being able to get quite that class of physician that I should like to have had, and by the general squabbles of medical men. I know no other way to account for it. It is a new departure; there

Earl of Kimberley—continued.

is always a jealousy against special hospitals, and there is a special jealousy against a new special hospital founded under such patronage as ours was. With such a prospect before it, and, again, adopting methods of treatment that were contra-distinguished from the mere drinking of physic and looking at your patient's tongue, and giving a dose of medicine three times a day. Our hospital was always a hospital for the localised treatment of paralysis, and it was not approved of at that time by the medical profession, not all of them.

19310. In short, probably the medical profession thought the treatment not orthodox?—I think I can only explain it if you will permit me, in one way: The "Lancet" published an article in which they said that electrical treatment, and massage, which means medical rubbing, should only be carried out by medical men. They approved of it; the entire profession approved of it. I stated broadly that a medical man, unless he has had training, is incompetent to carry out this treatment, and that as it takes from half an hour to three-quarters of an hour at a time trained nurses should be employed; and a dead set was made against founding, as the "Lancet" said, a new sort of hospital; but then how can a medical man give his attention to it for three-quarters of an hour at a time, even if he has the skill to do it. Undoubtedly the training of nurses met with the greatest opposition, because with the overstocked state of the profession medical men thought that in allowing nurses to carry out this treatment I was taking fees out of the pockets of the poorer members of the profession. My contention was that these men cannot give three-quarters of an hour's attention at a time to their patients, and that they require special practice even to be qualified to do so, for the mere possession of a medical diploma cannot educate a man into the use of his hands, and the manipulations that are necessary in massage under the applications of electricity.

19311. Was there no objection to the treatment?—No objection to the treatment; it was to the treatment by nurses rather than by medical men; I never heard any objection to the treatment itself; that has been universally recognised, but the theory of the medical press is that only doctors should treat patients. It always has been so; it is an attempt to make a trade unionism. It is the same kind of attempt that was made against lady doctors. I was one of the first men in London who advocated women being medical practitioners. It is simply the jealousy and trade unionism of the mass of the medical profession.

Earl of Winchelsea and Nottingham.

19312. You spoke, however, of personal disagreement between yourself and Lord Robert Montagu; are you not able to tell the Committee what the subject of that disagreement was?—I think there was no reason given by Lord Robert Montagu. Lord Robert Montagu behaved very well indeed, and afterwards withdrew any imputations whatever against me, and said that he had made none; and I really am not in a position to say more than that. He behaved as a perfect gentleman when the thing

was

16 April 1891.]

Mr. TIBBITS, M.D.

[Continued.]

Earl of Winchilsea and Nottingham—continued.

was settled. It was entirely a private matter; nothing to do with the medical profession at all.

19313. With regard to nurses being employed for massage instead of doctors, has your experience confirmed your theory as to that?—Most absolutely.

19314. But I suppose that you would still allow them only to do it under doctors' orders or superintendence?—Certainly so; that is one of the first principles that I have always advocated. Under no circumstances are nurses allowed to treat a patient except under the direct supervision of the ordinary medical attendant of the patient; that has always been emphatically my principle.

19315. With regard to your opinion that a special hospital is required for the treatment of these diseases, I should like to ask you a question or two. Do you think that the recovery is more favourable in a small hospital devoted to these diseases, than it could be in a general ward, however carefully treated?—Most undoubtedly so.

19316. Why?—Because more individual attention can be given to the treatment of patients than is possible in the large crowds of patients that there are at the general hospital. It is the individual attention that is given, particularly in treatment taking from half to three-quarters of an hour at a time, that I think renders a special and small hospital, at all events a special hospital, so much better for the patients.

19317. And do you lay stress on the fact that when many patients suffering from this disease were together, they might re-act unfavourably upon one another?—Most undoubtedly, especially in the case of epilepsy, as I have already said.

19318. With regard to the policy of moving the hospital into the country, as to which you were asked just now, supposing that the difficulty of doctors going into the country were got over by the hospital being very near London, although out of it, in that case would it not be better for the patients suffering from these diseases, which you especially treat, to be in country air than in London air, and in quiet instead of in noise?—I think that it is better for all of us to be in country air if we can be, and I think that every hospital should have a convalescent department in the country if it can afford it, to send patients to; but I think that the advantages of country air are counterbalanced by the disadvantages I have mentioned, namely, the difficulty of access by patients, and the difficulties of the medical men; because with an ordinary medical man, a few miles, a couple of miles, would make all the difference between his being attached to a hospital or not. I apprehend that no hospital could be in the country without being outside the cab radius anyhow, and that makes all the difference. Of course an ideal hospital would be a hospital in the country attended as frequently by its medical staff as a hospital in town is. Of course the purer the air the better for the patient.

19319. You are aware that we have had very eminent medical evidence upon that point, showing that it is quite possible to combine the two?

(24.)

Earl of Winchilsea and Nottingham—continued.

—I have not read the evidence. If it were possible, of course it would be the most perfect arrangement, but I do not believe it is possible.

Earl Cathcart.

19320. What hospital did you secede from?—The National Hospital for Paralysis and Epilepsy in Queen-square.

19321. And on what ground?—On the grounds that I have stated. I may as well state that I became medical superintendent of the National Hospital in 1869; I remained medical superintendent until 1875; I then became honorary medical superintendent. I resigned because my work was greater than I was able to do in conjunction with the hospital; they then elected me honorary medical superintendent as a mark of their esteem. In 1878, that is three years after, I started this hospital on the grounds I have said; and I thought it right, as to a certain extent it might appear in opposition to another special hospital, to resign my honorary appointment there, at the same time writing a note to say that I trusted there would be no conflict between the two hospitals, but as they did not receive these infant children and did not carry out the treatment exactly as I thought it best, it was not an opposition but only a multiplication. I never had any difficulty with the Queen-square people; they always behaved well to me, and they gave me the honorary appointment. I never had a word of difficulty all the years I was there.

19322. Then the secession was the proximate cause of the establishment of the new hospital in Welbeck-street?—No, because it was three years afterwards; I retired from the Queen-square institution in 1875; I only founded this hospital in 1878, after I had devoted a great deal of attention to young paralysed children, and with the desire to admit children of three months old, as contra-distinguished from children of 11 or 12 years, who at that time were not admitted into any other hospital. It was in no sense in opposition, I hoped it would be in supplement to other hospitals; I was quite unprepared for the opposition it met with then and has met with since. I would not have founded it if I had known what opposition it would meet with.

19323. Were there constant complaints made in regard to the insufficient condition of the building?—The building was insufficient, and our committee appealed to the public on the ground of its insufficiency, but I never heard any complaints from anybody else. We wanted to collect money to pull it down and build another, but I never heard any other complaint.

19324. Were the sanitary arrangements with regard to the drains, sufficient and proper?—The drains were put in thorough order under the certificate of Dr. Corfield, the eminent sanitarian, some years ago. The drains were put into sufficient order then. I do not recollect the year.

19325. You carry out the Swedish system of massage?—The Swedish system as one part, also the Russian system; in fact, I have visited every city in Europe and studied all their systems. It is not one especial system; it is

3 H 4

Russian,

16 April 1891.]

Mr. TIBBITS, M.D.

[Continued.]

Earl Cathcart—continued.

Russian, and Swedish, and other systems, the Aix les Bains system, and the Baden-Baden. All these systems are pretty much the same; they differ in details but in essentials they are the same to a great extent.

19326. Do you treat diseases of the uterus by means of massage?—No, I do not; I decline to have anything to do with that sort of thing, and I disapprove of massage for the uterus altogether.

19327. And that has consequently never been a cause of complaint as regards your establishment for massage?—Never; and no woman has ever been treated, or would be treated, with my permission, for diseases of the uterus by massage or by electricity. It is a most fruitful quackery and it is a monstrous thing, and never ought to be done, and I have always set my face against it.

19328. Have you had any complaints with regard to your treatment by massage?—Never; never anything but praise for us; that has been acknowledged by everyone who has undergone it; we have never had a single complaint; we have got the gratitude of all the patients.

Earl of Arran.

19329. You have a school for teaching massage, I believe?—Yes.

19330. And your pupils receive their education in massage at this hospital?—Yes.

19331. While the hospital is closed what means are there for giving them this education?—The hospital has never been closed to out-patients; the education has been given entirely in the treatment of out-patients. There are few in-patients who are in such a paralysed condition that they are unable to move at all that require this treatment; it is when, after the patient has become paralysed, a certain amount of recovery takes place, that these methods of treatment do everything; it is our out-patient practice that is so enormous. These poor out-patients come there with crutches and they are massaged two or three times a week, and after a few weeks they so far recover as to be able to walk with a stick; not absolutely cured, but much relieved.

19332. Then there is still a department open at the hospital where the treatment can be carried on?—That always has been the case, and it is larger now than it ever was.

19333. I understood that the hospital for the last 14 months had been entirely closed?—Certainly not, for the out-patients; the out-patients have always attended. Not one single day has it been closed to out-patients. It may have been closed a day or two for whitewashing or something of that sort, but I do not think it was.

19334. Will you kindly explain to us on what principle the school is carried on?—The principle approved by the board of management of the hospital in the year 1886, was this: It was proposed by myself and one of my colleagues, that we should be allowed to train nurses at the hospital in massage; that in return for that privilege we would charge the hospital nothing for their services. It would be an enormous expense to the hospital if it had to pay for mas-

Earl of Arran—continued.

sage. That arrangement has been carried out ever since. Our students have received lectures at the school, and when we have not had a school, at our own private houses. There are 40 or 50 attendances in a morning, and these women go and carry on the treatment for nothing; it has never cost the hospital one single farthing, and if this arrangement were abolished, it would cost the hospital many hundreds a year.

19335. Do the pupils pay a fee for admission into the school?—Most certainly; it is hardly likely that they would be trained for nothing; but that fee has nothing whatever to do with the hospital, as long as the hospital gets their valuable services for nothing.

19336. Does the establishment pay its own expenses?—I am afraid it is not paying its expenses now at any rate; no one place is paying its expenses, but I am afraid times are not very prosperous with it just at present. The misfortune of the thing was this: The students were allowed to attend at the hospital and to have their address there; the committee of management found them out and said they must have their address elsewhere. As long as the students had their address at the hospital they paid their expenses, but when a house had to be taken for them, it was a different thing; and I question whether it will be able to make both ends meet.

19337. How many students are there in the school?—I do not know; not a dozen.

19338. I thought this school was a private institution of yours?—Undoubtedly; I am not the owner of it, but I am responsible for its medical arrangement; but still that has never cost the hospital anything.

19339. If there were any profits from the carrying on of this school, to whom would they go?—They would go to the proprietor of the school, certainly not to the hospital.

19340. Who is the proprietor of the school?—My wife, because she took the house when she was driven out. I would not go to the expense of taking the house, so she said she would take it on lease rather than let the whole thing go smash. But I am responsible for all the medical arrangements.

19341. Where had she been "driven out" from?—I mean that our school was driven out from the hospital. It was an endeavour to ruin the school; they said that the school should not continue at the hospital, and they thought, by sending away the students from the hospital, they would ruin the school. I would not have the school ruined. The hospital committee absolutely threw away, or might have thrown away, the services of all these ladies; it was a most unwise thing of them.

19342. How long does it take to train a nurse under this system?—Three months is the minimum, but they generally continue for six months. Some nurses you cannot train in 20 years; it depends upon whether they are capable of being trained.

19343. But, on an average, how long would it take to train a nurse so as to fit her to undertake business on her own account, so to speak?—She is not allowed to undertake it except under medical supervision, not any nurse from our school. The length of time varies so very much with

16 April 1891.]

Mr. TIBBITS, M.D.

[Continued.]

Earl of Arran—continued.

with the different abilities of women, from three to six months; but under no circumstances ought any nurse, on her own account, to practise massage, only under medical supervision. I countenance no nurse practising it, except under the orders of the doctor attending the patient.

19344. Then would it be necessary, under this system, that the doctor should be in attendance while the nurse was practising massage?—It depends entirely upon the nature of the case and upon the doctor's opinion. I apprehend that every doctor would see a masseuse treat the patient the first time, and then he would exercise his discretion as to whether he would commit the patient to the nurse's hands, seeing the patient himself, of course, or, oftentimes, he would see it necessary to give his personal attendance during the carrying out of the massage. All cases differ, and doctors differ.

19345. Is there any certificate which a nurse receives at the end of her training to show that she is fit to practise?—Yes, she undergoes an examination conducted by myself, a practical examination. She must have attended daily at the hospital for three months; she must have attended lectures of mine; I put her through a practical examination on the human body; I give her three hours' written examination; and, if she is not fit, pluck her; then she has to go on till she is fit. Then I give her a certificate which carries no weight, except that which it receives from my personal signature, that she is competent to practise massage and electricity, under medical supervision.

19346. And what fee would she receive per hour, or whatever the mode of payment is?—It differs so much; it is what she can get. She ought to have 5s or 7s. an hour. There are some masseuses in London, I know one, who will not go out at all under a guinea an hour. I know another belonging to the Rothschilds who has 10s. 6d. I should say that the average fee per hour would be 5s.; if she can get 7s. so much the better, but I should say the average is from 5s. to 7s. And it is worth it because it takes it out of her; it is a laborious treatment.

Earl of Kimberley.

19347. Do you fix no fee for these nurses?—They are independent of us; as soon as they get their certificate they may go to Bath or to Rome; in fact they go anywhere. They simply carry the certificate, and they call upon medical men; but we have nothing more to do with them. It is a certificate that I have enabled them to carry out massage, medical men who have used them write to me that they have never had any nurses equal to my nurses, because they are so thoroughly trained and efficient; but I have nothing to do with them when they are gone.

19348. Then do I understand that these nurses, whilst they are in the institution, do not go out as masseuses?—No, not till they have had their certificate; under no circumstances till they have passed their examination would any one of them be sent out.

19349. And as soon as they have received that certificate they leave the institution?—Yes. If we can put any work in their way we do.

19350. You spoke of the hospital endeavouring (24.) e.

Earl of Kimberley—continued.

to ruin the institution; may I ask what you meant by that?—I said that it had ruined the school by turning us out; but it was practically the opposition of two or three members of the committee, backed up by this seceding colleague of mine who founded the school with me; and I declined to have anything to do with it unless he retired from it. He got men on the committee and they turned us away from the hospital, and they said we must take another address, and it is a wonder it did not ruin the school. I wrote a letter to this colleague of mine that unless he retired from it altogether, I would bring the matter before the committee of management, and utterly cease the thing altogether; and he retired from it.

19351. Do I understand you that the hospital is now in connection with the institution?—The only connection that the hospital has with the institution is that it receives the gratuitous services of the students, and that I am allowed to lecture to them there at the hospital once a week, or twice a week, as I choose. The students attend there every day in the week to treat out-patients, under the supervision of the matron for female cases, and under my supervision, or under the supervision of the electrician, for male cases; and they carry the treatment out from 10 to 1 o'clock every day in the week, for which the hospital pays nothing. There is no other connection and never has been, except that we had the address of the hospital until two or three years ago, and then, when we were compelled to give up that address, we were bound to get another.

19352. Then, is it the case that the patients of the hospital are attended to by masseuses who have not obtained their certificate?—Yes, because that is part of the training. That is analogous to the treatment, if one may so term it, at a general hospital, by the students, as dressers and as clinical clerks. It is a sort of give and take. The patients are treated by the nurses in this hospital just as they are by medical students in a general hospital. No general hospital could be carried on if no treatment were carried out except by qualified medical men. It is the very thing for which a school exists; the students are taught how to manipulate the patients and how to carry out electricity, but always under skilled supervision. How, otherwise, could we train them? Students will not go, when they have got a certificate, to a hospital for nothing.

19353. Is it the case in your hospital that the masseuse never operates without the presence of a medical man?—Most assuredly not; it would be impossible to carry on treatment under such conditions. A medical man is not present. It is analogous to what one of your Lordships referred to just now when he asked a question as to whether an ordinary medical man would allow massage to go on in his absence. But no massage is allowed to go on in the hospital unless in the presence of Mr. Trood, the electrician, who has been there many years, or of the matron, who is herself a skilled masseuse.

19354. My question has not been distinctly answered; I wish to know whether any massage is ever carried on in this hospital by an uncertificated masseuse without the presence of a medical

16 April 1891.]

Mr. TIBBITS, M.D.

[Continued.]

Earl of *Kimberley*—continued.

medical man?—Most certainly; it is carried out by the students in training without the presence of a medical man, but by the written directions of the medical man as to what should be done, as it is at all other institutions.

19355. Is it the case in general hospitals that the students are allowed to deal with the patients without the presence of a medical man?—Not to prescribe for the case, but to carry out localised methods of treatment such as bandaging the leg or removing a dressing. This is not the diagnosis of a case or the prescription for a case; this is simply carrying out the mechanical method prescribed by the physician responsible. It would be impossible for a medical man to be always present in any general hospital; there is none in London where they are always present.

19356. Do you consider it satisfactory that these patients should be handed over to these inexperienced nurses?—They are not handed over to inexperienced nurses in any sense; they are seen by myself and colleagues once a week, and their cases carefully examined; we have a most experienced matron present whilst the massage is being carried on with the women, and a most experienced electrician is present with the males. It can hardly be called handing them over to these nurses, when there is a superior officer present.

19357. It appears that massage is carried on by the matron and these inexperienced nurses, and I want to know whether that is a satisfactory system?—I think that it is the only practicable system, and I think that it is a satisfactory system.

19358. Satisfactory perhaps for the training of the nurses, but is it so for the patients?—I think so, thoroughly. I would also add that if certificated masseuses were to be obtained, it would cost the hospital an expense of many hundreds a year; but I consider the present system thoroughly efficient.

19359. But do you put the matter on the question of cost, or do you put it on the question of efficiency, and say that nothing more is required?—I am afraid that with all things it must be a combined question. Undoubtedly, if we could always have certificated masseuses it would be a greater advantage than having those in course of training; but then against that, how are they to be trained; the educational advantages are thrown away. When the old certificated masseuses die off, where are the new ones to come from, unless they are to be allowed to train.

19360. Would it not be more satisfactory if there were some certificated masseuses to superintend the uncertificated ones?—There are certificated ones; the matron is certificated; the electrician is certificated, or at any rate has had many years' experience; I do not think more superintendence is required than they now get.

Earl of *Arran*.

19361. In a book here, the Hospital Annual for 1889, the matron, Mrs. J. Honeyman Brown, is put down among the staff of the hospital; does she belong to the hospital or to the institute?—

Earl of *Arran*—continued.

She belongs to the hospital alone, and has nothing to do with the institute.

19362. There is no mention of an electrician here amongst the staff of the hospital?—I have not seen the record to which you refer.

19363. Does the electrician belong to the hospital or to the school?—Entirely to the hospital.

Chairman.

19364. There is a great deal of payment that comes from the patients, is there not; out-patients and in-patients, to the hospital?—It may be 400 l. or 500 l. a year; I do not know exactly what; I am afraid that it is a very small item as regards the expense; there are so many gratuitous patients.

19365. Was there at any time any profit from the hospital to the founder?—Never; a dead loss. I have advanced money, and never had any interest for it. I think they ought to have paid it.

19366. Then the hospital was founded in the interests of the sick poor, and for medical science?—Undoubtedly; in no other interest, and with no other desire.

19367. How do your accounts balance, as a rule; do you generally have a deficit or a surplus?—I really must refer you to the secretary, for I do not know; I know nothing about the financial part, except that we are prospering, I believe; I believe we are getting on. We must get on, because we have just rebuilt our place.

Earl of *Winchelsea and Nottingham*.

19368. I understand you to say that, with regard to the operations of the masseuses, they are not really in a medical sense operations, but simply manual carrying out of specific medical directions?—Undoubtedly.

19369. This treatment pursued in the hospital is a very special one, invented and superintended by yourself?—I am not aware that my method differs from the received methods in Europe. I do not think I have invented any special method of treatment; I have studied all the best methods, and combined them; but I cannot claim anything that is specially my invention.

19370. I will put the question in another way to get at what I want: if anything unfortunately were to happen to you would the special usefulness of the hospital be put an end to, by reason of your connection with it having ceased?—I hope not; it would be a misfortune to the hospital; but I hope the treatment would be carried on by my colleagues.

19371. Are there persons qualified to carry it on?—Dr. Forbes Winslow and Dr. Armitage, who are two of my colleagues, undoubtedly are qualified physicians.

19372. Is the hospital entirely dependent upon the Institution of Massage in this sense: that it could not go on without it?—No; if the school were to cease the hospital could engage qualified masseuses by payment.

19373. That would be more expensive?—It would

16 April 1891.]

Mr. TIBBITS, M D.

[Continued.]

Earl of *Winchilsea and Nottingham*—continued.
would cost many hundreds of a year, I am afraid ; it costs nothing now.

19374. And the supply would always be precarious?—I apprehend that it would. Of course, supply and demand are relative terms ; I apprehend that the supply would be a very different supply from what it is now, and that there perhaps might be a difficulty in always obtaining

Earl of *Winchilsea and Nottingham*—continued.
qualified masseurs and masseuses ; but that, of course, I do not know.

Chairman.

19375. Have you anything further that you wish to say to the Committee?—I think not.

The Witness is directed to withdraw.

MR. HENRY ALEXANDER DOWELL, is called in ; and, having been sworn, is Examined, as follows :

Chairman.

19376. You are the Secretary, are you not, of this Hospital for Epilepsy and Paralysis?—The Honorary Secretary.

19377. Do you hold any other appointment besides that?—Treasurer of the hospital.

19378. But I mean outside of the hospital?—Yes.

19379. Would you kindly tell us what appointment you hold?—I hold a small appointment under the Local Government Board.

19380. And where do you reside ; do you reside in the hospital?—No, I reside in Sussex.

19381. And how frequently does your work take you to the hospital?—I may say that as a rule I attend twice a week, and if there is anything very special, such as at Christmas time, special appeals or something of that sort, I generally make it my business to attend oftener ; for instance, I might be there every day for three or four days if necessary.

19382. But you get no payment at all?—I get an allowance for an assistant, and for travelling.

19383. And I think we were told that you got some commission for money collected?—Yes.

19384. What per centage is that?—Five per cent on what I personally bring in.

19385. Not on what is paid through bankers' orders?—No, nothing at all on that ; in fact, I may say, that up to the present time I have brought in considerably more than I have received any commission for ; the finances of the hospital being low, and all the money which we can collect being required for the re-building, I have not taken the commission.

19386. Does your assistant reside in the hospital?—He does not.

19387. Who does reside in the hospital?—The matron.

19388. And we were told of a dispenser by the former witness?—Yes, but he does not reside there ; he attends daily.

19389. The matron has full control in the hospital?—Yes ; the medical superintendent has really the full control ; I apprehend that if anything went wrong he would be summoned at once.

19390. That is Dr. Tibbits?—Yes.

19391. Does he reside in the hospital?—No, he does not, but if anything went wrong, and his presence was required, he would be summoned. I apprehend.

19392. Does he live near the hospital?—Close.

19393. Do you think sufficient control can be

(24.)

Chairman—continued.

exercised by that system, under which none but the matron resides in the hospital?—Hitherto the hospital has not been a hospital really with regard to the building ; it was only a private house, and I believe it was a butcher's shop at one time, but that was before my connection with the hospital. As a matter of fact up to the time of its demolition, about 14 months ago it was only a private house, and its space was so limited that it would have been utterly impossible to have had anyone residing there. The space was so limited that the committee room was also the electrical room, and also a waiting room.

19394. Then it was practically only a sort of sick house?—It was so crowded that it was really almost impossible to carry on the work.

19395. Do you mean that the wards were so crowded?—No, I am speaking now of the out-patients department particularly. There was only one ward, which only contained 10 beds.

19396. Is there any restriction as to the number of out-patients that come or the numbers to be treated?—No, not as to the numbers to be treated. The hours are set forth in the advertisement in "*Lloyd's Weekly News*," and in the "*North Western Gazette*," and in the "*Marylebone Mercury* ;" and once a month latterly in the "*Times* ;" it used to be oftener than once a month, but the expense was very very great.

19397. Is that advertisement you refer to for patients or for funds?—Entirely for patients, the advertisement that I speak of now.

19398. You advertise for funds too, do you not?—We used to advertise for funds too, but the expense was very great, and the result almost nil ; the expense was greater than the results obtained.

19399. You could not trace any subscriptions to the advertisements?—No.

19400. Do you appeal frequently to the public?—We are always appealing to them.

19401. Do you find that it is the best plan to keep always before the public?—Yes, that is my experience.

19402. On the same principle as Pears' Soap, or anything of that sort?—Yes, I may say that I have been very successful in the matter. In two years I doubled the subscription list ; I think I increased it from about 320 £. or 330 £. to about 650 £. ; so that that seems to show in point of fact that the system of pegging away at the public has been productive of good results.

19403. How does the cost of these appeals compare with the results from the appeals?—It varies very much indeed ; I really could not

3 I 2

answer

16 April 1891.]

Mr. DOWELL.

[Continued.]

Chairman—continued.

answer that question, because I have known the appeals cost in one week (we usually send them out weekly) 3 *l.* and the result has been 7 *s.* 6 *d.*; and then in the following week the result was 60/. One cannot say how the cost compares with the results, because immediate results are not obtainable. Sometimes I have money sent from abroad by the people to whom I write. The replies come from different parts, perhaps from India; the letters written to them are forwarded on, and these replies come many months afterwards.

19404. Should you suppose that each appeal cost you 3 *d.* or 4 *d.* to get up and send out?—No, I should not say so much as that, but I should think very likely it costs 2½ *d.*; about that.

19405. Irrespective of the postage do you mean?—No, I count the postage in.

19406. Do you ever get small sums sent in?—Yes, penny stamps. We have various contributions, from a 1 *d.* to 100 *l.*; not many of the latter amount.

19407. You say each appeal costs you about 2½ *d.*, therefore if you get half-a-dozen postage stamps, that pays the cost of that particular appeal?—If every one would put a shilling's worth of postage stamps in each letter we should be very well satisfied; but a great many people throw them aside. I know for myself, being a governor of a few institutions, and my name appearing in the list, I am frequently I may say inundated with these appeals; but being an old hand at it, and not having too much wealth at my command, I throw them in the waste paper basket, and I am afraid your Lordships would find that you had the same experience.

19408. As regards the financial portion of your hospital, do you generally have a deficit or a surplus?—Since I have taken the matter in hand with the approbation of the committee, there has been a surplus; but that has since been swallowed up by building; we have already expended 5,000 *l.* on the new building, I think it is 5,200 *l.* on the new hospital. The administrative block which is being erected now will cost 2,800 *l.*; and then it is estimated that the furnishing and all the appliances will cost another 1,000 *l.* The absolute building by itself is 8,000 *l.*

19409. How long have you been acting as secretary?—I, personally, as far as I can recollect, seven years.

19410. But now under the present management there seems to be a great re-organisation going on?—That is so.

19411. Are the contracts for food made by open tender?—No, there never has been a contract for food, because that has been rather a small matter in the hospital hitherto; the hospital having only had 10 in-patients, the consumption has not been great enough for a contract; in the future it will be. You are speaking of the hospital as it was, it is different from what it used to be; it is quite another matter.

19412. Is all the professional work that is done at the hospital done without payment?—As regards the medical staff you mean?

19413. Yes?—Entirely without payment.

19414. I think you had two nurses at one time?—We had three nurses at one time.

Chairman—continued.

19415. Did you train them yourselves?—They were not trained nurses. As far as I understand the matter, these cases are not cases requiring trained nurses. We have at the present time a trained nurse; but whether it is in contemplation to have trained nurses is more a matter for the medical staff to determine. I think the committee would be guided by them in that matter.

Earl Cathcart.

19416. What was your motive for joining the hospital as honorary secretary, philanthropy?—I can hardly answer the question. I am very fond of children, and I was very much interested in the matter.

19417. It was an interest in the matter itself, and not an interest in the founder of the hospital that influenced you in joining it?—The founder of the hospital asked me to become a subscriber, and I did, and when this contretemps occurred with regard to the medical staff and the resignations I attended that meeting, and I was asked to become a member of the committee. That was how it arose. I was a subscriber previously.

19418. Then you were instrumental a great deal, as I understand, in selecting the new chairman?—General Mercer is a friend of mine, and I had served on other committees with him, and I knew enough of him to know that if he would undertake the conduct of the chair, it would be very much to the advantage of the hospital; because having no regular chairman, anyone was put into the chair who happened to be present, and the consequence was, that if Mr. Smith was there to-day he was chairman, and Mr. Jones the next day, and there seemed to be no leader.

19419. How did you arrange it with the committee; the committee were all of the same mind about the selection of the new chairman?—The committee asked me if I could find some gentleman who would be willing to undertake the chairmanship. I may mention that Colonel Smith, R.E., chairman of our building committee, was elected chairman, but not altogether caring to take it, or not being accustomed to chairmanship, he declined it. Then Mr. Murray, a very regular attendant, was asked to accept; but he said he would rather remain a quiet member. Then Colonel Darvall was also asked, and he refused, because he said he did not understand the procedure. I was asked on several occasions if I knew any one else among my own friends, and I thought of General Mercer.

19420. And this was all ratified by your general meeting?—It was all ratified. He was proposed and elected the same day.

19421. Your committee are not overpowered by the medical staff, as I understand?—Not now. They were so at one time.

19422. The committee holds its own now?—Entirely.

19423. You have initiated a new system now, in fact?—Entirely, since the advent of General Mercer. It has been an immense advantage to the hospital.

19424. Have you any clinical instruction for the students?—Not for the students; there have been lectures authorised by the committee, but to medical men not to students. I have seen the

16 April 1891.]

Mr. DOWELL.

[Continued.]

Earl Cathcart—continued.

the attendance book with their signatures in it. I have not been present at any of the lectures myself.

19425. You do not refer to the lectures to the masseurs and masseuses?—No, these are clinical lectures authorised by the committee, and advertised in the "British Medical Journal" and the "Lancet."

19426. You hold to the wisdom of the policy of divorcing the massage establishment from the hospital?—I do, certainly. I always considered that no person should derive any personal benefit in that way.

Chairman.

19427. What salary does the matron receive?—£. 50 a year, and her board and lodging.

19428. And she is mistress of how many nurses?—Under the old *régime* she had three nurses, and the cook and the porter, all under her directions.

Earl of Arran.

19429. What does the medical staff at this moment consist of; how many men?—There are three physicians; the ophthalmic surgeon; the throat and ear surgeon's post is vacant; and there is a general surgeon.

19430. But I see by this Annual published in 1890 that there are five physicians, a surgeon, and a throat and ear surgeon, and an ophthalmic surgeon; several appointments are vacant at this moment, I gather from you?—The throat and ear surgeon's appointment is vacant; but whether the other two will be filled up is a question for the committee to determine.

19431. Have the committee formulated any scheme for carrying on the hospital when it is re-opened upon a larger basis; I mean with regard to giving out contracts, and so forth. It is to be opened in June, I understand?—We hope so.

19432. So that it would be almost time now to be prepared on that point of contracts for food and medicine and other things that may be necessary; up to the present that has been done rather in a happy-go-lucky way; there have been no contracts, I understand?—Not for food; I do not think that that question has entered the mind of anyone; but I may say with regard to the drugs that the matter has been thoroughly gone into by the sub-committee, and, having had the prices of other purveyors submitted to them, they have found that the present system could not be improved on.

19433. As I understand, you will have something like 40 beds?—Yes.

19434. That would require a large supply of food and other things; who would then be responsible that the food was of the proper quality?—There is a rule which has been lately passed, but which has not come into operation yet because the hospital is in a state of transition, by which it is provided that there shall be a regular visitation of the wards, the nurses, and so on; and I apprehend that it will be the duty of that committee to inquire into that, and to see that the food is right, and to see that the accommodation afforded and so on is correct.

19435. However, you have not formulated a scheme yet?—We have not.

(24.)

Earl of Arran—continued.

19436. You generally find someone in a hospital responsible for the food on its reception?—The matron undoubtedly up to now has been so; however, whether she will remain so, I cannot say.

Lord Thring.

19437. Is not electricity a part of your system of treatment?—Yes.

19438. And is not that one of the causes of the hostility of medical men to your hospital?—I cannot answer that; there is so much jealousy amongst medical men; they are more like women than men in regard to that.

19439. Massage is not opposed by medical men at all, is it?—Not to my knowledge.

19440. I mean, as a matter of fact, we all of us know that an ordinary doctor will recommend you massage?—I do not know about an ordinary doctor.

19441. You know that at the present time it is a very common recommendation of doctors to say that massage will, in cases of rheumatism and similar cases, be a benefit?—I should say so. One would think that every doctor would be very glad to adopt every latest improvement both in surgery and medicine; but they are not, I think.

19442. Is it not a fact that they have virtually adopted massage?—I think they have; that is my impression.

19443. Is it not the fact that they have not adopted electricity to the same extent as they have adopted massage?—I do not know what other medical men do; my impression is that they have adopted electricity rather more than massage.

19444. You do not think that their opposition arises from an idea that you use the magnetic belt and those other quack means, if I may use the expression?—But we do not use them; I never saw such a thing in the hospital.

19445. That is not quite my question; do not you think that the jealousy of medical men, which you say exists as to your hospital, arises from an idea on the part of medical men that you go in for the quackery of electricity?—I have never heard that said.

19446. We have been told that the medical profession are extremely jealous, and exhibit an antagonism to this particular hospital of which you are the secretary?—I have heard it stated so, but, personally, I have no knowledge of that being the fact. I attended once, as General Mercer has told you, at the Mansion House last year, and I put the question to Sir Sydney Waterlow then, asking him if it was not the fact that these grants were made on a certain basis.

19447. Do not you imagine that when Sir Sydney Waterlow gave you the answer which we have been told of, he, in fact, intimated that there was some quackery behind, or thought that there was some quackery behind?—He intimated nothing; he did say this, "I may say that we have the advantage of the presence of medical men on this Committee." The reply rose to my lips, "That is not an unmixed blessing;" however, I did not say so.

19448. At all events, you do not think there

3 I 3

is

16 April 1891.]

Mr. DOWELL.

[Continued.]

Lord Thring—continued.

is any hostility on the part of the medical profession to this particular hospital?—I think the hostility is not to the particular hospital; I think it is personal.

19449. Hostility to an individual?—Yes.

19450. Not arising out of massage or electricity? No; I think the hostility is directed against the founder of the hospital.

19451. You think that none of these quack methods that are advertised, magnetic belts and so on, are used at your hospital?—Never; I have never heard of their being used.

Earl of Lauderdale.

19452. You have no idea why assistance was refused to your hospital from the Hospital Sunday Fund?—No; I have asked and should very much like to know. I am sure every effort has been made, more especially of late, by the committee to do everything they can.

19453. You are not aware of any unfavourable report having been made?—I think this, that the Charity Organisation Society have influenced the Sunday Fund. I believe that these reports, which I say are totally false, have been made by people who are not now connected with the hospital, but were at one time.

19454. What is the nature of the reports?—Simply that the hospital is unworthy of support.

19455. For what reason?—I do not know; that is what I want to know.

19456. You think that the Charity Organisation Society have influenced the Sunday Fund in refusing a grant?—Yes, I think so. A certain agent of theirs came a little time ago and saw the chairman and myself, and made certain inquiries, and I gave him all the information I could, and when the report came back to us these things were twisted, and not given in the way in which I had given them. The statement of a man whom we will call a gentleman, was taken against the statement of my committee, which consists undoubtedly of gentlemen of position.

19457. And you think that was the reason of the assistance being withheld?—I think so.

Lord Monkswell.

19458. Then I understand that you did see this report of the Charity Organisation Society?—I saw the report.

19459. What was the effect of that report?—I have not seen the report which they have made to the Sunday Fund.

19460. But you saw some sort of report?—Yes, I saw a written report or statement. This agent of the Charity Organisation Society stated to General Mercer and myself that our auditor had told him that he did not examine the accounts at all; that he simply put his name to them, and that he knew nothing at all about them. Thereupon at the next committee meeting I reported the interview which General Mercer and myself had had with this agent, and I was requested to write to Mr. Denny, the auditor, a member of the chartered accountants, asking him if it was usual for an auditor to supply to outsiders any information concerning the affairs of people who employed him. He replied in a most indignant manner that he had not

Lord Monkswell—continued,

done so, and wished to have an interview with the committee, and to be confronted with this agent of the Charity Organisation Society. Whereupon I wrote to the Charity Organisation Society asking that Mr. Carthew, that was the agent's name, should attend and explain what he meant by this. Mr. Denny the auditor did attend; he also was asked to attend, and give an explanation, and he totally denied having made any such statement. The Charity Organisation Society's secretary wrote refusing to allow Mr. Carthew to attend.

19461. What was the upshot of it in the report?—Then General Mercer, the chairman, at the request of the committee, wrote complaining of this, and other things.

19462. How do you mean "other things"?—There were so many details I really almost forget what they were.

19463. I thought you said the report was not out; I thought you said that you saw something in writing to the effect which you have just stated about the auditor. You did not see anything in writing, if I now understand you rightly?—This agent made that statement to me and to General Mercer.

19464. And then did you see that statement subsequently reduced to writing?—Well, that was excused.

19465. You had a sort of letter from the Charity Organisation Society to that effect?—Yes, that they had made some mistake, that they had understood it was so, or something of that sort; excusing themselves in some way.

19466. What did they say, that they would set the matter right?—They have never done such a graceful act; they have been asked to do so and have not done so.

19467. They have written a letter to some extent excusing themselves for having made this statement?—Yes, they have; but the excuse, to my mind, appears to be rather worse than the offence.

19468. So that you suspect that they may have reported to Sir Sydney Waterlow, or to somebody else interested in the Sunday Fund, the effect of the conversation which you know took place with one of their people?—Yes; in fact I am sure that these questions and this investigation were suggested by others, was with a sinister motive.

19469. You have not yet denied, but I suppose you do deny, that there is any truth in this statement with regard to the audit of the accounts not having been thorough?—Of course I deny it.

19470. May I ask, generally, what was the nature of the other allegations which were brought against you; you say one was in regard to the accounts?—Another thing was that the balance sheet did not agree with the list of subscriptions in our report; and that might have been some five or six years ago, and it is explained in this way: When I first took office there I engaged my assistant, the gentleman who keeps the accounts and does all the detail work. There are three columns in these accounts not divided by lines. The first column is "Annual Subscriptions," the second, "Donations," and the third column, "Previous Donation";

16 April 1891.]

Mr. DOWELL.

[Continued.]

Lord Monkswell—continued.

tions"; and to explain it I must mention that up to that date the total under each column had not been cast up; had it been, no such mistake could have arisen; but by some printer's error they put the "previous donations," as it were, in the second column instead of the third; consequently there was an apparent deficit.

19471. You explained that?—It was explained, and the explanation was accepted at the time.

19472. But was there anything else except with regard to the accounts?—There were trivial things, matters of detail.

19473. Any considerable charges?—No, nothing that you could call grave charges.

19474. The charge with regard to the account you consider the principal charge against you?—I consider that it was a very grave charge.

19475. And there was no other charge that you considered grave?—Not worth answering; only I cannot state what the charges were now in particular; I do not carry them in my mind, but I know they were such as to give a bad impression. In fact, generally, it appeared to me that they came to this, that the truth was told to a certain extent but not the whole truth.

19476. But was there any allegation with regard to the discipline of the hospital, or people being badly treated, or anything of the kind?—No, nothing of that sort.

19477. Badly treated on the part of the doctors?—No, nothing of that sort.

19478. Or on the part of any officials?—No, nothing of that sort; it was principally a charge on a matter of account, and, as I thought, a very grave one, because, in a manner, it was directed against myself.

19479. Then you cannot recollect any other charge brought against your hospital?—No serious charge. I thought it was quite enough for one to be made.

Earl of Winchilsea and Nottingham.

19480. Do you publish the accounts every year?—Every year.

19481. And when you send out these appeals to the public, do you usually give any idea as to the financial position of the hospital?—No; except that the hospital is greatly in want of funds, especially of annual subscriptions.

19482. Do you publish a proper balance-sheet every year?—Certainly; I have the last three years' reports here if you would like to see them.

19483. In the case of the proposed expenditure upon the hospital, do you propose to put the building expenditure to a capital account?—The building account is now quite a separate account.

19484. The accounts will show what is capital account and what is the current account?—We have no invested funds, so that we cannot be said to have a capital account at all.

19485. Has there been anything said in these allegations to which reference has been made as to the medical staff and the management of the hospital being at cross purposes?—No; nothing that I have heard.

19486. You do not think that the action of the Charity Organization Society, and subse-

Earl of Winchilsea and Nottingham—continued.

quently of the Hospital Sunday Fund, arose out of that state of things which produced the resignations of which we have heard?—No; I should like to know what it arose out of.

19487. You have never been able to find out on what it rested?—No.

19488. Certain charges were made by the Charity Organization Society, and were met by you, and to a certain extent the Charity Organization Society apologised for them, or they were withdrawn?—The only extent to which they apologised was, that they excused themselves in a matter of misunderstanding as regards the audit.

19489. You are quite in the dark why you have been refused assistance?—Utterly in the dark.

Chairman.

19490. Do you receive much money by legacies?—We have never had any but one, and that was this: A subscriber four years ago left us a legacy of 500 *l.* I believe Scotland does not come under the Statute of Mortmain; there was 500 *l.* left to us to be realised on land belonging to her being sold; it was in Scotland, near Edinburgh, I think; a certain portion of that was sold, and of what it realised our share was only 25 *l.*, which we obtained of this old lady's solicitors, and again through our solicitors, Messrs. Boxall and Boxall, of 22, Chancery-lane, about 12 months ago, as far as my recollection serves me, we received a further sum of 225 *l.*; making 250 *l.*, or half of the sum that had been bequeathed to us, and the solicitors stated at the time in their letter that they thought that was all we were likely to get, as the value of land had fallen so much, but Messrs. Boxall have informed me since that we may get some other small dividend.

19491. As regards these payments by the patients, which amounted last year to about 460 *l.* for out-patients, and for in-patients to 36 *l.*, the whole of the expenditure is about 4,000 *l.*?—Last year it was.

19492. Therefore the payments by the patients themselves really form a very small proportion of the total expenditure?—I should think an eighth part; perhaps 10 to 12 per cent., not more.

19493. Is there anything else you would like to state to the Committee?—I should be pleased to answer any question that may be put to me.

Earl of Lauderdale.

19494. When was it that these allegations were made against your hospital?—I think it was at the time when this Committee of your Lordships first began its sittings. Perhaps I ought to go back a little way. The Charity Organization Society applied to me some four or five years ago for all particulars of the hospital, for one of the subscribers to it as they said. I replied that if this subscriber wished for any information I should be happy to give it him if he would call at the hospital, or I myself, or somebody as my deputy, would call at his residence and give him the information. A reply came back that the gentleman, the Honourable Mr. Fortescue I think, wished for this information. I replied that I should be very glad

16 April 1891.]

Mr. DOWELL.

[Continued.]

Earl of *Lauderdale*—continued.

glad to give him whatever information he wanted. I wrote to him to that effect, and I received a reply to the effect that he would do without it, that he did not wish for it; it was a very courteous letter; and I heard nothing more from that society till the commencement of the sittings of this Committee, when I had an application from Mr. Loch, the Secretary of the Charity Organization Society, asking me if I would give an audience to their agent.

19495. The object of my question is this: Did you ever apply for funds to the Hospital Sunday Fund before these allegations were made?—Yes, we did.

19496. And what was the cause of their refusal to give them then?—It was always the same answer. I remember one year Sir Sydney Waterlow or whoever was in the chair —.

19497. When did you first apply for a grant from that fund?—We have done so every year except one, I think.

19498. And your applications have been steadily refused?—Yes; and one year the then

Earl of *Lauderdale*—continued.

Chairman said that we wanted more subscriptions and donations; that if we could show more, then they would consider our case.

19499. Then, in point of fact, the allegations that you have referred to have nothing to do with the refusal of assent which took place previous to those allegations having been made?—Not to my knowledge.

19500. And you do not know what the reasons were for that refusal?—I do not know.

Chairman.

19501. You cannot form any idea?—I cannot form any idea.

19502. Is there anything else you wish to say?—No.

Earl *Catheart*.

19503. Your Chairman said that there were plans of the building which the Committee might see?—I think Dr. Tibbits may have them. (*Certain plans are produced.*)

The Witness is directed to withdraw.

MR. JOHN WILLIAM MOORE, M.D., is re-called; and further Examined, as follows:

Chairman.

19504. You have some correction that you wish to make in your evidence given in the earlier part of to-day's proceedings?—Yes. A question was put to me in reference to the Dublin Board of Superintendence of Hospitals, and I wish simply to explain that that is not a general hospital board. I recollected it afterwards. Perhaps the Committee are not aware of the fact that it is not a general hospital board; it is a board constituted under Act of Parliament to manage the distribution of an annual Parliamentary Grant of something under 16,000 *l.* a year which is given to the Dublin

Chairman—continued.

hospitals. The hospitals that do not participate in that grant have nothing whatsoever to say to that board; they are not under its control in any sense. I thought it was of some importance to tell the Committee about that.

Earl of *Winchilsea and Nottingham*.

19505. You do not happen to know what Act it was which constituted the board?—No, I am afraid not; but the required information can easily be obtained by the Committee.

The Witness is directed to withdraw.

MR. SAMUEL H. T. ARMITAGE, M.D., is called in; and, having been sworn, is Examined, as follows:

Chairman.

19506. ARE you a Member of the College of Surgeons or Physicians?—I am a Doctor of Medicine, and a Licentiate of the Royal College of Physicians.

19507. Are you a general practitioner?—No, I am practising as a physician.

19508. Are you on the staff of any of the big hospitals in London, or of any special ones?—Previously to joining the staff of this West-end hospital I was for a good many years physician to the North West Hospital.

19509. You are on the staff of this hospital for paralysis and epilepsy?—Yes, but previous to that I was physician to the North West Hospital; but I thought that at my time of life I would give up hospital work altogether, for I have been connected with hospitals for 20 years; but I was asked to join this special hospital, and I thought it would be of very great interest, and it was in my own neighbourhood; so I joined the staff of the hospital.

Chairman—continued.

19510. Where were you a student?—At the Edinburgh University and at Guy's Hospital in London.

19511. Were you one of the staff of this West-end hospital who resigned on the occasion that has been spoken of?—No, I did not resign.

19512. Are you generally in favour of special hospitals or of general hospitals?—I have been connected with a general hospital for a very great number of years, and in certain cases I am in favour of specialism, but I think if you begin with it in early life your judgment is apt to be warped, and you get cramped ideas about certain diseases, and when any person comes to you you are apt to imagine that he has come with the special disease which you specially attend to.

19513. That is to say, your opinion in fact is that the best special hospital is good, and the best general hospital is good?—Without a doubt.

19514. Should you like to see a restriction placed upon the building of these special hospitals?

16 April 1891.]

Mr. ARMITAGE, M.D.

[Continued.]

Chairman—continued.

tals?—Well, I think that if there are a great number constantly formed they may be an injury to the larger hospitals. I think, if they were formed with the mushroom-like rapidity that they have been lately, they would be harmful.

19515. Do you think that the cases that are treated in this particular hospital which we have had under our view to-day, could be equally well treated in a general hospital?—I doubt it; there are special advantages connected with our hospital for diseases of the nervous system, because we have special aids to the treatment of them, especially the electrical apparatus.

19516. You are in favour of this particular hospital that we have been hearing of to-day?—Yes, I am; I think it is doing an excellent work.

19517. Before the days when the authorities of the hospital thought right to build a proper hospital, were you not in a very inappropriate building?—Well, the building was a very wretched one, and completely inadequate for the treatment of the patients.

19518. But then is it a good thing to have a lot of sick people suffering from epilepsy or nervous diseases in buildings so totally inadequate to the requirements?—Well, we have had only one ward which has been devoted exclusively to children. The great feature of our hospital is the out-patient department; we have patients from all parts of the country, and a great many of them are sent by medical men.

19519. You mean medical men who are not specialists?—Decidedly.

19520. Is any instruction given in your out-patient department to other medical men?—No; I have frequently had medical men call and request that they might remain during my examination and treatment of the patients, and, of course, I have been very glad to accede to their request.

19521. Because otherwise, if no medical students were admitted to the consulting-room in your special hospital, a great amount of material for education would be wasted?—Yes, that would be so, if these cases came exclusively to the special hospitals; but we must recollect, of course, that our great mission is the relief of the patients. But, as regards the teaching department, there is not a doubt that a great many of these cases go to the general hospitals; but from my knowledge of the general hospitals, they have not the special aids for treatment which we have in this hospital.

19522. That is to say, as far as your knowledge goes; but most of the general hospitals nowadays have various departments, have they not, for various diseases?—That is so.

19523. Does not that rather minimise the usefulness of special hospitals?—Probably that may be the case, but at the same time I do think that in the case of diseases of the nervous system a special hospital is a very valuable one.

19524. Then do you think there are some special hospitals that we might do without. You say that this hospital for nervous diseases is very useful; perhaps in that same category you would include an ophthalmic hospital; would you say that is a useful institution?—Yes; they have special means at such a hospital for the treatment

(24.) e

Chairman—continued.

of persons with diseases of the eye; but, at the same time, they could have their ophthalmic apparatus in a general hospital. But there are such a great number of special cases throughout the country that I think men who devote themselves exclusively to one class of disease are able to apply a better treatment to it, especially with the aids that they have for assisting them.

19525. Now, is it the case that medical men are often on the staff of a general hospital, and on the staff of a special hospital at the same time?—I have known many cases of that kind.

19526. Do you think it is advisable?—Yes, I do think it advisable. I repeat that, with the exception of special diseases like those of the eye and the throat, I think that if a man is connected with both a special hospital and a general hospital, his services would be more valuable; and, I will add, diseases of women.

19527. And diseases of children?—No, I do not see any necessity for that.

19528. You do not care about children's hospitals?—No.

19529. It comes to this, that you approve of special hospitals in certain cases where special hospitals are existing; you have not gone so far as to say that there should be a special hospital in every instance where one exists?—No, I have not.

19530. How long is it since you left a general hospital?—About eight years ago.

19531. What hospital was that?—The North-West Hospital.

19532. And is there any school there?—No, none.

19533. Did you have a very large number of out-patients there?—A very great number.

19534. Was there any restriction in the numbers or the hours?—No, it averaged 80 or 100 cases of out-patients.

19535. In the time that you had at your disposal, could you get through those cases satisfactorily?—Yes, but it took me a very great amount of time. In connection with this hospital, when first I went there, I took the Wednesday afternoon and also the Friday night; but I had to give up the Friday evening after three or four years, because I found myself incapable of going through the work. I was there from six to sometimes 11 o'clock at night, and I found it impossible to do the work satisfactorily; such a great crowd attended, principally clerks, and men and women too, who were engaged in business during the whole day and only could come in the evening.

19536. Having that out-patient department open in the evening was a great boon to the public, I suppose?—Not a doubt of it. I resigned so far as regards the Friday evenings, and went on with the Wednesday afternoon, and on a Wednesday afternoon it takes several hours. I used to go about six o'clock on Friday, and I frequently had to stop till 11 in the evening, in order to do my duty to the patients.

19537. Was that because of the great crowd or because of the character of the disease requiring to be treated?—There were a very great number of patients, and of course when you see a patient for the first time, you must make a

3 K

very

16 April 1891.]

Mr. ARMITAGE, M.D.

[Continued.]

Chairman—continued.

very exhaustive examination; and if we do our duty we do the same to hospital patients as we would to a private case; and it took such a length of time that I found it utterly impossible to perform my duty satisfactorily.

Earl Cathcart.

19538. Who took your place on the Friday evenings?—Dr. Forbes Winslow.

19539. And he goes on with that now?—He goes on with it now.

Earl of Arran.

19540. Your out-patient department must differ from the ordinary out-patient department, I suppose, because you do not prescribe only, but the treatment itself must take place in the hospital?—Of course we prescribe in a very great number of cases. For instance, to take an example, we have a very great number of epileptic cases, and with them there is no electrical treatment or massage treatment as a rule, unless there is some deformity or some atrophy of the muscles.

19541. Then it is only in the cases where electrical treatment is necessary that the peculiar advantages of this hospital exist?—Decidedly.

19542. Do not you think that in the event of this mode of treatment becoming generally accepted by the profession, these special facilities would be found in every large hospital. I mean that it is only the fact that your treatment as yet has not been thoroughly worked out or adopted by the profession that has prevented these modes of treatment being found in every hospital?—Well, I think any accomplished physician would know how to carry out this treatment just as well as we do; but the question is whether it is not better in cases like disease of the nervous system to have a special place for these patients to go to. I do not think it would do if they grouped the nervous cases with the out-patients of a general hospital. For instance, with some hysterical patients it would have the most injurious effect. You have no idea of the kinds of disease that have to be dealt with. I will cite one case as an example: *paralysis agitans*, in which a patient's head, and feet, and arms are going all at the same time; and sometimes we have a patient struck down with epilepsy. Now if you had these cases in the out-patient department of a general hospital it would have the most pernicious and prejudicial effect.

19543. Have you any table of statistics to show whether the percentage of cure in your hospital of these particular cases is larger than it is in the general hospitals?—I cannot answer that question, but I know our treatment is most successful.

19544. Have you any table showing the percentage of cure in your hospital, not a comparative table, but with reference to your own hospital only?—You will find that in the report.

Earl of Lauderdale.

19545. You only treat children as inmates?—At least for the present. The committee of management will have to decide about that when the new hospital is ready. There are several large commodious wards, and I understand that there will be accommodation for 40 patients.

Earl of Lauderdale—continued.

19546. But it will be just as necessary for an adult patient to be treated as an in-patient as for a child, will it not?—Assuredly; and I hope the committee of management will see their way to take adults in.

19547. What is the reason of the restriction to children up to the present time?—Because the limits of the hospital were so cramped; we had only one ward which was for paralysed children; but in the new hospital there will be plenty of accommodation, if the committee of management think fit to take in adults.

Chairman.

19548. Do you happen to know whether in that hospital anybody is taken in free?—I am not aware. I have nothing to do at the present time with the committee of management.

Earl of Winchelsea and Nottingham.

19549. With regard to the question of whether any particular hospital ought or ought not to be established as a special hospital; could you suggest to the Committee any practical means of restricting them. I think you said, in answer to a question by the Chairman, that you thought it would be a good thing that the mushroom growth should be restricted?—I imagine that that could only be done by an Act of Parliament. Any person could commence a hospital if he thought fit; there is no legal restraint to prevent him.

19550. Would you propose to impose any legal restraint; do you think it would be for the advantage of the public or not?—I do think it would be for the advantage of the public.

19551. What would you apply as the test?—You would not propose an Act of Parliament which should prohibit altogether any special hospital being erected, because I understand you to say that in certain cases you would be in favour of a special hospital?—Decidedly; but that ought to be done by a committee; if it is done by legislation it might be brought before a Committee of the House.

19552. You would not propose, would you, that in each case the question of the establishment of a special hospital should be brought before a Committee of this House, or the other House?—If it was reported that a new hospital which would not have funds, in all probability, and would be of no general use, was proposed to be established.

19553. You think it would not be safe to collect, if we could do it, the sense of the medical profession in its recognised exponents about it, as to whether a certain hospital could be usefully established?—Assuredly if you took the opinion of the heads of the profession that would be a fair test, because they would not be biased by any private considerations.

19554. Your idea would be legislation which would enable Parliament to impose a veto upon new special hospitals, except with the consent and approbation of the heads of the profession?—Decidedly, if it were referred to them.

19555. But do you think that they would be a proper tribunal, and a safe tribunal, to refer that question to?—I do, most assuredly.

19556. I suppose

16 April 1891.]

Mr. ARMITAGE, M.D.

[*Continued.**Lord Saye and Sele.*

19556. I suppose epileptics are almost always mentally diseased?—No; very few of them indeed. There are many cases of congenital epilepsy, but a great many of them arise from exciting causes.

19557. Then why is Dr. Forbes Winslow connected with the hospital; I thought his particular branch was mental disease?—I am not aware what was the exact cause of his connection with the hospital.

19558. Do you consider that epileptics ought to be herded together in large numbers, or that they ought to be kept separate?—It must be remembered that they quickly yield to treatment now; they are soon amenable to treatment.

19559. Do you know that in the large pauper lunatic asylums very large numbers of them

Lord Saye and Sele—continued

are kept together, 50 or 60 being in a ward at a time?—Yes; there are certain nervous cases in which the disease may be acquired from imitation.

19560. I wanted to know whether, in your opinion, it was not better to keep epileptic patients as much as possible separate?—Yes, in violent cases; but I say again that they quickly yield to treatment; after the first day or two, probably, and then for weeks they never have an attack. There is nothing that yields to treatment so quickly as epilepsy; that is our experience.

Chairman.

19561. Is there anything else that you wish to say?—No.

The Witness is directed to withdraw.

Ordered, That this Committee be adjourned to Monday next, at Twelve o'clock.

Die Lunæ, 20° Aprilis, 1891.

L O R D S P R E S E N T :

LORD ARCHBISHOP OF CANTERBURY.
Earl of LAUDERDALE.
Earl CATHCART.
Earl of KIMBERLEY.

Lord SAYE AND SELE.
Lord SANDHURST.
Lord MONKSWELL.
Lord THRING.

THE LORD SANDHURST, IN THE CHAIR.

MR. THOMAS STRETCH DOWSE, M.D., is called in; and, having been sworn, is Examined, as follows :

Chairman.

19562. ARE you a general practitioner?—No, I am a Physician; I practice as a specialist in nervous diseases.

19563. May I ask what qualifications you hold?—Doctor of Medicine of the University of Aberdeen, Fellow of the College of Physicians of Edinburgh, and Member of the College of Surgeons of London.

19564. Were you ever at a general hospital?—Yes, I was attached to a general hospital as resident physician for over twelve months.

19565. What hospital was that?—Charing Cross.

19566. And were you a student in Glasgow or Edinburgh?—No, I was a student at Charing Cross.

19567. Then you know the working of general hospitals?—Yes, certainly.

19568. Then after that did you go to a special hospital?—Not as a student, if that is what you mean.

19569. No; I will put the question differently; were you attached to a special hospital at any time?—Yes, I have been attached to several special hospitals.

19570. Were you attached to the West-End Hospital for Paralysis?—Yes, for about seven years, or nearly seven years I think it must be.

19571. Were you there at the time of this dispute of which we have heard, when all the committee resigned and some of the staff?—No; I was there just afterwards. In fact, after that affair, of which I knew very little, Dr. Tibbits called upon me (I knew very little of Dr. Tibbits prior to that, in fact I knew scarcely anything of him at all), and asked me if I would assist him to reconstruct the hospital, which I regret to say I volunteered to do.

19572. Why do you regret it?—Well, I regret it, because the hospital, to my mind, has not been managed in the way that a hospital should be managed.

(24.)

Chairman—continued.

19573. Was that what led to the dispute which caused the resignation of so many members of the governing body?—Well, I believe so; but I really cannot tell you, because I have not gone into that matter. But of course at that time all the members, not only of the lay element in the hospital, but also the medical element, left the hospital.

19574. Leaving Dr. Tibbits alone?—Leaving Dr. Tibbits alone. Well, first of all they got rid of Dr. Tibbits. How they got rid of Dr. Tibbits I do not know, or for what reason they got rid of him I do not know, but at all events Dr. Tibbits was got rid of for the space of six months. At the end of that time they had a general meeting of the governors, and Dr. Tibbits was re-elected to the post of physician to the hospital, and consequent upon his re-election he broke up the organisation of the hospital completely; and I think I am right in saying that all the medical men attached to the hospital resigned, and the members of the committee resigned.

19575. That is practically what Dr. Tibbits told us?—That was the outcome.

19576. But when you say that you regret that you joined the hospital, what is the particular line of conduct that you objected to, and that caused you to regret joining it?—I regret for this reason: that there was nothing but difficulty and disturbance from the first period of my connection with the hospital up to the time that I resigned the hospital. I and several other members of the staff were almost entirely opposed to the views of Dr. Tibbits as to how a hospital should be conducted; and that gave rise to a great deal of disturbance. We never from the first had the hospital what I should call properly organised; sometimes we had a chairman, sometimes we had not a chairman, and we could not alter this; that was the misfortune of it; we really could not get it started upon a fair, practical,

20 April 1891.]

Mr. DOWSE, M.D.

[Continued.]

Chairman—continued.

tical, and what you might almost call, I think, an honourable basis. That is my opinion about it.

19577. Then it was first of all owing to the administrative difficulties that you objected to the hospital?—Yes.

19578. Not as to the treatment of nervous complaints?—Oh, dear no; that is quite a secondary question altogether.

19579. It is merely because of the extremely unbusinesslike organisation, or want of organisation?—That is the very word to give it, unbusinesslike; there was no business about it.

19580. But at the same time the hospital had a large number of subscribers and governors?—Yes.

19581. And they seemed to have great confidence in Dr. Tibbits?—Well, I do not think you can put it in that way; I do not think they knew much about Dr. Tibbits or about the hospital. I think it is partly a question if they are appealed to; and they look upon it as a work of charity; they give to the charity, not to Dr. Tibbits, or to any special hospital. In fact, with all these special hospitals when they are started, they must find out lines of charity, and charitable people associated with those lines of charity, if they want to succeed and to get subscriptions.

19582. But still these are now to a certain extent things of the past, are they not; the hospital is now re-organised?—I have left the hospital now about eighteen months.

19583. Is it your experience that these special hospitals are undertaken as a commercial speculation in the first instance?—No, I cannot go so far as to say that; but all these special hospitals, I think even the large special hospitals which are now so prosperous, have begun in a very, very low way; possibly with a room, or a couple of rooms, and they have all grown; they are the outgrowth of a sort of necessity apparently which has arisen for this sort of thing; at least that is my opinion.

19584. Where does the necessity lie; does the necessity lie as regards the disease, or do you mean that it is a necessity for the medical man who is promoting the undertaking?—Well, I think the necessity rather lies as far as the treatment of disease is concerned, and the number of diseases requiring treatment. I must say that, in my opinion, nearly all these special hospitals have originated primarily with the medical man rather than with the necessity for the diseases to be treated. It has occurred to a medical man (in all probability this man might be a man of ability, but he has failed possibly in getting a hospital appointment), that he can make his mark by establishing a hospital for the treatment of some special form of disease, and he does this; but generally speaking he does it under great difficulties. Possibly he might be almost impecunious at the time of starting; and this special hospital originates usually in this way: in a room, or two or three rooms. Well, if it is successful it very soon makes a large hospital. And I might perhaps add that in the case of many men of high position in London at the present time (we will take a man like Sir Spencer Wells, who has given special attention to the diseases of women; I will say even Sir Morell Mackenzie,

Chairman—continued.

who has given special attention to diseases of the throat), their success is in a great measure due to their originating and being attached to these special hospitals in order to carry on their speciality.

19585. But then of course to be what you call successful, it must be successful commercially?—Distinctly so.

19586. So that it is in the first instance a business out of which profit is made?—No, not financial profit to the man who started the hospital. It is not directly financially a profit to him, but indirectly through making his knowledge known to the world through this hospital he expects to get, and no doubt does get, a great deal of professional acumen on the one hand, and a great deal of money on the other through the carrying out of his profession; but I do not see how in any way financially a man who starts a hospital, unless he might be a very dishonest man indeed, gets anything out of the funds of the hospital.

19587. But you being a specialist yourself you are in favour of special hospitals to a certain extent?—Yes, I think there is an absolute necessity for them. I do not see how you can get out of it at all. In fact, I do not think it is the case that these special hospitals have been started in order to create a demand for a supply, but I think the supply really exists. If we take the demand for special hospitals for nervous diseases (I will just put that for your Lordship's consideration for a second), no doubt nervous diseases have increased as a class of diseases enormously within the last half century.

19588. And you do not think that the general hospitals which now have special departments set apart for various diseases could treat these diseases as well as they could be treated in special hospitals?—I do not think they are equal to the demand. And then again I should like just to bring before your notice one or two points in reference to these special hospitals. Well now, you know the origin of special hospitals is really due to the hospitals themselves.

19589. Due to the general hospitals, do you mean?—To the general hospitals themselves. Twenty-five years ago they would not recognise anything like specialism. Perhaps the first hospital of importance which gave rise to disagreement was the hospital for stone; St. Peter's Hospital for Stone. Mr. Coulson, I remember perfectly well, who was then one of the surgeons to St. Mary's Hospital, started this hospital for stone, and they immediately told him to retire from the hospital or give up the special hospital for stone, which he did. He retired from the general hospital, and he carried on the special hospital for stone. The feeling at that time against special hospitals on the part of the general hospitals was simply carried to such an extent that no man who was on the staff of a general hospital would for a second be permitted to be on the staff of a special hospital, distinct from that general hospital. But now let me draw your attention to this fact. What do we find to day. We find that there is scarcely a special hospital in London, certainly not a special hospital in London, which has gained any position as a hospital, that has not one of the general hospital

20 April 1891.]

Mr. DOWSE, M.D.

[Continued.]

Chairman—continued.

hospital men upon its staff. This appears to me to be rather interesting in reference to general hospitals and special hospitals. The staffs of general hospitals now are very much inclined to abolish, theoretically, if they possibly could, special hospitals; and yet at the same time they form part of the body of these special hospitals which are of any importance at all. They forget that, it appears to me, and they direct their antipathy entirely to these very small special hospitals.

19590. At the time when you were on the staff of the West End Hospital for Nervous Diseases, had you any medical men serving on your staff who were serving at the same time on a general hospital staff?—No; and I do not know whether at any time that was the case. They had, before this disagreement arose, men attached to this special hospital for diseases of the nervous system as consultants, who were attached to a general hospital; but after the disagreement between Dr. Tibbits and the other members of the staff, these men resigned.

19591. Has it ever occurred to you that there could be a certain amount of co-operation between general and special hospitals, in this way, for instance: assuming that there is a very bad nervous case taken to a general hospital, one which requires great care, and the massage treatment, and so forth, would it not be possible to have some method of organisation by which that case might be passed on to a special hospital?—No, I do not see that could be done very well; but although it is not done openly, I think it is done in other ways.

19592. I ask that question because it is the case now, is it not, that instead of these various institutions of every sort and kind working in with one another, they are all competing with one another?—Yes.

19593. That is so, is it not?—Yes, it is so; you take some of the special hospitals, recently organised and badly organised ones, there is, I quite agree with your Lordship, a feeling of antipathy on the part of the members of the staffs of general hospitals, as a rule, against members of the staffs of special hospitals.

19594. Why do you think that you could have no working in with one another of these various institutions; is it owing to this jealousy which you speak of?—I think the organization would be rather too large and comprehensive; it might be done; it is quite possible that it might be done.

19595. Could it not possibly be facilitated by a sort of consultative committee of the heads of all these various establishments?—A consultative committee made up of general and special hospital men, do you mean?

19596. Yes; or I would rather have the consultative body made up of the lay governing members, because it comes to the same thing, does it not, whatever the case might be, that the medical men may have to treat?—Yes.

19597. Could not the lay members of the governing body, the committee, arrange that cases should be passed on from place to place?—Yes, that is quite possible. Before all that could possibly come to pass I think you would have to organise and make use of State hospitals or poor law infirmaries. I think the utilising of those

infirmaries might, in all probability, engender a nucleus which might work something of the kind which you have been suggesting; but at the present time how it is to be done I do not exactly see. I am not quite clear how that organisation can be carried out; still that is quite possible.

19598. This would be a difficulty, would it not, that medical men, surgeons and physicians, getting hold of a very interesting case, would rather keep it in their own ward than send it to another hospital?—Distinctly, if it was a teaching case. They would not send a case that was really a valuable case in a teaching point of view to a special hospital.

19599. At the same time, there are a great number of general hospitals which have no schools, and do not teach at all?—Yes; but not large hospitals. Even the West London Hospital has a school of a kind now; it has not a school recognised by the examining bodies, but still it has a school.

19600. Are these special hospitals that you have been acquainted with any use for teaching purposes; do you have any students there at any time?—No. Of course they are valuable for teaching purposes, but they have not been utilised for teaching purposes. As the hospital grows, when it gets large enough, then it is utilised for teaching purposes. Now, I may mention the case of the National Hospital for Paralysis, in Queen-square; that was begun as a very small hospital, and now it is really one of the most important hospitals for nervous diseases in the world, perhaps, and it is utilised very largely for teaching purposes. The staff give lectures there and the best men in London are upon that staff; and the majority of the men upon that staff are attached to general hospitals.

19601. A great number of these special hospitals are in one particular quarter of London, are they not; all round that district about Soho-square?—Yes; possibly they are generally started in that neighbourhood simply because it is more central for people coming from the outlying districts; I might almost say that these special hospitals are supported by people from the outlying districts; and the only way in which I can account for that is that these special hospitals advertise in Sunday papers and in local papers, so that they draw these people from the outlying districts by advertisements.

19602. At the same time a great many of these hospitals stand in very unhealthy situations, do they not, as regards being surrounded by houses?—Relatively, perhaps they might.

19603. Is not that very bad?—Well, I think London so very healthy. Of course there are certain districts that are not healthy. Here is a thing I had sent me this morning from the North Eastern Hospital for children, in the Hackney-road. I should say that that for children was a very unhealthy place; I should say that they might find a very much more healthy place than that; I do not condemn the hospital in any way on account of its situation, but I should say that they might find a very much more healthy place than the position in which the hospital is situated.

19604. You said that sometimes these special hospitals are started by a medical man taking one small

20 April 1891.]

Mr. DOWSE, M.D.

[Continued.]

Chairman—continued.

small house or two, according to the means of the man?—Yes, or even only a room.

19605. There can be no guarantee in such a case that the house is in a healthy condition?—No. Generally speaking, it is for out-patients first; then when they have succeeded in getting an out-patient *clientèle* they begin to think of getting in-patients.

19606. But that fact does not make the situation any more healthy, does it?—Not at all.

19607. It is a well-known fact, is it not, that a great many of these special hospitals are organised in very unhealthy surroundings?—Yes, I should say so.

19608. Then, surely, that must be a very bad thing?—But that is a very large question, and I could not accept it in that comprehensive way as a well-known fact that these hospitals are generally situated in unhealthy surroundings. I do not think you can take that as an absolute fact.

19609. I will ask you to put it in your own way; how would you like to put it?—I would like to put it simply in this way, perhaps, that some of these special hospitals originate in unhealthy surroundings. If I thought it over very carefully, I could answer your question exactly; but, not having thought over the question and the exact position of the hospitals, I could scarcely tell you right off.

19610. Would you not approve of some means which could be devised for checking the growth of hospitals in an unhealthy and overcrowded district?—You see these hospitals are generally situated in unhealthy districts, for the reason that the supply of patients generally arises in the district in which the hospital is situated. Now, we will take the London Hospital, for instance; when that was started there was an immense demand for some hospital in that district, and the patients going to the London Hospital are chiefly patients from that district.

19611. I was not speaking of a large hospital like the London Hospital; I was speaking of a small hospital, such as the West End Hospital was before the present building was undertaken, and other hospitals which are known to be in Soho, for instance?—I think the same rule holds good with regard to a special hospital as holds good with regard to a general hospital; and when I speak to you of special hospitals having originated in the way I have told you, as a matter of fact really general hospitals have also originated somewhat in a similar manner from dispensaries and from the smallest possible beginnings.

19612. There has been a very rapid growth of these special hospitals in the last ten years in London, has there not?—Yes, but the growth of London has been exceedingly rapid.

19613. Would you like to check the growth of special hospitals in any way?—I should say it ought to be checked.

19614. What is your particular reason for that?—Because I do not think it ought to be in the power of any men or medical men to start a special hospital, and appeal to the public for charity for their hospital, unless it were made evident in some way or other that that hospital was worthy of charity, and conducted upon what you may call straightforward and businesslike

Chairman—continued.

principles. At the present time any man who likes to start a hospital can do so; I can go to-morrow and start a hospital; it does not matter; there is no one to tell me that I shall not start a hospital; I can get a committee together amongst my own friends in the same way that this West End Hospital was got together. Dr. Tibbits' mother used to attend at the annual meeting, and Dr. Tibbits' wife and matron, and Captain Dowell, who was examined the other day, he is the brother-in-law of Dr. Tibbits. So that the whole thing is a little family party, more or less. That is a thing which I cannot recognise at all.

19615. Do you mean that, with such a governing body as that, probably the fact of having a princess for a patroness would recommend such an institution to the public?—A princess being the patroness would recommend any institution to the public; and I think it is a very unfortunate thing, indeed, that the Princess does lend her name as patroness to that hospital. I know nothing of the hospital lately, or its management; it might now be conducted on right lines; but at the time that I was connected with it I did not think it was conducted on right lines, and I thought it a great misfortune that the Princess should lend her name to any such institution.

19616. And you, being a specialist at the time that you connected yourself with that hospital, that is one of the kind of special hospitals which you condemn?—Yes. At the time I was connected with it we did our best, myself and other members of the medical staff, to alter the hospital, hoping and believing that it might ultimately become a well-conducted hospital; but it was not such, and at the time I sent in my resignation I sent in my resignation in these words: "I resign the hospital on account of the way in which the hospital is conducted;" and another physician, a friend of mine, resigned just about the same time, and I believe his reasons for sending in his resignation were exactly the same as those which I have stated.

19617. Then your efforts to get the hospital placed on a more businesslike footing was frustrated owing to the proprietary nature of the hospital; is that so?—To a very great extent owing to the proprietary nature of the hospital. Dr. Tibbits appeared to be opposed to everything that we suggested; to be antagonistic to everything that we suggested, which we thought for the good of the hospital.

19618. And therefore you condemn any hospital which is of a proprietary nature?—Yes.

Earl of Kimberley.

19619. You said you would be glad to utilise the poor law infirmaries; in what way would you utilise them?—As I was the first medical superintendent connected with the first poor law infirmary under Gathorne Hardy's Act, and as I was resident superintendent there for seven years, I think that, in all probability, my knowledge might be of some value to your Lordships and if you would allow me I would like to give you one or two of my observations in reference to that matter.

19620. If you please?—I find that there are 24 Metropolitan poor law infirmaries in London, containing

20 April 1891.]

Mr. DOWSE, M.D.

[Continued.]

Earl of Kimberley—continued.

containing no less than 12,000 beds or more than 12,000 beds, the exact number being 12,032 beds. The larger number of these are perfect hospitals in every sense of the word; the nurses are efficient and well trained, highly respectable women; the medical superintendents are, as a rule, gentlemen of culture and good professional status; the matrons are selected usually from the nursing schools of the hospitals, and they are generally women of good capacity and sound knowledge of the art of nursing; but occasionally I am sorry to say women are appointed to these posts with no other recommendation than a pretty face and a good figure; one in whom a guardian of the poor takes particular interest. In the main, I consider that these institutions are well officered and well managed, but their organisation might be greatly improved; and what is known as Gathorne Hardy's Act should be thoroughly and conscientiously carried out; no more merciful Act of Parliament was ever created; now these institutions are periodically visited by the poor law inspectors in their customary perfunctory manner; they are managed by gentlemen selected from the various boards of guardians, who are called managers; and this, to my way of thinking, is an unwise procedure, and open to abuses. I would have these infirmaries managed and controlled by the Metropolitan Municipal Council (that is the London County Council), and I would specially commend to your notice that ladies should have a share in the management of these institutions; all classes of disease are treated in these infirmaries, excepting infectious disease and specially recognised diseases of the mind. The former, of course, go to the fever hospitals, and the latter to lunatic asylums. Sometimes, from want of careful diagnosis, they are sent to these infirmaries, and then of course they are sent from these infirmaries to these other special hospitals, and sometimes, of course, infectious disease breaks out in these hospitals or a case of lunacy, and so on, and they are then transferred to these special hospitals which I have just named. Now I should like, if I am not detaining your Lordships (it will not take very long just to run over these things) to add a few words on this subject; I was remarking that all classes of disease are treated in these infirmaries, with the exception of infectious disease, and specially recognised diseases of the mind. I would like in a few words to point out to you the vast advantages possessed by these infirmaries as homes for the suffering and afflicted poor of London. Take for instance chronic diseases such as cancer, consumption, and paralysis. Those unfortunate creatures who suffer from these diseases are admitted into hospitals only for a short period, and then with a very unwelcome hand. In these poor law infirmaries they find a home for life; they are visited once or twice a day by the medical superintendent, and are treated with every consideration, kindness and skill until death relieves them of their mortal suffering; they are free agents to leave and return as they please; they can be visited by their friends twice a week, and more frequently by special permission; the monotony of their lives is relieved by games of chess, draughts and dominoes, and interesting

(24.) e

Earl of Kimberley—continued.

books and papers are provided in abundance. This, to my way of thinking, is indeed a merciful charity. Now it seems to me very unfortunate, and I might almost say reprehensible, that such vast and rich fields of every known form of disease should be left barren and fruitless to the teaching and scientific medical world, and I would suggest that steps be at once taken to organize a staff of visiting physicians and surgeons to give clinical instruction to advanced medical students. When I was the physician superintendent of the Central London Sick Asylum at Highgate. I created special departments which would have been invaluable for clinical teaching, that is to say I set aside wards for cancer, consumption and nervous and other diseases, in order that they might be studied by comparison of type, stage and degree of dissolution; and this, I maintain, is the only true way to study disease. If the pathology of disease is illimitable, so are its clinical features; hence the necessity of extensive areas of observation, study, comparison, criticism, digestion, and reflection. The question which I now submit for consideration is this: Does a need exist for more extensive clinical teaching than that afforded by the London hospitals. In my opinion this is undoubtedly the case; for students, after passing their examinations, are lamentably deficient in practical knowledge. One thing is quite certain, that these infirmaries, as now constituted, are perfect hospitals, and possess all the machinery necessary to impart most valuable knowledge to students of medicine. If the medical superintendents have not sufficient confidence in their own powers to become teachers, there are hundreds of young men in London of reputation, position, and ability ready and willing to undertake such duties; but I would strongly protest against such men being selected for such office if they held appointments at the general hospitals. Of course that is an assertion which will have to bear a good deal of investigation, and I have no doubt it will create a great deal of ill feeling in the minds of any general hospital men who may happen to see such a statement in print; but that is my opinion. There is a rapidly growing, and, I might say, evil and pernicious tendency on the part of hospital staffs to absorb everything into themselves that comes within their grasp. Now these new centres for teaching should afford opportunities for other than hospital men to come to the fore, and give evidence of what stuff they are made. We should then have created a form of resistance, and generous, though spirited, rivalry which would produce good effects upon the profession at large. If we look to the Continent we have ample evidence of the great and valuable scientific work which these infirmaries have done and are now doing. I would mention the Salpêtrière Hospital at Paris under the able guidance of M. Charcot. Crowds of students from every part of the civilized world are to be seen within its walls, and every branch of science is brought to bear in unravelling the problems and mysteries of disease; and I venture to assert that we have no clinical teaching in this country comparable to that which is to be found at the Salpêtrière Hospital in Paris; and I state

3 L

again

20 April 1891.]

Mr. DOWSE, M.D.

[Continued.]

Earl of Kimberley—continued.

again that this is in a great measure due to the large number of cases so arranged in groups that the varying phases of individual types of disease can be best exemplified and best illustrated. Those are the observations which I desire to bring before you, and I think they comprehend a great deal that relates to the question of the utilization of these poor law infirmaries, or as I would rather call them, State hospitals, for the benefit of the people and for the benefit of clinical teaching.

19621. You said that you would prefer the management being in the hands of the County Council rather than being left to the various local bodies; what was your reason for that opinion?—Well, I have a very definite reason for that; I might almost say an extremely definite reason. The people admitted to these infirmaries, of course, come from the districts for which these guardians are elected; and that is a fact which is enough, in all probability, to create a little feeling on the part of the guardians; I mean to say a feeling of over anxiety. I will put it in that way, for the patients in the hospital, and is liable to lead sometimes to abuse.

19622. Do you mean by that that it leads to undue interference?—Undue partisanship for a particular patient, perhaps. Perhaps, if I put it in the other way, it will be better. I think these institutions would be far better conducted if they were under the management of a board, we will say, for instance, who knew nothing of the personal relationships of these patients with the outer world. They would merely have the conduct of the institution upon recognised lines to take into consideration, and no personal feelings would be associated with it.

19623. Your opinion then is not so much specially in favour of the County Council (about which I am not saying anything) as that you wish for an independent body?—Exactly; a perfectly independent body. I think it would be most highly advantageous.

Chairman.

19624. That independent body is, in the ordinary way, to be found in the case of the body that manage a general hospital?—Yes, but I think I can exemplify it a little further than that. Take the Metropolitan Asylums Board, for instance; that is made up of guardians chosen from the different boards, I believe. I should even go further than that, and say that I think these State asylums should be managed by men totally and altogether independent of the poor law element.

Earl of Kimberley.

19625. Would not there be this objection to that: these patients are all admitted as poor persons, and there is apt to be very considerable jealousy on the part of that class with regard to the manner in which these poor persons, their relations, may be treated; do you think they would be satisfied if there were no element of poor law administration connected with the infirmaries?—I think they would be satisfied. Of course, if any ground for complaint arose it could easily be investigated, and referred by the board, however it might be constituted, to the parish.

Earl of Kimberley—continued.

We will take the case, for instance, of a pauper coming from a certain parish; if that pauper found that there was any cause for complaint, and the complaint were referred to the board or to the officer in authority in the institution, and there was no redress given as the result of that complaint, then the complaint could easily be referred, for further investigation and report, to the authorities of the parish from which that patient came.

19626. But in regard to what I think you termed, the too great interest which the guardians of the poor may take in particular cases, it is quite clear that that interest is not a very desirable element in the management?—Not in the management, pure and simple.

19627. But not to dispute your judgment as to the management of the infirmary being better if it is quite independent, have we not to consider the whole subject, the feelings of the people who are placed in the infirmary, the feelings of their relatives who are outside, and the feelings of the population from which they are drawn; and do you think it would be safe to entirely separate the management from those various influences?—I quite see your Lordship's point. No, I think it would be unwise to quite separate it from them. In considering over this matter it did certainly occur to me that the board of managers presiding over one of these institutions should be selected from the various parishes in connection with that institution; but I would not have them selected from the ordinary Poor Law Guardians; at least judging from my experience, I think it would be far better for the institution that these gentlemen should be selected in the best way that they could be. I suppose that they would have to be elected by vote, but I should hope to get a better class of men with a more impartial mind, than the ordinary Poor Law Guardians as I have known them. I do not pretend to know very much about them; I am merely judging from what I have seen at the infirmaries.

19628. You have no experience I conclude, personally, of the Metropolitan Asylums Board?—Not at all.

19629. Have you ever heard any complaint of their management?—No; I do not know that I have. I think it is a very good Board indeed. I must admit that I think it is a very good Board.

19630. On the whole that would be rather a powerful precedent then, would it not, in favour of establishing a board of the same kind?—Yes, it would, distinctly.

19631. To put you a question on another subject: you said that the special hospitals were very much supported by the out-lying districts?—Yes.

19632. But you also said that the special hospitals grew up from the demand on the spot; and I did not quite see how your two statements could be reconciled?—Well, with regard to the former point I gave you my reasons, I think, or at least I endeavoured to show you in what way these special hospitals are supported by people from outlying districts. On the other point, I will just take up this little paper (*producing a circular*) which I had sent to me this morning, and perhaps

20 April 1891.]

Mr. DOWSE, M.D.

[Continued.]

Earl of Kimberley—continued.

perhaps this might answer that part of your question. This is from the North Eastern Hospital for Children in reference to a dinner at which the Duke of Connaught is going to preside: "This hospital was founded in 1867 on a very small scale, but has been increased from time to time, to meet the requirements of the very poor neighbourhood in which it is placed." Will that answer your question.

19633. Not quite; my question referred to what seemed to me some inconsistency in the two answers; because if the hospitals are supported chiefly by the outlying districts one does not see why their growth should arise from the patients on the spot?—In all probability, the statement which I made requires some qualification; it might do so. Now with regard to this hospital for children, I certainly consider special hospitals for children most advantageous; I think, after all, it is a mere work of charity, and if you come to look at it from that point of view, I think a hospital for children is one of the most charitable that can possibly be instituted. You see this hospital has arisen in a neighbourhood demanding the hospital. Now, taking a hospital for nervous diseases, for instance; of course you cannot place that in a neighbourhood which specially demands such a hospital, because you cannot say that nervous diseases exist in any particular locality; it is a diffused thing, and I think that that almost will give you an answer illustrative of the two conditions.

19634. Perhaps the mode of reconciling the two answers is this (if I may be allowed to suggest it): that a hospital may grow up in consequence of a demand on the spot; but when it becomes known it may be liable to be adopted by outlying patients?—Yes, quite so. Then, with regard to the Children's Hospital, for instance, you see that has grown up on the spot really to meet the requirements and the demands of the locality in which it has arisen; but a hospital for nervous diseases is, of course, different from that; that is one to treat disease everywhere.

Lord Saye and Sele.

19635. When you joined Dr. Tibbits' Hospital, I suppose you knew on what system it was managed?—Well, I did not consider that system. Dr. Tibbits came to me, and he said that some disagreement had arisen, and he told me the circumstances of the case, and he thought that in all probability there was a nucleus there for a good hospital; and I accepted his offer to reconstruct his hospital, if possible, or at least to make it a hospital.

19636. You left it owing to disagreement with Dr. Tibbits?—Not personal disagreement with Dr. Tibbits. I left it, and I stated so in the letter that I sent to the Board, on account of its management. The management of the hospital was not in unison with my views, and that was really the reason why I left the hospital.

19637. You said you left it because Dr. Tibbits was of an antagonistic nature?—Did I make use of those words? Pardon me, I do not think I made use of those exact words. I made the statement, during my evidence, that he was antagonistic to the Board, but I did not say that

Lord Saye and Sele—continued.

I left the hospital on account of Dr. Tibbits' antagonistic nature.

19638. If he had been of a conciliatory nature, you would possibly have remained?—Yes. I do not wish my evidence, in reference to that hospital, to be in any way personal to Dr. Tibbits. I think Dr. Tibbits very unfortunate in many ways. Poor man, he is very deaf; and I think very often he conjectures things which have not entered into the minds of people at all; and that might tend to make him irritable. I do not wish any evidence I give to be personally antagonistic to Dr. Tibbits in any shape or way.

Lord Thring.

19639. Have you ever had any experience of the working of the parochial system of the relief of the poor in the country?—No.

19640. You are not aware at all of the tenacity with which parishioners cling to their own parishes?—Of course I have friends in the country who are medical officers to parishes, and I have been round with them, and I know something about it, and I think it is so.

19641. And are you further aware of the way in which the guardians of the particular parish consider their own parishioners as entitled to their special care, and of the way in which the parishioners on the other hand look to the guardians as their protectors?—Yes, quite so; I can quite understand that.

19642. Then that being the case, do not you think that any centralisation of poor-law hospital management would be to the benefit of the doctors and not to the benefit of the patients?—No, I think not. I think what is to the benefit of the doctor is really to the benefit of the patient suffering from disease; not the ordinary pauper.

19643. I do not wish to interrupt you, or totally contradict you upon that point; but is that quite so; are you acquainted with the hospital at Vienna?—No, I am not personally acquainted with the hospital at Vienna, but I know something about it.

19644. As a matter of fact that is probably the most centralised institution almost in the world; there are 4,000 patients there?—Quite so.

19645. I was told that the comfort of the patients there was entirely disregarded, and the comfort of the doctors and science entirely considered?—Then if that is the case I should condemn it.

19646. But do not you then think it is the tendency where you get a large central administration, dissociated from the particular people with whom it is concerned, to regard science and the benefit of society in general, rather than the comfort of the particular individuals?—I cannot say that that is my experience.

19647. Then I will put it a little further. You say, yourself, as I understand you (and I have no doubt of it), that it would be greatly for the benefit of science, that a troop of doctors and intelligent followers should go through the whole of these infirmaries; but would it be greatly for the comfort of these poor patients who at the present moment have quiet lives (living there from the time they come in till the time of their death

20 April 1891.]

Mr. DOWSE, M.D.

[Continued.]

Lord Thring—continued.

death in quiet), would that be so much to their comfort, having a troop of doctors going through the infirmaries?—I think the ordinary monotony of their lives is rather distasteful to them than otherwise.

19648. Then you think it would conduce to their comfort to have these infirmaries used as schools?—I do not see in what way it could detract from their comfort. I do not say it would conduce to their comfort; but I do not see in what way it could detract from it at all.

19649. Do not you think it might lead to what I cannot help thinking takes place in some of these general hospitals; that the interest of the doctors is sometimes too much regarded as against the interests of the patients?—I cannot say so.

19650. Then you think that the central administration would be as good as the present local administration?—I do not quite follow your meaning.

19651. I will explain it at once in this form: my opinion is that the more you centralise any administration, and divorce it from the persons with whom it is concerned, although that has a very great benefit resulting from it, it has on the other hand very great disadvantages?—Well, I think the benefits really are in advance of the disadvantages.

19652. Then one other question with regard to the situation of these special hospitals; is it possible that the situation has been selected in these places because it is a much cheaper situation?—Very often.

19653. Not with regard to the sanitary or insanitary conditions?—Very often that is the case. There are one or two questions connected with that, in all probability; I mean to say with regard to the situation of these hospitals. In the first place, they have been put in certain localities where land has been easily available.

19654. That is saying where it is cheaper, in other words, is it not?—Yes, cheaper; we will leave it there.

19655. Then coming to one question which has been so often answered in the same way as you have answered it, do you consider that persons ought to be prevented from setting up hospitals; why should you prevent a man from setting up a hospital more than you should prevent him from exercising any other charity?—I would not prevent any man from setting up a hospital provided it were conducted upon definite known lines; such known lines, for instance, as would be accepted by the Hospital Sunday Fund.

19656. But suppose I am a homœopathist (which may be the height of folly or the height of wisdom), and I like, at my own expense, to set up a homœopathic hospital, is there any State reason why I should not?—I will give you an answer: I consider that a medical man is quite at liberty to start an institution or a home, but let its private and personal character be known and recognised; but no man or number of men should be allowed the power to start a hospital and appeal for its support to the charitable public by an organised system of doubtful honesty protected by the banner of false and assumed philanthropy.

Lord Thring—continued.

19657. Those are very fine terms, but what do they mean?—I think they simply mean what they are intended to signify.

19658. I cannot dip into a man's motives; a man thinking that a particular disease ought to be cured in a particular manner wishes to set up a hospital; why should he not?—There can be no objection whatever to that; I do not object to that; I have not raised an objection to it.

19659. But how are you to judge whether a man's motives are philanthropic or whether they are commercial, or whether, as in all probability is the case, they are a mixture of both?—You can only judge by the way in which that hospital is conducted.

19660. What do you mean by "conducted"?—Or "constituted," I will say; the way that it is organised, and the way that its functions are performed.

19661. Give me an instance in which you think that State interference ought to be interposed to prevent a man from setting up a hospital at his own expense, with the assistance of his friends?—I do not object to a man's doing that. I do not think you quite understand me. I do not object to any man doing that, as I have stated here, and I do not object to any man starting a hospital, provided it be of a purely personal character. Such a man, I think, ought to be at perfect liberty to do just exactly what he likes. If he does not conduct that hospital properly and as it should be conducted; if he appeals to the public, then he comes at once, to a certain extent, under the supervision of the Hospital Sunday Fund Committee, and if that hospital is not recognised by the Sunday Fund Committee it is ostracised by the profession, and it ought to be ostracised by the public.

19662. I entirely agree with you, but I again repeat I do not see how a hospital stands on a different platform from any other charity; of course, we all know that charities are abused, and that the public are very gullible, but why should you stop hospitals by the intervention of any central body, or local body, or any other body, any more than you should stop any other charity?—Well, I think that all other charities that are open to be abused should be stopped, and I think special hospitals form one of those.

19663. Then you think that the State ought to interfere with all cases of abuse of charity?—I should say so, if possible.

Earl of Lauderdale.

19664. Are there a large number of these special hospitals which you would condemn existing now in London?—I have not gone into that question; I could not tell you. There are a large number of special hospitals in London which really come under no recognition whatever; but if a hospital (I do not care where it is or what it is) does not conduct its affairs in a proper and businesslike way (and after all said and done, that is the point; it is the business point which seems to be lost sight of in the conduct of these hospitals), I think it ought to be interfered with.

19665. And you quoted the West End Hospital as an instance of that?—I did.

19666. You

20 April 1891.]

Mr. DOWSE, M.D.

[Continued.]

Lord Thring.

19666. You said, "every hospital that does not conduct its affairs in a businesslike way; is it a businesslike way of conducting a hospital to always produce a deficit?"—I do not quite understand the question.

19667. Would you crush every hospital that habitually, in its accounts, shows a deficit?—Of course a hospital cannot help not getting in funds; pretty nearly every hospital in London at the present moment shows a deficit, and I should have to condemn them all if they were to be condemned for showing a deficit.

19668. You would have to condemn the management in all probability?—It is the want of good organisation and good management that is the evil.

Earl of Kimberley.

19669. It would be necessary, I suppose, if such a restriction as you advocate was enforced, to lay down certain rules; what sort of rules would you lay down?—Well, they could scarcely be direct rules in all probability, but certain rules might be laid down of an indirect nature. For instance what I have just stated. I have just stated that if a hospital is recognised by the Hospital Sunday Fund we know perfectly well that it is conducted upon businesslike principles, and that its accounts are open to inspection and that the mode of managing these accounts is upon businesslike principles.

19670. Then do you confine your restrictions entirely to the question of the accounts and administrative management as depending upon finance?—Yes, I should in a great measure. Of course there are moral obligations in reference to a hospital, but I do not see how you can deal with those. If you deal with finance and everything connected with finance you have got something tangible to deal with.

19671. The finance of course is a very important part of any institution, but do the patients suffer from bad finance?—If the finances are bad, of course they have not the means to keep the patients as well as they would do otherwise.

19672. But is that so; supposing, for instance, that the in-patients cost double what they would in a well-managed hospital, yet if the patients get all that they want, that is a very bad thing for the subscriber, but is it any harm to the patient?—Not if the patient gets everything that the patient wants.

19673. But still that would be considered one of the breaches of your rules, would it not, namely, that there was most extravagant expenditure; would an extravagant expenditure be considered as a breach of your proposed rules?—Yes, I should say so, distinctly.

19674. Then in whose interests would that rule be?—Well it might be in the interest, you see, of the butcher and baker, and people of that kind.

19675. But I meant with reference to hospital management; I want to know exactly the ground upon which you would refuse to recognise a hospital whose management was extravagant, but where, as I have also assumed, the patients were well treated, both medically and otherwise; what would be the ground upon which you would

Earl of Kimberley—continued.

interfere with such a hospital as that?—I think it is quite possible to treat patients too well, if you give them undue licence and too many luxuries, and all that sort of thing. Well, now, we talk about the administration of stimulants to patients; possibly that might be taken as somewhat of a test to give you an answer to your question. At some hospitals you will find the cost of stimulants double what it is at other hospitals. That, in the eyes of some people, in all probability, might be looked upon as part of the maladministration of that hospital in reference to its excessive expenditure.

19676. Might not it entirely be a matter of opinion; the doctors of that hospital might advocate the larger use of stimulants?—Of course everything is a matter of opinion as far as that is concerned. The mere question of right and wrong is a matter of opinion.

19677. But when you are dealing with the rules with regard to the nature of the administration, some principles must be laid down to determine what are to be considered abuses, and what are not to be considered abuses. Some things are matters of opinion in the view of most people, while some things are not disputable at all in the view of most people; you would have to lay down some rules, would you not?—Rules of that nature would be looked upon rather as ethical rules than otherwise, which no State interference could have anything to do with at all; because it would be absolutely impossible for the State to interfere in the matter.

Chairman.

19678. What was your position at the Highgate Infirmary?—Medical officer or medical superintendent.

19679. Is that one of the new infirmaries?—It was the first infirmary established under Gathorne Hardy's Act.

19680. It was built for the purpose?—It was a new infirmary.

19681. Were you the only medical officer there?—I had an assistant there.

19682. That is to say there were two of you; and how many beds were there there?—Five hundred and twenty-three beds.

19683. Do you consider that number of medical men sufficient for that number of beds?—Quite. We used to work it very well indeed; of course it was fairly hard work, but we used to work it extremely well. I flatter myself that we had the best staff of nurses in the world there; they were all selected nurses from St. Thomas's Hospital; they had all been trained at St. Thomas's Hospital under the Nightingale system, and they were all exceedingly good women; if they were not the hospital could not be so well worked by one medical officer and an assistant.

19684. As regards the question put to you by Lord Thring with reference to a number of students and medical men seeing the patients and the inconvenience caused thereby to the patients, has it ever been your experience that the poor rather appreciate having a large number of people to look after them?—I think they rather appreciate it; I think they look upon themselves rather as subjects of interest. As you ask me

20 April 1891.]

Mr. DOWSE, M.D.

[Continued.]

Chairman—continued.

the question I think they rather appreciate it than otherwise.

19685. That is your experience again in the general hospitals, is it not?—Yes.

19686. Were you ever on the staff of any general hospital otherwise than as a resident officer?—No, I took this appointment at Highgate; otherwise I might have been.

19687. Are you in favour of general free hospitals?—Absolutely free, you mean; decidedly.

19688. You do not favour the principle of part-paying hospitals more than that of free hospitals?—No, not at all. With regard to the out-patients I do not know whether you would care to ask me for any evidence in reference to the out-patient department of hospitals.

19689. Before I come to the question of the out-patients, has it ever been suggested to you that all the gratuitous relief given at the general hospitals tends to starve what is known as the poor practitioner?—I think it does. I would not say “starve him,” for I do not know that it does. Well, I will answer your question by saying that I think it does.

19690. Do you think then that there are many people who go to a general hospital who could afford to pay a practitioner?—A great many; I think, however, that has been rather exaggerated.

19691. You mean the abuse?—Yes, I think that it has been rather exaggerated; but still that the abuse exists I think there can be no question of doubt whatever.

19692. Then as regards out-patients?—Then as regards out-patients, would you care for me to make a few observations upon that matter.

19693. Yes, we should be glad to hear what you have to say?—I have thought it over. In the first place I think it must be remembered that chronic invalidism exists amongst the poor as well as amongst the rich, and that some people are never contented unless they are taking medicine or seeking the advice of the doctor, hoping to find, in fact, a *Φαρμακον Νηπενθε*. I believe that hospitalism, as it pertains to the out-patient departments, partakes of the curse as well as of the blessing. I will give you my reasons for this statement in a few words. Firstly, there is at the present time a craze in the minds of some people that they get better treated at hospitals than elsewhere. Now, in ordinary cases of disease this, I maintain, is a fallacious idea, and it seems strange at first sight that persons suffering from hopelessly incurable forms of disease and from diseases which are either trivial in their nature or imaginary, should put themselves to serious inconvenience and remain for hours in crowded rooms, in a vitiated atmosphere, loaded with infectious material, in order to get the opinion of the doctor and some filthy stuff in the form of medicine. There can be no doubt that some check should be put to this craze. At one time the London County Council was, I believe, seriously considering whether one or two hospitals should not be erected in London for the study and treatment of mental disease and incipient insanity; fortunately wiser counsels prevailed, and any such scheme has for the present been abandoned. My belief is that

Chairman—continued.

such institutions would be highly detrimental to the moral and mental condition of the people, and tend to increase rather than mitigate morbid feelings and undue exaltation of the faculty of imagination. In my opinion the out-patient department of the London hospitals, as it is at the present time conducted, is unjust to the charity, to the patient, to the doctor, and to the student. It is unjust to the charity, inasmuch as large sums of money are squandered in drugs, which might be far better applied to other purposes. It is unjust to the patient, because these poor people have grown up in the belief that they can be cured at hospitals when they cannot be cured through other channels. It is unjust to the physician, because he is asked to perform a Herculean task which, if well and conscientiously performed, is an impossibility. It is unjust to the student, for the reason that all clinical teaching in the present crowded state of these departments, must be of such a superficial nature, and so hurriedly performed, that it appeals only to mere cursory observation and not to reason. This is a form of knowledge of very questionable value; therefore, to my humble way of thinking, the out-patient departments of hospitals are so badly organised and conducted that the great advantages which they undoubtedly should possess are really and truly lost; and not only so, I believe, still further, that the chaotic muddle and congested state which seems to be the normal condition of these departments, has a tendency to paralyze the higher functions of all concerned, and lead to unhealthiness and abuse. I certainly think that the general practitioner has just cause for complaint against the indefinite, promiscuous, and selfish manner in which medical charity, so-called, is carried on in London, and particularly in reference to these out-patient departments. You would require all the detectives from Scotland Yard to sift the undeserving from the deserving. It is next to impossible to do so. The remedy, however, appears to me to be as simple as it is just and honourable. First, I would limit the number of daily attendances; this I consider to be of prime and absolute importance. Secondly, there should be no payment of any sort or kind. I can conceive nothing so derogatory or so pernicious, both in principle and practice, as the payment of these small sums of money for the advice given by hospital physicians and surgeons. It has the appearance of soliciting and inviting patients to seek advice, and often sets aside the due exercise of discriminative power between those who are and those who are not deserving of charity. Thirdly, the casualty or assistant physician should have very definite instructions given to him for his guidance, relative, primarily, to the patient as the recipient of charity; and, secondly, to the department as a centre for teaching and clinical purposes. If the patient were afflicted with some ordinary form of disease and could be treated as well elsewhere, either by the practitioner privately or through a club or dispensary, he or she should be told so, and directed to attend again in six months' time. On the other hand, if the patient were suffering from some affliction requiring skilled or special treatment, such a case should be

20 April 1891.]

Mr. DOWSE, M.D.

[Continued.]

Chairman—continued.

be retained as one fit for the exercise of charity, advantageous alike to patient and physician and student. This limit to the treatment of out-patients should be laid down as law and recognised as a fundamental rule of the hospital. The out-patient department of the hospital should have a clerk to function it, and cards for treatment should be granted to applicants in rotation; and I maintain that no physician should be expected to see more than fifty patients in the afternoon, because I take it that these cases would be of clinical interest and importance, and each patient would form a focus for study and critical examination. If it were once for all thoroughly understood that restrictive measures had been introduced to regulate the out-patient departments, it would increase their value in every way, and satisfy the just complaints of the general practitioner. Those are a few observations which I have made.

19694. You mentioned just now that patients go to this out-patient department, and get some advice and a bottle of what you called "filthy stuff"; do you mean to imply that the medicine is necessarily nasty, where the patient thinks it is of any use to him?—I really do not think myself that a great deal of the medicine that is got from hospitals is taken at all, and it is not an uncommon thing for people, if they want cod-liver oil for their friends, so I am told (of course you must take the evidence I give on this point as hearsay evidence) to go to the hospital and get their pint of cod-liver oil, and hand it over to their friends at a certain price.

Lord Thring.

19695. Do I understand you to say that at a hospital they give a patient at a time a pint of cod-liver oil?—I should say so distinctly. If the patient is to take a table spoonful three times a day, that is an ounce and a-half, then a pint does not last a week. I do not think there is any doubt about that.

Chairman.

19696. But does this hurry and skurry of out-patients exist at all hospitals, do you think?—It does not exist to the same extent as it did at the time which I am speaking of, namely, 25 years ago. The organisation has been improving; but it still does exist to a great extent.

19697. Because at most of the general hospitals with schools, which have come before us, there is a limit as to the number of patients, or a limit as to time; that would meet your objection, would it not?—Distinctly.

19698. In addition to these large free out-patient departments, there are a great number of free dispensaries, are there not?—Yes.

19699. And those are really boundless out-patient departments, are they not?—Yes.

19700. These also tend, therefore, to rob the poor practitioner, do they not?—Are you speaking of Poor Law dispensaries, or ordinary dispensaries?

19701. Of ordinary free dispensaries?—I look upon it that those have been introduced by men from a money point of view entirely.

19702. That is to say dispensaries where people pay for their medicine?—Where people

(24.)

Chairman—continued.

pay for their medicine and for advice. I do not wonder at these poor dispensaries, or paying dispensaries being introduced, because really the practitioner is bound to do something to live after he has got his qualifications, and that is one way to get known in a district. I do not say that they are well conducted, for I know nothing about it; I could not tell you anything about these institutions.

Lord Thring.

19703. I should like to ask you what specific remedy you recommend for these abuses, because I do not understand. You say that the out-patient system is grossly abused?—I did not say grossly abused; those were not my words,

19704. But you used rather strong language, as far as I remember?—They are abused, I said, but that is not "grossly" abused.

19705. What specific thing would you do to prevent that abuse?—Better organisation.

19706. But what would you do practically to prevent it; "better organisation" is a generic term?—Because organisation is a thing that has to be studied; you cannot define exactly what organisation means, in reference to this special department for instance.

19707. Supposing you had the supreme authority of a hospital in which this abuse exists, in what direction would you remedy it?—I should have to think it over very carefully.

19708. You have no remedy to suggest?—I have nothing more than what I have suggested in the observations I made to you.

Chairman.

19709. Such organisation might be brought about, might it not, by an energetic body of governors in conjunction with the medical men?—Yes. One point which I might venture to bring before your Lordships is this, that I think every hospital should have a distinct head, a superintendent. Hospital organisation is what you might call a very mixed organisation.

19710. But in your experience have you found any hospital without a superintendent at all?—I do not think there is any hospital in London which has a superintendent, except Guy's Hospital.

19711. Would not a secretary answer the same purpose?—No, not at all.

19712. In some places they are called "secretary superintendents"?—I think the superintendent should be a medical man with good business powers, if he were to be found. I think that would be highly advantageous for the institution, and I think every institution should have such a man.

Earl of Kimberley.

19713. Would you limit the number of out-patients in a general hospital to such a number as was necessary for teaching purposes?—By no means; 50 patients a day to one man would be a very fair average I should think. I am not thinking of that, but of the charity as well. But I must say that a great many people go to these hospitals having often only imaginary diseases; they are often invalids; it is the invalids who go

3 L 4

to

20 April 1891.]

Mr. DOWSE, M.D.

[Continued.]

Earl of Kimberley—continued.

to a hospital, and make up the mass of people crowding the out-patient department; it is not real honest disease.

19714. Then I should gather that you are of opinion that these out-patients are all, or most of them, persons who could not obtain medical relief otherwise?—Not at present; certainly not.

19715. Then how do they obtain it out of London?—I cannot say what happens out of London; I am speaking now of the metropolis; my experience is confined to the metropolis.

19716. But it does not require any experience; there is a vast system of out-door relief in London, as I may call it, in the shape of medical attendance on out-patients of hospital; outside London and the large towns that does not exist; is there any absolute necessity for this large system of indiscriminate charity in London?—I can only account for it from the mass of the poor population requiring it.

19717. But the existence of a mass does not make the thing necessarily greater; the number is not the question, but whether that particular form of charitable assistance is necessary; I do not say anything about the number, but I ask whether it is necessary?—Yes, I think it is.

19718. Then I ask you why it is more necessary in a town than in the country?—Because in the town the population is denser; there is a greater demand for it.

19719. That would merely of course come to this, that you must proportion the supply to the demand; but why is the necessity for this particular form of relief for a large number of persons greater than the necessity for the same proportionate amount of charity for a smaller number of persons outside towns?—Do you mean in country districts, in the small towns?

19720. I mean outside large towns?—In small towns they go to the ordinary practitioner; they either put themselves under poor-law relief and go to the ordinary practitioner in that way, or they belong to clubs, organizations of that kind, which are estimable things; or if they do not get relief in that way, they go to the chemist and they pay him 2 d. or 3 d. for some medicine.

19721. Now do you think there is any ground for supposing that the rural population suffer from disease in consequence of neglect more than the population in London; is there any ground at all for supposing that they suffer more?—I should think less.

19722. May there not be some ground for complaint which is made of great hospitals in large towns, that they pauperise the population by indiscriminate charity?—That is quite possible.

Chairman.

19723. There is one thing I should just like

Chairman—continued.

to bring to your notice that you said just now. You think that as regards the hospitals generally a great number of cases come in temporarily, and you mentioned cancer as one?—Yes.

19724. And you said that there was no hospital in London which would take those cases permanently; I think your expression was that they were taken temporarily and with a very unwelcome hand; you mentioned cancer and consumption too?—Yes.

19725. Perhaps you are not aware of it, but still it is the fact, that at one hospital in London, at any rate, the Middlesex Hospital, they do take those cancer cases in permanently?—I was just going to allude to that.

19726. And the Brompton Hospital cases of consumption?—But that is not a general hospital; it is a special hospital.

19727. But the Middlesex is a general hospital?—Yes, and I was going to allude to that; I was going to bring that forward as an instance. Of course cancer is increasing very enormously; and I heard it stated the other day, or at least I read that it was stated in evidence the other day, by a very good authority, that there was no occasion whatever for a cancer hospital. I think there is every occasion for a cancer hospital.

Lord Thring.

19728. Did you in your remarks earlier in your evidence intend to impute to the guardians any improper influence or conduct with respect to the appointment of matrons?—Nothing more than what might be imputed in all probability to other men.

Chairman.

19729. Is there anything else that you wish to state to the Committee?—No. Here is just a short table which I have had prepared, thinking that it might be of service, and which I will leave with you, in reference to Poor Law infirmaries. (*The Table is handed in, see Appendix.*) I find that the total cost, provided all the beds were occupied, of these 24 Poor Law infirmaries would be 442,553 l.

19730. I will ask you a question on that point: Have you studied the accounts of the various hospitals in London?—No.

19731. Should you see any advantage in having some general system by which the subscribers could find out how much beds cost, and so on?—Yes, I should think that might be of very great advantage.

19732. And do you see any impossibility about it?—Not at all; it is merely a question of calculation.

The Witness is directed to withdraw.

MR. ARTHUR HENRY SANDILAND, is called in; and, having been sworn, is Examined, as follows:

Chairman.

19733. ARE you a physician?—I am a Licentiate of the College of Physicians.

19734. And are you attached, or have you been attached, to any general hospital at any time?—No.

Chairman—continued.

19735. Where does your practice lie?—I live in the Southgate Road, and my practice lies around there.

19736. Is that in close proximity to any hospital?—

20 April 1890.]

Mr. SANDILAND.

[Continued.]

Chairman—continued.

pital?—It is close to the Metropolitan Hospital in the Kingsland Road.

19737. That is a hospital which was started, I think we were told, on the paying system?—It is now carried on on that system.

19738. It was formerly called the Metropolitan Free Hospital, was it not?—It was.

19739. I think you want to draw attention to some evidence given before this Committee?—If you please.

19740. Could you indicate the question and answer?—It is the evidence where it is said that the medical practitioners in the neighbourhood have withdrawn their opposition to the scheme. It was in the evidence given by Mr. Byers, the secretary to the Metropolitan Hospital, and Mr. Goodsall, one of the staff.

19741. I think what Mr. Byers stated was that they called a meeting, did he not?—He mentioned a meeting, but he principally said that the medical men in the neighbourhood had withdrawn their objection to the scheme. Both Mr. Byers and Mr. Goodsall said that; which I wish to say is not by any means the case.

19742. Did any number of medical men withdraw their opposition, do you know?—I do not know if anyone has withdrawn his opposition; in fact I do not think anyone has, except he has been paid for it by being a salaried officer.

19743. At any rate that statement, which I perfectly remember, is not according to the fact, you say?—Not by any means, according to the fact.

19744. And what are the grounds on which you objected to the scheme?—We objected on various grounds. First of all, on the ground that it was no use at all to the poor in the neighbourhood, as at present constituted; that a poor man, if he goes there, obtains one attendance, perhaps, but after that he is told to go to the workhouse unless he will join the provident fund. Then we objected on the score of its being an injustice to the practitioners in the neighbourhood, and also on the ground that improper people are relieved there; in fact, it makes a provision for those people who, as I am now ready to show, are able to make a provision for themselves, and actually do so; in fact, this opposition of which I am speaking in the neighbourhood began as soon as the thing was mentioned at all.

19745. I have found the passage you refer to in Mr. Byers' evidence; it is at Question 16745: "How was this idea of the provident department first started?—(A.) The medical men of the neighbourhood, about 90 of them, received notices asking them to come to the hospital, and discuss this proposed plan; of these 90, seven took the trouble to come." Then the next question is, "And did they acquiesce?" and the answer is, "Since then they have done so"?—That is utterly untrue.

19746. You contradict that?—Certainly; and furthermore there were more than seven present; and I can explain the absence of a great many besides.

19747. He rather qualifies that in his answer. Question 16746 is, "Did they acquiesce?" and the answer is, "Since then they have done so. Directly the provident department was started they did object, and they wrote letters to the papers; but (24.)

Chairman—continued.

lately we have had no complaints; at any rate I have heard of none"?—That is perfectly true; there have been no complaints, because there has been no one to complain to; till we had the opportunity of complaining before your Lordships there has been no one to whom we could complain.

19748. That assumes that they had a right to start, if they chose, a provident hospital and that it was no business of anybody else's?—They had a right of course to start a provident hospital or any other concern they liked; but this they had taken charitable money to do; they had made a great fuss about its being a free hospital; they had gone a long way out of their way in saying how free the hospital was; and I have a letter from the late secretary in which he says that this is distinctly a free hospital and that no letter of recommendation is required. Then having got their hospital, and got their money, they turn out the poor man, tell him to go to the workhouse, and start it on what is called the provident principle, not from philanthropic motives, but because their money was spent, and they had no means of going on at all; and they say (I have heard it said by certain members), "Oh, it is true that we received this money, but it is spent." But if it is spent, it is there in buildings if not in money; it is in property; it is available for hospital purposes; and, although it is not coming in in the way of money which can be spent in the concern, it there is in the building.

19749. You mean that the money was given with the object of its being a free hospital?—Yes, distinctly.

19750. And that the authorities do not carry it on as such?—Yes. May I read you an extract: I went rather largely into this question; and, if you will allow me to say so, the reason I was rather prominent in this was because I was offered an appointment of paid surgeon to this provident department, which would have compensated me for any loss I might have sustained; and I refused it believing that the affair was not honest in any way.

19751. That appointment, I believe, is referred to in Question 16738, "Are these medical men in receipt of a permanent salary from the hospital"? to which the answer is, "They are in receipt of a permanent fixed salary of 100*l.* a year"?—Yes, that is it.

19752. Then, practically, it amounts to this: that the money for that, as it is developed at present, has been got under false pretences; that is your opinion?—That is my opinion; thinking that they had no right to use this money that they got in this way, I have looked up the deed and had a great deal of correspondence with the secretary. May I read the extract I have made?

19753. Yes?—I find in the deed these words; I suppose they must have been taken from some earlier deed: "On behalf of the institution founded in the year 1836, under the denomination of the Metropolitan Free Hospital, for the gratuitous relief of the sick poor of every nation and creed." The deed cites the fact that the money with which the ground for the present hospital was purchased was obtained from the funds

20 April 1891.]

Mr. SANDILAND.

[Continued.]

Chairman—continued.

funds of the Metropolitan Free Hospital, and then goes on to say that the trustees shall stand possessed of the property for the purposes of the said institution called the Metropolitan Free Hospital, and for the general purposes of the said institution, to advance the interests and objects thereof. Now that is altered altogether. If a poor man comes to them they cannot, in fact they dare not, turn him away first of all; they would get no public support at all if they did; but the second time he comes they tell him he may go. I have said to them personally what I am saying to you, and I have written to the same effect. I also wrote a letter some time ago, and said that I would make an extract from people I had attended as to whom I knew that their incomes were not above the limit that they would take into their provident department. These are not picked cases, but they were taken at hazard. The first is a labourer who in two years had paid 3*l.* 10*s.* 6*d.* to myself; then a carpenter in one year had paid 5*l.* 1*s.*; a clerk in two years had paid 4*l.* 9*s.* 8*d.*; a stone mason in three years had paid 3*l.*; a nurse in six years had paid 3*l.* 4*s.*; a watchman in two years had paid 4*l.* 6*s.* 6*d.*; a carman in three years had paid 6*l.* 19*s.* 6*d.*; a man of no occupation, who was supported by his children, in four years had paid 22*l.* 1*s.* 6*d.* This last-mentioned man, I think, had a small income, but he was principally supported by his children; and this man was able (this is rather a joke) to pay a guinea for a consultation fee to one of the members of the staff of this very hospital. Then a labourer, in five years, had paid 6*l.* 11*s.* 6*d.*; a baker's man in five years had paid 7*l.* 1*s.* So accurate is my transcript of this that this very baker's man, whom I found out and came upon by chance, I find now has absolutely joined this provident fund. Now that man in five years had paid 7*l.* 1*s.* and was not an object of charity at all.

19754. Therefore you maintain that the carrying on of this hospital, in addition to its practically being under false pretences, does not relieve the poor, but tends to rob the practitioners of their customers?—Yes; they certainly relieve a class of persons who are able to make provision for themselves; there is one other person on my list, a man in the post office, and that man in two years paid 6*l.* 12*s.*

19755. Did you make any representation as to this to the authorities of the hospital?—I wrote a letter to them with that extract in it which I have now read to you.

19756. But did you have any reply?—I did have a reply which was unsatisfactory, and nothing to the point. Nobody challenged my facts, and I have written on several occasions to the papers, but nobody challenges or contradicts anything which I have said.

19757. Have you found that any of your patients migrate to other free hospitals in other parts of the town?—I have not found it so.

19758. You have not traced them as doing that?—I have not traced them. Probably if they did so they would not tell me.

19759. But do you find that as a rule you attend the same people year after year?—Yes, I think so.

Chairman—continued.

19760. Then is the population there not a migratory one at all?—Yes, it is to a considerable extent migratory; but I mean that I still retain old patients, and have for 20 years.

19761. Is there anything else you wish to say about this subject?—I should like to read a letter that came to me from the North-East London Gospel Mission. This is a Mission for the Propagation of the Gospel, and so on, and I asked the secretary what he thought of the effect of the hospital, and if it was any good, and this is his reply: "Dear Sir,—We have been in the habit of daily visiting the poor and sick in the neighbourhood of Kingsland-road, and have done for many years. We regret to say we found great disappointment and complaint arose when the Metropolitan Hospital made it a condition to their relieving the poor attending as out-patients that they should become subscribers to a provident club instituted by the hospital themselves. We are consequently often asked for letters for hospitals farther away, where no fees are charged, the state and condition of many of the poor render them unable to pay for medical advice or provide the charges now enforced by the Metropolitan Free Hospital. Our experience would better go to show that while fees encourage the class able to pay the usual charges, it checks the indigent poor whom our hospitals are supposed to succour and help."

19762. Then, according to that, the real effect of the Metropolitan Hospital is this, that while it withdraws such customers from you as could afford to pay, it causes the indigent poor to seek relief at a great distance from their own homes?—Yes, or to be turned over to the workhouse.

19763. Do you not favour any provident system at all?—If it is started *bonâ fide* I think that it may be a good thing; it is the same then as an ordinary club doctor; but if started with money that is got to relieve the poor I do not think it is honest.

19764. But have you got any reason to know whether or not the governing body of this hospital have made any representation to the subscribers on the matter?—There was a meeting called, but meetings are not of very much use.

19765. But still can they do much more than advertise their meeting, and say that the condition of the hospital or the organisation of the hospital shall be taken into consideration? If then the subscribers do not come, that is not the fault of the authorities, is it?—It is not the fault of the authorities, but I think the public is so led away by the word "provident." If anything is called "provident" you may do what you like, and nobody thinks of questioning your good motives. I do not mean to say that the motives are bad in this instance, but the results are bad.

19766. Would you go so far as to say that the results are bad as regards the treatment of patients in the hospital?—I do not mean the medical treatment; I mean that the results are bad in admitting to the charity, and to the participation in charitable money, people who are not by any means objects of charity.

19767. You really mean to say that it falls very far short of what it professes to be?—Certainly; it relieves, I think, the wrong class of person, and turns away those for whom they have

20 April 1891.]

Mr. SANDILAND.

[Continued.]

Chairman—continued.

have already received the money; that is to say, in the name of whom they have received the money.

19768. Received the money, that is to say, from the public?—Yes, from the public. Some time ago a poor woman came to me bringing a card asking if I could do anything; the husband had been an invalid and had subscribed to this hospital for some time; then he was not able to continue his subscription, and they told her, well she must go elsewhere.

19769. They intimated that the workhouse infirmary was the proper place?—I suppose so.

19770. Is there any other point that you wish to bring forward. I will just ask you this question before we pass to any other point: Do you consider that the free out-patient departments tend to what is termed starve the practitioners?—I think there is not much tendency to that; there is some abuse, but I think not very much.

19771. That is not a ground of complaint?—Not a ground of complaint; but if this sort of thing were to continue it would be a very grave ground of complaint. Not only would it take the wrong class, but it would tend to depreciate the general value of medical services altogether; and if you depreciate the value of services of that kind, you will get inferior service after a very little time.

19772. Is that the only hospital within range of you?—There is the German Hospital not far off.

19773. Does it take the same class of cases?—No; only accidents and Germans. I could give you instances of people that I know who have been improperly relieved; people who came distinctly under their provident system and yet were able to pay the ordinary charges. I have the cases here of seven people who paid me the ordinary visiting charge of 2 s. 6 d. a visit, and yet they are all able to come under the provident

Chairman—continued.

system, and have been to this Metropolitan Hospital as patients.

19774. Do you know the incomes of these people?—I can only tell you their incomes I think in one or two instances; but they were all accepted at the hospital, so I suppose they made inquiries as to their incomes. I do not allege these as cases of fraud in that case.

19775. But is the income always a sure guide as to the ability to pay?—No, I do not think by any means a sure guide; but still, that is what they take as their guide, and it is by that that they are absolutely guided. There is one man I have attended now for close upon 20 years; I have received over 40 l. from that man, and yet he was accepted by them; he was a post-office man.

19776. But now taking that payment for 20 years, that was at the rate of 2 l. a year; was not it a great strain on him to pay that?—I should think not, considering that he paid in one sum 10 l. Three others I have in my list, all coming in one week; I have attended one of them for 18 or 19 years. I wrote to a member of the staff, telling him these particulars. I was able to look back only to 1877; in that time, since 1877, that man had paid me I think 23 l. Another one I had complained about, I had attended for seven years; that man had already paid me 5 l. in the seven years, and was owing me a like amount, and since I wrote my letter, has come in and paid nearly 2 l. again; I think that is all I have to say. I have a couple of letters here from medical men saying that they object to the thing, and I have also the word of the vicar of the parish to say that he thinks the usefulness of the hospital is very much diminished by the way in which it goes on now; and he also told me only the day before yesterday that he would give his evidence in that sense.

The Witness is directed to withdraw.

MR. GEORGE LOCKE, is called in; and, having been sworn, is Examined, as follows:

Chairman.

19777. ARE you a surgeon?—Yes.

19778. Are you attached to any hospital now?—Not now.

19779. Were you on the staff of a hospital?—I was at Charing Cross Hospital.

19780. On the staff or resident?—I was there as a demonstrator.

19781. Where are you now practising?—Close to the Metropolitan Hospital in the Kingsland-road.

19782. Do you take objection to Mr. Byers's evidence?—Yes, I do.

19783. I will put to you the same question as I did to the last witness; the answer to Question 16745 was: "The medical men of the neighbourhood, about 90 of them, received notices asking them to come to the hospital and discuss this proposed plan," that is, the provident plan?—Yes, I was one of those seven.

19784. "Of these 90, seven took the trouble to come. (Q.) And did they acquiesce?—(A.) (24.)

Chairman—continued.

Since then they have done so. Directly the provident department was started they did object, and they wrote letters to the papers; but lately we have had no complaints; at any rate I have heard of none." You were one of the seven who went, you say?—Yes.

19785. And did you object then?—I objected then.

19786. And did you accentuate your objection?—Yes, I did. It might be added to that that the practitioners objected first to the provident system, and we signed a round robin; Mr. Sandiland and myself got up a round robin which was signed by 50 practitioners in the district objecting to it.

19787. Was that before the meeting, or after?—It was two years after the meeting.

19788. That was to demonstrate the fact that your opposition had not ceased?—Yes, quite so.

19789. And you are still opposed to it?—Yes.

19790. What is the ground of your opposition?

3 M 2

—Precisely

20 April 1891.]

Mr. LOCKE.

[Continued.]

Chairman—continued.

—Precisely similar to that of Mr. Sandiland, that in a third class district we lose the better patients and still attend the poor.

19791. Is your practice not worth so much as it was?—It is worth more, but the conditions of life are rendered harder altogether; we take lower fees and do far more work than we did formerly to make up the same amount of income.

19792. That you consider is owing to the cheap rate of relief at the Metropolitan Provident Hospital?—Yes.

19793. Is there anything else you want to say beyond contradicting this evidence?—I might say that I have been for four years attached to a branch of the Metropolitan Provident Medical Association, and from the experience I have gained in that way I do not like the provident system at all.

19794. For what reason?—In the first place, I think the system is spoiled by the lay officials, that is to say, the secretaries, the treasurers, and the committees; they are more inclined to make the thing a success by treating numbers than to select the proper cases; they would rather have a large number, even if that large number includes improper persons, than let the thing be kept small by taking up only the persons most suitable.

19795. Is it not one of the conditions of success of such a system that the number should be very large?—It is a false kind of success, in fact I am about giving up the appointment because I do not like it. Though we have a clergyman as chairman, and a London county councillor as treasurer, and a Post Office official as secretary, yet the thing is, practically, dying of consumption.

19796. Is not that because the number is not sufficient?—Yes, that is so; and because if you select the cases carefully you offend the people and they stay away from it.

19797. You mean if you select the cases having regard to income?—Yes, and suitability.

19798. The poor do not like having that inquired into?—That is so. One year I attended four patients on that Provident Association, and I attended them all for illness which was contracted by a visit to the seaside; they could all afford to spend a fortnight at the seaside, and I had to attend them as the result of the holiday. I think that a man should not have treatment under those circumstances, who is well enough off to visit the seaside for a fortnight.

19799. You mean that people who can afford to visit the seaside can afford to pay for medical relief?—Quite so.

19800. Is there anything else you wish to state?—No, except to tender a couple of letters from neighbours of mine.

19801. Are these gentlemen in your profession?—Yes, close to the hospital. This one is

Chairman—continued.

from Mr. Fred. Cockell, of Forest-road: "Dear Locke,—I am very glad to have your letter, for I felt that Mr. Byers' and Mr. Goodsall's evidence should on no account be allowed to pass without contradiction. Personally I feel that a local hospital is most necessary and useful, and that possibly the time has come, when some sort of contribution has become necessary, on the part of the legitimate hospital out or in patients, or at least a large proportion of them. The scheme, however, in force at the Metropolitan Hospital, remains to my mind grossly unfair to every local practitioner, and demands that all of us unitedly should offer to it the very strongest objection. At different times I have talked of the matter with those of my personal friends who signed the protest" (that is the protest I mentioned), "and have not yet met with a single instance of any alteration whatever in their views in respect to the scheme. The feeling is universal of disapproval; and in respect to the practitioners holding office under the scheme, it appears to be generally held that the salary attached to the office conveniently blinds them to a sense of what is right and just to all other neighbouring practitioners. Dr. Frederick Wallace will probably give evidence, as a representative of the British Medical Association, in the general practitioners' interest. I shall see him this week, and know that in him we shall find a warm supporter of our views. Very truly yours, *F. E. Cockell, junior.* P.S.—At an earlier period of our inquiry, I forwarded our protest to Lord Sandhurst." Then this one is from Mr. Alexander Rayner, at 334, Kingsland-road (that is exactly opposite the hospital): "You ask my opinion of the Metropolitan Hospital. I believe it has done harm to the medical men of the neighbourhood, patients being now treated there who formerly paid them fair fees; many of these patients also earn wages in excess of the limits which the hospital professes to enforce. I know of one who has a good banking account, and used to pay my account by cheque. On the other hand, I know patients, having now joined the Provident Department, who never paid me, or if so, did so with difficulty; thus I escape a few bad debts. I also consider it unjust that patients who have joined the provident scheme should not always be attended by the medical officers of the Provident Department instead of by their private assistants" (it was noted by some of the patients that instead of the doctor they see a deputy). "Moreover, as the hospital was originally a free one, I think beds should always be available for accidents, and not occupied by paying patients to the exclusion of the former."

19802. There is nothing else you wish to say?—Nothing else.

The Witness is directed to withdraw.

20 April 1891.

MR. WALTER EDWARD SCOTT, is called in and, having been sworn, is Examined, as follows:

Chairman.

19803. YOU are the Secretary of the St. Peter's Hospital, are you not?—I am.

19804. That is a hospital for the treatment of special diseases, is it not?—Yes.

19805. What is the proper title?—St. Peter's Hospital for Stone, Stricture, and Urinary Diseases.

19806. What number of beds have you?—We have 24 beds and two private wards at the present moment.

19807. Are you mentioned in this memorandum of the Charity Organisation Society? Yes, I see, St. Peter's, Covent Garden, W.C.?—I find on page 17 of the evidence taken before you last year, at No. 157, a statement by Lieutenant Colonel Montefiore, which I am sent to give our version of.

19808. Question 157 is asked by Lord Clifford of Chudleigh: "I see a little further down in the list"; I think that is the list of the Charity Organisation Society?—It is.

19809. "That we have before us there is one that has 24 beds that cost 285*l.* a bed?—(A.) Will you give the name? (Q.) St. Peter's, Covent Garden"; what do you want to say in reference to that?—I first wish to ask on what basis of calculation Colonel Montefiore based that very large sum, if it is in the knowledge of the Committee; and at the same time I have to hand in our last return to the Hospital Sunday Fund on which the computation per bed and per patient was accepted.

19810. At what do you put your cost per bed?—The last time we went to the Hospital Sunday Fund, do you mean?

19811. Yes?—if you will allow me, I will hand in a return in duplicate for the last four years, showing what the beds have cost and the in-patients.

19812. Perhaps you will give us the figures?—On the last year, 1890, do you mean?

19813. Yes?—We spent on the out-patients, 1,408 *l.* 13 *s.* 4 *d.*; on the in-patients we spent, 1,773 *i.* 3 *s.* 6 *d.* Dividing that sum of 1,408 *l.* 13 *s.* 4 *d.* by the number of our attendances, which was 32,896, the average cost of each attendance as an out-patient, was 10½ *d.* I believe Colonel Montefiore bases his calculation on the assumption that the whole cost of the attendance of an out-patient only amounts to 7 *d.* I have seen Colonel Montefiore since, and I have given him my facsimile of these figures which I shall hand in to the Committee.

19814. And you put the cost of each patient at 10½ *d.*?—At 10½ *d.* each attendance.

19815. Does the 32,000 odd mean 32,000 attendances, or new cases?—Attendances. Our absolute new cases were 4,721, which are of course all included in the attendances.

19816. Then that is 10½ *d.* for each attendance?—Yes.

19817. Then you come to the in-patients; the 24 beds cost 1,773 *l.*, you say?—Yes.

19818. And that gives what?—The sum is divided by the occupied beds throughout the year; there were 4,943 beds occupied during the year.

(24.)

Earl of Kimberley.

19819. You mean days of beds occupied?—Yes, days. That gives 7 *s.* 2 *d.* a day, which gives 2*l.* 10 *s.* 2 *d.* a week, which gives 130*l.* 8 *s.* 8 *d.* per year.

Chairman.

19820. We may take that as in round figures, 130 *l.* a year?—Yes.

19821. There is a considerable difference between that figure and what is put down in the memorandum of the Charity Organisation Society, which is 285 *l.*?—Those figures, I believe, could only be taken from our last return to the Hospital Sunday Fund, which was in the year 1883; and the calculation we then made, in 1883, was that our average cost in that year, which was an expensive year, was 177*l.* 0 *s.* 4 *d.* for each bed throughout the year.

19822. Had you the same number of beds then?—We had the same number of beds then; but latterly we have filled them a great deal more; there has been more work done. But of course where you have got a larger division, you turn out a better figure in your average cost.

19823. You say the last time that you applied to the Hospital Sunday Fund was in 1883?—Yes.

19824. Do you not apply every year?—We are again applying this year, but from 1883 till this year we have not applied.

19825. Is that because you were not in want of funds?—No; but we thought that the sum which they gave us was so very excessively small, and it had been decreasing year by year, and our work was increasing, and they would not recognise, or did not recognise, perhaps I had better say, the special work done at the hospital; so that in the opinion of the committee it was better not to take the small sum they voted us, as compared with the larger sums we had had previously from them.

19826. You have never been refused altogether?—That has been hinted at.

19827. What was the origin of your hospital; when was it founded?—It was founded in 1860 in the Marylebone-road, I believe by Sir Spencer Wells and Mr. Armstrong Todd, for special work connected with the bladder, and in those days an alteration of the operation for cutting for stone as against crushing, in the early days long before I joined them. I joined as honorary secretary in 1868, and worked for five years, and after an interval I came back as secretary.

19828. Then this hospital was started by medical men?—Certainly, by Sir Spencer Wells and Mr. Armstrong Todd.

19829. Are you in the vicinity of any general hospitals?—Yes, Covent Garden, in which St. Peter's Hospital is situated, is in the immediate vicinity of Charing Cross, close to Charing Cross Hospital, and close to the Royal Westminster Ophthalmic Hospital.

19830. Do you treat a large number of out-patients?—A very large number of out-patients.

19831. And do they pay?—They do pay.

19832. What is the rate of payment?—As we calculate the expenditure is 10½ *d.* on each out-patient, certain cases are asked to contribute

3 M 3

a shilling

20 April 1891.]

Mr. SCOTT.

[Continued.]

Chairman—continued.

a shilling each for their drugs and the other expenses of the hospital. There are, on the other hand, a very large number of old in-patients and men who are not in a position to pay at all, who pay nothing; I mean such cases as stricture and bladder cases, and various forms of diseases of that kind. I may say that one of the medical staff is present here and will answer any question of that sort.

19833. Do you take payment from in-patients?—We have a thank offering box in the two large wards in which we give out each Sunday what has been collected, and it is put up in the ward what has been collected in the month. They purely give what they please in the ward.

19834. And how are people admitted to your hospital?—Entirely by the surgeons through the out-patient department.

19835. I mean to say, has a governor any power of admitting by letter?—No, we have letters of recommendation; though, at the same time, the surgeons are glad to receive letters of recommendation, which are given to the Hospital Saturday Fund and to various employers in the City who subscribe to us. They are sent up with a view of identifying the man who comes, and we let the employer know that he has been admitted; but they are really more for the information of the surgeon, and for ourselves to know what patients are sent.

19836. How do you discover those patients who are able to pay a shilling?—I have worked with the Charity Organisation Society many years of my life and, I think, I am pretty well able to gauge them in that way. Of course, sometimes, when men come with rings and chains, I say, "I think you are not a fit and proper person for this charity;" and they say "No, we are rather come to know where your surgeons are and where we could go to their houses and pay." But, on the other hand, my experience from working in the East End, is that it is very easy for a man coming to a hospital, to put on a bad suit of clothes, and we should not detect it.

19837. Do you think the poor make themselves appear better off than they really are, or worse off than they really are?—I do not ask them much about that. Very often I have had men who have been patients and gone away and sent me a sovereign, and so forth, for the charity.

19838. You do not keep any inquiry officer?—No; it is left in my hands. Every attendance of the out-patients passes through my hands.

19839. Do you derive very large sums from subscriptions?—They average 500 *l.* or 600 *l.* a year; it is rather falling now. Last year 442 *l.* was obtained by subscriptions; 629 *l.* the year before, and 611 *l.* the year before that.

19840. And then the amount of your donations is what?—We had two large donations last year, one of 1,000 *l.*, an anonymous one, and a legacy of 900 *l.*

19841. But do you run your hospital at a deficit?—No, we have run it as a success hitherto. I have got 1,555 *l.* funded as against the time when my lease will fall in.

19842. But is your hospital in any sense a proprietary hospital?—No.

19843. Then all the money that is obtained is

Chairman—continued.

funded, or goes to the relief of the patients?—To the absolute expenditure and expenses of the hospital.

19844. Then how do you make up your income; does the rest come from the payment of patients? Perhaps you would read us your receipts?—Yes. Shall I take the three years? I will take first the year 1888. The annual subscriptions were 611 *l.* 3 *s.* 6 *d.*; donations, including contents of alms-boxes, and grant from the Hospital Saturday Fund, 101 *l.* 4 *s.*; the dividends, interests, rent, and trust funds (I am quoting from the Hospital Saturday return) was 430 *l.* 18 *s.* 11 *d.*; payments by or on behalf of out-patients, 2,343 *l.* 11 *s.* 6 *d.* Total, 3,486 *l.* 17 *s.* 11 *d.*

19845. That is the whole total of your receipts?—For 1888.

19846. And that year what was your expenditure?—£. 3,374. 7 *s.* 3 *d.*

19847. You had a surplus therefore that year?—I had a small surplus then.

19848. And the next year?—In 1889 I had 3,064 *l.* 10 *s.* 6 *d.* receipts, and my expenditure was 2,970 *l.* 4 *s.* 3 *d.*

19849. A surplus again?—A surplus again. In 1890 receipts, 3,954 *l.* 14 *s.* 8 *d.*, and expenditure, 3,193 *l.* 16 *s.* 7 *d.* We invested 800 *l.* that year in the Three per cents.

19850. Then what really went to keep up your establishment, was it the fees of the out-patients?—To a large extent.

19851. The out-patients' shillings amounted to 2,343 *l.* in 1888?—It did.

19852. How do you manage about the nurses?—We have at present a matron, a charge nurse, two regular nurses, a night nurse and day nurse, and we have two ward maids.

19853. And do you find that sufficient?—Yes, it is quite sufficient at the present time.

19854. Are all the cases cases that require very attentive nursing?—As a layman I would rather that you asked one of the staff; he would tell you more about that than I can.

19855. Have you any Samaritan Fund?—We have a small Samaritan Fund, but it is entirely made up among those who are most interested in the hospital; it does not come into the accounts, and it is a very trifling thing. It really originated in the sale of Mr. Walter Coulson's instruments.

19856. To go back to the cost of 10½ *d.* per out-patient attendance, is that based on figures?

—We have a committee of three gentlemen assisted by the accountant, who put under each head what is allotted to the out-patient and in-patient departments. The return I have brought to the Committee is for the past three years.

19857. Then you set aside, as I understand, so much in the way of drugs?—Yes, for the in-patients, and for the out-patients.

19858. It practically amounts to this then, that you have two separate dispensaries?—No, we have one dispensary. As you will see a surgical case and an in-patient case has comparatively a small amount of drugs, as compared with the large amount for the out-patients. For instance, we spent 543 *l.* on drugs, and the sub-committee allotted 500 *l.* to the out-patients, and 43 *l.* 7 *s.* 2 *d.* to the in-patients. It was done by calculating

20 April 1891.]

Mr. SCOTT.

[*Continued.*]*Chairman*—continued.

calculating that each in-patient took so much drugs.

19859. Is that done on an estimate of what they were supposed to be likely to use, or what they did actually use in the out-patient department?—We based it on what we thought the in-patients absolutely required, and the remainder was put to the out-patients. That was the basis of the calculation.

19860. How do you manage about the food of your patients and your nurses; is that done by contract?—It is done by the adjacent tradesmen, and we have a fixed price tendered for each year. The matron does that. The hospital is not very large, and the matron herself looks after that. The expenditure is really not much more than that of a private house, so that she is responsible to the committee for what the patients have.

19861. What is the constitution of your hospital; you are the secretary of it; what salary do you get?—I get 150 *l.* a year, and if the funds of the hospital will allow it they have given me a gratuity, for the past four or five years, of 25 *l.*

19862. And have you a committee?—Yes, and trustees. Our treasurer is Mr. F. A. Bevan; our trustees are Mr. Dixon Hartland, M.P. Mr. Thomas Christy, and Lord Ardilaun; and these other gentlemen, whose names you see here, are well known.

19863. You have a committee which works the hospital?—We have a committee which works the hospital, and meets once a month.

19864. And a permanent chairman of that committee?—No permanent chairman. We have a monthly visitor appointed each month to whom in all the affairs during the month we appeal, and he is responsible to the committee for the working of the hospital during that month.

19865. How often does that committee meet?—Once a month.

19866. And what is the quorum of that committee?—Three; but it is hardly in my recollection, except in August or September, that we have ever fallen back on anything like our quorum; we have a large attendance.

19867. How many members are there?—There are 13.

19868. And do you generally have more than half the number in attendance on the committee?—Six, certainly.

19869. And what do they do; do they check all the books, and so forth?—The monthly visitor is responsible for all the accounts of the month, and all the bills are put before him on the table and he examines them, and the cheques are then signed by the monthly visitor, and another member of the committee signs after him.

19870. And how often is the monthly visitor there?—Sometimes three or four times a week; we always see him once in the week.

19871. Does he go through those accounts once a week?—He goes through the accounts monthly, when the bills come in; we only have our accounts monthly.

19872. That is the only check there is, a monthly check?—We pay our bills once a month.

19873. Is there no check more frequent than (24.)

Chairman—continued.

once a month?—There is no check more frequent than once a month.

19874. But you see how the stores are going more frequently than that?—Yes.

19875. Who is responsible for the stores?—The matron.

19876. But there is no check by any governor or official of the hospital more frequently than once a month?—No more check on the bills and on what we spend than once a month.

19877. But does any governor go through the quantity of stock you have in the hospital?—What stock do you mean?

19878. You do not take in your butter, for instance, once a month?—We take in our butter once a day.

19879. And how often do you get your meat in?—Once a day; the majority of our stores are all taken in once a day. I should think that the only thing the monthly visitor would require to check is the very small amount of wine; it is only a small amount, in our hospital.

19880. Is it not necessary once a week to check the supply of meat, and butter, and bread?—We do that once a month.

19881. When you pay the bill?—Yes, when we pay the bill.

19882. Is it ever noticed whether the supply has increased or decreased?—That would depend entirely on the number of in-patients; and we should see at the end of the month how many, more or less, in-patients we have had, and then if there was any increase or diminution of expenditure.

19883. And your committee thinks that sufficient?—That has been our practice. It is not like a large hospital; our average number of in-patients last year was 15.

19884. What is your working number of beds; 24 is your maximum you say?—I should like to refer in order to answer the question, if I may.

19885. Yes, certainly?—(*The Witness refers to a book.*) The average number of days each in-patient was in the hospital last year, 1890, was 14.755.

19886. What I want to get at is what is the annual number of beds occupied?—We had a large increase of in-patient work during last year. From the 1st of January to the 30th of June our average of beds was nine occupied; from the 1st of July to the 31st of December 1890 it was 15.63.

Earl of Kimberley.

19887. When you did receive something from the Sunday Fund, how much did you get?—I have a return here of our receipts for six years from the Sunday Fund. In 1879 we received 51 *l.* 11 *s.* 3 *d.*; in 1880, 58 *l.* 6 *s.* 8 *d.*; in 1881, 56 *l.* 5 *s.*; in 1882, 56 *l.* 5 *s.*; in 1883, 33 *l.* 15 *s.*; and in 1884, 23 *l.* 6 *s.* 8 *d.*

19888. That was the last year?—That was the last year we went before them.

19889. Do you know what was the reason of the amount falling off so much?—I think myself that there was a strong objection to special hospitals; and also I think there was an objection to the amounts that we obtained from our patients; I think so.

3 M 4

19890. Was

20 April 1891.]

Mr. SCOTT.

[Continued.]

Lord Saye and Sele.

19890. Was not the falling off of the amount owing to the fact that you were able to make both ends meet?—It might be so, but when we had that large drop between 1882 and 1883, we were in much the same solvent position. That might have been a reason; I think myself it was that, because we make this hospital to a great extent provident and self-supporting.

Lord Monkswell.

19891. With regard to the payment of the out-patients, did I correctly understand you to say that you set the Charity Organisation Society on them?—No, I said that from my experience when I worked under the Charity Organisation Society I was able to gauge them.

19892. In point of fact you know very little about them?—The patients who pay? Very little.

19892. You really do not know whether they are deserving objects of charity or not, or only to a small extent?—I myself do not know whether they are deserving or not.

19894. Who does know?—I presume it would be left to the surgeon.

19895. You also say that you treat old in-cases as out-patients afterwards without payment; I suppose in-patients might be capable of paying for themselves afterwards?—I should not ask any old in-patient; they are themselves of the poorer classes.

19896. But they might not be too poor to pay for out-patient relief?—They might not be; but many of them insist on paying for what treatment they have received.

19897. And then, with regard to these stores, you say the matron fixes the price of the articles; does she tell the butcher, "You must send me meat at so much a pound"?—It is done by agreement every three months.

19898. Does the matron go round to all the butchers in the neighbourhood?—No, we have dealt with one person for some years with whom we have made this arrangement.

19899. Then, I suppose, in point of fact, the prices are the butcher's prices?—No, we take care that that is not so; because, it is in our option. If we are being charged too much by the butcher, there are stores at the bottom of the street to which we can go.

19900. The matron goes to the stores, and tells the butcher she can get it at so much, and he must supply at that rate?—Yes.

19901. Do I understand that anybody weighs the meat?—Yes.

19902. And takes the quantities of it?—Yes, the matron.

Earl of Kimberley.

19903. I do not quite understand how you determine as to whether a patient should pay. It appears that a very great number of patients do pay, and yet you tell us that you have very little means of ascertaining whether they can pay. In what way is it that you are able to secure a payment by so large a proportion of your patients?—That a certain amount of our cases take expensive drugs, and those who take expensive drugs are asked to pay for those drugs.

19904. But one's experience of other hospitals

Earl of Kimberley—continued.

would lead one to expect that you would have a good many applicants who would declare that they were unable to pay. That appears not to be the case with your hospital; what is the cause of that?—There are a large proportion of unmarried men who come to our hospital, who, taking expensive drugs, are asked to pay. With regard to those who are married men, and who have urinary diseases, it is entirely optional whether they pay or not.

19905. But you find that they are many of them willing to pay?—The majority even of those cases that I do not ask, I find are willing to pay.

19906. Have you got any number of applicants who are really not able to pay?—Oh, yes, the very poor.

19907. But still they do not form so large a proportion apparently, as are said to be found amongst the usual applicants for the out-patient treatment?—That is so at St. Peter's.

19908. Can you account for that?—No, I cannot.

Earl of Lauderdale.

19909. You stated that there was 543 *l.* put down in your accounts as expenditure for drugs?—Yes.

19910. Is that the amount that you paid for fresh drugs brought into the hospital during the year, or the amount that you considered was expended upon patients for drugs?—The whole amount expended upon drugs in that year was, I have got the balance-sheet, 543 *l.* 7 *s.* 2 *d.*

19911. That is to say, you bought 543 *l.* 7 *s.* 2 *d.* worth of drugs in that year?—And we used them.

19912. Then you had exhausted all the drugs bought; you had no balance left?—We only take in a certain amount. We have our drugs in week by week, and pay for them month by month, and there is very little left over beyond the ordinary stock.

19913. An inappreciable amount?—Not at all appreciable; very little.

Chairman.

19914. Is one shilling your charge for the whole case?—Every time they come, do you mean?

19915. An out-patient comes to your hospital, and the charge is, I understand, a shilling, is it not?—We ask them to give a shilling for their drugs. I should not say they are absolutely charged it. No man is refused because he does not pay; he is asked to give a shilling for his drugs in the case of those who, I think, are in a position to pay.

19916. And whenever that amount of drugs has been taken, and he wants more drugs, he has to pay another shilling?—He will come again next week and take more drugs, for which he will give another shilling.

19917. He will be asked to pay another shilling?—Yes, he will be asked to pay another shilling; many of them can only afford sixpence. We have a system of stamps, shilling and sixpenny stamps; and those men who are the most thankful are the older men, and the older out-patients who give these sixpences.

19918. Do

20 April 1891.]

Mr. SCOTT.

[Continued.]

Earl of Lauderdale.

19918. Do you know the average payment made by each paying patient?—Yes.

19919. Tell us the average for last year?—The return that I have just sent in to the Hospital Sunday Fund gives as the average cost 5 s. 7 d., as fixed by Mr. Custance. That is the draft copy of the return to the Hospital Sunday Fund which I have sent in already for this year.

19920. Then each paying out-patient that does pay pays on an average 3 s. per head you may say, in round figures?—Yes.

Chairman.

19921. Have you any medical men among the governing body?—We have the whole staff; we have four surgeons, and they are all on the committee. It is under one of our general regulations that they are honorary members of the committee.

19922. Is there anything else that you wish to say to the Committee?—No. I do not know

Chairman—continued.

whether there are any further questions. I was simply sent here to correct that statement in the former evidence to which I have referred. May I hand in these three returns (*producing some returns*) of the expenditure for the past three years, and the averages for the past four years? I have also worked out for you a long division sum in the exact way that it is done.

19923. Will you furnish us with a return of the list of your employés, and their remuneration?—I will send in that. It is on the back of the return to the Hospital Sunday Fund; you wish all the servants?

19924. Yes, the whole of your employés?—It so happens that this is the draft of the Hospital Sunday Fund Return, and here they are with their salaries. I think that answers your Lordship's question. I will furnish you with a copy of that (*see Appendix*).

The Witness is directed to withdraw.

MR. E. HURRY FENWICK, is called in; and, having been sworn, is Examined, as follows:

Chairman.

19925. ARE you on the staff of this hospital?—Yes.

19926. Are you a surgeon or physician?—I am a surgeon, and I am Surgeon to the London Hospital.

19927. Then, as well as being on the staff of a special hospital you are on the staff of a general hospital?—Yes, on the upper staff of a general hospital.

19928. This hospital is for urinary diseases, is it not?—Yes.

19929. Do you take lock cases as well there?—Up to two years ago it used to be called genito-urinary; but then it was felt that too much work was being withdrawn from the practitioners, and the admission of cases of syphilis was absolutely prohibited, because those cases were easily treated by the general practitioner, needed no special skill, and were a source of income to the general practitioner; and therefore there was no reason why it should be admitted. On the other hand there was the Lock Hospital which took these cases; and therefore there was a further reason why we should not touch them.

19930. So by not taking these comparatively simple cases you do not interfere with the general practitioner?—Not in that especial line.

19931. But in regard to these other cases which are more complicated, and are cases requiring greater care, that is the object of the hospital, to treat them?—That is so.

19932. Do you ever send patients from the London Hospital to your special hospital for these diseases?—I do personally, because I have cases there that I cannot deal with at the London and that I can at St. Peter's.

19933. Have you ever found any objection taken to that by the authorities at the general hospital?—No, because all the cases in my wards are so to speak under my special care; and any case which is sent to me personally (and many of the cases are sent to me personally) to the London I look upon as my own individual pro-

Chairman—continued.

perty and dispose of them as I think fit. But cases which come from the out-patients of the London Hospital are returned religiously to the out-patients of the London Hospital; because they are so to speak the property of the London Hospital; in other words they are the material we learn from at the London, and there is no need to remove them from the general knowledge there.

19934. It is a field for instruction you mean?—Yes.

19935. But in your own individual capacity you do endeavour to bring about some sort of arrangement between the general hospital and the special hospital?—That is what I have been trying to do for some years.

19936. Is not that capable of further development?—That is what we are still trying to do.

19937. Do you find any opposition to that from your colleagues at the London Hospital?—No, not as to the drafting from one hospital to the other.

19938. The principal objection, I suppose, would be the loss of instruction that would ensue?—That would be the real trouble.

19939. And that is a very great trouble with medical men, is it not?—Very great when a school is attached.

19940. But you have a school at the London Hospital?—Yes, a large one.

19941. Do you do anything in the way of teaching at the special hospital?—Yes, a great deal. For the last two years the out-patients and the in-patients have been thrown open to the profession, in order that the knowledge derived from the material which is taken from them may be returned to them in as condensed a manner as possible.

19942. Do you have classes, or do you treat individuals at the special hospital from out-patients as well as in?—From both.

19943. Then to the extent of its limited capacity it performs the functions of a general hospital

20 April 1891.]

Mr. FENWICK.

[Continued.]

Chairman—continued.

pital with regard to education?—More, because we are not paid for it.

19944. Are you paid at the London Hospital?—Yes, we receive so much from the students in the way of fees.

19945. That comes from the school, you mean?—Yes.

19946. What is the medical staff of your special hospital?—It used to be Mr. Walter Coulson and Mr. Heycock, but after the former died, two years ago, we were enabled to get four surgeons on instead of two, so as to increase the working of the hospital and the teaching power of the hospital.

19947. Those are men of standing in the profession, I presume?—They are men of standing in the profession.

Chairman—continued.

19948. Have you any medical man, surgeon or physician who resides on the premises?—We have a house surgeon.

19949. He is consulted on any emergency which may arise during the night?—He is, of course, called up for it; and if any further difficulty arises, he sends for one of the staff.

19950. Is he a paid officer?—He is a paid officer.

19951. Paid by the hospital?—Yes.

19952. Is there anything else you wish to say for the information of the Committee?—I do not think so.

The Witness is directed to withdraw.

Ordered,—That this Committee be adjourned to Thursday next, at Twelve o'clock.

Die Jovis, 23^o Aprilis, 1891.

LORDS PRESENT:

Earl of LAUDERDALE.

Earl SPENCER.

Earl CATHCART.

Earl of KIMBERLEY.

Lord SAYE AND SELE.

Lord SANDHURST.

Lord MONKSWELL.

Lord THRING.

THE LORD SANDHURST, IN THE CHAIR.

MR. E. HURRY FENWICK, is called in; and further Examined, as follows:

Chairman.

19953. You wish to amplify an answer you gave to the Committee, I think; if you will take in your hand a copy of the evidence given at our last meeting, you will see that at 19929 I asked you this question: "Do you take lock cases as well there?" (that is at St. Peter's Hospital), and you said: "Up to two years ago it used to be called genito-urinary; but then it was felt that too much work was being withdrawn from the practitioners, and the admission of cases of syphilis was absolutely prohibited, because those cases were easily treated by the general practitioner, needed no special skill, and were a source of income to the general practitioner; and therefore there was no reason why it should be admitted; on the other hand, there was the Lock Hospital which takes these cases; and therefore there was a still further reason why we should not touch those cases;" you would like to amplify that answer, I believe?—I should like to point out to your Lordship that by that answer I mean the out-patient work. St. Peter's has never taken as in-patients, syphilitic cases. And then I will supplement that, if I may, by saying that St. Peter's always must treat certain venereal diseases of the urinary canal, commonly called gonorrhoea, because they lead afterwards to definite urinary disease, but usually the class that is seen there is a very chronic class, which has passed through a number of practitioners' hands and requires, in my opinion, special treatment.

19954. Is that all you wish to say on that point?—Yes.

19955. Then I asked you the last time you were here as to whether you co-operated at all in that special hospital with the London General Hospital, of which you are on the staff, and your answer was that you did. The question was 19932: "Do you ever send patients from the London Hospital to your special hospital for these diseases. A. I do personally, because I have cases there that I cannot deal with at the London, and that I can at St. Peter's." Now

(24.)

Chairman—continued.

in regard to this, do you wish to say anything more about that co-operation?—I should like to say that it could be very much more extended, and that a good deal of the educational power of the special hospitals could be utilised, which is not now utilised; if the special hospitals were affiliated to the general hospitals, then a great deal of the antagonism to special hospitals would be done away with. The special hospitals, I may also add, and I speak surgically, not medically, the special surgical hospitals affect the mass of the profession differently. The upper grade of the profession, the consultant grade, it affects in a special way; it withdraws from the consultant, who is generally attached to a hospital, a great deal of special material which he might use, get experience from, and give clinical teaching upon; therefore it is distinctly against the type of consultant surgeon. Then the lower grade of the profession it also affects in a monetary way; it withdraws from them a certain amount of income. I do not think (if I may add this) that the profession object to specialists in the abstract. Every medical man is at heart a specialist; but what he objects to is that specialism should be abused, that it should be treated dishonestly, and that any man now can start a special hospital, call himself a specialist, to his own aggrandisement, and to the depreciation of his colleagues.

19956. When you say "dishonestly," do you mean by using some treatment which is not recognised by the profession?—No, but by drawing to himself patients whom he would not get if he did not pose in the garb of a specialist. I think that should be corrected, and could be corrected. I think the word "hospital" should be most strictly guarded; that no place should use the word "hospital" unless under a certain license. I think all hospitals should be licensed. No hospital should be allowed to be founded unless it came before the licensing body (just as a railway is not allowed to be started unless it comes before a Parliamentary Committee, or

3 N 2

what

23 April 1891.]

Mr. FENWICK.

[Continued.]

Chairman—continued.

what not), and the pros and cons should be considered; the licensing body being the heads of the profession who are in a position to judge, without bias, of the merits, and the necessity for starting that hospital.

19957. You would not impose that restriction, would you, on a man who wished to pay entirely for the building of a hospital, and also proposed to endow it, so as to put it beyond the necessity to call for funds?—I am looking at it from the professional point of view.

19958. Then you would cause him to go for a license anyhow, whether he proposed to endow it or not?—Yes, I think so; I think that money could go into a better channel.

19959. But supposing the man said, "Well now, I will build a hospital for 10,000 £, and endow it with another 20,000 £," do you think that you could impose a restriction upon that man, to prevent him from spending his money how he chose; do you think it would be practicable to do so?—I can hardly answer that question without thought. Special hospitals are a growing evil, in my opinion. There are a number of them which do not need to exist, and this ought to be safeguarded.

19960. When I interrupted you, you were saying that you would have a licensing body composed of the heads of the profession, which could act without bias?—And that it could be argued before them as to the necessity or the non-necessity for the erection of that hospital.

19961. Would you have that purely a professional body, or would you have a lay element on it?—It is a purely professional matter, from my point of view.

19962. Do you think that the public would look upon a professional board as an unbiassed board?—Hardly; but I am first taking the professional aspect, so as to safeguard the interests of the profession. Then I think, seeing that there is so much opportunity for dishonesty in special hospitals (I speak advisedly), only those men should be appointed to special hospitals upon whom the profession have a certain amount of hold, men who have positions to lose, say surgeons of general hospitals. That would act also in this way: that the knowledge which is withdrawn from the general hospital could be returned to the general hospital by the surgeon at the special hospital, and that he would be able to return to his colleagues that which he had taken from them. As I explained to you, a certain amount of material is taken away from the general hospitals by each special hospital. Then I think that all the teaching at the special hospitals should be perfectly free; students should be allowed to attend, practitioners should have free access, and all the knowledge that was accumulated in a special hospital should be made public.

19963. Then are special hospitals closed to them at present?—Most of them are, I may say, closed.

19964. Is that on account of the want of space, or because, as a rule, the proprietors (or whatever the term is) of the special hospitals do not like to have their ways looked into; perhaps it is for both reasons?—I could not say that it was for either reason really.

Chairman—continued.

19965. That is, looking at it from the professional point of view?—From the professional point of view.

19966. Now, have you got any opinion about it from the public point of view?—I think the public should pay for the special hospitals; they should be self-supporting, and should not come upon the general charity. I consider that they are luxuries; that specialism has crept out in the last few years as a supply for the demand of the wealthy classes, and is paid for, and that charity should flow rather in the direction of a general than of a special hospital.

19967. Then, speaking from your position as being on the staff of a general hospital, and also on the staff of a special hospital, you would like to see the public give money to the general hospital, as opposed to the special?—As opposed to the special.

19968. Then that brings us to another question. Do you think that all the special hospitals, or any large number of them, withdraw funds practically from the general hospitals, or rather that they intercept funds and prevent them from reaching the general hospitals which would probably get there?—Yes, I think that they intercept funds that would otherwise reach the general hospitals.

Earl Cathcart.

19969. The general tendency of the evidence given here, has been to show that the students do not attend the special hospitals, not so much because they are really excluded, as because it is inconvenient to them to leave the general hospital they are studying at to go to a special hospital; and consequently, when they go to a special hospital at all, it is after their general education is over, and they pay a special fee to the special hospital?—I think that is right, but, on the other hand, if the special hospitals were "horsed" (to use the expression) by general hospital surgeons, they could infuse their teaching into the students easily, without driving them away to the special hospitals.

19970. Did it never strike you, from a public point of view (not from a medical point of view), that a hospital, where it is not really wanted, must be a public nuisance; that if it is not wanted in a particular neighbourhood, it must be a nuisance to that neighbourhood; because a large number of people must be brought about it, and perhaps infectious complaints may be spread, and that sort of thing; in such a case it must be a nuisance to the general inhabitants, must it not?—It does not strike me so, in the least.

19971. Take a case such as one we have had before us, of a butcher's shop being taken and converted into a sort of hospital, and suppose any infectious cases were brought into a building of that description, a mere butcher's shop converted, that might be a source of danger to the neighbourhood, might it not?—It might be, but I should say it would very seldom happen. People with infectious complaints do not travel about.

19972. For instance, might there not be cases that might tend to spread erysipelas?—Then the hospital

23 April 1891.]

Mr. FENWICK.

[Continued.]

Earl Cathcart—continued.

hospital would not be following the usual rule of isolating those cases at once.

19973. We had the case of a butcher's shop being taken for a special hospital; where that was done there would not be many conveniences, would there, for isolating cases?—No; then I hold it is not right that the special hospital should be licensed in such a case as that.

19974. That is what I wanted to bring out, and to make it even more clear than you have made it, that it is necessary that there should be some control over the establishment of new hospitals?—There should be the greatest control.

Lord Thring.

19975. You are aware, are you not, of the great distinction in law between what the law regards as a hospital for infectious diseases and what it regards as a hospital for non-infectious diseases; the law does consider a hospital for infectious diseases a nuisance in a private locality, and does not consider an ordinary hospital to be a nuisance?—Yes.

19976. Does not that suggest the answer to the question just now put to you, that you could not convert a butcher's shop into a hospital for treating infectious diseases, because the law would not allow it?—But now and again there is a sprinkling of infectious diseases among the class of patients who attend a hospital.

19977. But the law now is so strongly against hospitals for infectious diseases that you know, or might know, that it has been impossible to find places to found them in a great part of London?—My answer to that is, that the question I am now considering is that of the surgical special hospital, which does not embrace infectious diseases at all.

19978. I only wanted to clear up this point. The noble Lord who examined you before me put it as an argument that there should be a licensing body, as I understood him, to protect the public from having hospitals for infectious diseases planted in their midst. I say, No; that for that purpose the licensed body would be no use whatever, because there is now a most stringent law preventing the establishment of hospitals for infectious diseases in their midst. I was asking you whether you were aware of that distinction?—Yes.

19979. Then with respect to your licensing body, I understand you that you would allow no man whatever to establish a hospital except a certain number of doctors thought it was a good job?—That is a somewhat coarse way of putting it.

19980. I purposely put it so. That is what you said in effect, was it not?—I said that they should decide as to whether it was necessary that there should be a special hospital. There is a great deal of difference of opinion in the profession as to whether certain surgical sections need be specialities or not; and it is to control the frequent cropping up of new specialities that I thought the licensing body would be of advantage.

19981. The licensing body, then, you extend only to special hospitals?—I am only speaking of special hospitals.

19982. You would allow, would you, anybody
(24.)

Lord Thring—continued.

to set up a general hospital without a license?—I think the restriction might with advantage be extended to general hospitals.

19983. Then, in fact, what you say is that, in your opinion, no hospital should be established anywhere except it was approved by a certain number of medical gentlemen?—Yes.

19984. That is rather a strong order, is it not?—No; because, in that way, if there was any objection in the neighbourhood to the establishing of the new hospital, the practitioners would go before this licensing body and appeal against it.

19985. But why should any man in a free country be prevented from exercising his charity in such manner as he thinks fit. We have been told over and over again that the general hospitals even, and all the special hospitals, at least, many of the general hospitals, and the greater part, at all events, of the special hospitals, have arisen from the most humble beginnings; that, in the germ, they were the sort of hospital which you condemn, and that they have grown into most valuable institutions; is that the case?—Yes.

19986. Why then should you stop the system?—Because the vegetation may run riot, and is running riot now.

19987. In other words, to drop the metaphor, you think there are too many special hospitals?—Yes, I think there are.

19988. And therefore you would prevent any more being erected, except at the will of certain doctors?—Yes.

19989. Supposing I want to erect a homœopathic hospital, do you think the doctors would approve of that?—A homœopathic hospital would be outside the profession.

19990. Then you would allow me to erect a homœopathic hospital without going to the doctors?—I do not think the profession would touch a homœopathic hospital.

19991. You would not consider a homœopathic hospital within the purview of the doctors?—No more than I should consider the electrician or the quack within their control. I could not control it from a professional point of view.

19992. Then I might set up a quack hospital?—You might. I am speaking from a professional point of view.

19993. Do you think the profession exists for the public or the public for the profession?—That hardly requires an answer.

19994. According to you I may set up a quack hospital, but if I am going to set up a hospital not quack, I must have the leave of your doctors?—I am speaking not from an outside point of view, but from a professional point of view. Those questions ought to be rendered illegal.

19995. Which questions?—The questions of establishing a quack hospital ought to be rendered illegal.

19996. Then you would have a law prohibiting all systems of medicine which were not approved by the "profession," as you call it?—I certainly should have a repression of absolute quackery by law.

19997. "Quackery," you say. What is one man's poison is another's food, and what is one man's quackery is another's medicine. I may take it that you would wish that there should be

23 April 1891.]

Mr. FENWICK.

[Continued.]

Lord Thring—continued.

a law prohibiting everything that a certain number of doctors consider quackery?—Yes.

19998. That is so?—Yes, that is so.

19999. And that, of course, would include, as you know, or may know, most of the new systems of medicine; they have been held to be quackery at the beginning. You are aware that some of the most valuable discoveries in medicine have been altogether discountenanced at first by the profession?—I am, but they have not been considered quackeries.

20000. I do not know what they have been considered, but they have been discountenanced in every possible way. However, your opinion is that the public really is not interested in these things, but there ought to be a law that everything the doctors consider quackery should be prohibited under a penalty, and that no new hospital, which is not a quack hospital, should be established, except at the will of the profession?—I think the profession should be consulted about it, and that they should be able to put their veto upon it.

Chairman.

20001. Supposing you had a board of 12 or 14 members, do you think that those 12 or 14 medical men would agree as to whether there ought to be a special hospital established?—I think after hearing the pros and cons of the question from those who wished to found the hospital and those against it, they would be able to decide.

Lord Monkswell.

20002. You said that you considered the special hospitals somewhat in the nature of luxuries; do you consider that special hospitals treat special diseases better than they would be treated in the wards of a general hospital or not?—Distinctly better.

20003. Then would you say that any better treatment of a disease is a luxury; do not you think it is extremely important that disease should be combated in the best possible manner, and would you call it a luxury if it is combated in the best possible manner?—With the means that we have at hand, I think the general hospitals do their work well in treating disease generally; but certain special diseases can be treated better in special hospitals.

20004. If they are treated better there I should rather demur to your statement, that

Lord Monkswell—continued.

special hospitals are a luxury; however, your opinion is, that the disease is sufficiently well treated in the general hospital?—Yes.

20005. I do not know whether you have read Dr. Tibbits' evidence. He says, in answer to Question 19310, that he (I do not know whether he says that he himself established) was one of those who established the system of massage, and he suggested, from his point of view, quite properly, that the massage should be done by nurses and not by doctors; and he says, that the first suggestion of it was treated with great scorn by the "Lancet," which said, that massage could only be carried out by medical men. It is the fact, is it not, that massage is not carried out now by medical men, but by nurses; it is under medical direction, but the physical part of it is carried out by nurses, is it not?—Male and female nurses.

20006. By nurses, not by doctors?—Yes.

20007. Then do not you think that the "Lancet" was wrong, and Dr. Tibbits was right in suggesting, at the beginning, that it should be carried out not by medical men but by nurses?—It does not follow that it should be so.

20008. You think, in some cases, doctors are better than nurses?—They are very much better. It saves time and it saves expense for it to be carried out by nurses.

20009. And now it is the common practice, is it not, to have it carried out by nurses?—I will not say it is the common practice, because many surgeons do their own massage, I for one.

20010. At all events, it is a fairly common practice; it is done, and apparently the "Lancet" objected to it at first?—The "Lancet" may have objected to it.

Chairman.

20011. One question as to the St. Peter's Hospital; do you know when it was founded?—About 20 years ago, I believe.

20012. And did it commence in a very small way, as other hospitals have done?—Yes.

20013. But now you have a different building, have you not?—Yes; an anonymous donor gave 10,000 £. to the erection of this present hospital.

20014. That was how you got the funds for the improved building you now possess?—Yes, an anonymous donation of 10,000 £.

20015. Is there anything else you wish to say?—No.

The Witness is directed to withdraw.

MR. ARTHUR LUCAS is called in; and, having been sworn, is Examined, as follows:

Chairman.

20016. YOU are the Vice-chairman of the hospital that is known as the Hospital for Sick Children in Great Ormond-street?—I am.

20017. And how long have you been connected with that hospital?—I have been a member of the managing committee since 1875; I was elected vice-chairman in 1884; I have been a member of the house committee since 1876, and I was elected chairman of the house committee in 1879.

20018. With regard to your position as vice-

Chairman—continued.

chairman, that is an unpaid post, I suppose?—Most certainly; I may add that Lord Aberdare is the chairman.

20019. When was the hospital founded?—The hospital was founded in 1852. It was the first hospital for children only in London; there had been a small hospital in the Waterloo-road where they took women and children, but this was the first hospital for children only in London.

20020. This would be termed, I presume, a special hospital, would it not?—I suppose so, but,

23 April 1891.]

Mr. LUCAS.

[Continued.]

Chairman—continued.

but, if I may be allowed to object to the term "special hospital," it seems to me this is a general hospital with a limit of age.

20021. In fact a general hospital for children?—It is a general hospital for children; no special disease only is treated there.

20022. How many beds have you?—We have at present 127 beds, and the wing now being erected will contain 90 more beds, making a total of 217.

20023. What at present is your working average?—Our working average at present is 100.

20024. Would you tell us what your constitution and system of management is?—The hospital is managed by a general committee, a house committee, a medical committee, and a finance committee.

20025. How is the general committee constituted; are they governors?—It "consists of the patron, president, vice presidents, the treasurer, the physicians, and the surgeon or surgeons *ex officio*, of 20 other governors not being officers of the hospital, and of one member chosen by themselves out of the body of assistant physicians and assistant surgeons; and three members of such committee shall be a quorum."

20026. How often does it meet?—The general managing committee meets once a month.

20027. And they delegate to the house committee that you have named certain business?—Yes.

20028. And how often does that house committee meet?—Once a month.

20029. Then, is there no authoritative body which meets oftener than once a month; any sub-committee?—No, but they meet more often. When necessary a special meeting is called.

20030. What are the duties of the general committee?—They receive all statements of finance and the general correspondence of the hospital; they make all the appointments and they take means to levy funds.

20031. That last is probably the most arduous of their duties?—No doubt.

20032. But who is in charge, then, during the remainder of the month when no committee is sitting; who is the responsible officer?—There is no resident responsible officer, except the house surgeons and house physicians. There is a lady superintendent, who has charge of all the patients, and she is responsible for them.

20033. Then, when are all the various account books and small books of the establishment checked?—The housekeeping books are checked in the office; they are made up by the home sister, who is the housekeeper, and then they are checked in the office.

20034. Checked by whom?—By the secretary or his clerk.

20035. Is the secretary a resident officer?—He does not live in the hospital.

20036. He is a salaried officer, I presume?—He is a salaried officer.

20037. Do you think that is a sufficient check for a large establishment like that?—The whole of the accounts are submitted to the finance committee afterwards.

20038. And how often does it meet?—About once a month.

(24.)

Chairman—continued.

20039. But at any rate you consider that is a sufficient check of the expenditure of a large establishment?—My previous answer does not quite convey what I wish to state: There is a treble check; because the accounts are ultimately presented in detail to the managing committee who examine the cost of every article and compare it with the previous year or years; so that there really is a treble check, and I consider that that is sufficient.

20040. And is your audit done by professional men, accountants?—It is done by chartered accountants, who report four times a year to the committee. The accounts are also audited by the finance committee.

20041. Do you have to turn away a great number of patients from your hospital for want of accommodation?—Not in-patients, a certain number of out-patients.

20042. But at the same time, you are building an extra wing, I think you said, just now?—That is so.

20043. And therefore, I presume, you consider your accommodation is not sufficient?—That is so; we are obliged to turn away certain classes of infectious cases; for instance, whooping cough and other kindred diseases. Would your Lordship like me now, or later on, to give our reasons for adding to the number of beds?

20044. I think, as we are on the number of beds, you might give them now?—The reasons why we are extending the hospital, are many; one reason I have stated, that at present if we have whooping cough cases, we cannot take them in, and we are very much handicapped at present, because, if infection breaks out in a ward, and if, we have one case of, say measles or scarlet fever, we send it away, and we are obliged to send away about 18 or 19 other cases in that ward out of the hospital altogether. We propose, not to fill these 90 new beds at once, but to move the cases from one ward to another; that is to say, we shall have a "fallow ward;" a ward when it gets infected should be allowed to lie "fallow" for a time. There were other reasons for completing the building, that the accommodation in the new out-patient department was totally insufficient, and also that at present the majority of the sisters and nurses live outside the hospital altogether, in other buildings; the secretary and clerks work outside the hospital in another building, where the committee meets in other rooms; there are no retiring rooms for the surgeons; and nearly all the administrative offices are outside the building.

20045. Therefore the present construction of the hospital is extremely inconvenient; that is one reason for increasing your number of beds?—Yes.

20046. And then, owing to the want of accommodation for infectious cases and so forth, you considered that the hospital fell short of its possible usefulness?—That is so.

20047. And therefore you decided to make provision for an additional number of these beds?—Yes, carrying out the original scheme of the hospital when it was rebuilt in 1874.

20048. Are there a very great number of beds provided for children in London hospitals?

3 N 4

—There

23 April 1891.]

Mr. LUCAS.

[Continued.]

Chairman—continued.

—There are now in London 14 hospitals for children only.

20049. Are those of recent growth; since 1852?—Those are since 1852.

20050. Then taking the general hospitals, do all the general hospitals have a children's ward, as a rule?—The majority have now, but they had not previous to the founding of this hospital; its example was followed.

20051. And is it the experience of your medical men that children interfere with adult patients in general hospitals?—I think that that is a question I would sooner leave to the physician to answer, as it is purely medical.

20052. Have you, as a children's hospital administrator, heard great complaints of the want of children's hospitals; the necessity for increasing the number of them?—I think the supply is equal to the demand, so that I can answer that question in the negative.

20053. Now you have told us about the in-patients; who grants the admission to the in-patients?—When a patient is brought to the hospital with a letter from a subscriber, it is seen by the resident medical officers. If it is a bad case it is passed on to the wards. A good many cases are admitted, and the majority from the out-patient department, and are passed on by the assistant medical and surgical officers.

20054. Is it a necessity to have a subscriber's letter?—No, not a necessity.

20055. Then, as a matter of fact, the reason of admission is the disease, not the subscriber's letter?—Most certainly.

20056. It practically is like other general hospitals, a free hospital, in fact?—That is so.

20057. Then have you a large number of out-patients?—A very large number.

20058. Could you give us any figures; perhaps you will tell us at the same time how many in-patients you treated last year?—Yes; the number of in-patients treated in 1890 was 1,157; the number of out-patients treated in 1890 was 20,604.

20059. Are those all new cases?—Those are all new cases.

20060. Therefore, the attendances in the department would be that number multiplied at least by three?—Yes.

20061. And those are all free of payment?—All.

20062. You do not take any money, or rather you do not ask for any from your patients?—No.

20063. Now, as regards your finances, what was your expenditure last year?—In 1890 the expenditure was 12,045 *l*.

20064. And your income?—Our income was 12,074 *l*.

20065. Then you have a very trifling balance on the right side?—That is so.

20066. Would you tell us what your sources of income are?—Subscriptions and donations.

20067. How much were they last year?—In 1890 they were 2,997 *l*. from subscriptions; 3,501 *l*. from donations.

20068. Any investments?—There were no investments.

20069. You have no funded property?—Yes, we have funded property. There was 2,160 *l*.

Chairman—continued

from legacies; from the Hospital Sunday Fund, 781 *l*.; from the Hospital Saturday Fund, 154 *l*.; balance, 770 *l*.

20070. From the previous year do you mean?—From the previous year. Dividends, 430 *l*. and from sundries, 1,281 *l*.

20071. What are those; church collections?—Various items; they are stated in the report, a large number of items of different kinds.

20072. From sale of kitchen stuff, for instance?—Yes, and from nursing and other sources.

20073. Do you mean sending out private nurses?—A certain amount.

20074. I will ask a question about that presently; is any of that endowment?—Yes, we have an endowment fund amounting to 11,642 *l*.

20075. Of which you can only spend the interest?—Of which we can only spend the interest. To that you must add a general endowment fund, 4,590 *l*.; which makes a total of 16,232 *l*.

20076. What do you get a-year from that?—It gives an income of 431 *l*. a-year.

20077. Who advises about the investment of that money?—We have several very strong financial men on our committee; and, I am sorry to say, the question of investment is one that very seldom occurs.

20078. Still, at the same time, could you invest, under that Act of three or four years ago, the Trust Investment Act, or are you obliged only to invest in Consols, the 2½ per cents.?—I am not acquainted with the Trust Investment Act. We have generally invested in Consols, but not always.

20079. Now do you find that you ever have a difficulty in getting money?—Yes. If we did not hold an annual dinner, we should be unable to keep our income up to the requirements.

20080. How much, as a rule, does your annual dinner bring in?—Net, about 3,500 *l*.

20081. I do not remember your mentioning it in the receipts?—That is included in the "donations and subscriptions."

20082. And then you appeal to the public?—We appeal to the public.

20083. As often as you possibly can, I suppose; or do you only appeal at Christmas time?—As a rule, only at the dinner; and we do not appeal besides, except in the form of an advertisement.

20084. What does your advertising cost you?—In 1889, 271 *l*.

20085. And with regard to that amount received from legacies, 2,160 *l*., is it about the average, or was it a good or a bad year?—I find it a little difficult to answer that question, because it varies so; I should say a bad year, on the whole.

20086. But I suppose that the difficulty of procuring funds causes you, like other managers of hospitals, great anxiety, does it not?—At times it does.

20087. Have you ever had to shut up any of your beds for want of funds?—Some years ago we did; the exact date I am afraid I cannot remember.

20088. How do you collect your subscriptions?—By post.

20089. You

23 April 1891.]

Mr. LUCAS.

[Continued.]

Chairman—continued.

20089. You have not got a collector?—No.

20090. Are there any commissions to come off the subscriptions?—No.

20091. Have you ever considered any means by which hospital managers could get more money out of the public. The Hospital Sunday Fund, of course, does a great deal?—Yes, we have considered the question, but we generally have to fall back on the annual dinner. We have twice abandoned the dinner and issued circulars to all our supporters; the result was an immediate loss of a thousand pounds in our income in both cases.

20092. Now you are employed in building a wing; what amount do you expect you will have to pay for that wing?—The contracts accepted amount to 25,900 *l.* odd.

20093. Have you got that money?—We have at present 22,000 *l.*

20094. Where was that obtained from?—£. 6,000 of it was obtained from the Children's Jubilee Fund, and was presented by Her Majesty to the hospital; 5,000 *l.* was bequeathed by Mr. William Barry for the purpose of rebuilding the hospital; and the remainder was obtained by special appeals.

20095. And how long do you think it will take to complete it?—I trust by next Spring it will be in working order.

20096. And then you also trust you will have got the money to meet the 23,000 *l.*?—To meet the difference we shall want, in order to furnish the hospital, more than that; because the amount I gave you was for the contracts accepted, and I need hardly say that a larger sum will be required for furniture, and so on, before we can open the hospital.

20097. But still, do you hold this opinion which is also held by other hospital financiers, that as long as the public believe in the hospital they will always give you money?—Yes, to a certain extent; so long as the public believe that an institution was properly and economically managed, that there was no waste, I think the public would give money provided the accounts were published.

20098. For instance, this extra wing will run you into a larger expenditure than you have at present, of course?—It will involve a larger annual expenditure.

20099. And have you no anxiety about being able to meet it?—To a certain extent, I have, but I trust in a generous public to support us.

20100. Believing it to be a well-managed institution?—Yes.

20101. I sympathise with you there very much, but still that is hardly a business-like way of managing an institution, is it?—I agree with you; but I think one must consider the sentimental as well as the business-like way. This place has many friends, and I have no great anxiety that the extra yearly amount required will be wanting.

20102. I will not say your hospital, particularly, but any hospital might be unfortunate, or some unfounded rumour might get abroad, or from some cause or other its finances might fall short by 2,000 *l.* or 3,000 *l.*; if you were lucky enough to have a large amount of capital, say, 100,000 *l.* which you could sell out and work on, (24.) e.

Chairman—continued.

as a great many of these free hospitals have, you could meet that; but if you had no large amount of capital you must come to an end; must it not?—If we found that our expenditure was too large we should immediately close part of the wards, and limit our expenditure in proportion to our means.

20103. But all the hospitals in London are in very low water?—With the exception of the great endowed hospitals, and a few others.

20104. I think we have had it before us in evidence, that two of the endowed hospitals have not got the whole of their wards open; St. Bartholomew's is the only one that has. Now, in your expenditure, is the expenditure of your dispensary included?—Certainly.

20105. What are your salaried officers?—There is a secretary at 300 *l.* a year, who has one clerk at 100 *l.* a year, and a boy at 26 *l.* a year.

20106. Have you got any remarks to make about the finance?—No.

20107. Then, as regards your nurses, do you train your own nurses?—We do.

20108. And how many have you?—By nurses does your Lordship include sisters?

20109. I mean sisters too; how many are there on the staff altogether?—There is a lady superintendent, eight sisters, 11 staff nurses, 11 probationers, eight lady pupils; and then there are seven nurses who are engaged in private nursing outside the hospital.

20110. That makes a staff of 38, I think, for the hospital?—That makes a staff of 39 for the hospital.

20111. Including the superintendent, you mean?—Including the lady superintendent.

20112. And these other nurses go out to private cases?—They do.

20113. And that money goes to the hospital?—It goes to the hospital.

20114. Do you train them too?—We train them too.

20115. Your nurses do not live on the premises, do they?—Some of them do, and some of them live in houses adjoining the hospital.

20116. Are you extending that private nursing system?—As far as we can, but very slowly.

20117. It is a paying business?—It is a paying business; but we only supply very good nurses, and very good nurses are hard to find.

20118. How long do you keep your nurses before they get a certificate?—The probationers are trained for three years; but six months has to be spent in an adult hospital.

20119. Before they come to you, do you mean?—No; they sign an agreement for three years, and six months out of that three years has to be passed in an adult hospital.

20120. And does that apply to those that you send out to private nursing too?—Yes, as far as practicable.

20121. What is the minimum time after which you send a nurse out to private nursing; what is the minimum experience that qualifies her for it in your opinion?—As a rule, not unless they have been probationers for three years; but there have been exceptions. When we have been pushed, and a woman has shown exceptional ability, I believe she has been sent out after two years' training.

3 O

20122. In

23 April 1891.]

Mr. LUCAS.

[Continued.]

Chairman—continued.

20122. In a case of necessity, would you employ in the wards those nurses whom you send out?—In case of necessity, yes.

20123. That would be the first call?—Yes.

20124. Do you give these nurses any commission on their earnings?—Yes. The nurses who go out we give 25 *l.* a year, and after the first year an annually-increasing percentage of 10 per cent., 15 per cent., 20 per cent., and 25 per cent. on their individual earnings. We also give them their board, laundry, and indoor and outdoor uniform.

20125. And do you lodge them?—Yes.

20126. Then what are the minimum wages you pay the probationers in your establishment?—The minimum wages is 12 *l.*

20127. And then, after one year, what do they get?—They receive 12 *l.* during the whole time that they are probationers.

20128. How long does that probation last; for three years?—For three years.

20129. And then what is the increase?—As staff nurses they receive 25 *l.* a year, board and laundry, and indoor uniform.

20130. Then they go, at one bound, from 12 *l.* to 25 *l.*?—That is so.

20131. Do you give any pension?—It is very rarely that a nurse would stop long enough now to receive a pension.

20132. In case she did, would it be considered individually by the committee?—That would be considered individually.

20133. Then where do these nurses who live out feed; do they feed in the hospital or in their own homes?—In the hospital.

20134. All the nurses feed in the hospital?—All the nurses feed in the hospital.

20135. Have you female clerks and dressers? We have female clinical clerks.

20136. Is yours the only hospital in London that has female clinical clerks?—I cannot answer that question. We sometimes have men; but we have both men and women.

20137. Do you find that females do the clinical work well?—Very well indeed. The surgeons have reported to me that in many instances they have been more careful in their notes than the male students.

20138. We have been told that at other hospitals the patients' children, I think especially, are roused up very early in the morning; what time do you rouse your patients?—About seven o'clock the day-work begins.

20139. But, then, is it not the case that in your hospital patients are aroused, and a great deal is done before the day-work begins?—No, not to my knowledge; not as far as I know.

20140. Because, what we have been told about other hospitals is that nurses go into the wards, very likely at seven o'clock, and a great deal of washing of patients has been done by the night nurses previous to that. You cannot answer as to that with regard to your hospital?—I cannot answer confidently; it has never been so reported to me.

20141. Could you tell us what the hours of your nurses are?—The staff nurses begin at 7.5 to work.

20142. Do they breakfast before going to the

Chairman—continued.

wards?—They breakfast before they go to the wards, at 6.40.

20143. And then go to the wards at 7.5?—Then they dine at 1.10; wards again at 1.30.

20144. Twenty minutes being allowed for that meal?—Twenty minutes. They have tea at half-past four, and their work is finished at 9 o'clock. They have supper at 6 o'clock.

20145. How long do you allow for tea?—Half-an-hour.

20146. On what principle do they have more time for tea than they do for dinner?—I think that these hours are elastic up to 10 minutes or a quarter-of-an-hour.

20147. And supper takes half-an-hour?—The supper takes half-an-hour.

20148. Do they have any meal between the breakfast at 7 o'clock and the dinner at 1?—No.

20149. Nothing at all?—Nothing at all; not to my knowledge.

20150. That is the day nurses. Then the night nurses?—The night nurse begins at 9.10 o'clock. Do you wish to know the hours of her meals, or when she goes off duty?

20151. I should like to know when there is what is called the breakfast for the night nurses?—The nurse rises in summer-time at half-past four, in winter at 8 o'clock p.m.; she breakfasts at 8.35; she begins her duty at 9.10; she has her tea at 12.30 a.m.

20152. Is that in the ward?—That would be in the ward kitchen, which adjoins; it is practically the same. A second tea at 3.30 a.m., and she goes off duty at 9 o'clock a.m.

20153. And then she has what is termed dinner, I suppose?—Yes, she has dinner at 9.5 a.m., when she goes off duty.

20154. Do your day nurses have any recreation during the day at all?—Most certainly. Twice a week from 2 till 4, and twice a week from 6 till 10. On Saturdays in every third week from 6 in the afternoon to 10 o'clock p.m. on the following day. The nurse is allowed to sleep out provided she can prove to the lady superintendent that she has friends in London with whom she can stay.

20155. Then does she have any annual holiday?—She has three weeks every year.

20156. Does that three weeks' holiday apply alike to probationers and nurses?—That three weeks applies to the probationers and nurses. May I add that these figures I have given you are for the staff nurses; they are practically the same, with a little variation as to time, for the lady pupils and probationers. If you wish it I can give you the details.

20157. I should like you to do so?—For the lady pupils and probationers the hours off duty are from half-past 2 till 5.30, and from 10 till 12; and 7 p.m. till 9 p.m. on alternate week-days. Then they have one day off once a month, subject to ward work; from 6 p.m. to 10 p.m. the next evening, if they have relations in town with whom they can stay. Their Sunday leave is from 10 a.m. to 1 p.m., or 5 p.m. to 10 p.m., to be arranged by the ward sister.

20158. Is the health of your nurses good?—Yes, on the whole.

20159. Is it generally considered that the nursing of children is more anxious and troublesome

23 April 1891.]

Mr. LUCAS.

[Continued.]

Chairman—continued.

some work than that of nursing adults?—Yes.

20160. What notice is required to terminate an engagement?—One month.

20161. One month in all cases?—Yes.

20162. That is after the three years?—Yes; they sign an engagement for three years. When they are appointed staff nurses they have to give one month's notice.

20163. Then the engagement is terminable, I suppose, before the three years, according to arrangement?—If there are exceptional circumstances. A probationer might be going to be married, or her health might break down; of course, we should consent in each of those cases to forego the agreement.

20164. What are the hours of the sisters?—The hours of duty for the sisters are from half-past 8 in the morning to 10 p.m.

20165. And do they dine with the other nurses?—The sisters dine alone.

20166. Does any high official ever dine with the nurses; the housekeeper, or anybody of that sort?—We have just changed our lady superintendent; her health broke down. The last lady superintendent, I think, sometimes dined with the nurses and probationers.

Earl of Kimberley.

20167. Where do the sisters dine alone; in the housekeeper's room, I suppose?—Yes; there are only eight sisters, and it is more convenient; they dine at their own hour.

Chairman.

20168. A sister is a head nurse?—The sister is a lady, always a lady, by birth and position, who is placed in each ward over the staff nurse and over the probationer.

Earl of Kimberley.

20169. Do you mean that if you had an able and competent staff nurse who did not happen to be a lady you would not promote her to be a head nurse or sister?—Not as a rule.

20170. Have you ever done so?—No; since I have been connected with the hospital I never can remember any nurse who has not been a lady by birth, who has been at the head of a ward.

20170.* Do you think that an encouraging system for other nurses?—I think it a system that works exceedingly well, because it maintains a good tone in the ward.

20171. Is the tone of your staff nurses bad?—The tone of our staff nurses is most excellent.

20172. Then why should not some of these staff nurses be competent to be head nurses or sisters?—I should say they were not, but I can only say what the result of my experience has been, and it is that the system has worked well.

20173. Is this the case in other hospitals?—I think it is the case in many other hospitals. I should be sorry to answer for all the hospitals in London.

Chairman.

20174. Do you ever get any complaints from your nurses about food?—No; there have been

Chairman—continued.

some; I will not say we have never had complaints, but I have not received complaints for a very long time.

20175. You would hear of any complaint that was made?—I hope so.

Earl of Kimberley.

20176. Do your sisters pass through the other grades; have they been staff nurses, or do you procure them elsewhere?—A sister must have had two years' medical and surgical training in a general hospital; that is our rule.

20177. You do not, therefore, train them yourselves?—Not necessarily.

20178. Her training at the general hospital is, of course, apart from you?—Yes, quite so.

20179. Do you, then, give her any special training in your own hospital?—No, not when they come to us as sisters.

20180. After two years' training in a general hospital they are eligible by your rules?—They are eligible by our rules.

Earl Cathcart.

20181. You have a note in your book of rules, which defines that the term "sister" shall not mean a member of any religious association whatever. I see this note on page 43: "That while, as a matter of convenience, and in conformity with the practice of many other hospitals, the head nurses are denominated 'sisters,' it is not thereby implied that they are regarded as members of any religious association, nor does the committee in any way sanction the formation of any such association among those who are engaged in the work of the hospital"?—That is quite correct, and in conformity with the practice.

Chairman.

20182. Do you take nurses of all denominations?—Yes.

20183. The secretary lives out of the hospital, you said?—Yes.

20184. Would any complaint brought by a nurse with regard to food, or anything else, go to him first of all?—Any complaint by a nurse would be made to the lady superintendent, and probably to me, if the house committee was not sitting, when I visit the hospital once a week.

20185. You are continually in the hospital?—I always make an official visit once a week, every Tuesday.

20186. Now, how is your food supply managed; do you make contracts?—We do.

20187. And are those open contracts, by tender?—Yes.

20188. And who makes the contract, the house committee?—The house committee.

20189. Have you a steward?—No, a home sister.

20190. Who takes the food in, then, the home sister?—The home sister has the superintendence of it.

20191. As regards quality and weight, to see that it is the proper weight?—Yes.

20192. Your patients being children, I suppose, do not complain about their food?—No.

3 O 2

20193. Who

23 April 1891.]

Mr. LUCAS.

[Continued.]

Chairman—continued.

20193. Who is responsible for the food supplied to them in the ward being of the proper quality?—The sister of the ward.

20194. Are the sisters generally jealous of the quality of the food supplied to them from the kitchen?—I think that if the food were at all inferior they would complain at once.

20195. Have you any opinion as to licences for new hospitals?—I think that all new hospitals ought to be licensed.

20196. Could you give us any idea what the licensing body ought to be?—I certainly think it ought not to be a licensing body composed of doctors, because I think that they would be influenced by professional jealousies; it would be only human for them to be so. I should not like to say, without further consideration, how such a licensing body should be composed.

20197. Is it your opinion, then, that new hospitals spring up in localities where they are not wanted, and having for their object specialities which might frequently be treated in general hospitals?—Most distinctly.

20198. As objects of gain to the promoters?—Yes.

20199. And you see no way of stopping that excepting by a system of licences?—None.

20200. Would you let the Local Government interfere at all?—I would much sooner that the Local Government interfered than any other body. But perhaps I do not quite understand what your Lordship means by "Local Government."

20201. I meant the Municipal Government?—No.

20202. You would like to keep the rate officer out?—Yes, most distinctly.

20203. Have you any experience of provident dispensaries?—Very slight experience; the little experience I have had is most certainly in their favour; I think it is through provident dispensaries that a good deal of the strain that is now put upon the out-patient departments of hospitals will in the future be lessened, if provident dispensaries are helped as they should be helped.

20204. How do you mean "helped"?—Financially, because they could not start without means of their own. Once started I believe they can go on; but with the development of that system I think a great deal of the abuse (if I may use the term) of the out-patient department would be lessened.

20205. Do you think that there is much abuse of the out-patient department?—I think it has been exaggerated. That there is abuse I have little doubt, but I think a great deal of that abuse comes from ignorance. Now there was a man who came to our hospital last winter; the doctor in attendance suspected that he was a man of means; he saw the child, and I believe diagnosed the disease, but refused to prescribe, that is to say, to let him take away medicine, and asked him if he was a man of independent means; he said "yes," and he immediately offered to pay the doctor. It was a case of ignorance; and there is no doubt that a great deal of the abuse arises from ignorance and want of thought.

20206. Then might that be checked by the hospital authorities, by making inquiries?—We have taken various steps in that matter, which,

Chairman—continued.

with your Lordship's permission, I will state to you.

20207. If you please?—I will read some extracts from the reports of 1876 and of 1877: "In 1875 the attention of the committee was called to the fact that the out-patient department has been much abused by persons in a superior position availing themselves of its benefits. The committee have adopted measures to remedy the evil. The following rules were then passed: 'The register and also the letter shall bear a record of the name and residence of the patient, as also of the occupation and weekly earnings of the parent on whom the patient is dependent, and no patient whose parent is in the receipt of more than 30 s. per week shall be considered eligible for permanent treatment as an out-patient of the hospital. No patient shall be considered eligible for permanent relief as an out-patient, unless the letter with which the parent has been furnished shall have been submitted to the secretary or other officer of the Charity Organization Society's branch for the district in which the patient dwells, and unless such letter bears the stamp of the society, in proof of the verification of the facts stated in the letter.'" The result of these rules was, that in 1876 the number of out-patients was 3,841 less than in 1875; but the rules did not work, as they caused much friction with parents and subscribers, and for many other reasons. Then in the 1877 report I find: "The committee, with the cordial co-operation of the Charity Organization Society, have in a great measure obviated this evil, but they have grave doubts whether this advantage has not been gained at the expense of diminishing the utility of the hospital as a great centre for the treatment of severe and complicated cases." Then in 1887 the following new rules were passed: "No patient whose parent is in the receipt of more than 40 s. per week shall, except in special circumstances, be considered eligible for permanent treatment as an out-patient of the hospital. Patients shall be attended to once as of course, but every parent or person bringing a child a second time, may, unless furnished with a governor's letter, be required to make a statement as to the circumstances of the family, and submit to have such statement investigated." The 40 s. rule has had to be abandoned, and inquiries are now only made when the case is a suspected one. That is practically a history of our efforts since 1875 to cope with the difficulty.

Earl of Kimberley.

20208. Then I am afraid the result is that you have almost abandoned the practice of trying to prevent the charity from being abused?—That is not quite so, because, with your Lordship's permission, I will give you figures from 1879 up to date of cases that have been refused treatment, because they would have been an abuse of the charity.

20209. Yes?—Sixty in 1879; then in the following years, 128, 139, 171, 227, 153, 145, 213, 134, 109, 218, and 118.

20210. The number of out-patients you told us was 20,000 in round numbers?—That is so.

20211. Do you think that such an infinitesimal per

23 April 1891.]

Mr. LUCAS.

[Continued.]

Earl of Kimberley—continued.

percentage as you have mentioned, especially in the later years, at all represents the number of persons who were not really entitled to charitable assistance?—I should think that there was a large number that were not entitled, but we use our efforts to the utmost to find out the people who abuse the advantages of the charity.

20212. Did I gather rightly, that where there is a governor's letter no inquiry is made?—Not necessarily; not unless there is strong suspicion that the governor's kindness has been abused.

20213. As a rule, you presume that the governor sends you a proper case?—I take it that the house surgeon would think, if it was properly signed, that it was a good case.

20214. If anything came to his knowledge to make him suspect the contrary, he would probably inform the governor of it?—Yes, probably; it is practically in the house surgeon's hands; I have nothing to do with it.

20215. You mentioned you thought it would be desirable that there should be some licensing body, without whose sanction no new hospital should be opened; have you at all considered what kind of rules should be laid down for the guidance of such a body?—No; but I take it that such a body would inquire, whether there was a necessity for the hospital in the district where it was proposed to be placed; that would be the first thing to inquire about; then as to the means of such an institution, whether they were self-supporting, and whether they had any chance of maintaining such a charity without appealing to the public, or without lessening the resources of other kindred charities in the neighbourhood.

20216. Would not a system of that kind, for what I may term the protection of existing charities, be open to very great abuse?—Not if it were in the hands of a properly constituted body.

20217. Would it not, in point of fact, give a strong *locus standi* to the jealousies of existing institutions which would not wish to have what they term their ground poached upon; might not that counteract a good many useful schemes for hospital extension?—I think not, because the funds that would be devoted to these young institutions, if I may say so, would be devoted to existing institutions, and so really be for the benefit of the poor.

20218. But is not that (pardon me for saying so) rather an assumption; does it at all follow, that those who would be willing to contribute to the establishment of some new hospital would take an interest in some existing hospital; would it not be likely to result in the contrary?—For the moment, yes; in the future, no; because the generous founders of a new hospital pass away, and in all probability that institution has to go for help to the public, either if their funds fail or if they wish to extend what was originally a small institution.

20219. Upon what principle would it be right to refuse to any one the permission to spend their own money upon the establishment of a hospital?—May I give your Lordship an exaggerated case; a hypothetical case?

20220. Yes?—Supposing somebody were to leave 20,000 *l.* for another hospital for sick children in Great Ormond-street, and that hospital

(24.)

Earl of Kimberley—continued.

were then to be started with a secretary, perhaps an assistant secretary, and a regular staff, with all the expenses; that person dies, and he does not endow the hospital, and the committee, if there is a committee, have to go to the public to support the hospital; and of course, to that extent, they would injure the existing hospital for children, which is an old-established institution doing a great deal of work; and the rate per head for the small hospital would be much larger than it would be for the older institution. I am merely putting a hypothetical case in order to answer your question.

20221. Then that assumes that we ought not to put anything in competition with old-established institutions?—I do not think it is a question of competition between the hospitals, but of living.

20222. Is not that saying, in other terms, that you are wishing to prevent competition?—I take exception to the word "competition"; it seems more like a trade when that word is used. Our only object is to benefit the sick poor.

20223. But it assumes that an established institution has, in some sense or other, a monopoly, does it not?—I must again, with all respect, take exception to the word "monopoly."

20224. Will you substitute some better term, I have no particular affection for that one?—I can only repeat that we do not wish our hands weakened by the annual sum which is given by the generous being distributed among an unknown quantity of hospitals.

20225. The other ground upon which you would wish a license to be refused, I conclude, would be the improper character of the building, or the want of sufficient appliances?—Yes.

20226. That, in point of fact, would really involve what some persons are much in favour of, a general supervision of hospitals, would it not?—Yes.

20227. Would you be in favour of some supervision of the existing hospitals of a general kind?—Yes.

20228. Do you think such a body should have any connection with the Government, or with the municipal authorities, or would you constitute it otherwise; I think I understand you to say you would not connect it with Government or the municipal authorities?—I would not connect it with any local authority.

20229. Would you like to put them under the Charity Commissioners?—No, certainly not. I am not prepared to answer your question exactly at the moment as to what the body should be.

20230. I only asked you for an answer in the negative; I asked you whether you were prepared to exclude those bodies; I think I understand you that you would not be desirous of seeing the municipal bodies or the Charity Commissioners connected with it?—That is so.

Earl Cathcart.

20231. Now, can you, as a matter of fact, grind all the grist that comes to your mill?—With difficulty, yes; in the out-patient department there is a difficulty.

20232. But not in the in-patient department; you can take in all the children who are brought to you?—We can manage it.

3 O 3

20233. Are

23 April 1891.]

Mr. LUCAS.

[Continued.]

Lord Saye and Sele.

20233. Are the members of the medical staff on the general committee?—A portion of them.

20234. I think you said that you had no means of isolating infectious diseases?—No very good means; we have a very small room at present which is not fit for the purpose.

20235. I think you said that you send infectious cases away, such as scarlet fever?—We send measles and scarlet fever away whenever we can, but at times they are complicated with other diseases; and they also attack children after very serious surgical operations; then we are unable to send them away.

20236. I suppose some of the children stay a very considerable length of time?—That is so.

20237. What is the average duration of their stay?—I think I would leave that question to our physician, who will, I believe, be called as a witness.

20238. Are the children who are a long time in the hospital instructed in any way?—The children in the hospital are always so seriously ill that it would be impossible to instruct them; immediately they get better they are sent to a convalescent home.

Chairman.

20239. Is that convalescent home part of your property, or do you subscribe to it?—It is part of our property; but we are thinking of giving it up because the place where it is situated, Highgate, now is practically in London. Our medical advisers say that it does not do the good it should; and we do not contemplate building another, but affiliating ourselves to existing institutions.

Lord Monkswell.

20240. To follow up Lord Kimberley's questions, I suppose you would not think it desirable to have that system of licensing unless there was also some system of control of hospitals along with it?—No.

20241. Because it seems to me, that, in the absence of any system of control, it is just as well that there should be some little difficulty in getting subscriptions; it keeps hospitals up to the mark; something in the nature of competition seems to be desirable from that point of view. Of course, if you had not some system of control the effect of a system of licence would be to take away that element of competition?—It is possible. Of course it would give the public more confidence in the necessity for each individual hospital.

20242. You said you preferred to call yours not a special hospital, but a general hospital, with a limit of age. What is the limit of age?—Two till twelve; but with regard to the "two," I am afraid that is a rule that is more honoured in its breach than in its observance, for many children under two are brought to us in a very dangerous state, and we do take them in. When the rule was made it was because the expense of nursing very young children is very great, for obvious reasons.

20243. Did you say you had a medical committee?—That is so.

20244. What does it do?—It discusses the

Lord Monkswell—continued.

various procedures of the doctors; it considers everything that refers to the patients only.

20245. Is it under the jurisdiction of the house committee or of the general committee?—All their minutes are submitted to the managing committee.

20246. Is there an annual meeting?—There is an annual meeting in May.

20247. And what does the annual meeting do; what are its powers?—The annual meeting confirms the acts of the managing committee during the year.

20248. Do I understand that you never ask any money of the parents of the in-patients?—There is a box put downstairs in the hospital, and if they like to put something in they can, but they are never asked.

20249. What do you get in that way?—In the boxes about the hospital about 12*l.* was collected last year.

20250. And that is all you get or have attempted to get from the parents of the in-patients?—Yes.

20251. Is there no inquiry whatever as to the means of the parents of these in-patients?—Cases that come into the hospital are never admitted without inquiry, unless they are of extreme severity; then they are admitted at once; but there is very seldom any abuse. It might be for the advantage of science, if there were a very complicated case which would teach students in advanced science, even although it was the child of well-to-do parents, that it should be admitted; there might be such a case.

20252. Why should you not ask parents who were in a position to pay to do so?—We have often considered the advisability of having a paying ward.

20253. I do not say "a paying ward," that is another thing, but I mean supposing that you have a child that has been suddenly taken ill in the street and comes into your hospital, why should you not ask the parent of that child to contribute to the hospital funds?—Our difficulty is this, that we receive money from the public as a charity, and if it became known that we obtained payment I believe that it would materially affect our receipts.

20254. These would be, of course, only very exceptional cases?—Yes.

20255. Do I understand that you do sometimes promote staff nurses to be sisters?—I think if we thought that the staff nurse was a person of such education and otherwise as to be a fit person for the post we should do so.

20256. But, as a rule, they are not of a class likely to be promoted to be sisters?—Not always.

20257. Do you put them into two classes and say to one set, You will be able to become sisters, and to another set of staff nurses, You cannot rise to be sisters?—We do not tell them anything about that.

20258. Do they understand, by the light of nature, which of them can come to be sisters and which cannot?—I think they pretty well know.

Earl Cathcart.

20259. It has been argued this morning here that hospitals, such as your's, do not bring together

23 April 1891.]

Mr. LUCAS.

[Continued.]

Earl Cathcart—continued.

gether infectious cases as a rule; but you have a good many; for instance you had 24 males and 27 females from 1st January to 31st December 1889, ill with diphtheria; it is so stated in your return?—I have no doubt the return is correct.

20260. There is, as it seems to me, a feature about your hospital which is very honourable to you, which you have not mentioned, namely, the large number you have of endowed cots. You have a good many endowed cots?—We have.

20261. Can you say how many; it appears to me a creditable feature of your hospital?—There is a list in the beginning of the report. There are two classes of endowed cots, one class at the rate of 1,000*l.*, and those are in perpetuity; there are 10 of them.

20262. And how many of the second class?—The second class is endowed by payment of 300*l.*; there are seven of the 300*l.* class; they last for the life of the donor.

Chairman.

20263. Has the donor of one of the 1,000*l.* or 300*l.* endowed cots any right to keep that bed vacant during his lifetime so as to put his particular patient into it, because he has paid for the maintenance of it?—No.

Earl of Kimberley.

20264. What is the meaning of the arrangement, because it would seem that there is no particular advantage in giving 1,000*l.*, which is attached to one particular cot, but that you really give 1,000*l.* to the hospital expenses; what is the meaning, and what is the result?—It is a sentimental reason; a person gives 1,000*l.* and names that cot after some relative, perhaps a child, that he or she has lost. It is really an *in memoriam* endowment, and that name so long as the hospital lasts will always be kept above the cot.

Lord Saye and Sele.

20265. Had you to purchase the site upon which you are building your new wing?—We had the site; it was part of the original undertaking.

20266. Can you tell me what your ground-rent is?—It is a freehold.

Earl of Kimberley.

20267. In the case of these endowed cots, is the whole of the money expended on the maintenance of the cots; if not, what is done with it?—The money is invested.

20268. Is there any surplus?—We only get these cots at very rare intervals; there is no surplus.

20269. What is the meaning of this 1,000*l.*, what does it go to?—A person gives 1,000*l.* to the hospital, that money is immediately invested under the head of endowment, and the income is used for the general purposes of the hospital.

20270. It is merely a name attached to the donation?—That is so.

(After a short adjournment.)

(24.)

Chairman.

20271. Have you ever made any calculation as to the cost of your beds in the hospital?—Yes.

20272. Could you tell us what you put your beds as costing per annum?—Shall I give your Lordship the amount for 1890?

20273. Yes; what do you estimate the cost of a bed at for 1890?—At 70*l.* 18*s.*

20274. Then about the out-patients?—It is almost impossible to answer that question, it is so difficult to assess the cost of out-patients; it is so mixed up with the general undertaking.

20275. You can only do it by estimate?—Yes; and I do not think myself that if I gave you the figures they would be very reliable.

20276. But how do you arrive at your calculation regarding the in-patients?—The calculation regarding the in-patients is arrived at by eliminating as far as possible the cost of the out-patients, and dividing the remaining total expenditure by the number of beds.

20277. You say you subtract first of all the amount you estimate for the out-patients?—Yes; the average cost I have here, that will be during a period of 12 years, is 1*s.* 8½*d.*, but I must give that figure as only an approximate one; I do not think it can be arrived at with perfect accuracy.

20278. But at the same time the estimate that you make of the cost of in-patients depends upon the amount that you subtract for the cost of the out-patients?—No doubt.

20279. So that unless you can form some reliable estimate of the cost of the out-patients, your calculation as regards the in-patients is hardly more reliable, is it?—I think that it is reliable, with this qualification, that it is so difficult to assess the salaries; for instance, take the salary of the secretary, you might say that he was doing some out-patients' work as well as in-patients' work. So that for salaries we take a certain sum, which we consider fair, and assign it to the cost of the out-patient department; and then we subtract that (we take care to be on the safe side) from the total cost of the hospital, and divide the figure by the number of beds; so that the estimate is pretty accurate.

20280. Have you ever considered whether it would be advisable to have one system of hospital accounts all through?—I think it would be an excellent system.

20281. It would be a very small matter, would it not?—Yes; but if your Lordship wishes for information about that, I should ask leave to refer you to our secretary, who has taken rather a lead in the matter and is discussing with the secretaries of other hospitals the advantage of such a system as you refer to.

20282. The idea of having a general system of accounts is under discussion among the secretaries of hospitals?—Yes.

20283. And they have not yet arrived at any conclusion?—They have not, I believe.

20284. Then I think you want to correct a statement you made just now. You said something to this effect, that no nurse in the hospital could become a sister by promotion, because all your sisters were ladies?—May I correct that statement; that was so many years ago. Many years ago the class of staff nurses and of nurses generally, was far inferior to what it is now: they

23 April 1891.]

Mr. LUCAS.

[Continued.]

Chairman—continued.

they were more ignorant, and we could not do it; but that is not the case now, and as a matter of fact, our acting matron (who is taking the duty *pro tem* whilst the lady superintendent is ill) was a nurse in the hospital, and two of our sisters were nurses in the hospital, and were promoted to be sisters; and a great many of the nurses that are now employed would be quite fit for the post of sister in the hospital.

20285. Were these nurses who were promoted ladies or not?—Yes, they were.

20286. So that, practically, the old rule is

Chairman—continued.

observed?—The old rule is observed, but it comes from the superior class of the nurses.

20287. Did you say whether you take any male students at your hospital?—A few students attend lectures.

20288. Not in the wards?—I believe they go round the wards; but the physician would answer that question as regards the students.

20289. Is there anything else you wish to say?—Nothing.

The Witness is directed to withdraw.

W. B. CHEADLE, M.D., F.R.C.P., is called in; and, having been sworn, is Examined, as follows:

Chairman.

20290. You are the Senior Physician to the Great Ormond-street Hospital for Children?—I am.

20291. May I ask what qualifications you hold?—I am doctor of medicine in the University of Cambridge and I am a fellow of the College of Physicians.

20292. Has this hospital any connection with St. Mary's?—No direct connection.

20293. What is its connection?—Nothing more than the fact that several of the members of the staff of this hospital in Great Ormond-street are also members of the staff of St. Mary's Hospital, but there is no other connection beyond that.

20294. As regards the medical school I mean?—There is no direct connection between the medical school at St. Mary's and the Children's Hospital.

20295. Are you distinctly in favour of a separate hospital for children as opposed to children being mixed up with adults?—I think there are certain advantages in having separate hospitals for children; some of the special hospitals have done very great service in drawing attention to and acquiring knowledge upon special classes of disease. I think the same good might, perhaps, be attained now by very large special departments connected with general hospitals, but one or two important conditions would have to be observed in order to make them efficient.

20296. What would those conditions be?—In the first place, I think the departments would have to be sufficiently large to ensure an ample number of cases, and then, I think, they should be under the charge of some special officers who would give their chief attention to that particular branch, for the time being, at all events; and also that there should be special instruction given in connection with the departments.

20297. Do you know anything as to the mortality of children between the years 1842 and 1852?—I cannot give you any information on that point. It is still some eight or ten times more than the mortality amongst grown persons, I believe; but whether it has decreased, I cannot tell you.

20298. You do not know whether these special children's hospitals have had any influence at all on the mortality?—I cannot tell you by statistics; I am afraid I have no statistics to give on

Chairman—continued.

that point. I have not the least doubt, however, that they have done a great deal to lessen it.

20299. Now, do you train students at your hospital?—Yes, there are a certain number of students admitted.

20300. How do they come, by the favour of the physician or surgeon?—No, it is open to all students to come, on payment of a small fee.

20301. And have you as many as you could accommodate?—No, there are not a large number of paying or regular students; there were about 56 last year.

20302. To whom do the fees go?—To the lecturers, the people who give the instruction.

20303. The fees go direct to the lecturers?—Yes, direct to the lecturers; they are divided, according to the work done.

20304. You have female clinical clerks, we have been told?—A certain number, I think one-half of the total number are allowed; but the proportions of course vary, according to the demand for them.

20305. Do you always have as many as you have room for?—I think always as many clinical clerks as we have room for; the appointments are much sought after.

20306. Is that with a view to further instruction in medicine?—Yes, with a view of improving the knowledge of students and practitioner in the diseases of children.

20307. Have you any of your staff on the staff of other general hospitals besides St. Mary's?—They are all, with two exceptions, I think, viz., the ophthalmic surgeon and the dental surgeon,—members of the staff of some other general hospital; and that, I think, is of great importance, because it brings us into close communication with all the medical schools.

20308. You mean to say that you think that is a good thing for your hospital?—I think it is good for our hospital, and also for the general hospitals.

20309. But it attracts students to your hospital, does it not?—It attracts students to ours. And there is another reason; it keeps the hospital in the hands of men of the highest standing in the profession.

20310. You have no paying wards in your hospital?—No, there are none. I should hope that a paying ward may be added. I think that is really very important. If you will allow me to say what

23 April 1891.]

W. B. CHEADLE, M.D., F.R.C.P.

[Continued.]

Chairman—continued.

what I think on that matter, I should be glad to do so.

20311. Will you please do so?—I think it is very important that there should be provision for the lower middle class. They are very badly off for the best medical advice. Poor people can go to the hospital and get it free. Rich people, of course, can get the best medical advice, and have space to nurse the patients, and ample accommodation; but the lower middle class are almost shut out from these advantages. I think that is one reason why the hospitals are to some extent abused, because people of the class I refer to have no means of getting hold of the best medical and surgical advice. The payment of the necessary fees is rather beyond their means; and yet, on the other hand, their means are supposed to be too good to make them fair objects of charity; and so they are very much left out in the cold; I think that is a thing that requires to be amended.

20312. You think the very poor are all right, and the very rich are all right, but the lower middle class are not?—Yes.

20313. Have you ever considered the possible application of provident dispensaries and hospitals?—Yes, I have thought that matter over, and if it could be carried out satisfactorily, of course it would be a very desirable thing; but there are some difficulties about it which seem to me not to have been yet overcome. One of them is that it would imply the abolition of the out-patient departments in the hospitals.

20314. Would that be a very great evil?—I think they are very necessary for the instruction of students. If the out-patients were all relegated to provident dispensaries, and only cases received at the hospital for consultation, I am afraid very few students would go there unless the dispensaries were made, as it were, part of the hospital, officered from the hospital, and attendance made compulsory.

20315. Why should not the instruction which now takes place at the general hospital be transferred to the dispensary?—That would be making the dispensaries an actual department of the general hospitals. That might be feasible; but not to leave them in the hands of local practitioners with the expectation that the best cases would be sent to the hospital for consultation. I think human nature is human nature, and the best cases would naturally be retained.

Earl Cathcart.

20316. With your great experience, do you find that in successive generations of children there is any tendency to deteriorate or otherwise; rickets and that sort of thing?—It is very difficult to answer that question generally. Some diseases, no doubt, are hereditary, but a thing like rickets is simply the result of bad feeding and neglect.

20317. As compared with 20 or 10 years' ago, do you think that the children are equal in stamina now to what they were?—I think there is an improvement. The knowledge of feeding children has advanced very much among the poor, and the sanitary conditions have improved.

20318. It is in a great measure the bad feeding that causes the great diseases among children, and that is owing to want of know-

(24.) e.

Earl Cathcart—continued.

ledge, you say?—That is one very important element.

20319. Have you many lady students; you did not mention them?—Yes; among our students we have five or six lady clinical clerks. Lady students do attend; it is open to both women and men to attend.

20320. Attending children would be specially adapted for lady students?—In my judgment it is a very proper department for them to take up.

20321. As to these lower middle-class people you speak of, if they were admitted to the hospital they might put money into the poor-box, if they felt inclined?—Yes.

20322. But they do not to any large extent?—It is done.

20323. Twelve pounds we were told was received from the boxes?—It is not very largely done.

20324. To affiliate a dispensary with a hospital would really be to make it a paying department of the hospital, you consider?—It would be very much the same thing, and there are, of course, objections to that.

Earl of Lauderdale.

20325. In connection with the question Lord Cathcart put to you about the deterioration, or otherwise, of children, do you think a larger number are brought up by hand now than used to be?—I cannot say that I have made any observation upon that point.

20326. You do not know that that would have anything to do with their improved condition now, compared with some years back?—I should think it would rather tell against it.

Lord Monkswell.

20327. We have been told by the vice-chairman of your hospital that the nursing of children is especially trying, and he also gave the hours of nursing; it appears that the staff nurses work about 12 and a-half hours a day in a full day; what is your opinion; do not you think that that is rather long?—I think it is a long time. I think, I will not say especially in this hospital, but in all hospitals, there is rather a tendency to give too long hours.

20328. But these hours, I think I may say, are somewhat longer than those which prevail in many other hospitals; would you agree with him that nursing children is especially trying?—I think it is; we have to have a larger number of nurses in proportion to the patients.

20329. But should you say that 12 and a-half hours of nursing children was more work than 12 and a-half hours in an ordinary hospital?—I do not think the work is heavier, but there is, perhaps, rather more wear and tear in the way of incessant attention. The work is not nearly so heavy in the way of physical labour, but there is more worry about it.

20330. Should you say then that in children's hospitals the hours of labour ought to be shorter than in other hospitals?—I think they should certainly be shorter rather than longer; I should quite think that. I have not gone into the question as to the service of nurses very carefully.

3 P

20331. You

23 April 1891.]

W. B. CHEADLE, M.D., F.R.C.P.

[Continued.]

Lord Monkswell—continued.

20331. You said that although you had not the statistics you believed that the mortality among children was eight or ten times greater than that among adults?—I believe so.

20332. Between what ages would that be?—Between two and 10, I think it is.

20333. You do not count children under two in that calculation?—I must correct myself; I

Lord Monkswell—continued.

think that includes all children up to 10 years of age.

Chairman.

20334. Is there anything else you wish to say to the Committee?—I do not think so.

The Witness is directed to withdraw.

MR. RICHARD JAMES GILBERT, is called in ; and, having been sworn, is Examined, as follows :

Chairman.

20335. You are the secretary of the West London Hospital, are you not?—Yes.

20336. That is at Hammersmith, is it not?—It is.

20337. Are you pretty well alone there as a hospital, or in the midst of a hospital district?—We are alone.

20338. What is your nearest hospital going east?—The nearest hospitals would be St. George's and St. Mary's, exclusive of special hospitals.

20339. But those also are some distance, are they not?—Yes, they are ; Chelsea and Brompton are some of the nearest ; that would be about $2\frac{1}{2}$ miles

20340. Is there any hospital further west than you?—No general hospital ; I believe there are some cottage hospitals.

20341. Is yours a general hospital?—It is a general hospital.

20342. Without a school?—Without a school.

20343. Are there any students ; do any students come at all?—We have had students. There are none that are appointed by the committee now. We have had some who have been appointed by the committee. Occasionally the staff bring their pupils with them.

20344. Are pupils at other hospitals admitted?—Yes.

20345. Is your hospital a free hospital?—The letter system obtains. Every patient is required to bring a letter of recommendation. As regards out-patients, if they happen to come without a letter of recommendation they are examined, and if their cases are found urgent they are treated at once, and then they are sent away to get a letter of recommendation, in order that they may come under a member of the visiting staff. At their first visit they are treated by the resident medical officers.

20346. But no patient can become an in-patient without a letter of recommendation by a governor?—Oh yes. There are very few, as a matter of fact, of the in-patients who are admitted, simply because they come with a letter of recommendation from a governor.

20347. Then it practically amounts to this, that the test of admission is the severity of the disease?—Yes, as regards in-patients.

20348. And supposing you had two patients applying simultaneously, one with a governor's letter and the other without, but with a worse disease, which would have priority, the one with the governor's letter?—The one that was very ill would certainly have priority.

Chairman—continued.

20349. Are you a salaried officer?—Yes.

20350. And may I ask what salary you receive?—At the present time 250*l.* with house, rates, and taxes ; but some few years ago that arrangement as regards house, rates, and taxes was somewhat amended in this way, that I was granted 50*l.* a year on the condition that it was expended in the payment of rent, rates, and taxes, and the house to be approved by the committee.

20351. The object of that being that it should be close to the hospital?—Yes.

20352. And do you live in such a house now or in the hospital?—Within less than 100 yards.

20353. How many beds have you?—We have 101 ; that includes about 10 in special wards.

20354. When was this hospital founded?—It was first started as a dispensary for the districts of Fulham and Hammersmith, in the year 1856. In the year 1860 a mansion was taken at a rental of 100*l.* a year, and then they commenced receiving in-patients, and the institution went under the name of the West London Hospital and Dispensary, for certain districts, which were named. A few years subsequently that definition of places was withdrawn, so that now patients are received from anywhere.

20355. How long, may I ask, have you been secretary of the hospital?—Since August 1880.

20356. And previously to that had you any hospital experience?—No.

20357. What was your line of business?—I was in the secretary's office of the London and North Western Railway.

20358. You have had, then, what I may call a business training?—Yes.

20359. You say you have 101 beds, and certain wards with 10 of those beds set apart?—We have several special wards ; we isolate erysipelas and diphtheria, and objectionable cases, and cases that make noises and would disturb the general wards are removed if there is any prospect of their behaving in an objectionable manner for any lengthened period.

20360. You do not take infectious cases?—Not such as scarlet fever, or measles, or small-pox, or typhus ; there are very few other cases that we do not admit.

20361. Who admits to the wards, one of the medical men?—Yes ; in fact, the medical men and the house committee.

20362. Have you got a resident medical officer?—We have four ; two house physicians and two house surgeons.

20363. Are

23 April 1891.]

Mr. GILBERT.

[Continued.]

Chairman—continued.

20363. Are those under the authority of the hospital?—Yes, under the committee.

20364. Now, will you explain to us about your various committees; what is the highest body in the hospital?—The highest body would be the committee of management; they appoint out of their body finance and house committees. We have also a medical council, consisting of the honorary medical staff of the hospital.

20365. But how often does this first committee meet, the committee of management?—Once a month and when specially summoned.

20366. And how many members are there on it?—Including the *ex officio* members there are between 50 and 60; these are summoned by notice every month.

20367. And then, as to these committees to which they delegate certain portions of the work, how often do they meet?—The finance and house committees meet weekly.

20368. And what is the business of the managing committee?—The managing committee receives the reports and proceedings of the lower committees and also of the medical council; and, in fact, the sub-committees and the medical council have to report all that they do to the committee of management.

20369. At the same time the house committee, as I think you called it, is practically the administrative body of the hospital?—Yes.

20370. Without final responsibility?—Yes, without final responsibility.

20371. Now, what are the duties of that committee; do they go into all the small accounts and the various pass books, and various petty cash books and stock books, and so forth?—The finance committee does the financial portion of the work, and the house committee looks into all the orders that are given and examines the requisitions.

20372. You told us that the number of your beds was 101; what is your average working number of beds?—If you will allow me I will refer to my notes. The average number of beds occupied daily during the last three years has been 88·69; last year there were 94·45 occupied.

20373. Do you take a large number of out-patients too?—Yes, we have a very large out-patient department, because the hospital serves the parishes of Fulham, Hammersmith, Chiswick, Acton, and Brentford almost exclusively. Then a very large proportion of our cases comes from Kensington and from Barnes; so that the number of our out-patients, individual patients, has averaged during the last three years, 21,000 odd.

20374. Are those new cases?—Yes, those are new cases, and their attendances averaged 60,700 odd.

20375. Now, do you have complaints from your medical men as to a tremendous crowd in the out patient department?—We have had complaints from some medical men as to the extraordinary number of cases that they have to see.

20376. There is no limit of number?—No, it is unlimited.

20377. Or is there any limit of hours; is your door only open at a certain hour, and then closed again?—We have various times for opening;

(24.)

Chairman—continued.

but with regard to the general work, when the visiting staff attend, for that the gates are open at half-past one and closed at half-past two.

20378. You say that you furnish medical relief to this enormous district you have mentioned; are there no dispensaries there that you know of?—I believe there are some paying dispensaries.

20379. Part-pay or whole-pay?—I fancy they are supported by subscriptions as well.

20380. You have mentioned that the nearest hospitals are about two and a-half miles from you. What sort of area would be included in the circuit of your hospital?—I should think it would cover an area of very nearly 40 square miles; somewhere about that.

20381. And what population?—Taking it from the middle of Kensington, say Church-street, Kensington, I should think the population would now number about 500,000.

20382. Do you make any inquiry as to the circumstances of your patients?—I have done so; it is no part of my duty to do so, but I have done so.

20383. I mean at your hospital, does any one in authority make any inquiry at all?—It is nobody's duty to do so; I believe that occasionally independent inquiries have been made of the patients themselves, not beyond; I have myself done so, and I have generally found that I have been rather unfortunate in the cases that I have happened to select, in the cases that I happened to make inquiry into.

20384. Do you mean that they were really worse off than they seemed to be?—I mean, that from their appearance, I might have thought they ought not to have come to the hospital for treatment, and on inquiry, if one should rest contented with their own explanations, they were certainly eligible. For instance; I remember on one occasion, I noticed a very well-dressed woman indeed get out of a hansom cab at the out-patients' gate, and I thought to myself, "Well, this appears to be clearly a case that should not come to the hospital," and I inquired of her what her circumstances were; she lived in a house at 40*l.* a year rental, she said. "But," I said, "should you come to a hospital"; "Well, I consider I am eligible"; "How do you get your living"; "I let lodgings." "You drove up in a cab just now"; "Quite so, that cabman happens to be my own lodger, and he drove me up, as he was on his way here." I have on several occasions been defeated in realising my suspicions, and that was one of the instances which more particularly has fastened itself on my memory.

20385. Now, do you ever have to turn people away from your hospital, in-patients I mean?—Yes, occasionally, I have had to do so for misbehaviour.

20386. I did not mean that, I mean because your hospital was so crowded that you could not take them in?—Yes; last year, for instance, many days I have known the medical officers of the out-patient department wanting to admit cases, frequently eight in a day, and we have been unable to admit them for want of accommodation.

20387. What are you assessed at?—£. 300; and lately an adjoining house has been taken for

3 P 2

the

23 April 1891.]

Mr. GILBERT.

[Continued.]

Chairman—continued.

the nurses, the rateable value of which is 60*l.*; this would make a rateable value in all of 360*l.*

20388. And what amount of land does the hospital stand on. Have you any land besides that?—Yes, we have. If I may make a little calculation I think I can tell you; it approaches four acres, we have a good square block. If you will allow me, I will place in your hands a few copies of our report; I am sorry to say it is only the report for the year 1889; for some reasons we have thought it advisable to keep the present one in hand for a short time.

20389. Are you prepared to speak about the funds of your establishment?—Yes.

20390. Could you tell us what your expenditure and income were last year, and the sources of income?—At the commencement of that report you will see a plan. You were asking about the extent of our land. We practically spread our monies over two accounts, the one called "Estate Account" and the other "Maintenance and Management Account." The estate account is set apart for the purposes of extending the hospital, for investments; the management and maintenance account speaks for itself. Last year for instance, the income on our estate account amounted to 3,176*l.* 3*s.* 3*d.* That was made up of donations, 14*l.* 16*s.*; dividends on 2,952*l.* 0*s.* 7*d.*, India 3½ per cent. stock 100*l.* 15*s.*; legacies, 1,314*l.* 10*s.* (I should mention, that by a resolution of our committee legacies are appropriated to this account.) That would make a total of 1,430*l.* 1*s.* Then we have an estate which we call the Hammersmith-road and Wolverton-gardens Estate. I should explain that that is property which we have recently purchased, and the expenditure in completing the purchase of that property last year amounted to 1,399*l.* We received rents on that property amounting to 109*l.* 15*s.* 6*d.* That would yield a total of 1,508*l.* 15*s.* 6*d.* Then we have a small leasehold estate called the Elm Grove estate, the rent from which amounted to 237*l.* 6*s.* 9*d.*, making a total income for the year of 3,176*l.* 3*s.* 3*d.* On the expenditure side we have: Interest on loans, 107*l.* 15*s.* 1*d.*; cost of fencing to back areas, less sale of old material, 7*l.* 15*s.* 6*d.*; stamps, fees, &c., *re* enfranchisement of hospital site and four cottages in rear, 10*l.* 2*s.* 6*d.*; total, 125*l.* 13*s.* 1*d.* Then expenses on the Hammersmith-road and Wolverton-gardens Estate: By purchase of freehold of lots 5, 6, and 7, Wolverton-gardens, 1,368*l.* 15*s.*; less deposit paid during 1889 of one year's ground-rent returned during the year, 36*l.* 10*s.*; nett, 1,332*l.* 5*s.*; stamps, fees, &c., in connection therewith, 13*l.* 14*s.* 6*d.*; stamps, *re* loan, 3*l.* 10*s.*; stamps for fees, &c., *re* purchase of 198, 200, and 202, Hammersmith-road, 32*l.* 12*s.*; agents' fee *re* purchase of those houses, and Wolverton-gardens, 10*l.* 10*s.*; repairs and alterations to the houses in Hammersmith-road, 294*l.* 1*s.*; less sale of old material, 3*l.*, leaving 291*l.* 1*s.*; architect's commission thereon, 9*l.* 11*s.* 6*d.*; railings, &c., on frontage of Hammersmith-road, 215*l.* 17*s.*; architect's commission thereon, 10*l.* 16*s.*; total, 226*l.* 13*s.* Insurance on 189, 200, and 202, Hammersmith-road, 2*l.* 1*s.* 3*d.*; water rate on 202, Hammersmith-road, 1*l.* 0*s.* 8*d.*; labour and plants in garden, Wolverton-gardens,

Chairman—continued.

21*l.* 17*s.* 3*d.*; total, 1,944*l.* 16*s.* 2*d.* Then there was expenditure on the Elm Grove estate.

20391. Give us the total of that?—£.105. 1*s.* 3*d.*, making a total expenditure of 2,175*l.* 10*s.* 6*d.*

20392. Then there is a surplus in your favour because the receipts were 3,176*l.* you said?—That is so.

20393. Now will you give us the details of the receipts on the maintenance and management account?—Annual subscriptions, 2,411*l.* 13*s.* 9*d.* nett; donations, 994*l.* 10*s.* 4*d.*; alms-boxes nett, 314*l.* 3*s.* 6*d.*; Metropolitan Hospital Sunday Fund award, 572*l.* 18*s.* 4*d.*; Hospital Saturday Fund award, 175*l.* Congregational collections: Church of England, 122*l.* 19*s.* 8*d.*; Nonconformist, 46*l.* 19*s.* 6*d.*; Friendly Societies' demonstrations, 242*l.* 0*s.* 9*d.*; entertainments, 14*l.* 4*s.* 5*d.*; fees, 43*l.* 1*s.*; miscellaneous, 34*l.* 8*s.* 5*d.* Total income, 4,971*l.* 19*s.* 8*d.* Samaritan fund, donation 10*s.*

20394. Now what is the management expenditure?—The management expenditure consists first of the salaries of officials.

20395. What is the total?—£. 648. 7*s.* 6*d.*, that includes besides salaries, printing, stationery, advertising, postage, and incidental expenses.

20396. I want the total expenditure?—For management 648*l.* 7*s.* 6*d.*, for what we call maintenance (that means provisions, wines, and drugs, &c.) 5,436*l.* 11*s.* 4*d.*

20397. What is the total?—The total expenditure, that would be for management and maintenance together, 6,084*l.* 18*s.* 10*d.* On the Samaritan fund, 1*l.* 18*s.*

20398. So that you have a large deficit on that maintenance and management account?—Yes.

20399. Do you bring in the surplus on the other account to meet it?—No, we have borrowed 1,900*l.*

20400. Had you a deficit the year before also?—If I remember aright we had a deficit on this particular account the year before also.

20401. Then are you in a continual state of deficit?—It has been so for the last two years.

20402. Are you gradually getting to the end of your resources?—We have four acres of property that is very valuable; we could realise a very large amount of money from that.

20403. You have no fear of foreclosure?—No.

20404. And do you appeal and have a dinner?—We have not had any dinner since the year 1888.

20405. Did you find that it did not answer?—Yes, it did answer. The net result of that dinner, I think, was 2,000*l.*, rather more.

20406. Do you appeal very frequently?—Yes, we are in a constant condition of appeal; indeed, that is the only way we get our funds.

20407. I think you said you had 1,314*l.* from legacies, which you put to the other account?—Yes; under a subsidiary heading in that account there is also a legacy of 90*l.*, which would therefore bring up the total to 1,404*l.* for the year 1890.

20408. Is that a very small amount for legacies, or is it about the average?—I consider that our hospital is very unfortunate with regard to legacies, as, during the whole period during which it has been in existence, that is to say, 35 years,

23 April 1891.]

MR. GILBERT.

[Continued.]

Chairman—continued.

35 years, we have only received 25,609 l., which would yield an annual average of 731 l.

20409. You mentioned an item of your receipts just now, fees, 43 l.; I did not understand what that was?—Those fees are probationers'; those nurses have to pay a fee of 2 l. 2 s. on admission; the item also includes the fees paid by some ladies who have attended the hospital for the purpose of gaining experience in nursing for district work.

20410. Do those ladies reside in the hospital when learning?—Not as a rule; occasionally we make arrangements for them to do so; but they are treated on the same footing as the other nurses as regards food and so on.

20411. Are the medical men members of your committee?—The consulting staff are members of the committee of management, and also the senior physician and senior surgeon.

20412. Where does the Samaritan fund come from?—Only some trifling donations which we receive from time to time for the purpose of assisting the poor patients who leave the hospital.

20413. Are grants made sometimes, then, to the Samaritan fund from the general fund?—No.

20414. Do you train your own nurses?—Yes.

20415. Can you tell us what the nursing staff is?—The nursing staff consists at the present time of 26 nurses.

20416. Exclusive of the matron?—Exclusive of the matron, or, as we call her, lady superintendent.

20417. What salary does she get?—At present, 60 l. a year.

20418. And she is under one of these committees?—She is under the committee of management, and the sub-committees, and also myself.

20419. Then, in the absence of the committee, are you supreme in the hospital?—I am responsible.

20420. Would you tell us what the hours of these nurses are in their various grades?—As regards the grades, we have three. There are four head nurses, 10 assistants, and 12 probationers. As regards duty, those of the head nurses are from 8 to 8; the day assistant nurses from 6.30 to 8, and probationers the same. Would it be right for me to mention now when they have off hours?

20421. If you please?—The day nurses every evening from 8 to 9.30; one evening a week from 5 to 9.30, with generally an extension to 10 o'clock; on Sunday three hours off, but including half-an-hour for dinner, or whatever meal it may be. As a rule they are off daily one hour. Once a month they have a clear day, never entering the wards. They have an annual holiday of 14 days; but the lady superintendent always grants private leave of one day extra. Then they have their special leave at the lady superintendent's discretion. The night nurses have full two hours daily, and a night off once a month.

20422. When do the day nurses have their meals?—They have a half-hour for each meal.

20423. What time do you say they are in the wards?—At 6.30 they come on duty, then prayers, and so on; they do not get in till a quarter to 7.

20424. When do they have their breakfast?—On entering the ward they are served with (24.)

Chairman—continued.

a cup of tea and a little bread. I will give you details as to what they have later on if you wish it, and I will answer the question now as to the hours for their meals. The first, breakfast, is for the day nurses at half-past 7, the first dinner is at 12, the second dinner at half-past 12, the first tea at 4.30, the second tea at 5; the dinner for night nurses at 7.30 p.m., their breakfast at 8.30 a.m., and their lunch from 11 till 11.45 p.m., tea at any time during the day. The day nurses have supper from 8 to 9.30. Breakfast consists of bacon, hot or cold, or sausages, or fish, or eggs, bread and butter, tea or coffee. Dinner consists of hot joint and two vegetables, and bread and cheese. When there is cold dinner, always two courses with pickles or salad to season, soup, or pie, or pudding; the soup, or pie, or pudding generally twice a week. One day a week they have fish dinner, and a second course of pie or pudding. On Sundays, with hot joints, a Yorkshire pudding is often given in addition. Beer or milk to choice. Tea consists of bread and butter and tea. On Sundays, as a rule, jam or marmalade is given in addition. Supper consists of meat or pudding, with bread and cheese, milk or beer to choice.

20425. Who dines with the nurses?—With the day nurses, the housekeeper.

20426. And do the head nurses dine with the staff nurses?—Yes.

20427. They all dine together?—They all dine together. And might I mention that we have only one class of food throughout the hospital; officers, patients, and nurses and servants are all fed from the same joints.

20428. In the case of any complaints by the nurses, would they be brought to you?—Yes.

20429. Do you find that the nurses complain much?—No, not of late years.

20430. As regards the food, who makes the contracts?—The committee.

20431. Is it done by open tender?—No, by invitation.

20432. Who makes those invitations?—I do.

23433. And then do you compare these tenders one with another?—Yes, and then the committee make a choice.

20434. Who takes the food in?—The housekeeper.

20435. And then does she weigh it and inspect it?—Yes, she has to see to its being weighed.

20436. Have you any steward?—No.

20437. All the food is served from the same joints, you say; have the nurses got a separate kitchen?—They have what we call their dining-hall.

20438. But where is their food cooked, in the hospital kitchen?—In the hospital kitchen.

20439. Is the health of your nurses pretty good?—I believe it is as good as it is in any hospital.

20440. Have you any idea what your average of sick nurses is?—No.

20441. You could ascertain that I suppose?—I daresay we could.

20442. At this weekly meeting of this committee is there not a return of nurses produced showing who are off duty from illness?—No.

20443. But if a nurse is ill, is it not reported

23 April 1891.]

MR. GILBERT.

[Continued.]

Chairman—continued.

to the committee?—No, not necessarily; sometimes we report it, sometimes not. I may mention that, at the house committee meetings a list of the admissions is read over, and this would include the name and complaint of any sick member of the household taken off duty and warded. In this way the committee would have cognizance.

20444. There is no nursing committee?—No.

20445. Then a nurse might be ill, and the board of management know nothing about it?—It is hardly likely; our chairman visits the hospital daily, and we tell him everything that happens.

20446. That is the chairman of the committee?—Yes.

20447. Is that a business-like method, do you think?—I should think so.

20448. Do your nurses have any menial work to do besides nursing; scrubbing and cleaning?—Well, our rules say that they have to clean their own rooms, but that is not carried out. They do nothing in the wards.

20449. Have you what are called ward maids?—We have what are called ward maids, but they have, in a small hospital like ours, other duties to do besides; the ward maids are not permanently in the wards. In a small hospital like ours there would be no occasion to keep them in the wards.

20450. Do they sleep in the place?—Yes.

20451. Do you send any nurses out to private nursing?—No.

20452. Do your nurses sleep on the premises?—We have none sleeping in the hospital; we have two houses in which the dormitories for the nurses are.

20453. Are they quite close to the hospital?—Quite close.

20454. Have you got any collector?—My assistant bears that title.

20455. And does he get any commission on the subscriptions?—No; nobody receives a commission.

20456. Then what was your meaning when you said that the subscriptions were 2,411/10 "net"?—Attached to the church of St. Mary Abbott's, Kensington, they have some people who are called treasurers of the charities of Kensington, and our hospital is included in their list of charities, and the subscribers send their contributions to these treasurers, who remit to the hospital; and they deduct a small charge to cover their expenses.

20457. Now does this finance committee you spoke of check all the small books?—Yes.

20458. And do they check the account books of the hospital: that is to say, as regards the amount of provisions in the hospital daily; have you a book of that description placed before them?—Do you mean a stock book?

20459. Yes?—No, we have an order book; we have no stock book; our provisions are ordered in daily.

20460. Have you no means, then, of comparing whether the expenditure is going up or down?—Yes, I should be on the look out for that, and point it out.

20461. But do you think it is satisfactory that the responsibility as to that should rest with the secretary alone?—The committee sees that the books are placed before them at every meeting.

20462. But, as far as I can understand, there

Chairman—continued.

is no book which shows the different items, and the way they might go up or down?—Yes, I put before the committee an abstract, for instance, of the tradesmen's weekly account books; so that if provisions were going up or down it would be noticed at once.

20463. And that, in your opinion, takes the place of a stock book?—It would not be on all fours, in my opinion, with a stock book.

20464. But would it not be better to have a stock book?—It would entail so much extra labour, and I do not think any advantage would accrue to the hospital; if there is extra labour it will mean extra expense.

20465. Is there a system of vouchers for all expenditure?—Oh, yes; we have a receipt for every payment.

20466. Are those looked out and checked by the finance committee?—Those are checked by the finance committee.

20467. And when do you pay your bills?—Practically, quarterly.

20468. What do you mean by "practically," quarterly?—There are some few accounts that we pay monthly.

20469. And if you want money, you borrow it from your banker?—Yes.

20470. Have you got a professional auditor?—Yes.

20471. A chartered accountant?—Yes. Our auditors are Messrs. Broads, Paterson, & Co.

Earl Cathcart.

20472. How far are you from Charing Cross?—We are just outside the radius.

20473. Do your physicians and senior staff complain of the distance?—They have made no real complaint; I have heard them remark occasionally upon the distance.

20474. But some of your principal medical officers live at a considerable distance from the hospital?—They all live about Harley-street, and Hanover-square, and Grosvenor-square.

20475. It is more or less a tax upon the medical officers having to go so far as you are; three or four miles?—It is a tax upon his time, certainly.

20476. Do your out-patients ever stand out in the rain?—If they choose to come, as many do, half-an-hour before the gates are open.

20477. But on a wet day are they sometimes kept huddled together in the rain?—Our gates have for years been opened at half-past one for the afternoon attendances, and we open the outer gates at one o'clock, so that any one who will persist in coming so long before the doors are open, can get under shelter, should it come on to rain.

20478. Then, in that respect, they are more fortunate than the out-patients of many hospitals?—I am afraid I have not much knowledge of other hospitals.

20479. Have you what they call a monthly book; that is a book whereby you know at a glance that the patient has been in the hospital for a month, and you report that to the committee?—Yes, of the in-patients; we have a book that shows that weekly.

20480. But is there anything particularly to call the attention of the committee to each case that has been in the hospital at least a month?—This weekly return.

20481. And

23 April 1891.]

Mr. GILBERT.

[Continued.]

Earl Cathcart—continued.

20481. And practically, is that made out with a view to check the too long continuance in the hospital of a patient?—Yes, that is often inquired into, the length of stay of patients.

20482. You mentioned prayers for the nurses; have you any religious test of any kind whatever?—None.

20483. Or anything in the nature of a religious test for the nurses?—No, we simply ask of what religion they are when they enter; but it is immaterial whether they are Roman Catholics, Protestants, Dissenters, or Church of England.

20484. Can they attend prayers, or not, as they think proper?—No; all attend prayers.

20485. They are bound to attend prayers?—They are all called in the first thing in the morning.

20486. And there is no objection made on the part of any of your nurses, within your experience, to having to attend prayers?—No, they have never made any objection to it.

Lord Monkswell.

20487. How long have the nurses for their meals?—Half-an-hour.

20488. Three half-hours in the course of the day?—Yes.

20489. What time do they go off duty; I gathered at 8 o'clock?—Yes.

20490. Their hours are, then, from 6.45 to 8, with an hour-and-a-half interval?—Yes.

20491. That is 12 hours a day?—Yes; I also mentioned other hours they were off duty.

20492. But that is 12 hours in a full day?—Yes.

20493. Can you tell us how many members attend the weekly committees generally, and how many is the quorum?—Three form a quorum for the sub-committees and for the medical council, and five form a quorum for the committee of management.

20494. That meets weekly?—No; once a month.

20495. And the smaller committees meet once a week?—Once a week.

20496. How many are members of the sub-committee?—Eight.

20497. Are the sub-committee composed of different members, or are they the same?—No; the management and house committees are the same members.

20498. You do not advertise for tenders, but you issue invitations, you say; on what principle do you issue invitations?—I make a selection of those whom I think likely to serve us best; I only get my ideas from looking at the outside of the establishment.

20499. Is that a very sufficient test?—Well, we could not have better food.

20500. How far do your walks extend for that purpose?—Our butcher is in Church-street, Kensington, and our grocer is in St. Paul's Churchyard.

20501. Do you ever change your tradesmen?—Yes; but we were so well treated the last time we went into a contract that it was renewed then for this year with the same individuals.

20502. What objection might you have to advertising for tenders; have you ever put it
(24.)

Lord Monkswell—continued.

before the committee, or they before you, whether it would not be advisable to advertise for tenders?—No; I originally put before them the names of certain people whom I recommended that they should make a selection from, and the selection was made.

20503. The only reason you gave was that you had looked at the shop windows, and thought that the shop looked suitable?—One gets a little idea of the people from conversation, and so forth.

20504. You ask your neighbours, you mean?—Yes.

20505. Then you do not go more than a mile away?—Yes; I mentioned that we went to St. Paul's Churchyard for our grocer.

20506. Apparently, then, when you take your walks ever so far away, you look into shop windows with a view to seeing whether you can find a better shop than the one you are employing; but would you really go so far as St. Paul's Churchyard?—For instance, Messrs. Dakin & Co. are pretty well known.

20507. Do you supply patients with tea, butter, and sugar?—Our in-patients are supplied, with regard to food, with everything except butter.

20508. How do they get butter?—They purchase it themselves. In any case where the patient should be so poor that he could not purchase it, if the medical officer thought it necessary and ordered it for him, it would be provided for him.

20509. If he wants to buy it on his own account, do you keep it on store and sell it to him, or how does he get it?—His friends bring it to him; or if a person happens to come to the hospital and no friends visit him, he gives money to our porter or nurse to purchase it for him.

Earl of Kimberley.

20510. Why do you make this exception of the butter?—I cannot tell; it is an old exception that was in existence before I joined the hospital; indeed some few years before I joined it, I believe tea and coffee were also exceptions.

20511. If tea and coffee are given, is there any reason why butter should be excepted?—No, I do not know why it should be excepted, but no harm has been found to arise from it. The truth is it seems to point to the fact that the patients are well able to provide themselves with it, and they certainly get it fresh and fresh.

20512. Then the same principles might be extended to a number of articles?—It might be extended.

20513. With regard to the woman whose case you have mentioned, who appeared to inhabit a house rented at 40*l.* and let lodgings, how did you satisfy yourself that she had not means to pay for the treatment; the mere fact that she came in a cab was not sufficient to convince you?—No, I did not satisfy myself further than by the answers to the questions I put to her; I did not go beyond the woman herself; but then she came with a letter of recommendation from a governor; and that we look upon as a guard to some extent against the abuse of the charity.

20514. What information did she give you
3 P 4 which

23 April 1891.]

Mr. GILBERT.

[Continued.]

Earl of Kimberley—continued.

which made you think she was a proper object of charity?—It was only on her own statement given to me that she was not in a position to pay for medical advice.

20515. Did you ask her what sort of income she had?—Well, as she claimed this particular cabman to be one of her lodgers, I imagined that she was not doing a very high class business, and therefore the profits would be very small.

20516. Now, amongst the large number of out-patients that you have, do not you think that there must be a good many who are perfectly well able to pay for their own medical treatment?—I believe a very considerable number might pay a small amount; that is my own belief; I do not know.

20517. Do you think that there are many of them who could pay for the whole of their medical treatment; not a contribution towards it merely?—Oh, no. Two or three of our medical staff have expressed a certain amount of astonishment at the poverty of the patients who come to the hospital.

20518. Do you think that a great many of them come to the hospital who would get relief at a poor law infirmary?—Undoubtedly, some would.

20519. Have you a poor law infirmary near you?—Quite close to us.

Chairman.

20520. I do not think you told us what the salaries of your nurses were?—I will take the probationers first of all; they start at 12*l.* a year for 17 months; at the end of that time, if approved, they are appointed assistant nurses, and start at 20*l.*, rising by annual increments of 2*l.* to 30*l.* With regard to the assistant nurses, where we do not train them ourselves, after we have investigated their qualifications, if we are satisfied with them, they start at 24*l.*, rising by annual increments to 30*l.* Our head nurses start at 28*l.*, rising by annual increments of 2*l.* to 36*l.*

20521. Do you give any pensions?—No, the case has not arisen.

20522. Is Dr. Seymour Taylor one of your staff?—He is at present a member of the staff.

20523. He has made representations as to the crowding of your out-patient department, has he not?—Yes, he has.

20524. Have you lately reorganised your out-patient department?—No, all that has been done has been to engage a fourth resident medical officer, whose time is chiefly devoted to assisting in the treatment of the out-patients during the hours that the visiting staff are also at work.

20525. Have you had complaints from him of this kind that so many people have come to the hospital, to the out-patient department, with the most trivial complaints?—Yes, I believe that a considerable number come with trifling complaints; and I look upon the letter system as operating to prevent a very great extension of this attendance of trivial cases, because there is a certain amount of difficulty in getting a letter.

20526. Have you any officer whose duty it is to sift cases when they first come to the out-patient department?—Yes, that is the duty of the resident medical officers.

Chairman—continued.

20527. Are those paid?—They do not receive a salary; they are boarded and lodged.

20528. Will you explain what you mean by “sifting”?—What I thought you meant was that, as the patients attend *en masse*, the resident medical officer examines each of them, and directs them as to whether they are to go under a surgeon or physician, or a physician for the diseases of women, or the eye surgeon, and so forth.

20529. Would it be possible to have an officer whose business it was to sift these cases, with a view to seeing if they were fit recipients of medical relief from the charity?—It would be possible, certainly.

20530. Or do you think that the expense of such a man would hardly be commensurate with the advantage to be gained?—I have no means of judging, but my own opinion is that it would not materially affect the attendance at the hospital.

20531. You do not think that the fact of your having such a man, and its being known that a man was there whose business it was to inquire into their circumstances, would keep people away who were not fit recipients of relief from the charity?—It might tend, to a certain extent, to do so; I should think it would most certainly have that effect, but I should think in our hospital only to a limited extent.

Earl of Kimberley.

20532. Reverting rather to what I asked you before, I suppose you would hold that your hospital supplies charitable assistance to those who are not so poor that they ought to go to the poor law infirmary, and yet are so poor that they could not pay for their medical relief; is that so?—Yes.

20533. Do you think that that is a considerable class?—Yes, I do.

20534. Therefore that the poor law infirmary could not supply the want consistently with the ordinary principles of poor law administration?—No.

Earl Cathcart.

20535. What do you calculate the weekly cost of an out-patient at?—We do not work it out weekly; but the average during the last three years is, I think, a trifle over 1*s.* 1*d.* per patient. We do not work it out per week; but we make it 1*s.* 1*d.* per out-patient; but the cost of each attendance would be a trifle over 4*d.*

20536. You may take it on an average as about 1*s.* 6*d.* a week?—No, not so much as that; the cost for an out-patient at our hospital during the last three years has averaged 1*s.* 1·82*d.*, and the cost per attendance during the same three years has been 4·76*d.*

20537. We have been told that it averaged from 1*s.* to 1*s.* 6*d.*, and that the number of attendances averaged about three?—Yes, that is so at our hospital.

20538. What is your annual cost per bed?—You can get it in this way: our average cost per in-patient per week for the last three years has been 19*s.* 11*d.*; so it is under 52*l.*

20539. Have

23 April 1891.]

Mr. GILBERT.

[*Continued.*]*Chairman.*

20539. Have you got any honorary architect?
—No.

20540. Or any architect or expert as regards sanitary matters?—We have no architect who is attached to our hospital as an officer.

20541. Do you have any sanitary inspection of the drains?—Not by any specialist. Our drains were re-organised about five years ago; the old system was entirely done away with, and a new one, brought up to date, put in.

20542. But how do you know that it is still all right if there is not a regular examination of it?—Of course that is not known.

20543. You do not know in your hospital whether the drains are in good order or not?—I believe they are in perfect order.

20544. But would you like to take a house on an understanding that it was probable that the drains were in perfect order, not making yourself quite certain of it?—Well, as a matter of fact, I have just recently done so.

Earl of Kimberley.

20545. Would it not be a good thing to have an inspection yearly by an independent authority, in order that you might be satisfied that nothing was wrong?—I feel so satisfied that everything is right that the idea has never occurred to me.

Earl Cathcart.

20546. Have you a plan which is kept up to date?—We have a plan of the drains. It seems to me that if there were anything wrong with our drains, the first people to discover it or to feel the effects would be the patients, and our patients seem to get on very well indeed; in fact we are able to reduce the number of days' residence to a trifle over 22 days.

Earl of Kimberley.

20547. Would it not be as well not to leave it for the patients to suffer in order that you might discover that the drains were out of order, but to ensure that they were in good order by having an independent inspection, which would prevent the occurrence of anything wrong?—It might be an advantage.

20548. Especially as after a time it must be almost certain that something would require a re-adjustment?—It might be an advantage.

20549. Could it not be done at a small cost; it would be a security, would it not?—Yes.

Chairman.

20550. Is the health of your nurses good?—I was asked that question a little while ago, and I think I replied that I believed the health of our nurses would compare with that of those at other institutions.

20551. But the reason why I asked you the question was, that I understand that you do not keep any return, so that you could refer and really ascertain what was the state of your

Chairman—continued.

nurses' health?—Our lady superintendent, I know, keeps a book in which she makes a record of every time a nurse becomes ill; and of course nurses who become ill become patients of the hospital, and are recorded as patients of the hospital; and with a little labour I could extract the number and the days that they are recorded as sick persons.

20552. So that a record is kept up by the lady superintendent?—Yes. When I answered just now, I did not think of her private memoranda on that subject.

20553. You have no paid resident medical officer?—No.

Earl Cathcart.

20554. Have you had a case of diphtheria amongst the nurses?—Yes.

20555. Recently?—I cannot call to mind that we have had one recently; that is to say, this year.

Chairman.

20556. Perhaps you will furnish us with that information?—I will take a note of it.

Earl Cathcart.

20557. Not as to diphtheria only but any cases of illness among the nurses during the last three years?—During the last three years I know we have had cases of diphtheria.

20558. Cases of all diseases during the last three years among the nurses; it will not give you much trouble to make it out?—You want to know generally the cases of illness among the nurses during the last three years?

20559. Yes; a return of any illness, illness of all kinds, amongst the nurses during the last three years?—I will furnish that.

Chairman.

20560. Do you isolate diphtheria?—We do.

20561. All cases?—All cases.

20562. Is there anything else that you wish to mention to the Committee?—No, I am not aware of anything; I presume you would not like me to make an appeal.

20563. I should like you to do this: to put in a return of all the employés that you have at the hospital, all the servants and officers, and so forth?—Do you mean as to their names or the numbers?

20564. The numbers. Will you communicate with the Clerk of the Committee, and send it on?—Yes.

20565. And also their salaries?—You do not want me to individualise them; merely to give the numbers?

20566. Merely the numbers and their scale of pay?—I will furnish that.

The Witness is directed to withdraw.

23 April 1891.

W. B. CHEADLE, M.D., F.R.C.P., is re-called ; and further Examined, as follows :

Chairman.

20567. I BELIEVE you desire to make a correction in your evidence?—I should be glad to correct a misapprehension which has arisen. I was asked a question about the hours of the nurses, and it was assumed in the question asked me that they were 12 hours. There is an error in that ; it is only 12 hours twice a week. On two other days it is eight hours only, and on two other days 10 hours. So that it is only twice a week really that they have 12 hours. And then those hours include the time for meals, so that there is about an hour further to be taken off. I think our nurses are certainly not over-

Chairman—continued.

worked, and their health keeps up remarkably well.

20568. Can you tell us what the matron's salary is?—I think it is 100*l.* a year, but it really is not in my department.

20569. You cannot tell us, I suppose, what the assessment of the hospital is?—No ; the secretary would, of course, have all that information.

The Witness is directed to withdraw.

Ordered, That this Committee be adjourned to Monday next, Twelve o'clock.

Die Lunæ, 27^o Aprilis, 1891.

LORDS PRESENT:

Earl of LAUDERDALE.

Earl SPENCER.

Earl CATHCART.

Earl of KIMBERLEY.

Lord SAYE AND SELE.

Lord CLIFFORD OF CHUDLEIGH.

Lord SANDHURST.

Lord SUDELEY (*Earl of Arran*).

Lord MONKSWELL.

Lord THRING.

THE LORD SANDHURST, IN THE CHAIR.

MR. DAVID CANNON, is called in; and, having been sworn, is Examined, as follows:

Chairman.

20570. YOU are the Secretary of the Soho Hospital for Women, are you not?—I am.

20571. How long have you occupied that position?—Fifteen years last Christmas.

20572. What was your business before you became Secretary of the Soho Hospital?—I was in business in Liverpool.

20573. Do you mean that you were in a commercial house in Liverpool?—On my own account as a tea merchant.

20574. Therefore you had had a business training before you became secretary of this hospital?—Well, I think so.

20575. Is this hospital of yours a free hospital?—Both free and paying.

20576. And who are free; the out-patients?—Yes, and we have free in-patients; we have 40 beds reserved for the free patients, and the other beds, about 20, are for paying patients. We had a new wing built for paying patients.

20577. And how far does that payment extend; is it whole payment?—Twenty-five shillings a week is the customary payment; we have payment as high as two guineas a week; that payment covers everything; the patient who pays that sum has everything provided, medical attendance, operations, or anything necessary, for that fee; but we require a form to be filled up by her own medical adviser, a proper form approved by both committees, medical and general.

20578. What is the form?—It is simply this: that when the new wing was started in 1869, there was an idea that it might be drawing patients in from the doctors. Now, the form provides for the patient's own doctor filling it up; he sends her in. That was the object of the form.

20579. You mean that, owing to that system being pursued, therefore the practitioners cannot be robbed by the hospital?—That was the notion at the time, I imagine. It was started before I was there. The new wing was opened in 1869; I joined in 1875.

(24.)

Chairman—continued.

20580. Therefore a woman goes into your hospital as a free or paying patient on the recommendation of her own medical adviser?—Yes.

20581. And he sends her to the hospital, knowing the circumstances, and whether she is able to pay?—Yes.

20582. How are the patients admitted who are admitted free; are there any governors' letters?—They are not required for the out-patients, only for the in-patients, they attend daily on 10 in the morning, and the doctor of the day sends them to me, saying "such-and-such a case should come into the hospital. They are told they can get a governor's letter by applying to those on the list, and a list is provided for them by myself; I give a list to every patient, and they are told to ask for a governor's letter; if they do not get it from one, they ask from another, until they do get it. If the case is very urgent, and the doctor certifies that the woman ought to come in without delay, she is taken in without waiting for that governor's letter; because, as you are aware, delay might be dangerous in some cases, so that we do not require a letter for urgent cases.

20583. That is with regard to cases taken into the hospital?—Yes.

20584. In the 40 free beds?—Yes.

20585. Have you ever been in this position, that you have sent patients away to other hospitals. General hospitals?—I think only once or twice in my experience, when a patient has driven up in a dangerous state, applying at a wrong time of the day, and all the beds were occupied, we have simply told her to drive on to the Middlesex, which is our nearest hospital.

20586. You have not done this during the time that you have filled the office of secretary, sent away a patient so as to leave room for a paying patient?—Oh, no, because I have discretion from my committee even to put a free patient into a paying ward if necessary, in a severe case of urgency. I have that discretion, but

27 April 1891.]

Mr. CANNON.

[Continued.]

Chairman—continued.

but I do not know that it has ever been done more than twice in the whole of my time.

20587. Therefore if there is any change of beds you err rather on the side of putting free patients into paying beds than of sending away poor patients, so as to keep paying beds empty?—Certainly; we have never had to send what I call an urgent case away. Of course many of our cases are able to wait two or three weeks. We do not take accident cases, you see, in our hospital; it is not like a general hospital in that sense.

20588. You call your hospital a special hospital?—Yes; we claim it to be the first of the kind. It was founded in 1842 exclusively for diseases of women.

20589. You would not call it a general hospital for women?—No, because we do not take all cases that might be treated in general hospitals.

20590. In fact, they are all special cases that you take?—Entirely so, peculiar to women's diseases only.

20591. At the same time this is a different hospital from a lying-in-hospital?—Yes, we do not take that branch.

20592. What salary do you receive?—£. 300 a year.

20593. And could you tell us what the constitution of your hospital is as regards board and court, and so on?—Yes. We have recently been incorporated by a Royal Charter.

50594. First of all, when was it founded?—In 1842. It was then founded in Red Lion-square; the building was opened there; it was removed to Soho-square in 1851, and the new wing that I referred to just now for paying patients was opened in 1869. We obtained our Royal Charter of incorporation in 1887. All the buildings we have are freehold; but unfortunately we have a large mortgage debt. That we are trying to get rid of as fast as we can.

20595. I will come to that afterwards. Then have you an annual meeting of governors?—Yes; the committee of management are appointed by the governors, and so are all the honorary medical officers appointed by the governors; all paid servants, and officers, and so on, are appointed by the committee of management.

20596. How often do the committee of management meet?—Twice a month; the first and third Thursdays of the month.

20597. As well as that, have you got a finance committee, and so on?—No; the one committee takes the whole.

29598. They do all the checking of the small books, and that sort of thing. do they?—That is done by myself. I am practically steward in a measure,

20599. And are these books laid upon the table?—Yes; the matron, of course, sees to all the detail of the housekeeping bills; she brings them to me; I make up all the figuring and put them into the housekeeping book, which is laid on the table at each meeting of the committee.

20600. But are these books ever looked at by the members of the committee?—Yes.

20601. And initialled?—Not initialled. But in addition to that we have a ladies committee, who have all these tradesmen's bills before them,

Chairman—continued.

and they sometimes draw the attention of the general executive committee to the fact that the articles are somewhat excessive, and so on.

20602. Are those ladies governors?—All governors of the hospital. By our constitution every member of the committee of management, or of the ladies' committee, must be a governor.

20603. Then are these ladies elected by one of these annual courts?—Not the ladies' committee, elected as a body; the general committee can appoint the ladies' committee.

20604. How many members of the general committee are there?—There are 15. The constitution allows us to have 21, but 15 is the usual number.

20605. And the quorum is what?—The quorum is three.

20606. And do the ladies perform other functions than looking into the small accounts; do they visit the wards, and so on?—Yes, constantly; and they frequently have the matron before them; in fact, I think they have her at every meeting before them; and they advise with her as to anything they think necessary for the wards; they consult her, and they represent to the general committee what they think is desirable in the way of getting an extra quantity of bedding or linen, beyond the ordinary things she would get herself.

20607. Are these ladies continually round the wards?—Yes.

20608. Then with regard to the wards, how many beds have you in the wards?—We have 66 in the house, in the whole of the hospital; we cannot put up more than 66. For that number of beds we have 15 wards; and that I think will explain why our expenditure is excessive, compared with that of other hospitals, because our wards are so much cut up. Small wards are much more expensive to work than larger ones; at any rate, in my estimation, we require more nurses proportionately to the number of patients.

20609. But the work you do requires more careful nursing than most cases, does it not?—I would suggest that that is a medical question. I am not a medical man myself. I do not know exactly on that point. I am only speaking of the difficulty of so many nurses managing so many different rooms as compared with the larger wards, where you have twenty or thirty beds in a ward.

20610. I will come to the nurses in a moment. Then your out-patients, with this restriction, that they must have a governor's letter, are free?—They have no restriction when they come to the hospital; out-patients are seen entirely free; we make a great point of that.

20611. You have practically an unlimited out-patient department, then?—Yes.

20612. Are there any other hospitals or dispensaries in your immediate vicinity?—The Middlesex is the nearest; then Charing Cross is not much further off; those are both general hospitals. There is no other women's hospital near us, not what I should call a hospital. One is a private institution, which we do not recognise, of course, as a hospital; it is Dr. Somebody's Home

27 April 1891.]

Mr. CANNON.

[Continued.]

Chairman—continued.

Home Hospital; that is close to us. I have been constantly annoyed with applications about it.

20613. But did not your hospital begin in something like the same way when first founded?—That I cannot tell you. All I know is it was founded after due consultation with many noted medical men. I have a list of the medical men here, if you care to look at them, with regard to that.

20614. Have you got a balance sheet with you?—Yes.

20615. What was your expenditure last year?—Including a deficit carried over from the previous year, we had 6,568 *l.* 16 *s.* 11 *d.*, and there was a special bequest to the mortgage debt, which was put to the mortgage debt sinking fund, which makes a grand total of 8,368 *l.* I have a spare copy if you would like to have this (*handing a report to the Chairman*). On the back of that there are certain figures.

20616. Your expenditure was about 8,368 *l.*, you say?—If you take the average ordinary expenditure it is 6,800 *l.* a year.

20617. And your receipts were, what?—£. 7,122. 9 *s.* 7 *d.* There is a slight difference in our favour, I think, on 15 years; I have taken it all there for 15 years. We have managed to put away so much towards our mortgage debt. Since I was secretary, after my third year of office, we have kept all our beds open and have managed to reduce our debt, which originally stood at 18,300 *l.* to 10,800 *l.*, and that I hope next year will be cleared off entirely, besides keeping all our beds going.

20618. You hope to clear off the whole 10,800 *l.*?—I hope so, by next year.

20619. How do you propose to do it?—We have been reducing it as we get legacies in. Those accounts show that we have a deficit of 1,246 *l.* on the ordinary account; but on the page just immediately before that, namely, on page 27, there is a mortgage sinking fund, 3,435 *l.* 10 *s.* We have added on to that during the current year, so that we have every reason to hope that next year will clear the whole of our debt, and we shall stand freehold.

20620. But now your annual subscriptions come to how much?—Unfortunately, I cannot get them over 1,500 *l.* a year; we have had them as high but never much over that.

20621. Last year it was what?—1,466 *l.*

20622. And then donations?—Last year 1,022 *l.*

20623. Then that includes monies from the Hospital Sunday Fund, does it not?—No, the Hospital Sunday Fund grant was 364 *l.* 11 *s.* 8 *d.* and the Saturday Fund 87 *l.* 10 *s.* in addition.

20624. Then legacies?—£. 2,852. 6 *s.* 6 *d.*

20625. And then "Mr. Daniel Proctor's Executors. Discretionary"?—That is included in the legacies that I have named of 2,852 *l.* 6 *s.* 6 *d.*

20626. Then I see "Nursing Fees"; what is that?—Those are small fees we have received from probationers who came in to be trained.

20627. Where do you get the principal part of your support from; what class of subscribers?—I have not taken out any details to show that.

20628. I mean, are you supported in the neighbourhood at all?—We have a few supporters in the neighbourhood, but not very many. We

(24.)

Chairman—continued.

get a fair amount of our support from the City by grants from the Livery Companies, and from the Corporation; and before the Charity Commissioners made some alterations we used to get support from some of those parish estates in the City.

20629. And as to your legacies, do you always put them to a sinking fund?—Not the whole of them; but as far as we are able to do so.

20630. What has been the average the last 10 years of your legacies?—I think it is on that report I have given you, at page 32. I think you will find there the average in pencil at the bottom. We have had them as low as 30 *l.* and 100 *l.* The last two years the average has been rather better, over 2,000 *l.*; but taking the average of the 15 years it is 1,200 *l.* or 1,300 *l.*

20631. Is 1,123 *l.* the figure?—I think that will be about the average of the legacies for the 15 years.

20632. Then really you are well off in your legacies; what keeps you going is the legacies?—We consider that we are very badly off for legacies as compared with other institutions. We are now only beginning to get what we call a fair proportion.

20633. Do you appeal a great deal?—Every now and then we have an appeal.

20634. Only once a year?—At Christmas; a Christmas appeal, that is our usual course; we have had a dinner and concert, and so on, occasionally.

20635. Did you at one time appeal very frequently?—No, not in my time; in fact it was rather the opposite way. When I took up office we had to shut up a floor for want of funds, but I do not think the present members of the committee were all on the board then, and I fancy the policy was to shut up the wards rather than go to any expense of appealing (I am only giving my own opinion), and since we started a constant appealing we have managed to keep all our beds in use. But it is expensive, as is recognised by the Hospital Sunday Fund. They are constantly drawing my attention to our expenditure as compared with that of other hospitals.

20636. In that particular, or in others, do you mean?—In the management expenditure. I have been before the council of the Sunday Hospital Fund two or three times, pointing out that unless we appealed we might as well close a lot of our wards, as far as my experience goes.

20637. You go on the principle of an advertising firm, in fact?—Something like it; but we cannot afford to do as much advertising as business firms do.

20638. Have you had money from the Hospital Sunday Fund ever since it started?—Yes.

20639. Has the grant decreased or increased?—This year it has rather decreased; they thought that our expenditure was so excessive. But I consider that the council were great benefactors to this hospital. Prior to its institution we received little or nothing from congregational collections; now it is an average of 400 *l.* a year. Of course, we render the same accounts as all other hospitals, and give the balance sheet for three years.

3 Q 3

20640. The

27 April 1891.]

Mr. CANNON.

[Continued.]

Chairman—continued.

20640. The Sunday Fund you mean?—I am speaking of the Sunday Fund.

20641. The Hospital Sunday Fund and the Hospital Saturday Fund act on different principles in making their grants?—The Sunday Fund gave us a reduced grant, which is due to our expenditure. The Saturday Fund gave us a largely increased grant, which, I presume, is on account of the number attending. I do not know that; it is only my opinion; because they do not give us reasons.

20642. Do you train your own nurses?—Our matron is present, and will give you full particulars about the nursing. I think we train most of them.

20643. I will ask her about that. Are the medical men members of this committee of management?—Only one, the senior physician.

20644. Have they a committee of their own?—Yes.

20645. How often does that meet?—Once a month.

20646. Who makes the contracts for the food of the hospital?—I do, under the committee's supervision.

20647. Is it done by open tender?—We generally invite two or three to tender, but we do not do it regularly every year, as some of the larger hospitals do.

20648. It is done by invitation, not by advertisement?—That is all.

20649. And who invites the tradesmen, do you invite them?—I do; we generally try to keep them close to us, as close as possible; but we have not made many changes of late; we have been very well satisfied with our supply.

20650. Who takes the food into the hospital?—It is taken straight to the housekeeper downstairs; she is what you would call a cook house-keeper.

20651. Do the ladies ever go round at dinner-time?—Yes, constantly.

20652. Have you felt any appreciable falling off in funds this year owing to other charities which have been started?—I cannot trace it in any way to that; I have no reason to believe that at present.

20653. For instance, General Booth's fund has not affected you?—The question has been asked me several times privately, and I could not say that I know it for a fact; I cannot prove it in any way.

20654. But have your subscriptions or donations fallen off this year?—My donations are not as good as I might have had in response to the appeal.

Earl Spencer.

20655. Do your patients come from the immediate neighbourhood of the hospital?—A large number of our patients came from the east end of London; a very large proportion of them.

20656. Those are all poor people?—Yes.

20657. People who would be unable to pay for medical attendance?—Yes.

20658. Would they be people who could pay for a medical dispensary?—Well, I do not know; I have never taken out any list of their occupations or the occupations of their husbands; not to go through the cases in detail.

Earl Spencer—continued.

20659. Have you ever considered whether the existence of your hospital prevents the establishment of dispensaries near you?—No, we have not considered that question.

20660. Do you have medical students visiting the hospital?—We have what is called a school of gynaecology; they are medical men who attend in the out-patient department; they take out a ticket for attending for three months.

20661. Do these medical students who come belong to some of the general hospitals?—They may do; there is no reason why they should not; I do not register them, therefore I cannot say.

20662. How are they admitted to the out-patient department?—They have to apply to the dean, and he registers their name and qualification and gives them a ticket to attend on certain days, Mondays and Thursdays, or Tuesdays and Fridays, as the case may be.

20663. And do the medical men give them instruction?—Yes, the medical man of the day.

20664. On that particular branch of medicine?—Only our particular treatment.

20665. Are there many other hospitals of the same kind as yours in London?—I should think now about six or eight, but some are joint with children, *i.e.* for both women and children.

20666. Is yours the largest; can you give us figures which will show what proportion yours bears to the others?—I think the Chelsea, which is a new one, has 63 beds; we have 66; it is very nearly the same, because there are always some beds not occupied, used for operation beds.

20667. Do you have to turn many away?—No, I do not know that we ever turn any away.

20668. There is no demand then for a greater supply of beds in hospitals of this character?—We could fill many more beds; there are always 20 or 30 women waiting to come in; they generally have to wait two or three weeks.

20669. To all the free beds are patients admitted by letter?—Yes; excepting those I mentioned just now that the doctors say are so urgent that they ought to have no delay whatever.

20670. Then what are the class who pay?—Well, we have patients who come up from the country, Eastbourne, Brighton, and so on; they are sent up by their private medical men very often.

20671. Are those medical men who have been themselves connected with the hospital?—No, perfect strangers.

20672. They wish their patients to undergo certain treatment?—They recommend them to come into our hospital because they think they will get the rest and the attendance which they think necessary for them, and the special treatment.

20673. Would cases such as those which come into your hospital be treated in a general hospital?—I believe now the general hospitals have reserved departments for the purpose.

20674. Do you think there is any very great advantage in having a special women's hospital instead of their being patients in one of these departments of a general hospital?—I believe the

27 April 1891.]

Mr. CANNON.

[Continued.]

Earl Spencer—continued.

the reason of its being founded was that the general hospitals did not make that special provision at that time, and it is since the establishment of all these special hospitals that the general hospitals have set departments aside specially for the purpose.

20675. Then you would not consider that under the new arrangements any new hospitals of the kind are wanted?—Well, as a layman, I do not know that I am quite qualified to say that there is much material difference if the cases are properly isolated from the others. I believe there are certain medical reasons why we wish to keep our cases apart from general medical cases; but whether that would refer to keeping up special buildings I do not know. St. Thomas's Hospital, I take it, would be very well adapted for the treatment of such cases, because one of their blocks would answer the purpose.

20676. Are many of your medical men who attend generally on the out-patients connected with a general hospital as well?—That I cannot answer at present. We have many Americans attending who come over for instruction.

20677. Medical men?—Yes.

20678. Medical students?—No; qualified medical men in practice.

20679. And how do they attend at the hospital?—They come and make application for the purpose of instruction, and they are dealt with by the dean in rotation, according to their applications.

20680. Are they treated like medical students?—No; we have no young students in our place, in the sense of the students attached to general hospitals; they are mostly qualified men who come, who want special instruction in our particular branch.

20681. Then are they treated in the wards like medical students?—It is not in the wards; it is only for instruction in the out-patient department that they come.

20682. What sort of number have you of these?—I think they average somewhere between 25 and 30 in the year. There is a list of them in this report, at page 25 (*handing in the report*).

20683. Is this rather a peculiarity of your hospital, which is not to be found in other hospitals; I mean these qualified practitioners who come to study?—I believe it is; but I have understood that some of the others are going to do the same; I have heard it said that Chelsea is now going to open the teaching in the same way; but in saying that of course I am mainly speaking from hearsay.

20684. Could you say why the Americans come?—I do not mean to say that they are all Americans. You asked me whether they were students, and I mentioned that sometimes we have American medical men.

20685. Do you train many nurses for the country, for nursing in villages, and so on, in the country?—No, I do not know that we do; but our matron is present who will give you full information, I think, on that head.

Lord Clifford of Chudleigh.

20686. You mentioned that there was a private hospital near you; is that a paying hospital?—
(24.)

Lord Clifford of Chudleigh—continued.

I think it is called Dr. David Jones' Private Home Hospital.

20687. And does it appeal to the public?—I do not think so; I think it is only a private institution.

20688. You mentioned that it was an annoyance to you, or you led us to infer that it was so, from the trouble which it gave you in answering letters?—That is all, and from the friends of patients asking for permission to see their friends, and it turned out that their friends are in this small home to which I have referred.

Lord Monkswell.

20689. Did you say that you have 66 beds altogether, or 66 paying beds?—Sixty-six altogether.

20690. About 26 paying and 40 free?—Yes; but the 26 are not all paying; we have a few reserved for operation cases, that might be either free or paying.

20691. What is the form of the governor's letter; you say that the admission depends upon the patient being recommended by a doctor?—Unfortunately I did not think to bring one with me as a specimen.

20692. Is the doctor's signature required for the letter?—Not for the free patients. If a doctor from the country wishes to send a free patient up I write and tell him that the usual course is to send a governor's letter and a certificate of the case. It is merely a printed form, that I, so-and-so, recommend so-and-so.

20693. You say that the printed form makes mention of the recommendation of the doctor?—That is referring to the paying patients.

20694. Only the paying patients?—Yes.

20695. Not the free patients at all?—No.

20696. Do the paying patients pay the full amount?—They pay a weekly fee which covers everything; and I believe the reason of that form was the notion that we should draw patients away from doctors.

20697. Do you mean that they pay the whole expense?—No, it does not cover the expense. Twenty-five shillings is what they pay, and our estimate is 2*l.* 2*s.* 6*d.* as the total cost of each patient on the occupied beds.

20698. Some of the patients pay 2*l.* 2*s.*, you have told us?—Yes; they are sent the form and are told that there are beds for 25*s.* and for 2*l.* 2*s.* The only object of their paying the higher sum is that they think, perhaps, they will get better company or different company.

20699. In point of fact they get the same?—Yes.

20700. So that you have beds where patients pay the whole of the expense, and other beds where they only pay part, and others completely free?—Yes.

20701. Why was this hospital divided into such small wards?—When they started it I presume the idea was that the patients would be better treated and more comfortable by being not so many together. Our largest ward consists of 10 beds.

20702. Could you throw one ward into another if it were thought desirable?—If it was reconstructed I think we could.

3 Q 4

20703. That

27 April 1891.]

Mr. CANNON.

[Continued.]

Lord Monkswell--continued.

20703. That question has never come up since you have been secretary?—No.

20704. You say that your contracts are not made by open tender, in fact, generally speaking, not by tender at all, but that you employ those whom you have invited to supply the hospital?—Yes.

20705. What was your employment before you came to this hospital?—I was a merchant in Liverpool.

20706. Would you, as a merchant, know the prices of various things that would be expected to be required in a hospital?—I had nothing to do with a hospital when I was in business in Liverpool.

20707. You came up from business in Liverpool, and you say that ever since you have been secretary, as a general rule, tenders are not sent out, and if tenders are sent out for the supply of goods to the hospital, they are only to a limited number of tradesmen?—Quite so; we invite a half-dozen whom we think suitable to supply the hospital.

20708. You came to the hospital without knowing anything about the prices of these things?—Yes, but I have revised them since I have been there, with the assistance of my chairman.

20709. When you first went there you had no knowledge of the prices of these things that had to be got for a hospital; whose advice did you take as to the tradesmen you should employ?—I simply acted entirely under the advice of the committee.

20710. Did the chairman of the committee or the committee tell you what tradesmen to employ, or was it left to you?—I took up the work from my predecessor, who had been secretary for some two years, and he simply said, These are the tradesmen according to the books. But it was my own doing that I ascertained that some of these prices might be reduced as I thought, and I consulted my chairman, and we had tenders in and got the prices reduced to what they are standing at.

20711. And have you had tenders since that time?—That is three years ago.

20712. And you have been at the hospital for 15 years, so that for 12 years you went on without alteration?—Yes.

20713. You have only once asked for tenders during that time?—Yes.

20714. I understand that you make no inquiry as to the poverty of the patients, either in or out-patients?—No, we have no special arrangement for asking them.

20715. You have no inquiry officer?—No.

20716. And you never go round making such inquiries yourself?—No.

20717. And you do not know that any of the doctors do?—No, I cannot say that they do.

Earl Cathcart.

20718. In reference to your small wards for gynaecological cases, you are aware that in the general hospitals they always reserve a private room for ovariectomy cases, and cases of that nature?—That cases are sent up to a special room for that operation, do you mean?

20719. You are aware that they have private

Earl Cathcart--continued.

wards specially for that in a general hospital?—That I understand.

20720. Do your paying patients object to the publicity of operations?—I have had the question asked me whether they would be subjected to publicity, and that has been the means of keeping patients from coming in.

20721. Are you not aware that all the special hospitals, so far as your information extends, admit medical men to study?—I did not know that all did.

20722. The majority, at all events?—For the operations in the theatre, certainly.

20723. But take such hospitals as the throat hospitals, and other hospitals; most medical men are allowed to come and see the operations, are they not?—Yes; I was referring more particularly to the out-patient department, which, I understood, was going to be thrown open in the other hospitals for women.

Earl of Lauderdale.

20724. What is the average number of beds that were occupied last year?—Fifty occupied daily throughout the year.

20725. And what was the average cost?—£. 2. 2 s. 6 d. a week.

20726. Not deducting what you received in fees on account of the treatment?—Deducting nothing.

20727. And with regard to the admission of these medical practitioners for instruction in the hospital, is there any limit to the number thus admitted?—Only so far that there shall not be more than three in a day attending the medical officer of the day.

20728. Is there any discrimination and selection; is there any special qualification required, or can anyone come. You said just now that American doctors are in the habit of sometimes getting instruction at your hospital?—They give their qualification.

20729. But what sort of qualification is required?—A university degree, such as they take out.

20730. Then a student would not be admitted in that case?—A student of a certain number of years is, I think, admitted. I hope to have one of my medical officers present, who will give you full information on these points.

20731. Then, are lady doctors admitted in the same way?—No; they have never been admitted to our hospital.

20732. Do any lady doctors practise in your hospital; are there any on the staff?—None.

Chairman.

20733. Are all your surgeons members of the College of Surgeons of London?—Yes.

20734. As regards this sinking fund, I cannot quite understand what you said just now. You have got a debt now of 10,000 £. or 11,000 £.?—£. 10,800.

20735. And you set aside to this sinking fund a certain portion of the legacies that you receive?—Quite so.

20736. By this account here it appears that you have a balance of 3,435 £.?—Yes.

20737. And

27 April 1891.]

Mr. CANNON.

[Continued.]

Chairman—continued.

20737. And that leaves about 7,000 l. to be defrayed?—And since that account was made up (it was only made up to the end of December) I had a legacy from Mr. James Nasmyth of nearly 7,000 l., which is appropriated. I only said that I hoped by next year to clear the whole debt.

20738. Do you keep any officer to make inquiries as to people who can pay?—No.

20739. Do you make any inquiry yourselves as to whether they can pay?—The patients who come to me and ask to come in, are asked if they are in a position to pay.

20740. And if they say “No,” you admit them as free patients?—If they get a governor’s letter.

20741. And you think the responsibility ought to rest upon the governor?—We always insist upon the governor sending a letter. Some governors take the trouble to find out if the cases are *bonâ fide*.

20742. Is there anything else that you wish to say to the Committee?—I hoped to have brought before you one of my medical officers to have given you information on some points. My matron is present, who will give you fuller details about the nursing.

20743. In the absence of the committee of management, you are the supreme head of the establishment, I suppose?—Yes.

20744. Have you got any chaplain attached to your hospital?—Yes.

20745. Does he live outside?—Yes.

20746. And does he get any salary?—Yes.

20747. How much?—£. 75 a-year.

20748. And does he come when he is sent for?—Four days a week regularly, and at other times if necessary, if he is called upon.

20749. Is he a curate in the district?—No, he is attached to one or two institutions like the Poor Law Asylum in Cleveland-street.

20750. Have you got any plan of your drains?—I have no plan that I could show you, but I know where the drains are.

20751. Have you no plan in your office?—No, I have no plan.

Chairman—continued.

20752. But would it not be very much more for the benefit of the establishment if you had a definite plan kept up to date?—Well, our drains are so simple that I do not know that there is any necessity to have a special plan prepared for them. We have examination chambers, and the man who does all the repairs can always attend to anything. I could show any stranger myself what it was necessary to do.

20753. Who is responsible for the sanitary condition of the hospital?—Anything that is out of order is reported to me at once.

20754. You look upon yourself as being responsible?—I should be responsible to my committee, of course.

20755. Is there any sanitary officer employed?—No special sanitary officer.

20756. Have you any inspection of the building by an outside authority?—No.

20757. Do not you think it would be a convenient thing if you had?—The question has never been raised.

20758. But yours is a hospital in which there is a great deal of operating, is it not?—Yes; but the operations are conducted quite at the top of the building, as far away as we can get from any drains.

20759. Is there any resident medical officer?—Always.

20760. Is he a salaried officer?—Yes.

20761. He is under the committee of management entirely?—Yes; he takes of course all his instructions from the visiting medical officers; the committee appoint him on the recommendation of the medical committee.

20762. But he is a salaried officer; he is an officer of the committee of management?—Certainly.

20763. Is he a member of that medical committee that you spoke of?—No.

20764. He is quite independent of the medical committee?—Yes.

The Witness is directed to withdraw.

MISS MARIAN SQUIER, is called in; and, having been sworn, is Examined, as follows:

Chairman.

20765. You are the Matron of the Soho Hospital for Women, are you not?—Yes.

20766. How long have you been in that position?—Fourteen months.

20767. And before that, had you experience as a matron?—No, not as a matron.

20768. Were you nurse before that?—I was sister at St. Thomas’s for five years.

20769. And that is where you had your nursing training?—Yes, I was trained there.

20770. Would you tell us what your staff of nurses at this Soho Hospital is?—We have four sisters (three day sisters, and one night sister), three staff nurses, ten ordinary probationers, two paying probationers, sometimes three; one special nurse, and one out-patient nurse.

20771. Now, how do you divide these wards amongst your four sisters?—“A Sister” means a head nurse?—Yes.

(24.) e

Chairman—continued.

20772. It does not mean a religious denomination?—No. The wards are on floors; there is a Sister to each floor; we have three floors.

20773. And how do you place your nurses about in the wards?—The sister arranges that. We have a sister and a staff nurse for each floor, and three probationers on two floors; two on the other, because there are not so many patients on that floor.

20774. And how many beds do you average on a floor where you have five people to do the nursing?—There are twenty-three beds on the two floors.

20775. Is not that rather a large number of nurses per bed?—Yes, it is rather; but they are small wards, and we want more nurses on account of that.

20776. And these cases, as a rule, require, do they not, more careful nursing than the ordinary

3 R

accident

27 April 1891.]

Miss SQUIER.

[Continued.]

Chairman—continued.

accident cases found in general hospitals?—Than some accident cases.

20777. Would you not say that the cases you take in at your hospital do require more careful nursing than the ordinary cases found in a general hospital?—Some of them do, I think; not all.

20778. Have you got enough nurses?—Yes; that staff is large enough.

20779. I see you have got one special nurse; what is exactly her work?—That is a nurse for special cases; cases that are nursed in special wards; operation cases.

20780. Is that one special nurse sufficient; because you may have more than one operation case at a time?—When we have a second operation we take two of our probationers and train them.

20781. But how long have these probationers been trained before you set them to that?—It depends upon the circumstances of the individual case; sometimes a year; sometimes at the end of two years we take them.

20782. In fact you judge, within your own discretion, that they are properly qualified persons, though not legally qualified?—Yes.

20783. Supposing that you require extra nurses, or that some of your nurses are on the sick list and their places have been filled, what do you do; do you get nurses from outside?—I have never had so many on the sick list as to require to get them from outside.

20784. Do you train any nurses to nurse outside in private houses?—Some of them go out to private nursing; but they can only nurse in the special branch.

20785. But have you got room for nurses that you train to go outside?—We do not send them out, only now and again; if our own doctors require a nurse we let them go then.

20786. On the requisition of your own doctors you do send out nurses?—Yes, now and again we send out one if we have one that we can spare; we do not undertake to send them out.

20787. You do not advertise that you will supply them?—No, we do not keep enough nurses for that.

20788. You would only send them out if the wards were empty; something of that sort?—If the wards were light.

20789. You would not denude your own wards for the purpose of sending them out?—Oh, certainly not.

20790. Do you give certificates to nurses?—Yes.

20791. After what time?—After two years' training.

20792. Do they live in the hospital?—Yes, all of them.

20793. And how do they feed; do they feed in the hospital, too?—Yes, in their dining-room.

20794. They have got a special dining-room?—Yes.

20795. And have they got a special kitchen?—No, there is one kitchen for the whole building.

20796. Would you tell us what their hours are?—The staff nurses and probationers come on

Chairman—continued.

duty at seven in the morning, and are on duty till half-past eight at night, and they generally average from nearly two-and-a-half hours for probationers to nearly three hours for staff nurses off duty every day.

20797. Out of the 13?—Yes, out of the 13.

20798. And that includes the time for dinner and tea?—They have half-an-hour for dinner, and half-an-hour for tea.

20799. And two hours besides?—Two-and-a-half to three hours besides, as a rule.

20800. Three hours besides the meal times?—Yes.

20801. Do you give them any holiday?—They have one day off duty once a month; and they spend, as a rule, the night away from the hospital.

20802. And any annual holiday besides that?—Yes, they have about 16 days' holiday in the summer.

20803. I do not think you told us what the sisters' hours are?—They go on duty at half-past eight in the morning, and they are on till half-past eight in the evening.

20804. And what holiday do they get?—They get a month every year, and two days every five weeks; from Saturday to Monday.

20805. And the paying probationer, does she get the same work as the others?—The same work as the others.

20806. And the same holiday?—She is only with us for three months.

20807. Is she supposed to be trained at the end of three months?—In this work. As a rule, the paying probationer comes to us after having had training in a general hospital, and comes to us for special training in our work.

20808. What wages do your nurses receive?—The probationers receive, the first year, 10 *l.*, and the second 14 *l.*, and if they stay on a year, the third year, as staff nurse, they get 20 *l.*

20809. And the sisters?—The sisters begin with 35 *l.*, and it is increased annually till it reaches 50 *l.*

20810. Is there any pension given?—No.

20811. Do the sisters dine with the other nurses?—They have luncheon with them in the middle of the day, and they dine with me at six o'clock in the evening.

20812. Where does the housekeeper dine?—She has her meals in the kitchen with the other servants.

20813. Then there is no high official who dines with the nurses?—I dine with the nurses; I carve for them, and have luncheon with them at the same time.

20814. But you dine with the sisters, I understood you to say?—Yes, later, at six in the evening.

20815. Do you get many complaints from the nurses as regards food and so forth?—Very few complaints, I think.

20816. Not more than in any establishment?—No, I think not.

20817. Is there anything else you would like to mention to the Committee?—No.

The Witness is directed to withdraw.

27 April 1891.

MR. RICHARD T. SMITH, M.D., is called in; and, having been sworn, is Examined, as follows:

Chairman.

20818. You are on the staff of this Hospital for Women, in Soho?—Yes.

20819. Will you tell us what qualifications you hold?—Doctor of medicine of the University of London, and member of the Royal College of Physicians.

20820. Are you on the staff of any general hospital as well?—No.

20821. Is it generally the case that your colleagues are on the staff of general hospitals?—One of our staff is on a general hospital.

20822. Do you see any reason why members of the staff of a special hospital should not be on the staff of a general hospital?—Not any whatever.

20823. In fact, would it not be rather a good thing than otherwise?—I should think so.

20824. Has it ever occurred to you that special hospitals might co-operate with general hospitals?—Yes, to very great advantage, I think.

20825. But is that done at all, do you know?—I do not think so; I do not remember an instance.

20826. What is the difficulty in the way?—Well, all general hospitals have now special departments attached to them; I should think that is the case in every hospital, and they naturally of course wish the students to remain there.

20827. And also to keep their own interesting cases?—Certainly.

20828. Are you very strongly of opinion that special hospitals for women are very much required, seeing the advance that general hospitals have made?—Yes, certainly.

20829. Quite as much required as before the general hospitals had the special departments?—Yes, I should think so. We have more patients than ever at Soho-square, and I believe that the other special hospitals for women are equally well attended.

20830. But what is the reason; why do you think that special hospitals are still required as much as ever?—Do you mean with respect to women?

20831. With respect to women?—Because there is a difficulty in providing the accommodation for the students in the general hospitals. Women object to be examined by a great many doctors; so that of course a number of students who can take a deep interest in the cases is rather limited.

20832. Is that in special hospitals?—In general hospitals. For instance, I might illustrate it in this way: we have a very large out-patient practice and we have a good many students who wish to come to us; but we limit the number of students who can come on any one day to four.

20833. Is it not out of feeling for the patients that you do that?—To some extent it is due to that.

20834. And also want of space?—Yes, and also to want of space. We have three what we call cubicles in the patients' room, three little beds which are all screened off by curtains where
(24.)

Chairman—continued.

the patients can be examined. Of course, if we had larger room we could have six or seven of these, and then we could also have six or seven students.

20835. Is that the only reason that you think that a special hospital is necessary: is the treatment, or rather the opportunities, better in a special hospital than in a general hospital?—I would not like to say that the treatment is better.

20836. I did not mean to put it in that way; I meant, are the facilities greater?—I think the facilities are greater, and I think it must be admitted that with regard to the serious operations in our department the mortality is very much better in the special hospitals than in the general, with regard to ovariotomy and things of that sort. Even in the general hospital they find it advisable to separate the work of that kind from the general hospital itself.

20837. To set apart separate wards for the operation, you mean?—Yes; and where they can, even a special building.

20838. Then you do not think, I gather, that the work of the special hospital now-a-days is coming to an end?—We do not find it so at all; it is rather increasing constantly every year.

20839. But you would not like to see the work undertaken by the general hospitals entirely?—Well, I do not know that I should object to it if it were as well done. It is a question of providing accommodation for patients.

20840. Supposing that the accommodation in the general hospitals could be so increased so as to provide for every demand for these cases, would you still think that these special hospitals would be required?—If these cases of operative abdominal work could be done in special rooms or special parts of the hospital, separated from the rest, everything else considered, I do not see a reason against it; it is a question of expediency and providing accommodation for patients.

20841. Do you term yourself a specialist?—Yes. Of course, I have been through all other departments of the hospital where I was trained, and eventually landed in this way.

20842. Special hospitals have sprung up very rapidly in the last few years, have they not?—I believe there have been several. The one I am associated with is the very oldest of the kind for women.

20843. But are you generally in favour of special hospitals?—Oh, yes.

20844. In various diseases?—In various diseases.

20845. Are you in favour of special hospitals for children?—I should think, in some respects, there is the least need of a special hospital for children, because that is a thing that every medical student ought to learn soon. I suppose the answer would have to be taken from other points of view. Children require special attendants, and require special wards, special knowledge, special food.

20846. Then to go to another branch, as regards ophthalmia, do you prefer a special hospital for
3 R 2
that?

27 April 1891.]

Mr. SMITH, M.D.

[Continued]

Chairman—continued.

that?—Yes, I think the eye is worthy of a special hospital.

20847. And cancer, for instance?—I do not see any reason why there should be a special hospital for cancer simply for the sake of treating the disease. But there are a great number of persons who suffer from that disease; and, again, the way in which they poison wards where they lie furnishes a reason why there should be a special provision for cancer.

Earl Spencer.

20848. Do you consider a special hospital for consumption and diseases of the chest necessary?—I should say so. I might answer that by saying that when I was at University as house physician we were constantly turning away cases of consumption.

20849. As regards the argument in favour of special hospitals, does it refer to the students in the hospitals, and also to the patients themselves, or are you in favour of having special hospitals rather on account of the patients than on account of the students?—Well, with regard to women.

20850. But I mean generally. You have been answering the Chairman lately on general questions as well as questions about women?—Yes, but perhaps I do not quite understand your question.

20851. You think it is desirable on account of the patients being better treated that there should be special hospitals for cancer and other diseases?—I do, certainly.

30852. Do you also think it desirable for medical science generally and for students of medical science that there should be special hospitals, or is medical science better promoted by merely having general hospitals?—I think that now, of course, special attention is given to these diseases even in the general hospitals, and special departments are made for them, and therefore there is not the demand for special hospitals that there was formerly.

20853. It turns greatly on whether they can have accommodation enough?—Yes.

20854. And as the accommodation is larger, there is less need for the special hospitals?—Certainly.

20855. There was evidence given just now about certain medical men as I understood, qualified practitioners, attending particularly the out-patient department for the purpose of instruction?—Yes.

20856. Is that peculiar to the women's hospital?—Not exactly peculiar. We have a rule that a man who comes to Soho-square must be completely qualified, and be in practice.

20857. Do they take any part in the treatment of cases, or merely come for instruction?—They come partly for instruction; or if they come to the out-patients' department they might help the doctor and probably would in seeing some of the patients on their second or third visit.

20858. Then do they come to your hospital because they see cases there that they would not see elsewhere?—To some extent; of course that is only partial.

20859. And the medical men of the hospital practically teach them and explain the cases to them?—Yes.

Earl Spencer—continued.

20860. Do you consider this branch of your practice important?—Exceedingly important.

20861. Is it the case in other hospitals as well, that practitioners come to see cases?—Do you mean in the special hospitals generally?

20862. In special hospitals?—I should think so.

20863. It would not be the case in general hospitals?—In general hospitals they are chiefly students.

Earl of Kimberley.

20864. There are I understand two kinds of special hospitals; first, those which are special as regards the class who go to them, as when a special hospital for children for instance will treat all diseases of that class, and the same with regard to women. There are also special hospitals for special diseases. Now do I understand you to be in favour of special hospitals for special diseases for ophthalmia, or a special hospital for consumption and so forth; is that in your opinion the kind of special hospital that is desirable?—Well, of course it is my opinion that it is so, because they are able to make provision for the treatment of the disease; the general hospitals at present could not possibly make provision for it.

20865. It entirely rests, I understand, on the necessity of accommodation?—Yes, with regard to such things as consumption.

20866. Do you think that there are certain diseases which require to have a special hospital for their treatment; do you make any exception to your view, that if there were enough accommodation in the general hospitals, special hospitals would not be required?—I think there is a strong case for exception in cases where the abdomen is opened; I think it is desirable that that should be done in special hospitals always.

20867. Is that because of the better treatment of the disease in special hospitals?—That is on account of the better health and better results and better safety of the patients.

20868. Do you think, as regards the study of the disease, that special hospitals have an advantage by the staff concentrating their attention entirely on a particular disease, and do you think that that is of importance?—Only in so far as they pay more attention to it.

20869. Do you think it promotes science more?—Yes.

20870. And promotes possible discoveries in new treatment more?—Yes.

20871. And you would be in favour, I presume, of special hospitals in this sense, where they treated diseases such as consumption and cancer, which are of very long duration, which it would be inconvenient to keep in a general hospital for that length of time?—That is one very great reason.

Lord Clifford of Chudleigh.

20872. Supposing it were possible to make a special hospital a part of a general hospital, and put it under the same management without altering the building, if it were simply a question of management; would that be in your opinion an advantage or a disadvantage?—I think it would be an advantage.

20873. You do not think the control of a general hospital might, in some cases, be detrimental

27 April 1891.]

Mr. SMITH, M.D.

[Continued.]

Lord Clifford of Chudleigh—continued.

mental to the proper working a special hospital?—Well, of course it would depend upon the way in which it was controlled.

20874. You do not think there is anything in the nature of the two managements that makes them antagonistic?—No, if they would provide sufficient medical men.

Lord Monkswell.

20875. You have a great many wards in your hospital in proportion to the number of beds; do you think it is desirable or necessary to have so many wards; we are told that it increases the expense?—I should think on the whole it is an advantage with regard to our cases not to have more than 10 or so together.

20876. Some wards, I believe, contain very much less than 10 beds?—Yes; of course where we have cases of abdominal section, those are always done in isolated wards.

20877. On the whole, you do not think it would be advisable to limit the number of wards and throw two into one?—It would be; but why it is done as it is in our place is because of the way in which the place has grown; it has been enlarged by making other wards.

20878. Could you not alter the structural arrangements without great expense?—If we could pull down the hospital and rebuild it we should certainly have some larger wards.

20879. But short of that, you do not see any way of throwing one ward into another?—I am afraid not.

20880. Why should you not utilize the in-patients for medical instruction?—We do to some extent. Those students willing to come prefer to come and see the out-patients. Of course they witness the operations.

20881. The students can if they like come and see them?—Yes, see the operations.

20882. But without seeing the operations, can they go round the hospitals?—Yes.

20883. And they do sometimes?—Yes, they do sometimes; but the point is this: really that they come to us because they want practical instruction; they do not want simply to go round and hear what the doctor says, but to take a little share in the work, and examine the patients.

20884. Cannot they get any real practical knowledge in the in-patient department of your hospital; cannot you give it them?—They do not get it there; that is why they prefer to come to the out-patient department, where they get the opportunity they wish for.

20885. Would there be any objection to granting them some opportunity to examine the in-patients?—No; there is one of the rules which says that they may see them with the house-doctor in the ward; of course not without his presence.

20886. Do they object to that rule that they must see them with the doctor, is that the usual rule of a hospital?—It is the rule.

20887. Then they do not get practically as much clinical instruction in the in-patient department of this hospital as they do in any other hospital?—Yes.

20888. But you were saying that it was rather difficult for students to get instructions, and for practitioners to get further instruction in diseases of women?—Yes, of the kind where

(24.)

Lord Monkswell—continued.

they take some share in the methods of treatment adopted.

20889. Would it not rather facilitate that instruction if the special hospitals were done away with, and these special hospitals for diseases of women made into departments of general hospitals; because surely it must be a great waste of time for a student who wants to get up the subject of the diseases of women to go to a special hospital?—They would have to make such enormous extensions at the general hospitals,—they would have to almost double them entirely to carry out what you suggest.

20890. Still, supposing your hospital could be shut up, and a corresponding extension made to two or three general hospitals, should you not think that that would be better for the clinical instruction of the students and young practitioners than the present system of having to go to a special hospital?—I do not think so; it is not very far; our hospital is within 10 minutes walk of three other hospitals.

20891. So that if these special hospitals were distributed round London in convenient positions you would see no reason why they should not be just as instrumental in teaching medical students and young practitioners, as if they were wings of general hospitals?—Yes; I think they ought to be utilised for teaching.

20892. More than they are probably?—Yes.

Earl Cathcart.

20893. I was told of the case of a female cook which was one fit for operation, and she was sent for operation to a general hospital, the name of which I know, and she was detained there for a long time without operation; the matron was very kind, and was perpetually making excuses during the whole time for this operation not being performed; the lady interested in this cook took her away to another hospital, and there they operated successfully; then it leaked out that in the first hospital there had been so many cases of erysipelas that they were afraid of performing the operation. Supposing that that case was correctly stated to me as I have told it to you, it would be an argument in favour of your special hospital, would it not?—Yes; it is an argument illustrating the point I mentioned, that all these cases should be separated from the general work of general hospitals.

20894. We live and we learn, and I have learned from this little book of yours a thing which I had not learned before, namely, that you make your patients provide soap; do you know anything about that?—No, I do not know anything about the working in the wards, at least not little details of that kind.

Earl of Arran.

20895. Do you consider that your hospital is conveniently situated and healthily situated—Exceedingly so.

20896. The neighbourhood does not give one the idea of being a particularly healthy part?—But it has been so very much improved of late years; new streets have been made.

20897. Have you had any extensions of your building of late years?—Yes; we have had new bedrooms provided for the nurses.

20898. Were you able to lodge them before

3 R 3

the

27 April 1891.]

Mr. SMITH, M.D.

[Continued.]

Earl of Arran—continued.

the new bedrooms were made?—I could not answer that so well as the secretary.

20899. Was not Dr. Protheroe Smith at one time the head?—Yes, he was the founder of it.

20900. Is his son in the hospital?—No, his son is not in it.

Lord Thring.

20901. You do not admit women to learn to be doctors at your hospital?—No, we do not.

20902. Why not?—Because there is difference of opinion on the subject.

20903. Would it not be your opinion that it is the very hospital to which they ought to be admitted?—You ask my opinion personally?

20904. Personally?—I must say that I should not personally object.

20905. I will not press you any more. Then with respect to the question between special hospitals and general hospitals, it is this, if I understand it rightly, doctors object to special hospitals, I daresay rightly, because they subtract from the general hospitals means of learning and attract cases to themselves; in other words, they object professionally, because it injures the schools?—Yes.

20906. Not because it injures the patients?—That I do not know; I do not see any reason why it should.

20907. But is it not the fact that they say, the special hospitals are bad because they prevent our acquiring a knowledge of all diseases; it contracts our knowledge. That is their argument, is it not?—Of course it takes away a certain number of patients from them; there is no denying that.

20908. But apart from the question of medical education, the importance of which I do not at all underrate, it stands to reason, does it not, that the accommodation is better in the special hospital, and, therefore, it is better for the special patient?—Yes.

20909. Then I want to ask you a question, which seems to me to go to the whole thing. Supposing you were choosing yourself a doctor for the purpose of performing ovariectomy, which is a very difficult operation, would you choose a gentleman who was constantly in the practice of performing ovariectomy, or would you choose a gentleman who was in the practice of performing a great number of other operations; for example,

Lord Thring—continued.

cutting off limbs and every operation that a surgeon is accustomed to perform?—I should choose the former, undoubtedly.

20910. Therefore, in your opinion, it stands to reason that practice in a particular operation makes a man more skilful in that operation?—Yes.

20911. And that, on the whole, for the purpose of those operations, constant practice in those particular operations is of more advantage to the patient than general practice?—Yes.

20912. Then, in truth, that is really the whole history of the case, is it not?—And I should like to say that in my opinion the general hospitals have paid very much more attention to these things since the special hospitals have arisen.

20913. Then, as I think it has been put to you before, if a general hospital divides itself into a number of special hospitals *cadit questio*; of course that would be the greatest possible advantage, because you then get the general knowledge and you get the special practice also?—Well, it is of questionable expediency. If I were to take, for instance, my own hospital where I was trained, which is a very good general hospital, and I wanted to go in for all the specialties, that hospital would want to be made more than twice the size that it is now.

20914. I think it is quite clear that you would prefer having a special doctor to perform a special operation; but with regard to the education of a doctor, is it or is it not essential that at all events at some period of his life he should have the most general possible education and not be confined to special subjects?—A young man ought never to cultivate any specialty until he is thoroughly established in every other department of medical work.

20915. Therefore, as I should say is the case in all professions, a man ought to have a general education and then a special education; and then, if he likes, devote himself to a special hospital; and that would reconcile the differences between special hospitals and general hospitals; the special hospital would give the advantage of a special education and the general hospital would give the advantage of a general education?—Yes, and that is the reason that students come to us.

The Witness is directed to withdraw.

CAPTAIN A. S. HINCKS, is called in; and, having been sworn, is Examined, as follows:

Chairman.

20916. You are the Secretary of the Gordon Hospital for Fistula and other diseases of the rectum?—Yes.

20917. Where is that situated?—In the Vauxhall Bridge Road, No. 278, a short distance from Victoria Station.

20918. Is this what is termed a special hospital?—A special hospital for diseases of the rectum.

20919. On what terms are people admitted to it?—Either free or by payment.

20920. Before you go further I will ask you how long have you been secretary?—Four years.

Chairman—continued.

20921. Previous to that, what were you?—Previous to that I was on the committee of the hospital, at the time of its starting.

20922. And before that were you in the army? I was in the army. It is some years since I left the army.

20923. You have been on the committee since it was started?—Since it was started.

20924. How was it started?—It was started in 1884, mainly to meet the wants of people of limited means, who are unable to pay the customary fees in private practice, and yet are not desirous of going to a general hospital and receiving

27 April 1891.]

Captain HINCKS.

[Continued.]

Chairman—continued.

receiving free treatment. I may say, with reference to the way I came to be connected with the hospital, that it was this: I myself had to undergo an operation for one of these diseases shortly before that, after suffering for many years; and the surgeon who operated upon me, was one of the surgeons who founded the hospital; and, my means being limited, it cost me half my year's income to undergo this operation. Therefore I very readily joined in attempting to establish this hospital. We do not take any well-to-do patients, that is to say, patients who are able to pay the customary fees. As to payment, we have two private rooms with single beds, where the charge is three guineas a week; in the general ward it is two guineas a week, and I have authority from the committee to reduce that amount, according to my discretion, after discussing the matter with the patients, if they are really unable to pay it.

20925. Then have you out-patients too?—We have out-patients too.

20926. Is that free?—That is entirely free.

20927. Without any governor's letter?—Without any governor's letter. We have in-patients' letters, but they are very little used.

20928. I understand that this hospital was in the first instance founded by medical men?—Yes, founded by medical men.

20929. How many beds have you?—We have 11 beds.

20930. And what is the average number occupied?—Last year the average number occupied was 9.3; the year before it was 9.

20931. Are you acquainted with a memorandum known as the Memorandum of the Charity Organization Society?—Yes, I have seen that memorandum.

20932. And you are put down there as having an expenditure per bed of 150 *l.* per annum; is that correct?—Well, that is really rather less than what it was that year; the exact figure was 159 *l.* 9 *s.* 9 *d.* The number of beds occupied was five instead of four; and the cost per in-patient 8 *l.* 2 *s.* 9 *d.*, instead of 9 *l.* I do not quite know how those figures were arrived at that are given in that memorandum.

20933. Have you any idea how many out-patients you have?—We had last year 513.

20934. Then you have got to deduct that expenditure from the total in order to arrive at the cost of the in-patients?—Yes. In taking this year we took the 1 *s.* 6 *d.* of the Charity Organization Society. Of course we think that it costs somewhat more, really, but it is a difficult thing to arrive at the actual cost of an out-patient; and of course it does not very much matter; but taking that in the year 1889, we had 11 beds, nine occupied; the cost per occupied bed was 102 *l.* 10 *s.*; the cost 5 *l.*, 16 *s.* 9 *d.* for each in-patient. In 1890, the year just closed, we had 9.3 occupied beds; the cost per occupied bed 105 *l.* 6 *s.* 8 *d.*; each in-patient 6 *l.* 5 *s.* It is a little more last year, owing partly to a rise in the price of coals and provisions, and the extra cost of drugs.

20935. Then I understood you to say just now that there are different rates of pay, but every in-patient does pay?—Not every in-patient.

(24.)

Chairman—continued.

20936. Do you keep beds set apart as free beds?—No, they are all together.

20937. Then it is within your discretion whether to ask for money or not?—It is in my discretion to fix the rate of pay. Last year 11 patients paid three guineas a week; 20 paid two guineas; two paid 1 *l.* 11 *s.* 6 *d.*; three paid 1 *l.* 10 *s.*; 12 paid one guinea; 11 paid 1 *l.*; five paid 15 *s.*; two paid 14 *s.*; one paid 12 *s.* 6 *d.*; one paid 12 *s.*; six paid 10 *s.* 6 *d.*; 18 paid 10 *s.*; one paid 8 *s.*; three paid 7 *s.* 6 *d.*; one paid 7 *s.*; six paid 6 *s.*; eight paid 5 *s.*; one paid 4 *s.* 6 *d.*; two paid 4 *s.*; two paid 3 *s.* 6 *d.*; two paid 3 *s.*; one paid 2 *s.* 6 *d.*, and 38 were free patients.

20938. In point of fact you have these different scales of charge; but when the patients are in needy circumstances you get what you can?—Yes, I discuss the point and urge them to do what they can, and we practically in most cases take what they themselves offer.

20939. Do you have your hospital so full that you have to send people away from the doors?—We have to keep people waiting sometimes; we never have a great many patients on the books waiting to come in; if they do not get in in a short time, two or three weeks, they go off elsewhere.

20940. Do you recommend them to go to a general hospital if you are full?—Yes; if we see that we should have to keep them a long time; if it is a very urgent case we should say, "You had better go elsewhere."

20941. How many out-patients did you have last year?—Five hundred and thirteen.

20942. Were those all new case?—Those were all new cases, separate cases.

20943. Then the attendances would probably be that number multiplied by three?—The attendances were 2,642.

20944. Have you sufficient accommodation for all these out-patients?—Oh, yes; there is never a very large number on one day; I think, perhaps, 25 is about the highest number.

20945. But was this hospital built as a hospital?—No, it is simply a private house.

20946. It is a private house accommodated for this purpose?—Yes.

20947. Now, as to your funds, what was your expenditure last year?—The expenditure last year was 1,018 *l.* 2 *s.* 4 *d.* In saying that, I am leaving out 400 *l.* repayment of a loan.

20948. £. 1,018, you say, was your expenditure, and your income?—The income was 1,387 *l.*

20949. You had a surplus?—We had a deficiency of 30 *l.* 5 *s.* 4 *d.*, taking into consideration the loans.

20950. But you paid off 300 *l.*?—We paid off 400 *l.* We received a legacy of 500 *l.*, and 400 *l.* of that we devoted to paying off the loan from the banker.

20951. And, notwithstanding that legacy, you had a deficiency of 30 *l.*?—A deficiency of 30 *l.*

20952. Do you generally have a deficiency?—No; we had about paid our way for two or three years previously.

20953. Have you been able to make any calculation as to how far the funds from the payments of people will go towards paying your expenses?

27 April 1891.]

Captain HINCKS.

[Continued.]

Chairman—continued.

expenses?—We calculate that each in-patient costs us about two guineas per week. Since the hospital opened our total receipts were 3,525*l.*, including the 500*l.* of legacy, that is receipts from the public, from subscriptions, and from donations; and from the patients, 2,798*l.* 13*s.* 8*d.*; so that, speaking roughly, they pay very nearly half the cost of the hospital.

20954. And what are your sources of income?—We get a certain sum from subscriptions. The annual subscriptions last year were 208*l.*, and the donations, 278*l.* 15*s.*; the legacy, 500*l.*; that included a grant from the Hospital Sunday Fund of 31*l.* 5*s.*, and from the Hospital Saturday Fund of 43*l.* 16*s.*, and collected by temperance clubs, 46*l.* 8*s.* 1*d.*

20955. And how much did that make for that year?—£. 448. 18*s.* from subscriptions and donations, and 438*l.* 19*s.* from patients.

20956. That is again about half?—Again about half.

20957. Do you appeal to the public for funds?—Well, not now generally; we appeal privately; members of the committee write and ask; but we have no collector, and we do not send out general appeals.

20958. Does anybody get any commission on any subscriptions?—No, not last year. Previously to last year there was a commission paid.

20959. Are you a salaried officer?—I have a salary.

20960. What is your salary?—Fifty guineas a year.

20961. And board and lodging?—No.

20962. Is there any co-operation between your hospital and general hospitals?—None at all.

20963. For instance, are any of your staff on the staff of general hospitals?—One of our surgeons is an administrator of anæsthetics at the Women's Hospital, Soho, and at the Metropolitan Hospital.

20964. I mean your medical staff?—Yes, one of our medical staff.

20965. There is no co-operation between the Metropolitan Hospital and your hospital?—No.

20966. Would it be advantageous if such a state of things could be done away with, and if co-operation could be brought about?—I think it would.

20967. Would any difficulty be placed in the way?—I do not think there would be any difficulty as far as the Gordon Hospital is concerned.

20968. Why is it not done?—I do not know; I do not think, from my experience, that any of the hospitals are disposed to co-operate with a special hospital.

20969. You think that it is a feeling of jealousy that prevents it?—Yes, I think there is a feeling no doubt (indeed, we know it to be so) that special hospitals are unnecessary on the part of a great many people.

20970. But you have never heard the idea started that there should be the co-operation I referred to?—It has never been proposed to us in any way, or by us.

20971. What number is the medical staff of your

Chairman—continued.

hospital?—We have now a consulting physician, two surgeons, and an administrator of anæsthetics.

20972. Have you any other hospital of this description anywhere within range of you?—No, the only other special hospital of this description is in the City Road, St. Mark's.

20973. And have you any general hospital close to you?—We are not very far from the Westminster Hospital.

20974. And have people, after going to the Westminster Hospital, ever come to you, do you know?—Yes, I think we have had patients who have been at the Westminster.

20975. You mean to say that where they have not obtained full relief at the general hospital they have come to you?—Yes, we have had patients come to us in that way.

20976. Would those patients be free patients or paying patients?—Sometimes paying patients, sometimes free.

20977. Do you make any inquiry into the circumstances of patients?—Yes, I do from them, not outside, or only very rarely. Sometimes we ask the Charity Organisation Society to inquire for us; if I thought that the case required it I would ask them to do so; and they sometimes send us patients.

20978. When you do appeal, do you appeal as a free charity, or how do you word that appeal?—We state the facts of the hospital, that we take free patients and paying patients. I think we put more prominently forward that it is for persons of limited means; the intermediate class.

20979. A sort of what they call part-pay hospital?—Part pay.

20980. Do you find that people are anxious to pay, or the reverse?—I think, very ready.

20981. They do not conceal their circumstances?

—I think they are very ready to pay. Of course we are an isolated case; payment is not general. I think if the paying system was general they would pay very readily. We have cases where they go to their friends and make up something more than they offered to pay when they came in, that is to say, they pay more than they had arranged for. We have had several cases of that kind.

20982. When cases come into your hospital, are they sent there by any medical man?—Yes, occasionally; not to any great extent.

20983. Are those patients people coming from London or from the country?—More from the country.

20984. Then as regards your nursing, do you train your own nurses?—Yes, to a considerable extent; our present nurses were both at Stockwell, one for five years, and one for three years, before coming to the hospital.

20985. How many have you, only two?—Yes, the matron and two nurses.

20986. And any probationer as well?—No, no probationer.

20987. You have those three women?—Yes, and a ward maid.

20988. Is there any chance of students obtaining instruction in the hospital in these special diseases?—The practice of the hospital is open to all medical men.

20989. But

27 April 1891.]

Captain HINCKS.

[Continued.]

Chairman—continued.

20989. But I mean students?—No, we do not take students at all there.

20990. Are you quite certain of your answer?—Perhaps Mr. Whitmore will be better able to answer that question.

20991. Then how do you feed your patients; is it by contract?—No, we have no contract; the matron conducts the housekeeping; she buys from week to week.

20992. And, then, who are these people under; have you any committee of any kind?—Yes, we have an executive committee, a finance committee, and a visiting committee.

20993. And how often do these bodies meet?—The executive committee meets once a month; the visiting committee, I am sorry to say, do not visit as often as I should like; some of them come occasionally; but the practical working of the hospital is done by the executive committee, which meets once a month.

20994. But they only meet once a month, you say, then in whose hands is the hospital when the committee is not sitting, in yours?—It is in mine, I suppose, as far as oversight goes. The matron has charge of the hospital and control of the staff.

20995. This hospital is an ordinary house with a few bedrooms in it?—Yes, it is only a private house, not specially built for the purpose of a hospital.

20996. Do these committees exercise any supervision at all?—Yes, everything goes before them at their meetings.

20997. Are the various small books placed upon the table?—All the accounts are laid upon the table; all the accounts pass through the minute books.

20998. Do they ever look at them?—Yes.

20999. And initial them?—No, they do not initial them; they are entered on the minutes.

21000. What is the number of the executive committee?—The number of the executive committee is seven.

21001. And your average number of attendances is about what?—About four.

21002. And what is your quorum?—The quorum is three.

21003. Then you have a visiting committee which, as far as I can make out, does not meet very often?—No, it is not supposed to meet; they are appointed to visit the hospital; they come down individually.

21004. Then you might call them visiting governors?—Yes. They are of course members of the committee.

21005. And then what is the other committee you spoke of?—The finance committee, which is practically the executive committee; they are really the same parties.

21006. Who compose the finance committee is the treasurer on it?—The treasurer is on it.

21007. And in addition to him all the other members of the executive committee?—Yes, all the others. The executive committee are the members of the finance committee; it is practically the same committee. Separate minutes are kept, but they meet on the same day, and one follows the other.

(24.) e

Earl Spencer.

21008. You said that there was a similar hospital in the City-road, I think?—Yes.

21009. Is that a hospital dealing solely with the same diseases as you deal with?—Yes, solely.

21010. What size is that?—That has 36 beds, I think.

21011. It is a larger one than yours?—Yes, very much larger.

21012. Have you ever had any plans for enlarging the scope of your hospital?—Not yet; we have never been in a position to undertake that.

21013. Could you take in a good many more patients if you had more room?—Yes, I think so.

21014. I suppose these cases can be treated well in a general hospital?—I have no doubt they can.

21015. Could you give us the reason why you think these special diseases must be treated in a special hospital and not in a general hospital?—I do not think I should be prepared to say that there is any particular reason; but we get a good many patients who are quite unable to pay the fees customary in private practice.

21016. That would be the same, would it not, in a general hospital?—But they would not be allowed to pay at all in a general hospital.

21017. But all yours are paying patients, are they not?—No, not all.

21018. But I understand, on the contrary, in the general hospitals there are some patients that pay?—I believe in Guy's, and one or two hospitals they have a paying patient at a fixed charge; it does not vary as in ours.

21019. Is that a sufficient reason why you should have a special hospital and not a general hospital for these diseases?—I think there is a great advantage in having a special hospital. I think these diseases are not very much attended to by the ordinary practitioners.

21020. Are they not well known, well recognised diseases?—I can only speak from my own experience. I suffered for many years and got no relief until I happened to go to this gentleman in London, who was one of the surgeons of the Gordon Hospital; he at once said that there must be an operation, and that he could cure me.

21021. Was he in general practice?—He was in general practice.

21022. That would be the case, I suppose, with many people; they might go even to a hospital with a particular disease, and have an operation; they could be attended to in a general hospital?—I did not consider that I was an eligible person for a general hospital.

21023. Not even if you paid?—I should not have liked to go as a free patient.

21024. The reason of the necessity of this special hospital is to treat those who can pay rather than those who cannot?—I think so; I think that is the main object. I think that when I myself joined the hospital I should not have joined it if it had been an entirely free hospital.

21025. The object is to provide treatment in a convenient house for those who can pay?—Yes; and my experience of the hospital leads me to

3 S

think

27 April 1891.]

Captain HINCKS.

[*Continued.*]*Earl Spencer—continued.*

think that it is very good for persons still poorer than those I first thought of; they cannot get the nursing or the proper attendance at home.

21026. Of course the small size of the hospital necessarily makes it more expensive per bed?—Yes, very much more so; I think that is very noticeable in comparing those two years, 1887 and 1889. In 1887, when the cost was 159 *l.*, we had five beds occupied; and in 1889, when we came to have 11 beds and nine occupied, it fell to 102 *l.* 10 *s.*

21027. Will you say how the hospital was started in the first instance; was it started by yourself?—Not by myself.

21028. Then was it started by a medical man?—Yes, it was started by medical men. Mr. Whitmore would be able to say very exactly about that. Mr. Benton, who was Mr. Whitmore's colleague, wrote to me and asked me whether I would join the committee of the hospital. As I understood, many patients came to him who were unable to pay his usual fees; he could not afford to visit them in various parts of London without fees, and he thought that a hospital which received payment as far as possible to cover the cost of maintenance and nursing would be a very useful thing.

21029. And he received, I suppose, a salary from the new hospital?—No, the medical men receive no salary; they receive no money advantage whatever from the hospital.

21030. Then it was for the good of his patients rather than his own good that he started it?—Well I suppose all medical men expect to get some benefit themselves in the way of experience and reputation from a hospital, but certainly it was not in any way directly for his own benefit.

21031. Do the medical men who usually attend your hospital also belong to other hospitals?—No, with one exception; Mr. Ogle is chloroformist at the Metropolitan Hospital and at the Women's Hospital in Soho.

21032. But with regard to those who perform the operations, do they also belong to any general hospital?—I think not, but Mr. Whitmore would, probably, be able to tell you.

21033. Was there any profit derivable from the hospital when it was first started by the promoters?—None.

Lord Saye and Sele.

21034. This hospital is on a very small scale, is it not?—Yes, it contains 11 beds.

21035. It is hardly worth while, is it, to keep up so small a hospital with such an array of names, 14 members of the committee, a president, and six or eight vice-presidents, and so on. Is your own time taken up by it as secretary?—Not entirely.

21036. It would hardly be necessary to have a secretary at all for a hospital of this size, would it?—I think they would hardly be able to carry it on without a secretary.

21037. You spoke of 25 out-patients in one day; would not that be rather an outside number for any specialist to see himself?—No.

Earl Cathcart.

21038. Could you tell us why it is called the Gordon Hospital?—It was called after General Gordon.

21039. The famous General Gordon?—Yes.

21040. An was that done out of compliment to him after his death?—Yes, after his death, with the consent of his family.

Chairman.

21041. How did you first accumulate funds so as to put the hospital in a state of efficiency to be started as a hospital?—I think that money was advanced by the surgeons.

21042. Trusting to luck to get the money back in subscriptions, and so forth?—Trusting to having it established. They never have received the money back.

21043. And trusting to the public to support it?—Yes.

21044. I think you told me that you are not supported by the Saturday and Sunday Funds?—We are helped by both the Saturday and the Sunday Funds. I would like, as you refer to the Sunday Fund, to make one remark. There was a misapprehension about the hospital. Sir Sydney Waterlow named the hospital as one that was invited to send a deputation and did not attend. It is, perhaps, my fault from not knowing the rules of the Sunday Fund; but we did not know that we had a right to attend, and we had no invitation. The letter was not worded so. We had an intimation that they would give us the grant, but not the full grant; but we were not asked to send a deputation, and we were not aware that we could do so. Had we been aware of it we certainly should have done so.

21045. You do not know the reason why you had a reduced grant?—They considered the management expenses too great, it was intimated. I do not think we were disposed to complain very much about it. It was felt that, in fact, they had been very heavy.

21046. Do you go through the usual form of having a dinner, a fête, and so forth?—No.

21047. You just get your money out of appeals?—Out of appeals.

21048. Have you a large debt at this moment?—£. 200.

21049. And how long have you been in debt?—The foundation of that 200 *l.* is the money advanced for furnishing to start the hospital.

21050. Was this money advanced by the surgeons?—Yes.

Earl of Lauderdale.

21051. I see you pay 106 *l.* 10 *s.* for "rent, rates, taxes, and insurance;" that is at page 24 of your seventh annual report?—Yes.

21052. Have you got the house on lease?—It is on the ordinary 21 years' lease.

21053. In whose name was it originally taken?—In the names of the surgeons.

21054. Who were the men who signed that lease; can you give us their names?—Mr. Benton and Mr. Whitmore.

21055. Mr.

27 April 1891.]

Captain HINCKS.

[Continued.]

Earl of *Lauderdale*—continued.

21055. Mr. Benton's name is not on this list?—He is dead.

21056. Then Mr. Whitmore is really responsible for the rent; is that so?—That is so.

21057. Is the name of the Gordon Hospital inserted in the lease, or is it taken entirely in the name of Mr. Whitmore?—I have not seen the lease; it was done before I became secretary.

21058. How many rooms has the house got?—Eight rooms above the basement.

Earl of *Arran*.

21059. Is there any arrangement made of a kind to secure the repayment of the money that was advanced to start the hospital?—I think not.

21060. So that, in fact, it was almost, you might say, a gift upon the part of those who started it. Has the money been repaid in any way?—Not in any way.

21061. Up to the present none of the money advanced by these gentlemen has been repaid?—No.

21062. And there is no bond or any security for the repayment?—No, no bond or security.

Earl of *Lauderdale*.

21063. That amount stands as a liability against the hospitals?—Yes, it is shown as a liability.

Chairman.

21064. What was the amount advanced in the first instance?—£. 200.

21065. Have you anything else you would like to say to the Committee?—I think not. I have some figures here; I do not know whether the Committee would care to have them. I have put down the districts where the in-patients came from last year; it might be interesting, perhaps, to the Committee to know that.

Earl *Cathcart*.

21066. But they seem to have come from all over the world; from India, and from every parish in England?—We get them from very far abroad. The numbers of each district are not down in the report. From the South West district we had 51, the South East district 37, the West district 11, the East 13, the North 19, the East City 2, the West City 4, and country places 20.

Chairman.

21067. Have you got a matron?—Yes.

21068. How much do you pay her?—£. 45 a year.

21069. Do you think that as a general principle it is a useful thing to have a hospital with an average of only nine working beds, which employs the services of a paid secretary, a paid matron, and a staff of nurses, and so forth, when the same work very likely could be done by a much smaller staff in a larger hospital?—I should very much like to see it larger; but I think the hospital is doing very useful work, and that we do meet the wants of patients who would not go to the general hospitals, that is to say, not as free patients.

21070. You mean to say that their pride would interfere with their undergoing treatment by a charity?—Yes.

21071. Is there anything further you wish to say to the Committee?—I think not.

Earl of *Lauderdale*.

21072. The bulk of your subscriptions and donations appear to have been realised between 1884 and 1885; can you give us a statement of your subscriptions and donations in the years from the time the hospital was built?—In 1884, the first year, the amount was 488 *l.* 17 *s.* 4 *d.*

21073. In subscriptions and donations?—In subscriptions and donations. In 1885 it was 402 *l.* 6 *s.* 2 *d.*; in 1886, 306 *l.*; in 1887, 397 *l.*; in 1888, 426 *l.*; in 1889, 556 *l.*; and in 1890 948 *l.*, including a legacy of 500 *l.*

The Witness is directed to withdraw.

MR. W. T. WHITMORE, is called in; and, having been sworn, is Examined, as follows:

Chairman.

21074. You are the Surgeon of the Gordon Hospital for Fistula?—Yes.

21075. Were you one of the gentlemen who originally started the hospital?—Yes.

21076. What was your object in starting the hospital?—My object in starting it was this: It seemed to me that there was a great want for such a hospital. There was not another hospital like this in London, not on the same principles.

21077. Are you on the staff yourself of any general hospital?—No.

21078. But would not all these cases be treated equally well at a general hospital?—Well, anticipating that question, I have brought a letter from an old patient that might interest the Committee. That letter is dated February 1891, and is addressed to the Secretary, and, without mentioning names, which would be somewhat invidious, I will read the substance of it:—"I beg through
(24.)

Chairman—continued.

you to bring my case under the notice of the Gordon Hospital Committee, and to bear testimony to the very efficient manner in which I was treated at that hospital. In September 1890 I became ill shortly after I entered the hospital here" (that is, where he is living), "where I underwent an operation, and remained six weeks. In January 1890 I went into a hospital" (somewhere else; it is just as well not to mention names), "where I was again operated upon, and detained nearly 12 weeks, but without receiving any benefit whatever. In May 1890 I obtained admission to the Gordon Hospital, where I was operated on for fistula, and where I was, under Providence, cured." Then he goes on to praise up the hospital, and so on. Now, that is the sort of letter that we are constantly in the habit of receiving. Therefore, that would answer your Lordship's question as to whether these cases are

27 April 1891.]

Mr. WHITMORE.

[Continued.]

Chairman—continued.

as well treated in a general hospital as in a special hospital.

21079. At the same time, the professional advice which is given to patients in the big London general hospitals is certainly not inferior to the advice they would receive at your hospital?—I am not at all in a position to criticise the treatment of the general hospitals, and should not like to do so.

21080. I do not know whether the hospital referred to in that letter was in the country or in London. But it is a fact, is it not, that the most distinguished surgeons are on the staff of the London general hospitals?—I have always believed so; I have always supposed so.

21081. Therefore, that being the case, in a London general hospital the advice and operating would be as good as it is in a special hospital?—I cannot offer an opinion on the treatment of the general hospitals. As a matter of fact, in answer to your Lordship's question, I may repeat that the letter which I just now read is a letter similar to many that we get in cases where patients go to a general hospital, where they have been treated for months and years by general practitioners and general surgeons. They come to the specialists and they are cured.

21082. Your average of beds is nine, I think, occupied?—I am not prepared to go into the figures of the hospital; I leave that to Captain Hincks.

21083. I will just put a question to you which I put to him. Do you think it is worth while having a hospital with a salaried staff, the expenses of secretary and matron, and so forth, for a small number of beds like yours?—These expenses of the paid officials, Captain Hincks and the matron, I take it, as compared with other hospitals are merely nominal; just in the same way as the hospital itself is in embryo.

21084. The matron's full time is taken up, is it?—Very much taken up.

21085. And she lives in the hospital?—She lives in the hospital.

21086. So that although with regard to the secretary's time, that is more a nominal occupation?—No, I beg your pardon, it is not a nominal occupation. His time is taken up a very great deal by interviewing these patients. I think he was very modest in giving the Committee an account of what he does. The amount of work is enormous; he has to interview all these people, and it takes up a lot of his time. It is not "nominal" at all, I assure you.

21087. Yet at the same time, though your salaries are lower than they are at the general hospitals, your expenses are very much larger per bed?—These calculations, I must admit, I am not prepared to go into; I leave them to the committee and the secretary, and I avoid them. I am not very good at figures myself, I have quite enough to attend to by attending certainly three times a week, and I cannot be bothered with the figures.

21088. Were you one of the gentlemen who advanced a sum of money to start this hospital?—I was.

21089. Do you see your way to getting it back?—Well I should never bother the com-

Chairman—continued.

mittee for the money unless I saw that they were in funds. I think that it is money well spent, if I did not get it back; it has done a great deal of good. I should be very pleased to receive it back, I must say. I expect to receive it back some day.

21090. Then your object in starting this thing was more philanthropic than anything else?—Certainly.

21091. Do you term yourself a specialist?—Yes, I term myself a specialist.

21092. A specialist, I mean, as opposed to a general practitioner; or are you a general practitioner as well?—No, I am not a general practitioner as well.

21093. And are you in favour of other branches of the medical profession having their special hospitals?—Certainly I am.

21094. For the reason that you think the work would be better done there than in the general hospitals?—No, not to compare them at all. I think that for the good of the public and the good of everybody the special hospitals ought to be supported; not because the work is worse done, or not so well done, in the general hospitals. If you get a specialist in the general hospital you find that his cases will succeed and do succeed.

21095. Is it not the case now that the large general hospitals with schools all have their various departments for these various diseases?—No, indeed they have not; not for these rectal cases, certainly.

21096. But are not rectal cases treated in general hospitals?—Yes, they are; with the result that my unfortunate patient mentions.

21097. Do you have any students at your hospital?—Yes, the more the better; we encourage them to come all we can; we advertise to that effect.

21098. And do they come from other hospitals to see your work?—Well, if they are students they must be attached to other hospitals, because ours is not a school.

21099. Do you ever have from a general hospital, or from any other medical men, cases of this description sent to you for treatment?—No, not directly from other hospitals. It is difficult to know how they come. The committee of another hospital have never sent them, but I have had cases sent me by hospital surgeons.

21100. That is a sort of co-operation between the other medical men and your hospital?—No, not co-operation. They know that these cases are treated by the surgeons attached to the Gordon, and they send them on, saying to the patient, "Well, you can be treated there."

21101. Do you think it has ever occurred that they have been sent to you in that way by a surgeon who is on the staff of a general hospital?—Yes, I know it has.

Earl Spencer.

21102. Did you start the hospital in order to supply a place where you could operate on paying patients, or to benefit people who could not afford to pay the expenses of a surgeon?—Do I understand your Lordship to mean to pay me or to pay the hospital, when you say "paying?"

21103. To pay the hospital, I mean. I understood

27 April 1891.]

MR. WHITMORE.

[Continued.]

Earl Spencer—continued.

stood from the previous witness that it was in order to found a place where paying-patients could go for the purpose of operations; not in order wholly to afford free admission to those who could not afford to pay?—There was a slight misunderstanding, as I understand it, on the part of Captain Hincks, in the answer which he gave on that subject.

21104. Will you explain your view?—From what I understood of his answer, I think Captain Hincks led the Committee to suppose that he was treated at the Gordon Hospital himself; which was not the case. He was treated elsewhere as a paying patient by my late colleague.

21105. But was the hospital established for the sake of being a more convenient place for paying-patients, or for free-patients?—For paying; for patients who could pay something, but who could not afford to pay for an operation at home, and who did not like to go into a general hospital. People we find are very willing to pay something so that they may not be considered paupers. And this particular class of case is very delicate; they do not like to talk about it, and they will go anywhere to avoid that; they will say, "We will pay a few shillings, and we will be treated at the Gordon Hospital," or, "We will pay more; we will be very pleased to pay more."

21106. Are these cases cases that can be treated in ordinary houses quite safely by a surgeon, or must he have particular appliances, such as your hospital affords, in order for them to be successfully treated?—The question embraces such a wide field that in my answer it may appear as though I avoided it. The cases can be treated anywhere, as long as it is a nice clean room.

21107. They do not require a special hospital for treating them?—They require special treatment.

21108. But you can give that special treatment at home?—Of course you can give it anywhere; you can give special treatment anywhere.

21109. Then, according to you, the hospital was established in order that people who could not afford to pay for a surgeon at home might have the operation performed in a hospital?—Certainly.

21110. At a moderate rate?—At a moderate rate. The whole of the money that they pay goes to the hospital; it does not go to the surgeon; because if they could afford to pay a surgeon they would not be operated on in the hospital.

21111. I do not want to know the name of your patient who was treated before he came to you; but he was not in London, I understand you?—No, he was not in London; he was in Dublin. I could have brought a lot of other letters, if I had known they would have been received, from patients living in London.

Earl of Kimberley.

21112. I think you spoke of the hospital as being in embryo?—I consider it so; it has been in existence now for seven years.

21113. That shows that you are looking forward to its having a larger scope and being

(24.)

Earl of Kimberley—continued.

extended?—There is not the slightest doubt at all about that.

21114. And with regard to some of the expenses that are necessarily incurred, and that may now seem large in proportion to the small number of beds, you look forward to having a larger hospital, and then of course they will bear a less proportion to the whole expenditure. I mean the expenses of the matron and secretary, and so forth; you look forward to an extension of the hospital, and when the hospital is extended the expenses of such officers as the matron and secretary will bear a much smaller proportion than they now do to the whole expenditure of the hospital?—Certainly, when it is larger.

21115. Therefore you do not consider that that is a valid objection to a hospital which is in this embryo state?—When we come to splitting straws like that, I must say that I do not think that there is anything to be considered but the advantages that are to be obtained to the public, to the patients.

21116. Do you consider finance "splitting straws"?—I do in those amounts.

21117. You do not think, therefore, that it is important that the establishment expenses should not bear a large proportion to the whole expenses?—You must take into consideration the amount of good that an institution does. One man is willing to give a great deal more for relief than another; and therefore I am speaking in that view as a man who relieves the patient, not as a financier.

21118. Therefore you would see no objection to a hospital being established, however small?—A hospital must be started; you must have a commencement somewhere or somehow.

21119. That is the very question I asked you?—I did not gather the question.

21120. Then perhaps you will gather it now. I said that at the commencement of a hospital the expenses were necessarily large for the establishment in proportion to the whole expenditure; and I asked you whether that would diminish when the hospital had a larger extension?—I have answered that as far as I understand the question.

21121. You spoke of "splitting straws"; why is that "splitting straws"?—It was afterwards that I introduced that question of the proportion it bore to the amount of good that the patients obtain.

21122. I again ask whether you think it is a desirable thing that hospitals should be established in which the expenses for the establishment are very large in proportion to the total expenditure, is it or is it not desirable?—It appears to me that it is desirable in proportion to the amount of good that is obtained. A hospital must be started somehow or somewhere, it must have a beginning, and the expenses appear large in a small hospital.

21123. Quite so. Therefore I understand that your answer is "Yes"; that the defence of a large expenditure here is, that the hospital is at the beginning, and you look forward to its having a further extension; and then the expenses being smaller in proportion; is that so?—Yes.

3 s 3

21124. Now

27 April 1891.]

Mr. WHITMORE.

[Continued.]

Earl of Kimberley—continued.

21124. Now, are you in favour generally, of special hospitals?—Yes.

21125. For all diseases?—Yes.

21126. Has it ever occurred to you that these special hospitals established for all diseases would interfere very much with the teaching in the general hospitals?—No.

21127. Would it not detract from its efficiency?—Certainly not; it would not detract in the least; it would do good.

21128. Why would it not detract in the least?—Because the education of the students would be concentrated; the students could go to the head centres, so to speak, of specialism, and they could study the subject much better, much more easily, than at the general hospitals, if the theory were carried out thoroughly.

21129. Would you have any general hospitals?—Well, I would not have these colossal hospitals that are running to seed, so to speak.

21130. You look upon the general hospitals with a great deal of suspicion?—No; I was very well taught in my student days in one of them, but in my particular line I never learnt anything there: in this particular specialism to which I am now attached.

21131. But if these institutions are going to seed, as you say, does not that imply rather a censure upon them?—I did not say they were going to seed; I said that in my opinion they were.

21132. Perhaps that distinction would be considered “splitting straws.” If in your opinion these general hospitals are going to seed, that is pretty strong condemnation of them, is it not?—No, I do not think because they are going to seed that that is any reason why they are not useful.

21133. Would your idea be that you could have a whole network of special hospitals, each for a special disease, and that you could conduct the education of students by that means as well as now?—Yes, better.

21134. And I suppose you would wish these special hospitals to be of a certain size, of course, not to be too small?—Well, it would depend upon the speciality treated.

21135. You think that there would be some that would be very small?—No, I do not; if they had all arrived at a certain time when the size was established; if you would let the hospitals run on to a certain size I should think myself that they would get a considerable number of beds.

21136. Pending the establishment of that system, you would tolerate the general hospitals?—You must “tolerate” them apparently; there is nothing else.

Lord Clifford of Chudleigh.

21137. You were connected with the original founders of the hospital?—I was.

21138. What was the number of your staff when you commenced; was it the same as it is at present?—The same.

21139. Then you had 21 patients to begin with, I see?—Yes.

21140. Was it only for part of the year, that 21 in 1884. There is a list here, and I see that in 1884 there were 21 in-patients under treatment; and in 1885, 97?—We had two surgeons, and then we elected an assistant surgeon.

Lord Clifford of Chudleigh—continued.

21141. I was not speaking so much of the surgical staff as of the staff of the matron, and so forth?—We had a matron and a nurse, I think, who used to come in often; we used to get nurses from King’s College; we used to get nurses from different parts, according to the number of cases we had in, to save expense.

21142. Then in 1888 the number rose from 98, which it had been the year before, to 130, and there were last year 157; does that increase necessitate any enlargement of the establishment?—It depends on the case. You may have one case that requires a nurse night and day, and you may have another case that requires the attention of one nurse in the daytime. It depends on the severity of the case. It may be that we have severe cases on or we have not; it depends upon the cases, not so much upon the number.

21143. Do you suppose that the hospital is increasing in usefulness, so far as increasing its numbers is on evidence of that?—Yes, I think the numbers themselves will show that. We have brought the reports ever since it was started, and you will find that they have increased from year to year.

21144. The last three years they have not increased; that is the reason I asked the question?—Because we have not increased in beds; we cannot get any more beds in the house.

21145. If you wished to increase them now, you must have a new house?—A new house, or add to that one; and if I might be permitted to do so, I should like to say this: that we have always gone on the principle of not running into debt, after the establishment of the hospital. We try to pay our way, but we do not run into debt and then appeal to the public to help us out. It will be seen that in the statement of the report of 1889, we make a special point of that; we would rather keep it within our limits than run into debt.

21146. The particular point I want to arrive at is this, that if you had the opportunity of enlarging your house it would be possible to increase the amount of work done by your hospital, the number of patients treated, to a very great extent?—Yes, certainly.

Lord Saye and Sele.

21147. As it is, do you not think the personnel of the hospital is out of proportion to the number of cases treated?—No, I do not, and I do not think that you would if you were to see the cases and see the attention they require. These cases require a great deal of attention. I could go into particulars, but I will only say that each patient absolutely requires, I suppose, until after the fourth or fifth day after the operation, attention for the length of half-an-hour at the very least.

21148. The fact remains that there are only nine beds occupied, and there are only 25 out-patients seen in a day?—But to answer your Lordship’s question, I do not think that the personnel is in excess at all. I think the staff, really and truly, are overworked. I think we ought to have had more, and I certainly would advise

27 April 1891.]

Mr. WHITMORE.

[Continued.]

Lord Saye and Sele—continued.

advise the committee to have more if we had more money.

Earl Cathcart.

21149. Did you select yourself the honoured name of Gordon?—It was originally called the Western Hospital, and it was thought that the name "Western Hospital" rather too much localised it, as we found our patients coming from all over the world, and it was suggested by the committee, not by myself, that the name should be changed; the subject was discussed, and several names were suggested, amongst others that of Gordon; I was acquainted with the family of the late General Gordon, and I wrote to them and asked their permission, and I have their letter now where they said that they gave their permission and wished us all success.

21150. It was not so much to do honour to General Gordon, probably, as that you thought it was a name to fetch the public?—I do not know. I did not want to "fetch" anybody; only to do the most good I could for the hospital.

21151. At the same time it was a good name for the purpose to attract public attention?—Undoubtedly it was a good name, but it was not obtained with that object, because there were several other names suggested.

Earl of Arran.

21152. How many times in a week are you yourself obliged to attend at this hospital?—I am obliged to attend three days a week, unfortunately, and when I have bad cases there I make it my business to go very much oftener, to see to the after treatment. It is essential that the after treatment should be very thorough, and as we have no house surgeon there I go myself and dress the cases with the nurse and look after them; sometimes I go every day in the week, Sunday and all.

21153. I presume that, looking at your other engagement, although these cases, or a good many of them, could be treated in their own homes, if you had to go all round the town to treat them, you could not afford the time to do so?—I should make it my business to afford the time if they paid me.

21154. But I mean on the terms that you attend them at the hospital, you could not afford the time to go all round the town to attend them?—Certainly not.

21155. And that is one of the objects of a concentration of these cases, where the patients can pay something, in one spot?—Yes, for their good

Earl of Lauderdale.

21156. Did I rightly understand you just now to say, that these special cases could be treated in general hospitals, provided that there were a sufficient number of specialists to treat them, as in a special hospital?—They could be treated there. I cannot go into that comparison; I cannot compare our treatment with their treatment.

21157. Now, is the secret in the individual or in the place, that they are so much better treated in a special hospital?—There is no "secret" about it. They are not treated in the general

Earl of Lauderdale—continued.

hospitals, or they do not get well; not all of them at any rate.

21158. Then you attribute the better treatment of these cases in the special hospital to the place or the locality, do you?—No, I attribute their better treatment more to the fact that they are treated by a man who is always operating on these cases; the surgeons know how to treat a case. You may tell a man how to swim, and yet when you throw him into the river he cannot swim; and so lots of people operate on these cases, but they do not cure them.

21159. We will put it in another way. Supposing you were treating a special rectal case in a general hospital, would not that case be as effectively treated by you as it would be treated by you in your own hospital?—Certainly.

21160. Then what is the advantage of a special hospital for these cases?—Because you get men attached to the hospital who are constantly treating one special class of case.

21161. But if you had the same men who treat these cases in special hospitals treating them in general hospitals, would not the treatment be as effective in the general hospitals?—If they devoted their time as much to the special cases in the general hospital as they do to the special cases in the special hospitals.

21162. Then the result would be exactly the same?—The result would be exactly the same.

Chairman.

21163. We were told just now that the average of your beds occupied was nine?—If the secretary said so it is correct.

21164. And that you have one matron and two nurses?—And a ward-maid.

21165. But the ward-maid does nothing in the way of nursing, does she?—Yes, she does a great deal in the way of nursing; she sits up all night, sometimes.

21166. Then, is she the night nurse?—No, she is the ward-maid.

21167. But does she act as night nurse?—Certainly, on an emergency; if the nurses are knocked up she is told to sit up, and if there is the least alarm she rings the bell, and the matron goes up; but that is the exception.

21168. Somebody sits up all night with the patients, I suppose?—No, nobody sits up all night, unless it is necessary. If there is an important case, one that has been recently operated on, and there is a danger from bleeding, then someone sits up; we occasionally get in outside help in such a case.

21169. Then, you have to get in an outside nurse occasionally?—If necessary, and pay her.

21170. I was leading up to that; that number of two is a small number of nurses for the number of patients if a night nurse is required?—But I have just said that what extra assistance is required is brought in.

21171. Is there anything else you would like to state?—No.

The Witness is directed to withdraw.

Ordered, That this Committee be adjourned to Thursday next, at Twelve o'clock.

Die Jovis, 30^o Aprilis, 1891.

LORDS PRESENT:

Earl WINCHILSEA AND NOTTINGHAM.
Earl of LAUDERDALE.
Earl CATHCART.
Earl of KIMBERLEY.
Lord ZOUCHE OF HARYNGWORTH.
Lord SAYE AND SELE.

Lord CLIFFORD OF CHUDLEIGH.
Lord SANDHURST.
Lord LAMINGTON.
Lord SUDLEY (*Earl of Arran*).
Lord MONKSWELL.
Lord THRING.

THE LORD SANDHURST, IN THE CHAIR.

MR. FREDERICK WALLACE, is called in; and, having been sworn, is Examined, as follows:

Chairman.

21172. YOU are a general practitioner, are you not?—Yes.

21173. And will you tell us what qualifications you hold?—I am a Licentiate of the College of Physicians and a member of the College of Surgeons also. I am a Licentiate of the Society of Apothecaries as well.

21174. Where does your practice lie?—In the north-east of London, in Hackney and Shoreditch.

21175. Is that a very poor district?—Well, of course Shoreditch is a poor district. The part of Hackney in which I am now residing is not so very poor.

21176. How are you off for hospitals in that district?—In the Hackney-road we have a children's hospital, the North-East London Children's Hospital.

21177. Is that a large building?—It is a good sized building.

21178. And is there any general hospital in that district?—The nearest general hospital would be the London Hospital in the White-chapel-road.

21179. That would be some distance, would it not?—About a mile and a-half from my Hackney-road address. I might, perhaps, state that I have been in practice in the Hackney-road till about 19 years ago, when I moved to Upper Clapton, which is part of Hackney Parish; but I still keep up my connection with the Hackney-road by a partner there, and I have been nowhere else in practice; in fact, I was born in that neighbourhood, so I know the neighbourhood well.

21180. Let me follow up my previous question: are there any dispensaries besides these general hospitals?—There is no public dispensary in the neighbourhood of the Hackney-road; there is the Stoke Newington Dispensary.

21181. Is that a poor law institution or a provident one?—That Stoke Newington Dispensary (24.) e.

Chairman—continued.

sary is a subscription dispensary, kept up by voluntary subscriptions.

21182. That is a charity, in fact?—Yes, it is.

21183. And then is there a poor law dispensary?—There is the Shoreditch Union Dispensary in Hoxton-street.

21184. Then is the Metropolitan Hospital anywhere near?—The Metropolitan Hospital is in the Kingsland-road; it is within my radius.

21185. And all these places, I think we have been told (certainly we have as to two of them) take free patients, do they not?—The Metropolitan Hospital attends, I believe, the out-patients for a first time gratis; then, I think, they insist upon their joining a provident dispensary in connection with the hospital.

21186. Now do you find that these free charitable institutions interfere with your practice?—I do not think there is any doubt about it at all, that they do very much interfere with the practice of the general practitioners in the neighbourhood. Some 25 years ago when the Children's Hospital was established in the Hackney-road, and I (being then of course a young man) was in practice with my brother, there is not the least doubt that we felt a great falling off in our work in consequence of the establishment of that hospital.

21187. In fact, that hospital is a provident institution, I think, now?—No; they do pay a trifle, I believe, now at the Children's Hospital.

21188. In fact these free charities, to use a term which we have heard a great deal lately, "sweated" you?—Undoubtedly.

21189. Are you on the staff of any of these dispensaries or hospitals?—No.

21190. Where did you get your medical education?—At Guy's.

21191. Have you ever considered the question of the indiscriminate admission of out-patients?—Well I have not considered it, not thoroughly. I have my opinion that it is very much abused,

3 T

although

30 April 1891.]

Mr. WALLACE.

[Continued.]

Chairman—continued.

although not so much abused now as it used to be both at the London and at Guy's.

21192. Speaking generally, you consider that the out-patient department is abused?—I should not like to say so, at the London or at Guy's.

21193. At any rate there is a very large mass of out-patients taken gratis?—Yes, I think, of course in all large establishments like that there must be a certain amount of abuse, but I do not think that either of those out-patient departments, as they at present exist, is very grossly abused.

21194. But then do you think that a large number of those people go to these free out-patient departments who, were there no free out-patient departments, would go to private practitioners?—A large number must, would be obliged to, go to practitioners in the neighbourhood under those circumstances.

21195. Or else the poor law?—Yes.

21196. And in your experience are the poor law institutions very much disliked by the poor?—No, I think not. I have been parish doctor myself for 10 years, and I think since the introduction of Mr. Gathorne-Hardy's Act, and the establishment of the poor law dispensary system, there is no question that there has been a great alteration in the feelings of the poor with reference to the parish infirmaries.

21197. You were a parish doctor yourself at one time, you have said?—Yes.

21198. Have you ever had any opportunity of seeing what goes on in an out-patient department?—Well, my time has been so fully occupied since I left Guy's that I have not been there for 25 years.

21199. So that you cannot speak as to the overcrowding of out-patient departments?—No, I cannot really speak as to what is going on now.

21200. Do you think that by any amount of organisation we could check this large number of out-patients?—I think the London Hospital has rather proved that; I think they have some inquiry officers, and since that inquiry officer has been appointed the number of out-patients has been considerably less, and we have not heard of the abuse amongst ourselves so much.

21201. So that things do tend to improve?—Certainly at the London.

21202. Has the provident hospital, the Metropolitan Hospital, affected you?—It has affected us very greatly, and I think it is the Metropolitan Hospital upon which I have more to say perhaps.

21203. The Committee will be glad to hear anything you wish to say?—The Metropolitan Hospital was removed from the City into the Kingsland-road. They say that they moved it into a very poor neighbourhood; I dispute that. The situation of the hospital is not in the poorest part of Shoreditch or Dalston. After they had been there for some little time, it seemed that they found matters did not go on very well; they wanted more money; and so they started this idea of the provident scheme to make the thing pay, as we have heard. There was a meeting called, I believe, of the medical men of the neighbourhood (I believe I was invited, but I was unable to attend) to consider this matter. Some six or seven attended; but the rate of pay-

Chairman—continued.

ment that was proposed at that time was so low that most of the men declined to have anything to do with it, and no further meeting was called. We consider that it was in no way intended that the hospital should have attached to it this provident scheme, and so almost cut out the general practitioners in the neighbourhood from getting a living, I was going to say, in some cases.

21204. And the effect that it has produced is as serious as that, is it?—Undoubtedly. The outcome of it was that there was a round-robin signed by nearly all the medical men in the neighbourhood, protesting against the provident scheme.

21205. Then they take in their patients on reduced fees as it were?—On reduced fees. You pay so much a week; I think 6*d.* a week is the maximum for a family.

21206. And you think that that is unfair upon the general practitioner?—Because we find that people are joining this provident scheme who have been in the habit for years of paying the local practitioners not large amounts, but still fair amounts, fair accounts.

21207. You speak for a large number of medical men, do you not?—Well, the gentlemen who signed this round-robin, I think nearly all of them, are personal friends of mine, and I know their feelings very well on the point. I think I may speak without exception. There are one or two men in the neighbourhood of the hospital who have joined the staff, but I think with these exceptions the men in the neighbourhood are very much opposed to the provident scheme of the Metropolitan Hospital.

21208. As I understand, the reason you are opposed to it is that it is placed in a neighbourhood where it is not needed?—Not absolutely needed; it is not in an absolutely poor district, not like the London Hospital or the Children's Hospital in the Hackney-road.

21209. You are not prepared to speak as to the crowding in the out-patient department in the matter of diagnosis, and so on, and the inconvenience that is caused by it?—It is so many years since I was in an out-patient room that I do not think I ought to speak about it.

21210. Have you any opinion as to the overlapping of hospitals one with another?—That does not obtain in my neighbourhood at all, so I really could not speak to that point.

21211. Then have you any opinion as to the treatment of lock cases; that is to say, do you think that the free treatment rather encourages disease than otherwise?—I cannot hold that opinion that the free treatment encourages disease; I do not believe that at all.

21212. Have you any opinion as to the pauperising of the public by charitable institutions?—No.

21213. Have you any opinion on special hospitals?—I think the special hospitals are necessary to a certain extent; but one does not like the origin of them. I think that as far as is possible I would encourage special departments of general hospitals in preference to special hospitals.

21214. Will you go so far as to say that there are good special hospitals and bad special hospitals?—Yes, certainly.

21215. For

30 April 1891.]

Mr. WALLACE.

[Continued.]

Chairman—continued.

21215. For what nature of disease would you favour special hospitals?—Diseases of the eye, diseases of the bladder, and diseases of the larynx.

21216. And consumption?—I should not say that a special hospital was necessary for consumption, except, of course, as in the case of the Victoria Park Hospital, for the separation of patients from other patients.

21217. Then as regards cancer, would you have a special hospital for cancer?—I do not think that is necessary at all.

21218. And for diseases of women?—I think that is adequately provided for by the special departments at the general hospitals, and better provided for.

21219. Have you ever tried to co-operate as a practitioner with hospitals; that is to say by sending cases in to certain hospitals where they could get much more extensive treatment than you could provide for them in their own homes? Yes, I have, undoubtedly.

21220. Might not that be carried out to a very large extent?—I do not think it could be carried out to a very large extent. Take the Children's Hospital in the Hackney-road, for instance; I have been very pleased to send a child in there with diphtheria or croup, to be operated on for tracheotomy, where it would be utterly impossible that it could be done in its home.

21221. But still, if it can be done in a small degree, it can be done in a large degree, cannot it, by organization?—But these cases do not crop up so frequently; they are very isolated cases. It may not be necessary to co-operate with a hospital more than once a year.

21222. Do you think that general hospitals could co-operate with special hospitals?—That I am not prepared to answer upon.

21223. That you have got no opinion about?—No.

21224. Have you any opinion as to the extravagance of hospitals?—I have none whatever. Having nothing to do with the management of any hospital, I cannot speak to that point at all.

21225. Would you like to see the physicians and surgeons receive pay at the hospitals?—No, certainly not.

21226. You think that the present honorary system is the best?—Yes.

21227. Are you in favour of big general hospitals?—I am afraid that is rather a question that I was not prepared to talk about so much.

21228. If there is any particular branch of our inquiry as to which you have any opinion, we shall be glad to hear your opinion?—With regard to the Metropolitan Hospital I do not know whether it is in the scope of the inquiry to talk about the cheap dispensary system in London.

21229. It is fully within the scope of it. I will ask you a question as to the dispensaries; how do you define a cheap dispensary?—I define a cheap dispensary as an advertising "shilling-a-week" dispensary, where they advertise either by handbills, or by painting on the windows of the shop, or the door, the various prices and charges for attendance either out-door and in-door, and a dispensary, such as is conducted probably by a

(24.)

Chairman—continued.

qualified man acting as assistant to another man, who has, perhaps, several of these places. One man, I believe, has 25 of these dispensaries in London, managed by qualified assistants.

21230. That is a paying business?—I have not the pleasure of knowing the gentleman; I do not know whether he makes it pay; but as it has gone on now for some years probably it must pay.

21231. Then the patients pay for everything they get there?—They pay a shilling a week.

21232. What is your objection to it; that the advice is inferior?—Undoubtedly; and in many cases it leads to an offence in the fact of covering; the covering I mean, of unqualified men by qualified men who never see the cases at all. At some of these dispensaries there is no qualified man at all.

21233. Where is one of these dispensaries, or where are they generally?—All over the East-end of London you find them.

21234. But can you specify any particular place, because your statement at present is rather a general one?—Well, I brought with me a book in which I have collected various handbills referring to these dispensaries.

21235. Perhaps you would read one?—"The Stamford Hill Provident Dispensary, 8, Willow-terrace, eight doors below Stoke Newington Station. Attendance is given at this institution every day at the times mentioned below by a legally qualified and registered physician and surgeon. Fees: consultation and medicine, sixpence; visits with medicine, and within one mile, one shilling and sixpence; midwifery, fifteen shillings; first confinement, one guinea; vaccination, Tuesday morning, one shilling. All fees to be paid in advance. Messages for visiting patients at their own homes should be left at the dispensary by 10 a.m. Urgent cases attended to at any time. Hours of attendance: morning, from 10 till 1; evening, from 6 to 9. Sundays evenings from 6 till 8." That is the style of handbill circulated in the neighbourhood.

21236. Now that advertisement states that the advice is "qualified"?—Yes, it would be in that case.

21237. Have you got any advertisement where you consider that the advice is not qualified?—All the advertisements are issued of course by qualified men; the patients are sometimes left to unqualified men to attend to.

21238. How do you know that they are left to unqualified men; have you ever attended at some of those places?—We have attended inquests where children have been taken to dispensaries and seen by unqualified men, the parents of the children thinking that they were seeing a qualified man. The child has died, sometimes suddenly, and they have sent for me, and I have not been able to give a certificate because I have not seen it before death; then I have sent it to the dispensary for a certificate; then the unqualified man says: "I only saw the child; there will have to be an inquest."

21239. And that has come out in the evidence?—That has come out in the evidence; the qualified man, the covering man, living, perhaps, two miles off. I thought I had with me

here

30 April 1891.]

Mr. WALLACE.

[Continued.]

Chairman—continued.

here an account of an inquest I have attended in that way, but I do not seem to have got it.

21240. Can you give us any further indication of this network of cheap dispensaries where you said that one man had 25 under one organisation?—I have not it in this book, but I know that for a fact, that there is a man in London who has 25 dispensaries scattered through London.

21241. Will you give us a list of these 25 dispensaries?—I have not it with me.

21242. Who is the promoter of all these 25 dispensaries?—Shall I be right in mentioning his name?

21243. Yes, you will be quite right in mentioning it?—I believe he is a Dr. Bourke. As far as I know, all Dr. Bourke's dispensaries are properly conducted by qualified men; I have nothing to say to the contrary.

21244. Then what is your objection to them?—That there must be constant changes in the establishment. It is impossible for one man to keep 25 qualified men always in their berths; there must be constant changes, and it is bad for the patients that there should be.

21245. And then also these reduced fees affect the rest of the profession prejudicially in your view?—Undoubtedly.

21246. That is your principal objection?—Yes.

Earl of Arran.

21247. Do I rightly understand that though these assistants who are covered by the man who runs these dispensaries are qualified, the advice they are likely to give is not of the highest character?—It would be impossible for a man to get a thoroughly educated qualified man, a good class man, to attend to these dispensaries at the East-end of London for the salary that is given.

21248. So that, though they may be qualified, their advice is not of the highest description?—Certainly not.

21249. You have no idea what salaries Dr. Bourke pays to any of these assistants?—I think it is a salary and commission on work done. There are other men who have six, five, and four dispensaries. I think I have never heard of anyone else having so many as this particular gentleman.

Lord Zouche of Haryngworth.

21250. Who would be the unqualified practitioners who would attend to these cases?—Probably senior students, third and fourth year men, at the hospital; sometimes chemists' assistants.

21251. Would they ever be absolutely ignorant men?—No; I should not like to say that they would be absolutely ignorant.

21252. You would not go quite so far as that?—No.

21253. But not men who really would be competent to advise in any serious cases?—Men who ought not to be employed certainly in that kind of work; I think I am quite safe in saying that in many cases.

Lord Thring.

21254. Does not the very number of these dispensaries show that they supply a public

Lord Thring—continued.

want?—Well, I think that there is a public want undoubtedly, and that public want is a properly organised provident scheme.

21255. You admit that some of these dispensaries are worked by qualified men; in fact, I think, with reference to that very gentleman you mentioned, who has 25 dispensaries, you have told us that they are all worked by properly qualified men. What more do you want for the benefit of the public?—I say that they cut into the local general practitioner and sweat him; a man who has been there all his life, perhaps, and his father before him.

21256. In other words, it is competition?—It is a competition, but we do not regard it as a fair one.

21257. But why not?—Of course we cannot bring our fees down to theirs.

21258. Why cannot you set up an opposition dispensary?—We could not do that.

21259. Why not?—I should be very sorry to start a shilling a week dispensary in the neighbourhood in which I have lived all my life.

21260. You mean it is *infra dig*?—Certainly. If the patients got the full value for their money, I should not have much to say about it; but I am sure they do not.

21261. But why not; that is the very part I do not understand. The public throng to these dispensaries; therefore, they obviously think that they get full value for their money?—They go for a week or two and then they come to us.

21262. But then dispensaries would not last if that were the case generally?—They go on; they are constantly advertising, and they have changes of assistants.

21263. Does it not amount to this: that it is a professional objection; that there are a certain class of men who advertize in a way which you do not think consistent with the dignity of the medical profession. That is what it amounts to, does it not?—Yes.

Earl of Lauderdale.

21264. Is it the fact that these dispensaries you have been speaking of are only open at certain hours in the day?—From 9 till 1, and again in the evening from 6 till 9.

21265. There is no great hardship, is there, in any man being able to attend to these cases for that number of hours, a duly qualified man?—No.

21266. You said just now that they could not arrange always to have a duly qualified man ready to attend upon these patients. If the place is only open for a few hours like that, there ought to be no difficulty in making an arrangement for a duly qualified man to attend?—But the supply of qualified men ready to take that kind of work must be very limited. They will not go into a shilling a-week dispensary.

21267. What would you suggest in place of these dispensaries; would you abolish them altogether?—Of course I know the poor must be attended to; I am not objecting to that at all; but it is the advertising dispensaries, those advertised by means of these handbills and shop fronts,

21268. But for people of this class who are able to pay their shilling a week and no more, what

30 April 1891.]

Mr. WALLACE.

[Continued.]

Earl of Lauderdale—continued.

what would you suggest?—I should have a properly constituted provident scheme for them, so that they paid so much a week during health for medical attendance during sickness.

21269. How do you mean “a properly constituted provident scheme”?—The same as there are in provincial towns, medical aid associations.

21270. Under some central authority, you mean?—Under an authority managed by the members themselves.

21271. That is pretty much the same thing as is the case here, where you have one individual setting up these establishments on his own account without any expense to the public, simply for the use of those who choose to go to these establishments; and the fact of their going on so long appears to show that it is a necessity rather; I cannot see that you have suggested anything preferable to this?—I have in my mind the medical aid associations that exist in provincial towns.

Lord Monkswell.

21272. You say you do not know much about the out-patient system now, whether it is abused or not?—Not by observation.

21273. But you have a partner, you say, in the Hackney-road; he probably would have told you if the out-patient system was abused in his neighbourhood?—We have no special grievance as to that at the general hospitals, either the London or Guy's. We have no data to go upon at all.

21274. Then you do not at all agree with some medical practitioners who strongly object to what they call the overcrowded state of the out-patient departments, and to the fact that there is sometimes very little investigation into the means of the patients?—I am not in a position to speak as to that; I have not been to a hospital since I left Guy's.

21275. But probably if there was much brought up against the out-patient department, you would have heard about it from your partner?—Since there has been an inquiry officer at the London Hospital, I am persuaded the out-patient department has not been so much abused.

21276. I suppose your objection to this proposed provident scheme is simply because the payments are too low?—The payments are too low, and they take patients on when they are ill. It is by paying a little extra as a sort of fine that they get on, and they take them on when they are ill.

21277. You object to that as giving them a sort of an unfair advantage, as it were?—Yes.

21278. I suppose you would say that you suffer quite as much from private competition as you do from the competition of the hospitals, in the matter of these dispensaries?—I consider that we suffer very much more from the advertising cheap dispensaries than we do from the hospitals.

21279. Do you suggest any legislation to the effect that doctors should not be allowed to advertise or not?—I could not suggest any legislation on that point.

21280. Do you suggest any legislation at all on any point; have you thought about how it could be done?—My only idea is that of a large provident scheme for each district.

(24.)

Lord Monkswell—continued.

21281. You think that would kill the dispensaries?—If it did not kill them I think it would bring them to work all together, for the public good.

21282. I suppose you would say that the present law as to properly qualified assistants, and only properly assistants, being employed is not duly enforced?—That is the case at the East End, certainly.

21283. And you would like to see it enforced?—Yes. I should like to see the law against the covering of unqualified men by qualified men much more enforced than it is. The General Medical Council do prosecute in some cases.

21284. Why do they not prosecute sufficiently; do they not get evidence or try to get evidence?—If I wanted to bring a case up before the General Medical Council I should get myself into hot water with the people in the neighbourhood. I am the only man who could do it in my own neighbourhood. If I saw that an unqualified man was constantly seeing patients, if I stirred the law up I should get myself into hot water. It is besides a most difficult matter to get evidence.

21285. The fact is, as I understand you, that the public are so well satisfied with these unqualified practitioners that you would have a very bad time of it if you went before the Medical Council to complain of them?—No; I mean that there is a great difficulty in getting up the evidence in all these cases of covering; there is a great deal of trouble.

21286. I thought you told me just now that the public in your neighbourhood strongly object to your endeavouring to get up evidence?—No; I do not think the public would object to it. I do not think it is worth the candle. I think the public or some authority should do it.

21287. I thought you said that you would be very unpopular in your neighbourhood if you tried to do it?—Amongst a certain class of men I should be, certainly.

21288. What classes?—The man who is covering, for instance.

21289. I thought your statement was that you would be very unpopular with the inhabitants of the neighbourhood?—Oh, no.

21290. With the people who go to these dispensaries would you be very unpopular?—It is the covering that I speak of. The people who go to these dispensaries with unqualified men think that they are seeing a qualified man.

21291. You can explain to them, cannot you, that they are not seeing a qualified man?—But I cannot go down to the neighbourhood and explain it to everybody.

21292. If you come across instances of that kind amongst your own patients, you can say, “So-and-so is unqualified”?—But my own patients do not see the unqualified man.

21293. Surely, when an unqualified man is practising it must be perfectly easy for you to get up evidence upon the point; it must be notorious in the neighbourhood?—It seems easy, but it would be a very difficult matter.

21294. Then I understand that the reason that you do not go to the Medical Council in reference to this subject is, not that you are afraid that you would be unpopular for so doing, but simply because

30 April 1891.]

Mr. WALLACE.

[Continued.]

Lora Monkswell—continued.

because it would be extremely difficult for you to find out the real fact of the case?—To bring it home to the covering individuals. It would be very difficult.

Earl Cathcart.

21295. The real hold over an unqualified man is, is it not, when he signs a certificate; if he chooses to sign a certificate they can be down upon him immediately?—Yes.

21295*. Therefore you would not be surprised to hear of this case which happened in my own experience: that a practitioner was employed in the neighbourhood, and it came out at petty sessions when he was asked for a certificate that he dared not sign it?—Just so.

Lord Saye and Sele.

21296. You mentioned a case where a girl lost her life through seeking advice at a dispensary, did you not?—I mentioned a case where a child was taken to a dispensary and seen by an unqualified man. I do not say that the child lost her life through going there. They were unable to get a certificate from the dispensary when she died.

Lord Clifford of Chudleigh.

21297. I think you mentioned that it came out at the inquest that the child had been seen by an unqualified person?—I did not mention that it came out at the inquest. I sent the parents of the child to the dispensary to get a certificate; I said I could not give a certificate as I had not attended the child; and then they came back and said that they could not get a certificate at the dispensary; the gentleman refused to give it. The fact was he could not give it.

21298. Did you give evidence at the inquest?—I gave evidence that it was a case of sudden death through convulsions from teething.

21299. Did the unqualified practitioner who saw the child give evidence?—No.

21300. Why was he not called?—I do not know at all; he was not called.

21301. Would that have been a case in which the General Medical Council might have acted?—I think that case was taken up by the General Medical Council.

21302. You do not know with what result; you say that your remedy for the evil caused by these advertising dispensaries is a well-arranged and thorough system of provident dispensaries?—Yes.

21303. The system of the Metropolitan Hospital, I take it, is that of a provident dispensary?—Yes.

21304. Could you say in what that system differs from what you call the proper system; I understand you to object to that system?—I object to it, because they bring the hospital into a neighbourhood, and they engage medical men

Lord Clifford of Chudleigh—continued.

to work the provident scheme who are not connected with the neighbourhood; that is to say, they put five medical men on to work that scheme, who attend at the hospital and see out-patients, three of whom do not live in the neighbourhood at all. If the Metropolitan Hospital had taken on all the men of the neighbourhood who would have liked to join that scheme, then I do not think there would have been anything unfair about it; that is to say, if they had given us all, or those of us who wished to become surgeons to the scheme, an opportunity to do so.

21305. Is that the fault of the hospital, or is it in any way the fault of the resident medical practitioners?—The resident medical practitioners never had a chance of joining in the matter. They were never asked except that in the first instance, when the hospital first came into the neighbourhood, they had a meeting, to which they say they invited 70 or 80 of the medical men. I was invited myself; I did not go; only six or seven did go. The scheme propounded then to the profession of the neighbourhood was a very crude one; the fees were to be lower than they are now. The midwifery fee was to be a fee of 15 s.; now they have raised it to a guinea; and it was that fee that upset the local practitioners I think a great deal.

21306. Is it not true to say this, that the hospital proposed a plan which did not find favour with the medical practitioners of the neighbourhood, and that, therefore, they were obliged to go outside the neighbourhood?—I think after they had modified their plan, if they had given the neighbouring practitioners the chance again, they would not have had to go out of the neighbourhood.

21307. And you think that the medical practitioners did work with the hospital in the way in which the hospital had a right to expect that they would co-operate?—They do not co-operate now very well with the scheme.

21308. But they do not appear to me to have ever co-operated with the scheme?—No, they never have. We should co-operate with the hospital, but you cannot send a patient there unless he joins the provident scheme.

21309. I mean they do not appear to have co-operated with the hospital in forming this provident scheme?—But we never had a chance, after the first meeting, before they modified the plan.

21310. But have you ever made any representation to them since they modified it?—No, not to the hospital.

Chairman.

21311. Is there anything else you wish to say on this point?—No.

The Witness is directed to withdraw.

30 April 1891.

MR. GEORGE OWEN RYAN, is called in; and, having been sworn, is Examined, as follows:

Chairman.

21312. YOU are the secretary, are you not, of the Queen Charlotte's Lying-In Hospital?—I am.

21313. How long have you held that position?—Three years and 10 months.

21314. Previous to that how were you occupied?—Previous to that I was, for three years, steward of the Seamen's Hospital at Greenwich, and before that clerk to the secretary of the Seamen's Hospital at Greenwich.

21315. So that your training has been, in many respects, a training in the administration of a hospital?—Yes.

21316. What salary do they pay you?—£. 250 a year.

21317. And board and lodging?—No, I do not reside in the hospital; I lunch in the hospital.

21318. Who takes charge of the hospital during your absence?—The matron. There is a resident medical officer, and a matron, they would share in the responsibility.

21319. Would you tell us when your hospital was founded?—It was founded in 1752.

21320. Does it now occupy the same site?—No, it was re-built on the present site in 1856.

21321. And where is that?—At the west end of the Marylebone-road, the Edgeware-road end.

21322. Is it a paying hospital or a free hospital?—A free hospital.

21323. Have you anything to do with letters?—Yes, the letter system does prevail; but orders of admission are also granted by the visiting committee, after investigation of the cases.

21324. You mean to say if the case is very urgent?—If it is very urgent or a deserving case, on the recommendation of a clergyman, for instance, or some person of standing; the visiting committee would consider that case, and if it were a deserving case, they would grant an order of admission.

21325. You do not put their names down beforehand for some time?—Not necessarily, but the letter system is this: That a patient gets a letter from a subscriber, and the instructions on that letter are that the patient should attend the hospital at a certain time in the morning to register her name and obtain the order for admission. It is on this occasion, when she attends and registers her name, that the case is investigated over and above the investigation that the subscriber may have made beforehand.

21326. Then have you an out-patient department as well?—Yes.

21327. Is that very fully attended?—Fairly fully attended. The numbers have fallen off a little lately; but the numbers fluctuate. Last year we relieved 1,070 out-patients.

21328. Have you any knowledge how many attendances that would cover?—Seven attendances by the midwife on the out-patient, not seven attendances by the out-patient at the hospital.

21329. You relieve these cases at their own homes?—Yes, at their own homes.

(24.)

Chairman—continued.

21330. Are those midwives trained in your hospital?—Not necessarily. The majority of our out-patient midwives were trained in the hospital, and we prefer our own midwives for the work.

21331. Then, in addition to that, do you have an out-patient department where the women come?—No, it is simply a lying-in hospital for the delivery of patients in the hospital, and at their own houses. If I may quote the words of the charter they are: "For the reception as in-patients of lying-in women from all parts of the kingdom, including deserving single women with their first child, and for the delivery of married women and women giving birth to posthumous children at their own habitations in the metropolis." Those are the words according to the charter.

21332. As regards these single women there are certain, what you call, deserving cases that you say you do receive; is any attempt made to follow them up afterwards?—No, we have nothing whatever to do with that.

21333. How many beds have you got in your hospital?—There are 58 beds.

21334. What is your working number?—Fifty beds are lying-in beds and eight are labour ward beds.

21335. Is there a working average of 50 beds?—No, the average for the year 1890 was 36.

21336. Is not that rather a small working average?—No, I think not. The physician who will follow me will offer a better opinion on that matter than I could; but I think it is considered a very fair working average. We could not work at a full strength of 50 in a lying-in hospital with 58 beds. The evil results of working at such a rate would be very great. We prefer that the wards should have the opportunity of being well ventilated and should remain empty for two or three days before receiving patients again.

21337. How are these 50 beds distributed in the wards?—We have two beds in each ward for the patients, and one for the nurse; but we have four larger wards in the new portion of the building which contain three beds for patients and one for the nurse.

21338. But you occupy 36 beds on the average per annum?—Yes.

21339. Have you kept any beds closed for want of funds?—No.

21340. I do not know about your hospital in particular, but was there not a great deal of fever at these hospitals?—I can only speak for my own hospital. We have not had any outbreaks for many years, and it has not been necessary to close the hospital since the year 1879. I do not think we have had an outbreak since that time.

21341. Have you got any statistics which show the comparison of the mortality of cases relieved in the hospital as compared with those relieved outside?—I have no table.

3 T 4

21342. Perhaps

30 April 1891.]

Mr. RYAN.

[Continued.]

Chairman—continued.

21342. Perhaps the medical officer could give that?—I could make a statement to you; we have no table of the mortality.

21343. We will have your statement?—The mortality of the in-patients is necessarily a great deal higher than it would be in the out-patient department, on account of these single women entering with their first child, and difficult cases. Difficult cases would be transferred from the out-patient department to the in-patient department, and consequently the mortality would be greater inside than out.

21344. You mean that you take in the more dangerous cases as you find the necessity arise?—Yes, urgent cases would be transferred to the in-patient department.

21345. I do not think you told us how long you reckon the duration of each case to be?—The average stay of each case is 14·8 days. I might state that of patients going out discharged by physician the average stay is 15·9: of those going out at their own request it is 12·6.

21346. Could you give us the mortality of your hospital?—Last year it was 4·48 per thousand.

21347. Does that include every branch, or merely beds in the hospital?—That is inside. In our out-patient department there were no deaths whatever.

21348. Have you any female doctors?—No. We have two in-patient midwives who would deliver the normal cases.

21349. You have no female clinical assistants?—No.

21350. Or clerks?—No.

21351. Are students admitted to your hospital?—Yes, medical students are. Ours is the only Lying-in Hospital in London that does admit medical students.

21352. How do they get there; do they come by nomination; or how is it arranged?—By formal application, and it is necessary for a student to produce a certificate from his medical school to show that he is a fit and proper subject to come into the hospital for training.

21353. Do you have more applications than you can grant?—Yes.

21354. Now how is your hospital managed; is there an annual court?—There is the annual meeting of governors, which takes place every February, and at that meeting the business is to receive the annual report and the audited accounts and balance-sheet and to elect the committee of management and auditors for the ensuing year.

21355. And that meeting is advertised, is it?—It has not been the custom to advertise it; we issue circular notices to all the governors and subscribers of the hospital.

21356. Then they elect a committee of management, and how many does that committee of management consist of?—Of not less than 20, nor more than 30, exclusive of the *ex-officio* members.

21357. Who are the *ex-officio* members?—All the honorary members, president, vice-presidents, treasurer, physicians to the in-patient department and the out-patient department.

21358. Are there any other medical men on the committee of management?—There are three other medical men.

Chairman—continued.

21359. How many of these gentlemen attend; first what is the quorum of this committee of management?—The quorum is five.

21360. And how often do they meet?—Once a month.

21361. And have they any sub-committees?—At that meeting they appoint two or more of their number as visitors to take the control of the hospital in the interval.

21362. And what are the duties of these visitors?—The visitors meet weekly, and they form the finance committee, and they attend weekly and check the receipts and every item of expenditure, including the petty cash; and they see that the money received during the week has been paid into the bank. They inspect the provisions, and they occasionally go round the wards and interview the patients.

21363. Have you any ladies' committee in connection with this hospital?—No.

21364. Or lady visitors?—We have lady visitors.

21365. How many usually attend on the committee of management?—Five or six; six.

21366. Then as to your funds, what was your expenditure last year?—The expenditure last year on the hospital as opposed to the training school (we keep the accounts of the hospital separate from those of the training school) was 3,421 *l.* 19 *s.* 1 *d.*

21367. And your receipts?—Our receipts amounted to 3,056 *l.* 7 *s.* 2 *d.*

21368. That is a deficit?—Yes, a deficit of 365 *l.*

21369. And how did you manage to meet that?—The funds of the training school assist us in that way. Though we keep the accounts separate we have one banking account, and to prevent our selling stock, or borrowing money we use the balance on the training school account.

21370. Have you got any stock that you can sell out?—We have stock to the amount of 9,869 *l.*

21371. Can you sell the whole of that out?—We could sell the whole of that out; but, from that 9,869 *l.* we have, first of all, to pay our midwifery training school account, 4,534 *l.*

21372. Have you any endowment?—No.

21373. Will you give us a list of the different sources of income which produced the 3,000 *l.* odd?—Annual subscriptions, 1,372 *l.* 8 *s.* 6 *d.*; dividends, 277 *l.* 14 *s.* 7 *d.*; Hospital Sunday Fund award, 312 *l.* 10 *s.*; Hospital Saturday Fund award, 96 *l.* 7 *s.*; fees for providing monthly nurses and wet-nurses, 20 *l.* 19 *s.* 6 *d.*; proceeds of the sale of kitchen waste, 16 *l.* 12 *s.* 11 *d.*; discounts and returns, 12 *l.* 11 *s.* 11 *d.*; payments by patients, 41 *l.* 2 *s.*; rent of telegraph poles on roof, 1 *l.* 1 *s.* Then what we term the extraordinary income, consisting of life subscriptions, that is donations of 10 *l.* 10 *s.* and upwards, 701 *l.* 10 *s.*; donations under 10 *l.* 10 *s.*, 202 *l.* 3 *s.*; congregational collections, 1 *l.* 6 *s.* 9 *d.*; making a total income of 3,056 *l.* 7 *s.* 2 *d.*

21374. And have you no legacies?—Yes, we have legacies; the average amount of legacies received in the last 10 years was 338 *l.* per annum.

21375. And what do you do with that?—We invest it.

21376. You keep a legacy account?—Yes; a separate legacy account.

21377. You

30 April 1891.]

Mr. RYAN.

[Continued.]

Chairman—continued.

21377. You said that you received 41 l. in the shape of payments by patients?—Yes.

21378. But I thought you said it was a free hospital?—So it is, but these are voluntary payments made by people.

21379. Put into a box, or something of that kind?—Yes. But I ought to explain that that is not quite correctly worded; it ought to be "Payments by or on behalf of patients." People frequently make a contribution to the hospital on behalf of the maintenance of a patient whom they are particularly interested in. The contributions by patients themselves last year amounted to 6 l. 10 s.

21380. Then do you ever have a dinner?—No, we do not.

21381. Do you appeal?—We appeal pretty constantly.

21382. Have you had a deficit for the last five years?—I could not say for the last five years; I could speak for the last year.

21383. For the last four you have?—Yes; but that deficit fortunately has been decreasing year by year; and I might call attention to the very satisfactory increase in the amount received in annual subscriptions for the hospital. In 1881 they amounted to 849 l. and last year they were 1,372 l.

21384. Who collects them?—A collector.

21385. And what commission does he get?—Five per cent. commission.

21386. Are there any other commissions paid?—No.

21387. You yourself do not receive anything in that way?—No, I receive nothing whatever in the way of commission.

21388. Does the collector get that commission on every subscription paid into the bank?—He gets it on old subscriptions, not on new money at all. Whether the old subscription is paid into the bank direct, or to myself, or whether he collects it, we are bound to give him 5 per cent., because it was the original agreement.

21389. Do you train your own nurses for your wards?—No, we do not.

21390. What nursing staff have you?—We have three day nurses and a night nurse.

21391. And does one night nurse do the whole of the work?—One night nurse, assisted by two advanced pupils does the whole of the work. Perhaps your Lordships know that the pupil nurses on duty have charge of a case and sleep in the same ward as their patient, in the same way as they would do if they were in private practice.

21392. What does the night nurse do?—She superintends the work of nursing throughout the night, and takes in any cases that may come, and sees that they are properly taken into the labour ward and attended to; and in the morning she conducts the washing of infants and attendance on the patients; in fact her work is very important.

21393. What is the number of these probationers or pupil nurses that you have?—We had an average of 30 daily last year.

21394. Then as regards the organisation of this hospital, it appears to me that probationer (24.) c.

Chairman—continued.

nurses are really practically in charge of these cases, because they sleep and live entirely in the ward with the patient?—Yes; the object of that is that they may become perfectly well acquainted with duties as a monthly nurse; they treat a case in our hospital exactly in the same way as if it were treated at home.

Earl of Kimberley.

21395. In the cases of single women, how do you determine who are "deserving" single women?—I see a good many of these cases myself.

21396. How do you interpret "deserving"; what is the meaning of it?—Otherwise respectable, excepting for having fallen in this case; a domestic servant, for instance, who has led a respectable life.

21397. First cases, in short?—Necessarily; we should not think of admitting a second.

21398. What do you pay your midwives; you employ midwives outside, I understand you to say?—We pay them 6 s. per case.

21399. Do they attend the whole case for that, or merely the delivery?—They attend the case ordinarily for nine days, if the case goes on well; but if it does not go on well, they attend it until the case is better.

21400. Then have they anything besides the 6 s.; any food?—No, they live in their own houses; they are permitted to practice privately.

21401. Now, are you satisfied that in this large number of cases which you attend outside, the husband could not pay 6 s.?—They could not get attendance anywhere else for that sum of money; they could not secure the attendance of a midwife privately for 6 s.

21402. Then are your midwives remunerated otherwise, or what is the inducement to them to take as small a sum as that?—First, that they have a large number of cases, and, then again, they are allowed to practise privately.

21403. What do you suppose would be the charge of such a midwife as you employ, if you employed privately?—It depends entirely upon the case they are attending. I may answer your question by saying, 12 s. 6 d.

21404. Now taking it at 12 s. 6 d., are you satisfied that there are not a great many of the cases that you attend gratuitously where the husband could pay 12 s. 6 d.?—I think I may say we are satisfied that we do not attend a case in the out-patient department that is not deserving of assistance.

21405. That is not my question; I ask whether there are not many of the husbands of these women who are attended by your midwives, who could afford to pay 12 s. 6 d.?—I do not think we relieve a case in the out-patient department where they could afford to pay 12 s. 6 d.

21406. What sort of wages do you consider that these husbands earn?—About a guinea a week when they are in work, labouring men.

21407. And you think a man earning a guinea a week, and paying, we will say, 5 s. or 6 s. for his lodgings, could not pay that sum?—I think he could not pay it.

21408. Then how do you explain the fact that they are able to pay in the country, out of London?—Well, I not know in the first place what

30 April 1891.]

Mr. RYAN.

[Continued.]

Earl of Kimberley—continued.

what they would pay for lodgings and rooms in the country.

21409. I have assumed that the man only earns a net amount of 15 s. a week; now of course the charge is less, but are you aware that there are a good many labourers earning less than 15 s. a week net, who pay the whole of the expenses of attendance on their wives?—I am not at all sure that they always do secure professional attendance on them.

21410. They secure the attendance of a midwife?—Not necessarily always that. Cannot they secure parish relief?

21411. But I am speaking of those who do not get parish relief but pay themselves the expense of the attendance on their wives?—I am not prepared to discuss the point. In the first place I do not know that they do it.

21412. You think that a man earning a net sum, over and above the rent of his lodgings, of 15 s. a week, cannot afford to lay by money enough to meet the charge of 12 s. 6 d., having due notice, as of course he has due notice, that his wife is going to be confined?—That is my opinion. Also you must bear in mind that probably half the year he has been out of work; in the majority of my cases that is so.

21413. Then I may take it your answer would rather be that though these men might occasionally earn the sum you have mentioned, that would not represent their average earnings?—Certainly it would not.

21414. Do you make inquiry as to the means of the people?—I make inquiry as to the means of the patient when she attends the hospital to receive her order.

21415. And you are guided by the fact whether they have a very large family and so on?—Certainly.

21416. Do you refuse many applications?—I do not think an out-patient has ever been refused.

21417. Is it unreasonable to suppose, if you have never refused an out-patient, that there must be a good many of these patients who really could pay; because it seems almost impossible that there should not be applications from persons who are not proper objects of charity?—Of course the letter system interferes a little there. If a subscriber gives a letter to a patient, it shows that he considers her deserving of charitable relief. I am afraid I omitted to mention that just now.

21418. You are not afraid, therefore, that such a system as yours has a pauperising effect on the population?—I am not afraid of that.

21419. If it were largely extended, I suppose you think it would?—I think so.

Chairman.

21420. With regard to midwives and nurses, do you have only one description of certificate, or have you two grades?—We have two grades of certificates for monthly nurses; one of eight weeks' training. The nurse of eight weeks' training receives one form of certificate, and the nurse of 12 weeks' training receives of course a certificate of a superior kind.

21421. And then as regards the midwives?—They go through a course of 13 weeks' training; there are no grades of certificates for the midwives.

Chairman—continued.

21422. Is that 12 weeks' training supposed to be sufficient for a monthly nurse?—The 12 weeks is considered sufficient; the eight weeks in an ordinary case might be sufficient, but the hospital recommends pupils strongly to enter for the 12 weeks' course. There are other lying-in hospitals in London, one I know which undertakes to train a monthly nurse in three weeks, and give her a certificate.

21423. Have these nurses, as a rule, had any previous training?—Not always.

21424. You do not think it necessary that they should come from a general hospital?—I think it would be a very desirable thing if you could bring it about, and I know that Queen Charlotte's Hospital would be prepared to co-operate with any general hospital for that purpose, to include the monthly nursing and midwifery in the training of a general nurse.

21425. At present that does not prevail?—At present that does not prevail.

Earl of Winchelsea and Nottingham.

21426. What proportion of these cases that are attended in their own houses have to be attended by a doctor besides the midwife?—We have two out-patient physicians; they take charge of the out-patient department in alternate months, and they would be sent for in a case of difficulty or danger.

21427. But in an ordinary case the midwife is sufficient?—In an ordinary case the midwife is sufficient.

21428. Do you know what proportion at all of the out-cases have to be attended by doctors?—By our out-patient physician, I should say about three a month.

21429. What proportion would they number in a year; how many out-cases are there?—About 100 a month.

21430. Not above three out of the 100, then, have to be attended by a doctor?—That is so.

21431. Then when they have to be attended by a doctor, it is by the physicians attached to the hospital that they are attended?—Yes.

21432. Of course the treatment includes their attendance as well as that of the midwife?—Yes; but in any case of great urgency the midwife would send for the nearest doctor, and the hospital would pay that doctor his fee.

21433. You never attempt to claim from patients, or their husbands or friends, any amount of the money paid by the hospital on their account?—No, we do not.

21434. You spoke of "payments made by patients"; I think you explained to the Chairman that those ought more properly to be described as voluntary contributions; thanks for benefits received?—Yes; the small sum of 6 l. 10 s.; the others are payments made by others on behalf of those patients.

21435. Must we not take it that your real answer to the question about the inquiries that you make as to the sufficiency of the means of the out-patients to pay is that you really do not make any inquiry at all; you said that an out-patient had never been refused?—An out-patient has never been refused, to my knowledge.

21436. Then do you contend, in the face of that statement, that you really do make inquiry
into

30 April 1891.]

Mr. RYAN.

[Continued.]

Earl of Winchelsea and Nottingham—continued.

into each case to satisfy yourselves whether they can pay or cannot?—I make the inquiry in each case that comes into the hospital without a subscriber's letter.

21437. But you consider that the onus of inquiry is on the subscriber before he gives the letter?—I do; but if a case came before me bearing a subscriber's letter I should make an inquiry if I considered the case of a suspicious nature, and I should withhold the relief if I thought it right to do so.

21438. Do you know, as a fact, whether the subscribers make any inquiry before giving the letter?—I know the subscribers generally give their letters to people interested in the parish work, district visitors and clergymen; and the patients, as a rule, get them from those district visitors and clergymen.

21439. And those people, having local knowledge, may be supposed to be able to make inquiry?—I have no doubt they have done so, and have knowledge of the case. I do not say all, but the majority of the out-patients' letters are distributed in that way.

21440. Have you ever had a case where these free letters have been sold?—No, I have not.

Lord Lamington.

21441. If anybody came who wished to pay would they be more readily received on that account?—No, they would not.

Lord Saye and Sele.

21442. Are the cases of single women inquired into by the Charity Organization Society?—No.

21443. You do not employ them to make the inquiry in those cases?—No, we do not employ them; we frequently get cases from them.

21444. I suppose the women are churched, and the infants baptized in the hospital?—I am not sure about the women being churched; the children are baptized.

21445. There is a chaplain?—There is a chaplain.

21446. What is the salary of the chaplain?—It is 50 *l.* a year.

Lord Monkswell.

21447. About the in-patients, you say your inquiries are stricter than with regard to the out-patients?—Yes, on account of our admitting single women with their first child.

21448. Do you make any inquiries with regard to married women, with regard to their means?—Not in the case of a subscriber's letter. In the case of admitting a woman without a subscriber's letter she is seen by the visitors I spoke of, and they fully investigate the case before they give her an order of admission, and satisfy themselves that the case is deserving of the relief of the charity.

21449. Do you not think it might be as well to employ the Charity Organization Society to make inquiries for you?—The committee, I think, have a good knowledge of the work they are doing, and I do not think the Charity Organization Society would be of any assistance to them.

21450. With regard to the contracts; are your contracts by open tender or how?—Yes, they are by open tender.

(24.)

Earl Cathcart.

21451. What is the average age of the probationer nurses?—From 21 years of age to 40.

21452. Are they chiefly middle-aged women who come to learn?—Chiefly middle-aged.

Earl of Arran.

21453. Do you send out wet nurses?—Yes, we do.

21454. Have you many applications for them?—Very few; the numbers are falling off yearly. I read the fees received from that source in the list of receipts just now.

21455. Have you any means of ascertaining the health of the wet nurses before they go out? I mean their antecedents in any way?—We do not take any responsibility.

Lord Zouche of Haryngworth.

21456. Do you find that three nurses are sufficient for the number of beds you have?—We have found it sufficient, considering that we have such a large assistance in pupils. Pupils are not left to administer to the patients themselves; they are under the supervision of the sisters.

21457. But you find that the pupils have sufficient experience to take charge to a great extent?—A pupil is not put on till she has been taught. She receives some elementary instruction, covering about a week, before she is put on at all. Then she is under closer observation by the sister for some little time than an out-going nurse would be, who had completed or nearly completed her training.

Earl of Lauderdale.

21458. Did I rightly understand that it was only in-patients who were treated under subscribers' letters or out-patients too?—Both in and out-patients.

21459. Then is there a limitation with regard to attending single women in the same way for out-patients as for in-patients; that is to say, that you only attend deserving single women?—We do not attend deserving single women outside the hospital.

21460. Only married women?—Only married women.

Chairman.

21461. Not if the out-patient has not a subscriber's letter?—Unless she applies to the visitors in the way I spoke of.

21462. Is there any particular radius within which you attend to these cases?—We have five out-patient districts. One is the Notting Hill district, covering Notting Hill and Westbourne Park; then there is the Kilburn district, and the St. John's Wood district, and the Marylebone and Lisson Grove district, which last is the largest district of the hospital.

21463. With regard to the resident medical officer; what qualification does he hold?—It is necessary for him to be doubly qualified, and to have passed an examination in midwifery.

21464. And what is the medical staff composed of?—Two visiting physicians to the in-patients and two visiting physicians to the out-patients, and also a consulting physician and two consulting surgeons.

21465. What does the resident medical officer receive by way of salary?—£. 60 a year, and, of course, board and residence.

3 U 2

21466. Would

30 April 1891.]

Mr. RYAN.

[Continued.]

Chairman—continued.

21466. Would you give us the pay of the three nurses you have and the probationers?—Two day sisters receive a salary, starting at 30 *l.* and rising to 40 *l.* a year; their salaries are increased from 30 *l.* to 35 *l.* a year at the end of three years, and then by yearly increment of 1 *l.* to 40 *l.* The junior sister of the three receives from 25 *l.* to 30 *l.*

21467. These are the three you spoke of as “nurses”?—I should term them “sisters”; if I said “nurses” I made a mistake. They are in charge of a floor.

21468. And these sleep with the patients?—No, the pupils sleep with the patients. There are three sisters; there are eight wards on each floor with lying-in cases.

21469. I understand that each patient has a nurse of some kind within hail night and day?—In the same room; and in addition to that, there is an electric bell that the nurse, or patient, can ring from her ward to the room that the sister occupies on the floor.

21470. The probationers, that is, of the pupil nurses, pay what?—A nurse entering for eight weeks pays 11 *l.* 0 *s.* 6 *d.*, inclusive of lecture fees, and the 12 weeks’ nurse pays 15 guineas; the midwife pays 26 *l.* 5 *s.* for 13 weeks.

21471. To what account does that money go?—To the training school account.

21472. You said just now that 12 weeks was the longest training they have?—For the monthly nurse.

21473. And for the midwife, what is it?—Thirteen weeks.

21474. At the same time, you said that a great proportion of the probationers only train for eight weeks?—A great proportion train for eight weeks; but the year before last, the Committee, with a view to inducing pupils to enter for the longer training of nursing, offered to give them this special certificate that I referred to, and also persuaded them, in the regulations, to enter for the longer period if they could; and the result of that has been to very considerably increase the number of nurses offering themselves for 12 weeks’ training. A few years ago there used to be 10 or 12 a year; last year it amounted to 48 out of 128 nurses.

21475. Then none of these nurses stay more than three months?—None of them stay more than three months.

21476. Do you give the sisters any holiday?—Yes; they have every other evening off, from 6 until half-past 10; every other Sunday off, and two weeks’ holiday a-year.

21477. What does the matron receive as salary?—£. 120 a-year.

21478. And what holiday has she?—She has three weeks’ holiday in the year.

21479. Have you got any plan of your drains?—Yes, we have.

21480. Which you keep up to date?—We have a plan of the drains which we keep up to date; I have one in my office, and the honorary architect, who is a gentleman who takes a very deep interest in the hospital, has one in his office, and he is constantly in and out of the place inspecting the drains.

21481. Have the nurses and midwives become members of the Nurses’ Association?—We have nothing to do with that.

Chairman—continued.

21482. What class do the probationers come from, as a rule?—I do not know that I could very well answer that question.

21483. From the domestic servant class?—No; I cannot very well say whether it is from any particular class at all; I believe the majority of them are women who have done nothing before.

21484. A class a little above the domestic servant class?—A little above the domestic servant class.

21485. From the class of small tradespeople?—Something of that sort, I think.

21486. Could you explain to us about the training school?—I think I have said nearly all I have to say on that, excepting that nurses were first received into this hospital for training in 1851, but a training school was established in 1874, when, according to certain records that I have referred to, the laws of the hospital were altered to admit medical students to the practice of the hospital.

21487. And then as to the accounts of the training school?—Shall I read the figures?

21488. Yes, if you please?—The receipts for the year 1890 were as follows: Medical pupils’ fees, that is medical students, 362 *l.* 15 *s.* 6 *d.*; pupil midwives’ fees, 1,118 *l.* 5 *s.*; pupil nurses, 1,629 *l.*; sundries, 2 *l.* 5 *s.*; making a total of 3,112 *l.* 5 *s.* 6 *d.* The total amount of expenditure, perhaps your Lordship would not care for me to read the items.

21489. No; will you give us the total?—The total amount of expenditure was 1,900 *l.* 18 *s.* 7 *d.*, leaving an available balance of 1,211 *l.* I think it was, and that enabled the training school then to pay back 500 *l.* to the hospital account on account of money that was spent in 1886 to increase the size of the hospital.

21490. Have you any pensions to pay out of that fund to your sisters or matron?—No.

21491. Is that the yearly average?—That has increased year by year; I think that is the highest amount we have received.

Earl of Cathcart.

21492. Is the average anything approximate to that amount?—Yes, about 3,000 *l.* a year; 2,800 *l.* is a fair average.

Earl of Winchelsea and Nottingham.

21493. Are those receipts that you have given us, leaving an available balance of about 1,211 *l.*, the receipts, taking into account the new state of things under which you have 48 nurses for a longer period than before; you told us that owing to the new regulations, the number of persons entering for the longer term has increased; has that come into effect in these accounts, or do you expect the amount still further to increase?—I do not expect that that would increase the receipts very much. Really, if all nurses came in for 12 weeks instead of eight, we should lose by it.

Chairman.

21494. Is there anything you wish to say further?—No, I think I have said all I have to say.

The Witness is directed to withdraw.

30 April 1891.

MR. WILLIAM HOPE, M.D., is called in; and, having been sworn, is Examined, as follows:

Chairman.

21495. ARE you the Resident Medical Officer of this Lying-in Hospital?—I am Senior Physician on the staff.

21496. Will you tell us what your qualifications are?—I am a doctor of medicine, a member of the Royal College of Physicians of London, and a member of the Royal College of Surgeons of England.

21497. We have had nearly all the details, I think, that we require, from the last witness; is there anything you would like to bring before the Committee?—Nothing at all.

21498. You are strongly in favour of lying-in hospitals, I presume?—Decidedly.

21499. From every point of view, both the view of the patients and for the training?—Decidedly, specially for the training.

21500. Has a great improvement taken place in these lying-in hospitals in the last 20 years?—A vast improvement.

21501. The reputation that they bore up to 15 or 20 years ago was not very high?—It was not.

21502. That was owing to the insanitary state of the buildings in part, was it not?—Yes, and the want of knowledge of antiseptics which are now so much in vogue.

21503. And are you now perfectly satisfied with the existing state of things?—Perfectly; I speak of Queen Charlotte's.

Lord Saye and Sele.

21504. It is not the case, is it, as the last witness stated, that the mortality of single cases is higher than that of the married cases?—I should say it was; for many of the girls are very young, ranging from 14 up to 25 or so. We have had cases as young as 12, quite children; and the shock to them is very great; but they do very well, and they do better now than they used to do some years ago, for this reason; they are taken into homes before they come to us, and they are very carefully fed and looked after and cared for. In former days, when the mortality was greater than it is now, they were tossed about from pillar to post, often driven away from home, forsaken by their parents, and they were left to live anyhow; they came in really in the very greatest distress and misery.

Lord Monkswell.

21505. Are you satisfied that the nurses are not over worked?—Yes, I am satisfied of that.

Earl Cathcart.

21506. Should you say that the prospects of recovery are as favourable in your hospital as in private practice in similar cases?—I should say quite as favourable.

21507. But that is very different from the former experience?—Very different.

21508. From the experience of 10 or 20 years ago?—Fifteen years ago.

Earl of Arran.

21509. Do you have many cases where the age is so young as what you have just stated?—
(24.)

Earl of Arran—continued.

We have not many cases of the age of 12; we have several of 14 and 15 and up to 20 years of age, and they range from that up to 50 years of age.

Chairman.

21510. You have many cases as young as 12, 14, and 15, have you?—We have a few, but not many.

21511. I believe you desire to add something to your evidence?—Yes. The secretary has reminded me that a gentleman of the name of Bousfield once came up before this Committee, and stated that it was detrimental to the patients at a lying-in hospital to have medical students present. That I distinctly repudiate; in fact, since we have had our medical students, which has now been for 10 years, our mortality has considerably and steadily decreased, and they are of the greatest possible service to us; and it is quite fallacious to suppose that their presence is in any way detrimental to the patients admitted into our hospital.

21512. Are you of the opinion which was given here some time ago, that patients do not dislike the presence of medical students?—Certainly not; they rather like it than otherwise. They seem to think they are better attended to.

Lord Monkswell.

21513. Would you suggest, therefore, that medical students should be admitted to other lying-in hospitals?—Yes; I think that is greatly in favour of Queen Charlotte's Hospital. We open our doors to thoroughly scientific young medical men. And I think there is no lying-in hospital in the town that should be without a resident medical officer.

Lord Saye and Sele.

21514. You speak of the Mr. Bousfield, who is the Chairman of the General Lying-in Hospital in the York-road?—Yes.

21515. Then he has got considerable experience of lying-in cases?—That may be; but that which I have just referred to is the statement which he made in evidence; and it is contrary to my own convictions and experience.

Earl Cathcart.

21516. You would not like young men to come in from other hospitals with septic influences, would you?—No, they are strictly forbidden to do so. They are not allowed to attend any infectious case or go near it, or attend a post-mortem examination.

21517. I think that is of the essence of the question; I think that was what Mr. Bousfield objected to?—We are most strict about that.

Earl of Arran.

21518. Do you have regular lectures?—We have regular lectures. I and my colleague lecture twice a week throughout the year; and the resident medical officer lectures twice a week also throughout the year.

The Witness is directed to withdraw.

30 April 1891.

THE RIGHT HONOURABLE THE LORD BALFOUR OF BURLEIGH being present, and having been sworn, is Examined, as follows:

Chairman.

21519. You are the President of the London Fever Hospital, are you not?—Yes.

21520. Will you tell us is that a free hospital or is it a hospital where patients pay?—It is a hospital where patients pay, in two classes.

21521. What are the two classes?—We divide them under the names of ward patients and private patients. The ward patients pay three guineas for treatment for the whole case; the private patients pay three guineas a week; but the families and servants of governors are admitted free; and contracts are made on terms with hotels and the large firms for the treatment, without payment, of any of their employés who are taken with infectious disease, provided they have been for a certain period subscribers to the hospital. We have many of these. Perhaps before going further I may give you in a word or two what has been the history of the hospital.

21522. If you please?—The Fever Hospital was founded in 1802, and from 1802 down to 1871 it really did the whole fever hospital work of the Metropolis, which is now divided between it and the hospitals which, since 1871, when they were founded, have been under the management of the Metropolitan Asylums Board. Of the building that we occupy at present the first part was built about the year 1848. The older hospital was on the site of the Great Northern Railway Terminus, and we were expropriated in that year; the new building is situated in the Liverpool-road. Of course it has been added to and improved since that time. In 1871, as I have said, the Metropolitan Asylums Board began its work; but for some years after that year the Fever Hospital still continued to keep its old practice of taking in poor people absolutely free. But after some years of great difficulty the free treatment had to be discontinued. The rivalry, and to some extent the greater power, of the Metropolitan Asylums Board prevented the possibility of our doing the work; and also, to some extent, people got into their heads the idea that the Metropolitan Asylums Board was to do the work, and they discontinued subscribing; and between the years 1871 and 1880 our work was carried on only with very great difficulty and at a loss. I first joined the Committee about 1878, and at that time we were selling out stock and realising investments to the extent of about 3,000*l.* a year. But in 1880 the system of the hospital was changed, and, speaking generally, I do not say absolutely, the people who were unable to pay anything at all were taken charge of by the Metropolitan Asylums Board; I do not say exclusively so, because at times people are sent to us, and if they are taken in and it is afterwards discovered that they are very poor and cannot pay, the case comes up before the Committee and the fee is excused. You cannot turn away, or inquire into the circumstances of, a patient who is suffering from fever and brought to the doors of the hospital. If afterwards we find he cannot pay, the fee is remitted. In 1880 we

Chairman—continued.

commenced to charge the ward patients two guineas for the case, and the private patients three guineas a week; but in 1882 the ward fee was raised to three guineas for the case. Large firms, clubs, and hotels, pay I think 20 guineas, and their employés are taken in if they are stricken with fever, and no further charge is made.

21523. Is that 20 guineas a year?—The exact form of the thing is this: “Firms, clubs, and hotels, subscribing two guineas annually, may send one employée; if four guineas annually, they may send two; and if five guineas annually, they may send three yearly for free treatment in the hospital.” A guinea a year as an annual subscription constitutes the right to free treatment for any number in a private house; ten guineas and upwards in one donation gives the same privilege; but there are not many of those; there are some. We have lately been getting more governors, and therefore we have more people coming in on those terms; and we think that a wise thing, because it is a sort of insurance. At the present time, if I might say so, the Fever Hospital is doing work between the two social extremes. Those who have large private houses, and of course can give isolation and pay the cost of a fever case themselves, and have treatment in their private houses; those who are at the opposite end of the social scale go to the Metropolitan Asylums Board; and our hospital comes in between, and treats those who can pay partly. But as I said, we have a class of private patients, and they pay rather more than the cost of their treatment. We think it an advantage to them and an advantage to the community that isolation should be given in their cases.

21524. How many beds have you?—I would rather leave the medical officer to speak to that, because there have been some re-arrangements quite recently to make further provision for isolation.

21525. Are many cases brought by friends to the doors of the hospital without notice?—A few, not very many; generally I think notice is sent before hand; but you never know what emergency may take place.

21526. Supposing you receive a telegraphic message to the effect that there is a patient who requires admission, do you send any ambulance for him or what occurs?—We have an ambulance and that can be sent; but we are pressed for room, and we have been obliged recently to make the rule that those who reside outside the area dealt with by the Metropolitan Asylums Board can only be received into the hospital from families of governors, or from those who have subscribed before hand. Of course I press the advantage of the hospital on this ground: that we can give greater advantages, even to those who pay the whole of the cost to us, than they could get for anything like the same money in their own homes; and I claim that that is an advantage for a special hospital of the peculiar kind

30 April 1891.]

Right Hon. LORD BALFOUR OF BURLEIGH.

[Continued.]

Chairman—continued.

kind which deals with infectious fevers; that that is an advantage, not only to the sufferers themselves, but it is an advantage to the families; and if, as is really the case, people are becoming more and more inclined to take advantage of it, it is an advantage to the community, because it relieves the community of a source of danger from infection.

21527. Do you have to turn many people away on their making application to you?—Not in ordinary times, but at times of great pressure. If there happens to be an epidemic of any particular kind of fever in the Metropolis, we might have to do so. Last year we treated 682 people in the hospital, although there was no unusual epidemic. The year before that there was a considerable epidemic of scarlet fever both in the spring and autumn; and the pressure upon the space was severe, so much so that we have had under consideration the propriety of extending.

21528. What fevers do you take in?—Any infectious fevers except small-pox; we do not take small-pox; but the most usual course are scarlet fever, measles, and German measles, typhus and typhoid, and diphtheria.

21529. Would you tell us what the constitution of the hospital is, how it is managed?—The hospital is managed by governors, who are those who subscribe a certain amount. We have an annual meeting, and can hold special meetings. The actual executive work of the hospital is done by a committee which consists of the president, vice-presidents, the treasurer, the trustees, and the honorary secretary of the committee. The committee meets monthly upon the second Friday of each month, and there are weekly or fortnightly meetings, as required, of the house directors. The house directors are appointed from among the members of the committee, not exactly in rotation, but changed from time to time; and the minutes of the house directors are always laid upon the table and read to the next monthly meeting of the committee.

21530. What is the number of your monthly committee?—There are 24 members of the committee besides the vice-presidents; not many of the vice-presidents usually attend.

21531. What would be the average attendance on the committee?—We vary from about five to 15.

21532. And your quorum is five?—I think it is five; we have no difficulty in getting a quorum; and the committee I may say during the last 12 years, during which time I have been connected with the hospital, have been carefully selected from amongst those who will attend. Many of them have actually been patients in the hospital. The first connection of several of our committee with the hospital arose from their having, in the first instance, been patients.

21533. Then this committee, or the visiting governors; do you use that term?—House directors we call them.

21534. Those two bodies of gentlemen are the authorities who check all the accounts and so forth, do they?—They do a good deal with the secretary; but with regard to details of that kind, the monthly accounts are passed always by the committee as a whole; they see the whole
(24.)

Chairman—continued.

amounts of the accounts, and the cheques are signed in the presence of the meeting.

21535. Does a supervision once a month strike you as being sufficient as a check?—Coupled with the house directors, and the secretary, and the resident medical officer, certainly.

21536. You have a paid secretary?—Certainly.

21537. Can you tell us what salary he gets?—I cannot tell you off-hand; he is in the room and can tell you himself.

21538. You have a resident medical officer?—Yes; he is also in the room.

21539. He is the servant of the committee?—Certainly; he gives us his whole time.

21540. And he is independent of any medical committee there may be?—Yes. But in my experience we have never had any friction with the medical officers, either honorary or resident. Besides the resident physician we have three consulting physicians, who are available to us if we require them in an emergency; we have also two physicians who attend regularly, and two assistant physicians who take the place of the physicians when they are away for their annual holiday. They are gentlemen well known in the profession, and who have considerable outside practice, and who come, one or other of them, daily to the hospital.

21541. Are your food contracts made by open tender?—Yes, I think so in every case; but perhaps that I might leave to the secretary.

21542. And do you train your own nurses?—Certainly; we are obliged to do it. Of course that is one of the items that makes our amounts, if you are going to compare them with those of any other hospital, rather more expensive per patient than they would be; because, even when we have a slack time, and few people are in the hospital, we cannot let down our staff of nurses; because if nurses are not, so to speak, seasoned and have not had fever, that is if we were to take in new people in a time of emergency we should probably be worse off with those new people than without. We must, therefore, keep up a trained staff of nurses continually.

21543. You would rather the secretary spoke to the number of nurses, and so on?—Yes; he would give you all particulars.

21544. Do you admit any students to your hospital?—I think not. I should like to mention that there were 334 doctors, nurses, and patients received in our hospital from other hospitals in the last three years as patients.

Earl of Winchelsea and Nottingham.

21545. I think you said that the change in the system of the hospital was made in 1878, from an essentially free hospital to an essentially paying one?—Eighteen hundred and seventy-one was the time when the Metropolitan Asylums Board was established; but we kept on attempting to do the same work down to the year 1880.

21546. Have you any system except what you have described as a system of insurance, of free letters given to subscribers?—Anyone who has subscribed 10 guineas, or who subscribes one guinea a year, can send anyone from his house, but we do not give letters to people to send in patients casually.

21547. And outside the system that you have described

30 April 1891.]

Right Hon. LORD BALFOUR OF BURLEIGH.

[Continued.]

Earl of Winchilsea and Nottingham—continued.

described there is no system?—No, because our system is one of contract with the patient. We take anyone who comes who pays the ward fee, or the private patient's fee; but we endeavour, as far as possible, to consider the circumstances of the people who come in, and, though it is of course to some extent a delicate thing to do, if we thought anyone was taking an unfair advantage of the hospital we should endeavour to put pressure upon him to pay.

21548. You have spoken of certain cases that are still free; cases which you think ought to be so. Have you any system of inquiry in those cases?—It would come up more in those cases when the demand for a fee was made; a plea would be put in of inability to pay.

21549. Something in the same way as parents are now excused from payment of school fees if they are unable to do it?—Yes.

21550. Does the insurance you have spoken of include the cost of the removal of the patient to the hospital?—I am not quite certain upon that point.

21551. Does it include the cost of their treatment until they are fit to be discharged?—Yes; the duration would be, on the average, about six weeks.

21552. During the whole of that time are they kept in the hospital?—Yes.

21553. You spoke of an extension being probably required; have you considered whether that extension could be better made in the country, or do you propose to make it in London?—We have a sub-committee at the present time inquiring into the whole circumstances, and no decision as to policy has been come to by that committee; and I may say that unless things get more pressing than they are at present, I think we shall probably wait for the report of your Lordships' Committee. I am not, however, authorised to say that.

21554. Have you, at the present moment, any convalescent hospitals in the country to which you can draft patients whilst waiting to be discharged?—We have no direct connection with any such, but the doctor will be able to tell you about that better than I can.

21555. After a person has been cured, as far as medical attendance is concerned, a case of scarlet fever is still infectious, as far as the outside public is concerned, for several weeks?—Yes.

21556. During that time it occupies room in the hospital?—Up to the point when it is thought

Earl of Winchilsea and Nottingham—continued.

fit to discharge the case; the resident medical officer judges, I fancy, upon each case as it arises, whether the individual can safely be allowed to go to the place where he wishes to go, or whether it is necessary to permit him to stay longer under precautions.

21557. But the point is under consideration whether any proposed extension will be in the country?—That will be one element we shall consider.

Lord Monkswell.

21558. You said the ward patients only pay three guineas for the whole case, and that the average duration of the case is six weeks; do they get the same accommodation as private patients who pay three guineas a week?—Not the same accommodation in the way of privacy; but the same medical attention and nursing, and practically the same food.

21559. I suppose they occupy wards, and private patients have a room to themselves?—Yes, that is so; I believe in almost every case a private patient has a room to himself.

21560. And the three guineas a week in all cases is rather more than what it costs, even with a private room?—We think so.

Chairman.

21561. Would you like to speak to the financial condition of the hospital?—I think the secretary had better do that.

21562. I do not think I asked you where the hospital is situated?—It is in the Liverpool-road, which is one of the main roads out of London, and runs for some distance parallel to the Great Northern Railway. If you were at King's Cross terminus, which the Committee probably know, on the eastern side there is a road going northward, along which a tramway comes down; it is up that road a considerable distance.

21563. Is there anything else you wish to say to the Committee?—Nothing, I think.

Earl of Kimberley.

21564. Have you ever had any difficulty as regards the neighbourhood on account of any fear that you are a centre of infection?—We have had no representation to that effect that I am aware of during the 13 years for which I have been on the committee; and I may say that during the whole time I am in London I hardly ever miss a meeting. I should have been sure, therefore, to have known of it, if there had been any representation to us of that kind.

MAJOR W. CHRISTIE, is called in; and, having been sworn, is Examined, as follows:

Chairman.

21565. You are the Secretary of the London Fever Hospital, are you not?—Yes.

21566. How long have you been secretary?—Four years and a-half.

21567. And what were you before that?—I had just left the service; I was in the Army Pay Department for the last five years of my service.

Chairman—continued.

21568. What salary do you get?—£.300 a year, and a commission on some of the subscriptions.

21569. And board and lodging?—No; no board and no lodging. They give me lunch.

21570. Would you tell us the financial position of your institution. What was the expenditure last year and what were the receipts?—The expenditure

30 April 1891.]

Major CHRISTIE.

[Continued.]

Chairman—continued.

expenditure amounted to 8,479*l.* 19*s.* 1*d.*; the net outlay.

21571. And the receipts?—The receipts amounted to 13,392*l.*

21572. That is to say, you had a large surplus?—Yes, we had a surplus.

21573. And what are the sources of that income?—Donations, 2,655*l.* (I am not giving the shillings and pence); annual subscriptions, 3,582*l.* by householders, firms, clubs, and hotels; Hospital Saturday Fund, grant of 50*l.*; Hospital Sunday Fund, 468*l.*; fees received from patients, 2,447*l.*; dividend from funds and rents, &c. from the Elm Park estate, which belongs to the hospital, 1,890*l.*; sales of old kitchen stuff, 10*l.*; receipts for horse-hire (that is payments for the ambulance by patients) 150*l.*; legacies, 1,003*l.*; balance of the Samaritan Fund in favour of the hospital, 2*l.* 0*s.* 6*d.* That with 1,100*l.* brought forward from the preceding year, makes a total of 13,392*l.*

21574. Is that an exceptionally good year, on an average, in legacies?—As to legacies I should say it is about the average, extending over a period of 10 years; before that very few legacies were received by the hospital.

21575. Have you ever been able to make any calculation how far the three-guineas fee that you charge for ward patients, goes towards meeting the expense that they are to you?—We calculate that it pays about one-fourth of each patient's cost, and the funds of the hospital bear the other three-fourths.

21576. And the other patients pay a fee of three guineas a week?—Yes.

21577. Then the length of their stay averages six weeks?—Yes.

21578. So that there is some profit to the hospital then?—I believe it was originally fixed to just about meet their cost; I think there is a little gain made by the hospital, to say nothing of the donations which many of the private patients give.

21579. Do you get large sums from those donations?—From 10 to 25 guineas each.

21580. And sums of less than 10*l.*?—Yes, sums of less than 10*l.*; sometimes an annual subscription of a guinea, two guineas, three guineas.

21581. Do you appeal much to the public?—We do appeal to householders to support the hospital.

21582. In your immediate vicinity?—All over London.

21583. And do you appeal to people outside London?—Very little indeed.

21584. Will you tell us the number of beds you have?—Two hundred.

21585. And how are those divided between the ward patients and the other patients?—I am not in any way responsible for the interior economy of the hospital. Dr. Hopwood is here, and would give you that information.

21586. Then you have nothing to do with the nurses, have you?—Nothing with the nurses, except to pay them.

21587. What is your business confined to?—I represent the hospital with the outside public. The interior arrangements of the hospital are entirely in the hands of the resident medical
(24.) e

Chairman—continued.

officer; he represents the house directors in their absence. I have to do all the outside work and attend to subscriptions and donations and financial matters generally, and lay the monthly accounts before the auditor.

21588. Are you the secretary of the committee of management?—I am the secretary of the committee; I attend all the meetings of the committee, the house directors', and sub-committees, and every other meeting.

21589. Then you would rather leave the details with regard to the nurses to Dr. Hopwood?—Yes.

21590. Have you anything to do with making contracts?—Yes, I tabulate them. I lay the tenders before the house directors. Twice a year we call for tenders by advertisement for all our provisions; once a year for coal. I lay them before the house directors, and they having considered them, decide who shall supply the hospital for the ensuing six months.

21591. What length do you make your contracts as a rule?—For everything but coal the contract is for six months at a time; from Lady-day to September.

21592. Do you think that those long contracts are the most beneficial way of doing business?—I can hardly say whether there is a better plan that could be adopted; but that has been the plan that has been in operation ever since I have been there. I have seen no other system to compare it with.

Earl of Winchelsea and Nottingham.

21593. With regard to the question whether this is an average year; last year you brought forward 1,100*l.*, did you not?—Yes.

21594. Was that after investing any money or not?—Yes, that would be after investing some.

21595. Can you give me the figure?—That would be after investing 2,500*l.*

21596. So that the real balance of that year was about 3,600*l.*?—£. 3,627.

21597. And this year it is 4,900*l.*?—There was a balance in hand as well at the end of last year.

21598. Then it would be something like the same as last year?—Yes, something very like it.

21599. Do you put the legacies to a separate fund?—No, the amount for legacies is passed in with that balance.

21600. Could you give us a few particulars about the Elm Park Estate; what is that?—The Elm Park Estate was purchased by the hospital in 1888. The hospital had previously owned a small property in Coldbath Fields. This property brought in about 150*l.* a year, and had done so since 1813. The Metropolitan Board of Works wanted this property to run a road through to the Angel, and they bought it of us at a valuation of 24,000*l.*

21601. It is not anywhere near the hospital?—No, it is nowhere near the hospital; it is about half-way between the hospital and Chancery-lane. The Coldbath Fields' property is the one that was sold. I am giving a brief history of the whole transaction. The Coldbath Field Estate was sold for 24,000*l.*, and the committee, indeed the Court of Chancery, determined that the money realised by the sale

30 April 1891.]

Major CHRISTIE.

[Continued.]

Earl of Winchilsea and Nottingham—continued.

of this estate should be re-invested in another estate. The committee then purchased this Elm Park Estate at Brixton; they added 8,000 *l.* to the 24,000 *l.* they had received, and bought the Elm Park Estate for 32,000 *l.*

21602. What interest does it pay on the money you have invested in the purchase?—Nearly 4 per cent.

21603. How is it managed?—The hospital solicitors collect the rents; it is ground-rents entirely; it requires little management except collecting.

21604. Is it increasing in value?—I do not think it will very much. The rack rents will fall in at the end of about 90 years.

21605. The income of the Elm Park Estate is what?—£. 1,200 a year; the balance between that and the 1,890 *l.* which I mentioned just now among the receipts comes from stock.

21606. The total amount of dividend, including the rents from this estate, came to 1,890 *l.*?—£. 1,200 for the estate, and 690 *l.* for stock.

Lord Lamington.

21607. What do other hospitals pay when they send patients to your hospital?—They pay mostly three guineas; they mostly send their patients into the wards, and pay three guineas for the six weeks' treatment, but occasionally they require private rooms.

Lord Clifford of Chudleigh.

21608. Are all your patients sent by medical men?—No patient is received as a rule unless he is accompanied by a medical certificate saying the disease he is suffering from.

21609. And do you generally send your ambulance for him, if desired?—We always send it, if desired, within a certain distance.

21610. And what is your charge?—For the governors of the hospital the ambulance is sent free, within a radius of five miles; outside that, and to non-subscribers inside that, 5 *s.* for the first mile; a shilling a mile after the first.

21611. Do you let out your ambulance for moving patients to other places, except from and to your hospital?—No.

21612. They cannot get it for that purpose?—No, our ambulances have as much as they can do.

21613. Do you know whether ambulances of that kind are available for that purpose?—Yes, I know that there are certain men who let out ambulances; and I also know that people may obtain the ambulances of the Asylums Board on application to Norfolk House.

Lord Monkswell.

21614. Do I understand you to say that all contracts are by open tender, without exception?—There are a few things that are not tendered for, not supplied on contract, nurses' dresses are one. Then there is a great deal of work done in the hospital in the engineering way, in the repairing of buildings, and so on; that is done by our engineer and his assistant.

21615. With regard to the nurses' dresses, how do you manage; why are not those contracted for?—I can hardly say why.

21616. Do you go to particular tradesmen

Lord Monkswell—continued.

always for the dresses?—They generally get the serge from a place in Somersetshire, I think; from the manufacturer.

21617. For some reason or other there is no contract for any part of the uniform?—No.

21618. I suppose that is in the matron's hands?—Entirely in the matron's hands; she knows best which place to go to.

21619. With that exception all your contracts are by open tender?—I think with that exception all our contracts are by open tender.

21620. Everything that you have got anything to do with is?—Yes, everything that I have got anything to do with is.

Earl Cathcart.

21621. Touching cases of contagion amongst the nurses of the establishment, have you any knowledge in that matter?—I have a certain amount of knowledge, but the medical officer would be able to give you the fullest information.

21622. But these sort of cases are reported in your office, I suppose?—Yes; when a nurse goes into the ward she is always reported off, but she is treated free of course.

21623. Yes, but we have asked the question in most other cases, and it would be interesting to know, as yours is a fever hospital, whether you have many cases of contagious disease amongst the nurses of the establishment?—Three or four a year, generally.

21624. But you have an abstract showing that, I suppose?—It is in the report year by year; it is usually mentioned in the report, and as there is none in the report last year I fancy there were none.

21625. You were very fortunate in that respect?—They were seasoned nurses. In 1887 we had to take on a number of fresh nurses on account of the epidemic, and three or four of those contracted the disease they were nursing.

21626. Have you any strict regulation about the nurses as they go out about their dress?—They are not allowed to go out in the dress they wear in the hospital; that is the only rule.

21627. And that rule is strictly carried out, is it?—Yes, they are not allowed to go out in their nurses' uniform.

21628. And as regards the medical officers, is there any similar regulation?—There is no rule that I know of; they use their discretion.

21629. Your ventilation is so good, I believe, that people walk about in the hospital with impunity, yourself and others?—I never go near the hospital; my office is connected by telephone with it. When I say that I never go near it, I take my lunch with the medical officers, that is all, in their mess room.

21630. But the committee and medical officers and others walk about with impunity?—They do; there are some of our committee-men who visit the wards regularly.

Earl of Arran.

21631. As a rule, do your patients arrive in ambulances?—As a rule, yes.

21632. They do not use hack cabs?—When they do the cab is detained by the medical officer and is sent to the nearest police yard and disinfected. The gates are shut, and the cab is not allowed out till the police are there to receive it.

21633. And

30 April 1891.]

Major CHRISTIE.

[Continued.]

Earl of Arran—continued.

21633. And when the patients go away they are supposed to be free from infection?—Is free, I believe, as science can make them.

Earl Cathcart.

21634. What do you do; burn sulphur?—No; we use a disinfecting machine for which we paid 400 l. or 500 l. It opens into two rooms. The things for disinfecting are placed in one room; then they are passed into the disinfector, subjected

Earl Cathcart—continued.

to a heat of something like 250 degrees and then passed out into a non-infected room. That of course is as regards clothing, bedding and so forth. The patient is bathed and everything that is necessary done to disinfect him.

21635. But the ambulance, the cab I mean?—The ambulance I believe is sulphured after every journey.

The Witness is directed to withdraw.

MR. EDGAR O. HOPWOOD, M.D., is called in; and, having been sworn, is Examined, as follows:

Chairman.

21636. You are the resident medical officer of the London Fever Hospital?—Yes.

21637. What qualifications do you hold?—I am doctor in medicine of the University of Oxford.

21638. You do not hold any London qualification?—I do not.

21639. What salary do you receive as medical officer?—£. 200 and a house, or the majority of a house, and board.

21640. Is there any medical committee at the London Fever Hospital?—The honorary medical staff are members of the house committee; there is no special medical committee; no committee that is entirely medical.

21641. Being a salaried officer of the hospital you are not a member of that committee?—I am not a member; I merely attend.

21642. Would you tell us of the nurses; we have had the term "seasoned nurse" used; does that mean that they have been trained?—Some have been trained at other hospitals; a large number have been trained by ourselves. We take them on agreement, that they shall stay for three years, or if they terminate the engagement before that time, an amount of 8 l. is kept back from the first year's salary of 20 l.

21643. But then a great number of these people do commence training in your hospital?—Yes, a considerable number of them.

21644. So that they cannot be seasoned then; there must be a great risk of their catching the disease?—The majority of them have had scarlet fever; that is the principal disease now; typhus has died out. In the old days something like a quarter of the staff died of typhus I believe; of the medical staff, certainly; but now the risk in that respect is comparatively small.

21645. Do you know what the mortality amongst the nurses has been in the last 10 years?—There has been no one who has died. One nurse died from diphtheria shortly after 1880, that is to say, shortly after the time when my connection with the hospital commenced.

21646. How many nurses have you got?—At the present moment there are about 20; 22 or 23. I let the staff go down to about 13 by a natural process of diminution through the three years' contract coming to an end, and nurses getting married; and then as I am able to foresee the amount of fever that there is likely to be in London in the immediate future, I add to the strength of the staff, through the matron.

(24.)

Chairman—continued.

21647. Will you tell us what hours you work your nurses?—The day is divided into two parts of 13 hours and 11 hours. The night nurses are on duty for 11 hours, and the day nurses for 13.

21648. And then what time off have they?—Two or three or four times a week they have time off; some days from five onwards; and every Sunday.

21649. Perhaps you will furnish the details of that?—Yes.

21650. Can you tell us what wages they have?—They come on as probationers at 20 l. a year, of which 8 l. is kept back till they have completed their time; the next year they rise to 24 l., and then by 2 l. yearly up to 36 l. Sisters begin at 36 l., and rise by 3 l. yearly to 45 l.; except the night superintendent who begins at 40 l., and rises by 5 l. a year to 50 l.

21651. And who is the head of the nurses?—The matron is the head, under me.

21652. What does the matron receive?—She begins at 80 l., and rises to 100 l., or 110 l., or 120 l.; I forget exactly the limit.

21653. But you are responsible, are you, to the governors?—I am; I represent the committee in the hospital.

21654. Do you keep any nurses for sending out for private nursing?—Very few now. I do not think it possible to do it; not with advantage to the hospital.

21655. But is it the case that you do not have many applicants?—There is a very irregular demand; it would not be possible to work it as a commercial business, certainly financially. The demand only occurs in one part of the year largely, that is in the autumn, when fever is prevalent; and to keep the needful staff the whole year would be impracticable.

21656. Your nurses' health, otherwise than in regard to fever, I mean, is very good, is it not?—Yes, very good; they are not hard worked.

Earl of Kimberley.

21657. When a case comes, if you have any doubt as to its being a case of infectious fever, what do you do?—That involves the question as to how they are admitted. The patient might be admitted on a medical certificate that he or she was suffering from scarlet fever or measles or German measles or diphtheria. It might or might not be possible for me to confirm the medical man's diagnosis. He had seen the patient at the

3 x 2

time

30 April 1891.]

Mr. HOPWOOD, M.D.

[Continued.]

Earl of *Kimberley*—continued.

time I had not; so that the fact that some of the symptoms were wanting would not go for very much. The doctor's certificate must be taken as very strong *prima facie* evidence that the patient is suffering from that disease. But supposing the case is certified "scarlet fever," and in my opinion the patient is suffering from small-pox, I should have the patient put in an isolated building some distance from the other, and telegraph for an ambulance to remove the patient to the small-pox hospital. If belonging to the class that we generally treat, the patient would go to the Highgate Small Pox Hospital, where a five guineas fee is charged for admission, I think.

21658. But I suppose a case might arise where a mistake has been made and the patient, in point of fact, is not suffering from infectious disorder; you have known such cases?—Yes, I have.

21659. In that case would you, on the doctor's certificate, put that man into the hospital?—No, not into an infectious ward.

21660. And such cases occasionally occur?—They do.

Earl of *Winchilsea and Nottingham*.

21661. Have you any convalescent hospital in the country in connection with the fever hospital?—There is not one in connection with our hospital, but there is the Mary Wardell Convalescent Home for scarlet fever at Stanmore, of which we make considerable use.

21662. Supposing the patient has a disease like scarlet fever; that is the principal disease you have?—Yes.

21663. It is the fact, is it not, that the patient may be recovered as far as he himself is concerned, but may still be infectious to other people?—Certainly; and these cases are detained mainly for their infectiousness in the fever hospital.

21664. May we take the time as about six weeks?—Six weeks is the minimum for the adults and eight weeks for children.

21665. How long would they be under active treatment?—Sometimes one day, or a few hours; sometimes, perhaps, as long as three weeks, not generally more. After a month a patient might be drafted off to a convalescent home with advantage.

21666. Then for three weeks, perhaps, in some cases for four or five, you keep them in the hospital not for their own sakes, but for other people's sakes?—That is so.

21667. Would it not be a great advantage to you, supposing that you are pressed for room, as we have heard from Lord Balfour, that you are to be able to send them into the country at an earlier time than you can now?—Certainly. That is one of the proposals I made to the committee recently appointed.

21668. There is no reason on their own account for keeping them where they are?—None whatever; they would be better off in the country.

21669. Their convalescence would be quicker?—Yes, certainly.

21670. Then supposing that they are only kept for their own sake, shall I say one-third of the whole period of treatment?—I think it would be safer to say that during the first month they may require medical treatment.

21671. Then I will say one-half of the whole

Earl of *Winchilsea and Nottingham*—continued.
period of treatment. But they could be removed before the month, could they not?—They would require another medical staff then in the convalescent home.

21672. At the end of that time it would be an advantage to themselves and the hospital, if they could be removed to the country?—Certainly.

21673. What is the mortality in the hospital, taking it as you would, of course, under different diseases. Take scarlet fever first; have you them separated?—They are all taken by different years. I have them for all the years here, but they are not put together. The mortality from scarlet fever during last year was 2·3 per cent.; from enteric fever it was 9 per cent.; from diphtheria it was 4·5 per cent.; from German measles, of course, there was no mortality.

Earl of *Kimberley*.

21674. And from measles?—5·3 per cent. that year; but there were only four deaths; three of the fatal cases were admitted from other hospitals; the Metropolitan Board hospitals do not receive cases of measles.

21675. Can you give the mortality of 1889?—The mortality from scarlet fever was 1·2 per cent.; from enteric fever, 5·2 per cent.; from diphtheria, 17·6 per cent.; from measles, none; and from German measles, none.

Earl of *Winchilsea and Nottingham*.

21676. Do not you think that a very high average for diphtheria, 17·6?—It is a very low average.

Earl of *Kimberley*.

21677. You had a lower one last year?—We had; but then there were a small number of cases, so that the figure for that year is not of so much value. In the Metropolitan Asylums Board hospitals the mortality is about 50 per cent.; I think anything under 20 per cent. is very low.

21678. The mortality from enteric fever varies very much?—Yes.

21679. Is 9 per cent. low?—Yes, very; it averages 14 or 15 per cent.

21680. What may be taken as the usual average for scarlet fever?—Well, the Metropolitan Asylums Board average is 10, over a large number of years.

Earl of *Winchilsea and Nottingham*.

21681. Then really, according to those figures, you were something like 50 per cent. below the average of the Metropolitan Asylums Board?—Yes, quite that.

21682. Do you attribute that to the better conditions under which you are able to treat patients?—It is partly due to the class of patients we get. That acts in several ways. In the first place among the very poor classes, children catch the disease, that is to say, the average age at which the human being catches scarlet fever is lower in the very poor classes.

21683. And the condition of body too is lower, I suppose, in those classes?—The condition of body too is lower; one is not quite clear how far that goes in affecting the death rate.

21684. With regard to the hospital itself, do you find any difficulty as regards protecting the patients?

30 April 1891.]

Mr. HOPWOOD, M.D.

[Continued.]

Earl of *Winchelsea and Nottingham*—continued.

patients from the walls becoming impregnated with the infectious matter or anything of that kind?—No, none whatever; the health of the patients is very good indeed; the cases get on very well indeed.

21685. Then with regard to the drainage of the hospital?—The drainage of the hospital is very good indeed.

21686. You have an honorary officer who looks after that?—Yes, we have; and of course I look after the drainage myself.

21687. And you have a plan of the drains?—Yes, we have a plan of the drains; and I have done what I could since I have been there to verify the plan; to uncover every drain marked on the plan to see whether it really existed or not, and whether its condition was good. I found that the plan and the drains did not in all respects correspond.

21688. Then the drainage is not modern?—It is modern undoubtedly; it has been entirely renewed on the most recent plan.

Lord *Saye and Sele*.

21689. Are *post-mortem* examinations held in all cases?—No; *post-mortem* examinations are only held if the parent or guardian gives consent.

21690. How are the interments carried on?—Entirely by the friends of the patient.

21691. At their expense?—Yes, at their expense.

21692. And where?—Usually in the nearest cemetery.

Lord *Monkswell*.

21693. Are medical students admitted to your hospital?—Yes, medical students are admitted under restrictions.

21694. Have all the private patients separate rooms?—There are a few two-bedded rooms in which we sometimes receive two boys or two girls, brothers or sisters.

21695. Do the private rooms themselves necessitate more nurses?—Yes.

21696. Do you think that they do pay?—It is almost impossible to find out exactly; but donations are so largely given by the patients.

21697. Besides the three guineas a week you mean?—Yes.

Earl *Cathcart*.

21698. Do you ever, by any chance, get diseases mixed; that is to say, suppose a man went in with German measles, might he come

Earl *Cathcart*—continued.

out, having suffered from scarlet fever?—That has not happened of late years, I am happy to say; I have been able to keep it from coming to that.

21699. It has happened, has it not?—In the past it did, I believe, but hardly within my recollection even. I have been there since 1880.

21700. But that is not a hypothetical case at all, is it?—Not at all.

21701. We have had instances mentioned to us here of people going in a hospital with one complaint and coming out with another?—Yes. We have been very free from that sort of thing.

21702. Now with regard to yourself personally, do you take any precaution as to your clothes when you go out?—No other precaution than that I change my things, and wash my hands, and so on.

21703. You invariably do so?—Yes; I do not think there would be any damage to anybody if I did not.

21704. Supposing you were asked to go to a private family, to a five o'clock tea, would there be no danger in your going to that family without taking those precautions?—I believe not; the wards are so well ventilated.

Earl of *Arran*.

21705. I think you said it would be very advantageous to the hospital and the patients if they could be moved rather sooner than they are now?—Certainly.

21706. How would it be as regards the public; would they be free from infection sooner, or would you have to take additional precautions if you were to remove them sooner?—They would have to be moved in closed carriages; in ambulances.

21707. You would have to make some arrangement, I suppose, of that kind?—Yes.

21708. It would not be safe to send them by train, for instance?—Oh, dear, no.

Chairman.

21709. I do not know that you are the proper witness to put this question to, but perhaps you can answer it: are your accounts audited by a professional auditor?—Yes, they are audited by a professional auditor, and two auditors appointed by the Committee.

The Witness is directed to withdraw.

Ordered, That this Committee be adjourned to Monday next, Twelve o'clock.

Die Lunæ, 1^o Junii, 1891.

LORDS PRESENT:

Earl of LAUDERDALE.
Earl SPENCER.
Earl CATECART.
Earl of KIMBERLEY.
Lord ZOUCHE OF HARYNGWORTH.
Lord SAYE AND SELE.

Lord SANDHURST.
Lord LAMINGTON.
Lord SUDLEY (*Earl of Arran*).
Lord MONKSWELL.
Lord THRING.

THE LORD SANDHURST, IN THE CHAIR.

MR. JOHN WILLIAM GORDON, is called in; and, having been sworn, is Examined, as follows:

Chairman.

21710. YOU are on the staff of the "Lancet" I believe?—Yes.

21711. Will you please tell us what your vocation in life is?—I am a barrister-at-law.

21712. And you have given, as one of the staff of the "Lancet," considerable attention to the accounts of the metropolitan hospitals?—I have.

21713. What are the principal points that you wish to criticise in those accounts?—I am not quite sure that I can summarize the principal points in a word, but if I may take them in order I should like to do so.

21714. If you please?—The first point to which I wish to draw your attention is that the various accounts are presented in the most bewildering diversity of forms, so that it is impossible to establish any satisfactory comparison between the accounts of different institutions. Now I do not think I can do better than illustrate that point by drawing your Lordships' attention to some few accounts that I have here, and which I have selected by way of illustration. I have made a list of these accounts, and perhaps it will be convenient if I refer to them by the numbers on my list rather than by the names of the institutions.

21715. It would be more convenient if you would give the names in case the institutions referred to should wish to give explanations?—The first which I will refer to, and which in my list I call No. 1, is a statement of accounts of the London Hospital. That is a hospital account which presents in the form of one account a complete statement of receipts and expenditure. From this account it appears (to draw attention to one point which in this connection is material) that that institution received 21,500 *l.* odd in the shape of legacies last year, and all those legacies are duly brought to account.

21716. May I ask in that case was there a particular heading "Legacies"?—There is a particular heading "Legacies," and the legacies (24.)

Chairman—continued.

are entered under two heads; 6,664 *l.* 6 *s.* 2 *d.* under "legacies" simply, and under the heading "Ditto received in stock as per contra," 14,921 *l.* 7 *s.* 3 *d.*; making up the total sum of 21,585 *l.* 13 *s.* 5 *d.*

21717. In that account do you happen to remember whether, in addition to there being the head "Legacies" that was put under "Capital account"?—That was not put under "Capital account"; and as to the first item, 6,664 *l.*, it was in no way distinguished from other receipts; as to the second item, it is entered "as per contra," and on the other side credit is taken for that amount of stock as for stock purchased, so that the 14,000 *l.* appears in the accounts as an item of expenditure. That is how that hospital for instance deals with its legacies. Now the next (St. George's Hospital), No. 2 in my list, is an institution which has in point of fact received a larger sum in legacies, but they are dealt with differently. There is also here a heading "Legacies," and the various legacies are set out in detail; they are also thrown into a short total, 21,602 *l.* 9 *s.* 2 *d.*, but there is added to that a note against one of the legacies. The note is this: "In addition to this" (that is in addition to the amount entered as paid under the legacy) "a sum of 26,371 *l.* 10 *s.* 1 *d.*, 2½ per cent. consols, was transferred into the names of the trustees of the hospital"; and that sum of 26,000 *l.* does not appear in the account at all, that is to say, it is not brought to account; it is simply notified in that way.

21718. That sum is a sum, I presume, which goes permanently to increase the endowment?—I imagine not; that is to say if I quite correctly understand your Lordship's question, I do not think that this is impressed with any such particular trust as would prevent its being used, if need were, for the general purposes of the institution.

21719. That is what I meant?—But, as a matter

1 June 1891.]

Mr. GORDON.

[Continued.]

Chairman—continued.

ter of fact I think it did go to increase the investments, the property of the institution, for this reason: that the income apart from that, the income which is brought to account, as a matter of fact shows a balance over the expenditure brought to account so that there was no occasion to draw upon that during the year.

21720. In fact these moneys are temporarily invested?—Are “invested,” may I say. I suppose that the investment is temporary in this sense, that it may at some future time be necessary to draw upon it; but I imagine that the investment does not differ in character from the other investments of the institution. Then there is another sum to which I do not think I need make any special reference, except to say that it is a sum of 4,200 £, which is exactly on the same footing as the 21,000 £ to which I have referred. Now the point which I wish to make in that connection is, that taking these two statements of account which appear to be parallel to one another, supposing that one desired to compare these two institutions in respect of their accounts for the year, the one with the other, one would get an impression that No. 1 had received substantially the same in legacies as No. 2, the fact being that No. 2 has received more than double the amount in legacies, but has only brought a proportion, less than one-half of the total amount received, into its account. No. 3 (the Middlesex Hospital) is an institution which has received a much larger sum than either of the two already mentioned; it has received in legacies a sum of 83,433 £. 9 s., but no part of this has been brought into the account. And consequently a comparison of the income and expenditure account of these three institutions would produce upon the mind of a reader who went no further, the impression that No. 1 and No. 2 had received substantially the same sum in legacies, and that No. 3 had received no sum from legacies at all; the fact being that No. 1 had received the least, that No. 2 had received rather more than double No. 1, and that No. 3 had received more than double what No. 2 had. Now the magnitude of these items shows how difficult it is to form any just conception of the magnitude of the financial operations of a hospital from a mere inspection of its published accounts. Now the next institution to which I will call your Lordships’ attention, and which is numbered four upon my list (it is the Charing Cross Hospital), pursues a different course. The peculiarity of the accounts in this case is that there is no general account in the same sense in which there is a general account in the instances that I have already referred to; there is what is called a general account here, and it is an account which comprises the greater part of the income and expenditure of the institution, but it is supplemented by seven other accounts; two of them are accounts which are incorporated by the carrying over of their balances to the general balance,—which are incorporated in the general account; but five of them are accounts which are totally distinct from the general account; and in order therefore to get a complete view of the finances of this institution during the year, one has to refer to, and mentally or manually to

Chairman—continued.

incorporate the results of six different accounts. Now as to some of those, the reason is perfectly obvious, and perhaps it may be said that they are substantially the accounts of affiliated and subordinate institutions, and therefore rightly kept separate. For instance, one of them is a Convalescent Home Account; another of them is a Samaritan Fund Account; and there are probably very good reasons indeed for keeping those accounts separate; but one of the accounts to which I refer, separately shown, is called Extension Account; and, as a matter of fact, to that account all legacies of above 160 £. are carried, and all payments on what may be called capital expenditure are carried on the other side. Now that, as your Lordships will imagine, is a very substantial sum, it might be a very large sum; as a matter of fact it amounts to very nearly 6,000 £. in this particular case, and on this particular occasion.

Earl Spencer.

21721. In a year do you mean?—In this year. It amounts actually to 5,818 £. in this particular year; but if some of the accounts to which I have already drawn your Lordships’ attention had been treated in the same way, it is quite obvious that the sum would have been very much larger. In order, therefore, to get what is a substantially correct view of the finances of this institution for the year, it is obviously necessary to incorporate that account; and in order to get an accurate view, it is necessary to incorporate the other accounts which are very much smaller, but still sufficient to make it impossible to establish any strict comparison without the great labour of incorporating these various accounts. Now the next case, No. 4 (a), which stands upon my list, that of the London Lock Hospital and Asylum, is somewhat different, but it exhibits again the same peculiarity of subdivision. It differs from the one to which I have already referred in this respect; there are there three affiliated institutions, substantially one institution; there are two hospitals and an asylum which are worked together, and the accounts of these are kept separately. There again the total result is one account, because a general balance is kept, and a debit balance arising upon one account, or a credit-balance arising upon another account, are both carried to that general balance sheet, and in that way all the accounts are incorporated in substance by a book-keeping operation at the end of the year; but the accounts are separately shown; and of course the balance sheet does not show a comprehensive statement of income, nor does it show a comprehensive statement of expenditure; it shows only the balances of income and expenditure shown by the separate accounts. There again, in order to get at the result of the financial operations, it is necessary to incorporate several different and independent statements of account. Now the next illustration that I have here is No 5 on my list, that is the Deaconesses’ Institution and Hospital, it is more commonly known as the Tottenham Hospital, and this exhibits a peculiarity

1 June 1891.]

MR. GORDON.

[Continued.]

Earl Spencer—continued.

peculiarity in a singular way which is not easily exhibited by the comparison of separate hospital accounts. The peculiarity is this: in some institutions the annual statement is a statement of income and expenditure; that is to say of cash, money or money's worth incoming and expended during the year; in other cases the corresponding account is a cash account of money received and money paid; and of course those two things are not identical; money received and money incoming are probably the same, but money paid is by no means the same thing as money expended, because there are outstanding accounts in every case at the end of the year. Now, very singularly, in the case of this institution which I have numbered 5 we have both accounts presented; there is a cash account, which is an account of money received and money paid; there is an income and expenditure account, which is an account of income and of expenditure, that is to say money incoming and money expended. It hardly needs to be said that the exhibition of these two accounts is very perplexing, because they appear to be inconsistent the one with the other. They appear to cover, and indeed do cover, precisely the same period; but they cover it, as your Lordships will see, in rather a different way. The one shows money received and money spent; the other shows money receivable and money expended during the year. Why two accounts should be presented in that form I confess I have not an idea; but it is not only so in the case of that one institution, but it is also so in the case of No. 6 (King's College Hospital), to which therefore I need not more particularly refer. But it needs hardly to be said that if one institution presents two accounts like this, it is practically certain that with other institutions which present only one account, the account presented will sometimes be a cash account of money received and money paid, and sometimes be an account of money receivable and money expended; and so far as I know there is no means of telling, by a mere inspection of the account, which it is that is presented. No. 7 (the Miller Hospital), is another illustration of the same thing; that is to say there are three statements of account which present their accounts in that perplexing way. Now the next illustration (the East London Hospital for Children and Dispensary for Women), is of a statement of account which is too perplexed for me to understand. I find in this statement of account a very elaborate statement of all the various items of expenditure set out with the minutest detail, as indeed is customary with hospital accounts; and among these items of expenditure I find two items which are credited to "Architects"; there is a payment of 500 £, and there is also another payment of 50 £ on account of "Architect's charges"; but I can find no expenditure on building and no commensurate expenditure upon repairs; and it is perfectly obvious, therefore, that although upon the face of it the account appears to be complete, and to be a full statement, there must be (at least I cannot imagine that it is otherwise; I think it must be the case that there are), important payments which, for some reason or another,

(24.) e

Earl Spencer—continued.

have not been brought into this account. Now those are the illustrations which I submit of the perplexing diversity that there is between various accounts, which makes anything like a comparison between two accounts quite impracticable. Another point which I propose to make (and I have really already illustrated it) is that many of these accounts are exceedingly defective; but, upon that point, there is another aspect of hospital accounts to which I should wish to refer, and that is, that in comparatively few cases is any statement of the total amount of property held by these institutions made public. What is ordinarily known as a balance sheet in the strict and full sense of the word is very rarely included in the accounts. In order to ascertain what the fact was upon this point, I caused an examination to be made of 67 published statements of account, and the result of that examination was that 51 of them did not appear to have published a balance sheet at all; in 15 cases a balance sheet was published more or less complete, but of those balance sheets not more than seven were complete, if they were, and the remainder were quite obviously incomplete balance sheets. Now I would like to call your Lordships' attention to some of the statements which are published in that connexion. The first of these incomplete statements is issued by the institution already referred to as No. 1 on my list, that is to say, the London Hospital. There is there a statement which is headed "Balance Sheet," and it comprises on the one side "liabilities and estate," and on the other side "assets." Now I understand that there is included no statement of value of the land and fabric which is occupied by the hospital; there is no entry in the statement of expenditure under the head of "rent"; and therefore it is perfectly clear that the institution occupies its fabric substantially rent free, but there is apparently no entry in the balance sheet of the total value of this land and fabric, and I conclude therefore that that has happened in this case which happens in a good many cases, and that the balance sheet published does not include the value of freehold land or buildings, or of leasehold land or buildings, which are occupied for the purposes of the institution. Now the next institution makes that clearer still, and that is the case of the Charing Cross Hospital. There the balance sheet which is published is professedly a "statement of liabilities and immediately available assets." The "liabilities" include outstanding accounts, the amount of an overdraft and the amount of a loan; and the "immediately available assets" comprise rents outstanding, cash in hand, and a balancing entry which is entered as "balance to be provided for." Now that of course does not include any part of the properties held in trust for the institution, either the value of its building, the value of its land, or the securities, the stock, from which dividends to the amount of 302 £. have been received during the year. Then the next is again the case to which I have already referred of the Lock Hospital and Asylum, and there, as I told your Lordships, the balance sheet is a statement substantially of balances brought from the

3 Y

various

1 June 1891.]

Mr. GORDON.

[Continued.]

Earl Spencer—continued.

various several accounts, not a statement of the property at all. Then the next balance sheet is that of the King's College Hospital report, and in that case the balance sheet is called "Capital Account." It does include the properties, stock that is to say, held for the purposes of the institution; but it also includes income derived from legacies, because certain legacies are carried to that account instead of being included in the receipts and expenditure account; so that the balance sheet there is, in part, a statement of income. I have a good many other illustrations upon my list; they are mostly of the same character; I think I have now given your Lordships all the types; there are a good many others, which I hold in my hand, but I do not think that any useful purpose would be served by my going through them; because, so far as my recollection goes, they would simply be repeating the same characteristics to which I have already called attention. I think that is probably as much as it is necessary for me to say in the way of criticism; and I desired then to submit to your Lordships a form of statement of accounts which it is my suggestion the Committee should consider with a view to its being imposed, either by agreement or perhaps by Act of Parliament, upon the hospitals, so that every hospital receiving charitable contributions from the public should be called upon to render its annual statement in this form or in some modified form; and the exact suggestion (as perhaps it would be convenient to have a precise idea in view) would be that the hospital should be required to make either to one of Her Majesty's Secretaries of State or perhaps to the Charity Commissioners, or to any body which might be a suitable body for the purpose, an annual return of its accounts in this form, or in some such modification as this form, as might be approved. I have a number of copies of the schedule here if it would be convenient to your Lordships to be supplied with them (*handing copies of the schedule to the Committee*).

Chairman.

21723 Is this the same as the present form that the Hospital Sunday Fund sent out?—No, this is an independent form which has been prepared for a slightly different purpose. The form which the Hospital Sunday Fund sends out is directed to the purpose of the award which the Hospital Sunday Fund makes from its funds; and as your Lordship has mentioned that matter it may be convenient for me to say a word which I should wish to say in that connection before my evidence concludes. The Hospital Sunday Fund award is made upon the basis of a systematic analysis of hospital accounts, and the system pursued is, as I understand, this; of course I have no original knowledge of that matter; it is a matter that has been made public, and I am simply giving your Lordships what, in that way, has come to my knowledge, but the published statement of its method is this: It first of all takes the expenditure of an institution to be the basis, the original basis, upon which the award is to go. From that expenditure there is written off, by way of deduction, the income of the institution from legacies and realised property. There is then written off, by way of further deduction, its expenses of management.

Chairman—continued.

The expenses are divided under the two heads of Maintenance and Management; they correspond, roughly, to what one might call expenditure upon the effective and the non-effective forces of the institution; and the expenditure upon management, as distinct from the expenditure upon maintenance, is written off. The result so arrived at forms, apart from special considerations, the financial basis upon which the award is made. Now I think perhaps it should be pointed out to your Lordships that that probably is the reason (I speak here as a matter of inference and conjecture only, because again I have no original knowledge of the facts, but it is not perhaps immaterial to consider) why, in many of these accounts to which I have called your Lordships' attention, legacies are either not brought to account, or, if they are brought to account, are brought to account on both sides, so that they are taken out of the account again. If the legacies are to be written off the expenditure by the Hospital Sunday Committee, it is quite clear that they must be shown in it, because it is the expenditure of the institution that is taken as the original basis. If they are to be taken off the expenditure they must, first of all, be included in the expenditure; otherwise it is clear that a hospital would be prejudiced; and in the case of an institution like the one that had received 83,000 *l.* in legacies, if that had been written off the expenditure when the expenditure had not been swollen by the inclusion of that amount originally, there would have been no basis upon which the award could have gone at all; and therefore it is necessary that, for that purpose, either the institutions should leave all their legacies out of the account originally, or that they should take them out of the account by including them on both sides; and I think that is the reason for what seems to be the irregular way on the part of hospitals of presenting their accounts. It is a perfectly legitimate way for their purpose, but for the more general and public purposes, under which I am viewing them this morning, I think it is exceedingly inconvenient. This form has been prepared, as your Lordship sees, from a totally different point of view. I presume that is designed to bring to bear the test and stimulus of a comparative statement of the financial position of hospitals; and this statement has been prepared with a view to exhibiting, under an aspect in which they can be rigidly compared with one another, of course, the financial records of the hospitals during the year. Now in the preparation of this statement the first principle which is worked out is that of dividing both the income and the expenditure under two great heads; the one representing the income and the expenditure which goes on regularly and systematically from year to year; the other representing the income and expenditure which arises or occurs only or occasionally, and may be wholly peculiar to the particular year. These two it is perhaps expressive to call Renewable and Non-renewable; and so the main division here is between Renewable and Non-renewable income, Renewable expenditure and Non-renewable expenditure. That, I take it, is the first thing to which one's attention in attempting to form an appreciative estimate of a hospital statement of accounts

1 June 1891.]

MR. GORDON.

[Continued.]

Chairman—continued.

accounts would be directed. One would seek, first of all, to eliminate from the statement anything so wholly accidental or exceptional as, for instance, the occurrence of a very large sum in legacies in the income of the year. Then the next point to which one's attention is directed is the distinction between charitable and proprietary income (I am dealing at this moment with the income side of the account) and accordingly the first sub-division is between charitable and proprietary. Your Lordships will see that on the left-hand side of the various headings there are reference letters put; those are for the purposes of an auditor's certificate, to which I propose in a moment to refer. The charitable income comprises first "annual subscriptions," about which I imagine there would be no question at all. The next item is "donations"; and it may perhaps be said that donations are in their nature occasional and ought not to be said to be strictly renewable sources of income; but I think that it is legitimate to put them here for this reason: there is a certain aggregate amount which, as a matter of fact, is annually received by the hospitals by way of donations; a large number of donations come in comparatively small sums, and therefore, with regard to the income from that source, although in a sense occasional, that is to say although every individual payment is an occasional payment, the aggregate sum is an average sum and a practically renewable source of income. "Donation boxes," and "collections, &c.," call for no remark. Then in the schedule which is before your Lordship, there is a division, and that division represents a short cast which would be entered in the second column. I have here a statement which I am sorry to say I have only two copies of, which is filled in, and which will exhibit to your Lordships exactly the way in which I would suggest that these items should be exhibited (*handing one of the statements to the Chairman*). Those first four items are short cast, and the total is carried out in the second column; and the interest of that figure, which appears there in the second column is this, that looking at that one is able to tell on the instant how much of the charitable income of the institution is derived from what I may call the personal efforts of its friends. All that income is, more or less, derived from the supporters of the institution; it is contributed by its friends or collected by its friends. Then there comes next a group of three more items: the "Hospital Sunday Fund," "Hospital Saturday Fund," and a certain "proportion of legacies." As to the first two, they speak for themselves. As to the next, some question would probably arise. The question of dealing with legacies in hospital accounts is obviously a question of some difficulty. Your Lordships have seen the various ways in which different institutions deal with their legacies, and there is not only the question of bringing them to account, there is also the question of dealing with the sums so received. Should they be carried to capital? should they be expended upon the ordinary and renewable expenditure of the institution? Now, so far as I can understand from the various accounts, very various methods

(24.)

Chairman—continued.

are followed. The method which receives most favour is a method which is followed in the Hospital Sunday Fund. The Hospital Sunday Fund Accounts distinguish between legacies of less than 100 £. and legacies of more than 100 £.; and although they do not say so I have no doubt that the idea is that in some rough and approximate way that indicates the proportion of legacies which may fairly be brought to the year's account, and the proportion of legacies which should be, on a wise administration, carried to capital.

21723. You have not, in your suggested schedule, one heading of the total amount of legacies received?—I have not one heading of the total amount of legacies received; it would have to be derived from the two items "g" and "o." It would no doubt be a convenience to have it shown in one form for some purposes; but inasmuch as it is necessary to sacrifice some things that one would desire for some purposes, I have thought that the inconvenience of dividing it into those two items was worth incurring for the sake of getting a clear total statement of, as I venture to think, the still more interesting points which the statement actually does bring out. Of course a total is easily collected from this, because the two items are separately shown, and it is only a question of putting two items together in order to get at that total figure.

Earl of Kimberley.

21724. It would be easy to put the total amount, from legacies 10,000 £., and then to put in brackets "proportion passed to renewable income account 3,000 £."?—Yes. "Total amount received 10,000 £.; proportion carried to renewable account 3,000 £.; proportion passed to non-renewable account 7,000 £." In this case this is not an actually analysed account. I could not get the figures that are given here from any accounts that are actually published; but this is a hypothetical account for the purpose of illustration, and in this hypothetical account the institution is assumed to have received 10,000 £. in legacies during the year, so that the entry would run, on that plan, in this way: "Legacies 10,000 £.; proportion of legacies passed to renewable income account 3,000 £." As a matter of fact in many institutions a much larger sum than the amount received from legacies under 100 £. is carried to the ordinary purposes of the institution, carried practically to current account; and it is obviously quite right that that should be so. Many hospitals derive a very large sum annually from legacies, and it would not only be unnecessary, but I venture to think it would even be improper, for them to carry the whole of such a sum, or anything like the whole of such a sum, to their capital account. When they find that they get in the regular way a substantially settled income, for instance, of 3,000 £., in this hypothetical case, over a course of years, say five years, that they get an income from legacies which never falls below 3,000 £., it would obviously be a perfectly right course, and a common sense course for them to take, to pass at least that sum into their ordinary expenditure. Therefore, I have assumed that upon some such

3 Y 2

basis

1 June 1891.]

Mr. GORDON.

[Continued.]

Earl of Kimberley—continued.

basis as that, or at least upon some basis which commends itself to the committee of management of the institution, the total amount received from legacies is apportioned between renewable income and non-renewable income. Then as to the proprietary income the item "dividends and interest" presents no difficulty. The next item of "rents" is one about which it would be necessary to have a very clear understanding. In the case of institutions which occupy a freehold building or a leasehold building, it is not usual to bring the annual value to account as rent received, and the consequence of that is that the accounts of an institution which possesses the freehold of the fabric which it occupies are again (I did not mention this, it escaped my recollection just now) quite incomparable with the accounts of an institution (of which there are but few, if there are such) which occupies a building for which it pays an annual rent. In any case an institution which occupies a freehold or a leasehold building for the purposes of its work should obviously bring that annual value into account, because it is exactly in the same position as if it did not occupy that freehold or leasehold building, but paid its rent by letting it. I propose, therefore, that this item of "rent" here should in every case include the annual value of buildings occupied for the purposes of the institution for which no rent is paid. Then the next items, "fees from pupils" and "fees from patients," require no further comment than this, that in many cases they are not shown in the general account. It seems to me a very convenient thing that the general account should exhibit all the sources of income and all the occasions of expenditure which arise; and therefore I have proposed that in this general statement the accounts of the medical school and the nursing school should be incorporated. Then there is an item in the same way, "payments for private nursing." Of course where a separate nursing institution is kept that is not commonly shown. The rest are common items. There is another short total which gives you the total income of the institution from proprietary sources, and that is obviously a much more settled and reliable source of income than that which is dependent upon the efforts of the public or the efforts of the friends of the institution, and consequently has a peculiar interest of its own. The total of those three items, which is extended in the third column, gives you the total renewable income of the institution for the year, which has of course naturally to be compared with its total renewable expenditure. Now "non-renewable income" I think, does not require any special notice. The various items which I have tabulated here are, first the balance of legacies; then investments realised; loans contracted, and over-drafts. I call these non-renewable, for the simple reason that they are not things which can go on indefinitely; they are obviously occasional. Then at the end, "balance brought from last account," or "balance carried to next account," as the case may be, stands to be entered. Then as to the expenditure account, the same general scheme of distribution is observed. But here I propose

Earl of Kimberley—continued.

to introduce a feature which, so far as I know, is not at present observed in any of the accounts which are made public. These accounts for the most part are substantially (I am speaking now of the accounts which are ordinarily published) statements of cash and transcripts of the book-keepers' books, and consequently they go habitually into such details as the butcher's bill, the baker's bill, the dairyman's bill and so on, items which have no significance at all for the general public, and no significance at all from our present point of view; but they do not serve to distinguish between the various departments of the institution, and that is an obviously important distinction which by means of this statement I should propose to bring into view. And accordingly the first item here, the first heading under "renewable expenditure," is the heading of "supplies to ordinary patients," and that comprises the two sub-heads of "food" and "coal." Now to take the first of these, and compare it as it appears there with the form of statement which is ordinarily, I think I might say universally, made, as matters stand the food accounted for in an ordinary statement of account is food supplied for the purposes of the institution in all its departments; it includes food supplied to patients, it includes food supplied to, say, the nursing staff, the domestic staff, to any other part of the staff to which allowances of food are made, and there is no means whatever of discriminating between those various items. Now the suggestion here made is that such a discrimination should be introduced, and that food supplied to patients and others should be separately shown. I think the rest of the items under that heading need not be specially commented on unless I say this: In the illustration which I have placed before your Lordships of one of these accounts made out, I have underscored some of the items with a red pencil; those underscored items represent items which it is not possible to elicit from the accounts as they are at present published.

Chairman.

21725. Or from any hospital report?—Or from any hospital report as far as I know: and items which are not underscored are such items as it is possible to elicit from a well kept account, as matters stand.

Earl of Kimberley.

21726. You say "supplies to ordinary patients." What do you mean by that?—I mean that to show the distinction between ordinary patients and paying patients who are admitted to paying wards.

21727. How would you deal with those hospitals where the patients pay something, but not the whole of the cost of their treatment?—I should propose to deal with them by treating the patients who pay something as paying patients or perhaps putting them in a third class as patients who make payments on account.

21728. It would be necessary, would it not, that your account should in some way discriminate; otherwise it might present very misleading results?—It would be necessary to discriminate between paying and other patients.

21729. But

1 June 1891.]

Mr. GORDON.

[Continued.]

Earl of Kimberley—continued.

21729. But also in the case of part-paying patients, it would be necessary to discriminate, would it not; otherwise it would be misleading? It would certainly be desirable to show that, and I think that it would be quite easy to show it; and it is to meet a case like that that I suggested that this form might need to be modified in certain cases.

21730. This form would be applicable where there were only paying and non-paying patients?—Where there were paying and non-paying patients, which is the ordinary case.

Chairman.

21731. These figures given here represent sums paid for drugs and instruments and dressings; for instance, of all the patients of the hospitals, including out-patients as well as in-patients; is that so?—That would be so, as I understand it.

21732. Would it not be almost impossible in that case to make out the cost of the bed, because you would have to deduct the proportion of those figures due to the out-patient department?—That had not occurred to me, but it strikes me that it is so; for that reason probably it would be necessary to elaborate this statement a little more to the extent of showing the cost of the out-patient department separately.

Earl Cathcart.

21733. In some cases we are told the Samaritan Fund is a totally distinct thing?—In some cases it is. I propose in all these cases to incorporate all the subordinate accounts in this general account.

Lord Zouche of Haryngworth.

21734. The food supplied to nurses comes under the head of "Allowances" in your expenditure?—I should propose so.

Earl of Kimberley.

21735. The amount charged on account of food under the head of "Allowances" must be an estimate?—Yes.

Earl Cathcart.

21736. So much per head per day?—Yes.

21737. In the same way as board wages?—Yes, like board wages. Then as to the next, the sub-heading "Up-keep," I do not think any point arises upon that. Then as to the word "Maintenance," no better word occurred to me to express what I meant by this group of items, but it differs a little, in fact it differs materially, from the word "Maintenance" as used by the Hospital Sunday Fund, and very commonly in hospital accounts as they stand. "Maintenance" in my proposed schedule means maintenance of the fabric really.

Earl of Kimberley.

21738. But does not the maintenance of the fabric form part of the property account of the hospital; you have entered the rent on one side; where have you entered the cost of maintaining the building from which the rent is derived?—Under this head of "Maintenance" the first item is "Rent"; and as on the other side I propose to include the value of the building

(24.)

Earl of Kimberley—continued.

occupied, so here I propose to include the annual value of the building occupied.

21739. That is the building occupied as the hospital, but I am speaking of the buildings which are a portion of the estate; where would you put the cost of maintaining them?—Under the head 18, "Repairs."

21740. That would include the whole, not merely the repairs of the hospital building but of all the buildings?—That I imagine would include the whole. Then upon that item "Rent" I wish to make one remark; your Lordships will see that on the income side, the receipt side of the account, "Rent," which, for the sake of simplicity in this case I have assumed to be only the annual value of the building occupied, is entered for 1,750 *l.*; that is, in my hypothetical statement. On the other side the annual value is entered only for 1,600 *l.*, and the difference of 150 *l.* is supposed to be represented by allowances charged against resident officers who are accommodated in that way. Then I think the other items need no explanation.

21741. With regard to "Depreciation"; does that depreciation include all building belonging to the hospital?—I imagine so.

21742. Would not that on some property, on farming property, for instance, be a rather considerable amount?—I am afraid I have fallen into error. That depreciation I think will not come there. And again, I think that repairs relating to the estate would not come under the heading of repairs, because "renewable expenditure," really means expenditure upon the work and for the objects of the institution. I imagine that those payments would come under "Non-renewable Expenditure."

21743. Would that be so, "repairs" being expenditure which must be incurred every year upon a certain average; you cannot take credit for rent and not debit yourself with the cost of maintaining that rent?—That is so.

21744. To make it clear, I will ask you would you explain exactly what the items of "Repairs" and "Depreciation" refer to?—"Repairs" and "Depreciation" in this account mean only repairs and depreciation relating to the fabric occupied for the purposes of the institution; and repairs and depreciation which are incidental to the holding of landed property in trust for the institution, should I think not be included in this account at all; but the rent stated on the receipt side of the account should be simply the profit rent shown by the whole of the rent account.

Earl Spencer.

21745. And your remark now also applies to the word "rates" in your schedule?—It applies to the word "rates."

Earl Cathcart.

21746. "Rents less expenses" would be plain?—Yes.

Earl of Lauderdale.

21747. Item No. 20 is "Interest on Loans." "Loans" themselves are entered as non-renewable income, but the interest is entered as renewable; thereby you assume a perpetual loan?—That is so, because loans, so long as

3 Y 3

they

1 June 1891.]

MR. GORDON.

[Continued.]

Earl of *Lauderdale*—continued.

they subsist, give rise to renewable expenditure.

21748. But surely the proper place for this to be entered would be under "non-renewable expenditure," would it not?—In that case the loans which run on for several years would not be represented in the ordinary expenditure of the institution. Then the next heading is that of "services," and these words, "chaplain and organist," speak for themselves, excepting only that I propose to show (this remark has been anticipated to some extent), in addition to the salaries which are shown in every well kept account, the amount allowed in the way of house rent or accommodation, and food, and gas, and water supply; and these, upon the basis of an estimate, and as has been already suggested, that estimate would have to be made upon the footing upon which board wages, for instance, are estimated. Then there is another entry, which is "cost of collection and management," and which substantially corresponds to what is commonly known as "management cost" in hospital accounts.

Earl of *Kimberley*.

21749. That again refers not to the collection and management of property, but to the collection and management of the other receipts of the hospital and the management of the hospital itself?—Yes.

Chairman.

21750. Before you get to that what do you mean by "Secretarial Staff: Allowances," which is Item No. 25?—That, for instance, in the case of a resident secretary would include the value of the housing accommodation, and the water, coals, and food that he received.

Earl *Cathcart*.

21751. Secretaries have told us that they sometimes have only luncheon at the hospital, and that they sometimes have both luncheon and dinner?—Yes. Then I think as to these various items under "Cost of collection and management," there is nothing which needs remark except this, that very commonly the cost of the secretary and the cost of the secretarial staff are included in the cost of management. It seems to me that the better distribution of the cost is the distribution here given, and that the secretary's services are just as much services rendered to the objects of the institution as the services of the nursing or domestic staff. I am unable to appreciate the distinction which is often drawn, but it, no doubt, is a matter on which opinions differ. Then there is the expenditure upon the medical school, and the nursing school, and the "cost of paying patients," which I imagine would include all the expenses, no doubt again arrived at by an estimate, of the paying wards. That brings us to the result of the renewable expenditure; and when that is totalled up it is possible to see at a glance whether the ordinary income of the institution has covered its ordinary expenditure or not. In the hypothetical case I have assumed that the ordinary expenditure has exceeded the ordinary income, and that it has been necessary to draw upon the extraordinary

Earl *Cathcart*—continued.

sources of income for the year. At the same time I have assumed that the extraordinary sources of income have been ample, so that although the institution has gone beyond its ordinary income, it nevertheless is in a perfectly flourishing financial condition. Then as to the "Non-renewable expenditure, I think there is nothing that calls for remark. But your Lordships will now see that a statement of this sort would enable the reader to make exactly those comparisons which are probably necessary in the interests of the institutions themselves for their most effective management and certainly are desirable in the interests of the public which takes an interest in hospital management.

21752. Before you leave that, you assume a paid audit; now we have had it here that there is not a paid audit in every case?—I have assumed a paid audit.

21753. You think there ought to be a paid audit?—I think there ought to be a paid audit, and I was this moment going to make a suggestion respecting the audit to your Lordships. About the audit of accounts like these, at any rate upon the method which I propose to submit to your Lordships, there would I imagine be, as matters stand, a practical difficulty. As to the audit of accounts my impression is that at the present moment the audit of hospital accounts is not usually a very complete or satisfactory audit; for the matter of that, I do not think perhaps hospital accounts differ very much from other accounts; the auditing of accounts generally is a very difficult task and one which certainly is very often incompletely performed.

Lord *Thring*.

21754. I should like to ask one or two questions on the form of the accounts. I do not doubt the great benefit of proper accounts, but when you impute to the hospitals the keeping of bad accounts, I presume you will admit that they do it not for the purpose of fraud, but for the purpose of attracting the public?—I did not intend to impute to the hospitals the keeping of bad accounts at all; I have not the smallest reason to do that; all that I have imputed to them is that the form in which they present their accounts is not suitable for purposes of comparison.

21755. Uniformity of accounts everyone would agree is a very good thing, but the hospital accounts as they are, have this advantage, that hospitals can cook their accounts in order to make it appear that they want money; because, if they show a big deficit they get more out of the public; is not that the fact, as a matter of practice, I mean?—I give them in my suggested schedule an opportunity of showing a big deficit by allowing them to represent their total renewable income and total renewable expenditure, and any amount of ingenuity might be bestowed upon the preparation of those figures.

21756. But take the case of legacies, which appear to me to be the great difficulty; you say, and I daresay it would be quite right, that legacies exceeding 100 £. or 200 £. ought to be transferred to the capital account as a general rule?—That was not my proposition; only that the

1 June 1891.]

Mr. GORDON.

[Continued-

Lord Thring—continued.

the transfer should be made upon some approved principle. It does not occur to me that that in many cases would be the right principle to apply. I mention that principle as the principle to which the mode of exhibiting these legacies in the Hospital Sunday Account seems to point; but that principle does not by any means commend itself to my judgment as being the right principle to apply in all cases or indeed in many cases.

21757. Have you sufficiently considered whether your new form of accounts would be equally attractive to the public with the present form of hospital accounts, by which I mean to say would be equally advantageous to the hospital for the purpose of getting money out of the public; or are you simply putting it forward as being (as I have no doubt it is) a very improved and very much better form of account?—I have not considered otherwise than quite incidentally, and as a matter more or less beside my present point what its effect upon the public mind would be.

21758. It seems to me that hospitals, in keeping their accounts, very often wilfully keep them badly, not for the purpose of cheating, in the ordinary sense, but for the purpose of persuading the public; they believe that they will get a much greater sum by pleading poverty than they would if they made out a good account?—I have no doubt that happens.

Earl of Kimberley.

21759. Is there any distinction between that and cheating in the ordinary sense?—I think there is an important distinction, and for this reason. A difficulty does arise in the treatment of legacies for the purposes of the account in the way that I was indicating a little time ago. The way in which accounts are made misleading is chiefly by their being caused not to include legacies; practically there is no other way in which the accounts are misleading.

21760. Are there any of the hospital accounts which give no statement of their legacies?—In one sense it is universally so, because, take for instance the case of the London Hospital, which has been already referred to; they bring to account legacies there to the amount of 21,585 *l.*; on the other side of the account they write off as expenditure legacies to the amount of 14,921 *l.*, on the ground that those legacies were not received in the form of cash, but were received in the form of stock, so that it was the same thing as if they had received the cash and gone into the market and bought the stock. But the effect of that is that the expenditure for that year is swollen by that sum of 14,900 *l.*, which is not in the ordinary sense of the word expenditure at all, because that money is no more spent when it has been invested in stock than it is spent when it is put into the bank; it is equally available for the purposes of the institution hereafter; but the effect of that is to bring out a balance on the wrong side of the account. There is a balancing entry of receipts which is explained to be excess of expenditure over income of 6,853 *l.*

21761. Do you think that that is an honest statement?—I think that that is a misleading statement, but I do not think it was dishonestly made. I think it was necessary to put the

(24.)

Earl of Kimberley—continued.

legacies in expenditure, for the purpose of the Hospital Sunday Fund statement, and I imagine that that is the reason that the legacies were introduced there.

Earl Spencer.

21762. But as a matter of fact the 14,000 *l.* was kept as an investment as capital, and the balance of 7,000 *l.* used as income; I understood that from your statement?—It comes to that, I think. The balance of 7,000 *l.* is very nearly represented by new buildings; there are new buildings to the amount of 6,490 *l.*; so that that balance may be said to have been invested in buildings.

Earl of Kimberley.

21763. Then you mean that by not selling out the stock, but carrying it to capital, they leave their current account deficient so much?—That is so.

21764. Do you think that the public would misunderstand that?—I think it would be misunderstood; I think the entry "balance, being excess of expenditure over income" would lead an incautious reader at any rate to suppose that the hospital had gone through a period of financial adversity. The fact is that it had not gone through a period of financial adversity at all, but on the contrary a period of financial prosperity which had enabled it to add something like 20,000 *l.* to its resources, to its investments, in one form and another; and in that sense I think it is liable to be misunderstood.

21765. But in that case it is caused I understand you to say by some requirement of the Hospital Sunday Fund?—This is matter of inference and conjecture with me only as I have already said, but from my knowledge and examination of the accounts I conclude that that is the reason why legacies are separately treated in some such way as this.

21766. But then the managers of the Hospital Sunday Fund would not be misled, would they?—They would not be misled.

21767. And if they did it for that reason, no blame could attach to them?—No blame could be attach to them; and therefore I think it is not fair to speak of it as a dishonest statement.

21768. After the explanation that you have made it would appear that the statement was not made for any dishonest purpose, but for the drawing up of the account for the purposes of the Hospital Sunday Fund?—That is why I said that I thought this an unfortunate form in which to present the accounts to the public, but one made for a perfectly honest reason.

21769. Supposing as seemed to be suggested in a question put to you just now, the statement was made for the purpose of leading the public to imagine that the hospital wanted money, when they really did not, would that in your opinion be an honest proceeding?—I think your Lordship puts a question to me which concludes itself. I do not think it would be an honest proceeding to make a statement to the public for the purpose of obtaining income which they did not require.

3 r 4

21770. Speaking

1 June 1891.]

Mr. GORDON.

[Continued.]

Earl Cathcart.

21770. Speaking generally, it would be a very poor compliment to the public to suppose that they like to be humbugged?—I think so.

21771. As to donations it is a fact, is it not, that a good many people habitually give donations instead of subscriptions, because they can give donations when they please instead of being held liable for them as subscriptions?—I think that is very likely so from the way in which the item of "Donations" runs in about one level from one year to another.

21772. Your experience agrees with mine, that a good many business men habitually give donations for the reason which I have indicated?—I think so; my experience has not been so large as your Lordship's, but it is the conclusion that I have come to after examination of the accounts that a great many annual subscriptions are given under the name of donations.

Lord Saye and Sele.

21773. Would qualifying oneself as a life governor be included in the reasons for the giving of donations?—Yes.

Lord Thring.

21774. Would it not be necessary in order to make your form of account really work, that it should be made compulsory by law?—I think it would.

21775. Because if you did not make it compulsory by law and hospital A. adopted it and hospital B. did not, hospital B. would obviously be at a disadvantage?—Perfectly so; and that is why I suggested that it should be made compulsory upon these institutions to make an annual return either to the Charity Commissioners or some other suitable body in this form.

21776. I suppose you are aware, as a matter of fact, that it is unusual to set any compulsion whatever upon a voluntary institution, although in the case of endowed institutions they are bound to render accounts to the Charity Commissioners?—That is so, and probably it is not my province to express an opinion upon that.

21777. But you are aware that that is so?—I am aware that it is so; but if I may answer the suggestion conveyed by that question exactly, it seems to me that the compulsion would probably best be exercised in this way: that any institution which receives support by voluntary subscriptions should be compellable to make a return to anybody who chose to pay for a copy of it; to have a copy of its return either, as the case might be, for sale to anybody who chose to ask for it, or to be delivered to anybody who, being a subscriber, was entitled to receive it.

21778. I am not quibbling, but would you not have a considerable difficulty in defining what a hospital was for the purpose of these accounts?—I think that there might be a difficulty there, but I think in the first place the hospitals have been defined for the purposes of your Lordships' inquiry, and in the next place I think that a sufficient definition probably would be "any charity affording medical relief which receives charitable subscriptions from the public."

Earl Cathcart.] Or "which appeals to the public for charitable subscriptions."

Earl Spencer.

21779–80. You think it would be necessary that this should be done by law, and that it is not sufficient to have an inducement such as the Hospital Sunday Fund affords for them to adopt any particular form?—I think that would not be sufficient. The difficulty of that is that, however great the inducement is, it may be in a particular case, which would probably be a bad case, worth the while of the institution to forego the inducement in order to evade the publicity.

21781. Has that been the case already in any instance in regard to the Hospital Sunday Fund?—I am not able to speak as to that. This certainly has happened in the history of the Hospital Sunday Fund, and so much is public knowledge; grants have been refused in more than one case to various institutions.

21782. Because they have not adopted particular forms of account, do you mean?—I am not sure that grants have been refused on that ground, but there again I am speaking of a matter not within my own knowledge; but so far as I know it has never appeared what are exactly the grounds upon which those grants have been refused; but probably not because of the form in which the accounts were presented; probably a difficulty of that sort would never rise to that height; but because the accounts themselves were considered to be unsatisfactory in the state of things which they disclosed.

Lord Thring.

21783. I suppose you would admit this: that the hospitals put forward their accounts, rightly or wrongly, in the way that they think will be most attractive to the public and for the purposes of attracting the public?—I imagine that they do.

21784. Therefore that is the cause why your form of accounts would probably not be generally adopted voluntarily?—I think that is one cause.

21785. They would not be equally attractive, rightly or wrongly, to the public?—I am only giving my answer in that reserved way, because I think there would be other objections to this form of account. I think that distributing, for instance, the expenditure under the head of "Allowances" would occasion a great deal of objection to this form of account.

21786. And also the difficulty as between the out-patients and the in-patients?—I imagine that that would not be a serious difficulty; I imagine not nearly so serious as the difficulty of distributing upon an estimate the amount of the allowance.

Chairman.

21787. You were, I think, going to say something further about the audit?—Yes. Now the way in which the published accounts are ordinarily authenticated is by means of an exceedingly meagre certificate; but perhaps I shall best make my meaning clear if I begin at the other end of the story, and call your Lordships' attention to a form of certificate which appears to be very singularly and very exceptionally complete; that is the auditors' certificate which accompanies the accounts of the St. George's Hospital. Now that certificate runs in

1 June 1891.]

Mr. GORDON.

[Continued.]

Chairman—continued.

in these terms: "I, the undersigned, chartered accountant, have examined the above accounts, which I have compared with the books and vouchers of the hospital and find them to be correct. I also certify that the letter of the chief accountant of the Bank of England has been laid before me, stating that on the 1st of January 1890, the following stock was standing in the names of the trustees of the hospital." And then he gives the names of the stock; then he says: "I have examined and found correct the certificates of stock of the following sums, belonging to the general fund of the hospital, standing in the names of the official trustees for charitable funds"; and then he gives another list, and then goes on: "I have also examined and found correct the certificates of the following stocks," and he gives a further list and then goes on, "and also the bond and certificate of 100 l. 6 per cent. Mortgage Debenture Stock of the Oamaru (Otago, New Zealand) Harbour Board Loan," and he signs his name to that, and adds the words "chartered accountant, auditor." Now that is a very complete statement, which shows, to a very large extent, not only that the accounts have been vouched in a manner to him satisfactory, but also enables the reader to ascertain what is the kind of inquiry that he has made. It also shows that he has assumed the books and vouchers of the hospital to be the authority for the purpose of his audit, and therefore that the accounts are vouched to this extent, that the published statement is in accordance with the books kept. That is, so far as I know, the most complete form in which an auditor's certificate is ever given; but in many cases the certificate is exceedingly incomplete, and (I do not think I need quote chapter and verse for this, because your Lordships will be perfectly familiar with such certificates) the most ordinary form is simply either "examined and found correct," or "audited and found correct," and it is left perfectly ambiguous as to the extent to which the audit has gone. That may mean that the particular account which is certified has been compared, as in this case, with books and vouchers and found correct; or it may mean that the books themselves have been examined; but nobody can tell what it does mean. In some few cases the auditor has stated that he has examined the books themselves; but I do not think again I need quote chapter and verse for that. Now even where the certificate given is a very complete certificate, one cannot feel sure that it always represents a perfectly satisfactory audit. There is one instance here to which, if I might, I should like to call your Lordships' attention more or less informally. I have an account here, an account which I should like to pass round, because it appears upon this account that two items have been entered; one is a charge for the board of medical residents in the sum of 587 l. 17 s. 19 d.; another item is "By gas, &c., 818 l. 18 s. 13 d." Now those are not misprints because the total of the column casts 19 d. and 13 d. The accountants, who are a very eminent firm, have certified that account in the following terms: "We have examined the foregoing abstract of income and expenditure and the accounting statement and compared them with the books and vouchers produced to us and

(24.) e

Chairman—continued.

find them correct"; but notwithstanding that that is signed by a very eminent firm of accountants, I think your Lordships will come to the conclusion that it is impossible that the account could have been carefully examined.

21788. In what account of what hospital is that?—In the Guy's Hospital Report. It casts quite correctly; but I only say that nobody would think of writing 19 d. and 13 d., unless he did it quite inadvertently, and it is difficult to imagine how so gross an error can first of all have been committed by the accountant, and in the next place have been passed by the auditor. The only inference I draw is that in this case, at least, the audit cannot have been nearly as thorough and exact as one would suppose from the certificate it had been. It is a stupid error that could not have been passed by anybody who had noticed it; it is obvious therefore, that the audit was sufficiently loose.

Earl Cathcart.

21789. It might have been a printer's error?—It cannot have been a printer's error, for the reason that it adds up as 19 d. and 13 d.

Earl of Lauderdale.

21790. The account is quite correct?—The account is quite correct, but *ex pede herculem*; it could not have happened if there had not been great laxity somewhere, great laxity either in the auditing or in the publishing of the accounts. Now, I have here a proposed form of auditors' certificate and of auditors' report (*handing in the same*). On this sheet there has been printed at the top, "proposed schedule of hospital accounts, No. 2," which is simply an ordinary form of balance sheet. I do not think anything turns upon that at all; but the one that I propose now to draw attention to is the "proposed schedule of hospital accounts, No. 3." This proposes to require as an authentication of the returns made in the manner already suggested, two things, an auditors' certificate and an auditors' report. The certificate does not differ materially from the ordinary certificate, except that it goes very precisely to the points which, as I venture to think, ought to be certified, and it runs thus: "We have examined the accounts and account books" (making them responsible for the books and the published statements) "of" (such and such a) "hospital, and have verified the securities mentioned in the annexed balance sheet, and we hereby certify that we have satisfied ourselves that the accounts are correctly kept, and truly set out the financial condition of the institution as at the" (specified date) "and its income from all sources, and expenditure on all accounts during the year which ended on that date. The abstract statement of income and expenditure, and the balance sheet annexed hereto, and to which we have appended our signatures, are correctly made up from the books of the institution, and truly represent the contents of the same. We have adopted in our audit of the accounts the tests mentioned in the accompanying report, to which also we have appended our signatures." Then there is the accompanying report, which shows exactly what they have done, and proceeds to deal with the various items *seriatim*. "We have in the course of our

3 Z

audit

1 June 1891.]

Mr. GORDON.

[Continued.]

Earl of Lauderdale—continued.

audit examined and ascertained the income of" (such institution) "under its various items, as enumerated in the accompanying statement of income and expenditure, by means of the following tests." I have put this only in a very compendious form. I have taken the statement of income and expenditure which has already been submitted to your Lordships, and I have gone through those items and have drawn out what appear to me probably the available authorities by which those various items might be tested, and would be tested in a thoroughly satisfactory audit. It will perhaps be convenient if I go through these items. It probably would be a shorter way to go through them seriatim than to pick out those which are important, although some of them perhaps do not really call for any particular remark. The first item is (a) on the statement of account, "annual subscriptions." That probably would be authenticated by the collectors' receipt book. "Donations" would probably be authenticated in the same way. Then as to "donation boxes," I do not know how that is ordinarily done, but I suggest that it would be a sufficient authentication of it if the certificate of some person who had been appointed to open the boxes were given as to the amount. "Collections" certified by the Reverend So-and-so, or whoever may be the person who brings the amount of collection from the congregation. The Hospital Sunday Fund grant would be authenticated by the published accounts of the Hospital Sunday Fund, in the same way the Hospital Saturday Fund. Then with regard to the "proportion of legacies passed to renewable income account," two things come up to be considered; first of all, the accuracy of the figures, and secondly, the propriety of the apportionment I propose that the auditor should certify it in this way (therefore "g" and "o" will be taken together): "The proportion certified by the secretary, the total ascertained by the secretary's account, and by the published list of legacies which accompanies the published accounts." Then as to "h," "dividends and interest," the dividends should be certified by the certificate of some person, perhaps the stockbroker, who knows what the securities held in trust have realised during the year; the earnings of stock held in trust for the institution by the certificate of the trustees, or perhaps both dividends and interest might be authenticated by the certificate of the trustees. Then as to rents, the amount receivable would be ascertained by the estate agent's audited account; and in the case of the annual value of the building occupied, that would have no doubt to be arrived at by the estimate of some proper person. Then in the case of the next item, "j," "fees from pupils," that would be authenticated by the medical school accounts and the nursing school accounts, duly audited; in the same way "k," "fees for patients," would be authenticated by the pay wards account duly audited; "l," "payments for private nursing," would be authenticated by the nursing institutions accounts duly audited; "m," "sale of waste, &c.," by the kitchen account duly audited; "n," "refund of income tax," by the letter of advice from the Inland Revenue Commissioners perhaps. Then "o," "proportion

Earl of Lauderdale—continued.

of legacies passed to non-renewable income account," has been already dealt with under "g," "proportion of legacies passed to renewable income account"; "p," "investments realised," would be authenticated by the certificate of the stockbroker who had conducted the business; "q," "loans contracted," in the same way would probably be authenticated by correspondence or perhaps by the bankers' pass-book. All those items your Lordships will see are items about which there is a certain amount of difficulty in the authentication. It is impossible to tell from the compendious certificates which are ordinarily given what amount of scrutiny has been applied to these accounts. In the case, for instance, of a certificate which says, "compared with books and vouchers," it must be taken for granted that the books of the institution only have been referred to for the purpose of, I suppose, any of these items on the receipt side of the account; but I think that my examination of what I have ventured to call a very thorough audit has shown that it would be quite practicable to carry the audit beyond the books if auditors were put upon the duty of so doing.

Chairman.

21791. Would it not be wise to add in your proposed auditor's certificate "all": "We have examined all the accounts and account books"? Does it not happen sometimes that perhaps vouchers are wanting and that the auditor says he cannot be responsible for them?—That no doubt does happen, but the difficulty about saying "We have examined all the accounts and account books" is that the auditor cannot know that he has seen all the accounts and account books; and in most cases he would know that there were certain books kept which he had not seen. For instance, it may well be that some minor official who is entrusted with a certain amount of petty cash keeps a book in which he makes an account to be submitted to his superior but does not present that book to the auditor; so that it would be very difficult for an auditor to say he had seen all the accounts and account books. But the way in which I have attempted to meet that difficulty is in the last line of this certificate, which says, "The abstract statement of income and expenditure, and the balance sheet annexed hereto, and to which we have appended our signatures, are correctly made up from the books of the institution and truly represent the contents of the same." Now unless the auditors have satisfied themselves that they have seen all material books, I think they could not give a certificate in that form. Then, as to the expenditure, the first item of expenditure, food and coal, requires not only to be ascertained as to its total sum, but also it needs to be ascertained that the apportionment has been reasonably and satisfactorily made. So I suggest that in that case they would refer for the apportionment, say, to the steward's estimate, saying: "The total amount, cited under various heads for food and coal, agrees with the tradesmen's accounts," that is to say, the auditors would themselves look at allowances as well as at this separate item, and they would see that the

1 June 1891.]

Mr. GORDON.

[Continued.]

Chairman—continued.

the aggregate amount distributed under various allowances and included in this entry agreed with the tradesmen's accounts. Then the next items, 3 to 9, can all be authenticated by tradesmen's accounts; 10, "laundry," would probably necessitate a laundry account which ought of course to be kept and duly audited, and if so there would be no difficulty about authenticating that; 11 and 12, "gas" and "water," would be authenticated by the receipts of the gas and water companies respectively; 13, "miscellaneous," would have to be authenticated presumably by various receipts, and I propose as they cannot be conveniently classified that the auditors should in a case like that say that the various receipts were satisfactory to them, "receipts with which we are fully satisfied." The next item which I will speak of, that of the rent, of course includes here an estimated amount, and therefore that estimate would have to be verified by somebody; perhaps a surveyor's certificate might be given; 16 and 17, "insurance" and "rates," can both be authenticated by receipts; 18, "repairs," would have to be authenticated by somebody's account of repairs, probably the secretary's, again a subordinate account which would be duly audited before it was placed to the general account.

21792. All these other items, all the way down, merely require receipts, I think?—19, the "depreciation," requires an estimate.

21793. The various headings of "allowances" would have to be estimated?—The "allowances" would have to be distributed by estimate. Of course their total amount is not in question; the total amount allowed can be authenticated by receipts; but the distribution must be authenticated by somebody's certificate, and I propose that in that case the auditors should not only say that they have had somebody's certificate for the apportionment, but that it appears to them to be a fair and reasonable apportionment. When you come to 42, 43, and 44, "medical school," "nursing school," and "cost of paying patients," they would have no doubt to be authenticated by means of subordinate accounts which would have again to be separately audited. The "building" account would no doubt be authenticated by builders and architects' accounts; 46, "investments made," would be authenticated by the stockbroker's certificate, and the auditors should say that the securities representing these investments had been produced to them, or certificates and that the investments themselves were properly entered in the balance sheet. Then the "balance carried forward" would of course be authenticated by the pass-book or by the person in whose name it happened to be. Now this examination will have indicated that an audit of this sort would be a matter of very considerable labour, and I have no doubt that that would give rise to a serious difficulty as matters stand, and I think that probably a difficulty of this sort would arise. In the first place I should say that I think it will be sufficiently obvious that the audit, as ordinarily made, is probably not nearly such a searching examination as has been indicated by my suggestion, and there probably would be a difficulty of this sort. If the auditors were required to make a report of that

Chairman—continued.

description, a non-professional auditor would in many cases, perhaps in most cases, feel himself unequal to the task, and a professional auditor would only be able to undertake it at the cost of a very considerable fee. It might therefore be necessary to supplement the scheme which I have submitted to your Lordships this morning by some provision that some public officer might be called upon to make this audit, and if returns of this description were made to some public authority, that public officer might very naturally be some officer in the employ or service of the public authority, the man probably who was called upon to pass the accounts; and if it were understood that he was at liberty to repeat the auditing operation in any case where it seemed to him desirable to do so on the one hand, and that on the other hand he might be called upon to make an audit by any institution which found a difficulty in getting it made otherwise, probably the difficulty of getting such an audit made on the one side, and the difficulty of securing that it should be efficiently made on the other would be met; because if it were known that there was a public officer who might insist on repeating the auditing operation if he considered it necessary to do so in the public interest, it is perfectly plain that the better institutions would have the strongest interest in securing not only a sufficient audit, but a manifestly sufficient audit in the first instance.

21794. Who is to pay the auditor?—I imagine that that would involve some expenditure of public money.

Earl of Kimberley.

21795. What is the reason why there should be a compulsory audit for hospitals more than for all other voluntary institutions, such as colleges, and an infinite number of voluntary institutions of an important kind existing in the country?—I am not able to give any differential reason. It appears to me that in every case where it is necessary or desirable to publish accounts at all it is at least equally necessary and equally desirable that those accounts should be fully authenticated.

21796. Is not that an affair for the subscribers themselves to settle?—I do not perceive how it is unfair to the subscribers.

21797. On what do you base the right of the public to step in and make these requirements with regard to institutions to which the State does not contribute; on what grounds?—I base it on this ground. I assume, in the first place, that it is right that complete accounts should be made public; and if it is right that complete accounts should be made public, it appears to me to follow, as a necessary inference, that those published accounts should be duly authenticated. That is the ground upon which I put it.

21798. Then do you argue that wherever it is right that accounts should be published, in all those cases you should, by Act of Parliament, compel the publication of accounts?—I think not; I think it may well happen that in some cases there is a sufficient system as matters stand, but the impression produced upon my mind

1 June 1891.]

Mr. GORDON.

[Continued.]

Earl of Kimberley—continued.

mind by the examination of the accounts which I have gone through, for the purposes of this evidence, and the results of which I have given to your Lordships this morning, is that it is exceedingly desirable to improve the way in which hospital accounts are presented to the public.

21799. But does it not involve this proposition; that the State ought to interfere to see whether the management of these hospitals is sufficiently good?—I think not; it does not appear to me that the suggestion which I have made this morning involves any supervision of the management of the hospitals. The extent to which I am prepared to go with my suggestions (if I have inadvertently gone beyond that I should wish to correct it) is merely this: that these institutions which we are considering, and which receive and administer public charity, should make a full financial statement of the amounts which they so receive and disburse, and that the statement so made should be authenticated in such a way that there can be no reasonable doubt that it is an accurate statement; beyond that I do not wish to go.

21800. But surely the auditing of the accounts of any institution is a part of its management, and a very important part of it, securing that the finance of the institution is properly and thoroughly examined and verified. If that part of the management of the hospital is to be secured by an Act of Parliament, on what ground can you refuse to secure that patients are properly treated, by Act of Parliament; why should you limit your interference merely to this particular portion of the management?—The limitation is based upon this: It is not as a part of the hospital management that I propose to impose a particular form of audit at all; it is only as being a public record which the hospitals have contributed. If they are to contribute to this public record I propose that they should be called upon to authenticate the record so contributed in a manner satisfactory to the Legislature.

21801. That comes back to what I originally asked; why are we to compel this public record in the case of these particular institutions more than other institutions?—As to other institutions I am not able to answer, because I am not so familiar with the accounts of other institutions as with hospital accounts.

21802. I will take any institution. Supposing I take the Royal Academy, which I think is an institution which is independent, why should it not be required to furnish a properly authenticated record of all its expenditure and profits?—It may be that it should be so, but if so I do not know.

21803. Where would you draw the line? My difficulty is that if once you begin to interfere with the management of voluntary institutions (I am not questioning the advantage of your audit) I do not see where you are to stop.—As I say I am not considering it as a part of management at all.

21804. Let me explain that when I use the word “management” I do not use it in the restricted sense, but in the sense of the whole conduct of the institution, and that really includes

Earl of Kimberley—continued.

the audit; and upon that basis I ask you the question?—Considered as a part of the management of the institution it seems to me that the audit should not be prescribed by Act of Parliament at all, but considered as a process towards the production of a public record, it seems to me that it should be; and it is only upon that footing that I argue for it at all. The desirability of making this into a public record is based on a totally different footing. At the present moment all the hospitals, as far as I know, do make public their accounts; and therefore it is possible to compile a record from the published accounts; but, as a matter of fact, such a record is not compiled, and if one wants to know what the published result is one has to arrive at it at an enormous labour of inquiry and research. Now all that my suggestion amounts to is this: that the record which, in that informal way, is published at the present moment should be made a public record; and with a view to the making of it a public record, and as a step ancillary to that I suggest this form of audit.

Earl Cathcart.

21805. What you really want is an independent audit, an audit independent of the particular institution?—Yes.

21806. Then why should not fees be paid?—I propose that they should do so if they are prepared to make an audit of their own.

Chairman.

21807. You have examined a great many of these hospital accounts at different times?—Yes.

21808. Have you been able to form any opinion as to the amount per cent. of variation there is as regards the cost of management?—Not as the result of my own examination. I think, as matters stand, that that is very difficult to ascertain, and for my own part I should not like to put a figure upon it, and for this reason: so many diversities, as I have pointed out to your Lordships, obtain in the preparation of these accounts, as for instance in some cases there is rent paid for the hospital and brought to account, in other cases no rent brought to account, and so on, that for my own part I think that any conclusion drawn from the accounts as at present published would be apt to be very mistaken.

21809. Have you ever had any chance of forming an opinion as to the cost of collection of moneys collected for the hospital?—Yes, I have. I think that it varies very much; but there again it is very difficult to ascertain from the accounts as they are at present drawn, what the result in figures should truly be, and for this reason: The cost of collection is really directed only to a part of the income; I mean to say that the collector only deals with a part of the income, not obviously with the whole income of the institution. He no doubt collects the voluntary annual subscriptions, and probably he collects a certain proportion of the donations, but he does not collect collections made in churches, for instance; he does not collect from the donation boxes; in fact I might summarise it by saying that in the form of the statement submitted to your Lordships the first two items, “annual subscriptions” and “donations,” would represent the collector’s activity, and

1 June 1891.]

Mr. GORDON.

[Continued.]

Chairman—continued.

and he would have no concern with anything beyond that.

21810. These are the headings, A and B?—Yes, A and part of B.

21811. Is that quite so, because the collector's activity might be limited to new subscriptions?—It might be so, and in some cases it would be so; in other cases it would not; but that again illustrates the difficulty of which I speak; one does not know to what proportion of the income it should be assigned; but my impression is that in the case of a well-administered institution, which has a large income from annual subscriptions and donations, the collector's poundage spread over the whole of that sum (assuming that to be the right sum on which to apportion it) would come to something like 4 or 5 per cent.; but in other cases, and in cases in which his activity was limited to the getting of new subscriptions, it would come, I should think, to a great deal more than that; but I am not able to give figures.

21812. Have you seen the various estimates that have been made of the cost of maintenance of hospitals?—I have.

21813. Do you consider that they are practically valueless?—I have never attempted to verify them, because I have never had at my disposal the requisite material; but your Lordships are now in quite as good a position as I am to judge as to the value of those estimates.

Earl Spencer.

21814. To go back to this question of audit, without going into the question whether it is practicable to enforce it, is there not, besides the necessity of verifying the correctness of accounts from vouchers and books, also the necessity to show whether the different moneys have been received according to the rules and regulations of the hospital; I mean in this way, to see that a legacy has been properly paid over to capital or to income; for instance, in some cases its application to capital is required by the person who gives it?—In some cases there are rules to that effect, and in some auditor's certificates I have noticed comments to the effect that the rules require such and such a disposition of money received to be made.

21815. Do you consider it would be the duty of an auditor to see that those rules are properly carried out?—Whether the auditor is the right officer to do that, I do not feel sure; I am not at all sure that he is; I am not at all sure that it would not be throwing a great burden upon him, and one which at any rate a public servant, if he were to do duty as an auditor, could not properly discharge, to make himself acquainted with the rules of the institution; and in the form of audit which I have suggested, and which I submitted to the Committee, I have not contemplated the auditors, going into any matters of that sort.

21816. A public auditor does go into those matters to see whether the public authority paid correctly according to the Act of Parliament?—He does; but of course a public auditor stands in rather a different position; his duties are always defined by the Act. The duties of an auditor in such a case as this must be more or

(24.)

Earl Spencer—continued.

less indefinite; and it seems to me that the special difficulty of this case would arise in that way, an auditor would not know necessarily whether there were any rules for him to look to or whether there were not.

21817. Could he not ask the secretary or whoever was the authority to show him the documents in regard to legacies for instance?—He could; but the fact that he was obliged in that way to refer to some other person would, I should think, indicate that there was some other person in a better position than himself to ascertain whether the rules had been observed.

21818. That may be, but with regard to the security to the public you would require that the auditor or some independent authority should say whether the rules had been carried out or not, would you not?—That seems to me to go to a point that was mentioned just a few minutes ago. If it were desired to exercise any supervision over the management of the institution, that obviously would be so; but my suggestion does not go to that in the least. As I have already explained, my suggestion only goes to the authenticating of a public record; and for that purpose, for the purpose of authenticating the record, it is manifestly not necessary that the auditor should go into these matters; I should not, therefore, propose to make him responsible for that matter.

21819. But then with regard to expenditure, would you require him to see that proper authority had been given for making certain payments; as I presume payments might be made by some unauthorised committee or unauthorised individual, would you require him to see that they had been made by persons authorised by the rules of the institution?—I should not; I do not suggest that. All that I suggest is that he should be required to make a searching inquiry into the accuracy of the recorded statement, not into questions of authority or propriety at all.

Lord Zouche of Haryngworth.

21820. If, as is proposed by you, such a general form of accounts should be carried out, would that in your opinion lead to the better support of the hospitals on the part of the public; would it have that advantage in your opinion?—I am much in doubt as to what its effect would be in that direction. I incline to think that it would be so, because I think when all the facts were brought before the public, they would have fuller confidence in the institutions and a better appreciation of their work than they have at the present moment; but I am not able to support that opinion by any facts.

21821. Do you think it would lead to any better management of the hospitals?—I think it is exceedingly likely that it would. I think it is certain that in many instances it would lead to improved management, and I think that upon the whole it would lead to improved management.

21822. That would be the two main advantages that would pertain to your scheme?—Those would be the two main advantages, and I should like to add this. The excellent working of hospitals as the excellent working of any other institutions, so far as I know, can best be secured by

3 z 3

by

1 June 1891.]

Mr. GORDON.

[*Continued.*]*Lord Zouche of Haryngworth—continued.*

by means of comparisons between different institutions which enable those which are not so well worked as others to see the points in which they are capable of improvement; and I think that by tending towards a strict and exact comparison in respect of their income and expenditure a general statement like this would do a great deal towards levelling up the administration of the hospitals.

MR. W. CULVER JAMES, M.D., is called in; and, having been sworn, is Examined, as follows:

Chairman.

21824. WHAT is the dispensary that you are connected with?—The Westminster General Dispensary.

21825. Are you the local medical officer of it?—No, I am the senior physician of it.

21826. Will you tell us what the staff consists of?—Three physicians, three surgeons, and one resident medical officer.

21827. Is it part of the business of this dispensary to visit patients at their own homes?—Yes, by the resident medical officer.

21828. And what amount of time can he give to that part of his work?—The whole of his time is devoted to the working of the dispensary, in visiting patients at their own homes, and in some very rare cases in looking after emergencies.

21829. Then he has no work to do in the dispensary itself?—Yes, occasionally he takes the place of the visiting staff, the consulting staff, who are unavoidably prevented from going to see their patients.

21830. Is he a salaried officer?—Yes.

21831. Do you know what he gets?—I think it is about 110 *l.* a year, but the secretary will be better able to give you the figure.

21832. You are the senior physician?—Yes.

21833. Could you tell us what qualifications you hold?—I am M.D. and Master of Surgery, Fellow of the Royal College of Edinburgh, and a Member of the Royal College of Surgeons, England, and a Licentiate of the Society of Apothecaries, London.

21834. Then this dispensary is really a very large out-patient department, is it not?—Yes.

21835. Are there no beds in the dispensary at all?—No.

21836. And then the medicine is dispensed in the dispensary and supplied to the patients?—Yes.

21837. And is all that free?—A few of the patients pay a shilling for a letter that lasts a fortnight which they are able to renew for sixpence for another fortnight; the vast majority come by subscribers' letters.

21838. Then as to that payment made by the patient, how do you find out who can pay; is it a voluntary payment?—Yes, it is quite voluntary on their side. If some of the artisans prefer to pay a shilling rather than to search after a subscriber in order to get a subscribers' letter they are able to do it if they are considered worthy recipients of the charity.

21839. So that either a person has to get a subscribers' letter or pay for the treatment?—

Lord Zouche of Haryngworth—continued.

21823. Do you think there would be any other advantage in it?—Those are the advantages which have been present to my mind and no other occurs to me at this moment.

Chairman.

21823*. Is there anything else you wish to say?—No.

The Witness is directed to withdraw.

Chairman—continued.

Yes, unless it is a case of great urgency and, I believe, unless the patient is a person of colour.

21840. You treat him for nothing if he is a person of colour?—Yes; I believe the idea was originally started when the slavery question was very much to the front; I understand that a legacy was left for the purpose of treating persons of colour free.

21841. Is this dispensary in the neighbourhood of other hospitals?—Well, we are in the heart of Soho, and if we are near other hospitals I think we were certainly the first; we are over 100 years old, one of the oldest in London, if not the oldest.

21842. As a matter of fact, you are right in the centre of the whole of the hospitals of London, with the exception of Bartholomew's and Guy's; and so on?—We are many miles from those two.

21843. But you have in the immediate vicinity the Middlesex, and the Charing Cross, and you are not far from Westminster?—The Charing Cross and the hospital for women are the two nearest hospitals.

21844. You are not more than half a mile from the Middlesex, are you?—I should think we are more; we are in Gerrard-street; it is not very far from Charing Cross, but I should think it is much further from the Middlesex Hospital.

21845. Have you ever considered the possibility of linking your dispensary with the general hospitals?—Yes, it is a subject which has been very frequently discussed and been brought forward from time to time.

21846. Do you ever send patients from the dispensary to the hospitals for consultation?—If the patients are not suitable to be looked after as out-patients and their homes are too miserable to make us believe that they will be looked after sufficiently well by our Resident Medical Officer, we constantly advise them to seek beds in the hospitals.

21847. Then you do not send them there for consultation; it is more for the comfort of the patients?—More for their comfort and more of course to increase their chances of recovery.

21848. But do you ever send them there merely for consultation?—Very rarely; I think I may say no.

21849. Have you any limit of radius from which you take your patients;—I think it is half-a-mile.

21850. And they must have a subscriber's letter as well?—Yes, they are required either to have a subscriber's letter or to pay their shilling unless the case is one of great urgency, when

1 June 1891.]

Mr. JAMES, M.D.

[Continued.]

Chairman—continued.

when of course we should not let anything stand in the way.

21851. Are many patients sent by local practitioners to your dispensary?—Yes, I am very pleased to be able to say that we have a practitioner in the immediate neighbourhood who is a highly respected member of our committee.

21852. So that you do not consider that you compete in any way with the local practitioners?—Occasionally we do; and it seems to me a very great difficulty now and then to prevent that. We are always most anxious not to compete with them, because we consider that nothing could be more unjust than a co-operative medical society, started by charitable funds, for that is what it would really amount to. We live by the charity of our subscribers; and if we were to compete with our medical brethren who are perhaps working much harder for their means of subsistence, and are only receiving small fees, we think that we should be doing a very great injustice to them; but for all that I am quite sure that abuses not very frequently, I believe, much less frequently at our dispensary than in most cases, but still now and then, do creep in; and I need hardly say that it is extremely difficult for the medical officers, who give all their time for nothing, to look into the character of their patients.

21853. That would be more the business of the secretary, would it not, or some inquiry officer rather than of the medical officers?—Really I take it that generally speaking the onus should fall upon the subscribers, inasmuch as they ought to be very careful that they do not give their subscribers' letters to patients who are unworthy of their support and of their charity.

21854. You have no doubt heard of the complaint by what have been called poor practitioners, that is, practitioners amongst the poorest class, that these free charities interfere with them very much; do you think there is much in it?—Yes, I think there is too much in it; I am not prepared to say how much, but I think there is much too much in it.

21855. And do you think that could be stopped or diminished by careful inquiry on the part of the hospitals?—I think it could to some extent, but I think the chief culprits are the public themselves who carelessly give their letters.

21856. Have you ever been on the staff of a general hospital?—On the resident staff. I was house surgeon at Guy's Hospital and obstetric resident at Guy's Hospital, and I was also formerly physician to the Hospital for Women and Children in Westminster.

21857. Then you have had the opportunity of seeing a large number of patients?—Yes.

21858. And do you think as a rule that the charity is abused?—As a rule not, but in many cases it is.

21859. How could you form an opinion; what did you base your opinion on?—It is very difficult to lay down a general rule.

21860. I am only asking for your own experience?—Now and then you find that patients have not been for a long time and on inquiring after the course that the disease has pursued, you find that they have been able to
(24.)

Chairman—continued.

pay doctors who, of course, have charged fees for attendance. That rather suggests that in many cases they are able to pay.

21861. But is it not possible that a man may exhaust his means of paying doctors?—Yes, it is quite possible, and now and then is the case actually. For instance, at the Westminster General Dispensary the very gentleman of whom I was speaking has often seen patients, and when he has found that it was very difficult for them to pay fees, he, being a subscriber, has often given them letters, and they have continued their attendance under one of the honorary staff.

21862. Is anything in the way of midwifery done by the dispensary?—Not now.

21863. Do you keep any nurses to send out?—No.

21864. Merely the resident medical officer?—That is all; but he has put himself in communication with two or three of the charitable associations, and now and then when there is a severe case that is not suitable for a hospital, and that has to be attended to at home, he gets a sister or a nurse to go down and visit the patient.

21865. He is limited in his visits to a radius of half a mile?—He is. We, the honorary staff, are not; the patients come from all parts of London to see us.

21866. Have you no kind of co-operation at all between any nursing sisterhood and your dispensary?—No.

21867. Do you know whether such co-operation exists in other dispensaries?—I am not aware that it does.

Lord Lamington.

21868. You have no provident system at all in your dispensary?—No, unless you consider that paying a shilling for a fortnight's letter, and then renewing it by a further payment of 6 *d.* could be called provident.

21869. What class of patients come?—Poor factory hands, artisans, and the employés of the employers round about Soho.

21870. And those who cannot pay anything to the local practitioner, and whom he sends on?—Yes, excepting the suggestion that I put forward when the Chairman was questioning me just now: I think that there are certain abuses, and some come who could very easily pay the smaller fees asked by the general practitioners in the neighbourhood of Soho.

21871. Does the local practitioner ever send anybody on, who is able to pay his fees, from the difficulty of the case?—Not very often, because as a rule those would require a bed in a hospital.

Lord Monkswell.

21872. Should you consider the provision of a subscriber's letter as any guarantee that the case was a suitable one for your dispensary?—Not as a sufficient one.

21873. What are the subscribers?—The employers of labour in Soho for the most part, and those interested in the dispensary; for instance, occasionally some of my wealthier patients have sent donations.

21874. Do you suppose those wealthier persons

1 June 1891.]

Mr. JAMES, M.D.

[*Continued.*]

Lord Monkswell—continued.

persons have made inquiry into the case to which they give a letter?—Not if they are out of the neighbourhood; then the letters are sent to the secretary.

21875. If they are out of the neighbourhood then I understand you to say that they leave their letters with the secretary to your institution?—Yes.

21876. And he of course ought to make inquiry?—Yes.

21877. But what time has he to make inquiry?—He is in the room and will be able to answer that question himself.

21878. Do you issue any instructions with your subscribers' letters?—Here is a subscribers' letter (*handing in the same*); they are supposed to give them only to deserving cases. The notice at the top is that "The bearer should be an industrious and respectable poor person (not in receipt of parish relief) who is unable to pay a medical man for advice and medicine."

21879. Do you ever follow up yourself patients to try and find out if the charity is abused?—I have not done that.

Chairman.

21880. From your experience at Guy's and other hospitals do you think that the patients at your dispensary differ from the ordinary hospital out-patient cases?—There are fewer cases with us that would lead to an operation.

21881. And do you have any accidents at your dispensary?—Rarely.

21882. They are trivial accidents generally?—Yes.

21883. Supposing a severe accident was brought to your dispensary would you send it off to a hospital?—Yes, because we have no bed to put them in.

Earl Cathcart.

21884. In point of fact they would not bring those cases to you; they are only cases that casually occur and happen almost at your very doors?—Yes.

21885. Have you any idea of the average number of visits and the average cost of each patient?—I believe the average cost of each patient is from 2 s. 1 d. to 2 s. 6 d.

21886. For each letter?—For each letter.

21887. And the number of visits?—The number of visits paid by the patients to the hospital is said to average about five to each letter; but I am inclined to think that that is above the average.

21888. It is above the average of the ordinary out-patient department of the hospitals?—And I am inclined to think that it is so in this case.

Earl Cathcart—continued.

21889. What is the cause of the greater expense; do you give them more medicine than the ordinary hospital out-patient gets?—We give them the best; but I am hardly prepared to answer much about the business part of the arrangements.

Earl of Arran.

21890. Do you think there is a decided advantage in the existence of this dispensary, in the middle of the hospital district as it appears to be?—I do; I think there are very few charities that are less abused, and that are more thoroughly appreciated by the poor than this.

21891. Do you think the advantage is this: that it relieves the out-patient departments of the hospitals, I mean, would the patients that come to you be equally well treated at the hospitals?—I have no doubt they would be; but it would certainly increase the number of out-patients in the hospitals which as a rule are rather over-crowded.

Chairman.

21892. Is there anything else you wish to say to the Committee?—I think not, excepting that one would be only too thankful to see that our poorer brother practitioners were not competed with unfairly by any institutions that are supported by voluntary contributions; and I feel certain that even in ours to a slight extent, and in others to a larger extent, they are competed with unfairly every now and then.

21893. And you would like to see some sort of inquiry at every institution?—I should.

21894. If it were practicable?—If it were practicable. Our expenditure is limited, and I do not know how we could quite get the funds to institute that inquiry; and, as I said before, I think the chief culprits are those who give the letters without taking the slightest trouble to inquire into the circumstances of those to whom they give them. If you were to lay down a wage-earning limit, for instance, it would have to have many exceptions. I take it that a poor clerk earning 75 l. a year, say less or more, with half-a-dozen children, is in a much poorer condition than an artizan with his 6 s. 8 d. or 7 s. a day, with perhaps one child or no children and not even a wife; and my experience is that, speaking of all the poorer classes that I have come across, and indeed of other classes too, there are few who spend a greater portion of their income on pleasure pure and simple than the artizan classes spend.

Earl of Arran.

21895. Have you any idea what the average number of attendances is to the case?—The secretary is better able to answer that question.

The Witness is directed to withdraw.

1 June 1891.

MR. J. J. JOHNSON, is called in; and, having been sworn, is Examined, as follows:

Chairman.

21896. You are the Secretary of this dispensary, are you not?—Yes.

21897. Would you tell us how long you have been there?—Seven years with an interval.

21898. And before that what was your position?—As an accoutrement maker.

21899. You had had a sort of business training therefore?—Yes; I am now a collector of taxes.

21900. And what salary does the dispensary give you?—52 *l.* including the poundage upon collection.

21901. And what per centage is that?—Five per cent. upon donations and subscriptions, with the exception of those donations or grants from the Hospital Saturday or Sunday Fund.

21902. And that is all the commission you receive?—Yes.

21903. Can you tell us when your dispensary was first established?—In 1774.

21904. And we have just now been told that its business is to visit people at their own homes?—That is part of the business.

21905. Will you explain the rest of the business?—The home visiting is done within a radius of half-a-mile; the patients are admitted from all parts of London without any restriction. The most of them from the parish of St. Ann, Soho, and the immediate neighbourhood of St. Giles'-in-the-Fields and of St. Martin's-in-the-Fields; some from St. James' and the rest from outlying parishes. At one time the visiting district used to be a very much more extensive one; "Westminster" meaning a very large district.

21906. You said they were admitted without restriction, but I understood from the last witness that they had to be provided with a letter?—By "restriction" I meant as to distance. Each patient must bring a letter signed by a subscriber, or to save the trouble of securing a subscriber's letter (that was the reason of the arrangement), a patient is allowed to buy one for a shilling which lasts a fortnight; half the time of the subscriber's letter.

21907. Has it always been a paying dispensary, or was it free at one time?—I consider it is free now; the payments are quite voluntary; there is no difficulty in obtaining a subscriber's letter.

21908. But at the same time, supposing somebody comes without a subscriber's letter, you do not treat them unless they like to pay?—They would be generally sent across the road or to some adjoining street to a subscriber.

21909. Have you been able to form any estimate as to how far these payments go towards the expenses of the institution?—Yes; they have gradually increased from 13 *l.* in 1875 to 56 *l.* in the present year.

21910. How many people did you relieve last year?—Four thousand six hundred and seventy-nine new letters were made use of.

21911. And have you any idea how many times a patient came to the dispensary on the average?—The subscriber's letter, I may explain, will admit of eight visits; a bought letter of four visits. That would look like an average of six, but my estimate of the total number of atten-

Chairman—continued.

dances is based upon an average of five, and I think that is in excess. Looking at the matter closely, I think I am in error and it is not five but more like four.

21912. Have you ever heard of any idea of endeavouring to co-operate with the hospitals?—Yes, I have.

21913. And has anything come of it?—No; it was brought before our committee and there was nothing done as a matter-of-fact.

21914. The matter dropped?—The matter dropped.

21915. What is that committee that you speak of?—It consists of tradespeople in the neighbourhood.

21916. Is it an open committee?—Elected by the governors.

21917. Is it limited in numbers?—Yes; 20.

21918. And are there medical men on that committee?—Yes; besides the 20 the senior physician and the senior surgeon sit on the committee.

21919. Do you have to send many patients away because you are too overcrowded?—Never.

21920. You have been seven years at this dispensary?—Yes.

21921. Have you been able to form any opinion as to whether the medical relief in London is sufficient for the poor population?—The medical relief afforded by the poor law, do you mean?

21922. No; I mean, take it all together, the charitable relief?—It seems to me to be sufficient.

21923. Has it ever been mentioned to your committee that the duties of your resident medical officer are of necessity more than he can accomplish?—No, on the contrary; it has been suggested by myself occasionally that possibly the duties might have been increased.

21924. He does nothing, we understood just now from a former witness, except to see patients at their own homes?—Yes, and to take the place of any member of the staff who happens to be absent.

21925. Does he do any private practice on his own behalf?—No; he is specially prevented from so doing.

21926. What salary does he get from you?—£. 110 per annum with furnished apartments, and gas and fire.

21927. And any food?—No food, no board.

21928. Then you have no nurses on the staff?—No.

21929. Can you tell us what your income and expenditure was last year?—About 500 *l.* as nearly as possible on each side. The receipts were 507 *l.*, and the expenditure 490 *l.*

21930. Does that include these salaries of yourself and the resident medical officer?—Yes, all expenditure.

21931. What are the principal sources of your income?—The principal source is annual subscriptions.

21932. How much were those?—£. 208;
4 A dividends

1 June 1891.]

Mr. JOHNSON.

[Continued.]

Chairman—continued.

dividends from invested capital (some 3,016 *l.* consols), 80 *l.*; rents (which are the result of letting a part of the building; it is a freehold by-the-bye) 57 *l.*; grant from the Hospital Sunday Fund, 36 *l.*, and from the Hospital Saturday Fund, 53 *l.*; payments by the patients, 56 *l.*; and some odd sums.

21933. Do you have much difficulty in getting these payments from the patients?—None whatsoever.

21934. They pay very readily?—With the greatest willingness; they are never asked for the payment.

Earl Spencer.

21935. Do you know what the nearest dispensary similar to yours is?—I think the nearest is in King-street, Regent-street, parish of St. James'; that would be not quite half-a-mile away.

21936. You do not compete at all with them for patients?—In Gerrard-street at the Westminster General we accept patients from the parish of St. James', but the St. James' Dispensary does not accept patients from any other parish but St. James'.

21937. I am not quite clear from your answer whether you visit patients at their homes as well as give them relief at the dispensary?—Yes, we do visit patients at their home.

21938. Are they required to come to the dispensary first before you give them relief at their homes?—Yes, or to send their letter.

21939. Can you divide the number you gave just now, 4,600, among those whom you relieved at the dispensary and those who were relieved at their homes?—Yes; the new letters requiring the visiting of the house surgeon were 781 out of 4,679.

21940. Regarding your medical officer, is he generally a young man just beginning practice?—Generally so. You see he will have time for study.

21941. It is a low salary for a man to continue at?—It is a low salary.

21942. How long do they generally continue in the position?—Possibly a couple of years, sometimes longer.

21943. The visiting physicians and surgeons remain longer I suppose?—Yes, very much longer.

21944. And they are gratuitous?—Entirely gratuitous.

Lord Lamington.

21945. Do you make inquiries into those letters that are sent to you as to the suitability of the patients?—I have done so on several occasions. Knowing the district pretty well, I happened to notice that one or two patients were ratepayers and probably not fit to be treated at the dispensary.

21946. You do not as a rule make inquiries?—Not as a rule; there is no organised system of examination.

Lord Monkswell.

21947. I suppose you have very little time to make any inquiry?—Very little time.

21948. Consequently you make very few?—Very few.

Earl Cathcart.

21949. Do you ever have any complaints of your medical officer neglecting your out-door patients?—I believe such a thing has occurred.

21950. Within your experience?—Yes.

21951. How long ago?—I think it was in 1887, about four years ago.

21952. What did the medical officer do, or not do?—It ended in his tendering his resignation.

21953. And he was considered to blame, was he?—Yes.

21954. It was considered that there had been neglect?—Yes.

21955. How was the neglect discovered?—I am afraid it is rather a long story.

21956. Will you make it short?—It was discovered by the complaint of a patient to me.

21957. Several patients?—No, one patient.

21958. And did you find that the thing happened in other cases as well when you inquired?—It was presumed to have happened.

21959. And was it a serious case he had neglected?—It was simply a matter of neglect.

21960. You have had no check beyond the good faith of the young medical man?—That is so.

Earl of Arran.

21961. Who judges whether a patient requires treatment at the dispensary or at his own home; is there a different letter for each class of treatment?—No, the same letter.

21962. But is it noted on the letter where attendance is to be given?—The rule is that if attendance is required at home the letter is sent by the patient, who is too ill to come, to the dispensary in the morning before 10 o'clock, so that the resident officer may take it out with him and visit the patient. In the other case the patient himself brings the letter in the middle of the day.

21963. Have you any means of ascertaining how the letter in a case requiring treatment at the patient's own house reaches him; who applies first. It seems to me that there might be a considerable amount of error that might creep in?—I do not quite understand the question.

21964. If a person is too ill to go to anyone who has the right to give a letter himself, how does he apply?—By deputy I presume.

21965. Naturally; but then there can be no means of ascertaining, on the part of the person who gives the letter, whether his statements are correct or not?—That is so; a great onus rests upon the person who gives the letter.

21966. Have you any idea of what proportion of the total amount of the letters given remain in the hands of the secretary for distribution?—No, I do not think I can give the figures.

21967. How many letters has each subscriber a right to?—Twenty.

21968. For what subscription?—A guinea.

21969. Have you any idea, roughly, how many subscribers you have?—Possibly 150 annual subscribers, different individuals.

21970. The previous witness said that the onus of proving whether a person was a proper recipient for medical relief lay with the person giving the letter, but it would appear as if, in the case of most of the letters, it lay with the secretary,

1 June 1891.]

Mr. JOHNSON.

[Continued.]

Earl of Arran—continued.

tary, and that it was impossible for the person himself to exercise any discrimination in the matter?—But the letters left with me I distribute to other subscribers in the neighbourhood, and upon them rests the onus of giving them to proper persons.

21971. Then they do not remain in the hands of the secretary; they simply do not go through

Earl of Arran—continued.

into the hands of the person who has the right to give them?—That is so.

Chairman.

21972. Is there anything else you wish to say?—No.

The Witness is directed to withdraw.

MR. JOHN FAULKNER, is called in; and, having been sworn, is Examined, as follows:

Chairman.

21973. You are the Secretary of the Royal General Dispensary in Bartholomew Close, are you not?—Yes.

21974. Is that quite close to St. Bartholomew's Hospital?—Yes, quite close.

21975. When was it established?—In 1770; it was the first dispensary indeed established in the kingdom.

21976. And it was established within a stone's throw of St. Bartholomew's Hospital?—It was a little further off when established, a few streets further, but quite contiguous.

21977. Is that a free dispensary?—It was entirely free for many years, but now we require a payment of 2*d.* for a week's supply of medicine of every patient.

21978. Do you have a great number of patients?—Last year we had 5,273 new cases and 13,800 attendances at the dispensary. In addition to that there were 3,769 visits paid to 1,015 patients at their own homes by the resident medical officer.

21979. And is there any limit of distance which he goes?—We do not visit at their own homes patients who live beyond the limits of the city of London or further than half a-mile's radius from the dispensary.

21980. Then you do not find that St. Bartholomew's Hospital competes with you?—No, it has rather been an assistance to us than otherwise: because, from being so near, we have always been able to obtain talented men to fill the vacancies in our medical staff from St. Bartholomew's. As there are a large number of out-patients at the hospital, it would be rather a relief to the hospital.

21981. Do you send your patients to the hospital for consultative purposes?—No.

21982. Not at all?—No. We have an able staff; indeed Sir William Savory is our consulting surgeon.

21983. What is your staff?—We have two physicians, two surgeons, a consulting physician, and a consulting surgeon.

21984. And a resident medical officer?—And a resident medical officer.

21985. Have you any nurses attached to the dispensary?—No, we have not. If we find a serious case which requires nursing we endeavour to get it into the hospital.

21986. What was your income and expenditure last year?—Our annual expenditure is about 900*l.*

21987. And your income?—About the same.

21988. And from what sources does it come?—From subscriptions, donations, and the Hos-

(24.)

Chairman—continued.

pital Sunday and Saturday Funds. Then we let off a portion of our premises, which brings in about 300*l.* a year now; and we have a dinner once in three years which produces extra donations.

21989. Can you give us the item of subscriptions?—Our annual subscriptions last year were 374*l.*; there were 86*l.* in donations, and there was a Church collection which brought us in 46*l.*; and the patients' pence of the year came to 113*l.*

21990. What did you receive from the Sunday fund?—From the Hospital Sunday fund 52*l.*, and from the Saturday fund 22*l.*

21991. Supposing a patient comes to you and says that he cannot pay the 2*d.*, do you send him over to the hospital?—No, we should tell such a person that he should go to the poor law dispensary. We are very desirous not to take pauper cases or to interfere improperly with the medical profession; we are extremely particular in that matter; we insist upon a letter of recommendation, excepting, of course, in an urgent case, and every person bringing his letter for the first time has to go before the resident medical officer, who questions him and satisfies himself that it is a suitable case for our dispensary before he enters it, and then he assigns the case either to the physician or the surgeon whom he may consider proper.

21992. When the resident medical officer goes to visit a patient at his own home, suppose he finds other members of the family ill, does he attend any of them who may require attendance, or only that one person for the one payment?—He would attend the others too, but they would have to get an extra letter; and a fresh letter must be obtained at the end of the month.

21993. They have to get a letter and pay their pence as well?—Yes.

21994. What do you pay your resident officer?—It commences at 130*l.* and rises by 10*l.* a year to 150*l.*; as a rule, we think a man should not remain with us above three years.

21995. What salary do they pay you?—I have 40*l.* a year now. For some 25 years I was the honorary secretary of the place, and I have long taken a great deal of interest in it.

21996. And how long have you been secretary altogether?—About 30 years.

21997. You have been able therefore to watch the growth of a good many of these dispensaries?—Yes.

4 A 2

21998. They

1 June 1891.]

Mr. FAULKNER.

[Continued.]

Chairman—continued.

21998. They have increased very much, have they not?—Largely; there is scarcely a locality without its dispensary.

21999. Do you consider that the medical relief is sufficient in London?—Yes. It is said to be in excess, but speaking of our own institution, I consider that that is doing a very great work, and I can scarcely conceive that any institution can be more free from abuse than it is. I am perfectly satisfied that those who come to us are not in a position to pay a medical man, or indeed to contribute to a provident dispensary.

22000. You have St. Bartholomew's Hospital quite close to you; have you any other hospital or dispensary near at hand?—The City Dispensary is further towards the Mansion House.

22001. But there is no other general free hospital. is there, within a short distance?—No.

22002. Does your resident medical officer visit any case, infectious or not?—Yes, any case.

22003. And does he do anything in the way of midwifery?—We do not attend those cases at all.

22004. Have you ever considered whether it would be possible for the general hospitals to take small payments from patients?—I do not know that I have a right to express an opinion upon that. It has been decided against by the hospitals over and over again. I should have thought that something of the sort might have been done and would have been desirable.

22905. Do you have to send away many patients because they cannot pay their 2 *d.*?—No, we do not.

22006. Are you overcrowded?—No; we do not encourage large numbers of trivial cases. We have not based our claim upon the public on large numbers; we have never gone upon that line at all; we have always desired to keep the institution as far as possible from abuse, and not to treat trivial cases, but only more important cases.

22007. Is the dispensary open all day long?—Always open; any urgent case will be admitted by day or night; but the physicians and surgeons attend at 1 o'clock and new cases have to come at 12, during which hour the resident medical officer has to be in attendance. At other times of the day he is visiting cases at their own homes.

Earl Spencer.

22008. When was this charge of 2 *d.* first made by your dispensary?—I think about 1865.

22009. Did it make a great difference in the number that come to you?—No, I do not think it did.

22010. If you have not stated it before will you tell us now why you charged this 2 *d.*?—The number of dispensaries was increasing, and also the poor law dispensaries were established, and I think it was about the time that they were established that we thought, as there was provision then for the poorer persons, we might put a charge of 2 *d.*

22011. But that charge has had very little effect on the numbers that come to you, you have stated?—It has not had much effect.

Earl Spencer—continued.

22012. But I understood you to say that when they were unable to pay the 2 *d.* then you send them to the poor law dispensary?—We do, and also when our resident medical officer is attending patients and finds that they are in very poor circumstances, and that they are unable to obtain food and proper nourishment, we always refer them to the poor law.

22013. Are there a great many cases of that kind?—Not many.

22014. They do not complain of the payment of 2 *d.*?—Not at all.

22015. I suppose it amounts to only a very little; it is 2 *d.* a week I understand?—It is 2 *d.* a week.

22016. For how many weeks on an average is the payment continued?—We do not take statistics of that. Of course it must vary very much. We have not very many chronic cases I think.

Chairman.

22017. Did you not tell us just now that you had so many new cases and so many attendances at the dispensary?—Yes.

22018. Then that would give you an average of how many times they attend?—Thirteen thousand eight hundred and 5,000 were the numbers that I stated just now; that would be not quite three attendances in each case.

Earl Spencer.

22019. And those that come to you, you are really of opinion would not be able to subscribe to a provident dispensary, involving their paying something regularly?—That is really my opinion. We have discussed the question over and over again whether we would establish a provident branch, and have always decided against it.

22020. Are the recipients of your medical aid generally in regular work, or are they rather in accidental employment?—Both. Of course there are many who are in regular employment, receiving a small wage, but others are only in casual employment.

Lord Lamington.

22021. Are those letters ever sold outside?—No, I never knew of a case. I feel clear that if it occurred we should soon discover it.

Earl Spencer.

22022. Would these cases that come to you be refused at the poor law dispensary, supposing they went there? I want to make the distinction clear between your dispensary and the poor law, and the necessity of your establishment when the others were close at hand?—I do not know what course they pursue; they ought certainly to refuse them. I think a person must obtain an order from the relieving officer before they can obtain relief from the poor law dispensary.

22023. Are many cases sent from the poor law dispensary to you?—No, I do not recollect a case.

Earl of Kimberley.

22024. Do you make any inquiry into the circumstances of the people?—We form a general opinion of them; I mean the resident medical officer does before he enters them.

22025. And do you ever reject them?—We have done so, but I may say that in many cases where

1 June 1891.]

Mr. FAULKNER.

[Continued.]

Earl of *Kimberley*—continued.

where we thought from the dress of the applicants that they were scarcely worthy of being attended to, we have on inquiry found that they were most deserving.

22026. Have you any idea of the highest wages that are earned by those who come to you?—No, I have no means of judging that.

22027. Could you draw any line as to the amount of wages that a man receives; supposing you found a man earning 30 s. a week in regular employment should you consider that a fit case for your dispensary?—Yes, I think so if he had a family.

22028. Supposing he had no family?—Well, yes, even then I think it might be, if he were seriously ill.

22029. You think he could not afford to pay for his own medical attendance?—You see very frequently when they are ill they lose their wages at the same time.

22030. You do not think, in fact, that a man receiving 30 s. a week in London is able to pay for his own medical attendance?—Not if he is likely to be a long time ill.

22031. There must be a great number who attend very seldom, if the average number of attendances is three, as you say it is?—I do not think the receipt of 30 s. a week should debar a man from receiving such medical relief.

22032. Not even a single man?—I do not think we have many such. They are mostly married and have families; and I may say that a very large proportion of our patients are women.

22033. They of course would be in receipt of much less?—Yes

22034. But then would you go any higher in point of wages than the sum I have mentioned?—I should think 30 s. would be about the limit.

Lord *Monkswell*.

22035. As you have no special inquiry officer how does the medical officer carry out an inquiry into the circumstances of the patient; what means has he of doing so?—He forms a general opinion. Perhaps he may see some 30 patients in the course of a morning, and he forms a judgment.

22036. And supposing he is not satisfied with some of those 30 what means has he of finding out more about their circumstances?—We have no means of inquiry beyond that.

22037. You yourself make no inquiry?—No.

22038. Then I do not understand why you say you are satisfied that the charity is not abused?—From continually being amongst the patients and seeing them I am convinced of that.

22039. Do you constantly go to their own houses?—No. When they are visited at home the resident medical officer himself can see their circumstances.

22040. Patients may come to your dispensary from all parts of London?—Yes. I see them all in the room.

22041. You do not follow them up?—I can judge largely from that.

(24.)

Lord *Monkswell*—continued.

22042. You think you can judge by seeing them in a room without making any inquiry?—Form a general opinion; certainly.

Earl *Cathcart*.

22043. What do put the average cost of an in-patient at; your patient who comes to the dispensary I mean as against those visited in their own homes by your medical officer?—I think it is 3 s. 4 d.

22044. But that is above the average of what the out-patients cost at the general hospitals?—I daresay it is.

22045. Have you any cause of complaint in reference to the visits paid by your young medical officer to the patients in their own houses?—No; we have not; I am happy to say it is quite the other way.

22046. That has never occurred in your experience?—Never; we have had numerous letters commending him for his attention and kindness.

22047. And your young medical officer must have peculiar opportunities of knowing the state of the population in the neighbourhood from his constant visits to the homes of the people?—Certainly.

Earl of *Arran*.

22048. Do you keep any tables of the different employments of the people who come for relief?—We do not; we make no entry of that.

22049. When you say that a great proportion of your patients are women, do you make inquiry as to what their husbands' wages are, if they are married women?—No, we do not.

Earl of *Kimberley*.

22050. Are you really of opinion that a man earning 30 s. a week cannot belong to a club to provide himself with medical attendance in case of illness?—They mostly do belong to a club, but I think there are many who belong to a club, and who yet do not avail themselves of going to the medical club doctor, especially if they happen to be seriously ill; in the same way as we ourselves if we feel very unwell prefer to go to a physician rather than to an ordinary medical practitioner.

22051. Surely the medical officer whom you employ, at the salary you give him, cannot be a superior man to the club doctor?—They would be in all probability our physicians or surgeons who would see those cases, and I think they are superior to the club doctors.

22052. Then you think in that respect they really would not be able to afford paying for the advice that you can give them?—I think so; we do not aim so much at attending trivial cases.

Earl *Spencer*.

22053. But now, do your cases differ very much from those that become out-patients at a large hospital like St. Bartholomew's?—Yes. Of course they have many of the same kind of patients as we have, but there are a large number of very trivial cases that attend the out-patient department of a large general hospital.

22054. And so too you have a large number

4 A 3

of

1 June 1891.]

Mr. FAULKNER.

[Continued.]

Earl Spencer—continued.

of trivial cases, I suppose?—No. It would not be worth the while of anyone to go through the ordeal of getting a letter, and presenting it and paying the 2 *d.* if the case were only a trivial one.

Lord Zouche of Haryngworth.

22055. What is the usual kind of case; is there any particular kind of disease that you treat?—We have had a great deal of influenza lately.

22056. That is a special thing; what is the usual class?—All classes of disease.

Earl Spencer.

22057. Are they cases that would not be attended to at a general hospital?—I did not mean to convey that. Of course they attend to all cases.

22058. Why do they come to you in preference to becoming out-patients at St. Bartholomew's?—I think that our physician or surgeon would be able to devote a little more time to the consideration of their case than it is possible to devote to it in the out-patient department of a large hospital where thousands have to be seen in the course of a very short space of time.

22059. Is it merely your letters that prevent your being overcrowded?—It is our letters. We do not distribute our letters broadcast; we give 12 letters of recommendation for a guinea; there is that limit.

22060. You have no paying patients; in the last dispensary we have had before us they are allowed to pay 1 *s.* for a fortnight's medical relief?—No, our medical staff, when it was put to them, objected to that.

22061. Why did they object to that?—I think it was considered to be interfering with the medical profession.

22062. Do many local practitioners send cases to you for consultation?—No, I never saw such a case as that.

Earl Spencer—continued.

22063. Is there any teaching in your institution?—We have pharmacy students only.

22064. There are no students allowed to be under the resident medical officer?—No, except for pharmacy.

Earl of Kimberley.

22065. As you do not require these patients to make any payment except the 2 *d.* for medicine, yours is, but for that, purely a charitable institution?—Yes.

22066. Except for the 2 *d.*, what is the difference between them and people who receive charity in the ordinary course; I do not see that the men themselves differ in accepting this charitable relief from the ordinary pauper who goes in and receives relief. The only difference seems to be that it is provided by voluntary subscription in one case, and by the rates in the other?—A man may accept charity without being a pauper.

22067. Is there any difference?—Perhaps there should not be any difference, but a man who receives poor law relief is debarred from many privileges.

22068. You do not mean by the receipt of medical relief; he is exempted by law from any political disabilities in that case, is he not?—I believe he is.

Chairman.

22069. Has your institution been managed by a committee?—Yes, by a committee of 24, annually elected, six of whom go off every year; and our accounts are audited by two of the subscribers who are not members of the committee.

22070. Is there any audit by a chartered accountant?—No, but the audit is very carefully and efficiently done.

22071. Is there anything else you wish to mention to the Committee?—I think not.

The Witness is directed to withdraw.

Ordered, That this Committee be adjourned to Thursday next, 12 o'clock.

Die Jovis, 4^o Junii 1891.

LORDS PRESENT:

Earl SPENCER.
 Earl CATHCART.
 Earl of KIMBERLEY.
 Lord ZOUCHE OF HARYNGWORTH.
 Lord SAYE AND SELE.

Lord SANDHURST.
 Lord SUDLEY (*Earl of Arran*).
 Lord MONKSWELL.
 Lord THRING.

THE LORD SANDHURST, IN THE CHAIR.

MR. GEORGE ALFRED CROSS, is called in ; and, having been sworn,
 is Examined, as follows :

Chairman.

22072. You are the secretary of the London Homœopathic Hospital in Great Ormond-street, are you not?—Yes.

22073. When was that founded?—It was founded in 1849.

22074. How many beds have you?—We have a capacity of 90 beds ; that is the utmost capacity.

22075. What is your working average?—About 65 beds.

22076. Do you not employ the remainder of the beds for want of funds?—Partly for that reason, and partly because if really we filled 90 beds we should decrease the room for our nursing staff, which is a very large one, and is largely used for private nursing. We send out a considerable number of nurses for private nursing.

22077. Am I to understand that at one time a part of the hospital is occupied by patients and that at another time the same part is occupied by nurses?—The hospital is a very old one, and the upper part of the hospital is really used for dormitories.

22078. Dormitories for the staff, do you mean?—Dormitories for the nursing and the domestic staff ; so that we have a nominal capacity for 90, and an actual capacity, I might say, of 75 or 80, and a working capacity of 70 ; something like that.

22079. How is your hospital managed?—It is managed by a board of managers and a weekly committee.

22080. The weekly committee are the administrative body then?—Practically. They meet frequently ; but the actual administrative power is wholly in the hands of the board of management, the monthly board.

22081. And have you an annual meeting?—Yes.

22082. And all governors attend it?—They are all invited to attend it.

22083. They all may attend?—Yes.

22084. Is yours a free hospital?—Yes, except
 (24.)

Chairman—continued.

that we get recommendations in some cases of subscribers. We do not insist upon them ; practically it is a free hospital.

22085. Do you ask for any payment at all?—None whatever.

22086. Have you a large out-patient department?—We see about 10,000 out-patients in the year. Some of them would be repetitions ; the same patient, I mean, would be calculated twice over by the expiration of the ticket.

22087. Do you mean that the attendances number about 10,000?—No, the attendances number about 30,000.

22088. Then the fresh cases are 10,000?—We give our out-patients a ticket which entitles them to advice and medicine for a month ; at the end of a month they must renew that ticket, and when they so renew it they are counted as new patients.

22089. Do you make any inquiry into the circumstances of the patients?—We have an arrangement by which our dispenser checks the patients as they come in. We have a lady dispenser, and she makes any inquiry she thinks fit ; and our medical men are also urged by the board to stop any patient who gives any sign of being able to pay for medical attendance, and to refer the case back for inquiry. Ultimately it may be referred to me.

22090. In the absence of the board, have you entire power in the hospital?—I have.

22091. Up to the amount of suspending any official?—I have never had to exercise that power. I should not hesitate to do it if occasion required.

22092. And then you would report to the board?—Certainly ; I should call a board immediately.

22903. Have you plans of the drains of your hospital?—Yes.

22094. Which you keep up to date?—Yes ; we have renewed the drainage of the hospital, perhaps five years ago ; we renewed it entirely
 from

4 June 1891.]

Mr. Cross.

[Continued.]

Chairman—continued.

from beginning to end, so that our drainage is on the latest system.

22095. Would you tell me from whence you get your funds; have you your balance sheet here?—It is in the report.

22096. Will you tell me what your gross expenditure was last year?—£. 5,000.

22097. And your income?—May I explain that I have the balance sheet before me to the 31st of March, last year; shall I take that year?

22098. Yes, if you please?—It is nine months of 1889, and three months of 1890. My new balance sheet is in the press at the present moment, and it was with regard to that that I stated that the expenditure was 5,000 *l.*, the expenditure for the year before me now was 4,579 *l.*

22099. And the income?—The income was 4,706 *l.*

22100. You had a surplus that year?—We had a surplus that year.

22101. Will you tell me whence you derive your income:—We derive it, in the first place, from a certain amount of invested funds. We get perhaps, altogether, 800 *l.* or 900 *l.* from invested funds; we get 1,000 *l.* from subscriptions; an average of perhaps 400 *l.* from donations; we get 250 *l.* from the Hospital Sunday Fund, and from 80 *l.* to 100 *l.* from the Hospital Saturday Fund; we get about 400 *l.* from out-patients' fees (they pay a shilling for a monthly ticket); and we get legacies. It is a little difficult to fix the average of the legacies, but I should think the average is about 2,000 *l.* a year; 1,500 *l.* or 2,000 *l.* a year. Of course, those legacies are very variable. This year we did not even have 500 *l.*, but another year we may have a great deal more. The legacies, I may say, have increased considerably within the last 10 years.

22102. Do you appeal to the public?—Yes, constantly.

22103. And do you have the usual festival dinner?—We have no festival dinner.

22104. Not a triennial occasion?—No; we are organising one at the present moment, but that is of an entirely special character; we do not have either annual or triennial dinners.

22105. Why are you taking that step this year?—Because we are about to rebuild our hospital. We have appealed for a sum of 30,000 *l.*, of which we have now over 27,000 *l.*; and as we do not propose to commence building till we have the whole of the money actually promised, a great effort is being made to get together the whole of the remaining 3,000 *l.*

22106. How long have you been collecting that 27,000 *l.*?—Since this time last year. One lady gave us 10,000 *l.*; our treasurer and chairman gave 2,000 *l.*; his wife gave us 1,000 *l.*; another friend has given us 2,000 *l.*; and the rest we have made up in general donations. May I say that we have an income from the nursing fund, for the nurses sent out, of 1,667 *l.* This last year it has been 1,800 *l.*

22107. Does that go to the funds of the hospital?—It goes to the funds of the hospital, less the expenses, so far as we can calculate them, of the nursing staff; so that we may take it that we get 650 *l.* as an average.

22108. You say "less the expenses of the nursing staff"; do you mean that portion of the

Chairman—continued.

staff which goes out to private nursing?—We make a sort of actuarial calculation under which we deduct the entire wages of the nursing staff; not the keep of any of them, but simply the wages. We take it that the provisioning of those who are in the hospital would about equal the cost of the private nurses when they are in the hospital. It is an extremely difficult thing to work out. It would require an additional clerk to keep the accounts if it were desired to do it with perfect accuracy. Therefore, with the consent of our auditors and the board of management, we deduct the entire wages of the staff. That leaves us a profit of about 650 *l.*, which goes to the general fund.

22109. Do you give any pensions to your nurses?—We have no pensions. The matter is at the present moment under the consideration of the board. Acting on the advice of a committee which sat at our hospital last year to go into all questions of our nursing arrangements, the board are now considering the desirability of instituting a pension fund at the hospital.

22110. Have you any land belonging to your hospital?—None whatever, except the land we are built on.

22111. Is your hospital freehold?—It is freehold.

22112. Have you any house property besides the hospital?—None whatever.

22113. Then, as regards the food of the patients and the nurses, who makes the contracts?—The house committee.

22114. Is a public tender invited?—No; we do not take public tenders.

22115. Then, how do you select your tradesmen?—We get the most reasonable tradesmen that we can find, perhaps two or three of them, to send in tenders.

22116. In fact, it is done by personal invitation, is it?—Practically it is.

22117. Do you think that by that means you get the best and cheapest food?—I think I may be sure that our tenders are the lowest of any hospital, and I think that our quality is equal to any.

22118. Have you had any opportunity of comparing the prices paid by your hospital with those paid by other hospitals?—Yes.

22119. And that is the conclusion you have come to?—Yes.

22120. Do you ever have complaints from your patients as to the quality of the food or the cooking?—Very rarely indeed.

22121. What course is pursued if a complaint is made?—It is reported to the house committee.

22122. The house committee might not be sitting; what would be done in that case?—In that case I should deal with it myself instantly; but the complaint itself, whether dealt with or not, is reported to the house committee.

22123. Are all the small accounts laid before this house committee that sits once a week?—Not before the house committee; the requisition books are laid before the house committee-meeting before certain things are ordered. Our course with regard to the bills is, that a member of the board of management is appointed by the board to go through every detail of the account, both the income and the expenditure, before the statement

4 June 1891.]

Mr. CROSS.

[Continued.]

Chairman—continued.

statement is made to the board, and cheques are submitted to the board to be signed.

22124. How often is that audit made?—Once a month. As a matter of fact, it is impossible to get a cheque without that audit.

22125. With regard to all the small accounts, like the secretary's petty cash-book or the house-keeper's petty expenditure, are those laid before this board?—Yes; once monthly.

22126. And that your governors think to be sufficiently frequent?—Of course the audit does not end there; the whole accounts go into the hands of public auditors at the end of the year.

22127. Are they members of the Society of Chartered Accountants?—Yes.

22128. May I ask what salary you receive?—I have 250 *l.* a year and some meals in the hospital.

22129. And lodgings too?—No.

22130. What are those meals, luncheon?—Yes, luncheon, and, if I wish it, tea.

22131. And what assistance have you in your office?—I have one clerk, and within the last few months I have had a junior clerk, a boy.

22132. Have you got a hospital steward?—No.

22133. Then who is responsible for the taking in and receiving of the food?—Our housekeeper is responsible to me for that.

22134. Then as regards your medical staff, what number have you?—We have 16 members on the medical staff, including the consulting physician and consulting surgeon.

22135. And what is the limit of age to which those gentlemen occupy that position?—There is no limit fixed.

22136. Have you any resident medical officer?—Two.

22137. A surgeon and a physician?—They are not divided in that way, because ours is very largely a medical hospital. We call them both medical officers, and they both do surgical work interchangeably.

22138. How long do they hold their position?—We appoint them for six months.

22139. Are they salaried officers?—Yes.

22140. What do they get?—The senior gets a salary at the rate of 100 *l.* a year, and the junior at the rate of 40 *l.* a year, and board and lodging of course.

22141. Are you particular as to the qualifications that those gentlemen have?—Quite.

22142. And as regards the staff; must they be members of the College of Physicians of London, or of the College of Surgeons?—Not necessarily members of the College of Physicians. We require that they shall be legally qualified and registered.

Earl Spencer.

22143. Is yours the only homœopathic hospital in London?—Yes, in London.

22144. When you mentioned the out-patient fee, did you mention what the amount they pay per month was?—A shilling.

22145. Then that ensures that they are not people who ought to go to the workhouse infirmary?—I take it that it would practically insure that they can at least find a shilling to (24.) e.

Earl Spencer—continued.

pay. They, therefore, are not paupers in the sense of being absolutely destitute.

22146. Do they come to you a longer distance than usual on account of yours being a homœopathic hospital?—I may say, yes; we have them from the provinces.

22147. They come up for consulting purposes?—They come up to see our physicians. Of course they cannot come from too great a distance; but I have known cases that have come up to stay in London in order to get advice at our hospital.

22148. You mean as out-patients?—As out-patients. Of course our in-patients are constantly coming from the country.

22149. Are there any homœopathic hospitals in the country?—There is one in Liverpool, one in Birmingham, another in Bath, one in Bournemouth, and others in Hastings, in Eastbourne, and Bromley.

22150. Are you in connection with them in any way?—Not with them. We have a convalescent home at Eastbourne, of which I am the secretary.

22151. Do you think that the qualifications of your medical men are different from those usual in other hospitals in London?—Not in any sense, except that they claim to have gone a step beyond the ordinary curriculum of medical education, and to have acquired a special principle of therapeutics.

22152. Is there any special examination for those who practise as homœopathic doctors?—Not that I am aware of. There is a society, the British Homœopathic Society, which invites all qualified men holding homœopathic principles to become members, and which is itself careful in the last degree as to the candidates whom it elects.

22153. You said that there was an extra qualification in your medical men to those of other hospitals, on account of your being a homœopathic hospital; is there any examination or test for that?—Not that I am aware of. I ought not to have said "qualification." Of course it is a theory; a principle which is held. I mean there is no diploma given in consequence of it. Therefore, whether it be a qualification or not would be dependent upon opinion.

22154. How do you decide whether they have a sufficient knowledge of homœopathy for you to admit them on the staff?—We have a medical council consisting of a large number of medical men, very well known in London and the provinces too, and they make a recommendation upon it.

22155. You have a homœopathic medical council?—Yes.

22156. Not connected specially with your hospital?—Yes, specially with our hospital.

22157. Then I think I noticed when glancing at your book, that you have a school for students, do they come from the general hospitals after their course there, or how do they come to you?—We get them chiefly after they have qualified at the other hospitals.

22158. And what kind of course do you give them at your hospital?—Some few years ago we had lectures on therapeutics and *materia medica*; but now it is chiefly confined to clinical teaching

4 June 1891.]

Mr. CROSS.

[Continued.]

Earl Spencer—continued.

in the wards and practice in the out-patient department.

22159. Do you find the number of those requiring homœopathic instruction, who come to the hospital, increasing?—I am sorry to say we do not; I think the number could hardly be said to be increasing, but it does not decrease.

22160. Of course patients are never treated homœopathically except at your hospital; at no other hospital in London?—That would be really a matter of medical practice. We sometimes suspect that they are, but not exactly in the form in which we should treat them.

22161. You spoke of legacies amounting to 2,000 *l.* a year; do you use all your legacies, or do you fund any of them?—We fund all.

22162. I understood that that 2,000 *l.* came into your income in that year?—It appears in the account against its own investment on the other side.

22163. You fund all your legacies?—Under a law of the hospital we fund all legacies over 50 guineas.

22164. Out of that 2,000 *l.* how many were there over 50 guineas?—Well they practically all are over 50 guineas; we very seldom get a legacy of less.

22165. Supposing in any one year your expenditure exceeded your income, would you sell out the capital of these legacies?—Not without asking our subscribers to make up the deficit.

22166. If you wished to sell out what course would you follow?—Call a general meeting of the governors and subscribers, and ask permission to sell out.

22167. Has that often been the case?—Not very often.

22168. The general course would be, without having recourse to the legacies, to meet your expenditure by your general income?—That is the case as a rule.

22169. You mentioned that your resident medical officers were only engaged for six months; is not that an unusually short time?—Our medical staff assure us that it is the usual plan at hospitals. A few years ago we engaged them for one year, which in a hospital of the size of ours, seemed to some of us a preferable time, but our medical staff strongly advised the board of management that the term should be reduced to six months each, and that course has been adopted by the board and carried out.

22170. Is there no inconvenience in losing them just when they are beginning to get accustomed to their work?—In my opinion that is an inconvenience.

22171. And as a rule do they only stop six months?—The junior would succeed to the senior position after the expiration of six months.

Lord Monkswell.

22172. Do you insist upon the payment of the shilling from out-patients in all cases?—Not by any means. The patient has only to make a credible declaration that he or she is unable to pay the shilling, and there is not a word said about it; as a fact we have a large number of patients entirely free.

22173. What do you mean by “a credible

Lord Monkswell—continued.

declaration”?—If a man had a gold ring on his finger, or a heavy chain on his waistcoat, and said he could not afford to pay the shilling, we should doubt him.

22174. You judge by the appearance?—If they say that they are unable to pay the shilling and if they have appearances that bear it out, we take their word.

22175. You have no system of inquiry?—We have a possible system of inquiry; if the dispenser is not satisfied she has the power of referring the case to me, and if it came to me I should make every inquiry.

22176. What sort of inquiry would the dispenser make?—She would make the inquiry that I have just suggested.

22177. If she was not satisfied with the appearance, you mean?—If she was not satisfied with the appearance.

22178. On the whole, I suppose she makes few inquiries?—I think she satisfies herself if the patient is able or not able to pay.

22179. You mean, by questions which she asks the patient?—By questions which she asks the patient. I may say that our experience is, that patients are not averse, if they can at all afford it, to pay the shilling, and if they say that they are not really able to pay, our experience has led us to believe them in the majority of cases; we have had a few cases in which the question has arisen.

22180. Is there a large proportion then who do not pay the shilling?—The larger proportion pay it.

22181. About how many do not?—I should think, perhaps, 5 per cent. do not pay it.

22182. I suppose the shilling a month does not nearly cover the cost of the out-patient's treatment?—I think not.

22183. Have you any idea what it would cost?—You see the expenses of the out-patient department are involved in the general expenditure, and it would require a rather long calculation to answer the question.

22184. What would you say, 5 *s.* or 10 *s.* a month?—As a guess, I should think, perhaps, 5 *s.* a month.

22185. So that, in point of fact, you do give a great deal of advice gratuitously; if fact, all the advice you give to the out-patients is very largely gratuitous?—Yes.

22186. That is to say, they only pay about one-fifth part of the cost of their treatment?—Yes.

22187. Then with regard to these tenders, you say that you employ the most reasonable tradesmen in the neighbourhood; how do you find out who are the most reasonable tradesmen in the neighbourhood?—Personally, I find out by consulting with my colleagues, the secretaries of other hospitals, what they pay; I feel that if I get the supplies at a hospital of the size of ours at the same price that they have them for at much larger hospitals, I have reason to be satisfied.

22188. Do you go round and see their samples?—I do not do that; but I should not myself admit anything unless the quality were of the best.

22189. “Best” is capable of a good many interpretations. Do you ever have a sheet prepared

4 June 1891.]

Mr. CROSS.

[Continued.]

Lord Monkswell—continued.

pared of all the prices given in all the hospitals, with the highest and lowest prices shown?—No.

22190. You merely ask the tradesmen in the neighbourhood whom you consider the most respectable to send in their prices, and if you find that their prices are fairly low, and that what they sell is of reasonably good quality, then you employ them?—I understand what the question means: Do we take tenders every half year, or every year, as is done in the workhouse infirmaries and the unions. We do not do that. Our tradesmen have served us, in most cases, for years, and so long as they continue to serve us well, at the lowest price (of which we are pretty fair judges), they keep the contracts.

22191. How long have you been secretary of the hospital?—Fifteen years.

22192. How often have you changed your tradesmen?—Our butcher has served us nearly the whole of that time; we did change him a long time ago.

22193. The baker?—The baker has served us the whole of that time.

22194. And you have made no inquiry as to the prices of other bakers?—We have constantly made inquiries.

22195. Then do you ever leave it to your subordinate to go round to these shops and find out what their prices are, or do you do that yourself?—I get the tenders myself when I want them.

22196. But do you go round with a view of finding out whether there are not other tradesmen in the neighbourhood, or further off, who will serve you better?—That is done constantly.

22197. You go yourself?—I do not go; I send a clerk, or I myself write, asking them to tender.

22198. But then you must know something about them before you ask them to tender. I want to know how you find out about these tradesmen; whose advice do you go upon when you ask them to tender?—I do not quite understand the question. If I want to change a contract, I invite some half dozen tradesmen, who supply other hospitals, to send in tenders.

22199. Then do you simply invite them because they are employed by other hospitals, or because you get a report from your clerk about them, or because you have been to them yourself?—I should invite them because they serve other hospitals, as being people very likely to serve us well.

22200. Then if you have any doubt as to your tradesmen serving you well, you invite other tradesmen employed by other hospitals, and you would give the preference to tradesmen in your neighbourhood, I suppose, who are employed by a good many hospitals; have you any system at all?—The system is that we get a tender at the lowest possible price consonant with the best quality. We make it a principle to secure quality before price; at the same time we have, I think, about the lowest prices of any hospital in London. If the quality of the service continues, we have no wish to change. If we had to change I should consider the nearness of the tradesman to the hospital. If I could get a man near the hospital to serve me at the lowest price with the best quality, I should employ him in preference to a man a long way off, for the

(24.)

Lord Monkswell—continued.

simple reason that if his goods are not satisfactory on any particular day, they can be sent back at once and exchanged.

22201. But my question rather was, when you are inclined to be dissatisfied with a tradesman, and when you think it your duty to ask other tradesmen to tender, what steps do you take with a view to finding out that the tradesmen who wish to tender are the best tradesmen?—In the case of milk, for instance, some years ago we had occasion to complain, and I sent to a hospital of considerable size near, and asked the secretary the name of their contractor, and the prices; and I then went to that man and some others, and eventually we chose that man at the price at which he served the larger hospital.

22202. Why did you go to some others?—Because I thought their experience might be useful.

22203. On what principle?—Because I knew that at that hospital they were in the habit of making careful contracts, and I happened to know from a member of their board, who was also a member of mine, that their contract was a particularly favourable one.

22204. You have not quite understood my question; you say you not only went to that man but to other men; why?—Because they were large contractors, and supplied other hospitals.

22205. Then you went to several hospitals?—To the contractors of several hospitals.

Earl of Kimberley.

22206. Could you tell us what price you are paying now for mutton?—We pay 7d. all round for the best joints.

22207. All round, in beef and mutton?—All round, in beef and mutton, for the best joints.

22208. With regard to the examination that you speak of, whether the applicants for out-relief can pay the shilling or not, what sort of criterion have you as to the wages or position of the person?—The inquiry would depend on our lady dispenser, who has been in the service of the hospital nearly 20 years, and who has acquired in that time a very considerable experience in dealing with out-patients and that class of people, and it would be for her to form some idea as to whether the patient could afford to pay the shilling or not.

22209. But what would be the criterion she would go by; would she regard a man regularly employed at 30s. a week as a fit person to pay the shilling?—I should think, if he were a man with 10 children, perhaps, she would not.

22210. If he were a single man, would she?—I think, in that case she would.

Chairman.

22211. The shilling is generally cheerfully paid, you say?—It is.

22212. Are your patients of the poorer class?—I do not think our patients are of the most absolutely destitute class as compared with some of the other hospitals, but, of course, they are a very poor class; and within the last few years they have seemed to me to be yet poorer; we seem to have had a lower class of people in the monetary scale coming to the hospital than in former years.

4 B 2

22213. The

4 June 1891.]

Mr. Cross.

[Continued.]

Earl Cathcart.

22213. The financial pull that you seem to have over all other hospitals is in the small use of drugs; what do you pay for drugs?—We are supplied gratuitously with the homœopathic drugs by Messrs. Gould and Son, of Moorgate-street.

22214. They cost nothing?—The homœopathic drugs cost us nothing. Certain appliances and external applications which we are obliged to make cost us as much as they would cost any other hospital at the wholesale dealers.

22215. That comes to this: that the out-patient costs nothing except advice?—There is considerable expense attached to the out-patient department; there is the dispenser's salary, the assistant's salary, and all the cost of keeping the place clean, all the numerous books and records and the medicine cases, and general expenditure.

22216. Have you never made any proper estimate what your out-patient department costs you per patient?—I have never gone into that.

22217. It would be interesting to do so. With regard to your medical school, you mention one in your various documents?—I perhaps ought to say that we have hardly a medical school in the ordinary sense of the term; as a fact our medical men only profess to teach two subjects, therapeutics and materia medica; all the rest of the subjects would be the same as those taught in the ordinary schools.

22218. I took it from your own prospectus?—I am aware of that.

22219. Then that mention of the school is a little misleading?—It was forced upon us in this way. In the original laws of our hospital it is part of our title. Our hospital was founded to be a medical school; to what extent I am not in a position to say, but in our actual title we were put down as the London Homœopathic Hospital and Medical School; and, as a fact, a few years ago a good many very liberal people gave us, or one of our medical men, a considerable sum of money with a view of founding a medical school, and that was made over to the hospital on the condition that we should re-adopt the title.

22220. Have you any expenditure for your so-called school?—We have a few lecturers' fees.

22221. What does that expenditure amount to in the whole?—Last year it amounted to about 20*l*.

Lord Thring.

22222. Do you consider that your hospital really and truly supplies all the homœopathic necessities of London; in other words, is it large enough for London?—I think not; of course there are other homœopathic dispensaries in London more or less of a private character; but it has been the wish of our board to considerably enlarge the sphere and the work of our hospital.

22223. And you think it would be capable of enlargement if you had more money?—I think there is no doubt about that. At the present moment we are obliged to reduce the number of patients because our income last year was not equal to our expenditure.

22224. Then the supply of homœopathic medicine is not equal, in your opinion, to the demand in London for it; in other words, more people want to be homœopathically treated in London

Lord Thring—continued.

than you can supply?—More than I think the hospital could supply.

22225. Your financial position is particularly strong, you fund all your legacies; is that owing to an original rule or because you do not like to risk any deficit?—It is actually part of an original law of the hospital, that all sums over 50 guineas shall be invested, and the interest only be made available for current expenditure.

22226. You are aware that other hospitals speculate more, so to speak; use their legacies for current expenditure, and trust to the public for making up the deficit?—I am sorry to say that I am aware of that.

22227. But you consider that your position is stronger by funding your property in the way you do?—Not only stronger, but I think it is sounder in every way as a financial principle.

22228. Supposing other homœopathic hospitals were set up in London, do you think that they would injure you at all, or do you think that London could supply both?—My experience hardly enables me to answer, but I should think there are plenty of people to supply both. As a fact, another homœopathic hospital was started 25 or 30 years ago, and after a brief career it did not continue.

22229. Do you adhere strictly to the old homœopathic system of globules, or have you modified it at all?—We mostly use tinctures at the hospital, and triturations, and what we call pilules.

22230. You do not adhere to such very minute doses?—Some of the doctors do.

Chairman.

22231. Are your subscribers mostly large or small subscribers?—I am sorry to say they are mostly small subscribers; as we lose subscribers of 10 guineas, we do not replace them to the same amount; we have to get, perhaps, five new subscribers of two guineas. The tendency seems to be not to subscribe but to give donations.

22232. In the year which you mentioned, 1889, your receipts were 4,706*l*., and your annual subscriptions were 1,000*l*. in round figures?—Yes.

22233. Have you any idea whether that is the usual proportion received by hospitals in annual subscriptions?—I have made no calculation that would entitle me to answer that.

22234. Do you receive any commission on subscriptions?—None whatever.

22235. Does anybody connected with the hospital receive any commission?—No.

22236. You have no collector?—My clerk performs the work of the collector, and his remuneration is included in his salary.

22237. Have you any chaplain in connection with your hospital?—We have.

22238. Is he a salaried officer?—He gets a small stipend.

22239. What?—£. 25. a year.

22240. Does he live in the hospital?—No.

22241. Have you any female clinical clerks?—No.

Lord Thring.

22242. Your cases are principally medical, not surgical, are they not?—We have had a very large

4 June 1891.]

Mr. CROSS.

[Continued.]

Lord *Thring*—continued.

large increase in surgical work within the last two years.

22243. And by "surgical work," do you mean that you perform the ordinary surgical operations?—Yes, of every kind.

22244. And then as to your nursing; I quite understand that your medical system is cheaper, on account of the drugs, but is your system of nursing for any reason cheaper than the ordinary hospital nursing?—I should be disposed to think that our nursing arrangements are rather more expensive than the ordinary hospital nursing. Our nurses are very well looked after in every way.

22245. At all events your nursing arrangements are not cheaper than those of other hospitals?—No.

Earl *Spencer*.

22246. Do your patients remain longer in your hospital on an average than the patients in an ordinary hospital?—I think rather less; as far as I have been able to see from the Hospital Sunday Fund returns, rather less. They stay with us about 27 days on the average.

22247. Do you know what the ordinary average is?—I think it is much longer than that. Of course it would depend upon the nature of the case very largely. Some hospitals would keep their patients longer, by reason of the nature of the case, as in cancer.

22248. Do you consider that your treatment would relieve the patients in a shorter time?—We are strongly of that opinion.

Chairman.

22249. Is there anything else you wish to say?—I have taken a great deal of interest in the question of the rating of charities.

22250. What are you assessed at?—At 225 *l.* a year; with our nursing institute it is now 325 *l.* a year.

22251. And what do you pay on that?—We pay on that about 80 *l.* a year. The question I was referring to was the whole question of the rating of charities, as to which I have taken some very active steps in the last few years.

22252. With what view?—With the view of securing the exemption of hospitals entirely from rating. Until the year 1865 the hospitals all over the kingdom were entirely exempt from any rates whatever; but since then, by reason of a decision that was given in the House of Lords on the case of the Mersey Docks and Harbour Board, such action has been taken that the hospitals are now obliged to pay rates. I do not know whether your Lordships remember the case, but the case was really this: the Mersey Docks and Harbour Board were sued by the Liverpool authorities for the payment of rates, and the question came to the House of Lords for decision, and the Lord Chancellor, in the course of that decision, made the observation that, as a fact, no bodies were exempt from payment of rates, and therefore the docks must pay. That was interpreted by the officials to mean that they were entitled to assess hospitals and other charitable institutions, and as a fact they did assess them, and from that time forth all the hospitals have been made to pay. It is a very serious loss to

Chairman—continued.

them, and I am very strongly of opinion, after looking carefully at all the cases and such Acts as have been referred to, that there is actually no warranty for it at all.

Earl of *Kimberley*.

22253. Is your contention then that charitable institutions ought to have a subvention from the rates?—That they should be exempted.

22254. Of course it is exactly the same thing as regards the rates whether they are exempted from the payment of a certain sum in rates, or whether they receive a subvention to that amount from the rates?—In my opinion it is not exactly the same thing.

22255. Will you explain why?—In this way: that the principle of exemption is one admitted very largely in other cases, and is admitted in the case of hospitals as to the income tax, which is not regarded in any sense as a subvention of the hospital from the State.

22256. Why do you say it is not a subvention of the hospital?—I take it that there is a great difference between a subvention and an exemption, I mean in this way: that if the State subsidised the hospitals in any way, there is no doubt the State would be perfectly entitled to claim a share in the management of them.

22257. But do they not subsidise them? What difference is there whether I give you 5 *l.* or exempt you from paying 5 *l.*?—As far as the money is concerned there is no difference, but the principle of action is entirely different.

22258. Will you explain what possible difference there can be between the payment of 5 *l.* in one way or another?—It seems to me that there is a difference. Of course, if a hospital is subsidised by the State, then we have the system, which seems to obtain very largely in France, which is a different system altogether from ours; but if they are simply left as they were left for 250 years without being called upon for the payment of taxes or rates, it seems to me their position is very different altogether from the position of those subsidised by the State.

22259. I should be very glad to hear what possible distinction you can make, in point of fact, between a case where a sum is not required to be paid, and thereby the hospital receives the amount indirectly, and a case where the sum is directly paid to the hospital. Your claim for the charities amounts to this, that the ratepayers should indiscriminately subscribe a certain sum to all charities. That may be the right thing to do, but that is what it amounts to, is it not?—I have never phrased it in that way to myself, nor have I ever heard, that because we are exempted from income tax, or because the authorities at Somerset House return us the amount which is deducted from our dividends for income tax, therefore they subsidise us or give us a subvention.

22260. But then, is not the reasonable conclusion, that if you are liable to the rates, you ought also to be liable to the income tax?—I should rather be disposed to put it, that as we are exempt from the income tax, so we should be exempt from the rates.

22261. Do you think that the principle is a good one, that an indiscriminate subscription should

4 June 1891.]

Mr. CROSS.

[Continued.]

Earl of Kimberley—continued.

should be given to all charities without any power on the part of the persons giving it to determine to what charities?—I should say it would be a very bad principle indeed, but I cannot admit that that applies to the question of paying rates.

22262. You draw a distinction between my excusing your paying 5 *l.* due to me, and my giving you 5 *l.*?—The distinction is, that the 5 *l.*, as I claim, is not due; that is to say, that legally, under the original Rating Act of Elizabeth, I contend that the rates are not due, and I base that upon the fact that the Act of Elizabeth directs that part of the rates is to be handed over to the helping of public charities; and I maintain that you cannot, by any possible principle of construction, interpret that to mean that the charities are to be made to pay rates.

22263. That I understand to be a legal question, which of course can only be decided in a court of law?—Can only be decided in a court of law; but I may say that, as a fact, it was decided in favour of the view which I hold, for 250 years, and it was never altered, except in regard to a case which had reference to the Mersey Docks and Harbour Board, and not to any hospital or charity in the United Kingdom at all.

22264. That of course is a matter of legal argument, but I want, on the question of policy, to ask you, do you think there is any good ground for requiring what I call a subvention from the rates?—Yes; because I think that the hospitals of London spend an enormous sum of money, certainly not less than 800,000 *l.*, nearly a million, every year (I am speaking of hospitals only) in relieving the rates of the metropolis. The entire charities spend not less, all told, than two millions and-a-half every year; and it seems to me, if my opinion is asked, an impolitic thing, to say the least, that that vast amount of charitable work should be taxed by the enforcement of rates from which those charities were exempt for so long.

22265. But still I want to know what answer you have to the objection that I make, namely, that it amounts to this, that the ratepayers have to forego a certain contribution towards their expenses without having the power of exercising any discretion as to whether the particular institution should receive that assistance?—The answer to that is, that as a fact certain institutions are exempted from these rates without the State claiming any such power of control; and institutions which are not, on the face of them, so much entitled to exemptions as the hospitals, which spend so much for the public benefit.

22266. That is the argument, is it not, that two blacks make a white?—Assuming it is granted that there is a black and a white.

22267. Is it not the case that some of these institutions, probably, if you apply the principle generally, might be classed under "black"; that is to say, it is scarcely possible to suppose that all institutions are equally worthy of assistance; and therefore the objection is that they get indiscriminate assistance, without any power on the part of any public body to determine whether or not such contribution ought to be made to the particular institution?—May I say, in reply to

Earl of Kimberley—continued.

that, that there was no question of difference between black and white when they were exempt from the taxes.

22268. It might be argued, might it not, that the previous system was a vicious one?—Yes, it might, if the rates had been imposed, because there were blacks among the whites; but there was no such contention.

Lord Thring.

22269. I understand you to say that the decision in the case of the Mersey Docks and Harbour Board was a wrong decision in law?—Certainly I do not presume to say anything of the sort. All I say is this, that it has been interpreted to signify that the House of Lords is of opinion that hospitals should be rated. What I contend is that there is nothing in the report of the case of the Mersey Docks and Harbour Board, nothing in the report of the judgment of Lord Westbury, which leads anybody to form any opinion of the kind. My contention is that hospitals have been rated not in consequence of a decision of the House of Lords, but in consequence of an interpretation which has been put upon it, and an interpretation demonstrably mistaken by official auditors, or the authority, whatever it is, that would put the machinery in motion. As a fact, in the House of Lords five judges were present to give their opinion upon the case, and four of those judges expressed the distinct opinion that, as to hospitals, there was no doubt whatever that they were exempt from the rates. Lord Westbury himself expressed the same opinion. He said, as to hospitals, whether they should pay rates or whether they should not pay, is not now before us, but it is perfectly certain that the Act under consideration exempts nobody by name.

22270. Why do you not try another test case for the hospitals?—There is no money to do it.

22271. But surely, considering this enormous sum that the hospitals pay in the shape of rates, there would be no difficulty in trying a test case?—There is no money to do it, and no one to raise the money to do it.

22272. Why should not any of these great hospitals say they will not pay the charge?—I cannot induce them to do anything of the sort. I have done my best to induce some of them to take a spirited action like that, but it is not possible. They say, with a great amount of reason, that they have no money to spend in litigation. It is perfectly true; the money given to hospitals is not given to them to spend in legal expenses.

22273. That appears to me the most absurd view that can be held. Suppose a hospital can save, we will say, 1,000 *l.* a year by incurring the expense of a case, which, even if it went to the House of Lords, would only cost, at the utmost, from 800 *l.* to 1,000 *l.*, even if it went through every court, do you mean to say that any board of governors would allege that it was not within their functions to try the case?—I should say so, unquestionably.

22274. But is not the difficulty this: do you consider that hospitals are the only charity exempt?—Not at all; I would exempt all buildings (and I have so phrased it in an Act which

4 June 1891.]

Mr. CROSS.

[Continued]

Lord Thring—continued.

which I suggested) which are exempted from inhabited house duty, because the hospitals and other charitable institutions are at the present moment exempted from inhabited house duty; for the same reason, that they are public charities.

22275. What I mean to say is this: you have told us that the House of Lords case does not cover hospitals; do you consider that the House of Lords case, as properly interpreted, does not cover any charity?—None whatever.

22276. What do you define a charity to be: you are aware that it includes a racecourse, in law?—I was not aware of that.

22277. I am afraid it is the vaguest term you can use?—The term is defined by the Income Tax Acts, in which the term "public charity" is well understood, and under which all income which can be shown to be income expended in public charity is exempt from income tax.

22278. What you mean is this: that you think that the House of Lords case, properly interpreted, does not cover any public charity within the meaning of the Income Tax Acts?—I am quite sure of it.

22279. Then it seems to me the most extraordinary circumstance that this question is not

Lord Thring—continued.

tried?—We have aimed at introducing an Act of Parliament, a Bill which has already been laid before the House of Commons, with the view of getting a short Act passed, as the simplest and cheapest way of settling the whole thing; an Act similar to that which Lord Shaftesbury passed when he secured the exemption of ragged schools from taxes. Of course there are several institutions which are hardly quite so deserving as hospitals which are, as a matter of fact, exempted from rates; churches, for example, and ragged schools, and literary institutions, and some others of that kind; workmen's dwellings under 20 *l.* a year also are exempt; and it seems to me that they certainly have hardly such a good claim as hospitals and orphanages, and other institutions of purely public charity.

22280. I do not wish to argue it; but the question is, would it not be much better, instead of bringing in an Act of Parliament, if these charities are not legally liable, to have them declared not legally liable?

The Witness is directed to withdraw.

MR. ROBERT LAWSON TAIT, is called in; and, having been sworn, is Examined, as follows:

Chairman.

22281. YOU are a surgeon, are you not, at present practising in Birmingham, as your headquarters?—Yes.

22282. You have, on a former occasion, practised in London, have you not?—I have never resided in London, but I am largely engaged in practice in London.

22283. I understood that you were acquainted with some of the larger hospitals in London?—Only as a visitor. I am more familiar with the hospitals in the Midlands and in Edinburgh.

22284. Our present inquiry is confined to the metropolis; but I will ask you a few questions on the general question. Do you entertain any opinion on the question of the advisability of having larger or smaller hospitals?—I am very strongly of opinion that the larger the hospital becomes the less efficient it is for public purposes, and the higher its mortality becomes.

22285. To what cause is that to be attributed?—It is very difficult to say; the causes I have not quite gone into; but it is not difficult to get at some of them. Thus, in the mortality from operations, if one operation should become a source of infection, it is very easy to see that it would be much easier to convey that infection to a number of other operations in a large hospital than in a smaller one.

22286. Would not that be rather owing to a want of proper organization in that particular hospital?—The danger would be increased, of course, just as the organization was defective; but as the nurses and servants, and those who have the immediate charge of patients, do not belong to the highest order of intelligence, and never can, it is not difficult to see that it is much more difficult to keep down sources of danger from that cause in a large crowded institution than in one of moderate size.

(24.)

Chairman—continued.

22287. What do you call a large hospital; how many beds do you reckon a large hospital to contain?—Anything over 200 beds I should call a large hospital.

22288. Then you are not against hospitals up to 200 beds?—No, I think not, so far as one can judge from hospital statistics, which of course require qualification, because one does not understand how their indications are arrived at; but 200 beds seems to me the hospital at which the maximum safety, with convenience of administration, is arrived at.

22289. Then also there are a large number of hospitals, certainly in London, with a very small number of beds; 20, and possibly under that?—Yes, many.

22290. Are those advantageous institutions, in your opinion?—It is very difficult to contrast them with others, because in many cases they are special hospitals; but when you get to hospitals where comparison is possible, where the populations seem to be the same, and to be populations suffering from the same kind of diseases, and with the same proportions of deaths, a hospital with 200 beds is much safer than a hospital with 600.

22291. But in reference to these special hospitals with a number of beds not exceeding 20, are those generally advantageous for the population, or the contrary, in your opinion?—I think they are advantageous, because they are generally hospitals for diseases of the eye, for spinal diseases, diseases of women, and so on. They cannot be fairly taken to contrast with the large general hospitals; the purposes are totally different.

22292. Is there any danger of those hospitals originating, owing to speculative purposes?—I think

4 June 1891.]

Mr. TAIT.

[Continued.]

Chairman—continued.

think that perhaps that would be a very fair description of the origin of some of them; but, on the other hand, there is a more fair method of explaining many of them. The traditions of the large hospitals get them into the possession of a corporate idea. Take for example, the instance of a large hospital like Guy's; the old fashioned notion, which is not yet quite dead, was, that to become a member of the staff of Guy's Hospital, you had to be an apprentice in youth to one of the surgeons, and that involved a very heavy premium; I forget just now, but my impression is (I will not pledge myself to the exact figure) that in Sir Astley Cooper's time the fee was 500 guineas; it was either 300 or 500 guineas, and my impression is that it was 500 guineas. That of course limited the number of students who could ever have any chance of becoming members of the staff to those who could pay that sum in very early life, in fact whose friends were rich. Then they very seldom went, and indeed they do not often now go outside their own upgrowth, one may call it, for their staff. Therefore, when a man of exceptional ability or industry, or of any other good quality, comes to London, he finds, to a very large extent even yet, the doors of the large institutions closed against him. If he has something to give to the public, or something to say to the public, he is very apt to start a special institution; and in that way I believe many of these hospitals have been started, and have done good. The Samaritan Hospital is an example; St. Peter's Hospital for Stone is another; many of the ophthalmic hospitals are examples of it; but I am afraid there are some to which your Lordship's indication would apply.

22293. In fact it comes to this, does it not, that there are good and bad special hospitals?—Yes.

22294. Is there any tendency, in your opinion, for the large hospitals, as regards diet and dressings and treatment, to be carried on on an extravagant scale?—Yes, I think so. The management must be conducted with very great care, otherwise it becomes very expensive. I remember a very good example of that (I would rather not indicate it by name) which was put into my own hands to inquire into. We found that there were no scales in the kitchen, and nobody responsible for taking in large stores; and my report to the governors was, that the result was that the expenditure upon articles of food in that institution was nearly twice what it ought to be.

22295. Was that a large hospital?—It was a hospital of 120 beds.

22296. Was it in London?—No, it was not in London.

22297. As regards the large general hospitals, they have attached to them large out-patient departments?—Yes.

22298. Have you any opinion upon the advisability of out-patient departments?—It is impossible to do without them altogether, but they ought to be enormously curtailed.

22299. How would you suggest that that should be accomplished; by inquiry?—I do not know that inquiry will answer the purpose altogether, though it might aid a great deal. I think that the proper system to curtail the out-patient

Chairman—continued.

department is to develop the system of provident dispensaries, and to make the hospitals practically the consulting institutions of the poor, not places to which anyone may run with an attack of diarrhoea, or toothache, or dyspepsia, but places to which serious cases may be referred from the provident dispensary, or whatever system may be adopted. The hospitals ought to have the filtrate and not the great mass of material.

22300. At present owing to the large mass of cases taken in the out-patient departments, the treatment of them is very hurried sometimes?—Hurried; it is ridiculously so. It is a known fact that in some of the out-patient departments less than a minute is given, on the average, to each case. It is impossible adequately to cope with them in out-patient departments of hospitals like St. Bartholomew's, and Guy's, and St. Thomas's.

22301. And you would like to see a system of linking between hospitals and dispensaries, and provident institutions, and so on?—Yes, and also the poor law sick asylums, because there is no reason why a pauper should not have the best medical advice. The cases in those institutions where special care is required, should be referred to the hospitals.

22302. Do you think that in a place like London such an organisation is possible?—It would be a very big thing, but bigger things have been done.

22303. As regards the poor law institutions, would you like to see them open to students?—Most decidedly, for the reason that it is in the poor law sick asylums that we have the patients suffering from the diseases that are most prevalent in ordinary human life. In the hospitals it is more the exceptional cases that are seen; cases that do not occur often in the experience of the average practitioner. He is, therefore, in the hospitals taught rather on exceptional cases than on those that he will meet with every day in after life.

22304. Is not that rather a question of organisation in regard to the admission of cases to general hospitals, might not the organisation be that such cases would be admitted to them?—That would hardly be a fair answer, for you must consider, on the other hand, the position in which hospitals like St. Thomas's and Guy's are placed. Anyone who is suffering, say, in the country from an aneurism of an important artery, desires that that aneurism should be treated with the greatest skill available, and naturally, therefore, he would go to such a place as St. Thomas's, where such cases are frequent. It becomes, therefore, essential that the hospitals should be consulting institutions for special cases. When a surgeon in his room sees a case of popliteal aneurism, or some exceptionally interesting case, it is to expect what is a little more than human to suppose that he would not take that case in preference to some more ordinary ailment; in fact, he would not fulfil his proper function if he did not.

22305. Then would you send the surgeons and physicians of the hospital to the poor law infirmaries; do you think that the difficulty of teaching students as to those ordinary ailments might be got over in that way?—That might be so in special instances, but I think that the better way of working the enormous amount of material

which

4 June 1891.]

Mr. TAIT.

[Continued.]

Chairman—continued.

which is at our disposal, at least for teaching purposes in the sick asylums, would be to establish a system of very numerous clinical clerkships, by which a student would be put in charge of, say, six beds, and he would have merely to carry out instructions, and carefully record the progress of these cases from day to day under the direction of the visiting surgeon or physician.

22306. Then that would alter the principle of the infirmaries very much, would it not?—I think not.

22307. There are no visiting physicians or surgeons in the poor law infirmaries now, are there?—In Birmingham we have adopted a system which I think better than that which prevails in London; a modification of the two. In our large sick asylum, which is, I think, the finest thing of the kind in the kingdom, we have a large staff of resident medical officers, and two visiting medical officers, one physician, and one surgeon; and under them we are adopting already the system of clinical clerkships with great advantage to the patients and no detriment to them, and with great advantage to the pupils. These appointments are made for six months; at the end of that time the students put there are rendered perfectly familiar with all the ordinary ailments they will probably have to meet with in after life.

22308. You alluded just now to a system of co-operation between hospitals and dispensaries and provident institutions; have you anything of that kind existing in Birmingham?—In embryo as far as the Local Government Board will let us go. I sincerely hope we shall be able to influence the authorities of the Local Government Board to let us go still further.

22309. Could you indicate in what line?—Largely by permitting the students of our medical school to serve for periods of six months as clerks in the wards, and by increasing the staff of visiting surgeons and physicians.

22310. I meant more as regards the patients who go for relief to the various institutions?—Do you mean the hospitals as well?

22311. Yes?—The only great modification that I have given any attention to would be to put them under a central bureau like the Bureau de Bienfaisance; it would of course greatly minimise the cost of management and it would do away with a great deal of the feeling of rivalry which exists between all such institutions.

22312. You do not think that a feeling of individuality in a hospital is a good thing?—In some ways it is good, but on the whole it is bad.

22313. Would you have that bureau control the expenditure of the hospitals?—I do not see why it should not. It would be composed of business men.

22314. And would you have it undertake the inspection too?—Yes, inspection. I do not see why they should be relieved from inspection any more than workhouses and asylums, prisons, public institutions dealing with public money.

22315. You would have this kept clear of the rates?—Yes, I see no reason for altering that. There is plenty of money to be obtained from the (24.) e

Chairman—continued.

public by voluntary subscription, in fact in some instances almost too much, one might say, for it gets frittered away in many ways when it might be saved. I see no reason to advocate putting hospitals on the rates.

22316. I do not understand from you that you would wish to see rate-paid officials working this board or bureau?—No; in any place where public spirit existed, I do not think it would be necessary; what is wanted is more of a community of management than anything else.

22317. And do you approve of the system which at present obtains in London in most cases, of the services of the staff in the hospitals being unpaid, or would you like to see them paid?—I think that the results would be much better if they were paid.

Earl Spencer.

22318. To clear up a part of your evidence, when you alluded to the fees given by pupils to eminent surgeons, you did not mean to say that that goes on now, did you?—I think it does in a modified way; I fancy the system of apprenticeship and heavy indentures does obtain here and there yet.

22319. Do you mean that it is not open for any clever man who wishes to go into surgery to enter and become a pupil of any surgeon in the hospital?—If he can pay the money he can enter on the ordinary *clientele* of the large hospitals, but practically in the old times it was impossible for him to hope to join the staff unless he had paid a heavy indenture fee in addition.

22320. You think there is still something of that sort?—I would not go so far as to say that it would prevent men getting on the staff now, but I think the indenture system still exists in a modified way.

22321. A young man wishing to rise in the profession by getting on to the staff of one of these hospitals would have now to pay a considerable sum?—Not necessarily, but, I think, in some instances it is still done.

22322. Under the rose, or openly, do you mean?—It is not done publicly; I would not say it is done under the rose; that means rather an aspersion.

22323. Is there not some considerable fee paid elsewhere for medical students?—The ordinary curriculum fees vary from 50*l.* to 90*l.* or 100*l.* for a complete curriculum; but what I speak of is over and above that; it is an indenture fee under the old apprenticeship system.

22324. Now, you alluded to special hospitals, and you gave rather favourable evidence with regard to them; you said that they arose to some extent by those who started them being precluded from entering the large hospitals?—Yes.

22325. Now is that from the large hospitals having too strict regulations as to where their medical staff should come from, in fact being too close corporations?—If you will not use the word “regulation” but say “custom” or “practice,” I answer the question, yes. I do not know whether there is any written law on the subject, but it was the custom.

22326. But we understand that many hospitals will not take a medical man or a surgeon who does not belong to one of the London schools?—

4 C

There

4 June 1891.

Mr. TAIT.

[Continued.]

Earl Spencer—continued.

There are exceptions, but the custom is for each big hospital to supply its staff from its own students, and that is a matter of regulation in many places. For instance, to take my own old hospital (I can speak for that), no one can be one of the surgical staff of the Edinburgh infirmary, which is now one of the largest hospitals in the kingdom, unless he is a fellow of the Edinburgh College of Surgeons. That used to be a very close corporation indeed. When I joined it about 25 years ago the number of them were very small.

22327. Do you think it would be an advantage to open these places rather more?—Most certainly. The ideal system is the Parisian system; the *concours* open to all the world.

22328. And you are aware of some cases in London where able men have been obliged to start hospitals on their own account, because of having been shut out from these great hospitals?—Yes.

22329. Now that you are on the subject of the schools, do you consider the way in which medical men are taught in London satisfactory, particularly with regard to their walking the hospitals, which is more our part of the inquiry?—Yes; on the whole I think that the London curriculum is extremely satisfactory; but there is one curious deficiency which arises almost out of the matter that we have been talking about. Each medical school in London (I think there are 11), has a complete staff of teachers, and a man who is a junior say, let him be a young assistant surgeon or physician, is set to teach botany; he knows nothing about botany, and he does not care anything about botany; and as soon as he gets a chance he will take the chair of physiology, and probably he knows as little about physiology as about botany. He waits till he gets full surgeon, or full physician, and then he takes the chair of medicine or surgery, about which he does know a great deal. The result is that the students are badly taught in the subsidiary sciences.

22330. Would you like to see that system changed?—Yes.

22331. How would you like to change it?—By putting it more on the Edinburgh system. A man who is professor of botany in the University of Edinburgh is a botanist *pur et simple*, and never wants to be anything else. He is paid a sufficient remuneration to justify that. That chair in Edinburgh is worth 2,000*l.* or 3,000*l.* a-year, and there is no reason why in London it should not be equally valuable.

22332. For certain purposes of education you would like to centralise the teaching in London?—Yes.

22333. And pay much more highly the lecturers and teachers in certain subjects?—Yes; instead of having 11 lecturers on botany, with an annual income of 150*l.* a-year, and who knows little about the subject, I would give two or three men a good sum.

22334. Would you apply that to other sciences besides botany?—Yes; in fact to all these sciences that do not lead to practice, for that is about the key-note to the position. If a man teaches medicine or surgery, or therapeutics, he is in the line of teaching that will do him good for practice; botany will not do him a scrap of good.

Earl Spencer—continued.

22335. Do you consider that there is any advantage in having an independent school at a particular hospital which has a tradition of its own?—No; and that is the evil from which a lot of this trouble has grown. Each hospital, desiring to be an entity, has manufactured for itself a medical school out of its staff; and, in the case of the smaller hospitals, very inefficiently.

22336. Is there not some advantage, perhaps, in not having the whole of the science taught in one groove; as to the practical part of it, I mean?—I can hardly imagine that, in the case of sciences like botany and physiology and chemistry.

22337. I except those?—Then you grant my case.

22338. I only want your opinion. With regard to the other, the practical part, would you think it desirable to have some independent school?—When you come to the practice of medicine and surgery, there is no reason why every hospital should not teach independently.

22339. There may be advantages in its doing so, you think?—Distinct advantages; I would not alter that.

22340. Only for certain things you would have a central body teaching, and then allow each hospital for the practical part to have its schools?—Yes.

22341. With regard to the workhouses, supposing you established clinical clerkships in London, you would have to alter the whole system of the workhouse infirmaries in London?—I cannot answer with regard to London, because I do not know the system. I imagine that the system of superintendence would have to be a good deal altered, but I think in respect of the welfare of the patients, it would be altered for the better.

22342. You would not, I suppose, allow these clinical students to be taught merely by an ordinary medical man at a workhouse infirmary; you would want physicians of a higher standing to teach them?—I do not know that, because the ailments to be dealt with are quite of the ordinary kind in the great majority of cases. It seems to me that the system of teaching with regard to the ordinary ailments of everyday life in the workhouses and sick asylums should take the place of the old apprenticeship system, by which all of us were obliged to go into the surgery of a country doctor, or a doctor in general practice in the town, to learn our business. Now men are turned out as graduates of universities who have really no familiarity with the ordinary ailments of life, and have to begin to learn their business after they have qualified.

22343. At Birmingham, as I understand, your workhouse infirmaries are managed somewhat differently from those in London; you have visiting physicians?—We have a small staff; I hope to see it materially increased before long.

22344. And you actually have clinical clerks there?—Yes.

22345. And you have seen the practical advantage of it?—Great advantage.

22346. Now you talked of a central body like the Bureau de Bienfaisance; do you think that large voluntary hospitals would willingly come under

4 June 1891.]

Mr. TAIT.

[Continued.]

Earl Spencer—continued.

under the control of a central body like that?—I think they would if the body was made up of units from their own committees. If it was not an enforcement; if it was not said by Government, "You will have to come under this control, and there will be a lot of Government officials," I think the voluntary hospitals would jump at it.

22347. Would you give that central body a power of control of the finances?—That would have to be done by the individual charities; it would be a sub-committee of a series of committees. We find that in ordinary business life that works very well. I think it is because that has never been put before the hospital managers as a good thing to do that that has not been done long ago.

22348. But the subscriptions would still go to the individual hospital?—They would be allotted as they are in the Saturday and Sunday collections now. In fact the committee of the Saturday and Sunday hospital collections in Birmingham are a good example of what might be done for the whole of the subscriptions and a great deal of the management.

22349. Do you find that you can regulate certain things in hospitals by means of one central body, and get them to alter other things that you may not approve of?—It has never been tried as far as that, but I do not see why they should not.

22350. With regard to the form of accounts, say?—As a matter of fact it seems never to be difficult at all in Birmingham to take to a new thing if it is good. For example, the old system of electing medical officers to charities was by every governor voting, and in the large general hospital at Birmingham in the last election in 1867 or 1868 it was like a Parliamentary contest. They had to bring up for personal voting persons from Tamworth and Lichfield, and all round, and they had committee-rooms all over the town, and it cost the man who lost it nearly 2,000 £. That was the election of a surgeon to the hospital. It dawned upon somebody that this was a very foolish thing, and that they had better have a committee of election, and the principle was at once adopted; 24 or 26 members of the committee of the hospital were checked by an addition of a slightly larger number, say 30, taken by ballot from the general list of governors, making an election committee of 60. It does not cost the candidates now as many pence as it cost pounds before.

22351. As a rule I suppose the elections of medical officers throughout the infirmaries in the country are on the old system?—Yes: the astonishing thing in Birmingham was that every one of the charities adopted it at once, it was so evidently a good thing to do. In Leamington the other day a contest took place for an appointment in a hospital much less important than any of ours in Birmingham and 700 votes had to be polled.

Earl of Kimberley.

22352. With regard to the poor law infirmaries, would there not be some danger, when such an organisation as you suggest was introduced, that they might supplant the hospitals and gradually become general hospitals, sup-

(24.)

Earl of Kimberley—continued.

ported by the rates?—I do not think so; I do not think that such a danger would arise. Of course it is very difficult to see what will come from touching any big institution or series of institutions; but I am rather a socialist in that line of thought, and I would like to see the difference between pauper and non-pauper done away with.

22353. I should like to ascertain clearly what your view is. Would you desire to limit the treatment at the poor law infirmaries to the more ordinary cases, leaving difficult cases to be sent to the hospitals?—I think I should, and I think that unless the arrangements were very fundamentally indeed altered, and altered perhaps more at the hospitals than the workhouses, that arrangement would still continue.

22354. But otherwise, would it not be the case that instead of hospitals supported by voluntary subscription, you would, in point of fact, have hospitals supported by the public purse; that might be the result, might it not?—You mean the compulsory process against the voluntary process.

22355. Would there not be a danger of extinguishing the voluntary institutions?—No, I think not, because there again, speaking from my experience in my own town (which is more visible than in a place like London, which is so enormous that you cannot see what is going on), in Birmingham the tendency is for the hospitals to fall into the support of voluntary contributions from the artisan class. Our Saturday collections are running up by large increments every year.

22356. But still it would be essential that the poor law infirmaries should not supply the very same surgical and medical relief, because, otherwise there would be very little inducement for men to go to the other institutions?—I do not think there would be much danger of that as long as the salaries at these poor law infirmaries are in the very moderate way that they are.

22357. Would there not be some danger that if you got a very able staff at the infirmaries, men of the first class, they would naturally desire to draw upon the more difficult class of cases?—Those men would go to the hospitals.

22358. To turn to another matter, the class of instruction which you would desire to be given to medical students, the preliminary scientific instruction given at the hospital might almost be described as part of a university course?—Yes.

22359. And, if possible, it would be desirable that this preliminary scientific instruction should be combined with the other instruction that the student ought to receive in the shape of a university course?—Yes.

22360. And then, after having passed that, a student would, of course, go to one of the various medical schools for the purpose of attending the clinical instruction; that would be an ideal system?—That would be an ideal system.

22361. You are aware, I believe, that in the great majority of large hospitals in London, the medical appointments are limited to those who belong to the colleges of surgeons and physicians?—That is so.

22362. Do you think that a good system?—No, I think not, unless it be taken in this way, which of course is a very fair defence for it; that

the

4 June 1891.]

Mr. TAIT.

[Continued.]

Earl of Kimberley—continued.

the membership of the College of Physicians and the fellowship of the College of Surgeons, representing, as they do, certainly, the highest distinctions attainable in this country, in the two lines of life, medicine and surgery, enable the electors at once to clear the way of a number of candidates whose claims would be, relatively speaking, insignificant, and therefore it is a convenient form (I am not quite sure if it is a good one), to say that candidates for these offices shall possess these qualifications.

22363. Do you think it would be a hardship for a graduate, a physician or surgeon, who possessed the Edinburgh degree, to be obliged afterwards to obtain the qualification of the London body?—Not a bit a hardship; I had to do it myself.

22364. You think it could not be considered a grievance?—I cannot see how it can be considered a grievance, seeing that the pecuniary bar is so slight. I came to live in England fully qualified as a Fellow of the College of Surgeons of Edinburgh, and at the cost of 10 *l.*, and some work, I took the Fellowship of the College of England, which opened everything to me.

22365. It has been represented as a hardship in the case of some one who has attained, perhaps distinction, that he should be compelled to go through some examination again to qualify for an appointment of this sort?—But there is no distinction in surgery comparable with the College of Surgeons here.

22366. Do you think that in hospitals, in your experience, there is sufficient pains taken to see that the sanitary condition of the hospital is thoroughly good; I do not mean the drainage, but the whole sanitary surroundings?—I am afraid that I must say there is not.

22367. It has been suggested that in large hospitals it would be an advantage (I have heard that suggested) if there were some special officer whose business it was to see to all sanitary arrangements. It is said that now it is nobody's business to see to them. What is your view as to that?—I think it would be a great advantage. And that is one of the strong arguments against large hospitals; that when you build a hospital for 600 beds you will be very averse to pull it down when it needs pulling down; if it had only 200 beds you would not be so averse to pulling it down.

22368. Take a case which has been brought before this Committee, the drainage arrangements for St. Bartholomew's, and other matters of that kind. Now, if in a large hospital there is no such special officer as I have suggested, a surgeon has the treating of a case without any guarantee that the sanitary arrangements are those which are requisite for the proper treatment of it?—It is a dreadful thing to have a patient brought into a hospital for an operation and send him out a corpse because the sanitary arrangements are not what they should be.

22369. And unless there is some other qualified person who controls such matters, that is liable to happen?—It is liable to happen at any moment, because no one can perceive what is going on underground, and it is a thing which ought to be carefully watched everywhere.

22370. And besides what is going on under-

Earl of Kimberley—continued.

ground, one knows, as a layman, that there has been great progress made now in all the sanitary arrangements, both in hospitals and elsewhere, and they are more likely to be thoroughly enforced if somebody is specially charged with that duty?—Yes; I think the question answers itself in what happens in one's private house: the inspector can come into your house and mine and insist upon this or that being done. How much more necessary is it in an institution where disease is rampant.

22371. Also, a physician or surgeon who is entirely occupied with the actual treatment of the cases would naturally not have time for general investigation of such matters?—And he would not have the skill or the knowledge.

22372. As to the number of out-patients, I suppose you wish to limit the number of out-patients in the hospitals to those necessary for the instruction of the students?—And for special treatment.

22373. And you are in favour of the hospitals being used for consulting purposes?—Yes.

22374. But if the infirmaries were made thoroughly available, that instruction which is so necessary for medical students in the ordinary common diseases would be obtained in the infirmaries?—Yes, largely.

Earl Cathcart.

22375. Were you concerned in the inquiry of Judge Chambers the other day with regard to hospital abuses in Birmingham?—Yes.

22376. And do you approve of the report he made?—I approve entirely of the report so far as it went; I would go much further; but it was very difficult to get any body or a committee, with such a discrepancy of opinion as was manifested, to go to a still greater length. I think it was an admirable report.

22377. But on the subject of out-patients, you would suggest that that report would give valuable information to this Committee?—Certainly.

Lord Monkswell.

22378. Do you think there are too many schools in London?—If two or three of the small schools like Westminster and Charing Cross could be amalgamated into one, perhaps advantage would be gained.

Lord Zouche of Haryngworth.

22379. I think you said that the ordinary ailments of life are much more met with in poor-law infirmaries than in general hospitals?—Yes.

22380. Should you say that that applies to a very large place like London to the same extent as it does to a smaller town?—My experience is so small in London, and the case in London is so exceptional, that I would not like to say; but still every now and then some of these sick asylum officers are good enough to call me in for consultation, and I look round and see very much what I see in Birmingham.

22381. Would not the medical students get sufficient instruction in ordinary ailments at hospitals in a large place like London equal to what they would get at any poor-law infirmary?—I think not; for the more successful a medical school

4 June 1891.]

Mr. TAIT.

[Continued.]

Lord Zouche of Haryngworth—continued.

school seems to be (it is paradoxical, but it is true) the more difficult it is to get instruction; and that is better seen perhaps at Edinburgh than anywhere else, because there the evil has grown to a ridiculous extent.

22382. Do you mean that they are bound to take more or less special cases?—No, it is this, that there is not material enough. In the years 1860 to 1865, when I went through my curriculum at Edinburgh, we used to have, as clinical clerk, some four or six beds each; there were 700 medical students; there are now 2,000 students, and I believe there are now several students to each bed.

22383. What plan would you suggest to prevent the out-patient department of hospitals being abused by trivial cases?—It is the trivial case that is, of course, the nuisance; and I think that a burden ought to be laid very much upon the medical staff (probably upon the resident medical staff, who, being paid officers, are at the command of the committee in all details) to reject rigidly all cases that are not really cases demanding special hospital treatment.

22384. But with regard to this central body, which you would like to see established, would you give to them any jurisdiction as to what are fit cases to be admitted?—I hardly think that would come under their control.

22385. That is suggested in this report on the Birmingham hospitals?—I should rather think it was the business of the committee of each hospital; but that is a point I have not considered.

22386. I read here, "It" (that is, such a council) "would enable them" (that is, the hospitals) "to support each other in making such regulations as might seem advisable for the admission of patients and the exclusion of unfit cases"?—They might regulate it so, for instance, that one hospital, being near a lot of manufacturing, might take accident cases, and that another, which was removed from such a neighbourhood, should take medical cases. I have no doubt that the central working these would be found advantageous, though I have not considered that question.

Lord Thring.

22387. Your observations with respect to the defective knowledge of young practitioners of common ailments, would apply still more with respect to infectious diseases, would it not?—Yes, very largely; and that is one of the evils that arises out of the concentration of infectious ailments, that we send students out to practice medicine who may never have seen the eruption of small-pox or measles.

22388. And a doctor may go into the country, and not know scarlet fever?—Yes. We have in Birmingham a very large small-pox hospital and a scarlet fever hospital; and one of the advantages of the arrangement just now suggested would be that it would enable us to send the students up in batches to become familiar with all the stages of the disease, which they could do in two or three afternoons.

22389. I understand that a medically qualified practitioner, as he is called in law, although a man who has gone through the hospitals, and who is a very scientific man probably, and has a great

(24.)

Lord Thring—continued.

deal of knowledge, may never have seen infectious diseases, also may have seen very little of ordinary diseases, and may never have been present at a vaccination?—That is quite true, and that is the mischief of having done away with the old apprenticeship system; it is to undo the evil of the abolition of the apprenticeship system that I want to utilise the outlying institutions like the sick asylums and the zymotic hospitals.

22390. You would add to all that some examination or test, I suppose, of whether a man had gone through these things?—It is very difficult, indeed, to multiply examinations without some strain upon the physique.

22391. I mean some practical certificate that a man had gone through a fever or small-pox hospital; you might require that?—Certainly, just as the examining boards require a certificate that a man has vaccinated so many.

22392. Or had so many cases in midwifery?—Yes, exactly the same line.

22393. Then, I understand your system, in short, to be this: that you consider that, having regard to the imperfect opportunities of learning the treatment of infectious diseases and, as you say, the ordinary diseases, you would open the poor-law hospitals, and you would make it imperative on the younger men to have gone through some ordinary course of training, such as practically would enable them to learn the treatment of infectious diseases and ordinary diseases?—Certainly.

Chairman.

22394. Is there anything else you would like to say?—I think not; all the ground that I was anxious to express an opinion upon has been traversed.

Earl Spencer.

22395. About the large hospitals, you say that, in your idea, they should be about 200 beds, not more. I suppose your objection to large hospitals is more to the structural part of the hospital than to anything else?—It goes to that a great deal. In a book which I published a little time ago I tabulated, as far as it is possible to tabulate, the result of a series of operations performed in the various hospitals throughout the country. The result was certainly very startling. Take, for instance, a common operation like an amputation for disease below the knee, which I suppose is one of the most common serious surgical operations we have: the mortality of that operation in hospitals of under 20 beds was 5.5 per cent.; from 20 to 100 beds it was 14.53 per cent.; from 100 to 199 it dropped to 11; I do not know how that was, but you see there is not much difference between 100 and 200. Then when you get to over 200 beds it is nearly 21 per cent. Now of course figures like these would require months and years of investigation to understand what the true meaning of them was; but that clearly shows that the size of the hospital is a factor in the deaths.

22396. But I suppose you might have a large hospital divided into separate buildings and organised in that way, so that practically you get the advantage of a hospital with only 20 beds?—There is an experiment there (*pointing to St. Thomas's Hospital*) that has not proved successful.

4 C 3

22397. You

4 June 1891.]

Mr. TAIT.

[Continued.]

Earl Spencer—continued.

22397. You would attribute the want of success to organisation, would you, as well as to the structure of the hospital?—I am afraid you must excuse me from assigning the reasons. I have not gone into them; I can only give you the facts. But if you have a population spread over a large area; take a case like Birmingham where we have an especially widely-spread population (the people nearly all live in two-storey houses or little cottages, and the streets are wide), we have no exceptional zymotic diseases that are worth talking about. Typhus fever is absolutely unknown; cholera has never entered the town; showing that for area we are perfection. We have two large hospitals: sometimes an injured person has to be carried four or five miles to one of them. It would be better instead of having two to have six.

22398. The management would be more costly if that were done, would it not?—I do suppose that the management would be more costly, but I think it could be done by shrewd care so as to reduce that extra cost.

Lord Thring.

22399. Is it not a fact very well known, however it may be accounted for, that if you mass human beings together, even healthy otherwise, you pollute the air?—That is ascertained in the case of typhus fever. The moment you get above a certain density of population (I do not know the exact figure), the moment you pass that density of population typhus fever reigns, and if you keep well down below it you cannot get typhus fever to live; you may pour it in by the bucketful but it does not stay an hour.

22400. Is it not the fact that any disease if you mass it together becomes infectious?—Yes.

22401. Is not the Vienna hospital the largest in the world?—It is.

22402. And the worst?—And the worst.

The Witness is directed to withdraw.

Mrs^s MARIAN BREW, is called in; and, having been sworn, is Examined, as follows:

Chairman.

22403. You are the Lady Superintendent of Nursing of the London Homœopathic Hospital?—I am

22404. How long have you occupied that position?—Nearly 17 years.

22405. And previous to that had you experience in nursing?—Yes, I have been in Liverpool.

22406. Where did you first obtain your training?—At Liverpool as a lady pupil and then as a sister in Liverpool.

22407. At what hospital?—At the Royal Southern Hospital in Liverpool.

22408. Will you tell us how many nurses you have at your homœopathic hospital?—Fifty-five.

22409. And does that include probationers?—That includes probationers.

22410. And does it include those whom you send out for private nursing?—Yes; I have 34 private nurses.

22411. Then you have 21 for the hospital itself?—Yes. I have one at our home at Eastbourne.

22412. Could you tell us from any return you have what the hours of these nurses are?—They go on duty at seven in the morning, and of course they get off for meals; they are on duty from 7 till half-past 10, and then get a quarter of an-hour for lunch; then half-an-hour at 1 o'clock for dinner; half-an-hour at half-past 4 for tea; and they go off duty at 8.

22413. Does the day-nurses' day end, then, at 8?—Yes.

22414. Do they have their breakfast before they go into the ward?—Yes.

22415. At what o'clock?—At half past 6.

22416. Do you consider that the half hour is sufficient for dinner?—Yes.

22417. Sometimes the dining hall is a long way from the wards?—Ours is not.

22418. How many beds have you?—We can

Chairman—continued.

make up between 85 and 90 beds, but we have only from 62 to 65 in work.

22419. Then your night nurses come on at 8?—Yes.

22420. And at what time do they go off?—At half-past 8.

22421. And what meals do they have?—They get two good meals in the night, and they have a good meal when they come on duty and when they go off in the morning.

22422. Do they have a meal before they go into the ward?—Yes.

22423. What you call a breakfast?—Yes, it is quite a good meal.

22424. When do they get their dinner?—Between 12 and 1, as they can arrange it with their work; it is quite a good meal also.

22425. What meal do they get besides that?—Tea at a time when they can fit it in with their work; but those kind of things they must arrange during the night.

22426. They can get refreshments during the night?—Yes.

22427. And then when they come off duty they get another meal?—Supper.

22428. At that 12 o'clock meal what do they get?—They get meat and vegetables, and bread and butter and tea.

22429. Where do they have it, in the wards?—In the ward kitchen, the kitchen of the children's ward.

22430. And do you keep your nurses on day duty and night duty for a long period of time together?—I have one night nurse who has charge for six months, one of my senior nurses. She has probationers under her who take two months in turn. I regard their night work as part of their training; they get about two months' night work in the year.

22431. Then as regards the holidays, do they get any holidays?—Yes.

22432. How

4 June 1891.]

Miss BREW.

[Continued.]

Chairman—continued.

22432. How long?—A fortnight is the rule, but they often get three or four weeks; the private nursing becomes slack in the summer, and then I can give the girls longer holidays, particularly those of them who have their homes at a distance in Scotland and Wales; I can give them three or four weeks, and I am enabled to send them for a week occasionally to our home at Eastbourne; through the kindness of Major Morgan I am enabled to do that.

22433. There is no other holiday except the fortnight or three weeks in the year?—That is all in the rules.

22434. How long do you train your nurses before you put them on the private nursing staff?—A year. Our place is very small, and they get a great deal of instruction in that time. I think a year is enough for them; I know they are quite equal to the case they go to.

22435. Then is the system this, that you denude your wards of nurses so as to send them out to private nursing?—Never. We have sometimes a little strain of work by sending out nurses; but a nurse may come back the next evening, or in the morning. I may take a nurse from a ward to send her out, but I never leave a ward insufficiently nursed.

22436. Do you give certificates for nursing?—Yes, at the end of three years. They are supposed to give two years' work for their training.

22437. Could you tell us what wages the nurses receive?—The probationer gets 12 *l.* a year and uniform. At the end of one year they get 18 *l.*, and at the end of three years 25 *l.*; at the end of 10 years they get 30 *l.*

22438. Do you know what the average stay of the nurses in your hospital is?—My senior nurse has been in the hospital 17 years; the nurse who has charge of my children's ward has been 15 years; the nurse in charge of the men's ward 10 years. But the private nurses leave. I have nurses that have been with me eight or 10 years.

22439. What is the size of your wards?—Our largest wards take 14 beds; our children's ward takes 22 cots.

22440. Do you have more than one nurse in a ward?—Two; we have no ward maids; the nurses do all the cleaning.

22441. And at night do you have one night nurse in each ward?—One for each floor, except the children's, and we have one, and sometimes two nurses for the children. We have one nurse on each floor in the other parts of the building. Of course, for special cases I get special nurses.

22442. Is there any communication between the wards?—They are very near, and the doors are open, and they can hear from one to the other; but if there is a case requiring constant attention there is special nurses put on it.

22443. When you want a special nurse where do you get them from?—I have my own.

22444. You mean you take them out of your private nursing establishment?—Yes.

22445. What do you charge for your nurses when you send them out?—They get from one to two guineas a week; two and a-half guineas in infectious cases.

22446. Do you give your nurses any percent-
(24.)

Chairman—continued.

age on what they earn?—That is a thing that will be arranged; that, of course, I have nothing to do with. I think we all look forward to a pension fund.

22447. You are not associated with the National Pension Fund?—No; we hope to be.

22448. Do you think that in the last few years there has been a tendency in nurses to make a shorter stay in hospitals?—I do not know in hospitals; I think the private nursing tends to make them go from place to place.

22449. I was speaking of nurses employed in your wards?—No, I do not think they would leave.

22450. They are inclined to stay, you think, as long periods as before?—As long as you keep them in the wards.

22451. Do you have the appointment of nurses?—I choose the probationers, but the agreement is with the committee.

22452. And the same thing with regard to their dismissal?—I have the power of dismissal, but I do nothing without talking it over with the secretary and the house committee. The power of dismissal must be left with me in a certain sense; I should never dream of dismissing them without talking it over with the committee.

22453. Then the committee would practically give you the authority?—Yes.

22454. Is it a nursing committee or house committee?—House committee.

22455. Is there a nursing committee?—I do not think so. There has been a special one.

22456. If one of your nurses is ill, what becomes of her; does she go into the ward?—Our place is very small, and I cannot give up a sick room to her, but we have one bed screened off. They are well cared for when they are ill.

22457. And who looks after them, the staff?—Yes, in turn.

22458. The members of the senior staff?—Yes, the visiting physicians.

22459. A former witness, Mr. Cross, said something which gave me this impression, that you had a portion of your hospital which you gave up at one time to nurses, and at another time to patients?—I think Mr. Cross is mistaken in that.

22460. I understood him that sometimes you lodged your nurses in your wards?—No, I do not think he could have meant that, because we have a house at the opposite side of the street for our private nurses' bedrooms. We have not room in the hospital for them.

22461. Then they have to come across the street to come into the wards?—Yes, but it is not so far as they have to go from one part of St. Bartholomew's to another.

22462. Still you hope, I suppose, when you have got the 30,000 *l.* to re-build, to alter that?—I hope for great things.

22463. Do you think it a good thing for nurses to do these cleaning duties you spoke of, as a general question I mean?—I think so; I think they learn how things should be cleaned by doing them.

22464. But such things as cleaning grates and so forth?—They do not do that; the scrubber does that. The scrubber scrubs the floor and cleans the grates. The nurses clean all their lockers

4 June 1891.]

Miss BREW.

[Continued.]

Chairman—continued.

lockers and tables, brasses, and it does them good.

22465. It may do them good, but still it considerably augments their duties, does it not?—I think not; I think my nurses can do it, and do it well.

22466. If you had got the room and could manage to arrange matters with your committee, would you not like to have some wardmaids?—Yes, sometimes; and sometimes I think they are a great nuisance. I cannot tell very well about that.

22467. There are disadvantages as well as advantages connected with them you mean?—Yes, they cause a great of trouble; and a strong healthy girl makes very light of the housework she has to do.

22468. Is the health of your nurses good?—Yes, I think it is fairly good.

22469. As at the other hospitals, do you subject them to medical examinations before they come?—They come with a doctor's certificate, and if I have any doubt at all I get a physician to examine them.

22470. Where do your nurses dine, in a dining-room?—They have a good dining-room.

22471. Have they a separate kitchen?—No.

22472. Everything comes out of one kitchen?—Yes.

22473. Do you find that the nurses complain much?—I have had a little complaint, not very much.

22474. Supposing a complaint is made, what course is pursued; do you lay it before the house committee?—If it is a complaint of cooking I send it to the housekeeper, and she tries to put it right. Of course such things may occur in every institution.

22475. You told us that these nurses have certain holidays; I do not think you said whether they have any recreation in the day?—They get two hours off duty every second day and one long day every month, and if I can possibly manage to give them the night with that long day, I do.

22476. At what time is the two hours?—It depends upon their hours of work and the doctors' visit; sometimes in the morning, sometimes in the afternoon, occasionally in the evening, but I do not care very much for it to be in the evening.

22477. Have you any garden attached to your institution?—No; we have a key to Lincoln's Inn Fields.

Chairman—continued.

22478. Do you ever have to employ any male attendants?—We have a trained porter, an Army Medical Corps man, but we do not want him very often.

22479. He does that work?—Yes, he is supposed to; if it is a very bad case we have to get a commissionaire.

Earl Cathcart.

22480. Do you test your probationers in any way to see that they belong to your own medical persuasion?—They all become converts immediately.

22481. But you have no particular test as to that?—No, I never ask them whether they believe in homœopathy, or allopathy.

22482. Have you ever known cases where they wished to change?—Yes, they have gone into Guy's or St. Bartholomew's, but they have always come back to be physiced by our doctors.

22483. They wish to change sometimes?—They wish to work in the large hospitals, because of the greater variety of work and other attractions that the large hospitals offer.

22484. They are not wedded to any particular medical doctrine?—No; we believe in nursing.

Earl of Arran.

22485. You have got a private nursing association of your own?—Yes.

22486. Do you prepare nurses solely for homœopathic modes of treatment?—I prefer taking cases under homœopathic doctors; but we sometimes send nurses to others.

22487. Then I should gather from that that there is no difference in the system of bringing up nurses for the homœopathic treatment?—The nursing is the same. Of course there are many things under allopathic treatment (that would be under very old doctors) that they would know nothing about; they do not know anything about leeching, or anything of that kind; it would not be in their line.

22488. Do they come to you from other hospitals at times?—Not as a rule; I have had one or two who came to me I knew something about; but as a rule I prefer to get my own workers and train them myself.

Chairman.

22489. Is there anything else you wish to say?—Nothing more.

The Witness is directed to withdraw.

MAJOR WILLIAM VAUGHAN MORGAN, is called in; and, having been sworn, is Examined, as follows:

Chairman.

22490. WE have had all the details of this hospital, as to the management and the nursing and so on. I will ask you a question about the convalescent home at Eastbourne; is that linked on to your hospital?—In a sense it is, and it is managed by the hospital committee in London; but it is kept quite distinct, and the nurses or patients from the hospital have to have letters for the home, like any outside institution. It is

Chairman—continued.

not an adjunct of the hospital, but still it is principally used by the hospital; but the hospital has really no advantages in regard to it except that the hospital subscribers subscribe to the home as well, and they give the matron a quantity of letters, so that she has always a letter to give to a poor patient in the hospital.

22491. So that practically anybody in the hospital can go there, if necessary?—Yes, if necessary;

4 June 1891.]

Major W. V. MORGAN.

[*Continued.*]*Chairman*—continued.

necessary; but it is not kept for the hospital. If you subscribed to the home you could send a patient down there quite irrespective of the hospital.

22492. How long has the home been built?—Five years. This is the third year that we have occupied it.

22493. Was it built as a convalescent home?—Not at all; only as a little residential place in Eastbourne.

22494. What had you to pay for it?—I think 1,100 l.

22495. And how much does it cost per annum to keep it going?—That depends a great deal upon the number of patients we have in it, and we have a great many more patients in the summer than in the winter. But in the little convalescent home book you have the exact figures, where you will find what it has cost for the last year.

22496. Perhaps you will refer to that and tell us how much it costs per annum?—In 1890 it cost 502 l.

22497. And how many people can it accommodate?—Twenty-one.

22498. Is that paid out of the funds of the hospital, the 500 l.?—No; the hospital does not pay anything towards it at all.

22499. The hospital originally paid the 1,100 l. for the first purchase, did it not?—No; I got up a special fund, quite distinct and separate from that of the hospital. There are many persons who subscribed to that fund who do not subscribe to the hospital. A person who does not subscribe a guinea to the hospital might, perhaps, give 10 guineas to the home. May I be allowed to say a word or two on some other points?

22500. Yes?—No question has been asked in the room to-day as to our idea as regards the system of accounts. I should like to express a very strong opinion that the system of accounts for all hospitals should be the same; it would be an immense help to the hospitals, and I am sure to the public as enabling to judge of them. And then I should like to say a word also about contracts. We are a small hospital and we do give out contracts to certain persons we think proper; and we have samples in bread, for example; and we are now at the present moment considering the contract for cocoa; we have got a lot of cocoa in. But when we have once given out a contract to a good man, a butcher for example, and when we find, by comparison with other hospitals, that we are having the articles at the same prices, and, as we know, of the best quality, we do not give out fresh contracts. We have two or three members on our board who are on the boards of other hospitals; and if we find that we are getting the best meat at the same price as the Middlesex Hospital, for instance, we know we are doing about right, because they buy altogether very much more than we do. Then we have one member from St. Bartholomew's, and one from University, and we get to know from those. We do not keep on changing. Then again, in connection with that, we periodically appoint a committee to consider the whole question of the expenditure of the hospital, including the contracts, and we always find, when that

(24.) e

Chairman—continued.

committee goes to work, that there are some items or other that are antiquated, and that require alteration; and therefore, I think we pursue a very strict system of contracts in our view.

22501. How long do you make your contracts for?—We generally make them for the year; but in point of fact, take, for instance, our contract for milk, it runs on until we stop it. And I also would like to call attention to the fact that our hospital, though a homœopathic hospital, and therefore always being put among the special hospitals, is not a special hospital, but is a perfectly general hospital, conducted upon the same principle as the general hospitals, that is to say, we refuse no case of any kind, except a contagious case; we take every possible case in medicine or surgery, and therefore we are as general a hospital as any general hospital can be; only we prefer the system of homœopathy. If in any items our medical men find the old system better, then they use the old system; at all events in connection with our own. Further, I should like to explain, that we do not make any charge to out-patients. That shilling charged to an incoming out-patient is the registration fee, to pay the expenses of registration, and also for bottles and things of that kind; we do not call it a charge, and if any person pleads poverty and can prove it, or brings a letter from a subscriber, he does not pay that shilling. Therefore you will see, that if about five per cent. is the number of persons who do not pay that shilling, the number who are unable or unwilling are very few, because that includes the letters; but as a rule persons in the habit of coming to our hospital, if they cannot pay the fee, bring it from their employer, or from somebody, or some institution.

22502. With regard to the fees do you agree with Mr. Cross, that you do not draw most of your patients from the lowest and most destitute class?—Yes, as regards our out-patients I think that remark is true; but, as regards in-patients, they are the very lowest and poorest, as a rule.

22503. As a hospital administrator, would you see any objection to a central board for the consideration of various questions?—No, not for their consideration; but I should object to a sort of board of control to have the power to say whether a hospital should be established or whether it should not, because I am perfectly aware of the fact that if that had existed 40 years ago this hospital would not have existed, the prejudice against homœopathy was so great 40 years ago. In point of fact the Medical Council went so far as to burke the Government evidence in regard to the cholera in favour of the hospital, and after they had authorised it to be got they actually refused to put it into their report until it was brought forward by Lord Robert Grosvenor in the House of Commons, and then, under the order of the House of Commons, this Report was published. That showed what might happen, not only with homœopathy, but with anything else in which you might have a new fashion. Medical men are exceedingly averse to new ideas; you cannot put new ideas into them.

4 D

22504. What

4 June 1891.]

Major W. V. MORGAN.

[Continued.]

Chairman—continued.

22504. What is the Report you refer to?—A Report in connection with the cholera in 1854. The Government appointed a medical man, whose name I forget for the moment, to report on the treatment of cholera in all the hospitals, so that they might have a comparison of what the treatment was. This gentleman happened to be a personal friend of Mr. Cameron, who is still alive (he is 85 years of age now), who was medical officer in charge of the homœopathic hospital in those days, and he induced him, with great difficulty, to come and see the homœopathic hospital and the treatment of cholera, and he found that the treatment of cholera there was infinitely more effective than in any other hospital in London, I think it was something like 18 to 35 per cent., and he came every day or three or four times a week, and this gentleman was so struck with this that he put it into his Report, and when it came before the Medical Council of the Board of Health, as I said before, they left it out, and it was considered of course by us (I was not present in those times) so important that Lord Robert Grosvenor, who has always been a very ardent homœopathist, was asked to bring the matter before the House and insist on its being published.

22505. How long have you been connected with the hospital?—Altogether about 18 years in the two capacities of treasurer and chairman; I succeeded Lord Ebury as chairman.

22506. Is there any other point you wish to mention?—About the medical school his Lordship

Chairman—continued.

on your right seemed to think we were rather using a misnomer. If we are using a misnomer it is not our fault. We have a medical school; we have a fund specially subscribed which I have charge of for the purpose of conducting this medical school, but in consequence of the regular examining bodies not only ignoring homœopathy, and saying to the young man, "It is no importance at all whether you understand it or not," but actually giving a man a black mark if they know that he has studied homœopathy, we found, when we established this school, that very soon the students ceased to come. It is not simply that it is not beneficial to them, but it is actually the other thing, and in consequence they did not come, and we, of course, have closed our school. The main fund is still in hand, and some day or other I hope it may come forward; but that is really the reason why the medical school is not continued. We do continue it as far as we can, that is to say, we say to medical students, and medical men of every kind, "Come whenever you like to the hospital for clinical instruction; come and see the patients treated for yourselves, and ask how they are treated, and why they are so treated, and everything else." Therefore, we do all we can in that way to continue our school. I merely wished to explain that it is not a misnomer in any way.

The Witness is directed to withdraw.

MR. EDWARD ALDER, is called in; and, having been sworn, is Examined, as follows:

Chairman.

22507. You are the Secretary of St. Saviour's Hospital, are you not?—Yes.

22508. What is St. Saviour's Hospital?—It is an institution principally established for the treatment of cancer.

22509. And where is it?—In Osnaburgh-street, Regent's Park.

22510. When was it founded?—That I really do not know. I think it was about 14 or 16 years ago, but long before my time, originally in Brompton.

22511. How long have you been connected with it?—I am in my eighth year now.

22512. How many beds have you?—We can make up 36 beds for patients.

22513. And how is this hospital managed?—It is managed by Mrs. Palmer; Mr. and Mrs. Palmer are the owners of the institution, and it is managed by Mrs. Palmer.

22514. Do the patients pay there?—Yes. At the present time nearly all our patients are paying patients.

22515. And do you apply to the public for funds too?—We have very little outside support, scarcely any; the support last year from outside was only 54*l.* 10*s.* in donations and subscriptions.

22516. Do you apply to the Hospital Sunday Fund?—We had for several years contributions from them, and also from the Saturday Fund, but for the last two years we have had nothing from

Chairman—continued.

the Sunday Fund, and last year we had nothing from the Saturday Fund.

22517. Did that donation cease from the Hospital Sunday Fund owing to your not applying, or did you apply as usual?—I applied as usual and gave them all proper statistics, but what they allege is that our system is not in accordance with their rules, because we have no managing committee.

22518. Then the fees paid by the patients almost defray the expenses of the treatment?—Oh, dear, no; not by a great deal. Mr. Palmer and Mrs. Palmer pay considerably more than half the expenses of the institution, besides giving the place free of charge. Mr. Palmer's payments last year were 1,249*l.*, and Mrs. Palmer 535*l.* odd; the whole of her income she spends upon the hospital.

22519. What is Mr. Palmer; a medical man?—No; Mr. Palmer is one of the Board of Governors of the Bank of England.

22520. Where do your funds come from, then, if they do not come from subscriptions?—The funds come from the annual subscriptions, and the patients' payments, and we had a bazaar last year, and then the balance is paid by the Lady Superior and Mr. Palmer.

22521. What payments are asked from these patients?—We have one general ward where the patients pay half-a-guinea a week; then we have a special ward for a different class of cases at a guinea

4 June 1891.]

Mr. ALDER.

[Continued.]

Chairman—continued.

guinea a week; and we have certain private wards at a guinea, two guineas, and three guineas, according to the accommodation and treatment.

22522. How do these people who pay the lowest price get into the hospital; merely by application?—Merely by application, because there is no occasion for tickets from subscribers.

22523. Do you take any steps to find out what price these patients can pay?—Yes; that is a special arrangement made between themselves and the Superior, because all cases have to be submitted to her before any admission.

22524. Who is the Superior; Mrs. Palmer?—Mrs. Palmer.

22525. What number of nurses have you got?—I think we have 15 nurses and probationers at the present time, including a resident night nurse.

22526. Do you train the nurses yourselves at your hospital?—Yes; there are some who have had no other training than at our own institution, and there are others who have been trained elsewhere.

22527. And then, as regards your staff, have you a number of surgeons and physicians, or how is it managed?—We have one hospital physician, Dr. Owen Pritchard.

22528. What is he; does he reside in the home?—No, he is not resident; he only visits, and he is only an honorary physician at the present time. He was engaged up to last year as a visiting physician at a salary of 200 *l.* a year, but he has given his services since March of last year. Then the Superior has lately given a ward of five beds free to a committee consisting of Sir Morel Mackenzie and other doctors and Mr. Stead, to thoroughly test the Mattei medicines for cancer cases.

22529. Do you admit any students to your hospital?—There are no students; no teaching for medical men at all.

22530. Would you give us the items of where your income last year came from?—The annual subscriptions were 52 *l.* 10 *s.*; the donations, 4 *l.* 6 *s.*; the patients' payments, 359 *l.* 2 *s.* 9 *d.*; the bazaar, 147 *l.* 18 *s.*; the payments by the treasurer, 1,249 *l.*, and by Mrs. Palmer herself, 535 *l.*

22531. No legacies?—No legacies.

22532. And no invested property?—No invested property.

22533. Have you a resident surgeon or physician?—No, Dr. Pritchard is non-resident.

22534. He does not reside on the premises?—No, not on the premises; he never has resided on the premises.

22535. Do you reside on the premises?—No.

22536. Are you a salaried officer?—I was up to last March, but I am giving my services just now. My salary has only been 20 *l.* a year; and, of course, I have not been supposed to give the whole of my time, and have not done so.

22537. Under whom is the hospital; under Mr. and Mrs. Palmer?—The management is in Mrs. Palmer's hands entirely.

Earl Spencer.

22538. Who is responsible in case anybody is suddenly taken ill for getting medical advice?—Mrs. Palmer resides on the premises, and they send for the doctor in such circumstances. When

(24.)

Earl Spencer—continued.

there is occasion they send for the doctor any time day or night.

22539. Is there a matron?—Mrs. Palmer is the head in every department; there is no matron; there is a housekeeper under the Superior but no matron.

22540. And Mrs. Palmer manages all the work; the superintendence of the nursing, for instance?—She manages everything; she is a lady of very great experience.

22541. Has she ever been in any other hospital?—She has had an immense amount of experience in nursing, but I am not able to say as to that. She was nursing, at the time of the cholera, in the East-end.

22542. Do the premises belong to Mr. and Mrs. Palmer?—They belong to Mr. and Mrs. Palmer; they are under a Crown lease; they pay 100 *l.* a year ground rent.

22543. How long have they had it?—I think about 10 or 12 years.

22544. Have the nurses any holidays?—They have not any stated time, but when they wish it they make a request, and generally they get whatever time they wish for.

Earl Cathcart.

22545. The fact has not yet been mentioned, but it is a hospital entirely for women?—It is a hospital entirely for women.

22546. Does Mrs. Palmer never go to her own home at all?—She makes the hospital her home.

22547. But Mr. Palmer does not reside there?—Mr. Palmer does not reside there; their own house is in process of rebuilding.

22548. It is mentioned in the book before me here that you have out-patients?—Dr. Arthur Kennedy, who is the physician to the Mattei ward under this new committee, is allowed the use of the dispensary for his own private out-patients once a week.

22549. And are these out-patients numerous?—Sometimes there are 20 or more who come on Wednesday afternoon.

22550. Are they only cancer cases?—I do not know; I think they are general cases. The institution itself is principally for cancer, but I think that Dr. Kennedy's Wednesday afternoon patients are general cases.

22551. And are the out-patients recognised by Mrs. Palmer as part of the business of the establishment?—It is quite in Dr. Kennedy's hands. Mrs. Palmer does not have anything to do with that.

Chairman.

22552. Are the patients brought by the surgeons as a rule; how do they find out about the existence of these cases?—By inquiry; the patients come to inquire and we advertise.

Earl of Arran.

22553. When was the hospital first established in Osnaburgh-street?—I am not prepared to say; I think it was about 10 or 12 years ago.

22554. I believe you moved from somewhere in Brompton?—Yes.

22555. And it was established I believe for testing the treatment of cancer by the Michel process in the first instance?—Yes, without using the knife.

4 D 2

22556. Does

4 June 1891.]

Mr. ALDER.

[Continued.]

Earl of Arran—continued.

22556. Does that go on still?—Yes, and very successfully.

22557. Some time after the establishment in Osnaburgh-street other processes were adopted, tentative processes?—Yes, every remedy that has a fair chance of success has a trial.

22558. Then as each process is adopted for trial does the physician or surgeon who is chiefly identified with this particular process have the right of entry, so to speak, into the hospital?—Yes, certainly; it is always done under the guidance of the physician to the institution. He can come at any time.

22559. But the physician to the institution might not approve of all these different processes which are tried in the hospital?—I understand what your Lordship means.

22560. Because these different processes are more or less (I do not want to use the expression in any offensive sense) empirical, and therefore they are probably identified with some particular physician or surgeon?—At present the Michel treatment is our principal remedy; but that can only be applied to outside cancer; it cannot be applied internally.

22561. Then besides the Michel process, and the Mattei process, what other systems of cure are tried in the hospital, if any?—I have nothing to do whatever with the wards, so that I could not answer your Lordship exactly upon that point; but Dr. Pritchard himself is an allopathic physician, and Mrs. Palmer herself has had a great deal of experience with regard to drugs and herbs.

22562. Who dispenses the drugs?—We have one of the nurses as dispenser, under the doctor, and under Mrs. Palmer's directions.

22563. Then is Mrs. Palmer herself the chief dispenser?—She superintends everything; everything is done with her knowledge and sanction, and under her direction.

22564. I think you said there is no committee?—There is no committee, except for this Mattei ward, in which Mrs. Palmer does not interfere.

22565. When the hospital was originally established was there a committee?—I have been given to understand that there was a committee of ladies at that time, but when I first joined the institution there was a committee of noblemen and gentlemen, but they scarcely took any interest in it, and their meetings were not regularly attended, and after a little time they dropped off one after another; eventually the meetings were altogether discontinued, and for the last two years there has been no committee whatever.

22566. Can you tell us at all what the result of the treatment by the Michel process has been, I mean with reference to treatment, say at the Brompton Hospital, for cancer; what the percentage cured under the Michel process has been in proportion?—I have made no comparison; in fact I have had no statistics from any of the other hospitals; I have no experience or any other hospital but this.

22567. Have any cases treated by the Michel process been absolutely cured?—Yes, Mrs. Palmer has recently issued this pamphlet (*producing a pamphlet*) which states the cases, and gives the particulars of cases of undoubted cure. In fact we have one cured patient in the house now who has been at work in the hospital for several years.

Earl of Arran—continued.

22568. Is there no physician or surgeon at all connected with the hospital except the gentleman whose name you mentioned, Dr. Owen Pritchard?—Not at the present time.

22569. He is the sole physician?—He is the physician.

22570. And he operates by the Michel process?—Yes.

22571. Does he operate with the knife at all?—Not at the hospital.

22572. What was the building used for beforehand?—I have been given to understand that it was built for an orphanage originally.

22573. Then who provided the funds for the alteration?—Mr. Palmer.

Chairman.

22574. Do you have a good many applications for admission to the hospital?—There have been a good many more lately; but the cases that are past all hope are not admitted; unless there is a hope of either relieving or curing, we cannot take them in, because it simply increases the death rate without doing any good.

22575. You said that there had been a good many applications; what do you mean by "lately"?—Since the issue of the pamphlet.

22576. What is that pamphlet?—It is a pamphlet giving the particulars of the cures that have effected by the Michel process.

22577. You think that the increase of applications is owing more to the fact of the hospital being more widely known than to the increase of cancer?—Yes, certainly more to that than to the increase of cancer.

Earl Spencer.

22578. Are the patients brought to the institution merely for the sake of making experiments in these various processes, or for general relief?—For general relief, because these processes are not used except quite with their consent and by their wish. They come in on purpose for this treatment.

22579. But the only condition is that they are never to be operated upon with the knife?—Yes, the superior will not consent to knife operations. A good many of our cases have been cases of recurrence after knife operations, and they are cases in which the treatment has been very successful.

22580. And in case no good is done by the curative processes, are they sometimes sent to another place?—Yes, some of our patients have been sent to the Middlesex.

22581. For operations?—Not for operations, but when they have been past hope.

Chairman.

22582. Have you any plan of your drains?—No. I have not.

22583. Do you have any inspection of your drains?—The system of drainage has been entirely renewed; the drainage of all parts of the house has been rebuilt at a very great expense lately. The hospital is very near to the underground railway, and it was found that there had been a settlement of the land since the building
of

4 June 1891.]

Mr. ALDER.

[Continued.]

Chairman—continued.

of the tunnel, and that it had injured the plan of the drains, and they had to be taken up and remade in all directions.

22584. Do you have an annual cleaning of this hospital?—Yes, more often than that. There is almost a continual cleansing process

Chairman—continued.

going on; we keep two house porters who are cleaning at all times.

22585. Is there anything more you wish to tell the Committee?—No.

The Witness is directed to withdraw.

MR. ARTHUR L. A. FORBES, is called in; and, having been sworn, is Examined, as follows :

Chairman.

22586. You are one of the surgeons belonging to the St. Andrew's Hospital for Eye and Ear, are you not?—Yes.

22587. Will you tell us where this hospital is situated?—At 67, Wells-street, Oxford-street.

22588. And how long has it been a hospital?—I founded it myself, about the end of 1882.

22589. And what was the building before it was a hospital?—It was a new house, and I took the basement of it for out-patients only.

22590. Are you on the staff of any general hospital?—No, not now. When I first came to London I was on the staff of the Metropolitan Ear and Throat Infirmary, but I resigned that, and founded this hospital for myself.

22591. How many beds have you?—It is entirely for out-patients; we have no beds at present.

22592. It is entirely an out-patient department, in fact?—It is entirely an out-patient department.

22593. It is, practically, what they call a dispensary?—Yes.

22594. Do your patients make any payment?—Yes; we do not receive a penny from charity; it is altogether on the provident system, and self-supporting; that is, we do not expect any charitable aid whatever. It was founded with the intention of being made self-supporting.

22595. And does it support itself?—It does now; it did not for the first two or three years, but it now just about pays its way.

22596. And how do you regulate the payments which you require from the patients?—We have a definite understanding that all persons presenting themselves the first time shall be seen for nothing, if they say they are poor. After that they are charged not less than a shilling a week; and if they are too poor to pay that, it being a special hospital altogether, we consider that they would be better treated at some general hospital where they can get proper nourishment; in fact, that they do not come under the class of people whom we treat.

22597. Do you give them anything in for that shilling; do you give them the medicine?—Everything is provided.

22598. Do you apply to the Hospital Sunday Fund as a dispensary?—No, we have never applied to that. It would be useless applying, because it is entirely self-supporting; there is no necessity to ask any charity.

22599. The only payment made, then, is the shilling; you have no subscriptions?—No, there are no subscriptions.

22600. Have you any assistant?—There is a dentist attached to it, and a gentleman who has

Chairman—continued.

made a specialty of teaching the dumb by the oral system; but beyond that I am the principal representative.

22601. Are these other gentlemen qualified?—All legally qualified.

22602. Are there any hospitals near to you?—Yes, the Middlesex and the London Throat Hospital in Portland-road are quite close.

22603. How many patients did you have last year?—I have not that at the moment with me, but we had about 1,500 attendances; allowing an average of about three attendances to each patient, that is about three weeks that each patient might be under treatment. That was to the end of last year, and up to the end of May of this year we had about 554 attendances.

22604. Have you compared at all the results of your treatment with those of the general hospitals?—No, I have not; but as the treatment is on the usual allopathic system, the ordinary medical system, I do not take it that there would be very much difference in the results.

22605. Do these patients belong to the poorest class?—No, they do not; they belong, I should say, with scarcely an exception, to the well-to-do tradesmen class. It is not very well situated for the poorest classes; it is too far from the East End; but, however, when they do come they are treated free the first time, and medicine and advice given to them; but they are expected to pay a shilling if they can; if they cannot pay it they are seen for nothing.

22606. Would not all these patients of yours be as well treated in a general hospital?—No, I do not think so; I do not think they would get the same special attention or the same time; and the class of patients who come to special hospitals object to the necessary handling, if I may term it so, that they get from students. A student cannot examine a patient without learning how to do it, and he has to learn on some one; and the better class of people object to that, and therefore they come to special hospitals.

22607. Then are these people who pay you a shilling a week too poor to pay practitioners themselves and to be seen in their own homes?—There is no means of preventing their coming. That opens up the question of hospital abuse, a question on which I feel strongly. I certainly feel that many of them would very fitly and properly pay the practitioners, and many of them do, but in these cases they come for special advice, and they are quite willing to pay a reasonable fee.

22608. Have you ever had patients sent from the

4 June 1891.

Mr. FORBES.

[Continued.]

Chairman—continued.

the general practitioners or other dispensaries to you?—Yes, several times; and the general practitioners support me to a certain extent on account of my charging a fee. They imagine, and very rightly, that there is some protection to them, as people will not be seen by me for nothing.

22609. At the same time you see them more cheaply than the practitioner does?—I do not think so. The shilling charge is the lowest, and, as a rule, they pay perhaps from 2 s. to 2 s. 6 d. a week; and in the poorer parts of London the general practitioners do not even get as much as that.

22010. Have you any other institution of the same description in any other part of London?—No.

22611. Have you ever had any bazaars or dinners?—No, I have set my face against that, and I will not appeal to public charity in anyway. I believe that, speaking generally, the whole of the special hospitals in London could be made self-supporting with a little better financial management, and a little more attention to the fact that people should not be treated for nothing where they can pay reasonable fees. I will merely say that in my own opinion the out-patient department of these special hospitals should be made to support the in-patients as far as possible.

22612. Then you would like to see an inquiry officer at every hospital, would you?—I would make a distinction between the special and the general hospital. I think the general hospitals stand in a different category altogether because, first of all, they must deal with accidents; secondly, they must be schools for clinical medicine; and, thirdly, they must have wards where they treat all classes of people, sometimes at great expense, with special appliances. But as to the special hospitals proper I think the abuse consists in the small fees they ask of well-to-do people who leave the general practitioners and come to specialists; and also in the fact that they do not work the out-patient department sufficiently.

Earl Spencer.

22613. Do you visit at the houses of the patients?—No; I might add a word as to my intention in founding this hospital. When I came, some 12 years ago, to London as a specialist, having undergone special training elsewhere, and in London, I considered the abuses so great that I determined not to apply for a hospital appointment, or not to go in for it in the usual way, but to endeavour to establish what is so common on the Continent, a *clinique*. Every Paris and Vienna specialist has his *clinique*, and if that system could be introduced here it would check the whole of this abuse from the very root.

22614. When you say that you are a specialist, what is your speciality?—That of an aurist and oculist; I have done nothing else since I have been in London; that is the special line I have taken up.

22615. Do you belong to any of the colleges in London?—No, I belong to Edinburgh.

22616. You said that yours was a provident institution; do you mean by that that they sub-

Earl Spencer—continued.

scribe during health as well as during sickness?—No, I meant merely that it was self-supporting; perhaps I ought not to have used the term "provident."

22617. They only pay when they come to be treated?—Yes, when they come to be treated.

22618. Then have you no subscriptions?—No, we have no subscription list at all.

22619. You do not, I suppose, publish any accounts?—No, I have not published anything yet about it, except a statement in the Medical Directory that it is open.

22620. Do you take any private practice as well?—Yes, I merely look on this as a means of seeing the poorer patients, and of doing some useful work for them. A good many I see for nothing; I give my time and so on; and at first I did it at a very considerable loss.

22621. If you had not a private practice do you consider that this would pay itself?—It is a difficult question. After 12 years a specialist gets known to a certain extent. I think if it was wholly unknown it would hardly pay its way.

22622. What is the number of times on an average that a person comes to be treated?—About three; that would be about three weeks' treatment.

22623. And he pays for that, what?—He will pay for that about 3 s. to 4 s., including everything.

22624. Have you different rates, or does every one pay the same?—Every one is expected to pay a shilling as the lowest rate.

22625. Then you have different rates?—Yes, that is to say that some persons pay 2 s. or 2 s. 6 d. a week.

22626. Why should a person pay 2 s. or 2 s. 6 d. a week instead of a shilling?—That is when they are quite unable to pay any more than a shilling; but we think that from 2 s. to 2 s. 6 d. is a fair rate.

22627. How do you settle which class they are in; which rate they are to pay?—I explain it to the patient, saying "We expect you to pay 2 s. or 2 s. 6 d.; if you cannot pay that you may pay 1 s.; if you cannot pay that you may get advice and medicine, but next time you must bring some contribution"; generally a shilling.

22628. How would you divide these people; are there more that pay a shilling or more that pay 2 s.?—I think the average of the great number of attendances is about 3 s. that a patient will pay during treatment spread over the time. It is impossible to give the amount for each individual patient; there are hundreds of them; but taking the collected averages and working it out, I calculate that the expense is about 3·1 s., and the actual cost about 3·3 s. or 3·4 s.

22629. Have you any idea what wages these people who come to you get?—Yes, I have definite information on that subject from their own statements.

22630. Can you give us that?—From 2 l. to 3 l. a week many of these persons receive; it is very seldom that anyone confesses to less than 1 l. a week; but of course the ear class of case is somewhat different from the general run, inasmuch as a person can go on working while he is deaf; it does not lay him up.

22631. You

4 June 1891.]

MR. FORBES.

[*Continued.*

Earl Spencer—continued.

22631. You do not get the poorest?—We get a certain number from the East End, but it is too far for them to come; the railway journey would cost them too much; but I get a number of provincial people and from the suburbs.

22632. Sent up by medical men, do you mean?—Some sent by medical men, and some recommended by friends in London.

22633. Do you take any steps to advertise your dispensary?—Yes, in common with most special hospitals, it is advertised in the medical directories and also in the Sunday papers.

Earl Cathcart.

22634. Is there a charge made for the supply of instruments; have you any difficulty in regard to the supply of the instruments?—No, I do not think we have; they do not ask for as many tubes and that sort of thing as might be supposed. They come in the hope of being benefited, and if they are not benefited in two or three weeks they go somewhere else, and we lose sight of them altogether.

The Witness is directed to withdraw.

Ordered, That this Committee be adjourned to Monday next, at Twelve o'clock.

Die Lunæ, 8^o Junii, 1891.

LORDS PRESENT:

Earl CATHCART.
Earl of KIMBERLEY.
Lord ZOUCHE OF HARYNGWORTH.
Lord SAYE AND SELE.

Lord SANDHURST.
Lord MONKSWEILL.
Lord THRING.

THE LORD SANDHURST, IN THE CHAIR.

MISS LOUISA TWINING, is called in ; and, having been sworn, is Examined, as follows :

Chairman.

22635. You have been for a long time, and until lately, a guardian of the poor in London, have you not?—Yes; for about six years I was a guardian of the poor at Kensington.

22636. How long have you ceased to be a guardian of the poor?—For one year. It is only since the election of 1890 that I have ceased to be a guardian.

22637. And you have an intimate knowledge of the working of the metropolitan poor law infirmaries?—I visited the Kensington infirmary constantly during that time. It was my chief interest in the poor law work there, and I have seen a good many others.

22638. Is the Kensington Infirmary one of the new infirmaries established under Mr. Gathorne Hardy's Act?—Certainly; it was separated then; before that time it was united with the workhouse.

22639. And are there others still in London not separated from the workhouse?—No, I think not; I think all the 24 metropolitan infirmaries are under the same rule of separation.

22640. Are they all built?—Except Bethnal Green, which is being built.

22641. One of the points to which you have paid particular attention is the nursing of these establishments, is it not?—Yes.

22642. And in the poor law infirmaries in London what is the organization of the nursing?—There is a matron over the nursing department, and over the nurses, in every one, separate entirely from the workhouse, and a steward, and a medical superintendent, or two medical superintendents in most cases I believe; and the nurses are engaged by advertisement or by other means; and up to the present time it has not been essential that they should be trained. I believe now it is considered necessary that they should have been a year in some institution for training.

22643. When you say "they," are you alluding to the nurses or the matrons?—The nurses.
(24.) e.

Chairman—continued.

There has been no regulation given at all for the matrons.

22644. As regards the matrons, a year ago at any rate when we went into this subject, were the matrons trained nurses or were they not?—There were 11 of the 24 infirmaries that had hospital-trained matrons.

22645. And from your experience do you think that that is a good plan?—I think it is absolutely essential. If there are to be trained nurses, they must have trained matrons to look up to.

22646. Do you know whether there is any tendency to improve in that respect at present?—Certainly; in every instance where there has been a vacancy in the former type of matron I think an educated hospital-trained woman has been elected; but in our opinion, I mean the opinion of the Workhouse Infirmary Nursing Association, that might have been done very much quicker if some recommendation had been given by the central board that that should be the case with infirmaries. It has been done with regard to the metropolitan asylums but not with regard to the infirmaries.

22647. How are the matrons appointed?—Entirely by the guardians.

22648. Irrespective of their general qualification or want of qualification as nurses?—I think so, because in many instances in the beginning of them, the guardians simply appointed a former officer of their own whom they had had for many years in the workhouse, without necessarily any knowledge of nursing whatever; she could only have had experience, certainly not trained knowledge of nursing.

22649. And then to whom was she responsible?—To the medical superintendent entirely.

22650. And to whom was the medical superintendent responsible, to the board of guardians?—To the board of guardians and of course ultimately to the central board; the central board have to approve the appointments in every instance, even down to the nurses and servants.

4 E

22651. Then

8 June 1891.]

Miss TWINING.

[Continued.]

Chairman—continued.

22651. Then as regards the relative positions of the matron and the medical superintendent, the matron is under the superintendent?—Entirely.

22652. Is she under the superintendent to the extent that he could dismiss her?—Certainly not; that is entirely in the hands of the guardians. Of course he can make complaints and influence the guardians; but he has no power at all of that kind. No nurse, no servant, can be dismissed without the sanction of the guardians.

22653. Then has the matron in the poor law infirmaries supreme control over the nurses and the female servants of the establishment?—Not sufficiently, as we think. We think that she should have more undivided authority over the nurses, except of course in the medical point of view. In that respect, as in a hospital, they would be entirely under the doctor's orders; but we think that she should have much more power over the nurses with regard to their management in all ways, except the medical care and nursing of patients. We think that as now the matrons are competent and trained and educated women, the nurses should be much more left under the matron's care with regard to their going out and her signing their certificates, and all such things as those. As they are qualified now, we think that the power ought to be given to them.

22654. At present in the matter of leave of going out or of absence, the medical officer is the supreme authority?—Yes.

22655. Does he exercise that authority?—By courtesy, and by good will between the different authorities, that has now given way. The medical superintendent leaves these things in the hands of the matron; but he is not bound legally to do so; he can interfere in every possible arrangement.

22656. That is to say, the present arrangement gives every possibility of friction between the workhouse infirmary authorities?—Entirely, we think.

22657. And that would be done away with, to a certain extent, if not entirely, supposing your plan of the matron being supreme over the nurses were put in force?—I think it would, certainly.

22658. Have you made any representation to the Local Government Board on that point?—As to the recommendation for trained matrons, a deputation from our Workhouse Nursing Association went before Sir Charles Dilke, President of the Local Government Board, and we gave a strong recommendation that now none but hospital-trained matrons should be appointed. They said that no fresh general orders had been issued for infirmaries. That has always been delayed and I believe never has been done. Separate orders are given on the establishment of each new infirmary, we were told, but in none of them has there been the recommendation that there should be a hospital-trained matron, though Dr. Bridges has distinctly made it for the metropolitan asylums.

22659. Is the amount of nursing in the poor law infirmaries sufficient do you consider?—It is gradually improving, I think, and as the plan

Chairman—continued.

is adopted of taking probationers, of course that is a very great help. It is gradually increasing; I think people see that the numbers have been inadequate, especially with regard to the night nursing; and that is gradually being improved, certainly.

22660. Would you like to see these probationers trained from the beginning in the workhouse infirmaries?—Certainly.

22661. Is it the case now at all that they are so?—Very few indeed. Marylebone trains its own probationers; Kensington has been talking of it for a long time, and now they have just adopted the plan of training, I believe, for three years; but in no instances in London do they train for other than their own institutions. The plan adopted in Liverpool and Crumpsall has never been tried in London.

22662. What is that plan?—Trained outside probationers for other infirmaries and other institutions that have not a large number of sick of their own; and that is a point we are very anxious about, because the difficulty of getting properly trained nurses is very great just now, and it seems to us a great waste that these large infirmaries should not be utilised for training young women, for themselves, by a course of three years, or one year for other outside infirmaries. I understand that Marylebone trains 16 in the year for themselves, and that Crumpsall trains 60 probationers for other purposes than their own; of course they train their own.

22663. Then also that need of a fixed period of training would apply to nurses for special cases?—We are particularly anxious to see an extension of probationers in the lying-in-wards of metropolitan infirmaries or workhouse infirmaries. In some infirmaries those wards are not kept; the patients are in the workhouse; but wherever they are under competent superintendence, it seems to us a very great pity that nurses are not trained for that particular department. It is a complete waste of all that large material that there is; but Kensington is the only infirmary that trains that class of probationers.

22664. How many beds are there in the Kensington Infirmary?—Fourteen beds in the new lying-in-wards lately built.

22665. What is the total number of beds at Kensington, do you remember?—Between 550 and 600; at times of pressure it has been 600, and it is now about to be enlarged, and another 30 or 40 beds added.

22666. And the number of nurses in your time was what?—About 50, I think; it would be very much improved if they adopted the probationer plan and kept these nurses for three years. Of course the assistant nurses are always coming and going; you have no hold over them whatever.

22667. But 50 nurses with possibly 600 beds is a very much smaller number of nurses in proportion than you find in a general hospital?—Certainly, but the cases are hardly of the same character.

22668. Should you say that the infirmaries were undernursed, or the hospitals overnursed?—I should

8 June 1891.]

Miss TWINING.

[Continued.]

Chairman—continued.

—I should think that would hardly be the case. The majority of cases in workhouse infirmaries are of the nature of chronic cases, or much less severe than those in the hospitals, though many severe cases do exist; you could not compare an infirmary to a hospital full of serious cases.

22669. You do not think that any comparison would be a fair one?—No, I do not think it would be a fair one; it is an entirely different class of cases. I certainly think there ought to be a tendency to increase the number of nurses in the workhouse infirmaries. Many of the nurses are overworked, not to the extent of nurses in hospitals.

22670. Do you think that the hours of nurses employed in infirmaries are too long?—No, they did not appear to me to be so at Kensington; I am not quite sure whether the same hours apply to all the infirmaries.

22671. I understood you to say that you considered the nurses were overworked; that was why I asked the question?—I do not think they are overworked, as to the length of time.

22672. Do you mean as to the responsibility?—I really could hardly say as to that; it depends so very much on the different wards, and the class of cases. Extra help can be given in special cases of need, I think, in the wards.

22673. And where you have a small number of nurses like that, it is more than ever necessary, I presume, to have a properly trained matron?—Yes. Now at Kensington we have a trained assistant matron in addition; we have had that for the first time for the last two years; before that the head matron was the only trained person in the establishment, and now, of course, it is far better with a trained assistant, who is able to personally supervise the nurse's work.

22674. There is no nursing done by paupers now?—None in Kensington, and I believe the rule is that it is not allowed in any metropolitan infirmary; even the scrubbing is done by paid women from the outside; nobody from the workhouse is allowed to enter the infirmary.

22675. Should you like to see outside medical men admitted into the infirmaries?—Certainly. I said the same thing 30 years ago, when I was before the Committee in 1861. It seemed to me one of the greatest necessities to increase the medical supervision in these large buildings.

22676. Are the guardians very much opposed to it, or why has not any advance been made in that direction?—I cannot say what is the reason. Individual guardians have been opposed to it, simply, I think, because it is a new idea; and the majority of guardians are not competent to judge of the medical advantages; they are not medical men, and they are not able to at all appreciate the amount of work that is done by the two resident doctors.

22677. There, again, do you consider that any comparison between infirmaries and hospitals would be unfair, because in an infirmary with 600 beds you have two medical men, and in a hospital you have an unlimited number almost on the medical staff?—It is perfectly impossible for two medical men to give adequate attention to 500 cases, whatever they may be, whether they

(24.)

Chairman—continued.

are slight or serious; it is impossible that they can be attended to.

22678. Are these medical superintendents, as a rule, young men?—Yes, I think generally.

22679. They come fresh almost from hospital training; is that so?—I believe so.

22680. And are they appointed by the guardians, or recommended by the guardians?—Yes, applications are sent in, and they are elected on their respective qualifications.

22681. Are they elected by the guardians, or does the appointment come from the Local Government Board?—By the guardians entirely; they have entire control.

22682. Of course, there is a large amount of material for education wasted in the poor law infirmaries?—A very large amount indeed, and it is not only our opinion, but Dr. Bridges himself has repeatedly said that there is an enormous waste of material in regard to cases which are never seen elsewhere except in these infirmaries, where people remain for years and die; an entire waste of material. Students never see them.

22683. What is the great objection; have the guardians an objection to admitting students?—They had in our case; but when we recommended it from Kensington, I believe that it was objected to by the central board; the Local Government Board said it had not been contemplated. But since that time there has been a great advance in opinion about that, and Paddington has adopted something of the same plan, an extension of medical inspection and supervision; and I think Whitechapel and St. Pancras also have another resident.

22684. Is there a great objection on the part of the poor to students seeing their cases, do you know?—Not the slightest; I believe that is a complete delusion. The poor feel themselves neglected occasionally, and, I believe, they would be delighted to have an additional visit of any sort or kind to relieve the monotony of the life.

22685. Is it your experience that the position of the patient is the prouder the more medical men he has around his case?—I have heard it said so in St. Thomas's, and from my own experience I believe it to be the case.

22686. Then with reference to the position of the medical superintendent, would you like to see the general control of the establishment taken out of his hands and put into the hands of a layman?—Yes. I think it is far too much work for any man, very often a young man, to have the control of these large establishments. He has to be responsible for everything; he has to look after everything; and when you consider that there are 500 or 600 patients, I think it is only common sense to say that he cannot supervise the management of a large institution like that. I think it is quite incompatible with his duties as a medical man.

22687. You say he is responsible for everything, as well as being responsible for all the medical department; is he responsible for the house-keeping, and the food, and the cleaning, and so on?—So far as he is supreme over the steward. The steward is responsible to him, but he is the final authority upon everything; and

4 E 2

8 June 1891.]

Miss TWINING.

[Continued.]

Chairman—continued.

and if he sees work not properly done he is bound to report it, and speak of it.

22688. Do you know if such an organisation exists elsewhere than in London?—At Birmingham in the new infirmary, which has lately been built, with 1,600 patients, they have adopted the plan of a lay superintendent, a gentleman who is entirely responsible for the management; of course he has nothing to do with the sick and the nursing arrangements, but he is responsible for the management of the whole concern, and, relieves the medical officers from an enormous amount of work and responsibility.

22689. And this layman is responsible to the Board of Guardians?—Entirely.

22690. In the London workhouses, which you have been acquainted with, is the supervision of the wards sufficient on the part of matron, or whoever is responsible for them, as regards details of management in the hospital, with which the lay Board of Guardians cannot be acquainted?—When there is a qualified hospital-trained matron, I think that is quite sufficient; or if, when the numbers become larger, as at Kensington, a trained assistant matron is appointed, I think that is quite sufficient if there are trained head nurses over two, or perhaps three, wards.

22691. But in the case of an untrained matron?—I do not know what you could do then, because it is no use having trained nurses under an untrained matron; there is nobody to supervise their work.

22692. Therefore, without having a trained matron, everything must fall into a state of disorganisation?—Quite so; I think it is not fair to trained nurses, who have been looking up to their superiors in hospitals, to put them in a position where they will be under persons to whom they cannot look up professionally; it naturally lowers and demoralises the whole tone of their work.

22693. Are there any visitors amongst the guardians whose business it is to go round the wards and see how things are going on?—Yes, weekly; there is a rota every month for a certain number of guardians who are supposed to visit constantly, at least once a week.

22694. In the case of an infirmary having an untrained matron, is that supervision of any very great practical value?—I should not like to say that it is of no value, but when you consider that there may be amongst guardians no one who has ever seen a hospital ward or who knows anything about the management of the sick, I think one can see what a very poor supervision it would be. Of course they see that the wards are neat and cleanly and tidy and all that, but it is impossible that they can be judges of anything else.

22695. It would hardly occur to a lay guardian to look into beds and so forth?—Certainly not.

22696. Or to poke about in sculleries?—Certainly not.

22697. Would you like to see further powers of detention in lying-in wards?—Yes, certainly. I think there is great improvement required in the lying-in wards. I was speaking on Saturday to one of my former colleagues at Kensington, and I understand that it is a frequent thing, and perhaps the most common thing, for the young women to come direct to the infirmary with no power to compel them to go through the receiving

Chairman—continued.

wards in the workhouse; and they have equal liberty to go out just as soon as they like, direct from the infirmary. The consequence is that the slight stigma (perhaps it is only slight, but I think we do well to preserve it as much as we can) which some of the more respectable do feel in going to the workhouse is entirely done away with. They go to a splendid hospital; our lying-in wards at Kensington I think would compete with any other institution of the kind in London; they have every comfort, one may almost say luxury; they have the best attendance of nurses, they are free to come and go exactly as they like; there is no stigma. There is no power of keeping them till inquiries are made as to their circumstances; there is no check whatever to the liberty. I think it is a great and growing evil, the facilities that are afforded to these young women. Numbers come up from the country for the sake of avoiding the publicity at home, and get into these London wards.

22698. You would like to see them compelled to return to, or go through the workhouse, before leaving?—Certainly; it is not always possible, on their arrival, but it would always be possible before they leave.

22699. To return for one moment to the nurses, is the nursing in the workhouse infirmaries popular with trained nurses, or have you difficulty in getting them?—I do not think we have any difficulty in London. Just now there is an immense run upon nurses of all kinds of course, and they are more free to choose; there is a great demand now for district nurses; but we have never had the slightest difficulty in such an institution as Kensington in getting women.

22700. And, as a rule, are they content with their wages?—They know that so thoroughly before they come, because it is on a scale fixed by the Central Board; they begin at a certain wage; and then everything is found for them, uniform and everything; and they rise up by so much to 28 *l.* or 30 *l.* a year, I think. I have never heard any discontent expressed with that.

22701. And they are equally well acquainted with the opportunities for recreation and holidays that they will have?—I think that many value the knowledge of what there is beforehand; and on that account so many prefer it to private nursing, because they know exactly what they have to do and expect, and they are not at the mercy of their employers.

22702. Are you acquainted with the St. John's Sick Asylum in Cleveland Street?—Very well indeed.

22703. Could you explain to the Committee what the organisation is, that is to say, what patients go there, and where do they go there from?—The sick patients are sent there from the Strand Union, which has its workhouse and schools at Edmonton, and from St. Giles-in-the-Fields and St. George's, which is a United Union, and from St. James's, Westminster, the workhouse being in Poland-street. Since I came here I have been told that orders have been given to extend the accommodation in Cleveland-street, where the present Sick Asylum is, which I had not heard before. It seems to me rather an extraordinary plan to extend it in such a very crowded

8 June 1891.]

Miss TWINING.

[Continued.]

Chairman—continued.

crowded inadequate part as that is, engrafting it on to the old buildings which were never the best suited for the sick. Of course, it has been thoroughly inadequate till now, and the consequence of that is, that a large number of the sick are kept in the workhouse of St. Giles's, and St. James's, Poland-street, and at Edmonton, with, as we believe, a very imperfect organisation of nursing and management. They are not adapted for the sick, and are under the master and matron who know nothing about the sick, and I believe the nurses are never of the most competent description that will go to workhouse wards.

22704. You think that if any increase is to be made to the buildings of St. John's Sick Asylum, the increase ought not to be made there, but elsewhere, wherever they can find a better situation?—I should have said it was a great pity to keep so many sick in such a crowded neighbourhood; it seems natural that they should be taken out a little way further off. Of course, all the asylum infirmaries that can be moved have been moved I believe. Holborn has moved the sick up to Holloway from the very centre of London, but I know nothing about their property or the possibilities of an increase of it.

Earl Cathcart.

22705. I can rather sympathise with you, having been a chairman of a board of guardians myself some time ago, and I know that the poor law system is a very rigid thing; that is your experience?—Yes.

22706. And that the guardians really have very little power; they are bound to act according to the Consolidated Orders and Regulations of the Poor Law Board or the Local Government Board now; that is so, is it not?—Yes, but I think there is ample liberty for the guardians to do a great deal more than they do; I never found that we went to the extent of our powers.

22707. If the guardians were to try and delegate their powers to the matron and others, you would suggest that that power on the part of the matron, or anybody else to whom it was delegated, would not fit into the poor law system?—That I quite agree with; it is only done by mutual courtesy; but the medical superintendent can do a great deal to make the position of the matron pleasant.

22708. I rather gather that you wish that the matron should have considerable powers given to her, but that extension of power can only come from the Local Government Board?—I quite agree with that.

22709. You have seen in the newspapers lately perhaps reports as to the infirmary nursing which have not been very satisfactory; whether rightly or not, I am not in a position to say, but you have seen that complaints have been made of the management of some of the infirmaries or asylums?—Those are the metropolitan asylums, I think; we are not speaking of them now.

22710. Do you mean that there is no analogy between their working and the working of the poor law infirmaries?—They are a different set of institutions; they are under the management of managers, a large body selected from the boards of guardians; it is not exactly analogous

(24.)

Earl Cathcart—continued.

to the other. But with regard to this excellent plan that has been recommended by Dr. Bridges for the metropolitan asylums of trained matrons, and an increase of students, because they found there was no possibility of young medical men at the present day ever studying fever or these special cases which are never kept in the infirmaries; those two plans which have been adopted in the metropolitan asylums we are most anxious to see enforced for the infirmaries; and we can see no reason why the one class of institution should not have the same recommendations as the other.

22711. I am glad to hear that this arrangement meets with your approval of throwing open the infirmaries?—It seems to me so self-evident. I really cannot understand the opposition to it. It would harm nobody, and it would be an enormous amount of benefit in every way. It would throw daylight into these institutions and encourage the nurses; it would help to cure the sick; I am quite sure many cases might be got out of the infirmaries if they could have more medical supervision and care.

22712. We had the pleasure the other day of hearing that that system has been largely followed in Birmingham?—I believe Birmingham is quite a pattern of improvement; I think it is wonderful what they have done. Of course they started on a new foundation, which is always such an advantage.

22713. You have been interested for a good many years in regard to workhouse management and workhouse nursing, and have written a great deal on the subject?—It is nearly 40 years since I first began to visit the Strand Union.

22714. You were so good as to send me your pamphlet, "Suggestions for Women Guardians," to which is added, "Thoughts on the Diet of Nurses in Hospitals and Infirmaries." You are still of the same opinion as is expressed in that publication?—Entirely.

22715. And do you find that the cooking has improved in recent years in these infirmaries?—I think there is no reason to find fault with that, as far as I know. Of course a great deal would depend upon the carefulness of the individual matron; but there was nothing to complain of at Kensington in the diet.

22716. And the food is good?—Yes.

22717. You know what a powerful weapon the audit is in the poor law system; they surcharge people at once in every kind of way?—Yes.

22718. And they are not particular whom they surcharge; you would not be surprised perhaps if you heard that they had surcharged me?—I have never heard that our doctor could not recommend anything he chose to order for the sick.

22719. We have been told here by nurses themselves that in the poor law infirmaries they are comfortable; we have had evidence here to that effect?—I believe they are. It entirely depends of course on the matron set over it.

22720. Some of the infirmaries are most admirable buildings, the more modern buildings, are they not?—Quite.

22721. And you are familiar with those buildings as well as the Kensington?—The

4 E 3

Kensington

8 June 1891.]

Miss TWINING.

[Continued.]

Earl Cathcart—continued.

Kensington is not entirely modern but it has been added to from time to time; they are now going to add fresh blocks.

22722. But you are familiar with the new buildings?—Yes, I have been over Marylebone and Paddington and others.

22723. And they meet with your approval?—I think they are excellent, as good as they can possibly be.

22724. The consumption of stimulants and beer and that sort of thing you think may be diminished a good deal; you are in favour of not giving beer, but giving the money in lieu of the beer?—We have given up those things almost entirely now; there is no beer consumed at Kensington; and the diminution in the infirmaries is something wonderful. I believe it has in many cases gone down from hundreds of pounds to a few pounds.

22725. And is money given to the nurses in lieu of beer?—Yes, there is, and they all receive it.

22726. Do you remember what they have?—I am not quite sure about it; I think it is 1s. 6d. a week or 2s.; I am not quite sure which.

22727. You suggest in your book that hospital nurses should have coffee as well as tea, or that they should alternate coffee with tea?—Yes; we adopted that in Kensington, especially for those on night duty. Of course those are mere trifles comparatively, if there is a proper matron who is accustomed to the management of nurses.

22728. You lay great stress upon the importance of having a properly-trained matron as the absolute head of all these establishments?—Certainly.

22729. That is not the case now?—There are 11 out of 24 metropolitan workhouse infirmaries that have trained matrons.

22730. You would suggest that the Local Government Board should insist upon it that the matron should be always a person properly trained and duly qualified for the appointment?—I should certainly like a recommendation to that effect; I do not know how far the guardians would like insistance upon it, but I think the least they could have done was to have given a recommendation. That is a necessity for the head of an establishment for the sick.

22731. And you think it is essential that at each of these institutions, for the reasons you have given, there should be a trained matron, properly qualified?—Quite; I am quite sure it will be done; but then at present it is only done as these matrons die out who have been already appointed.

22732. Do you think the doctor is not afraid of the audit; do you not think the audit keeps him rather in terror?—I have never heard that at all. At one time at Kensington we found there was a great abuse in visitors bringing in things for the sick, and we were obliged to put a stop to it; and we passed a resolution that the steward and the medical superintendent were at liberty to order anything that he thought necessary for the benefit of the sick. It was said that he could order champagne (I suppose that was a sort of extreme) or anything he considered would help the recovery of the sick; he was at liberty to order lemonade and so on, anything

Earl Cathcart—continued.

that could be suggested as of value in a hospital; and I have never heard that there was the slightest objection as to the cost.

22733. Many of the visiting guardians are clever people; there might be architects among them and just the sort of men to go and look round the sculleries and so on, might there not?—You may have that class; we had a very superior set of guardians at Kensington, but as a rule I do not think you would have those men among them. They can see that the places are clean; but I more especially referred to the management of the sick wards; unless they were in some way connected with a hospital or were medical men, I do not think they could understand the things that require looking into.

22734. I do not wish to convey an opinion of my own, and it may seem ungallant and ungenerous to repeat it, but we have been told here both by matrons and by medical men that they did not consider it desirable that ladies should be put on the board of hospitals?—So I have heard.

22735. What is your view on that?—I am strongly of opinion that it would be the greatest possible help, and I do not think I should have much opinion of a matron who objected to it.

22736. And what sort of proportion would you have of ladies on a hospital board; could you mention any proportion?—No, I could not say. I think a woman should have an opinion in such decidedly domestic matters, and especially when half or more of those under their care are women or children.

22737. I think I asked an experienced matron here whether she would like to have the assistance of a board of ladies, and she answered at once, certainly not?—I quite understand that. Ladies can make gentlemen think anything; I can quite understand that they do not like the interference of women, who are much more sharply sighted in certain questions.

22738. But still with your great experience and knowledge of the subject you think it would be advantageous to have ladies on boards of hospitals?—Decidedly, and I have never known an objection to it. I have known matrons in the country and in London who said it was the greatest possible advantage to have a lady to speak to; there were things they could not discuss with gentlemen; and it seems to me reasonable that in all domestic matters they should be glad to consult with one of their own sex.

22739. And in your publication you lay great stress on the importance of having ladies, with a view to the arrangements for dress, and so on?—Yes, I have heard of gentlemen discussing an hour about details of dress, which it does not appear to me suitable for gentlemen to have to discuss.

Lord Zouche of Haryngworth.

22740. Do you know what reason has been given for not permitting medical students to visit the workhouse infirmaries?—One of our guardians objected that it was cruel to the paupers to have people coming to discuss their cases; that they had no choice about coming in as people have into voluntary hospitals, and as they

8 June 1891.]

Miss TWINING.

[Continued.]

Lord Zouche of Haryngworth—continued.

they were compelled to come in, they thought it was very hard that we should enforce a plan which they would object to. I have never heard the slightest evidence that they would object to the plan.

22741. Any other reason?—No, I really do not know any reason; I do not know any board of guardians that has tried it with the Local Government Board except Kensington; and our medical superintendent there was most warmly in favour. He wished to have, in fact he did bring round with him privately, now and then, students from the West London Hospital, at Hammersmith; and he has always been urgent for the plan, that it would be desirable.

22742. And when these students were brought in I suppose no objection was made by the patients?—Not the slightest. It was only for their own benefit of course. It was not in any way to look after the sick or assist the medical superintendent. I think nobody would urge that regular medical students from the first beginning should come in. Of two or three plans I have heard suggested, one is, that advanced students should go, and that there should be lectures, as at Paddington, given in the infirmaries; and of course that would be a very great advantage (I think that is done in two or three places), and that consulting physicians should be brought in, because there are often most obscure cases. Several times we have had serious operations and severe cases in Kensington. I think it is quite unknown to the public outside that there are such cases as those in the infirmaries; they think they are all chronic cases of old people, and that anything is good enough for them.

22743. Could you name the sort of case that you refer to, or the class of cases that you refer to, which are not generally met with in ordinary hospitals?—I am afraid I could not do that.

22744. But we may take it that there are a great number of cases of that kind?—And of those that are turned out from the hospitals, because they cannot be kept more than a few months.

22745. Who would carry out the severe operations?—Our medical superintendent. Our medical superintendent was a St. Thomas's student, and is perfectly qualified to do everything, and he has been most successful. He has treated many cases during the time I have been there, and he has said himself that there have been many cases which he would have been glad to have shown and explained to other people, cases not kept in the hospitals for years till they die. Incurable cases there is no opportunity of studying in our hospitals if they last beyond a few months.

22746. Speaking generally, do you think that the dietary of the nurses in workhouse infirmaries is as satisfactory as that which obtains in other hospitals?—I do not think I have a good opinion of the dietary in hospitals.

22747. You would perhaps put the dietary of the workhouse above it?—I took very great pains about it, and I believe that is a thing that only women can look into. I believe I was the first to ask the nurses what they liked, and to try to find out. I think it is most important for the health of nurses that they should be well fed

(24.)

Lord Zouche of Haryngworth—continued.

and have what they like; and I was able to make a few suggestions which the guardians very willingly agreed to; but I never found that any guardians visited the nurses at their meals; it is not likely they would, and if they did, I do not think young women would speak to them in the same way as they would to a lady. With regard to complaints about the diet in hospitals and the paper which I wrote about that five or six years ago, I am bound to say that very great improvements have been made since then; I do not think it is entirely true now as it was at the time I wrote it, but then my experience was that the dietary of nurses was most inadequate in hospitals. But it is five or six years ago that I made all those inquiries.

Lord Thring.

22748. With respect to the nurses what number of hours do you think a nurse ought to work?—Our day nurses begin at seven at Kensington, and they go on till seven; and of course they have hours for their meals.

22749. Do you think that that is overwork or not?—No, I should not think that it is with nurses in good health.

22750. But when they have, as we are told they have, 14 hours sometimes, is that too much?—I think 12 hours would be quite sufficient.

22751. I presume if they had more holidays they could bear more work during their working time?—They are well provided with afternoons; an afternoon a week and a day once a month; and in every case they are allowed out once in the day, either in the afternoon or in the evening. Of course we are very anxious that all afternoon leaves should be adopted instead of the evening hours.

22752. Then you think that your infirmary nurses, with 12 hours a day and the period of rest you give them in the course of the day, are not overworked?—I think not.

22753. Then with respect to the dietary, it really depends on the cook does it not; a good cook will make all the difference with no more expense for the food; is not that the fact?—The steward I think it rather depends upon; the steward has the ordering of everything. The cook only carries out the cooking, but the steward has the power of ordering everything and varying the diet occasionally. We were very fortunate at Kensington in having a very good steward who listened to suggestions and made the diet as varied as he could.

22754. The steward, if he has associated with him a good cook, can give nurses extremely good food, without increasing the expense of the food at all?—Certainly.

22755. It is only a difference of management?—Of course the quantities are fixed entirely by the Local Government Board, the amount of meat, and bread, and all that, is put down for every officer; but within that margin there is an immense opportunity for improvement.

22756. You know a great deal better than I do, I dare say, that the same quantity of meat or the same quantity of bread, or any article of food, when nicely cooked and well prepared, will go further and cost less than when badly cooked and badly prepared?—Certainly.

4 E 4

22757. With

8 June 1891.]

Miss TWINING.

[*Continued.*Lord *Thring*—continued.

22757. With respect to the matron, I did not quite understand you; do you consider that the matron ought to be over the men's wards and to manage the whole of them, or over the female wards only?—I think she should be, as matron, over the whole of the establishment as regards the nursing.

22758. You do not mean that the master of the workhouse should have any authority at all, but that the matron should be over the whole of the nursing establishment?—There is no master in the workhouse infirmaries. The matron and medical superintendent are the two officers in authority in the workhouse infirmaries in London; in the country it is different.

22759. And how would you arrange what the duties would be; would the medical superintendent be superior to the matron, or would they have concurrent powers?—The medical superintendent would be superior in every sense as regards the management of the sick, and the orders to the nurses as to their duties in nursing; but the matron should have entire authority over the domestic arrangements, as to their hours of leave and everything that comes under a woman's management, except as to the care of the sick and the medical orders.

22760. There you rather surprise me. The doctor, I understand you to say, should be able to order the nurses; I always understood that the doctor should tell the matron what he wanted, but that the matron ought to have the power to give the executive order; in other words that she ought to manage the nurses, but that she ought to do, or have done for her, the acts which the doctor wishes. Take an example; supposing the doctor wanted a special nurse sent to a particular patient; I thought that the proper form of hospital management was (I am not giving any opinion of my own) that the doctor should tell the matron, "I want a special nurse sent to Jane Smith," and that the matron should order any nurse to go to her?—I cannot say. It entirely depends upon the good feeling between the medical superintendent and the matron. I have known many instances of orders being given direct to the nurses in a way which I thought entirely set the matron's authority aside; but that is a matter of personal feeling between the matron and the medical superintendent.

22761. Would it not be wise that there should be a general rule that the matron should have the full executive power, but that she should be bound to carry into effect the orders of the doctor?—That is exactly what we want.

22762. Then you would not have the doctor give the orders direct to the nurses. I think it is a point of considerable consequence in the management, though it appears a small point, and I am anxious that your opinion on it should be clearly given to us?—I am exceedingly strong on that point, but the excuse of course for its not being done has been that the matrons have not been competent people.

22763. Presuming there was a competent matron at an infirmary, you would think she ought to have the entire management of the nurses, subject to her obligation to obey the orders of the doctor?—Yes.

Earl of *Kimberley*.

22764. Would it do to have a divided authority in an establishment of that kind; would it not be essential that the supreme authority should lodge in the medical superintendent?—I do not think there would be any difficulty in that any more than in a hospital.

22765. Would it do in a hospital if there was not a supreme authority; did you ever hear of a hospital where there was not?—I think you can hardly put it in that way. It seems to me the duties of the medical superintendent and the matron are so distinct.

22766. Is it not essential in every large establishment that some person should be responsible for everything, and have supreme authority?—Yes.

22767. And if you gave the matron any authority apart from the medical superintendent, would not that inevitably lead to confusion and dissension?—I have never found that so when the medical superintendent had a competent matron to deal with. Their duties are so distinct, of course, that there would be no question about the medical part and the orders to the nurses as to their duties in nursing.

22768. Then should these establishments be an exception to all administrative experience, namely, that it is necessary to have one supreme authority for administrative purposes?—I think the medical superintendent would be called the head, and would be the superintendent still.

22769. I understand that you quite admit that the medical superintendent should have supreme authority; all you wish is that there should be a reasonable division of duties?—Yes.

22770. And that the medical superintendent should not interfere with certain domestic arrangements?—Yes. I do not think anybody would wish to call the matron supreme head of the whole institution.

22771. You mentioned in the Kensington Infirmary a resolution was passed approving of any medical necessities, such as the medical officer thought necessary, being supplied to the sick?—Yes.

22772. But is it not the case that it is in accordance with the usual practice, if not the invariable practice, that the medical officer in poor law establishments has power to order whatever he thinks necessary for the sick?—I conclude so, within the limits laid down; I never heard the orders applying to those cases called in question at all; but in many cases where visitors are allowed to bring little delicacies to the sick, I believe that is thought to be a substitute; and no one would object to an orange or things of that kind being taken for the sick, but we found it led to such immense abuse that we were obliged to make a general rule against anything being brought; and then to avoid hardship, we said, "These things, if necessary for the recovery of the sick, must be provided."

22773. I believe the medical officer has, in fact, the power to order whatever he thinks necessary for the sick, and that there is no limit to his discretion?—No, I believe not.

22774. Of course, if he were to exceed all reasonable limits, the proper course would be to make complaints of him to the Local Government Board?—I suppose so.

22775. The

8 June 1891.]

Miss TWINING.

[Continued.]

Earl of Kimberley—continued.

22775. The guardians might remonstrate with him, but they could not prevent him from ordering what he thought necessary?—No, I think not.

22776. The responsibility rests entirely with the medical officer?—Entirely; and there is not the same limit of course in regard to quantities for the sick as there is in other things.

22777. With regard to the serious cases which you say are treated in infirmaries, are they never sent to general hospitals?—Never, I think, because we have a perfectly competent medical man to attend to them.

22778. I thought you objected to them being treated in the infirmaries?—No, not at all; but I think he should have assistance. It adds greatly to the interest of the institution, and if you have trained nurses it is well that they should have some more interesting cases than the chronic cases that are supposed to be found in the inmates of infirmaries.

22779. Is it not on the whole better that difficult cases should be treated in hospitals where the very best advice can be obtained rather than that you should institute a system of treating difficult cases by the best medical skill in the infirmaries?—I have so often been told that the hospitals are full enough without all these cases, that they have as many as they can take already.

22780. Of course if the hospitals are not able to take the cases that would be a sufficient answer; but should you not think that the better arrangement would be that the really serious and difficult cases should be removed to a hospital rather than that you should transfer an infirmary into a first class hospital?—That I cannot say; I had nothing to do with their admission; I do not know how they came there, but they were inhabitants of Kensington, and I suppose they came there as the nearest and most available place.

22781. But I suppose from your experience in the country more especially you know, that where a very difficult case arises, the first thing they do is to send it to a hospital?—Yes. Then again I believe many of these cases would last too long for a hospital, that they would not perhaps keep them in a hospital; they might for some actual operation.

22782. I was rather alluding to operations?—I cannot give the details of how it was. Whether they were likely to be very long cases, or why they were sent to the infirmary, I cannot say.

22783. With regard to the objection to students being admitted into the infirmaries, are you aware that the Act which was passed some years ago which enabled students to be admitted to infirmaries, was after that time repealed, because (I do not know whether rightly or wrongly) it was alleged that there was a serious objection on the part of the poor to students being admitted?—I am quite aware of that. In 1869 I think it was repealed.

22784. And it is only recently that an Act has been passed to remove that bar. Now may I ask, do you think, from your experience, that the poor would object to the attendance of students?—I think there never was a more

(24.) e

Earl of Kimberley—continued.

groundless objection; I believe it is a complete delusion. Why should they object to it any more than they do in general hospitals? I am told that the more people come to look at them and talk over their case the more pleased they are. Besides, with the enormous expense that there is to the rates for treating these people, surely we are not bound to consult them about admitting students if it is for the good of the public and the advance of science. I am sure it is not necessary and that they would be pleased.

22785. I suppose you are aware that there are sometimes objections made (I have heard of objections being made) by patients in hospitals, and have you never found a prejudice on the part of some people against being examined by students?—I do not think any case has ever come before me; in fact I think the complaint is the complaint of such a minority that we are not in the least bound to take notice of it; we must do for the best in a large scheme like that.

22786. Did you ever hear that there was any objection on the part of the guardians from the notion that if outsiders, physicians and surgeons, and students, were admitted into infirmaries, it would interfere with the management?—No, I never heard that. Of course it must be with the entire consent and concurrence of the medical superintendent, and I cannot see who else there is to interfere with. There is nobody but the medical superintendent and the matron.

22787. Then you think that is an objection that is groundless?—Entirely groundless. I do think that for consulting physicians to be brought in is exceedingly important; I am quite sure it would help to cure, and it would be such a very great help and comfort to the medical superintendents to have some other opinion that they could rely upon.

Chairman.

22788. You wish to say a word about female inspectors of workhouse infirmaries, I believe?—Yes, I should like to say how much we do wish for that. What I should like to say in a general way is, that I think medical knowledge is so exceedingly necessary for the Local Government Board Inspectors. The majority of our inmates in workhouses now are the sick and the infirm; there is nobody else worth speaking of. Able-bodied labour is not found in the country workhouses now; rarely in London; and it seems to me that the care of the sick is by far the most important part. Therefore it seems to me such an extraordinary thing that we have one medical inspector for all London, and one only for the whole of the country. In our Workhouse Nursing Association we have over 100 nurses, and we hear a great deal that goes on in the country in sick wards and infirmaries. A few gentlemen inspectors go round; it is hardly likely, if they are not medically trained, that they can inspect the nursing in these country workhouses; and it would be an enormous advantage to have a medical man go round. We have but one for the whole of the country, and it occurred to us that if we could have a woman who was trained

4 F

in

8 June 1891.]

Miss TWINING.

[Continued.]

Chairman—continued.

in hospital work, it would be the greatest possible advantage for all our nurses to have their work inspected. We could not expect a lay gentleman going round to notice the defects in the nurses' work. The matron of the workhouse is never trained; she cannot possibly keep up the standard of the nurses to any high degree; and there is no real inspection of their work; and we thought if we could have women inspectors for the country who have been trained as hospital nurses, their influence would be most important in looking after the state of the sick wards in the country, failing qualified medical men; but even if we had that, I think there would be room for a woman also to investigate the work of our nurses, who have no encouragement at all as it is.

Earl of Kimberley.

22789. I rather gather from your statement that you have great faith in inspectors?—I have, if they understand their work; but I do not think lay gentlemen can possibly understand the work of these women nurses, and the state of the sick. I think everything wants to be investigated, the state of the nursing, the state of the appliances, there may be no thermometers, none of the most necessary appliances for the sick. You cannot expect a lay-gentleman to ask about these things; he does not know they are wanted in a hospital; and, of course, he does not notice their deficiency in sick wards.

22790. Your experience leads you to think that the visit of an inspector once a year is of little benefit?—Especially if they are conducted round by the master, before whom the nurses would not think of saying a word.

Chairman.

22791. Is the health of the nurses in the London Workhouse Infirmaries good?—I think so. We have them at Kensington nine and ten years remaining in the infirmary; I never heard any complaint on that score.

22792. And I gather from what you said just now to Lord Kimberley, that you would like to see our enquiry extended to the country?—I think it is most important. I am sure there is a great deal more in the country that now wants re-consideration. We are asked for trained nurses now from all over the country, but there is a great deal to be done before they can be satisfactorily supplied. The relations of the nurses to the present untrained matrons are most unsatisfactory, and I am sure, seeing the lack of able-bodied help, and the unwillingness of the guardians to provide paid labour, it must come to some alteration of plan soon; and I most earnestly trust the country will not be left out.

Earl of Kimberley.

22793. My impression is that the Local Government Board now for the most part require trained matrons?—I believe they wish it; they have not made it a condition in workhouse infirmaries.

Lord Thring.

22794. In order to work the nursing in the rural districts, would it not be absolutely essential to centralise the hospital management?—That is entirely my opinion; but I am afraid of going into that as we are not to talk about the country. I think it must come to that; we must make district hospitals and concentrate the sick.

22795. And is there not still more necessity for that being done in regard to infectious diseases in the country?—I think so.

22796. Then your proposal would be that in all rural districts, what I mean in sparsely inhabited districts, the sick poor in infectious cases should be put into infectious hospitals, and you think that the chronic and ordinary sick ought to be conveyed to a moderately centralised hospital?—Entirely. I think we shall never meet the difficulty otherwise, because the guardians will not employ and pay a trained nurse for perhaps 10 or 12 sick people.

22797. They will not make the proper order, you mean?—You cannot do it, it is too difficult. And in the same way I think the epileptic and the feeble-minded ought to be classified and separated. As the able-bodied no longer exist in our workhouses, I think you should take separate institutions for those cases.

Earl of Kimberley.

22798. Is there not this objection on the part of the poor to being invariably treated in an infirmary, which would be a very serious objection, that they would object to be moved from their own homes?—I do not think so. The Holborn sick poor in London are taken to Holloway; the Marylebone poor are taken some miles from their own homes. I think it should not be such a very large area.

22799. Have you any experience of the poor in rural districts?—A great deal.

22800. Have you not found that they have the greatest objection to be moved to any workhouse at all if they can obtain treatment in their own homes?—Yes, that is quite reasonable, and we ought to encourage that idea; I am afraid their friends are only too willing to neglect them when once put into a public institution.

22801. As I gather it, your opinion is that there is a very great objection to very small institutions for taking care of the sick, because you cannot get thoroughly trained nurses in them?—You cannot get it. And another point is the necessity of separating infirmaries from workhouses; you cannot amalgamate the two classes. The officers fit for a workhouse are unfit for the management of the sick; they know nothing about it, and yet they are exceedingly jealous of those who do; and therefore as long as we have the general workhouses mixed up with serious sick cases or chronic incurables, I think we shall never get them properly managed.

The Witness is directed to withdraw.

8 June 1891.

MR. REGINALD BRODIE DYKE ACLAND, is called in ; and, having been sworn, is Examined, as follows :

Chairman.

22802. You are a Barrister-at-law ?—I am.

22803. And you are connected with the Hospital Saturday Fund ?—I am Chairman of the Hospital Saturday Fund.

22804. How did that fund originate ?—It originated in the year 1874 at a meeting called at Captain Charles Mercier's house of working men interested in the hospitals ; and then and there I believe it was determined to try and form a fund which should interest working men, as being the persons who had most direct interest in the hospitals, in their management, and in raising a fund towards contributing to their support.

22805. It was to be a working men's fund ?—It was to be a working men's fund, and is to this day (though I am here to-day as representing it) a thoroughly representative working men's fund. There are only two or three of us who work at it who do not belong to what I may call the working class, either as actual artificers or foremen, or men in the upper grades.

22806. What is the organisation of the Hospital Saturday Fund ?—At present it is incorporated under the Companies Act as an Association not for profit. That was done last year, because it was hoped that it would give it a sort of stability which a mere voluntary association has not got. Perhaps I may say that in the first start off in 1874 some 258 *l.* was collected in the streets ; and about 5,000 *l.* in the workshops. Last year a sum of 5,096 *l.* was collected in the streets, and 15,237 *l.* in the workshops, and similar places.

22807. So that the collection in the streets has increased in a greater proportion than in the workshops ?—Yes, the proportion is greater : but the streets' collection in my opinion has almost got to its limit ; the workshop collection, I think, has infinite capacity in it for extending. With regard to the actual income derived from the workshops, we think that it is really a new source of income to the hospitals altogether. It comes from a class who hitherto have not subscribed, and it comes from a class (I say this without at all wishing to make any difference between the Hospital Saturday Fund and the Hospital Sunday Fund) who, as a class, are not very large subscribers to the Hospital Sunday Fund. That is obvious if one looks at the collections made in different churches.

22808. Do you take subscriptions from clubs ?—Yes, but the subscriptions from the clubs come to a very small amount, as a rule. Our largest subscriptions come, I think, I may say from printers. I see that Spottiswoode & Co. sent us 140 *l.* out of one shop last year ; and the next largest subscription I have seen was something like 60 *l.* or 70 *l.* from Marshall and Snelgrove's.

22809. Would not printers be people in receipt of rather higher wages than ordinary workmen ?—Not than engineers and not than railway people I should think.

(24.)

Chairman—continued.

22810. Do the railway people subscribe to this fund ?—Not to any large extent compared with other trades ; but I imagine that that is largely because they have sick benefit clubs themselves ; the North Western Railway Company has.

22811. Do the workmen and foremen alone subscribe or do the heads of firms subscribe ?—Practically the workmen and foremen alone subscribe. Some of the firms I believe have said, in order to encourage it, that they will give in addition ; I believe that is not the case with Spottiswoode.

22812. What is the constitution of the fund ?—At present the board of delegates, which is a body elected by the workmen in their different workshops, is supreme over everything. It numbers I think now between 300 and 400. That board meets quarterly and exercises a control over the committees which are elected by the board. The committees are four in number, besides the executive committee. There is a distribution committee for distributing the money when we have got it, and the letters which we receive in return for our grants. There is a finance committee exercising the usual financial control over the affairs of the Hospital Saturday Fund. There is a surgical appliance committee which has a special work which consists in purchasing and distributing the surgical appliances to those who need them. And there is the workshop and street collection committee, which has the actual control of collections in the workshops and the streets on Hospital Saturday. These committees meet fortnightly. Besides these there is an executive committee which consists of the chairman, the treasurer and four honorary secretaries, and one member elected by each of the committees ; so that we focus the work of all the committees on the executive committee. The executive committee meets every week, considers all business that is brought before it by the paid secretaries, and then distributes it, sometimes with and sometimes without an expression of opinion, among the different committees within whose work it seems to come.

22813. Are there any working men on the executive committee ?—I think there must be seven or eight actual working men.

22814. And what you term "working men" take part in all committees ?—In all committees. The other committees are 12 in number, with one honorary secretary and the chairman and treasurer *ex-officio* members.

22815. Then there is this large quarterly meeting of which you say there are 300 or 400 members ; what sort of numbers attend as a rule ?—It varies. When there is any particularly interesting business, perhaps 150 to nearly 200 ; in an ordinary way 80 to 90. We meet on Saturday afternoon at 5 o'clock, so as to give the ordinary working man an opportunity of attending ; and all the committee work is done in the evening from 7 to 8 o'clock, for the same reason. Then besides these I should say that there

8 June 1891.]

Mr. ACLAND.

[Continued.]

Chairman—continued.

there are local committees in different parts of London, about 30 of them, which are not really committees of the fund, in the sense of being composed of delegates, but the local committees are people interested in the different districts where they work the Hospital Saturday Fund; and their principal work is organising the street collection, and getting the services of the ladies, who are seen about the streets on Hospital Saturday, to take the different positions and to undertake all the work that has to be done by those ladies in collecting the money in the streets on Hospital Saturday.

22816. What number of firms have you among your subscribers?—The actual number of firms, I think, is 4,301; that was the actual number of firms last year.

22817. Do the numbers regularly increase?—For the last two years they have increased very much indeed. When, in 1888, a letter was written to the “Times,” which called attention to the possibility of a penny a week collection, the Hospital Saturday Fund thought it would be a good opportunity to extend their work, if possible; so we obtained the assistance of the then Lord Mayor, Sir James Whitehead, and he organised, he working at it very hard indeed himself, a regular system of visiting all the workshops with paid organising secretaries. I shall have to say presently that that was very expensive, but I think it answered. Until then, though our secretary was anxious to do so, we found it impossible to cope with the enormous size of London, and to get into all the workshops to get sufficient from them.

22818. Then on what principle do you distribute your grants?—It is very carefully decided, after considering a form of return which is sent out about this time of the year (*handing in the form*). That form of return is sent to all the hospitals which have practically hitherto received a grant from the Hospital Saturday Fund. And then, besides that, about the beginning of May in each year, an advertisement is put into the daily papers, asking all those institutions who desire to participate to send for a form of return, and then this is sent to them. The funds are then distributed, after the consideration of this form, in accordance with what is called “the plan of award,” of which, without reading it, I may say shortly, the principle is this: the whole amount to be divided is divided into three parts. Three-fifths go for relief, and one-fifth each for economy and efficiency. Now the relief marks are determined in this way: for each bed which is occupied on the average throughout the year, one mark is given; for each 2,600 attendances of out-patients one mark is given. The totals of those are added up; I mean the totals for all the hospitals, and then the amount to be distributed under the head of relief is divided by the total number of marks. That gives the value of each mark for relief. Then, of course, it is a mere arithmetical sum working out the amount to be given to each hospital under the head of Relief. For economy the marks (the maximum number being 15) are distributed in this way: We have attempted, more or less I think I may say with

Chairman—continued.

success, to arrive at different standards of cost per bed per week for in-patients and per attendance for out-patients. Then according as the different hospitals cost more or less, they get more or less marks for economy. Then the marks are added up in the same way as for relief and the value of the economy mark is arrived at, and the amount is distributed among the hospitals. According to our plan of award we are bound to give special consideration to certain hospitals, lying-in-hospitals, chest hospitals, throat hospitals and convalescent homes, those being the institutions which working men consider they get practically the most advantage out of, and therefore being institutions to which they would like that a larger proportion of their donations should go. With regard to the efficiency marks (of which the maximum is also 15) they are distributed according to the answers to the series of questions that you see on the page before you. One important question from the point of view of the Hospital Saturday Fund is whether or not their is evening attendance; another important question from their point of view is whether or not they will receive a governor as representing the Hospital Saturday Fund; and then according as the questions are well or badly answered, so the marks for efficiency are given. One point I am very anxious to make which is this: that the Hospital Saturday Fund absolutely refuses to give any grant to any institution which is not governed by a committee elected by the subscribers.

22819. Are there many of that description of hospitals in London?—That rule of the Hospital Saturday Fund is very well known, so we do not hear of many of those. One or two instances do come before us generally in the course of the year, and we always reply that we regret that we are unable to make a grant.

22820. Did you refuse any last year on that account?—Yes, we refused one for that reason, the St. Saviour's Hospital for Cancer in Osna-burgh-street. It is a *bonâ fide* attempt to distribute the money in our hands according to the amount of work which is done by the hospitals, the cost at which it is done, and the general efficiency of the hospital; and we are always trying to improve it, and if we can see any way of doing so we shall be only too thankful to improve it further; but I think it does fairly work out that a hospital which does a good amount of work at a reasonable rate gets a much better grant than a hospital which does its work expensively and not well. One other point I ought to make on the distribution, and that is this: that all hospitals who receive money from their patients have deducted before the amount of relief marks is arrived at, all the patients who are paid for by their own contributions. The importance of that you will see in some of the hospitals which actually make a profit on their out-patient department.

22821. Have you ever made any calculation as to the difference in the relative cost of management and maintenance between large and small hospitals?—Yes, I have. Last year I was Secretary of the Distribution Committee, and I had the whole 150 or so returns through my hands, and I was very much struck at the time
at

8 June 1891.]

Mr. ACLAND.

[Continued.]

Chairman—continued.

at the excessive cost of small hospitals for management as compared with the large hospitals; and since then I have taken some nine of the larger hospitals, taking as the larger those which have over 150 beds, and compared the cost of management in comparison with the amount spent in maintenance by nine average small hospitals: that is to say, hospitals whose beds are under 40 or 50; and I find that in hospitals like Charing Cross with 143 beds, Guy's with 419, King's College with 163, London with 622 (these are the average number of beds occupied throughout the year, not the actual number of beds in the hospital), Middlesex with 254, North London with 179, St. George's with 316, St. Mary's with 251, and Westminster with 175; they expended in maintenance 197,700 *l.*, in management 15,143 *l.*, which gives the result that a sum about equal to 7½ per cent. of the amount spent on maintenance is expended on management. Now take nine small hospitals, though I have not selected them exactly at random; I have not selected on any sort of principle at all, except that I tried to take average examples of quite small hospitals—

22822. Under what number of beds?—Under 35. The largest I see has 34, namely, the Chelsea Hospital for Women. Then the National Hospital for Epilepsy, which has 21; the National Hospital for Diseases of the Heart and Paralysis, with 18; the London Skin Hospital, which calls itself a hospital, and has no in-patients, and no beds at all; St. John's, with 11 beds; that is, St. John's Hospital for Diseases of the Skin (I rather think there has been an increase this year, I am not quite sure); St. Peter's for Stone with nine beds; the Central London Throat Hospital with 11; the London Throat with 18; the Paddington Green for Children with 23; and the Chelsea Hospital for Women with 34. They spent a total sum on maintenance of 15,542 *l.*; on management, 3,478 *l.*; which gives a sum equal to something like 25 per cent. of the amount spent on maintenance expended on management. Now, in order to follow that out a little bit, I tried to see what came from the patients in these hospitals, large and small; and I find that at Guy's they received 734 *l.* from patients; at King's College, 111 *l.*; at the North London, 115 *l.* 2*s.* 6*d.*; and in none of the other large hospitals did they receive anything at all. In the small hospitals, the National Hospital for Epilepsy, spending on maintenance, 9,523 *l.* 8*s.* 3*d.*, received 1,882 *l.* 7*s.* 3*d.* from their patients, or 18 per cent.; the National Hospital for Diseases of the Heart, spending on maintenance 1,554 *l.* 7*s.*, received from their patients, 357 *l.* 12*s.* 5*d.*, it comes to about 23 per cent.; the London Skin Hospital, spending 327 *l.* in maintenance, received from patients 368 *l.* (I am omitting the shillings and pence), or 112 per cent.; St. John's Hospital for Diseases of the Skin, spent 1,391 *l.* in maintenance, and received 1,627 *l.* from patients, 117 per cent.; St. Peter's for Stone, spent 2,426 *l.* in maintenance, and received 1,984 *l.*, or nearly 82 per cent., from their patients; the London Throat Hospital spent 817 *l.* in maintenance, and received from patients 522 *l.*, or nearly 64 per cent.; the Hospital for Diseases of the Throat in Golden-

(24.)

Chairman—continued.

square spent 2,349 *l.* in maintenance, receiving from patients 2,558 *l.*, or 108 per cent.; the Paddington Hospital for Children spent 1,902 *l.* in maintenance, receiving from patients 154 *l.*, or 8½ per cent.; the Chelsea Hospital for Women spent 3,512 *l.* in maintenance, receiving from patients 639 *l.*, or 18 per cent. I quote those figures which are taken from the Returns furnished to the Hospital Saturday Fund for what they may be worth. I do not want to express any opinion at all, either for or against paying hospitals; but, of course, where the hospital poses as a charity (I do not say whether these do or not, I do not wish to express any opinion), where the hospital professes to be a charity, and yet you find them receiving from the patients amounts varying from 50 to 114 or 115 per cent. of the actual amount spent for the benefit of the patients, one really begins to wonder where the charity comes in, if I may be allowed to use such an expression.

22823. Do you, through your collectors, receive any letters of recommendation from the hospitals?—Yes; we receive letters of recommendation in proportion to our grants, sometimes according to the same scale as that in which they give them to ordinary subscribers, and sometimes according to a special scale. We distribute those through the men in the workshops who actually collect for us; and I think that it is a very good way of distributing them, because the collectors are the actual class from which the hospital patient are, as a rule, drawn, I suppose, and they are very jealous, for the best of reasons, not to give them to people who really ought not to have them, because it diminishes the supply for people who really are fit recipients of the charity. Occasionally, but very occasionally indeed, a complaint is made that a Hospital Saturday letter gets into the hands of a person of the class for whom the hospitals are not supposed to be intended; but that is very rare indeed, and I think that as a rule the letters do really get into the hands of the people who are the proper objects of charity at a hospital.

22824. Is the administration of your fund very expensive; do you pay any commissions?—No, we pay no commissions, but we have been obliged in order to extend the work, to pay very considerable salaries. That has been very much reduced, and we hope that at the end of this year we shall reduce our expenditure, at all events, to about 10 per cent. of the total receipts; and we can, if the work goes on extending as it has done in the last two or three years, reduce it to 5 per cent., I think, because the expenses will not increase at all in the same proportion to the amount of work which is to be done. Once we get into a shop and the men begin to subscribe regularly weekly, and tell their friends about it, we find that the work extends more or less by itself, and that if the men get really interested, the contributions increase without any more expense to the fund at all.

22825. Can you tell us at all what the subscription is that is given by the individual workman?—The subscription we aim at is a small regular weekly contribution; we are not above taking a halfpenny; we prefer a penny; and we do not expect to get into the class to whom more

4 F 3

than

8 June 1891.]

Mr. ACLAND.

[Continued.]

Chairman—continued.

than a penny a week would be a practicable subscription.

22826. Are you connected with an institution called the Morley House Convalescent Home?—Yes. That arose more or less directly, I may say directly, out of the work of the Hospital Saturday Fund. It was founded in about 1883. There was a difficulty in obtaining letters of recommendation among working men, I do not believe by the Hospital Saturday Fund, that is not one of our great objects, but among workmen generally there was a difficulty in obtaining letters of recommendation for convalescent homes after they had been ill; and with characteristic energy the working men said they thought they would try and make a convalescent home for themselves. A committee of the Hospital Saturday Fund was formed, and in the result a small property of about seven or eight acres was bought near by Dover, at St. Margaret's, close to Dover, and there is now there a convalescent home which contains about 30 or 40 beds, and which has received 2,500 patients since the home was opened, and last year something like 600. I believe the exact figure was 585; it is now going to be extended; they propose to add 50 beds now. I think it has 1,000*l.* or 1,500*l.* already in hand towards the extension fund. That again is absolutely managed by working men, and I do not think it has the disadvantage, if I may say so, of any what are ordinarily called gentlemen on that committee at all. Your Lordships will understand that I do not use the expression in any way unkindly, but it is absolutely and entirely managed by men belonging to the working class.

22827. Can you tell us how the money was got for the Morley House Convalescent Home?—First of all an appeal was made through the agency of the Hospital Saturday Fund to all the collectors in the workshops; that produced a sum of 400*l.*, and it was then determined that an attempt should be made to start a convalescent home on that capital sum. Search was made to see if premises could be rented which would do, but it was found that they would practically have to buy. Some subscriptions were asked for and a sufficient sum was raised to purchase this freehold property at St. Margaret's, subject to a mortgage to Messrs. Hoare, the Hospital Saturday Fund bankers; they advanced the money. It has since been paid off gradually by the subscriptions given almost entirely in the workshops; now that debt has been paid off, and there is about 1,000*l.* in hand towards extending the work.

22828. As regards the distribution, what you aim at, I understand you to say, is to give your grants to the hospitals where most good work is done at the least cost?—Yes, where the most charitable work is done at the least cost.

22829. Somebody gave evidence here the other day with reference to a dispensary, a certain Mr. Johnson, and in Question 21910 he was asked: "How many people did you relieve last year?" and his answer was "Four thousand six hundred new letters were made use of." Then I asked him how much he got from the Hospital Saturday Fund, and he said 53*l.* Then we went to another dispensary?—Is that a dispensary of which Mr. Johnson spoke?

Chairman—continued.

22830. That is a dispensary, the Westminster General?—There is a dispensary called the Westminster General.

22831. And then in reference to the Bartholomew Close Dispensary we are told that there were 5,273 new cases last year, and 3,769 visits paid to 1,015 patients at their own homes, and that from the Hospital Saturday Fund they only got 22*l.*?—If your Lordship will allow me just to look at our return book I will explain it in a moment.

22832. Certainly. (*The Witness refers to a book*)?—The Westminster General received 53*l.* 11*s.*, but then the figures the witness has given you are not the same as the figures he gave us; for the total number of new out-patients in our book is 5,204; the total number of attendances for the past year was 26,069.

22833. Now that was contrasted with the Bartholomew Close Dispensary?—They received 22*l.* 13*s.*

22834. The witness told us he had 5,273 new cases and 13,800 attendances?—That is the Royal General Dispensary in Bartholomew Close. He returned to us the total number of new out-patients as 3,638; total number of attendances for the past year 11,695.

22835. In answer to Question 21978, he said: "Last year we had 5,273 new cases, and 13,800 attendances at the dispensary"?—I think I see where the mistake has arisen. Was that evidence given a few days ago?

22836. Yes?—Last year you see was 1890. What our grant was made on last year were the figures for 1889. I have no doubt that that is the explanation of it. These returns are for 1890, and our grant was made on the figures for 1889.

22837. What amount do you disburse for surgical appliances?—Last year a grant was made of 750*l.*; that is to say, last Christmas. The amount the Surgical Appliances Committee had to work on last year was 500*l.*; this is expended in purchasing surgical appliances, and then the patients come up every Thursday, and they say what they want; they are seen by a medical man who advises what is the proper thing for them to have, and then they agree, unless they are absolutely unable to do so, to pay by instalments, at least half the cost; in that way the committee received 349*l.*; they received considerably over half last year; so that the amount available was 849*l.* for spending in surgical appliances. 2,099 patients were relieved by being supplied with all sorts of instruments, from spectacles up to wooden legs; and we decided last week that teeth should be supplied in suitable cases as an experiment; we are going to see whether that was a desirable work to undertake. May I before I leave the work actually connected with the fund mention one other thing started within the last year? It was found that very often in cases of serious illness there was a great difficulty in getting people to the hospital who ought to go there; and, of course, the class whom we attempt to benefit are not the people who can send round a carriage, or can obtain carriages easily, either by hire or otherwise. We have now made an arrangement with the Invalid Transport Corps that on a minimum payment being

8 June 1891.]

Mr. ACLAND.

[Continued.]

Chairman—continued.

being guaranteed to us of 3 s., we will undertake to remove a suitable case from the home of the patient to the hospital. It has been done in a few instances, and I believe has proved an immense advantage to some of the poorer people whose sufferings have been enormously increased by being carried to the hospital in four-wheeled cabs, as sometimes is done.

22838. You have had great opportunities of discovering whether the workmen have confidence, as a rule, in the hospitals?—I think, unbounded. Whether their confidence is always well applied is a question which your Lordships will have, sooner or later, to determine. Some of the hospitals which one hears most unfavourably about, are perhaps the hospitals which are most popular with the working classes.

22839. Do you think there is any reason for that?—The reason is, that they are made comfortable and get kindly treated. Whether the treatment is the best thing for them, looking at them as patients, is a question which I, of course, am not able to determine.

22840. But in reference to the general hospitals, have they confidence in them?—Yes, I think so; I have never heard any complaints against the treatment.

22841. What is the definite aim of your fund?—The first and principal aim of the fund is to enable the working classes to contribute to the hospitals from which they themselves get so great a benefit, and the amount we aim at getting is 100,000 *l.* a year. Personally, I believe that is hardly possible in London, but I think we may very well look forward, I personally look forward, to getting at least 50,000 *l.* in the course of a few years. The amount collected has increased in the last two years, in the workshops I mean; since 1888, it has increased from 6,900 *l.* to 15,237 *l.* in 1890; this year we hope to get out of the workshops alone about 20,000 *l.* Whether we shall have or not may depend on a variety of circumstances; but I look to getting at least 50,000 *l.*, sooner or later. Then, apart from the money question, the Hospital Saturday Fund, as being a representative hospital organization for the working classes, has two or three definite aims. One is to obtain evening attendance at hospitals; that has been often expressed, and if you look at our form of questions you will see that that is one of the questions which is asked. Personally I do not know whether or not that is the best thing for them, but still that is one of the aims of the Hospital Saturday Fund; and I wish to identify myself with the fund. And another one about which I have no doubt whatever, is to obtain representation of the working-class element upon the boards of hospitals; and I am satisfied myself that if we can select the right men (and I can myself put my finger certainly on a certain number of the right men, as Hospital Saturday Fund delegates), it would be an enormous advantage to the hospital; I mean men who take a very intelligent interest in the management of hospitals, and men whose experience of their own class of course is absolutely beyond what an ordinary philanthropist (I am using the word in the kindest sense) can possibly have. I believe that if we can get satisfactory men it would be a great advantage

(24.)

Chairman—continued.

to the hospitals, and to the working classes themselves. Most of the hospitals do now allow working men governors to be elected by the Hospital Saturday Fund; in fact very nearly all do. Of course the difficulty is, that the meetings are at present arranged, not with a view to the attendance of that class, and it is very difficult for a man to get away and leave his work at three o'clock to go and attend a hospital meeting. Some of them, however, do so; and I hope that in time they may get from the ordinary courts of governors on to the boards of management. Then I think that the Hospital Saturday Fund further has this, not exactly aim, but rather effect. I think that the Hospital Saturday Fund has had the effect of bringing into the workshops a knowledge of and a great interest in the work of the different hospitals, and that I think will, in time, also bear the most excellent fruit. Then, lastly, the Hospital Saturday Fund, when perhaps they are more kindly recognised than they are at present (we do not find ourselves altogether kindly recognised in London), will be able to exercise a very good influence on the management of hospitals. Your Lordships must now be fully aware that there are a great number of hospitals in London which do require a beneficial influence to be supplied from somewhere; and nobody knows it, perhaps, better than those who have worked on the Hospital Sunday Fund and the Hospital Saturday Fund; because they annually see all the accounts and reports of the different hospitals; and it is hoped that, by degrees, we may assist in creating a standard of efficiency and economy which it is impossible for an individual to create, and which possibly a central body of good standing and good position may create. Then there is one other thing that I think perhaps I ought to mention to the Committee, and that is this: that although the Hospital Saturday Fund are most anxious never to meddle with the internal management of the hospital, further than decide, of course, whether or not we shall make it a grant, yet it is, I believe, a great advantage that there is a body subscribing, as we do now, about 17,000 *l.* or 18,000 *l.* a year to the hospitals, through whom a complaint of the treatment of any particular patient can be made. We have found that several times; persons going with our letters have, or think they have, some cause to complain about their treatment at a particular hospital; and they write to us, and our routine is this: We always send a copy of the letter to the hospital, and inquiry is always made for and in the name of the Hospital Saturday Fund. Of course, we do not disclose the name of the patient if we can help it; and, I think, it is only fair to say that in many instances complaints which I have assisted in investigating at the executive committee, 19 out of 20, if not 29 out of 30, have turned out to be perfectly unfounded; and, better than that, on communicating with the subscriber, or the person who has made the complaint, we have generally been able to satisfy him that it was his fault and not the hospitals; not always; but the existence of a body which is considered to have more or less influence, through whom these complaints can be made

4 F 4

8 June 1891.]

Mr. ACLAND.

[Continued.]

Chairman—continued.

made and through whom investigation can be made, is an advantage to the patients and to the hospitals themselves.

22842. How many institutions did you assist last year?—We assisted, last year, altogether, 144; namely, 27 general hospitals, 59 special hospitals, 31 dispensaries, 14 convalescent homes, and I have six miscellaneous and seven special awards. If I may refer to an answer made by Miss Twining just now in evidence, with regard to the spread of district nursing, I believe that we have received this year a great many applications from district nursing associations to participate in our award, and last year we made a grant of 50 l. to the East London Nursing Society; and we hope to make more grants to well-established district nursing associations in the future.

22843. What are district nursing associations; are they for nursing patients in their own homes?—Nursing patients in their own homes, persons who either cannot or will not go to hospitals, and are not well enough off to obtain the services of a nurse in the ordinary way.

22844. Is that done free?—That is done free.

22845. Is it increasing?—I do not speak as an expert; but from a slight knowledge I can say that that is increasing very much indeed. Miss Twining has been one of the great advocates of that.

22846. How does your fund differ from the Sunday Fund?—In this way, that the collections are made in churches and all places of worship once a year in the case of the Hospital Sunday Fund, and all the advocating of the claims of the hospitals is done by the clergymen in their pulpits in their ordinary sermons. For us, the collection is attempted to be made weekly. I have a sheet here which we send into the workshops, ruled for every Saturday (*handing the sheet in*); and we attempt to get these small weekly contributions which are remitted to us at the end of the quarter. That sheet (*producing it*) is one for the annual collection which is made where we cannot get a weekly collection. The fact that all these sheets have to be sent out, and the fact that there is a great deal of work to be done in registering them, and receiving a large number of small amounts, very largely increases, of course, the expenses of our fund as compared with the Hospital Sunday Fund; but as the amount of work or the number of sheets issued increases, the proportionate expense will decrease; we shall not want any larger staff to do half as much work again.

22847. From your study of the various reports and accounts and balance sheets of the hospitals, would you like to see a universal system of accounts?—I should very much indeed, if it were possible. I understood that there was a meeting at the Mansion House, to which I am sorry I could not go (I intended to go to it), to advocate or bring before all the secretaries of hospitals some uniform system, and that a committee of secretaries had been appointed to consider the question.

Earl Cathcart.

22848. It is always assumed here that the Sunday Fund is an absolutely permanent institution, and it probably will be so?—Yes.

Earl Cathcart—continued.

22849. And I suppose the same with regard to your Saturday Fund?—With regard to our Saturday Fund, we hope it will be as permanent, at all events, as the Sunday Fund. We have now the advantage of being incorporated as a company, which gives us, of course, an existence independent of any trustees.

22850. Then you are a company under the more respectable form of the “Limited” being left out?—The “limited” being left out.

22851. In your interesting evidence you stopped short in one answer; you said that you paid a large sum for secretaries to go round to the different workshops to canvass, but you did not explain how the secretaries are paid?—I am glad your Lordship has given me an opportunity of explaining that. The secretaries are all paid fixed salaries. If you desire to hear what we do pay them I will give you the actual figures.

22852. Will you enlarge a little on your former answer, which was not so detailed as I wished?—The general secretary and the financial secretary, the two heads, receive 250 l. each; there are two assistant organising secretaries at the present day who receive 200 l. each; their duty is to go round among all the workshops to advocate a systematic collection on behalf of the hospitals, and as far as possible to introduce the Hospital Saturday scheme into the workshops. Under the scheme which was instituted by Sir James Whitehead, we started with four of those assistant organising secretaries, and we have now been able to dispense with two because the ground has been covered. That has been, so to say, a capital expenditure; and in this October another one will disappear, and the outside staff will be reduced to one man, of whom, with the general secretary, the chief duty will be to go round and introduce, and advocate subscribing to the different hospitals in the workshops.

22853. These canvassers who are specially appointed to go to workshops are of the class of working men?—Yes; one is a Mr. Webster, who was, I think, the founder of the Hospital Saturday Fund in Sunderland, which has been for the number of working men in the place the most successful which has been founded in England at all; and the other one is Mr. Taylor, who came, I think, out of the office of the London Hospital, a clerk in the office of the secretary of the London Hospital.

22854. Then you trust to their spontaneous zeal?—Yes.

22855. Otherwise you would pay by result?—Yes. We trust in their spontaneous zeal; we give them so large a minimum salary for this reason: they have great possibilities or opportunities of dealing with small sums of money, and on the strong advice of so good a man of business as Sir James Whitehead, it was decided that we would pay them such a salary as would put all temptation out of their way, seeing the small amounts which they would have to deal with. But London is divided into districts, and after a certain amount is reached in the district, the men get an additional 1 per cent. on the amount collected in their districts beyond a specified sum.

22856. And the results have justified your confidence?—The results have entirely justified our confidence.

22857. I think

8 June 1891.]

Mr. ACLAND.

[Continued.]

Lord Zouche of Haryngworth.

22857. I think you mentioned that certain hospitals were rather more looked upon with favour by the management of the fund than others?—No, I did not say that. I understood the question of his Lordship in the Chair to be whether the working classes of the country in my experience have confidence in the hospitals, and I said yes, but I thought that perhaps that confidence might be in some cases misplaced, as your Lordships might find out. In certain hospitals they appear to be very well treated.

22858. My question had reference to a remark you made some time ago, where you said that the working classes thought that they got rather more benefit out of certain hospitals than others?—That was in a different part of my evidence; lying-in hospitals, surgical aid societies, convalescent homes, and institutions specially for the treatment of the throat and chest diseases are the hospitals which have special consideration, because, as I understand it, the working classes think that they obtain greater benefits from those hospitals than from others. Take a case like Brompton, for instance; any subscriber to Brompton knows that letters are always being demanded from him for Brompton Hospital, much more than in the case of any general hospital; and that idea has got into the heads of the founders of the Hospital Saturday Fund.

22859. Then, in consequence of that, do you think that those hospitals you have mentioned would receive rather favourable consideration; I do not mean undue consideration?—They do actually receive additional consideration, and the way in which it is now done is this: that a special grant is made to one of the hospitals which is found to receive special consideration according to the plan of the award. Take Brompton, for instance; the figures at Brompton might work out to give them a grant of, say, 300 £. (I am taking imaginary figures), and then the committee might say, "Well, we are to give them special consideration"; and probably an additional grant of, say, 100 £. would be added on to the 300 £. which they would otherwise receive. Apart from that special consideration in the case of those three or four classes of hospitals, the award is made most absolutely correctly, or as nearly mathematically correctly as can be in accordance with the plan of award.

Lord Monkswell.

22860. You say you pay salaries without commission?—Yes.

22861. Do you find it answers better than with commission?—We have not tried commission; we thought this the better way to do it.

22862. You have not thought about it very much?—We have not thought it out very much, one way or the other. It seemed to us the better way to let a man know what was the minimum he was going to get.

22863. You give 15 marks for economy, I understand, in this form?—Yes.

22864. Is it not difficult to determine the claims of one hospital with another as regards economy?—We work out the figures from those supplied to us by the different hospitals.

22865. Then do not you make any allowance for different kinds of diseases?—No.

Lord Monkswell—continued.

22866. So much per bed you take?—So much per bed. We have attempted to do that which you speak of. I hope, if we get a satisfactory standard, we shall be able to do it; but it is almost impossible to get a standard. If some great hospital authority will give us a standard we can do it.

22867. You acknowledge that your system would be the better for revision?—Our system I do not think is perfect at all, but it is the nearest approach for distributing the fund that we have been able to discover to a perfect system.

22868. You have had this question of distributing the money, in some respects according to the different types of disease, under your consideration?—Yes, that has been attempted to be done.

22869. And the greater care required in nursing, for instance, in certain cases; then again, with regard to smaller and larger hospitals, you find that the smaller are naturally more expensive than the larger ones; do you make any allowance for that?—No, because we try to get the patient doctored as cheaply as possible; and if a small hospital is more expensive than a large one, we think, *pro tanto*, the award ought to be reduced.

22870. But we had evidence the other day to show that at all events as regards accidents it was desirable not to have a hospital very large?—Your Lordship will understand that I do not profess to speak as an authority on hospital management; I look upon myself merely as an apprentice on that at present; and we are attempting to distribute a fund which has been placed in our hands by a number of subscribers for distribution among the hospitals in the best way we can; and we have not a sufficient knowledge to erect standards for hospitals for different diseases and different sizes of hospitals.

22871. I should have thought that both as regards sizes of hospitals and diseases something might be done; it seems rather hard to only allow small hospitals the same cost per bed as the larger ones; in some cases it may be necessary to have a small hospital; it may be a very peculiar disease, and from the nature of it a small hospital may be necessary?—That is a question of course whether that particular disease could not be better treated in a general hospital, about which I understand you have had a great deal of evidence already, and as to which I should hardly like to express an opinion.

Chairman.

22872. Is there anything else you would like to say?—No. If it would be any assistance to the Committee that I should work out the returns in the same sort of way, comparing the large hospitals with the smaller ones, I should be very happy to do so. At the same time if it would be no assistance, I do not want to inflict it on the Committee, or to have the trouble to do it. If your Lordship would kindly let me know if it would be of any assistance I should be only too happy to do it; but I do not want to undertake the work if it would be no good at all.

Chairman.] I will let you know.

The Witness is directed to withdraw.

8 June 1891.

Mr. ROBERT J. NEWSTEAD, is called in ; and, having been sworn, is Examined, as follows :

Chairman.

22873. ARE you the Secretary of the Royal London Ophthalmic Hospital, Moorfields?—I am.

22874. When was that founded?—In 1805; on the 4th of January 1805.

22875. And how many beds have you?—One hundred.

22876. And this is a hospital entirely for diseases of the eye?—Entirely for diseases of the eye.

22877. Do they send cases to you from other hospitals and dispensaries for treatment?—That would only be exceptional; but we have cases from the infirmaries of the workhouses, from something like 80 in England.

22878. I ought to have asked you before how long you have been secretary?—Nineteen years.

22879. How is your hospital managed; what is its constitution?—It is governed by the governors, represented by a committee. That committee should be 24; at the present moment they are only 12.

22880. How often do the whole body of governors meet?—Once a year absolutely, but they may be called together at other times; as a matter of fact they have not been called together, except for the election of surgeons or for the petition being made to Her Majesty The Queen to incorporate the hospital.

22881. And then this committee, how often does that meet?—Once a month.

22882. And that is the executive of the hospital?—That is the managing committee of the hospital.

22883. In the absence of this committee you are the supreme authority in the hospital?—Quite so.

22884. Have you the right to suspend officials?—Certainly not; my duty would be to report them to the committee.

22885. But the committee might not meet for three weeks?—I should suspend a porter or anyone of that sort.

22886. Before this committee, does every description of books used in the hospital, account books and so on, come?—Every account book comes before the committee.

22887. Is there a finance committee?—No, the committee themselves act as a finance committee.

22888. Have you an honorary treasurer?—We have a treasurer; John Deacon, Esq., of 20, Birchin-lane, E.C., Banker.

22889. Are all those books then initialed by some governor or governors?—They are ticked off. The cash book of the hospital is examined once a month previous to the meeting of the committee by an accountant from the office of one of the committee.

22890. Are your auditors members of the Society of Chartered Accountants?—No, they are not members of the Chartered Accountants.

22891. They are honorary auditors?—They are honorary auditors.

22892. Now on that question, from your experience as a hospital official, do you think an

Chairman—continued.

audit of that description once a month a sufficient check on the expenditure?—I think so; I think the once a month better than the once a year by the professional accountant.

22893. But would not once a week be better still?—You cannot make the accounts up so well once a week. Everything is balanced off once a month, the donations and so on that come in are checked, and the vouchers for payments are produced and examined.

22894. At any rate your governors are satisfied with once a month?—Certainly.

22895. Where do your funds come from?—From the public.

22896. First of all, what was your expenditure and income the last year that you have there?—The expenditure in 1890 was 6,349 l.

22897. And income?—The net income was 5,496 l.

22898. And whence did that income come?—From subscriptions, donations, legacies, dividends, and so on.

22899. Could you tell us what the amount was in each case?—The annual subscriptions were 806 l. 12 s. 10 d.; the donations, including the almsboxes and grants from the Hospital Saturday and Sunday Funds, were 1,651 l. 6 s. 11 d.

22900. Have you got the amounts given by the Hospital Saturday Fund and the Sunday Fund separate?—I think I can give you these; they are not separate in this account, but I have got them here. From the Hospital Saturday Fund, 176 l. 8 s., and from the Sunday Fund, 572 l. 18 s. 4 d.

22901. Then the next source, legacies?—Congregational collections I have next, 36 l.; legacies of 100 l. and under, 190 l.; legacies exceeding 100 l., 1,890 l.; dividends, 871 l.; sale of old material, kitchen waste, 49 l.

22902. What do these dividends come from?—They come from 20,000 l. invested in Consols, left some years ago by one of the founders of the hospital, and 4,400 l., Brighton and South Coast Railway; and New South Wales and other securities.

22903. You have no land?—No land; the hospital is freehold.

22904. Any house property?—No house property.

22905. What occurs when you have a deficit, as you had last year, of 900 l.?—A sale of some stock is made to make up for that deficiency.

22906. Do you generally have a deficiency?—For the last four years there has been, more or less, a deficiency, some in larger amounts, some smaller. Previous to that there had been exceptional years of deficiency only.

22907. Has there been any extraordinary expenditure to account for that deficiency; any building?—In 1876 a new top-floor was built on the hospital, with 26 more beds, and that led of course to a much larger expenditure.

22908. And is that sum of practically 2,080 l. in legacies an average year?—The year before altogether it was only 470 l.; the year before that, 1,480 l.; but taking this year, I have already knowledge

8 June 1891.]

Mr. NEWSTEAD.

[Continued]

Chairman—continued.

knowledge of legacies amounting to 6,500 *l.*, and subject to some annuities, the 1-10th share of 49,000 *l.*

22909. But, on the whole, I may take it that 2,080 *l.* is a sort of average year in legacies?—Exactly.

22910. Have you a large out-patient department?—Very large; an average of 300 a day.

22911. Would those be fresh cases?—No.

22912. That is the attendances?—Yes.

22913. What is the total number for the year of fresh cases?—26,000 fresh cases.

22914. And we must multiply that by three or four for the attendances?—They were 133,000.

22915. Is it a free hospital?—Quite free.

22916. Are there no letters of any kind?—We have letters printed for the subscribers if they wish it, but a poor person is free to come in without a letter; letters are not demanded.

22917. So that a patient with a letter has no preference over a patient without a letter?—They have a preference to this extent, that I note on the letter that they are recommended by a subscriber, but they have no absolute preference.

2218. Do you make any inquiry as to the condition of the people that you treat, or do you treat anybody that comes?—Every patient, except an accident, has to give the name, address, and occupation. If the surgeons or the clerk have any reason to doubt that they are proper recipients of charity, they are sent up to me to make inquiries, and are refused relief if the inquiries are unsatisfactory.

22919. You make inquiries?—I make inquiries; but those inquiries are entirely confined to their own evidence; we do not make further inquiries.

22920. Do you take any payment from out-patients?—We take no payment from outpatients, except that they may put something in the box. Boxes are provided in the institution into which they drop small coins.

22921. As they feel inclined?—As they feel inclined; but there is no asking them for anything.

22922. Then as regards your nurses, how many nurses have you?—Three sisters and six regular nurses; that is nine nurses.

22923. For 100 beds?—Yes, 100 beds.

22924. Are they large wards or small wards?—They are different sizes.

22925. Do you require any night nurses?—Yes; we have two.

22926. And they circulate about in the wards?—Yes.

22927. And you have a matron?—Yes. The matron is present to answer any question you may please to put to her. Two of the surgeons have been nominated by the medical council of the hospital to attend, and would have attended to-day, but one, Mr. Tweedy, has had to go to Gibraltar in consequence of having had influenza; the other, Mr. Nettleship, will come at any time that will suit this Committee, and was not desired to attend to-day.

22928. Then as regards your contracts for food, who makes them?—We have no contracts for food. In the case of the butcher, we take the

(24.)

Chairman—continued.

meat on the same price as the contract for at St. Bartholomew's Hospital.

22929. You are guided by the contract for St. Bartholomew's Hospital?—Yes.

22930. And what happens with regard to the bread?—As to the bread it is the same thing. One of our committee is on the management of St. Bartholomew's.

22931. Then you make no contract?—We make no contract.

22932. Who is responsible for the food coming into the place?—Seeing to the quality of the food, do you mean?

22933. Yes?—The matron.

22934. Does she see it herself?—She sees the food and has it weighed.

22935. Have you any house steward?—No.

22936. What is, as a rule, the duration of a case of an in-patient?—I should judge it to be about 14 days, taking it all round. Some are much longer than others.

22937. What is your medical staff?—The medical staff consists of nine surgeons, two resident house surgeons, and one curator and librarian.

22938. What qualifications does your board insist upon for the staff?—Every member of the staff must be a Fellow of the Royal College of Surgeons in England.

22939. Are there no physicians?—The physicians are only to be called upon in case of one of the patients having some other disease unconnected with the eye, or in case of illness among the servants.

22940. Are the residents paid?—The residents are paid.

22941. Are those long appointments, or for a short time?—They stay various times; the present senior house surgeon has been about two years; the other 18 months. Some stay three or four years; some do not stay so long.

22942. May I ask what salary do you receive?—£. 250.

22943. And board and lodging?—No, only my lunch.

22944. You live away?—I live away.

22945. Who is in command at night while you are away?—The matron, or the senior house surgeon.

Lord Saye and Sele.

22946. You said that there ought to be 24 members of the committee of management, but that there were only at the present time 12; what has become of the others?—The others have died or resigned.

22947. It was thought better to reduce the committee then, was it, as their places have not been filled?—No, the great difficulty is to get new members on the management; and the committee would be glad at the present time to make up their number to 24.

22948. What is the average attendance?—The management consists of something like six or seven of these 12.

Lord Monkswell.

22949. You mean that six or seven are generally there?—Yes, generally.

4 G 2

22950. Are

8 June 1891.]

Mr. NEWSTEAD.

[Continued.]

Chairman.

22950. Are there any sub-committees?—Only for special purposes.

22951. You have no standing nursing committee?—No standing nursing committee.

22952. No finance committee you said?—No finance committee, except that the General Committee go into the finance at every meeting.

Earl Cathcart.

22953. I supposing eye-patients do not require so much nursing as other patients; they are able to help themselves?—They require as much nursing in one way, but not as much waiting upon.

22954. They can get out of bed and walk about for instance?—Yes, quite so, after two or three days.

Chairman.

22955. Is there anything else you wish to say to the Committee?—I know that Moorfields has been said to have a great many people come there for advice, who are able to pay; but I think that their number is very much over-estimated. Many are sent away, five a day I think: and there are very few who really get the advice who could afford to pay a fee of a guinea to a specialist.

Earl Cathcart.

22956. Do you have to give many appliances?—Only artificial eyes and spectacles.

Chairman.

22957. Are the two night nurses in addition to the nine you mentioned?—No, they are included in the nine. I will leave the charter of incorporation as well as the report (*handing in the same*).

The Witness is directed to withdraw.

MISS ELIZABETH NICHOL, is called in; and, having been sworn, is Examined, as follows:

Chairman.

22958. You are the Matron of the Moorfields Hospital?—Yes.

22959. We have been told that you have altogether nine nurses?—Yes.

22960. Is not that a less proportion than usual for 100 beds?—Not for eye cases.

22961. The nursing is of a light description, is it?—Yes, the patients can attend to dressing themselves, and that sort of thing; the nurses have only to attend to the eye.

22962. How long have you been matron?—A year and a-half.

22963. Where were you trained?—At Newcastle-on-Tyne.

22964. What are the hours of the nurses?—From seven in the morning till half-past nine, and they are off duty every other day from six in the evening until 10.

22965. Where do they feed; have they a dining-room of their own?—Yes, they all feed in the dining room; they have all their meals there, except afternoon tea, which they have in their own rooms.

22966. Do they sleep in dormitories?—They each have a bed-room and sitting-room combined.

22967. Is their health good?—Very good.

22968. And do you train them yourselves?—As a rule they are trained nurses, who have been trained in general hospitals. When they come to us we train them as eye nurses.

22969. How long do you keep them, as a rule?—One sister has been there five years, and, I think, all the others have been there over three.

22970. And then as to wages?—The nurses receive 20 *l.*, and two of the sisters receive 26 *l.*, and the senior sister 30 *l.*

22971. And your own salary?—£. 60.

22972. You are boarded and lodged?—Yes.

22973. What hours have the night nurses?—From half-past 9 at night to 10 minutes to 9 in the morning.

Earl Cathcart.

22974. You come from a general hospital at Newcastle?—Yes.

22975. Were you matron there?—No; I was nurse there; and then I was sister at the Royal Ophthalmic Hospital for five years before I was matron.

Lord Monkswell.

22976. You say that the nurses begin at 7 and go off duty at half-past 9 at night. That seems rather long hours; how much time do they have for their meals?—They have breakfast from 8 until half-past; dinner from 2 until 3, and afternoon tea in their own rooms, which they take when they like.

22977. How long do they take off for that?—They take that when they like; there is no set time.

22978. You would not object to their going off for half-an-hour for that?—No. They have a rest in the afternoon.

22979. How long is that rest?—I could not exactly tell you, but there is a time when they can rest.

22980. Do not you know how long it is?—It is no fixed time.

22981. Have they got an hour or half-an-hour for it?—I should say they have always an hour in the afternoon.

22982. They have about three hours then in the day off duty for meals?—Instead of having two hours every day they have four hours every second day off duty.

22983. In addition to their meals you mean?—Yes.

22984. Therefore on ordinary days they would have three hours off duty for meals, and 11½ hours on duty, and on other days they work about nine hours?—Yes, I think it would be that, and once a week they are off duty from 3 o'clock until 10.

22985. You said that they go off duty on ordinary days at half-past 9?—Yes; their hours on

8 June 1891.]

Miss NICHOL.

[Continued.]

Lord Monkswell—continued.

on duty are from 7 in the morning until half-past 9.

22986. Then why do you say that once a week they are off duty until 10; would it not be until

Lord Monkswell—continued.

half past 9?—I mean that they are allowed out until 10.

22987. And as to holidays, how long holidays have they?—Three weeks' holiday.

The Witness is directed to withdraw.

MR. EDWARD MORTON DANIEL, is called in; and, having been sworn, is Examined, as follows:

Chairman.

22988. YOU are the Honorary Secretary of the British Hospital for Diseases of the Skin?—Yes, of the committee of management.

22989. When was that hospital founded?—About 20 years ago.

22990. And by whom?—By myself among others.

22991. By a syndicate in fact?—Yes, by a number of gentlemen who wished to found a hospital for the treatment of a special class of diseases.

22992. And it is situate where?—As you see, it has two branches; one in Poland-street, facing Great Marlborough-street, and there is a branch at Newington Butts.

22993. How many beds has it?—There are 11 beds in one branch.

22994. And what is the other branch?—That is an out-patient department. The business of the hospital is mostly an out-patient one.

22995. What is the number of out and in-patients you treated last year?—Three thousand four hundred and seventy-two out-patients, and two in-patients. In other years there have been many more in-patients.

22996. Does that number of two patients include both branches?—Yes.

22997. And the 3,000 odd out-patients equally include both branches?—Yes, in the same way.

22998. And how is the hospital going on as to its funds?—The total receipts last year were 1,180 *l.* 19 *s.* 11 *d.*; of that, 26 *l.* 5 *s.* was from donations; 39 *l.* 14 *s.*, annual subscriptions; 249 *l.* 8 *s.* 6 *d.*, interest on investments; and 865 *l.* 12 *s.* 5 *d.*, from patients' contributions.

22999. What are your investments; are they consols?—£. 8,708 2 *s.* in the 2½ per Cent. Consols, and a sum of 1,000 *l.*, Local Loan Stock.

23000. Is that the result of appeal or legacies?—Of accumulations and a number of legacies.

23001. You had a surplus in that year, had you not?—The expenditure of 1890 was 950 *l.* 6 *s.* 9 *d.*, and the investments, 1,127 *l.* 10 *s.* 6 *d.*; and taking the account of income and expenditure from the 1st of January to the 31st of December 1890, which I have here, we commenced the year with a balance from the preceding year of 1,395 *l.* odd, and we ended with a balance of 498 *l.* odd.

23002. Do you ever receive any legacies?—Yes, occasionally. There is a question about a small legacy now that another hospital claims; the question is now pending.

23003. Then as regards this large sum which in one year the patients paid themselves, 865 *l.*, on what system do you get that; what is the

(24.)

Chairman—continued.

question of payment?—The system is this: small payments are made by patients who can afford it; 5 *s.* for a month's attendance and medicine; 1 *s.* 6 *d.* for a week's attendance and medicine; sometimes less and sometimes rather more; nothing at all if they are very poor and have subscribers' letters.

23004. As to that term "poor" do you make inquiries?—The people in attendance make inquiries, when the patients attend.

23005. Do they make inquiries beyond the patients themselves?—Yes, when circumstances appear to require it; it is not as a rule done.

23006. Do you appeal to the public for funds?—We have not for a good many years; not for several years.

23007. Do you apply to the Hospital Saturday or Sunday Fund?—No.

23008. You never have done so, do you mean?—In the first instance we applied to the Hospital Sunday Fund a good many years ago, and we got a contribution; the second time we did not get a contribution; and we understood that it was not the policy of the managers of the fund to make grants to small special hospitals of this sort, so we have not carried the matter further.

23009. Are you managed by a committee?—We are managed by a committee.

23010. Do you have your accounts audited by a member of the Society of Chartered Accountants?—Yes. Your Lordship will see that I have brought you a print of the last year. The accounts are always very carefully audited, and for many years have been, by Messrs. Turquand.

23011. Do you ever co-operate at all with any of the larger hospitals or dispensaries, or with the medical practitioners round about by receiving cases from them for consultation?—Yes; that is to say, we are perfectly willing to do it; we are perfectly willing to show our cases; we are very anxious to co-operate with every one.

23012. Have you found your willingness to co-operate appreciated and reciprocated?—Not very much.

23013. Do you require your medical men to have the qualification of the surgeons and physicians of the Royal Colleges?—Yes.

23014. So that unless a man has that qualification he could not come to your staff?—We consider our men to be men of considerable eminence in that branch.

23015. I understand that they must have the qualification of one of those two colleges; that is a *sine qua non*?—Yes, that is a *sine qua non*.

23016. Have you any nurses in the hospital?—No.

4 G 3

23017. No

8 June 1891.]

Mr. DANIEL.

*Continued.**Chairman—continued.*

23017. No nurses in the out-patient department?—No, no nurses. You see that most skin diseases do not require severe treatment indoors; the cases are treated by applications and medicines.

Earl Cathcart.

23018. Was your institution started by any eminently skilled doctor?—I make no doubt that the hospital would not have lasted so long but for the interest that eminent and skilled doctors take in it.

23019. Is there any eminent name associated with it, such as that of Sir Erasmus Wilson?—No.

23020. You mentioned that you had only two in-patients?—Yes.

23021. And how do you graduate the establishment so as to suit two in-patients. Suppose you have one cook and one nurse, that would be one person in attendance for each patient; how do you manage?—We have to manage according to the calls upon us.

23022. I suppose if you have two patients the nurse does everything, cooks and everything?—Yes.

23023. Then your establishment consists of one nurse?—Practically you may take it so. We are not equipped for a large number of in-patients.

23024. And supposing the nurse goes out, the patients take care of themselves in her absence?—If we had a large number of in-patients we should have to increase our staff accordingly.

23025. But when the one nurse goes out, what do you do with regard to the patients?—I understand that arrangements are made to look after the patients properly.

23026. And some medical men from outside look in as to their medical attendance?—Yes, there is no resident medical officer.

23027. The fact is that the two in-patients must be very much in your way?—No, I think not. No doubt they are an expense, but there are sufficient funds forthcoming to support them.

23028. But still two-in-patients is not a satisfactory working number of in-patients?—No.

Chairman.

23029. You said just now that you presumed that in case of the absence of the nurse certain arrangements would be made; who would be in command; you do not live in the place?—No.

23030. Then who, supposing you have two of those patients there, would be in charge of them?—The principal medical officer would be the person in command.

23031. Does he live there?—He lives close by in Weymouth-street. The main branch of the hospital is in Great Marlborough-street.

23032. But it is, in fact, such a rare occurrence to have anybody in the hospital that it is not necessary to have anybody at all in command?—We find that the applications for treatment inside the hospital are very few and very rare. It is a kind of disease that does not seem to require treatment inside the hospital.

Earl Cathcart.

23033. Is the common itch a disease that prevails in London?—To a great extent.

23034. You must make those people in-patients?—It is a very rare thing, because they do not wish to become in-patients.

23035. But for that class of complaint you must treat the people very severely?—I am not a doctor, but I understand that the treatment consists in washing the patient, bathing the patient, and anointing with sulphur ointment. I understand that that treatment suffices.

Chairman.

23036. When you do have in-patients you get in a nurse to look after them?—Yes, we make proper arrangements.

Lord Saye and Sele.

23037. How many skin hospitals are there in London?—I do not know; I am only interested in this one.

23038. You spoke of a legacy?—Yes.

23039. I suppose that was sent to the Hospital for Skin Diseases?—To the British Hospital for Skin Diseases at Finsbury. At that time we had a branch there.

23040. You laid claim to it?—Yes.

23041. What was the amount?—It is some hundred pounds; it is a substantial amount. It appears to have been left by an old patient of the hospital.

The Witness is directed to withdraw.

MR. GORDON JONES, is called in; and, having been sworn, is Examined, as follows:

Chairman.

23042. You are the Secretary of the Hospital for Urinary Diseases, in Soho?—I am acting secretary for the present; I am medical officer; I am not really the secretary, but our secretary is away, and I am acting for him.

23043. When was this hospital started?—In 1878.

23044. And by whom?—By Dr. David Jones, my father.

23045. How many beds have you?—Twelve.

23046. What is your working number; what

Chairman—continued.

number of beds do you generally have full?—It varies; for the last two or three years we have had some long cases; perhaps four or five beds are occupied, and sometimes six or eight; sometimes they are all full. I could not give any exact average now.

23047. Do you have a large number of out-patients?—Between 2,500 and 3,000 in the year.

23048. Are your in-patients free?—No; it is a self-supporting hospital; entirely paying.

23049. And it actually does pay its way?—It does.

23050. Do

8 June 1891.]

[Continued.]

Chairman—continued.

23050. Do you appeal to the public for charity?—No, nor ever have done so.

23051. Do you apply to the Hospital Sunday Fund?—No.

23052. And you get nothing except what you get from the patients?—From the patients; that is absolutely all. We have had one or two donations from patients of five guineas or 10 guineas.

23053. Therefore you do not co-operate at all with other hospitals or dispensaries?—I forgot to add that the hospital is conducted on homœopathic principals; so that fact, of course, negatives any connection with any other hospital excepting the homœopathic ones.

23054. But there are two or three homœopathic hospitals in London, are there not?—Yes, but I take it they treat their own patients. We have patients sometimes sent by medical men; a good many.

23055. From medical men in the district?—No, from different parts of London.

23056. What is your scale of payment?—Indoors 2 l. 4 s. weekly, and the out-patients payment is a shilling each patient, each time. My father really instituted this hospital for those patients who were not in a position to afford high fees, and yet who objected to receiving gratuitous advice. There are many like that: they do not object to pay something, but they cannot pay much.

23057. Have you any different grades of payment for in-patients?—We have two free beds constantly going. There was a donation made to my father some years ago of 1,700 l., and with that he founded two free beds; so those are always free.

23058. And the interest upon the 1,700 l. is a

Chairman—continued.

sufficient payment for the maintenance of those beds?—I will not say that; but we call them two free beds. They are free always and no charge is made for them at all.

23059. Is there any other staff besides yourself?—Yes, there are three medical officers.

23060. What sort of standing are those men: are they men of a certain age or young men?—I am the youngest; one is 38, the other is over 60.

23061. Do they hold the qualifications of the College of Physicians or Surgeons?—One is M.R.C.S.; one is a M.D. I am an Edinburgh L.R.C.P.

23062. Have you ever applied to be appointed a member of the staff of a general hospital in London?—No.

23063. Was that because they knew that you were connected with homœopathy?—No, because I had private practice of my own.

Earl of Kimberley.

23064. You could not qualify for the College of Surgeons or Physicians as you are a homœopathist?—I am afraid it would be rather a hopeless attempt.

23065. You could not as a professional homœopathist?—I could go up for the qualification, but I doubt if I should have any chance of getting through; I am afraid not. Of course there is a good deal of ill-will, I will not say animosity, but still ill-feeling exhibited by allopaths to homœopaths.

23066. But they would examine you on the other system?—Yes, allopathically; there is no homœopathic examination; one must qualify as an allopath before practising homœopathy.

23067. Would they test you and ask you if you were a homœopathist?—They would probably know that I was one.

The Witness is directed to withdraw.

MR. ROBERT FITZROY BENHAM, is called in; and, having been sworn, is Examined, as follows:

Chairman.

23068. You are the Founder and Medical Officer of The "Queen's Jubilee" Hospital, are you not?—Yes.

23069. Will you tell us what The "Queen's Jubilee" Hospital is?—It is a general hospital, but we do not take in infectious diseases, such as small-pox or scarlet fever.

23070. What year was it founded?—In February 1887.

23071. You were the founder?—I was

23072. How did you manage to find the funds; where did your funds come from for building and so forth?—I took a house and I supported it.

23073. Did you appeal to the public?—After it was founded. After it was started, I asked a number of my own patients for support.

23074. And did you get enough to carry on the hospital in that way?—Not in a lump sum, but in small subscriptions from time to time.

23075. Is it still working as The "Queen's Jubilee" Hospital?—It is.

23076. And how many beds have you?—Ten.

(24.)

Chairman—continued.

23077. Are they always full?—Always full.

23078. That involves a considerable expenditure; have you a large annual subscription; perhaps you will tell us where your yearly income comes from?—In 1888 the donations were 15 l. 8 s.; subscriptions, 71 l. 11 s. 6 d.; collecting cards, 18 l. 13 s. 4 d.; collecting boxes, 154 l. 3 s. 1 d.; Saturday street collections, 132 l. 12 s. $\frac{1}{2}$ d.; surgical appliances, 5 l. 1 s. $\frac{1}{2}$ d.; they were instruments which were given to the hospital, and we sold them to the patients; things like trusses and so forth, we converted them into money. Then in-patients' payments, 30 l. 11 s., and entertainments, 176 l. 5 s.

23079. You have no money invested?—No.

23080. And you have no landed property?—No.

23081. How much income does that make altogether?—£. 604 5 s. 4 d. Then to that add unpaid accounts, 514 l. 18 s. 8 d.; and I advanced 472 l. 13 s. $\frac{1}{2}$ d., a cash advance, which made together 987 l. 12 s. $\frac{1}{2}$ d. That was in 1888.

4 G 4

23082. That

8 June 1891.]

Mr. BENHAM.

[Continued.]

Chairman—continued.

23082. That was the first year it started?—No, the second year. The first year there were so many large expenses that I took them off, I mean legal expenses. There was the Homœopathic case, and also the injunction, costing over 2,000 £., which I paid.

23083. Will you explain what that was?—The hospital was first situated in the Gloucester-road, and according to the lease granted by the freeholder, the place should not be used for anything which could grow to be a source of annoyance to the neighbours. There were photographers next door. They got others to join them, and brought an action, and it was held that diseases of the nose were infectious diseases; not that any medical man could understand that. However we had to move, and I had to pay the legal expenses.

23084. Did that 2,000 £. fall on your shoulders?—Yes.

23085. Do you apply to the Hospital Saturday and Sunday Funds?—We have several times.

23086. But without success?—Without success.

23087. What was your expenditure in that year 1888?—The expenditure was 1,591 £. 17 s. 5½ d. made up in this way: Cost of collection boxes, 17 s. 6 s. 2 d.; salaries and wages, 426 £. 10 s.; housekeeping, 186 £. 9 s. 1½ d.; travelling expenses, 3 £. 17 s.; postages, 27 £. 7 s. 2 d.; stationery and printing, 76 £. 9 s. 2 d.; drugs, 171 £. 19 s.; rent, 200 £.; rates and taxes, 36 £. 17 s.; sundry expenses, 6 £. 5 s. 8¼ d.; advertising, 56 £. 2 s.; furniture, 20 £. 2 s.; repairs, 42 £. 18 s. 8 d.; gas, 12 £. 10 s. 2 d.; fixtures, 20 £.; alterations to new premises, 250 £.; cost of removing, 36 £. 5 s.; insurance, 19 s. 3 d.

23088. That all comes to something over 1,500 £.?—Yes.

23089. And there was a deficit of 900 £.?—Yes, out of which I have advanced about half for that year.

23090. And how is the rest of the deficit defrayed?—That is carried on from year to year, but last year we were rather successful, and I advanced 573 £. to pay off back debts; so at the commencement of last year there was 1,305 £. owing, and I advanced 573 £., which leaves now only 731 £.

23091. Is that a debt to the bankers?—No, a debt to the tradespeople; running accounts for drugs, and so forth.

23092. You receive subscriptions; do you have any public audit of your accounts?—Yes, annually.

23093. By members of the Society of Chartered Accountants?—Yes. We have a large out-patient department.

23094. Do the out-patients pay?—No; there is a collecting box if they like to put anything in it; what we receive amounts to about a farthing per head, on the average.

23095. Do the in-patients pay?—A few of them do, but I suppose nine out of ten do not.

23096. Have you any nurses?—Yes, a matron and two nurses. Then we have special nurses for special cases. If we have say a case of

Chairman—continued.

typhoid, we have a special night nurse, who goes home in the day time.

23097. What made you first found this hospital and put yourself to this great expense?—In the first place there was really a need for it, and, secondly, I am fond of my work.

23098. Where is it?—The hospital is now in the Richmond-road, just at the bottom of the Earl's Court-road, situated upon a large area of ground for extension.

23099. And are you a very long distance from any other hospital of any description?—About 2½ miles; about equally distant from the West London and the St. George's; and we have, I think, on an average quite 20 accidents a day, some of them very severe, necessitating big operations, amputations of the thigh, and so forth.

23100. What is your staff of medical men?—There are five other medical men besides myself, a medical man to act as registrar and administrator of anæsthetics, and also to do our work if we are unfortunately away.

23101. Is your private practice in that neighbourhood?—No, it is rather spread.

23102. Does not looking after this hospital interfere with your private practice?—It does in a measure; still I do not attend every day myself.

23103. What are these assistants of yours in the medical line; are they young men or men of standing?—No, not young men; Dr. Thudichum is the great authority on diseases of the nose, and many of our cases have migrated from other institutions from which they were turned out as incurable.

23104. Are you successful in these cases where other hospitals have not been successful?—I can mention a very large number of such cases; in fact, several papers have been published to that effect.

23105. But owing to this skill that exists at your hospital, have not many other hospitals been anxious to co-operate with you?—I do not follow the question perfectly.

23106. You say, and I have no doubt it is so, that you are successful in cases where other hospitals have failed; do any of the other hospitals and dispensaries send to you cases for consultation?—A hospital would not do that, but many of our patients have been under treatment before they come to us. We treat a number of chronic cases.

23107. Is the number of your patients increasing annually?—It is, undoubtedly.

23108. You mentioned just now that you derived a certain amount of money from entertainments, 176 £.; what description of entertainments is that?—Sometimes we get up a concert or a bazaar, or anything we can think of.

23109. Do you always find that that pays?—No; unfortunately.

23110. It is a loss?—Sometimes; it is more often so than otherwise. I am sorry to say that the bazaar which has just been held is somewhat a fiasco.

23111. Then who bears the brunt of that?—I do.

23112. Do you hold the qualification of the Royal College of Surgeons?—I do.

23113. Were you ever on the staff of any general hospital?—I was assistant house surgeon
at

8 June 1891.]

Mr. BENHAM.

[Continued.]

Chairman—continued.

at St. George's; I was registrar and administrator of anæsthetics at the National Orthopædic Hospital; and then I started this hospital.

23114. Did you tell us how many nurses you have?—There is a matron, and two permanent nurses; but sometimes we have as many as half-a-dozen nurses.

23115. What do you pay your matron?—It is an honorary appointment; board and lodging.

23116. And have you a secretary?—Yes.

23117. What do you pay him?—£. 2 a week.

23118. And what do the nurses get?—£. 20 a year.

23119. And you board and lodge them?—Yes.

23120. Where were they trained?—One is a trained nurse, and the other not, though she has seen a great deal of practice.

23121. Not a certificated nurse?—No.

24122. Where was the certificated nurse trained?—I do not know; we engaged her from St. Helena Home.

23123. And when you require another nurse you get her from a training institute?—Yes.

23124. You founded this hospital?—Yes.

23125. Was the house not built for a hospital?—Not exactly built for it; but I adapted it to a hospital.

23126. What was it before it became a hospital?—It was a private house standing in its own grounds.

23127. Do you have to pay any medical officer?—No; it is all honorary.

23128. And you are out of pocket by this concern, I understand?—I have lost over 5,000*l.* in one way and another; it is my hobby; still the institution is very much wanted, because the patients are rapidly on the increase; we saw 22,000 out-patients last year.

23129. And how many in-patients?—On an average we see one a month per bed, so that as there are 10 beds it is 120 a year. For instance, there is a man in now with a severe compound fracture of the leg; he has been there two and-a-half months.

Earl Cathcart.

23130. I thought you said that there were about 20 accidents a day?—Yes; but not requiring to be admitted; smashed wrists or fingers, &c.

23131. Then there is a great deal of manufacturing in your neighbourhood, is there?—Extensively; the railway works, and several large factories.

23132. What is the nature of the nasal cases you have, polypus?—That is a simple nasal disease; but tumours at the back of the nose, and diseased bone of the nose.

23133. Why did you choose the term, The "Queen's Jubilee" Hospital?—Because I thought it was a novel idea as it was started in the Jubilee year.

23134. Then it was rather to please the taste of the public?—I thought that it was appropriate.

23135. And have you illustrious patrons?—Yes, very, most influential.

23136. Who are your principal patrons?—The Duchess of Wellington, the Right Honourable the Countess of Buchan, the Right Honourable the Countess of Denbigh, the Right Honourable

Earl Cathcart—continued.

the Countess of Cottenham, the Right Honourable the Countess of Haddington.

23137. Thank you; that is sufficient. Then I gathered from you that there was an objection in the neighbourhood to the founding of a new hospital?—No, not at all. When it was first founded Messrs. Elliott and Fry were next door, and they thought it might interfere with their business; but we are supported now by all the neighbours and tradespeople.

23138. Messrs. Elliott and Fry considered you a nuisance and got an injunction against you?—They did.

23139. On account of your treatment of nasal disease?—I believe it is founded on the decision of the late Master of the Rolls that a hospital which treated infectious diseases was a nuisance; and I believe it was held that nasal diseases were considered infectious, and therefore it applied on the decision of the late Master of the Rolls. But I have just said that medical men fail to recognise nasal diseases as infectious.

23140. But perhaps medical men on the other side took an opposite view?—Pardon me, I do not think the medical profession do; I think they are unanimous about that. There was rather a confusion about the words "infectious" and "contagious" and it was jumbled up.

Chairman.

23141. I see here you have in your report "committee of management," headed by the Right Reverend the Bishop of Marlborough, and this committee appears to be composed of 12 members?—Yes.

23142. How many generally attend?—On an average I think about two-thirds.

23143. Have you any fixed chairman?—Yes.

23144. Who is chairman?—Dr. Thudichum.

23145. Does he attend?—Yes, and the vice-chairman is Admiral Sullivan.

23146. And then there is a ladies' committee; what do they do?—I am sorry to say that that is a sort of nonentity; we have given it up now because we do not find it practical.

23147. You mean to say that they do not attend?—Well, it was formed for the purpose of organising entertainments.

23148. Not for the administration of the hospital?—No.

23149. And in consequence of the loss which ensued from these entertainments you abolished your ladies' committee; is that so?—Yes.

23150. Then how often do this committee of management meet?—They are called if there is any special work going on, but they always meet annually. Up to a few months back, we used to meet almost regularly monthly; but there has been no special work; the affair is in working order now; and I have great difficulty to get the funds to make both ends meet.

23151. In fact what they have to do is to meet to pay the bills?—No, I am responsible for that; there is a clause in the rules that until the hospital is self-supporting I have to bear the responsibility.

23152. Do you look forward with hope to the future career of this hospital?—I think so. Last year there was a very great improvement; our annual receipts amounted to 1,000*l.*

4 H

23153. Was

8 June 1891.]

Mr. BENHAM.

[*Continued.**Chairman*—continued.

23153. Was that from any one single large legacy?—No, an increase of everything, donations and subscriptions, and there was one legacy of 50 *l.* left to us. So it looks very healthy; indeed, the working classes are organizing a demonstration for this hospital owing to the benefits they have derived from it.

Earl of Kimberley.

23154. Do you make any inquiry at all as to whether the applicants are able to bear the expense themselves?—If the clerk who enters the names of the patients thinks they are not fit to be admitted, he makes a note of it, which comes before the visiting medical man, or the secretary, and he would ask the patient a few questions, "What are you" and so on.

23155. Have you rejected any?—A very large number.

Earl of Kimberley—continued.

23156. What sort of standard do you adopt?—We go by their belonging to the working classes and by the nature of the case.

23157. But assuming that the case is one that should be treated outside and not one so urgent as to be in a hospital, what sort of standard of wage should you consider would disqualify a man for receiving the benefit of the charity?—We have no standard, no fixed rule. May I explain it in this way: Supposing a female came up with a cold, and her husband was earning 30 *s.* a week, we should refuse her; but if she came with cancer of the breast, we should admit her for treatment.

23158. But a single man coming with an ordinary disease who was earning 30 *s.* a week you would not consider eligible?—No.

The Witness is directed to withdraw.

Ordered, That this Committee be adjourned to Thursday next, Twelve o'clock.

Die Lunæ, 15^o Junii, 1891.

L O R D S P R E S E N T :

Earl SPENCER.

Earl CATHCART.

Lord ZOUCHE OF HARYNGWORTH.

Lord SANDHURST.

Lord SUDLEY (Earl of ARRAN).

Lord THRING.

THE LORD SANDHURST, IN THE CHAIR.

MR. HENRY WILLIAMS, is called in ; and, having been sworn, is Examined, as follows :

Chairman.

23159. I BELIEVE you wish to make a correction of the evidence of Mr. Gordon in relation to the accounts of Guy's Hospital?—I do.

23160. Will you tell me the number of the question?—The question is 21787 on page 544. It is a very long answer given by Mr. Gordon, and towards the end he makes a statement about Guy's.

23161. This is what you refer to : “ I have an account here, an account which I should like to pass round, because it appears upon this account that two items have been entered; one is a charge for the board of medical residents in the sum of 587 *l.* 17 *s.* 19 *d.*; another item is ‘ By gas, &c., 818 *l.* 18 *s.* 13 *d.*’ Now those are not misprints, because the total of the column casts 19 *d.* and 13 *d.*” You wish to explain that, I believe?—I wish to explain it so far as this : that the statement signed by our auditors was in type, and upon our sending it to the printers, they have made a mistake ; and I have a letter from them acknowledging their mistake. The statement signed by the auditors and passed by myself is absolutely correct, and the fact that it adds

Chairman—continued.

up correctly is simply one of the vagaries of figures which you do come across sometimes. Instead of being marked 10, it has been marked 19 ; the figure 9 has slipped into the 10 below, and the figure 3 has slipped into the 10 below also.

23162. You have a letter from the printers acknowledging the mistake?—I have a letter from the printers acknowledging it ; and I have the original document in type signed by the auditors, which is absolutely correct. I hand it to your Lordship.

Earl Cathcart.

23163. I asked Mr. Gordon whether he was sure it was not a printer's error, and he said he was, because it added up right?—Of course, it would add up the same.

23164. Then you had not checked your proof?—I had checked my proof. What I sent to the printer was a final revise in type. Here is the letter from Waterlows acknowledging the mistake (*showing the letter to his Lordship*).

The Witness is directed to withdraw.

MR. JOHN HENRY BRIDGES, M.D., is called in ; and, having been sworn, is Examined, as follows :

Chairman.

23165. You are a Local Government Board official, are you not?—Yes.

23166. Will you tell the Committee what your precise position is?—I am the medical inspector for the metropolitan district for poor law purposes.

23167. For purposes of medical relief?—Yes.

23168. And how long have you occupied that position?—Since December 1869.

23169. Will you tell us what amount of poor law medical relief there is in the metropolis ; how many infirmaries, for instance?—There are 24 separated infirmaries and 44 out-door dispensaries. In addition to that there are the imbecile asylums and the fever hospitals under the control of the Metropolitan Asylums Board.

(24.)

Chairman—continued.

23170. Have you to do with those?—Yes, I have to visit them.

23171. Now, not including the asylums for the imbeciles, and so forth, under the Metropolitan Asylums Board, that is to say, taking only the infirmaries, how many beds are there under the poor law?—There are, at present, 12,445 beds.

23172. Have you formed any opinion whether that number is sufficient for the population?—It is not quite sufficient, and I have formed that opinion because I observe that the deaths that took place in the poor law metropolitan infirmaries last year, 1890, were 8,375, and the deaths that took place in London workhouses were 2,865.

23173. You mean to say that, if there had been sufficient room these 2,865 deaths ought to have

4 H 2

15 June 1891.]

Mr. BRIDGES, M.D.

[Continued.]

Chairman—continued.

have taken place in the infirmaries?—Most of them. And further, some of the parishes in London have no infirmary; for instance, Bethnal Green, owing to peculiar circumstances, has never as yet been able to procure a site for an infirmary; and, therefore, all their sick are in the workhouse.

23174. In the summary which you gave, 12,445, did you include any beds that there are in these workhouses?—No; those 12,000 and odd beds are exclusively in the 24 infirmaries.

23175. How many beds for the sick are there besides the 12,445 in workhouses?—I think about 4,000.

23176. That makes about 16,000 beds altogether?—Yes.

23177. Are those 4,000 for the sick, or for the inhabitants of the workhouses generally?—The 4,000 beds are beds actually occupied by sick persons; some of them are beds set apart for that purpose, and some of them are beds in ordinary wards which are obliged to be occupied, because there is no room in the infirmaries.

23178. As regards these 4,000 beds, what is the position of that sick asylum in Cleveland-street?—That is an asylum under a special board formed from three boards of guardians, the guardians of the Strand, the guardians of St. Giles's, and the guardians of St. James's, Westminster; they elect certain members and form a district asylum board.

23179. Then, again, are the beds in that sick asylum included in these 16,000?—Yes, I included them as one of the 24 infirmaries.

23180. Then what is the system pursued; do these three parishes send their sick people to the Cleveland-street Sick Asylum?—Yes, the three boards of guardians elect representatives every year, and form a board, and the parish authorities send their sick to the Cleveland-street Sick Asylum to the extent that that asylum will accommodate.

23181. Have you ever heard that the accommodation is so scanty in the Cleveland-street Sick Asylum that these three parishes have to keep their sick in their workhouses?—Yes; I have called the attention of the boards of guardians and the Local Government Board to that fact. The Local Government Board has made very strong representations to these three boards of guardians on the subject.

23182. That they should not keep their sick in their workhouses?—Yes, that they should find another site for another infirmary, or else very much enlarge the site they at present hold.

23183. Have you any idea what action is going to be taken, if any?—I believe they are considering the question of action, but no decision has been come to on the subject.

23184. Supposing it came to a question of enlarging the Cleveland-street Asylum, would that be a wise course, do you think?—If they could get a sufficient space of ground around it, no doubt it might be enlarged, but I should suppose it would be a very costly matter to acquire land round it.

23185. But then are there not many conditions about that district which would render it unadvisable to build another great infirmary there,

Chairman—continued.

so close to the other large hospitals, in a crowded district, and a very poor district?—I admit that it is not the very best site possible; but, on the other hand, supposing they were to select a site a very great way from where the sick live, there would be the great difficulty of conveying them there; and it very often results when an infirmary is too far, that a considerable number of the sick are practically left in the workhouse from the difficulty, whether real or supposed, of conveying them to a distant asylum.

23186. But that would be a matter of efficient organisation, would it not, if such difficulties arose?—I think not altogether that. The Strand guardians, for instance, have a very good workhouse at Edmonton, a workhouse which holds a considerable number of sick poor at the present time; but it would be impracticable to turn a site so far off as Edmonton into a sufficient infirmary.

23187. Now take for instance the Marylebone Infirmary, that is some distance from the parish of Marylebone, is it not?—It is, but nothing like so great a distance as Edmonton; it is perhaps three miles from their workhouse, and I do not think that it would be very easy for the central Sick Asylum Board to find a suitable site even within three miles.

23188. Has the poor law medical relief increased lately, in the last 10 or 20 years?—Indoor medical relief has increased, and out-door medical relief has diminished.

23189. By out-door medical relief you allude to the dispensaries, do you?—In the main to the dispensaries, because the greater part of London is under the dispensary system.

23190. But is that reduction of out-door medical relief owing in a measure to the enormous out-patient departments at the free hospitals?—I rather think the reduction of out-door medical relief is due to the establishment of the poor law infirmaries. The district medical officers of late have been sending in all the cases that they can of severity into the poor law infirmaries.

23191. Then you do not think, according to that, that a great many people who ought to go on the poor law go to the charities?—I do not think my opinion would be worth very much with regard to the charities.

23192. Could you tell us what the organisation of one of these new infirmaries is?—There is the principal superintending officer, who is the medical officer of the institution; he is called the medical superintendent. His business is to govern and control all the officers of the infirmary; then under him there is a steward and a matron, and other subordinate officers under them.

23193. How is the medical superintendent appointed?—By the board of guardians, or by the district board that manage the infirmary, or the asylum.

23194. Is the appointment endorsed by the Local Government Board?—It is referred to the Local Government Board, who either veto it, or approve of it.

23195. Who dismisses him in the case of misbehaviour?—He can only be dismissed after an inquiry by the Local Government Board; the permission

15 June 1891.]

Mr. BRIDGES, M.D.

[Continued.]

Chairman—continued.

permission of the Local Government Board is necessary to his dismissal.

23196. Then who appoints the matron?—The matron is appointed in exactly the same way.

23197. But then all the subordinate officers are not appointed by the Local Government Board, are they?—No; nor is the matron appointed by the Local Government Board; but over the dismissal of the matron the Local Government Board exercises a veto; and also over the dismissal of the steward. With regard to the subordinate staff, the Local Government Board, although it sanctions their appointment, has nothing to say to their dismissal; they can be dismissed without the leave of the Local Government Board.

23198. Has it ever occurred to you that the duties of the medical superintendent must be in excess of what it is possible for one man to perform. In the first place he has to look after the whole of the patients, from a medical point of view, has he not?—Yes.

23199. Then he has to be responsible for all the servants of the establishment, has he not?—He is responsible through his assistant officers.

23200. He is the responsible officer?—He is the responsible officer.

23201. In fact, the whole of the domestic and medical and administrative business falls upon his shoulders?—Perhaps that would hardly be quite an accurate way of stating it. It would fall upon him in the same sense in which everything that goes on in a ship, for instance, falls upon the captain of the ship; but a great quantity of the work is delegated to the steward, and another even more important department of the work is delegated to the matron.

23202. But still I do not think you gave me an answer to the first part of my question, which was whether you thought that the duties he had to perform were in excess of what one man can do properly?—That I think depends entirely upon the amount of assistance that is given him in the way of an assistant medical staff.

23203. What amount of assistant medical staff do any of them get?—In all the infirmaries there is an assistant medical officer; in the larger infirmaries there is what is called a clinical assistant, namely, a duly qualified medical man, who practically acts as a junior assistant, and who takes clinical records of cases.

23204. Therefore, in a large infirmary like the Marylebone Infirmary, with, I think, about 700 beds, you would have three medical men practically?—That is so.

23205. Now, do you think that sufficient?—I do not; I think it is an extremely small staff.

23206. Because, when you come to compare it with the numbers we have had mentioned before us in the large hospitals, it seems very inadequate. Take the London Hospital, for instance, which has, approximately, the same number of beds as the Marylebone Infirmary, you find there an unlimited number of medical men; there is a large number of resident medical men, besides the consulting staff, whereas, in your infirmary, with 700 beds, you have only three?—Yes; I

(24. 25.)

Chairman—continued.

am quite unable to say that I regard the medical staff as sufficient; I do not.

23207. Then would you propose that it should be increased by having more on the paid staff, or by opening the wards of the infirmary to what is called an honorary medical staff?—The latter alternative, opening them to an honorary staff, would offer great advantages, if you could secure that the honorary staff should consist, as in the case of general hospitals, of the most eminent men in the profession. The difficulty, or one great difficulty, in the way of that course lies in the extreme distance of the infirmaries, or most of the infirmaries, from the place where the principal consulting physicians and surgeons of London live. They, for the most part, live in the centre, and as the hospitals are, for the most part, tolerably central, the distance they have to travel to their hospital is not very large. I fear that, in the case of most of the infirmaries, it would be somewhat difficult (I am not at all intending to say that it would be impossible) for the leading physicians and surgeons of London to travel to the infirmary. For instance, to take the case of the Marylebone Infirmary, or the case of the St. Saviour's Infirmary, they are both a long way from the centre of London; three miles perhaps. I think it would, perhaps, be somewhat difficult, even for assistant physicians and surgeons of the London hospitals, to come to those more distant infirmaries unless they had an adequate fee for doing so. I think that would have to be paid.

13208. But you would not increase the resident staff of those infirmaries then?—I should increase it, unless this other plan could be adopted, of connecting poor law infirmaries with the staff of some general hospital. I think the only other alternative lies in increasing the resident staff. It might be increased, perhaps, in two ways; one, would be, instead of having one clinical assistant, to have three or four; and also it might, I think, be possible, under careful supervision, to induce a certain number of senior medical students to come, who would hold posts such as those of dressers and clinical clerks, and who would render very valuable assistance without any damage to the discipline of the institution.

23209. But that is a matter of organisation, is it not?—I think so.

23210. Would you like to see your infirmaries thrown open to the instruction of students?—I should. I should very much wish to see that clause in the Poor Law Act of 1869, which negatived a previous section of the Act of 1867, done away with.

23211. Do you know why that 1869 clause was passed?—I have inquired very often, and I cannot find anybody at the office of the Local Government Board who knows. It is supposed, I believe, that some one feared that the infirmaries might be used for anatomical purposes, and that it would be an unpopular measure with a view to poor law administration; that that would be an objection. Supposing that objection to be real, it would be an objection which it would be very easy indeed to meet by proper regulations, indeed by the regulations which already exist on that point.

4 H 3

23212. Do

15 June 1891.]

Mr. BRIDGES, M.A.

[Continued.]

Chairman—continued.

23212. Do you think that the position of the matron and the medical superintendent is a satisfactory one at present?—I think it is satisfactory, supposing that there is that ordinary amount of tact on both sides which may fairly be expected in officers appointed to those two positions. I do not deny that there are some difficulties, but I do not think the difficulties are very considerable. I have always urged the medical superintendents to regard the matron as a sort of first lieutenant, entrusting her with the discipline and management of the nurses, and interfering with her as little as the ordinary head of a family interferes with the management of his domestic servants; and where that is done I do not think that difficulty of any serious kind arises.

23213. In fact, you would give further responsibility to the matron?—I should give the responsibility to the matron, reserving it always for the medical superintendent to interfere in cases of great urgency.

23214. But now in a matter of detail, like giving nurses leave to go out and signing their certificates, and so on, who does that; the medical superintendent or the matron?—The practice rather differs; I believe that leave is generally signed by the matron with the counter signature of the medical superintendent.

23215. So that, in fact, unless the application is recommended by the matron, the medical superintendent would have nothing to do with it?—No.

23216. Of what standing generally in the profession is a medical superintendent?—He is generally a man who has held a good position in his hospital; has held the position of resident house physician, or resident house surgeon; in most cases, that is so.

23217. But those are not necessarily men of very great experience, are they?—The guardians rarely elect a man who has not had a good many years' experience since taking his diploma.

23218. But in most cases they are young men, are they not?—Generally on their appointment they would be from 28 to 30 years of age.

23219. Do they hold these appointments for many years continuously?—Yes, for very many years.

23220. And these men have power to operate and so forth?—Yes; a considerable number of operations have taken place in the infirmaries; I have in fact a record here now of some 385 important operations, leaving out of sight the operations of minor surgery, that have taken place in the infirmaries during the last year.

23221. What is the description of operation?—I mean such operations as amputations and excision of joints.

23222. Do they have any consultations before these operations?—Frequently. In very serious operations, it is very common for the medical superintendent, with the leave of his board of guardians, to call in the advice of some consulting surgeon.

23223. From outside?—Yes, from outside.

23224. Is that surgeon paid by the board of guardians?—Yes; that surgeon is paid by the guardians with the permission of the Local Government Board, which is always granted.

Chairman—continued.

23225. What number of the medical staff live on the premises; do they all live on the premises, where there are three of them?—Yes.

23226. Then are they all boarded and lodged?—The medical superintendent is lodged but usually not boarded; the assistant officers are always boarded and lodged.

23227. As well as being salaried officers?—Yes.

23228. What is the salary they receive?—The highest salary paid to any medical superintendent is 500 *l.* a year.

23229. And lodging?—And a house with coals and gas, not board.

23230. Then 500 *l.* a year is the maximum salary I understand?—Yes.

23231. Then what do they begin at?—In the smaller infirmaries about 300 *l.* a year would be an ordinary salary.

23232. Now with regard to the matron; is she always a person who has been trained in a hospital as nurse?—Unfortunately that is not the case. In the more recently opened infirmaries the matron is a person who has received a thorough hospital training; but in some of the infirmaries that were opened earlier, the guardians were very unwilling to limit themselves to the choice of such a person, and appointed ladies who had had no training at all.

23233. Why were they unwilling to engage a competent lady?—They perhaps had their own favourites, or perhaps they did not appreciate the importance of having a trained matron.

23234. Then they practically engaged a superintendent of nursing who, it was possible, might have been ignorant of nursing herself?—In many cases that has been done.

23235. Would you not like to see every infirmary under a matron who was a trained nurse?—Yes, I am extremely anxious to see that made a *sine qua non* for a person holding the position of a matron.

23236. Do you know any cases where the matron is not a highly trained nurse?—Yes.

23237. Could you tell us what they are?—I could mention the large infirmary of St. George's, the infirmary of Wandsworth, the infirmary of the Poplar and Stepney Sick Asylum District.

23238. And in those cases the matrons are not trained nurses?—They are not trained nurses; they are simply qualified as housekeepers.

23239. And they have been moved up to the position of matron from some other position; is that so?—In some cases. In one case which I have mentioned the matron had been the wife of a workhouse master; she was simply a workhouse matron.

23240. Do you happen to know what age she was when she was appointed?—I should say about 35; I am not quite sure about the age.

23241. Now in these three places you have mentioned, are there any trained nurses under the untrained matron?—Yes.

23242. Then the subordinates know a great deal more about their profession than the superintendent does?—Very much. In such cases the matron would not attempt to interfere with the nurses in their work in the wards.

23243. Then this want of experience on the part

15 June 1891.]

Mr. BRIDGES, M.D.

[Continued.]

Chairman—continued.

part of the matron does not cause irritation between the matron and the nurses?—I think it destroys the influence that a matron ought to exercise over her nursing staff.

Earl Cathcart.

23244. Miss Twining said that the matron could not exercise proper authority because the others rather looked down upon her; they had been instructed, and the matron was not instructed?—That is so.

23245. Miss Twining has a very strong opinion upon that?—I feel that very strongly indeed.

23246. And I think she said that the great majority of these matrons were not trained nurses in London?—The majority are not; that is quite true.

23247. I think she said that 10 or 11 were trained, and all the rest not?—It is something like that.

Chairman.

23248. You have given us the names of three infirmaries where the matrons are untrained; could you give us the rest of them?—I should say that in the cases of Camberwell, Greenwich, Hackney, Islington, Lambeth, Mile End, and Woolwich, the matron had had no training, and also I ought to say in the central sick asylum, and in the Poplar and Stepney sick asylum.

23249. What is the principal duty of the matron, to look after the nursing?—The most important duty of the matron, as I conceive, ought to be to look after the nursing; but she also has many other duties; she has to control the whole linen supply, and to act generally as a housekeeper.

23250. At any rate you consider that her most important duty is to look after the nursing and the nurses?—Yes.

23251. And in the case of, I think, 12 infirmaries that you mentioned, or a large number of infirmaries that you mentioned, the matron, whose principal duty is to look after the nursing, is herself an untrained nurse?—Yes.

23252. Now in these infirmaries will you tell us what the proportion of trained to untrained nurses is?—The word "trained" perhaps has some ambiguity about it.

23253. I mean hospital trained?—If I were asked what number of nurses have had a hospital training I should say it would be a fifth part of the number.

23254. Are any of these trained nurses certificated nurses?—That I am not quite sure about.

23255. But are you in a position to say whether every infirmary has some trained nurses at any rate in it?—Yes, I think I may say that every infirmary has some trained nurses.

23256. Then these trained nurses would very likely be extremely critical of the work that is done by the untrained nurses; have you ever had any amount of complaint as to mismanagement by untrained nurses?—The trained nurses that are appointed generally have placed under them the younger assistant nurses; they are supposed to teach them their duty and gradually train them.

23257. Does any infirmary train its own nurses at present?—Yes, several of them, the Maryle-

(24.)

Chairman—continued.

bone Infirmary for instance, almost entirely trains its own nurses; and several of the others.

23258. What number of nurses are employed in these large infirmaries?—There are altogether 888 nurses.

23259. But I mean taking one infirmary; we will take the Marylebone, that is one of the new ones; have you any statistics that will enable you to tell us the number of nurses there?—There are 65 nurses at Marylebone.

23260. Amongst 700 beds?—Yes.

23261. Do you consider that to be sufficient?—Yes, I think so. I do consider that sufficient for the class of cases that are admitted there, because a large number of the cases are not such as require a very great amount of nursing; they are very different indeed from the cases admitted into hospitals.

23262. Those 65 include night nurses, I suppose?—Yes, that number includes night nurses.

23263. They have night nurses, have they not, at these infirmaries?—Yes.

23264. There has been a great deal of improvement in the nursing in the last ten years in the infirmaries, is there not?—Very great indeed. The prejudice against the employment of trained nurses and the engaging of a trained matron has very much diminished, and I have no doubt at all that if all the untrained matrons were to disappear to-morrow, almost all the boards of guardians concerned would elect a trained matron; unfortunately they are saddled with their old officers.

23265. Paupers are never employed as nurses, are they, in London?—Not in the poor law infirmaries.

23266. I mean in the poor law infirmaries. And are they employed as ward maids or scrubbers or in any capacity?—Very rarely. The rule is that the cleaning of the wards, the rough work of the wards, shall be done by charwomen, who live outside, and who spend their day or half of their day in the infirmary.

23267. Is any attempt made at classifying patients in the infirmaries?—That rests entirely with the medical superintendent.

23268. That is a matter of administration which rests with the medical superintendent?—Entirely; and that would vary from one infirmary to another; some medical superintendents like classifying their cases and some prefer mixing them.

23269. Are all kinds of illness taken in the infirmaries?—Every kind of illness where the person is considered by the relieving officer of the parish to be sufficiently destitute.

23270. Setting aside infectious fevers and so forth, of course?—Yes.

23271. Now have you any power of detention of patients in the infirmaries?—I may say practically none.

23272. They treat the venereal disease in the infirmaries, do they not?—Yes.

23273. Have you any power in those cases to detain men or women till they are quite cured?—No, there is no power. There was a clause passed in an Act of Parliament of, I think, 1868, which allowed the medical officer to report to the guardians any case where he thought that a person affected with contagious or mental disease

4 H 4

could

15 June 1891.]

Mr. BRIDGES, M.D.

[Continued.]

Chairman—continued.

could not go out with safety to himself or others, upon which the guardians were authorised to detain that person; but I believe it was held that that clause did not apply to venereal disease.

23274. Do you think that would be a desirable power to have?—I cannot say that I think it would be very often exercised.

23275. You mean that the Guardians are only too glad to get rid of those patients as soon as possible?—Yes, I think so.

23276. Now as regards the infirmaries, whence come the drugs and the food?—The drugs and the food are supplied by the guardians in the first place, but a large part of the expenditure of the infirmaries falls upon the common fund of London.

23277. What is that "common fund" that you speak of?—The common fund of London was established by the Poor Law Act of 1867, for the purpose of easing the burden upon the poorer parishes of London; by that Act certain portions of the expenditure were placed upon this fund, to which all the Boards of Guardians contribute and from which some of them receive large sums, and amongst the matters so placed upon this common fund were the salaries of officers and expenditure in drugs.

23278. Then the guardians make their own contracts, do they?—Yes.

23279. Both for food and drugs?—Yes.

23280. Do the prices paid vary at different infirmaries?—Yes, they vary a great deal.

23281. Could you hand in a paper showing how they vary at different infirmaries?—There is such a paper; I am sorry to say I have not got it with me.

23282. Perhaps you will hand it in to the Committee?—I will.

23283. Have you a document from which you could tell us how they vary?—I have not got the document; there is a document about the contracts which I can send to the Committee if they wish. I have here a report of the total expenditure of the different infirmaries in different items.

23284. I will come to that in a minute. But what can be the cause for these contracts varying as they do?—I think the option of the guardians to accept or not to accept the lowest tender.

23285. Are contracts invited or are they advertised?—As a rule they are advertised.

23286. Do not you think that they ought always to be advertised?—I do, and it is the all but universal rule that contracts should be advertised. It is only in exceptional cases that they are not advertised, and then only by leave of the Local Government Board, granted for some special reason.

23287. Who receives the food and drugs when they are brought to the infirmary?—The steward receives the food and other provisions; the drugs would be handed over to the dispenser; there is generally a resident dispenser in the larger infirmaries.

23288. Then is the medical superintendent responsible with regard to the food, or is the steward alone responsible for it?—He is under

Chairman—continued.

the general superintendence of the medical superintendent, but practically he is the principle officer, of course, under the supervision of the visiting committee of guardians.

23289. Is there ever much complaint of the food by either inmates of the infirmary or the nursing staff?—Not often.

Earl Cathcart.

23290. My memory did not serve me just now exactly with regard to Miss Twining's evidence. In answer to Question 22644, Miss Twining said: "There were 11 of the 24 infirmaries that had hospital trained matrons." That confirms your own impression?—Very nearly so.

23291. Then Miss Twining says afterwards, at Question 22658, that a recommendation was made some time ago, in the time when Sir Charles Dilke was at the Local Government Board, suggesting that matrons should have more power, that their position should be more recognised, but that nothing has ever been done in consequence of that recommendation so made. You do not remember that circumstance?—I think I remember on several occasions something of the kind having been brought to the notice of the Local Government Board; but the view taken by the Local Government Board has been that in every poor law institution, whether it be a workhouse or a school, or a training ship, or an infirmary, there must be some one officer who is the head of the whole.

23292. That Miss Twining seemed fully to recognise, but she seemed to think at the same time that it would be better for the chain of responsibility that under the superintendent the matron should be responsible for the conduct of the nurses and generally of the female part of the establishment?—I very largely agree with that view. All I would urge is that it should not be so enforced as to deprive the medical superintendent of the ultimate superintendence which he at present exercises, and which, if he exercises it with tact, will not interfere with the full control of the matron over the nursing staff.

23293. That I gather to be quite Miss Twining's view; but the thought, in case of there being a very highly qualified matron, that that matron should be recognised as the head of the female part of the establishment, and not, as happens in some case at present, that the medical man himself should interfere with the female department without actually consulting the matron, because that would seem to interfere with the chain of responsibility?—I think if the medical superintendent does interfere without real cause for doing so, it is a grave mistake on his part.

23294. That interference should be through the head of the female part of the establishment, that is to say the matron?—Certainly, as a rule.

23295. Then Miss Twining goes on to quote you in answer to Question 22682. The question is "Of course there is a large amount of material for education wasted in the Poor Law Infirmaries?" and her answer is, "A very large amount indeed, and it is not only our opinion, but Dr. Bridge's himself has repeatedly said that there

15 June 1891.]

Mr. BRIDGES, M.D.

[Continued.]

Earl Cathcart—continued.

there is an enormous waste of material in regard to cases which are never seen elsewhere, except in these infirmaries, where people remain for years and die; an entire waste of material. Students never see them." Now Miss Twining has, as I gather, interpreted your view very fairly there?—Entirely; I quite agree with that. There are a great number of diseases which run through their course in these infirmaries, which are not seen by students in general hospitals, or which perhaps may be seen by the ordinary student at the first beginning, for the first few months of the treatment of the case.

23296. In infirmaries what margin of beds are you obliged to keep empty as a rule; have you any particular percentage of beds usually kept empty in infirmaries?—No, it depends entirely upon the pressure from without. In some cases, if the relieving officer sends cases to the infirmary, those cases have been taken in although the proper number of beds has been thereby exceeded.

23297. I ask that question, because as a rule in the general hospitals there is always a margin, something like 10 per cent., which are kept for one purpose or another, people being removed, and in case of casualties. But there is no working margin reserved in the infirmary beds?—There is not.

23298. Could you favour us with, or arrange to give us, the Consolidated Order regulating the infirmaries?—The Order is not precisely identical in all the infirmaries, although it is very similar. I have here an Order of the Local Government Board applicable to the St. Saviour's Infirmary.

23299. And that is typical, is it?—That is typical of the rest.

23300. Could you kindly leave it with us?—Certainly.

23301. Now the subject of dislocation was mentioned; that is to say institutions dislocated from their own parish or their own neighbourhood; would not that sort of dislocation of an infirmary interfere rather with the feelings of the patients, by removing them from their friends and visitors?—There is a very strong feeling amongst the poor themselves and their friends, against removal to any considerable extent.

23302. I have found it so in my experience in the country, that people do not like being far removed from their friends and relations, because then they cannot have visits?—Yes, that is so.

23303. In the case of old people especially, they feel very much removal to a distance?—Yes.

23304. The medical superintendent on the whole is a satisfactory officer, as I gather from you?—The majority of them.

23305. Are there every now and then complaints?—Yes, there are.

23306. What of; non-attendance, absence?—There have been complaints of neglect of a particular case.

23307. Carelessness?—Or carelessness, or of want of skill.

23308. That was my experience in the army with regard to medical men, that it is necessary for commanding officers to look strictly after the

Earl Cathcart—continued.

hospitals and to visit them very often; sometimes in the evening, sometimes in the morning, to see to see that the sick are properly attended. The same thing occurs in civil life, no doubt?—It may occur, certainly.

23309. Is there no medical superintendent in chief, nobody whose business it is to go round at different hours to visit the different infirmaries?—Yes, that is part of my duty to visit these infirmaries.

23310. And you do that occasionally; you visit at different times?—I do.

23311. And nobody knows when you are coming, in point of fact?—My visits are always unexpected.

23312. And sometimes in the evening?—Yes.

23313. Late?—I have visited as late as midnight.

23314. But, on the whole, the medical superintendence is satisfactory?—As a whole, I have no hesitation in saying that it is.

Chairman.

23315. So far as it goes?—So far as it goes.

Earl Cathcart.

23316. So far as the numbers can cope with the difficulties?—Yes, I mean that entirely.

23317. Then how is the medical attendance managed in the workhouse; is it a separate staff of medical men?—It is managed by some practitioner who visits the workhouse when he thinks necessary. Sometimes that officer is the superintendent of the infirmary if the workhouse happens to be near the infirmary, and sometimes it is a distinct officer.

23318. But not necessarily an infirmary medical officer?—Not necessarily so.

23319. Then you would gladly see the greater part of the sick, or nearly all the sick removed from workhouses?—Yes, I would.

23320. It would be better for the poor in the workhouses, and better for the sick?—Yes.

23321. Do you not think there was some sort of feeling of prejudice, that clinical teaching in the infirmaries would lead to expense; that the guardians have harboured the notion sometimes that clinical teaching in the infirmaries would bring in medical men with more expensive views and that sort of thing?—I do not say that that may not have entered the minds of some of the guardians, but I think it would be very easy to show them that no serious expense, perhaps no expense at all, is involved in that.

23322. But it is very satisfactory that, as we gather from you, you combat the idea that there should be anything adverse to clinical teaching in the infirmaries?—I am very strongly in favour of the plan of having clinical teaching in the infirmaries, not merely for the sake of medical science, which would certainly profit by it, but also quite equally, for the sake of the inmates of the infirmaries themselves, who would profit very much by the very close attention that would be given to their cases.

23323. And there is a prejudice out of doors that the patients would object to being seen by a number of young medical men; but that is not your view of the case?—I believe that that view

15 June 1891.]

Mr. BRIDGES, M.D.

[Continued.]

Earl Cathcart—continued.

is entirely erroneous. I think that the immense majority of poor sick people are very much pleased by close and minute attention being given to their cases.

23324. That is what we are told in regard to the general hospitals, that the patients rather like being closely looked after by many people, Many?—I think that is so.

23325. Many of the medical men in infirmaries no doubt are married?—Of the medical superintendents some are married.

23326. There is no objection to the medical superintendent being a married man, as he lives in a separate house?—There is none at all.

23327. But the junior officers could not be married as they live within the infirmary?—They could not.

23328. A married man would not be taken for the post of a junior medical officer?—No, there would be no accommodation for a married couple in the case of an assistant medical officer.

Lord Zouche of Haryngworth.

23329. I believe you have a large number of chronic cases in these infirmaries which are kept beyond the time when they would be discharged from ordinary hospitals?—Yes, that is so; a very large number of the cases admitted into the infirmaries belong to the chronic class.

23330. And those cases would not be kept at an ordinary hospital, whether a general or special one, for nearly such a long period, I suppose?—That is so; there are cases, for instance, where the disease takes 10 or 15 years to run its course.

23331. So that the inmates of these infirmaries are in a very much better position than people who will not take advantage of the poor law infirmaries?—Much better certainly than those who are left outside in their own houses.

23332. I believe it is a fact that there is no institution of any sort in London for treating what might be ordinarily called chronic cases after they have been discharged from hospitals, except such as the poor law infirmaries?—Unless you recognise as such the hospital for incurable diseases at Putney.

23333. With that exception, I suppose there is none?—I think there are one or two very small institutions, but none of any size.

23334. Is it not often a very great hardship to people, who are not paupers, but who go into the ordinary hospitals and are treated for a certain time: the worst of their disease, so to speak, is cured, and they are then turned out because there is no more room for them, and they sometimes die of the disease for want of proper care at their own homes, the only alternative being that they should go into a workhouse?—Yes, I think there is such a hardship.

23335. And do you see any remedy for that state of things?—I have never thought of any remedy, except a greater amount of voluntary enterprise in the matter.

23336. In the direction of some kind of incurable hospitals or asylums?—Chronic hospitals, similar in fact to the Cancer Hospital.

Earl Cathcart.

23337. There would be no difficulty, I suppose, in any member of this Committee visiting the workhouse infirmaries, or any of them?—Not at all.

23338. It would be sufficient merely to give one's name?—Amplly sufficient.

Earl Spencer.

23339. Where were these cases, which are now treated in the infirmaries, treated before they were established?—They were almost all of them treated in the sick wards of workhouses.

23340. You do not think that the sphere for treating the patients has been enlarged and gone beyond those who would necessarily go to the workhouse; I mean a class above paupers?—I think that a good many of the cases now to be found in the infirmaries would have refused to go into a workhouse before, but they would have been treated as out-door paupers at their own houses.

23341. They would have received relief before?—They would have received out-door relief.

23342. Do you think that you get any large number of persons who might belong to provident medical clubs?—As far as I have been able to examine that matter, I believe exceedingly few.

23343. I gather from what I have heard of your evidence, that you do take chronic cases?—There are a large proportion of chronic cases, but chronic cases do not, by any means, make up the total amount of the inmates of these infirmaries. For instance, I note that, in the course of last year, the number of admissions into the Marylebone Infirmary was 2,203, which, of course, implies that a large number of them remained there only a short time, because the infirmary only holds 700; and I compute that the total number of admissions into the infirmaries during 1890 was about 30,000, so that a large number of the cases are not chronic.

23344. Have you any return showing the average time that patients remain in the infirmaries?—No, I have not. I am not quite sure whether that average would not be a little misleading, because, as some people remain only a month and others may remain for 15 years, the extremes of the average are so great that the average itself might be a little misleading.

23345. Have you any return showing the number of cases that remain in, say, over a year or over two years?—I have not such a return, but it would be an easy one to obtain.

23346. Is there any communication between the infirmaries and the general hospitals, in this way, that any serious case might be sent to the hospital, or do you treat all serious cases at the infirmary?—In some cases the medical officer having a severe surgical case requiring some important operation would prefer not to perform the operation himself with his own staff, but would have the case sent, by leave of the guardians (which would always be given), to a general hospital. In other cases, as I think I have already said, the medical superintendent obtains the aid of some other medical man, some consulting surgeon, to assist in an operation.

23347. In

15 June 1891.]

Mr. BRIDGES, M.D.

[Continued.]

Earl Spencer—continued.

23347. In the country, I think I am right in saying, very frequently the boards of guardians subscribe to infirmaries in order to send patients there?—That is so.

23348. That would hardly be the case in the metropolis with the infirmaries?—It is not the case to nearly the extent that it was. They used to subscribe to the hospitals for that reason very much more than is done now.

23349. And you say that now the poor come more freely to the workhouse infirmary than they would to the workhouse itself?—Certainly, for every reason. They look upon the workhouse infirmary as being more akin to a hospital, and they know that they will get very much better treatment there than they would in the sick ward of the workhouse.

Chairman.

23350. Could you tell us what the cost of the 16,000 beds in infirmaries and workhouses was for the last financial year you have?—I have not added it up, but I have here a return which I could leave with the Committee of the total cost of each infirmary. The total expenditure in 1888 (which is the last printed return I have) for 23 infirmaries and sick asylums was 336,205 *l.*, and the average cost per head of the infirmaries was 35 *l.* 17 *s.* 4 *d.*

23351. Could you tell us what the cost of one infirmary was with 700 beds; Marylebone Infirmary, for instance?—The cost of the Marylebone Infirmary was 38 *l.* 9 *s.* 4 *d.* per head.

23352. Is that per patient, as it were?—Yes, per patient. That means not estimated by the nominal number of beds, but by the actual number of days' residence of all the patients for the year, supposing the average number of patients in the year was, say, 600. In the case of Marylebone, I have it here exactly; the average number of patients during that year was 653.

23353. £. 336,200 for the infirmaries; then there are 44 dispensaries as well, you say?—Yes, there are 44 dispensaries as well.

23354. What was the cost of those dispensaries?—I do not think the return is annually sent in, but I have a return, I think, for 1886 in which the cost of drugs for dispensaries was 7,000 *l.*

23355. That is for drugs alone?—For drugs alone.

23356. Then there are salaried officers belonging to these dispensaries, are there not?—Yes. I could leave a return with the Committee representing precisely what the salaries of the district medical officers in London are.

23357. Will you please do so?—I will.

23358. Will you state what is the maximum salary or rather what is the range of the amount of these salaries?—The average salary is about 115 *l.*

23359. And how many of these medical officers are there?—There are 158.

23360. When were these dispensaries established?—About the same time as the poor law infirmaries were established; they began to be formed about 1870.

23361. Were they established with any relation to population?—Yes, with some view to the

Chairman—continued.

population. In the larger parishes there are three of them, and in most of the parishes there are two.

23362. Do you know how many patients were treated at these dispensaries last year, or in the last year that you have the returns for?—I have the figures for 1890; in that year 119,141 orders were given to medical officers for attendance upon patients.

23363. That is at their own homes?—Attendance upon patients, partly at their own homes, and partly at the dispensary; for attendance at their own homes, 53,572 were given, and for attendance at the dispensary, 59,149. Then I ought to add that 10,198 pauper patients who had what are called permanent orders. In the chronic cases the orders are not renewed; they run on perpetually.

23364. So that they can attend once a week?—Yes.

23365. At the same time their malady does not require them to go to the infirmary?—That is so.

23366. How are those dispensaries managed; are they under the guardians too?—Entirely under the guardians. There is a dispenser who is generally resident, not always resident, and the dispensary is open for a certain number of hours during the day, during the morning and during the evening; and the doctors visit at specified hours, for an hour, say, in the morning.

23367. What is the range of the visits paid at the patients' houses; is it, if they are within the parish, or what?—Yes; it would rarely be more than a mile.

23368. Are the dispensers who are employed duly qualified?—All of them.

23369. And with regard to the medical officers that you have, what qualifications do they hold, as a rule?—They must be registered medical practitioners.

23370. Could the dispensaries be used for teaching purposes?—I do not think with any utility; I think it would be very difficult to make them available for teaching.

23371. You say not with any utility; is that because the cases are not grave enough?—The cases that are of any gravity are always sent as soon as possible into the poor law infirmary.

23372. Have you ever considered whether you could organise the system so as to link the poor law infirmaries and dispensaries with the great charities?—Yes, I have thought about it a good deal, and I think that every facility ought to be given for making attempts in that direction. Where a poor law infirmary is situated not very far from a general hospital, as for instance, in the case of the Whitechapel Infirmary and the London Hospital which is nearly opposite to it, or even in the case of the St. George's Hospital and the Chelsea Infirmary, or of the Lambeth Infirmary and St. Thomas's Hospital; in such cases as these I think it would be possible to have some arrangement by which the assistant physicians or assistant surgeons, that is the junior honorary staff of the hospital, could come at certain definite times and consult with the medical superintendent as to the more

15 June 1891.]

Mr. BRIDGES, M.D.

[Continued.]

Chairman—continued.

serious cases, bringing possibly with them a certain number of senior students.

23373. Are you acquainted with the organisation of the Birmingham infirmaries?—Yes, I have a general knowledge of it.

23374. I think the plan there is that they have a lay superintendent, have they not; a lay governor I think he is called?—That is so.

23375. Would you like to see that carried out in London or not?—I see some advantage in the plan. I understand that at Birmingham they have a lay governor, they have a qualified matron, and they have several junior resident medical assistants, and they have a consulting physician and a consulting surgeon from Birmingham, who visit. Now, supposing an infirmary in London were sufficiently near the centre of things to make it possible for one of the very best physicians or surgeons to visit, I can see considerable advantage in such a plan as that. I think that perhaps it would have the advantage not merely of his greater skill, but of avoiding degeneracy into routine, which is always a danger where you leave things entirely to resident officers. But on the other hand, considering the great distance of many of the infirmaries from the centre where the best medical men reside, I am afraid it would be very difficult; and I should be exceedingly sorry to leave an infirmary to the mercy, so to speak, of such visiting medical men as might be found in the immediate neighbourhood of that infirmary. I think that then things would be very much worse than they are at present. At present you have a man who is very often an exceedingly able vigorous man as medical superintendent taking a very keen interest in his work and contributing to medical science as far as he can. I think that unless you took care to get the very best medical skill that London could supply, you might, by a visiting staff, very easily change for the worse.

Earl Cathcart.

23376. You have got a list of operations there. I think, if the noble Lord in the Chair takes the same view as I do, it would be interesting to put it in, because it shows the relation of your work to that done in the general hospitals?—I could put in a complete list of all the operations of importance that have been performed; I have here merely an abstract of it.

23377. That might answer every purpose?—Very well; I will furnish that.

23378. With reference to the cost of the out-patient departments of the general hospitals in regard to your dispensaries, we have had here the average cost per order?—Does that include the proportionate expense of the medical officer's salaries?

23379. No, no salary at all, but merely his expense caused by the out-patient. Have you any calculation of that nature with regard to your dispensaries?—I have merely the total cost of drugs for the 119,000 orders, that is 7,000 *l.*

23380. When you say "drugs," you mean drugs and appliances, probably?—Drugs and appliances.

23381. Then in the case of the general hospitals they would average it upon each order?

Earl Cathcart—continued.

—Yes; I have only the average cost per order of the salary of the medical officer attending, which is not what your Lordship wants.

23382. What does it come to please?—It comes to 3 *s.* 4½ *d.*, on the average.

23383. On each order?—Yes.

Chairman.

23384. I did not quite understand. You say that the drugs cost 7,000 *l.*?—Yes.

23385. Taking the 158 medical officers at an average of 115 *l.*, a-piece that comes to about 28,000 *l.*, a little more; that makes altogether the cost somewhat in excess of 35,000 *l.*; do you include the salaries of the officers when you make the calculation which comes out at 3 *s.* 4½ *d.*?—No, my calculation of 3 *s.* 4½ *d.* is simply on the proportion of remuneration of the medical officers for each order.

23386. Each out-patient?—Each out-patient.

23387. Therefore you do include the cost of the medical officer in that calculation?—Yes, it includes nothing else but that.

Earl Cathcart.

23388. Have you ever struck the average of the number of attendances upon each out-door relief order, each dispensary order for out-door relief?—No, I have not done that. I have inquired into it a little, but never exhaustively. I believe it to be about eight attendances on the average.

23389. I suppose that the establishment of these dispensaries which the noble Lord in the Chair asked you about, is under Mr Gathorne Hardy's Act?—Yes.

23390. The whole institution of the infirmaries and out-door dispensaries and that is under Mr Gathorne-Hardy's Act?—Yes.

Lord Zouche of Haryngworth.

23391. Are these poor law infirmaries always separate buildings from the workhouses?—In nearly every case they are separate. In one or two cases a portion of the workhouse has been so cut off from the rest of the workhouse building as to make a separate infirmary; that has been done in the case of Shoreditch and in the case of St George's-in-the-East.

23392. What class of patients are taken into the sick wards of the workhouses?—Merely those for whom there happens to be no room in the infirmary; they represent really the overflow. Where the infirmary is sufficiently large and is also sufficiently near at hand, there would be no cases at all left in the workhouse. For instance in St George's-in-the-East last year there were only two deaths in the workhouse, whereas in the infirmary adjoining there were 317.

Chairman.

23393. In what workhouse is the maximum number of deaths in the sick beds of the workhouse?—In the case of Bethnal Green, which has no separate infirmary at all, the number of deaths last year was 462. In the case of St Pancras, where there is an infirmary at Highgate, but the infirmary is not sufficient for the number of the sick, the number of deaths in the

15 June 1891.]

Mr. BRIDGES, M.D.

[Continued.]

Chairman—continued.

the workhouse sick wards was 400. In the case of Holborn also, a workhouse in addition to the infirmary is set apart for sick people, and there there were 408 deaths.

23394. What do they do at Bethnal Green, supposing they have more patients than they can take in?—There is no alternative except to cram them into a smaller space.

23395. And is that infirmary very much over-crowded as a rule?—It is.

Lord Zouch of Haryngworth.

23396. Do you think that there is not the same objection on the part of people to take advantage of a poor law infirmary, when it is a separate building from the workhouse; I mean, would a man going into a poor law infirmary, going into quite a separate building and institution from the workhouse, consider that he did not go in quite so much as a pauper as if he went into an infirmary where it was workhouse and infirmary together, do you think that some such distinction is drawn?—I think some distinction is drawn. I think sometimes a poor man would prefer remaining an out-patient at his own house to going into anything that was specially associated with the workhouse; and no doubt if the infirmary is some way off he gets to consider it as somewhat more like a general hospital.

23397. But where the two are combined in one building there is no doubt a very strong objection on the part of a good many people to going into it at all?—The objection would certainly be rather increased. When I say that the two are combined in the two cases that I mentioned, I did not mean that they are combined as far as administration went, but that the two buildings were adjacent.

Earl Spencer.

23398. Have you any means of comparing the condition of things, with regard to the treatment of the sick, before these new infirmaries were established and the condition of things now?—Yes, I think the materials exist for that comparison. In the Thirteenth Report of the Local Government Board, such a comparison has been made in the body of the Report, with the condition of the sick before Mr. Gathorne-Hardy's Act. In 1886, for instance, there were, I think, only 111 paid nurses for all the sick of London, whereas now the number is exactly eight times that, 888.

23399. Can you give any figures to compare the number of cases treated per thousand of the population, or anything of that sort?—I have not the numbers with me.

23400. Has there been a large increase in the number of cases treated in the infirmaries, compared with what the number was before?—Yes, they have increased very considerably. A very large number of the sick poor of London, would not go into the sick wards of the workhouses at all, but remained to be treated at their own homes.

23401. Did they pay for that treatment before?—No; they were treated by the poor law medical officers.

23402. In an inferior way?—In a very inferior way.

(24.)

Earl Spencer—continued.

23403. Are there any figures to show what the result of the new treatment has been, as to cases alleviated or cured?—I think that in that report I referred to there are some of those facts to be found, that is to say, in the Thirteenth Report of the Local Government Board; I have not got it with me here.

Chairman.

23404. Will you put it in?—I will.

Earl Spencer.

23405. Then as to the cost of drugs and medical officers, in answer to a question, you gave the cost of drugs and the cost of paid medical officers; can you compare that with what it used to be under the old system?—I cannot; because under the old system the drugs were provided by the medical officers themselves.

23406. Then they were paid on a different system from what they are now?—They were paid a sum, out of which they had to find their own drugs.

23407. Now you mentioned that one of the workhouse infirmaries is exceedingly crowded; crowded to an extent to affect the health of the patients, or the cure of the patients, do you mean?—I think any amount of overcrowding would tend to affect that.

23408. But is it so overcrowded that it has a deleterious effect upon the treatment of these patients?—I am not quite aware what infirmary your Lordship is alluding to.

23409. I think it was Bethnal Green?—Bethnal Green is a case in which there is no infirmary, a case in which all the people are treated in the sick wards of the workhouse.

23410. How is that; is it that the guardians have not been willing to join in a separate infirmary, or is it that the Local Government Board have not insisted upon it?—The Local Government Board has pressed them very strongly, but they have not yet succeeded in obtaining a site; they are at present actively engaged in looking out for a site.

23411. I understood you to say that some of these infirmary wards were already crowded?—There is one of them which is somewhat overcrowded, which has more patients, perhaps, 10 per cent. more patients, than we think ought to occupy it; I refer to the infirmary at Whitechapel, but it does not amount to more than that.

23412. Can you state the dimensions of the rooms, or the number of cubic feet of air allotted to each patient?—The amount of cubic space allowed to each patient in the poor law infirmaries is 850 feet.

23413. That is the regulation?—That is the regulation amount.

23414. And in this case of over-crowding, what was it?—In some cases it would have been reduced to about 650.

23415. Would that have a serious effect on the treatment of patients?—It would undoubtedly have a deteriorating effect in treating pneumonia or in treating almost all diseases of severity; especially in cases of erysipelas for instance, it would have a deteriorating effect.

23416. Is there any communication between one infirmary and another, so that if one is overcrowded, and the other not full, they can relieve

15 June 1891.]

Mr. BRIDGES, M.D.

[Continued.]

Earl Spencer—continued.

the overcrowded one by sending patients to the other?—Voluntary arrangements can be entered into between two boards of guardians, with the sanction of the Local Government Board, to take a certain number of patients into an infirmary which has sufficient room, at a certain price.

23417. As a matter of fact, is that often done?—It is done; not very often, but it is sometimes done.

23418. How do the patients obtain either admission to the workhouse infirmaries or relief at the dispensaries; by the order of a relieving officer or by a simple voluntary application at the institution?—A person obtains relief at a dispensary by applying at the relief office of his parish, and telling the relieving officer that he himself, or that his relation is ill, and then the relieving officer gives the district medical officer of that district an order to attend that person, either at his own house, if the case is a very bad one, or at the dispensary, if not. With regard to the infirmaries, the relieving officer in the same way gives an order for admission into the infirmary.

23419. The relieving officer does?—Yes, the relieving officer gives an order to attend.

23420. And these patients often go from their own home direct to the infirmary?—Very often.

23421. Does the relieving officer in all these cases satisfy himself that they are destitute and unable to afford to pay for medical relief?—Yes, he is bound to do so; it is part of his duty to do that.

23420. That is strictly adhered to as far as you know?—I know of no instance where it is not adhered to; and I think the instances where a person who could afford to pay for his maintenance in the infirmary finds admission to the infirmary are very rare.

23423. I suppose you are hardly in a position to answer the question whether there are any provident clubs in these districts where infirmaries and dispensaries are placed?—I could not answer with any accuracy.

23424. Do the boards of guardians encourage provident medical clubs?—No, I do not think the boards of guardians in London have interested themselves in that.

23425. You are hardly aware whether the establishment of these infirmaries and dispensaries has diminished the number or prevented the creation of provident medical clubs?—I do not think that it has diminished their number, because I am under the impression that that number has increased of late.

23426. The provident clubs, do you mean?—Yes, the provident clubs.

Earl Cathcart.

23427. We have heard of cases where people have been sent round from pillar to post when they have been to look for the relieving officer; have you ever heard complaints of that nature?—Yes, some such complaints have been brought to the knowledge of the Local Government Board; it has happened now and then.

Earl Cathcart—continued.

23428. I think we heard of a case where somebody was sent backwards and forwards, and had to end in the hospital at last, a case in which the relieving officer made great difficulties. But that does not occur often I gather from you?—I do not think it often occurs. Those cases are always very carefully investigated when they do occur.

23429. You have not referred to midwifery relief; have you any strong opinion with regard to relief given in midwifery cases?—No, except that I have a very strong opinion that midwives should be trained persons.

23430. But are unmarried women invariably sent into the workhouse or into workhouse infirmaries for confinement?—Yes; out-door medical relief would not be given to an unmarried pregnant woman.

23431. She would be sent into the workhouse, not the infirmary?—The workhouse.

23432. Then are they attended by medical men and not by midwives?—There is very often in the workhouse a trained midwife, and in those cases the medical man would only be called in cases where it was necessary to call him in.

Chairman.

23433. In regard to that, are there any trained midwives attached to the dispensaries?—Not exactly attached to the dispensaries, but in one or two cases there are non-resident midwives engaged by the guardians and appropriated to certain medical districts.

23434. Is that only in a few cases, with a few Boards of Guardians?—It is only in a few cases; it is not the rule in London.

23435. Would you like to see that universal?—Presuming that the midwives were properly trained, and with certain regulations as to the attendance of the medical officer after the confinement, I should be very willing to see it extended.

23436. Are there any other trained poor law nurses who nurse patients in their own homes?—At present there are not; I believe that it is in contemplation to allow boards of guardians throughout the country to establish district nurses.

23437. A great deal is done by voluntary effort in that direction in London, is there not?—There is a great deal.

23438. You say that the Bethnal Green Guardians are looking for a site for an infirmary; how long have they been looking for a site?—They have been looking for it many years.

23439. Since 1868?—They were excused in the first instance from prosecuting the search for an infirmary site, on the ground of their extreme poverty. The East End of London was in a state of great distress then, and Bethnal Green was supposed to be the poorest part of the East End; and, therefore, at that time pressure was not put; but for the last 15 years great pressure has been put, and I believe the guardians have been really in earnest in looking for a site; but there exists no site in their parish. They had hoped

15 June 1891.]

Mr. BRIDGES, M.D.

[Continued.]

Chairman—continued.

hoped to get some of that poor land which was talked about a year or two ago, but they have not been able to do that, and it is a very difficult matter to get a site.

23440. Is there no site outside the parish that they could have?—I hope that one will be found outside the parish, but they have not yet been able to get one.

23441. You said at the commencement of your evidence that you thought that the number of beds provided for the sick in infirmaries was insufficient, and that that was proved by the fact that upwards of 2,800 people died last year in the sick wards of the workhouses?—Yes.

23442. Did the general hospitals make up the deficiency in any way?—I should not have thought that they did, because the tendency is for the flow to be from the general hospitals to the poor law infirmaries, not the other way. There are very few instances of people being sent from the poor law infirmaries to general hospitals.

23443. Then, again, a great number of people who go to the hospitals would have to go to the poor law infirmaries if there were no hospitals?—That is so; to that extent, of course, they relieve the pressure.

23444. But taking it all round, your opinion is that the medical relief in the metropolis is inadequate?—It is.

23445. Have you anything else that you wish to state?—No.

Lord Zouche of Haryngworth.

23446. Is it not the fact that there is a great flow of patients from the general hospitals to the poor law infirmaries to be treated as chronic cases?—Yes, I should think there is a very considerable flow of those.

23447. That is shown by actual returns?—It could be shown by actual returns, but I am merely speaking of what I know from my own observations. When I visit the infirmaries, and ask about such and such a case, I am told it came from St. Thomas's or from Guy's hospital; they could not keep it there any longer.

23448. And then they would go on to be treated as chronic cases in the infirmaries?—Yes.

23449. And you think that is often done?—I am sure it is very often done.

Earl Cathcart.

23450. The extreme activity of the out-patient departments of the general hospitals must be a little relief to the rates of the poor law. If it were not for the great activity of those out-patient departments of the general hospitals a number of people more would come for orders to the poor law dispensaries?—I daresay it is so.

23451. And with regard to the cost of the poor law dispensaries, we calculate that each order costs about 4 s. 3 d. in your out-patient department; that is to say, the dispensary, including the drugs and the medical man; we calculate that it would be about that approximately?—About that.

The Witness is directed to withdraw.

MR. CHARLES GROSS, M.D., is called in; and, having been sworn, is Examined, as follows:

Chairman.

23452. You are the Medical Superintendent of the St. Saviour's Infirmary?—Yes.

23453. Where is that situated?—In East Dulwich-grove.

23454. That is one of the new large infirmaries, is it not?—That is the largest in London.

23455. How many beds are there?—Seven hundred and eighty-six.

23456. And do you generally keep all those full?—No; we have never had more than 700 odd; 702, I think, is the most.

23457. Is that because you wish to keep a margin?—No, but because we have not had the people to fill them.

23458. Should you feel obliged to keep a certain margin, as they do in the general hospitals?—We should like to, of course, but it is impossible to do so.

23459. Would you tell me how the patients are admitted?—They mostly come in by an order, signed by the relieving officer and the out-door doctor, in fact they must be signed by both. Others come in transferred from the workhouse.

23460. Do you take any accidents, excepting through those orders?—No, only through those. We are out of our district, otherwise perhaps we should; we are two miles from the union itself.

23461. Then is this infirmary situated in the

Chairman—continued.

country?—Yes, in East Dulwich; it is rather a nice neighbourhood.

23462. Would you tell me what salary you are paid by the guardians?—£. 450, and a house, coals, gas, and washing.

23463. And have you an assistant?—I have one assistant now.

23464. And you are responsible for the whole of the administration of the infirmary to the guardians, are you not?—I am.

23465. And also for the whole of the medical work of the establishment?—Yes.

23466. Do you not find that almost more than you can manage?—Yes, it is very hard work indeed.

23467. Would you like a larger amount of medical assistance?—We ought to have it, certainly.

23468. What do you think would be sufficient?—You see we have so much useful material there which now is wasted. Of course with the number that we have we cannot make large reports and so on with only one; I think four really would not be too many to do the work.

23469. Would you like to have them resident on the spot with you?—No, that is not necessary. The difficulty that we have is taking the reports

15 June 1891.]

Mr. GROSS, M.D.

[Continued.]

Chairman—continued.

of the cases; we really have not time to do that thoroughly.

23470. That is done by clinical clerks?—It should be, but my board seem very much against that for some reason or other.

23471. Perhaps they have in their mind the cost to the ratepayers?—No, I do not think so; I do not think they have sufficiently grasped the situation.

23472. Have you made representations to them on the point?—Yes, I had a third medical officer last year; he has not been re-appointed.

23473. Then, in addition to the administration of the place and the medical work, are you responsible for the book-keeping?—No. I have a medical relief book, but I have a clerk for that.

23474. And then you are also responsible too for all the food?—I have a sort of general responsibility; the steward has to do all that.

23475. But suppose any complaints were lodged to the guardians, the guardians would come down upon you, I suppose?—Yes, I ought to have known it first.

23476. Would you tell us what staff you have beyond this officer whom you have named?—We have a dispenser, a steward, a matron, and an assistant matron.

23477. Is your matron a trained nurse?—Yes, quite.

23478. You would be of the same opinion, I suppose, as the last witness, that all the matrons in the poor law infirmaries ought to be trained?—I think so, certainly.

23479. Have you any trained nurses too?—Several.

23480. What number of nurses have you?—We have 12 head nurses or sisters, 48 ward nurses, and six assistant nurses, besides a superintendent of night nurses.

23481. Is the superintendent of the night nurses a trained nurse?—Yes.

23482. And the 12 staff nurses or head nurses?—Yes, all trained.

23483. And what proportion of the 48 are trained?—They have all had some training, I do not take anybody unless they have been at least 12 months in a hospital.

23484. Are there any of the 12 nurses that you call trained nurses certificated nurses?—Yes, they have all had three years' experience at least; I do not take any of them with under three years' training.

23485. And do you find that the trained nurses and the untrained nurses get on together?—Yes; the trained nurses are above the untrained nurses.

23486. But some of these untrained nurses are young women, I suppose, are they not?—Yes.

23487. Do you take them with a view to teaching them their business?—No; we have a scheme now for taking probationers, but it has not passed the board yet; they seem to have some objection to it.

23488. But could you conceive in your own mind any objection they could have beyond that of expense?—I do not know; I think they have a sort of sentimental objection, that the infirmary should not be a means of teaching anything.

Chairman—continued.

They do not like the idea of making it a school in any shape or form.

23489. Both as regards the nurses and the patients?—And everything.

23490. Could you tell us what hours you employ your nurses?—The head nurses have to be in the wards at eight o'clock in the morning, and they go off at nine at night; and the other nurses, the ordinary nurses, come on at seven o'clock in the morning and go off at nine at night.

23491. And what hours for meals have they got?—They have one hour for dinner; the breakfast is before they come on duty; and then they have tea in the ward kitchens by the side of the wards. They have every alternate day three hours in the afternoon for recreation. They are off duty one week-day a month; and every third Sunday from noon till 10 p.m.; and they have 14 days' leave of absence. We have not separate night nurses; the nurses change from night to day duty, taking three months at a time. They have 24 hours' leave every time they come off night duty or go on night duty; so that makes really eight more days a year.

23492. They have their breakfast before they go into the wards, they have an hour for dinner, and they have their tea in the ward kitchens?—Yes.

23493. And then do they have supper?—Yes, they have supper in the mess-room after they have gone off duty after nine. They are supposed to go to bed at ten o'clock.

23494. Have the nurses a separate kitchen?—No; each ward has got a ward kitchen at the end, where they heat milk and so on, not big cooking.

23495. But their meals are cooked in the general infirmary kitchen?—In the main kitchen.

23496. Where do the nurses sleep?—In the middle block, quite apart from the wards.

23497. And do they have separate rooms?—All the head nurses have separate rooms, and then we have about 17 other nurses who have separate rooms; and the others have to sleep two in a room.

23498. Then there is no nurse who sleeps in close proximity to the wards?—No, none.

23499. Then have you any ward-maids, as they are termed in the general hospitals?—We have 30 scrubbers, charwomen who come from outside; 12 of them are employed the whole day long, and 18 for six hours, half-a-day.

23500. And that is all the extra assistance there is?—That is all the extra assistance there is. We have nine house porters.

23501. But on the female side that is all?—Yes.

23502. Then as regards the male staff?—There are nine porters who carry coals and food, and all that sort of thing.

23503. Then as regards the infirmary cook?—We have a female cook and two kitchen-maids, and an assistant cook; four people in the kitchen.

23504. Have you any housemaids?—We have six housemaids.

23505. Can you tell us how you pay these nurses?—

15 June 1891.]

Mr. GROSS, M.D.

[Continued.]

Chairman—continued.

nurses?—The assistant nurses begin at 16 *l.* a year, and rise 1 *l.* a year.

23506. Up to a maximum of what?—They never stop till the maximum; they get promoted or go. The ward nurses begin at 20 *l.*, rising 1 *l.* a year to 25 *l.*; and the head nurses begin at 26 *l.*, and rise to 32 *l.*; everything found, and uniform.

23507. Do you have many complaints from the nurses as to their food?—No; ours is a very good dietary indeed.

23508. Have you got the dietary sheet, or could you send one?—I could send one.

23509. Then from what you say as regards the length of time the nurses stay, I presume you have no pensions for them?—No, none of them stay long enough for that.

23510. What is about the average time at which your nurses leave?—A good many nurses simply come for a year. I mean they go away at the end of a year, they cannot get a testimonial before; and some stop for three or four years.

23511. Do you give them a testimonial as trained nurses at the end of the year, or what is it a testimonial of?—As to their nursing capabilities and so on. We do not profess to train them now, although we hope to. There is a scheme now before the board to have probationers.

23512. How long has that scheme been before the guardians?—I brought it up three or four years ago, and it was thrown out then, and it is now under consideration again.

23513. Do you have visiting governors?—The committee visit every Monday, when they come and go round the infirmary.

23514. A certain number of them?—All the committee do.

23515. Do you have members of this visiting committee coming at various times?—No, only on the proper days; the stated days.

23516. Is there a chaplain in connection with the infirmary?—There is.

23517. What does he get?—He gets 250 *l.* a year.

23518. And is he lodged?—No, he lives opposite. He has to spend five hours a day in the infirmary.

Earl Cathcart.

23519. Have you had more than one medical inspector like Dr. Bridges; have you had any of his colleagues to visit your infirmary; have you had any medical inspection beyond Dr. Bridges?—No, Dr. Bridges is the only one.

23520. He has no medical colleague?—Not that comes to us.

23521. How often may he visit you, on a sort of average?—About once a year.

23522. Not more?—No; then we have another inspector who comes, not a medical man.

23523. That is Mr. Hedley?—Mr. Hedley too. Mr. Herbert, I was thinking of, the assistant inspector.

23524. Dr. Bridges does not come, on an average, more than once a year?—Perhaps three times in two years.

23525. Does he come at uncertain times?—Yes.

(24.) e

Earl Cathcart—continued.

23526. You never know when he is coming?—No.

23527. With regard to the matron, I suppose you maintain a sort of chain of responsibility, that is to say, you would not give orders to the nurses, except through the matron?—No.

23528. If you had to find fault with reference to any material matter with the female servants, you would speak to the matron about it?—No, I should not; I should speak to her eventually.

23529. But you would not in the first instance?—I should say that I should not speak to the matron; if I saw a nurse misconducting herself, or if I thought it necessary to censure her, I should not speak to the matron necessarily; but I should mention it afterwards to the matron that such and such a nurse was doing wrong.

23530. You would make a point of not finding fault without telling the matron you had done so?—I should take her into my confidence.

23531. I mean you would desire to keep up the matron's authority in the establishment as much as possible?—Certainly.

23532. It would be for your interest to do so?—My interest and my duty, I should think.

23533. Are your nurses ever drawn from the workhouse, that is to say, supposing a smart woman comes into the workhouse for any object, is she ever drafted into the infirmary as a nurse?—No.

23534. They all come from outside altogether?—All; it is almost entirely left in my hands, and the hands of the matron to select nurses.

23535. Does the auditor exercise any depressing influence upon you in any way?—No.

23536. Are you liable to be surcharged in any way?—No.

23537. If anything went wrong in the steward's department he would be surcharged, not you?—Yes.

23538. Do you take lock cases?—Only very bad ones; the ordinary ones are kept in the workhouse.

23539. Do you take male and female lock cases?—If bad.

23540. If you had a male case, would it be nursed by a female?—It would be nursed by a female.

23541. We have been told here that it is not right that female nurses should be employed in that way; what is your view?—I should prefer a male nurse if we had many cases; that is to say, if we had a lock ward in our infirmary; I should prefer a male nurse for those cases.

23542. We were told by a witness from the female lock hospital that it was a totally unfit thing that women should be employed in nursing male cases?—I think so.

23543. Still you do it?—We have so very few of them that it would not pay to have a man on purpose.

Lord Zouche of Haryngworth.

23544. Do patients come into your infirmary from the general hospitals?—Yes, a great number; a great many of them who are very ill, perfectly hopeless cases. They would send to us bad cases of consumption, and so on.

23545. Chronic cases?—Chronic cases, and occasionally

4 K

15 June 1891.]

Mr. GROSS, M.D.

[Continued.]

Lord Zouche of Haryngworth—continued.

occasionally an accident. If a man breaks his leg, they will send him on to us, after putting him up in splints.

Earl Spencer.

23546. You were not employed in the old workhouses?—No.

23547. You cannot compare the treatment the patients got there with the treatment you give them now?—I was not employed then, but I know a great deal about the workhouses, and the country workhouses I have seen. The treatment now is as different as it possibly could be.

23548. They have a much better chance of a successful cure?—Certainly.

23549. Had you ever been in any other workhouse infirmary before you took charge of this one where you now are?—No.

23550. You are not at all overcrowded, I presume, in your infirmary?—No, we have not been overcrowded.

23551. Are your beds generally full?—No, we have never had more than 702 occupied, I think, and we are certified for 786; we have now, I suppose, about 640 occupied.

23552. Are there many cases that you have that remain there for many years?—Oh, yes, several; paralysed cases mostly.

Lord Thring.

23553. Do the poor object to going into the poor law infirmary in the same degree as they do to going into the workhouse?—Oh, dear no. They look upon it now as going into the infirmary; the word “workhouse” is never mentioned. “I am going to the infirmary” they say.

23554. Then do they go straight there; does a poor person go straight from his house into the infirmary?—Most of them.

23555. On the order of the relieving officer or of the medical officer?—Both have to sign the order.

23556. The relieving officer has not power himself to send a person to the infirmary?—No, he has to send for the doctor, and the doctor sees him, and signs the paper as well; and if he does not think it a suitable case he sends it to the workhouse.

23557. Then they do not necessarily pass through the workhouse at all?—No; I suppose, perhaps, 40 per cent. come through the workhouse.

23558. And do you discharge them direct from the infirmary or pass them through the workhouse?—Generally, if a man has no where to go to I should send him to the workhouse.

23559. But if he has got well and has a place to go to, what then?—I simply say, “You had better go,” and he goes; if he refused to go, I should transfer him to the workhouse.

23560. I mean this: A man may go to the poor law infirmary, be cured of his complaint, and go away without having any taint, so to speak, of the workhouse about him?—Certainly.

Earl Spencer.

23561. But they are all cases which are sifted before they come in, as to whether they can pay for medical relief?—But some of them do pay.

Earl Spencer—continued.

If a man was in a good club or had an annuity, or something of that sort, the guardians would deduct the cost of his keep out of whatever he had got.

23562. Are there many cases of that sort?—I should think, perhaps, about 10 or 12 per cent. in a year.

23563. And do they know that they belong to a club when they take them in, or do they discover it afterwards?—Sometimes they know. A man receiving 10 s. a week and his people cannot attend to him, or he is too ill to be attended to at home, then the guardians take him in and deduct 8 s. a week for his maintenance, or some such sum.

23564. What happened in the old time before these infirmaries were established?—They would do the same in the workhouse in such a case.

23565. I mean would he have gone to the workhouse?—Not so many would. As a rule, they do not object to come into the infirmary.

23566. He would probably have gone into a hospital then?—No; the case being chronic they would not have taken him into the hospital. I am referring to cases of old people, paralysed and broken down; they would not look at them in the hospital.

23567. But you do not take in, do you, independent working men receiving what we have often been told is the typical sum of 30 s. a week, as much as that?—Yes, we do.

23568. And what do they pay?—Nothing. For instance, a man was burnt, a gas man; he earned very good wages, but on the Saturday he was burnt a bit; he is sure to come to us on Monday, that is to say, he has saved nothing, he has done nothing for himself, and so he comes in to us. Again, a man comes in with delirium tremens sometimes.

23569. But the man receiving 30 s. on Saturday, and coming in on Monday, might, I suppose, belong to a provident club?—He might, but I do not think near so many join the clubs.

23570. In a case of that sort would the guardians recover any payment from him?—If they thought of it they would very likely, and if it is given on loan they can recover.

23571. But do you think there are many cases such as you mentioned of men receiving 30 s. a week who come to your infirmary?—I think so, a goodish many.

23572. What sort of per centage?—I can only guess; it is only accidentally that I discover these cases. It does not really come to me; only occasionally I see, say, a bricklayer, a man apparently in robust health come in, perhaps with a burn, or some little accident, or something of that sort. I ask him, “Are not you in a club; have you not been working?” And very often he says, “Yes, I was at work last week.”

23573. Why do they come to you instead of going to the hospital?—They would not take him at the hospital; that is to say, perhaps the case is not serious enough or interesting enough.

23574. And what would have happened to that man before the establishment of your infirmary?—I should think he would have stopped out. They do not mind coming in now.

23575. And he would have paid for himself, do you

15 June 1891.]

Mr. GROSS, M.D.

[Continued.]

Earl Spencer - continued.

you mean after he had gone back to work?—He would have got a medical order.

23576. Is out-door relief much given in London where people are in receipt of large wages?—I cannot say from my own knowledge.

Lord Thring.

23577. In effect, according to your evidence, the tendency of these infirmaries, however good it may be with regard to the poor, is greatly a tendency to pauperise them?—Certainly. A man comes and looks round the infirmary, and says that if he has such a place as that to come to he is not going to save money to provide for himself. We have had that constantly said.

23578. And you have said also that it undoubtedly prevents their going into provident clubs?—I think so. A man says: "I have nothing to gain by going into a provident club; I am very well treated in the infirmary." They all come in if they have a chance.

23579. But legally does not he become a pauper by going to the infirmary?—Yes; but I do not think he takes notice of that.

Earl Spencer.

23580. The inspector said that pains were taken to ascertain that the patients admitted were of a class that ought to receive poor law relief; you think that that is not the case?—Yes, pains are taken, but a man is earning, say, 30 s. a week, and by Saturday he has spent it all or very nearly all, and he is taken ill on the Monday and he is virtually destitute.

Lord Thring.

23581. Yours is most startling evidence because it amounts to this, and I suppose it is the case. Take the case of a gas fitter earning 30 s. a week; if that man were thrown on his own resources, as he would have been in former days, he would not have got out-door relief; he would not have gone into the workhouse, but would have gone on credit for a time; he would have gone to his doctor, and the doctor would have mended him up on credit. The man is destitute in one sense, that he cannot pay to-day, but he may be able to pay next time. Do I understand that under those circumstances the man comes to the infirmary?—In several cases. Take a man in delirium tremens; we know that the man has been in good work; he will come and stop a fortnight, and give any amount of trouble, and then we send him away perfectly well, and he has done nothing for it at all; perhaps he has torn up a lot of clothes, and done all sorts of things in delirium.

23582. There is a legal power to recover; it is a debt, is it not?—I do not think it is unless the guardians when they give the relief give it on loan, and then of course they can recover it as an ordinary debt.

23583. But if it is not given on loan it becomes no debt at all, and there is no obligation to pay?—No; sometimes money may be found on a patient. One came in with 9 l. on him the other day; the guardians would deduct the cost of his maintenance out of that; it is paid out into the treasury and his cost deducted.

(24.)

Earl Spencer.

23584. Then with regard to the infirmary, you do not think that there is the same deterrent effect in offering the relief there in all cases as the offer of the workhouse had?—No, not at all.

23585. In the case of the workhouse their coming in is a test really whether they are genuine cases?—Yes.

23586. In the case of the infirmary they come in because they find it so good and comfortable, and they do not consider it to be the same thing in effect as going to the workhouse?—Certainly not.

23587. And you think there are a great many cases of people who refuse to go to the workhouse and come to you?—Yes.

Lord Thring.

23588. You have no right to send a man to the workhouse?—If I consider that he is not a fit case for the infirmary, I say "Have you anywhere to go to?" and if he says "No," I transfer him to the workhouse.

23589. I do not mean that; I mean this case: a man comes with good wages, and say, with a bad burn; you take him into the infirmary; at the close of his treatment, when he is quite well, you have no right to discharge him into the workhouse or to detain him for a day?—The only means I really have of discharging him is to send him to the workhouse.

23590. But he passes out of it?—If he says, "I am not going to the workhouse," then he discharges himself and goes right out.

23591. That is what I mean; if he chooses to discharge himself you cannot keep him?—I cannot keep him under any circumstances; I believe we can make him give 24 hours' notice.

Earl Spencer.

23592. Do you take children from their homes into the infirmary?—Yes, a great number of children.

23593. Are the circumstances of the parents investigated?—Yes, that would be done by the board. We get several children's cases that they will not take at the hospital, hopeless cases.

Chairman.

23594. You said that you had a great many patients come from hospitals; a man might have an accident you said, and break his leg, and have it set at the hospital, and then he might be sent on to the infirmary?—Yes.

23595. He would come to complete the cure, as it were, from the hospital?—Yes; they would not let him occupy a bed at the hospital.

23596. Then you get not only chronic cases, but also some of these accident cases?—Several.

Lord Thring.

23597. Yours is a sort of convalescent ward, therefore, to the hospital?—To a certain extent. Of course they must get an order; the hospitals do not send them on to us direct, we should not take them in if they did.

Chairman.

23598. How long have you been at St. Saviour's Infirmary?—Nearly 14 years.

4 K 2

23599. You

15 June 1891.]

Mr. GROSS, M.D.

[*Continued.*]*Chairman—continued.*

23599. You were appointed by the board of guardians?—Yes.

23600. Did they require a special qualification like that of the Royal College of Physicians or Surgeons?—No, they did not.

23601. Is the requirement of that general?—It ought to be, but I do not think it is.

23602. You spoke of a committee of the guardians; what do the committee do?—It is a visiting committee; they come on Monday afternoons, and the first thing they do is to go through the steward's requisition book for all the food or anything else required in the place. Then it is put to the committee, and the chairman signs on the side of it if it is to be ordered. Then the committee see me and the matron, and do any business that may arise; and if there is no more business they go up and visit the infirmary; two parties sometimes.

23603. Have you ever considered whether it would be a good thing to have students at the infirmaries?—Yes.

23604. You would be in favour of that?—Certainly, that is to say, because of the material there; people have no idea of the useful material that, so to speak, is wasted. I feel very strongly on that indeed, because the great deficiency of medical education now is the want of clinical instruction; and here we have material and opportunities of showing cases in clinical studies generally that it seems almost sinful to waste.

23605. And are the guardians opposed to that, do you know?—I think many of our guardians are. It varies a great deal in different boards.

23606. Are they afraid that the treatment in infirmaries might become more expensive if there were students there?—No, I do not think so. On the contrary it ought to be cheaper, because I suppose they would not come for nothing; it might be made almost self-supporting.

23607. You see every advantage in it?—Every advantage.

23608. Is there anything else you would like to state to the Committee?—No.

23609. If there is anything you would like to suggest we shall be glad to hear any suggestion from you?—The only suggestion which I would make is this: As I was just saying, there is a waste of material, and it would be better for the patients and the medical men and for everybody that there should not be that waste. The more light you can throw on a patient's case the better, and the more people you have coming to see it the better; it is a check on the doctors and on the staff. There is an inclination after being there some years to get rather tired of the whole affair, and I always find that if friends come round or other medical men are allowed to come round, it is good for the patients and for the staff and everybody. Otherwise as one gets older one feels inclined, I am afraid, to perform one's duty in a more perfunctory manner than one should do. I am sure the poor would greatly benefit by it and that they do not object to others seeing their cases; in fact, my experience is that the more people you take to see a case the more the patient likes it, except that very occasionally a woman objects to being looked at.

23610. Do you consider the nursing adequate at your infirmary?—Our nursing, if we were

Chairman—continued.

allowed to take probationers, would be quite right, only there is such a dearth of nurses now that we are obliged to take nurses that really, so to speak, are not worth the money. They have not had sufficient training and they are not perhaps quite such a class as one would desire, although I must say that we have about the best nursing staff of any infirmary. The guardians leave it pretty nearly in my hands, with the assistance of the matron, and we do not take anybody, if we can possibly avoid it, who is untrained or whose education is not so good as we should like. If we had probationers we should have the pick of some perfectly capable and superior young women. We are obliged now in the winter to take, I was going to say, anyone that comes.

23611. Do you think that nursing in an infirmary is unpopular with young women because it happens to be connected with the workhouse?—We do not mention the word "workhouse"; it is always called the infirmary. And it is rather a misnomer to say "workhouse infirmary"; a workhouse infirmary is really part of the workhouse, as is the case in the country, but this is so entirely separate that the nurses now begin to see the difference; though sometimes, when we write to a nurse, directly she sees the word "Union" it frightens her in a moment, and she does not come. But one reason why trained nurses prefer the hospital is because it is far more exciting and more interesting; there are more students about and there is more to see; always a lot of changes, and when they come to us they miss all those; whereas if they were originally trained with us and never participated in these excitements at the hospitals, they would begin to think it was the normal course of events, and I believe they would be far happier and more contented; and I think really they have in our infirmaries more leave and better food and everything better than they would have in almost any hospital; they are not kept quite so strict either. And if we had probationers and trained our own nurses we should get a much better class I am sure.

23612. What salary does the matron have?—The matron gets 100 *l*.

23613. Does that increase?—No, it does not increase; she would possibly have an increase in time if she asked. She has only been there about six weeks. She gets everything found.

23614. One question with regard to the night nurses; I omitted to ask what meals do they get?—They get up at 7.30 at night; breakfast at 8 p.m.; they have to be in the wards at 8.50; they leave the wards at 9 o'clock in the morning; their dinner is at 9.30 in the morning.

23615. And then do they have, like the day nurses, a sort of tea in the kitchen?—Yes, they take in food for the night.

23616. What is that food, bread and butter?—I do not remember exactly the dietary. They have an egg a day and a pint of milk, and an extra pint of milk if they do not take beer; and I think eight or nine ounces of cooked meat.

23617. Do you happen to remember what wages the scrubbers have?—The half-day scrubbers have 1 *s.* 6 *d.*, and the whole day scrubbers have dinner and tea given them as well.

23618. The

15 June 1891.]

Mr. GROSS, M.D.

[Continued.]

Chairman—continued.

23618. The half-day scrubber, the six hours scrubber, gets 1 s. 6 d., and the 12 hours scrubber 1 s. 6 d. and dinner and tea?—Yes.

Earl Cathcart.

23619. Dr. Bridges told us that the medical superintendent, in some cases, called in consulting surgeons when the guardians paid; is that your practice?—No; I have occasionally called in a friend, but I have never asked the guardians to pay for it.

23620. And then do the guardians take interest enough in those cases to pay the consulting surgeon?—I never knew but one place, the Poplar and Stepney, where they pay five guineas.

23621. But that is a very rare circumstance?—I believe so. We have always plenty of hospital staff only too pleased to come down and see our cases.

23622. Might I ask what your intermediate practice was after you left your hospital, before you took this appointment?—I was an assistant in a large practice, and I went and took charge of a large asylum for a short time; but before I was qualified I was assistant to the doctor of a large workhouse in London.

23623. You mentioned having country experience as well?—Yes, I was also at Leighton

Earl Cathcart—continued.

Buzzard; I was a pupil of a poor law medical officer there.

23624. Your principal had a poor law contract under the old system, before Mr. Gathorne-Hardy's Act?—Yes, I was there in 1870; he had been there a long time.

23625. What was your hospital?—Guy's.

Lord Zouche of Haryngworth.

23626. Do you think, speaking generally, that the dislike on the part of the people to obtaining poor law relief is on the decrease?—I do not know about dislike to relief generally; infirmary relief certainly.

23627. And as to going into the workhouse?—They object to that very much; the young people do especially; the old people do not mind it so much.

23628. But it makes a great difference as regards going into the poor law infirmary, apart from what is commonly called a workhouse?—Yes, no doubt about it.

Chairman.

23629. You will be so kind as to send that diet sheet?—I will.

The Witness is directed to withdraw.

MR. FRANK HORNE, is called in; and, having been sworn, is Examined, as follows:

Chairman.

23630. You are secretary to the London Throat Hospital, are you not?—Yes.

23631. Would you tell us where that is?—At 204, Great Portland-street, and 72, Bolsover-street; we have the two entrances, one back and one front.

23632. This is a special hospital for the throat and ear, is it not?—The throat, nose, and ear.

23633. When was this established?—It was established about the end of 1886. I may state at once that I have only been appointed since February; therefore I have to look at my paper to answer these questions.

23634. How was it started first of all?—I think the best way for me to answer that question would be just to read some paragraphs written at the time. "The promoters of this hospital, lately members of the medical staff of the Hospital for Diseases of the Throat, Golden-square, where for many years they have filled the position of medical officers and teachers, have, since their withdrawal from that institution resolved to transfer their work to another site. They have been induced to take this step at the request of numbers of their former patients; and by the advice of members of their profession, who deem it a matter of regret that their services to the poor should be lost, and their teaching interrupted through the resignation of their former appointments, a course of action which had the support of the entire medical press and of the profession. The new hospital which they have founded will be known as 'The London Throat Hospital.' Inasmuch as it is intended that this

(24.)

Chairman—continued.

hospital shall be established upon a basis free from all spirit of partisan or proprietary administration, its founders have determined: 'That the general supervision and conduct of the hospital shall reside in a body of representative men, which will constitute the general committee; associated with an executive committee which shall include the medical staff, and will preside over the management of the hospital directly. While the promoters of the hospital confidently expect that it will receive such support from the public as may be accorded to a properly and economically conducted public charity, whose chief object will be the free treatment of the sick and necessitous poor, it will be the aim of the management to avoid a system of pauperising the people, and of calling upon the public to provide funds for indiscriminate help. They therefore purpose to render the hospital, as far as they are able, a partially self-supporting one, by requiring small weekly payments from those patients whose earnings will enable them thus to contribute towards the hospital expenses. The hospital will be open for the treatment of patients on and after 14th February.'

23635. Who were the principal promoters of that hospital?—The principal promoters would be Dr. W. McNeill Whistler, Dr. Edward Woakes, and Dr. George Stoker.

23636. And those gentlemen were formerly members of the staff of the Golden-square Throat Hospital?—Yes.

23637. Do you know why they broke off from that staff?—That pamphlet (*producing a pamphlet*)

4 K 3

15 June 1891.]

Mr. HORNE.

[Continued.]

Chairman—continued.

phlet) gives an account of it. There was a little dispute between the two hospitals, and I brought it for that reason.

23638. Perhaps you can state the salient points of the dispute?—I can only say that I was appointed since February, and it is rather difficult to go through it all.

23639. I suppose you do not know?—As you see from this pamphlet, there is a letter dated the 14th of May, addressed “To the Right Honourable Lord Calthorpe, President, My Lord,—We have the honour to lay before you our resignation from the hospital, together with that of Dr. Semple, of the consulting staff. In doing this, we beg to add that, as there are important cases under our care in the wards, we will, if it be desired, continue the charge of them until we consider them in a condition to be discharged.” That gives really the resignation.

23640. And the reason for that resignation is stated in this pamphlet?—Yes, the whole of it.

23641. And that you put in?—Yes.

23642. Is it a free or a paying hospital?—The necessitous poor are treated free; but from those in employment, or those in a position to make it, a small weekly payment is expected. As a rule we receive from 1 s. to 2 s. 6 d. a week; but I might mention that of the number of out-patients received last year one-third were free.

23643. Have you any beds at the hospital?—We have four emergency beds; but I might state that we have two empty wards which we are waiting to fill up with beds and furniture.

23644. As soon as you get the money?—As soon as we get the money. But the whole of the debt has been paid upon the hospital.

23645. So that at present the hospital is out of debt?—Out of debt entirely.

23646. Have you any resident medical officer living in the place?—No.

23647. Who is in charge?—The nurse, who is also the matron.

23648. Do you live in the hospital?—No. I may mention now that I receive 50 l. a year, and I attend there from 4 to 6.

23649. And with regard to this nurse, who is also the matron, has she any assistance at all?—Only from a servant and the porter.

23650. What is the ordinary number of patients in the beds in the hospital?—Last year we had 49, taking the number all through the year.

23651. But how many beds had you occupied all through the time?—I suppose you may take it they averaged about three; that is what I returned to the Hospital Sunday Fund.

23652. And then you have a very large out-patient department?—A very large out-patient department.

23653. What were the numbers?—Last year the numbers treated were 1,186; and 10,004 attendances.

23654. But with regard to these 1,186, did some of them pay too?—With regard to the number of patients paying last year, I may state that the average of free patients was about a third; the others paid from 1 s. to 2 s. 6 d.

23655. Do the in-patients pay too?—Yes.

Chairman—continued.

23656. Do they pay in the same ratio?—No, they pay more.

23657. What do their fee amount to?—Sometimes they do not pay anything. At the present time we have a patient, a serjeant in the army, who is paying a guinea a week; but, as a rule, I suppose, taking the average, they pay from 5 s. to 10 s. a week. As far as the payment of out-patients goes, we had last year over 700 out-patients at 1 s., thereby showing that 1 s. is the sum paid by the largest number; we had 150 at 1 s. 6 d.; about 140 at 2 s. and at 2 s. 6 d.; of course they dwindle down to a smaller number.

23658. How do you determine what price a patient shall pay?—The amount is determined by the dispenser as far as an out-patient is concerned; as far as the charges to in-patients are concerned, they are determined by myself. If an in-patient should come before I get there at 4 o'clock, of course he is reserved until I see him; and then I inquire into his circumstances, and charge him accordingly. As far as the out-patient goes, the dispenser sees every patient as they come in, and makes inquiries, and uses his own judgment.

23659. How does he make inquiries?—He asks the applicant questions.

23660. He asks him you mean what his wages or his means are, and what family he has and so on?—Yes.

23661. He cannot do more than ask questions himself?—No. As a rule he can pretty well see the character of the man. I might mention, as far as the in and out-patients last year were concerned, that from the out and the in-patients we received 584 last year; that shows a pretty good average.

23662. Do you use the Charity Organization Society at all?—No, not at all.

23663. Why not?—We have never felt it necessary.

23664. The inquiries you make and the observations you make you think sufficient?—I think the amount we receive from the patients is quite sufficient. I might state that the average weekly payment from the out-patients is about 11 l. a week, and I think, allowing for the number of out-patients, it is a very good average.

23665. Are you aware whether the patients come from a general hospital to your special hospital?—No, I do not think so; I could not say.

23666. And you do not know whether patients go from you to a general hospital?—I should think not. I have only been connected with this hospital for five months, and the dispenser or one of the medical staff would be very pleased to appear and answer questions which I cannot answer.

23667. Now as regards your finances, what was your expenditure and your income last year; have you a balance sheet here?—Yes, you will find it on page 10 of the report for 1890. Our receipts last year would be 1,163 l. 14 s. 2 d.

23668. I think we will have the details. How much were your donations?—Donations, 256 l. 16 s.

23669. Annual subscriptions?—£.105. 19 s.

23670. Students' fees returned by medical staff?—£. 14. 9 s. 10 d.

23671. Proceeds

15 June 1891.]

Mr. HORNE.

[Continued.]

Chairman—continued.

23671. Proceeds of Cinderella dances?—£. 64. 3 s.

23672. Proceeds of dramatic performance?—£. 103. 3 s. 2 d.

23673. Hospital Saturday Fund?—£. 25.

23674. Collecting boxes?—£. 10. 1 s. 9 d.

23675. Patients' payments?—£. 584. 1 s. 5 d.

23676. Did you apply to the Hospital Sunday Fund?—Yes, but we had only been established for three years at that time and the rule of the Hospital Sunday Fund is that you must be established for three years, and we came so close after the three years that they suggested we should postpone it till this year. So of course we have made a return for this year.

23677. Now I see at the top of page 10 of your report you have got a balance of 16 l. 7 s. 6 d.; so you had a surplus last year?—Certainly.

23678. And have you a surplus this year?—Yes, 51 l. 15 s.; that is to say at the end of 1890.

23679. Are you appealing constantly to the public?—Only by advertisements.

23680. You do not issue what they call appeals?—No, we are waiting for next year, when we can make a special appeal with reference to our empty ward, and we hope to have our first dinner.

23681. Are you managed by committees?—Yes.

23682. How many?—By a general committee and an executive committee.

23683. How often does the general committee meet?—The general committee meet once a year; the executive committee meet once a month, the second Monday in every month; and the house committee every Wednesday.

23684. Who constitute the general committee; how many members are there, and what is the qualification to be a member of the general committee?—The qualification of the general committee is this: "There shall be a general committee of 30 members, each of whom must be a qualified governor of the hospital. Every donor of 20 guineas and upwards in one sum shall be a life governor, and each subscriber of three guineas and upwards shall be an annual governor." Mr. Burdett-Coutts, M.P., is the chairman of our general committee.

23685. That meets once a year?—Yes.

23686. And then your executive committee?—They meet once a month.

23687. And how many members form that committee?—Thirteen.

23688. How many generally attend?—About five; the quorum is four.

23689. Then what does the house committee do?—If I may read the rule itself about the house committee (it is very short) that will be the best way of answering the question I think: "The house committee shall meet weekly; they shall conduct the domestic arrangements of the hospital, such as receiving urgent reports, regulating the duties of subordinates, payment of wages, maintenance of building requiring immediate attention; and they shall be responsible to the executive committee, to whom they shall report at every monthly meeting."

23690. Do they examine all the books of the hospital?—As far as the account books and the

Chairman—continued.

bankers' book are concerned, that is done by the executive committee monthly. I always put on the table the cash book, together with the bankers' book, and show the balance accruing each month. It shows the money I have received during the month and the payments I have made, and that, of course, agrees with the bankers' book.

23691. How many members compose the house committee?—Four.

23692. And what is the quorum of that committee?—Two.

Earl Cathcart.

23693. It seems that a battle royal occurred at the disruption; there was a battle which took place in 1877, between the medical council and the committee of management; is that within your knowledge?—No; with reference to that matter I must say that I cannot answer any questions because I know nothing of it. I would suggest, with reference to any questions on that point, that Dr. Whistler would be very pleased to attend.

23694. It is important if we are to go into the matter further, that we should get at the truth?—The medical staff are rather disappointed that they have not been asked here because they would like to answer these questions.

23695. Of course, if the pamphlet is put in in bulk it would answer all the questions, but it is too bulky to put in in its entirety; it will have to be epitomised?—I might say that Dr Whistler would be very pleased to attend in reference to that.

23696. What caused the institution to be in public odium in 1877. It is mentioned in the pamphlet that the institution was in public odium at that time?—I do not know about the Hospital for Diseases of the Throat in Golden-square; our hospital was not in public odium.

23697. But, however, if you cannot answer the question it is no use asking you?—No, I cannot.

Chairman.

23698. Is there any special qualification required for your medical staff?—The 12th rule is: "There shall be a medical committee, which shall consist of the physicians and surgeons conducting the clinics, to which all questions relating essentially to the medical administration of the hospital shall be referred. This committee shall advise the executive committee with reference to appointments on the medical staff, the arrangement of the medical duties of the hospital, and upon all matters concerning its educational department." The committee appoint the medical gentlemen.

23699. But does it say there what the qualification of the medical gentlemen must be?—No.

23700. Do you know what the qualification is?—They must be F.R.C.S. or M.R.C.S. As a matter of fact, since the foundation of the hospital there have been no new appointments made.

23701. I see something about fees from students?—Yes; for clinics they really are; and then the medical staff returned to the hospital a portion of that. That wording should really be "balance of students' fees," not the whole.

4 K 4

23702. Do

15 June 1891.]

Mr. HORNE.

[Continued.]

Chairman—continued.

23702. Do you get students in any number?
—Yes, I believe so.

23703. You do not know?—No; as secretary that does not come under my notice so much because we have our own medical committee.

23704. You have no medical officer resident in the hospital?—No, not resident. We have an assistant surgeon.

MR. WILLIAM ABRAMS, is called in; and, having been sworn, is Examined, as follows:

Chairman.

23706. You are the Secretary of the Central London Ophthalmic Hospital?—Yes.

23707. How long have you been secretary?—For the last five years; I may mention that I have been connected with it, I should think, from 15 to 20 years as assistant.

23708. Where is this hospital?—238A, Gray's Inn-road.

23709. How long has it been founded?—It was established in 1843; that would be 48 years ago.

23710. By whom was it promoted in the first instance?—I believe by a committee of gentlemen seeing the necessity for the thing; and they spoke to surgeons, and so a surgical staff was formed; something of that sort.

23711. Do you know whether that was before the general hospitals had special departments, such as eye and ear departments?—I cannot say.

23712. Is it a free hospital or a paying one?—Partially free, and admission is partially by payment. As a matter of fact, till within the last few years, it has been entirely free; but in consequence of the falling off of funds, we have been obliged to institute small payments. The payments now are the issue of 2*d.* tickets. We do not enforce that. If a very poor case comes, of course, on the case being represented to me, we admit it. We have another payment, a half-crown ticket, which entitles the patient to attend for a month, and we expect those who can afford it to take it. The advantage of that ticket is that the surgeons see those cases before those who take a 2*d.* ticket.

20713. And does the 2*d.* ticket last only for one week?—Only for the one attendance.

20714. Then when you instituted this payment, did you find your patients decrease in number?—We did not find any falling off. We find the amount paid readily, as a matter of fact.

23715. Have you any beds at this place?—Thirteen beds.

23716. And what is the average number of beds that are occupied?—Last year between five and six. I should mention that we have had now, for three years, half the beds closed for want of funds.

23717. Do the in-patients pay, too?—They are expected, as far as they are able, to pay a shilling per diem towards their maintenance; but we do not enforce that in extremely poor cases. I may

Chairman—continued.

23705. If you have more patients than four, do you send out for a nurse?—We never have more than four patients; they are only emergency beds; I mean that the doctor sends in a patient upon whom he is going to operate, and if they have the four beds full they will not have more than four; two females and two men.

The Witness is directed to withdraw.

Chairman—continued

mention that to subscribers we issue letters of recommendation, and those patients who present letters of course we charge nothing. That is the advantage to subscribers.

23718. Do you make any careful inquiries into the position of patients as to whether they are earning wages enough to be able to pay?—Certainly.

23719. What form do those inquiries take?—Well, it depends very largely upon the man's family, and we go into questions as to his circumstances. A man who earns 2*l.* a week may not be able to pay so much as another who is only earning 25*s.* But there are not many cases where we find we are imposed upon.

23720. Then do you either go or send to see whether the man's statement is true?—As a matter of fact, I generally do that myself. I could mention two or three cases where we have been imposed upon.

23721. Do you find, as a rule, that you are deceived or not?—I should say in two cases, and that is only within the last three years, we were deceived. I might mention my experience in one case. A party at the top of the Gray's Inn Road refused to pay the fees, and being known to the porter, the latter communicated with me; and I said I would make inquiries, and the patient must come again to-morrow. I found that this identical party was the proprietor of two shops in the Gray's Inn Road. But those cases are very few.

23722. As a matter of fact, generally you have found the statements truthful?—I have.

23723. Will you tell us what your expenditure was last year?—I find I have left the report containing the balance sheet at home; but I have the returns to the Hospital Sunday Fund here, and I happen to have got the total income.

23724. Could you tell us what your expenditure was last year?—I have it here, 923*l.* 0*s.* 5*d.*

23725. And the receipts, the income?—The total receipts were 887*l.* 7*s.* 11*d.*

23726. That is a deficit of about 40*l.*—Yes.

23727. And what are the items of the income; donations?—Annual subscriptions, 137*l.* 6*s.* 6*d.*; donations, including contents of alms-boxes and grants from the Hospital Sunday and Saturday Funds, 364*l.* 6*s.* 1*d.*; dividends, 34*l.* 2*s.* 6*d.* (I should say that that is upon 1,000*l.* invested in

15 June 1891.]

Mr. ABRAMS.

[Continued.]

Chairman—continued.

in the 3½ per Cents.); sale of old material, kitchen waste, and sundries, 3 l. 4 s. 10 d.; payments on behalf of patients, 334 l. 2 s. 6 d. That is made up as follows: the monthly cards of which I have been speaking, 139 l. 7 s. 6 d.; the 2 d. tickets, 124 l. 3 s. 6 d.; and maintenance (that is for patients when they are in the hospital), 70 l. 9 s. 6 d. That I think will total 334 l. 2 s. 6 d.

23728. Then the class of patients that you take, as a rule, is not the poorest class?—They range from the very poor up to, say, persons with 2 l. a week. We get many clerks from the neighbourhood of Gray's Inn and Lincoln's Inn; the hospital is in the neighbourhood of law writers, and watch and clockmakers and workers in jewellery, where diseases and complaints of the eye are most prevalent.

23729. What is the amount of the grant from the Sunday Fund?—The Hospital Sunday Fund last year (this year's has not been awarded) was 62 l. 10 s. From the Hospital Saturday Fund 41 l. 1 s.

23730. Have you any nurses?—Two probationers, and the matron, of course, is a qualified nurse; obviously, because she must train the probationers, and has the superintendence.

23731. What does the matron get in the way of wages?—£. 30 a year.

23732. And board and lodging?—Board and lodging and uniform.

23733. I do not think you told us your salary?—£. 70 a year. With regard to my duties, I may say that, as a matter of fact, I am obliged to be everything; superintendent, in the absence of the committee and chairman, secretary, clerk, steward, and so forth. The management of the place takes up very nearly my entire time.

23734. You are steward as well?—Everything.

23735. And do you get board and lodging as well?—No.

23736. Who takes charge of the place when you are away?—The matron; and there is a house surgeon living off the premises, who is bound to live within five minutes' walk. We pay for his apartments, but we find him no board; and he is always in requisition for urgent cases and accidents, for which the hospital is always available day and night.

23737. I did not ask you what number of out-patients you had?—The out-patients last year were 8,475.

23738. Were those fresh cases?—Those were new cases; the attendances last year were 17,797. But I should mention that that number was rather small; the three years' average amounted to 19,545. The in-patients last year were 180.

23739. Are you managed by a committee?—Yes.

23740. Would you tell us the various committees you have; is there a general committee?—There is the monthly committee of management, the finance committee, which meets monthly, and there is the surgical committee, which has to do, of course, with really the hospital department, and we have an annual general meeting of the governors.

23741. What qualifies a man to be a governor?
(24.) e

Chairman—continued.

—Payment of a guinea per annum as a subscriber, or a donation of 10 guineas, or, in proportion, the representatives of a corporation or company, or anything of that kind.

23742. Is the committee that meets once a month the executive of the hospital?—That is the managing committee.

23743. And they go into the accounts?—They examine the accounts, and receive the reports, and read the letters during the month, and so forth, and leave instructions with me to carry out what is necessary.

Earl of Arran.

23744. I think you said that you did not find that the numbers applying at the hospital for relief were diminished by the fact of your instituting payments?—I should not think so,

23745. But should you say that those applying now come from the same class as those who applied previously?—I think so; I do not notice any difference.

23746. Would not that rather induce you to think that the charity had been somewhat abused before?—I think there is no doubt that to some extent formerly this charity, like all other charities, had been abused. I believe there are many patients who could afford to take that simple 2 d. ticket who formerly did not pay anything.

23747. I think you spoke of a 2 s. 6 d. payment too?—That 2 s. 6 d., ticket lasts for a month; the 2 d. ticket is for each attendance; virtually it is the same.

Chairman.

23748. Is there anything else you would like to say to the Committee?—I do not know that there is anything for me to say, except that last year we had (I simply mention this to show the work we are doing if you will allow me) between 400 and 500 patients more than in any previous year since 1843, and that shows the necessity of this particular hospital; and also, when I mention that we are in the centre of a district where I think diseases and complaints of the eye are really most prevalent on account of the very occupations of the people, I think that shows its usefulness. And again we have no other hospital, as far as I can ascertain, certainly within two miles, and I think within two or three miles; the nearest is Moorfields.

23749. That is to say, you have no ophthalmic hospital nearer?—Yes.

23750. Is there not a general hospital which would treat these diseases nearer?—I cannot account for our receiving so many ophthalmic cases when there is a general hospital near; but I may mention that we do get ophthalmic cases sent to us from general hospitals. I found a case the other morning, between 11 and 12, sent to us from a general hospital.

23751. What general hospital was that?—That was University Hospital; but that is not the only instance. Then we are near to large manufacturing premises; there is Eley Brothers within a few doors, and Cubitts, the builders, and so on.

23752. Did you ever hear any of your medical men give any reason why there should be more
4 L people

15 June 1891.]

Mr. ABRAMS.

[*Continued.*]*Chairman*—continued.

people suffering from eye diseases last year than in previous years?—No, I cannot say that I have heard them do so.

23753. What does your staff consist of?—There are three surgeons, and three assistant surgeons in attendance. There is a surgeon and his assistant surgeon, and the house surgeon in attendance two days a week; that would account for the six days; one surgeon with his assistant attends twice a week. Of course there are the honorary officers, consulting surgeons, and so forth.

23754. You have consulting surgeons as well?—Yes; Sir Andrew Clark is our consulting surgeon.

23755. Is he consulting surgeon or physician?—I should have said consulting physician; the consulting surgeon is Sir William Savory.

23756. And you have a house surgeon?—Yes; but he lives off the premises; we have

Chairman—continued.

made that arrangement with a view to reduce the expense of board; we pay him a guinea a week; then he is always in requisition; he lives opposite the hospital, if an accident is brought in the porter fetches him; he is not allowed to leave his apartments without leaving word where he can be found.

23757. Is he engaged in private practice?—No; he is a fully qualified man, but he is not allowed to engage in private practice.

23758. But it is only fifty guineas a year that you pay him?—He comes here for the sake of the practice. We only engage him for six months; they are bound to stop six months, but they have the option of stopping longer.

23759. Do you have a new one every six months?—We only bind them for six months, but as a rule we find that they stop longer, perhaps for the sake of the practice.

The Witness is directed to withdraw.

Ordered, That this Committee be adjourned to Thursday next, Twelve o'clock.

Die Jovis, 18^o Junii, 1891.

LORDS PRESENT:

Earl of LAUDERDALE.
 Earl SPENCER.
 Earl CATHCART.
 Earl of KIMBERLEY.
 Lord ZOUCHE OF HARYNGWORTH.
 Lord SAYE AND SELE.

Lord CLIFFORD OF CHUDLEIGH.
 Lord SANDHURST.
 Lord LAMINGTON.
 Lord SUDLEY (*Earl of Arran*).
 Lord MONKSWELL.
 Lord THRING.

THE LORD SANDHURST, IN THE CHAIR.

MR. JOHN R. LUNN, is called in; and, having been sworn, is Examined, as follows:

Chairman.

23760. You are the Medical Superintendent of the Marylebone Infirmary?—Yes.

23761. How long have you been in that position?—Ten years.

23762. Is that the infirmary for the parish of Marylebone?—Yes.

23763. It is situated some distance from Marylebone, is it not?—Yes, just on the borders of Wormwood Scrubbs.

23764. Is that one of the new infirmaries?—Yes.

23765. It was built after the passing of the Gathorne-Hardy Act?—Yes, on the pavilion system.

23766. How many beds have you in that infirmary?—Seven hundred and forty-four.

23767. And supposing you had more beds, could you fill them?—At times.

23768. Then, supposing you have an overflow, what measures do you have to take?—We are crowded at times when we make up extra beds.

23678*. You mean the wards are too full?—In the winter months we may have 20 over our number; that is all.

23769. What is the system of admission into your Marylebone Infirmary?—The patients are admitted by an order that is given us by the district medical officer and the relieving officer. The patient applies for relief to the relieving officer; then if the relieving officer thinks fit, the case goes to the district medical officer, and then the case is sent to the infirmary by cab or by train as is thought fit.

23770. Are you then bound to admit on the certificate of those two officials?—Yes.

23771. You cannot say that it is a trivial case, and refuse to admit it?—No, I am bound to admit.

23772. Do you admit all cases?—All cases with orders, yes.

23773. All cases excepting infectious cases?—We take no infectious cases in, but sometimes they break out in the wards, when we send them to infectious hospitals.

(24.)

Chairman—continued.

23774. Do you take lunatics or persons of unsound mind?—We are not supposed to have them; they take them at the workhouse, and we get them from time to time, that is to say, they break out in the infirmary.

23775. But does it not occur sometimes that a lunatic or a person of unsound mind is sent to you from a hospital?—They are generally delirium tremens cases, arising from drink; they are not lunatics. If they know they are lunatics they are seen by the district medical officer at the hospital, and they are sent to the workhouse as a rule; that is the place for them.

23776. Do you get many people sent to you from the hospitals?—Yes, a great many, and without orders.

23777. Do you admit them without orders?—If they are too ill to be sent away, and if they belong to Marylebone, we admit them. Sometimes we send them away, if they are slight cases.

23778. Are those chronic cases generally which you admit in that way?—No; fractures after three or four weeks setting, cut heads, epileptic fits, and bronchitis cases.

23779. Do you actually receive bronchitis cases from the general hospitals?—Yes.

23780. Have you any return that you can put in of the number of cases of that description that you have received from the general hospitals?—No, I have not got that. It just depends if the hospitals are cleaning, or whether they are full, or what not.

23781. It is an exceptional case, you mean, to receive such patients from the hospitals?—Yes; it is not a general thing.

23782. It is exceptional for a hospital to send a bronchial case to your infirmary?—Yes, that is only if they are full. At times we get cases which they cannot keep in the hospital for weeks together, and then they send them on to the infirmary of the district. Then those have generally as a rule a proper admission order which they get in the usual way, just the same as the other cases, except that the hospital

authorities

18 June 1891.]

Mr. LUNN.

[Continued.]

Chairman—continued.

authorities refer them to the relieving officer; I mean they call him in; I did that myself when I was at St. Thomas's.

23783. But as a matter of course they send on chronic cases to you?—Sometimes they send one with a written statement, "This is a case for the infirmary."

23784. The relieving officer is called in in those cases, you say?—I, as an old resident medical officer at a hospital, sent many a one to the infirmary; I used to write on the form when I was at St. Thomas's, "This is not a fit case for the hospital, but for the infirmary."

23785. And the infirmary took them in?—As a rule they took them. We used to have words now and then, but as a rule they took them in.

23786. You have 744 beds, you say, in this infirmary; can you tell me what amount of medical staff there is?—There are two assistants beside myself.

23787. As well as being responsible for the medical condition of the patients, you are responsible for the whole of the administration of the infirmary?—Yes.

23788. Do you not find that work excessive?—The work is not excessive in itself; we have so many chronic cases. It is the long hours on duty; one is always at it when one is on the place. The work itself is not excessive.

23789. Is there not this danger in the present system, that you might have as superintendent a medical man who was first-rate in his profession, and at the same time the worst possible administrator?—It might happen so.

23790. And, *vice versâ*, you might have a man who, as administrator, was very economical and good for the ratepayers, and at the same time he might be an indifferent medical man?—That might be.

23791. Do you not think that it would be better to have the general administration and the care of the patients in separate hands?—No, I think not. I think it is most absolutely necessary to have a gentleman at the head of these large institutions.

23792. And you mean one who is at the same time a medical man?—Certainly, a medical man.

23793. Do you think that your two assistants are sufficient?—At present I do.

23794. Then are the hospitals overstocked with doctors, in your opinion?—I should say, as an old hospital resident, that they were.

23795. Are there any improvements which you can suggest in the organisation of the infirmary?—Not at present.

23796. You think that the system as it is at present is as perfect as it can be?—Yes.

23797. Is your matron a trained matron?—Yes, and a lady.

23798. How many nurses have you?—We have, all told, 66 nurses. This number includes the probationers.

23799. And what proportion of trained nurses?—They are all trained.

23800. Then do you train your own probationers?—Yes; we train our own probationers under the Nightingale Committee, and the guardians, who have a sort of contract with the Nightingale Committee; they pay our proba-

Chairman—continued.

tioners the first year. Our school is unique in the poor law.

23801. The various infirmaries pay their nurses the same all the way round?—I do not think so.

23802. What are your rates of pay; take the matron first of all?—The matron has 100 l. to 150 l. a year; she is trained, and is a lady, which is most important; we have two assistant matrons; our first assistant matron rises from 50 l. to 70 l. a year; the second assistant matron receives 35 l. rising to 50 l.; the head nurses, 28 l. rising to 32 l.

23803. How many of them are there?—Of head nurses, or sisters as they are called sometimes, there are 12, and two night superintendents (I had better take those afterwards). The ward nurses get 20 l. to 25 l.

23804. How many of them are there?—We have 24 by day, and we have 12 by night. And of probationers, we have 15; those are paid by the Nightingale Committee 10 l. a year; the first year we train them, and we take them on to our staff at the end of the year; they are bound to us for three years.

23805. Do you give certificates at the end of three years?—Yes, for the three years. I produce that to give you a brief account of how the probationers come to us (*handing a Paper to the Chairman*).

23806. What hours do these nurses have on duty?—The nurses come on at 7 in the morning and are on duty till 8.50 in the evening. They have three afternoons a week from 2 to 4, and from 6 to 10 once a week. Those are the nurses or ward nurses. The head nurses come on at 8 till 8.30; they have three afternoons a week from 2 to 4; they have two evenings a week from 6 to 8 and 6 to 10. All our nurses have a whole day off once a month.

23807. Every nurse?—Every nurse.

23808. Of whatever grade?—Yes. Every third Sunday they are off duty from 2 o'clock till 10; they do not go on duty again. They have their annual leave granted by the guardians; the head nurses have a month and the ward nurses three weeks.

23809. Then with regard to the hours of these nurses' meals, do they have breakfast before they go in the wards?—Yes, they have their breakfast at half-past six.

23810. And then they have dinner?—Yes; the first dinner is from a quarter to 12 to a quarter past; then when they go off, the others come up for another half-hour.

23811. They have half-an-hour for dinner, then?—Yes.

23812. Is there nothing taken by them between the breakfast and the dinner?—Yes, they have half-an-hour off for what is called their luncheon, when they go down and get milk, and so on, when they can be spared from the wards.

23813. And then the next meal, tea, is when?—The first tea is from 5 to 5.30. The second, 5.30 to 6, the same time, half-an-hour.

23814. And supper?—They have supper at 9 o'clock

23815. And

18 June 1891.]

Mr. LUNN.

[*Continued.*]*Chairman—continued.*

23815. And have you also night nurses?—Yes.

23816. When do the night nurses come on duty?—The night nurses come on duty at half-past eight in the evening, and go off duty at eight in the morning.

23817. So that the hours of the night and day nurses overlap one hour?—Yes.

23818. Have the night nurses a meal before they go into the wards?—Yes; they have a meal in the morning at 9 o'clock. Hot meat, vegetables, and puddings in the evening; at supper, tea and cold meat, sometimes fish.

23819. Then they have a meal before they go into the wards?—Yes.

23820. Is the health of the nurses good, on the whole?—Excellent.

23821. Where do they sleep; in dormitories?—No, each nurse and officer has a separate room.

23822. In the Marylebone Infirmary is the accommodation and ventilation sufficient, in your opinion?—Excellent.

23823. When was it built?—In 1881, at least it was opened in 1881. It was building two years before that.

23824. Have you ever heard the opinion expressed that these infirmaries, by the advantages that they offer, discourage people from saving money to subscribe to provident sick clubs?—There are one or two like that, not the majority; the discipline is too strict. The older hands go on, but with regard to the people who want to work, it is not my experience that they do.

23825. Have you ever heard it suggested that people domicile themselves in Marylebone on purpose to be able to go to the Marylebone Infirmary?—I have heard that said.

23826. But that is not true in your opinion?—No.

23827. Would you like to see students in your infirmary?—That is a very large question. I do not think there is enough work for them to do, and I do not think the ordinary student would ever come after the first few weeks. I have been a resident in hospitals, and I know that with the ordinary run of students it is difficult enough to get them to come to the hospitals and take their notes, and they would not come to see simply poor old men and women, chronic cases.

23828. You do not feel the want of clinical assistants, dressers and so forth?—We have not the work for them to do. The ulcerated legs they would never bandage up; that is done by the nurses now; and if those things were taken away from them, it would make the nursing department rather weak.

23829. Do you consider that you have sufficient nurses?—Yes we have one nurse to 15½ patients on the average.

23830. And you consider that sufficient?—In an infirmary.

23831. You have had experience of a general hospital?—Yes, I have been resident at several hospitals.

(24.)

Chairman—continued.

23832. And there is a larger proportion of nurses to the patients in the general hospitals; you do not consider it necessary to have that proportion in the infirmaries?—It would be, if they were all acute cases.

23833. In many hospitals it is one nurse to four or five patients?—In the Children's Hospital at Shadwell we used to have one to four and a-half.

23834. Do you think that excessive nursing?—No it must be as large as that for children.

23835. But in the ordinary hospitals?—I think we had one to six or seven at St. Thomas's.

23836. The cases are more acute in a hospital, as a rule, then in an infirmary?—Yes, certainly.

Earl Spencer.

23837. In comparing the nurses that you have with the nurses in the general hospitals, could you say whether they are of the same class?—Our present nurses are from exactly the same class since we have had our school; they were not before.

23838. And as efficient?—Quite so.

23839. Of course we could see by comparing this evidence with the evidence we have got from other places, but can you say how far their salaries compare with those of ordinary nurses?—Very fairly.

23840. Are they higher or lower?—In the infirmaries they are lower than in the hospitals?

23841. Then their hours of work, and so on, are shorter than in hospitals?—Yes, in the long run they are.

23842. And their holidays are greater, are they not?—I should say they were.

23843. Is that on account of their receiving lower pay or merely because you think it is necessary to give them this relaxation in order to maintain their efficiency?—Yes, it is most important in the infirmaries to do that; the work is so monotonous.

23844. You think that, with longer hours, your nurses would not be as healthy, and therefore not as efficient?—I think so.

23845. Now with reference to the cases that come to your infirmary, where would these cases have been treated previously, before the infirmaries were established; would they have been in the workhouse?—I could not answer that question. The clerk of the guardians is here and he could answer it for you; I could not.

23846. You could not say whether the infirmaries interfere at all with provident medical clubs?—I should say not.

23847. You do not know perhaps the kind of position to which most of your patients would belong, the wages they earn?—From 18 s. to 26 s. a week, I should say would be the average.

23848. If they earn as much as that, would they not be able to pay something towards a medical club, or a doctor to attend them in their own homes?—Not a man who had five or six children to keep; though the guardians you must remember may make a person pay for maintenance. We had a case the other day where a father had to pay 7 s. 6 d. for a child.

4 L 3

23849. Could

18 June 1891.]

Mr. LUNN.

[Continued.]

Earl Spencer—continued.

23849. Could you give the number that you have of patients who themselves, or whose parents, earn as large a sum as 25 s. a week?—I could not say; that does not come under my notice very much; that work is done at the offices.

23850. With regard to students coming to the infirmary, you said that you do not think that there would be a sufficient number of cases that would be of interest to those walking hospitals?—Not to the ordinary run of students.

23851. But besides the cases you have mentioned, are there not in the infirmaries a good many cases of colds and chronic illnesses that an ordinary practitioner ought to study before he goes into practice?—Yes; but the ordinary run of students will not study those.

23852. But ought they not to?—That is another matter.

23853. May it not be that they have not the opportunity of studying them in the general hospitals?—Yes, they can study them in the out-patient department.

23854. Still, I suppose an out-patient is not as good material for study for a medical student as one in an infirmary, who is like an in-patient in a hospital?—I should say it was; I should say better, because in the out-patient department you see them in their natural condition. You have to find out what is the matter with them. If you see them in bed, you naturally think there is something the matter with them.

23855. But it does strike you as important for a man who is going out into general practice that he should understand ordinary cases?—Yes, certainly.

Lord Clifford of Chudleigh.

23856. You said that you got a certain number of cases from hospitals; would it not be an advantage in some of those cases that the medical study of them should be continued after they left the hospital?—I think it would be very useful.

23857. Therefore it might be an advantage to have a certain amount of study going on in the infirmary in that kind of cases?—Under very strict discipline.

23858. Do you think it could be arranged that cases which had been sent from a hospital, for instance, could be followed up in the infirmary?—With us practically it is done so. If there is an interesting case, and I know the staff at the hospital, they write to me to know all about it.

23859. They do not come themselves to see the case at the infirmary?—Very often they do.

23860. Did I correctly understand you to say that the Marylebone infirmary is the only infirmary that has a training school for nurses?—A separate training school and home.

23861. But the others do train nurses?—They train nurses, but they have not a separate home.

23862. I suppose that the nurses who are trained at a Poor Law infirmary are of course thoroughly trained for the infirmary work, but would you say that they were as highly trained

Lord Clifford of Chudleigh—continued.

as the nurses who attend the general hospitals?—With us they are.

23863. And that their experience is as large?—I am only speaking from my own experience; with us certainly they are as highly trained.

23864. And you think that their experience is practically as large?—Yes. We have got three nurses at the Hong Kong hospital; they went straight from us, and are very highly spoken of. We have nurses of ours holding superior positions. We have them examined at the end of the year by a visiting surgeon at St. Thomas's, and he says they are as well trained as the hospital nurses.

Lord Lamington.

23865. The hospitals, as I understand, only forward cases to the infirmaries when they are full, as a rule?—We only have them sent on to us when they are full as a rule.

23866. Is there no out-door department connected with the infirmary?—No, none.

23867. And as to the nurses' food, do they do their own messing?—No, that is done by the guardians under the supervision of the matron and the steward, who are responsible to me.

23868. And are they generally satisfied?—Now and then a complaint occurs; chiefly they complain of the bread. The matron buys her own rather than eat it.

23869. Is there any dispensary connected with the guardians in the parish?—I know there are some, but how many I cannot say; I think there are four. The clerk to the guardians could answer that question.

23870. Are they independent of you?—Yes, they have nothing to do with us.

Chairman.

23871. But they would send cases, would they not, to you?—Yes, dispensary cases; but they generally send them to the hospital if they can.

Lord Monkswell.

23872. You say that sometimes, when you yourself were resident in a hospital, you used to send hospital cases to the infirmaries, and that you sometimes had words with the infirmaries about those cases. On what grounds did they object to them?—In this way: the residents know the routine, as a rule; but if they get a new resident in, he does not know the regular routine of sending a patient to the relieving officer and getting an order for the infirmary.

23873. Then it is merely a question of a man not knowing his business?—Yes.

23874. There is no objection on the part of the infirmary to receive anybody sent from a hospital?—No, not as regards pauper cases who are very ill.

23875. Is there no objection on the ground that the person can well afford to pay; does not the relieving officer make some inquiries?—If they come in the ordinary way; most probably the relieving officer would have missed that case; the house surgeon at the hospital would have sent it on to the infirmary.

23876. Sometimes they present themselves without going through the relieving officer's hands first, you mean?—Yes.

23877. Then

18 June 1891.]

Mr. LUNN.

[Continued.]

Lord Monkswell—continued.

23877. Then could you not insist on the relieving officer making inquiries and making their relations contribute, if they are able?—The clerk of the guardians would tell you about that; I have nothing whatever to do with it.

23878. What you say about students makes one think that there must be something defective in medical examinations. If students will not attend as they ought to attend chronic cases, might not the examination be altered in such a way as to make it worth the students' while to attend them?—That is the only way to get at them.

23879. Do you not think something might be done in that direction?—It is not for me to suggest anything; I am not an examiner.

23880. But you are a medical man and have had experience?—I should say that it would be very advisable for students to know small ailments, but they will not learn them.

23881. Then do you not think it is the duty of the heads of the medical profession to see that they have an examination of such a character that they can get more marks by learning them?—I could not answer that question.

23882. But that is your own opinion?—That is my opinion.

23883. Do you not find that the hospitals will not send the interesting cases to the infirmaries?—They do send them if they cannot keep them in long enough themselves.

23884. They will even send an interesting case away?—Yes; when I say an interesting case, for instance, kidney cases, which go on for months and months; they cannot possibly keep such a case at the hospital. It goes on to the infirmary, and then it would be transferred to its own parish, if it does not belong to the infirmary. That is often the case with cases that come up from the country.

Earl Cathcart.

23885. We went into a great many details last Monday with regard to infirmaries; there was one subject we did not much touch upon, and that was the division of the medical labour, as between the medical superintendent and his subordinates. How is that arranged in your case; are you a sort of consultant?—I see every case that comes in.

23886. That is according to the order I see, but I mean about the daily routine, how do you manage?—For instance, to-day I do the whole of one side, the male side, and my colleague does the whole of the female side; the second assistant has the dressing notes to take, and the galvanism, and to help me at night if there are any urgent cases; there is always one on duty. At night I shall go round the whole of the female side and see all the new cases, and the cases that are very ill.

23887. And what would be the ratio of patients to the medical men?—Of acute cases I could not say.

23888. I mean what would be the division between you and your principal assistant?—I should see 300 patients in one night going from ward to ward.

23889. Then have you nobody to assist you in that duty, none of your assistants?—They do the opposite side; they do the male side to-night.

(24.)

Earl Cathcart—continued.

23890. I understand that perfectly, that you alternate the duty between yourself and your principal assistant; one takes either side alternately?—Yes.

23891. Then you have one other assistant who does the dressing; how many assistants besides that one have you?—Only one.

23892. Then you have, and your principal assistant has, to cope with about 300 beds with the assistance of one medical officer?—Yes.

23893. Then you can only give a very small time to each case?—We go round the wards, and the nurses have a chance to speak to us, and I know which cases are bad ones.

23894. You simply take a walk round and say, well, nurse, how is No. 300 getting on?—No; I medically examine 20 or 30 cases every day of my life.

23895. You have a great deal of clerical work, I see, to do; do you do it yourself?—I could not, I have a clerk.

23896. You have a good many books to keep, and you have "to admit every pauper brought to the infirmary with the proper order, or transferred from the other workhouse, and to examine his state on his admission, and to give the requisite directions as to his being placed in a ward appropriated to the class of cases to which he belongs"?—That is so.

23897. And that occupies a great deal of your time?—Yes, and that of my colleagues.

23898. Usually, do you take those cases yourself?—I see them always.

23899. And about how many attendants may there be in a morning?—We had yesterday 21, I think.

23900. And each of those would take you how many minutes?—A good many would be cases of ulcerated legs, old hands; all cases that I think at all ill I examine.

23901. And these cases may take five minutes each?—Some longer than others; sometimes not that.

23902. You have to "report in writing to the guardians any defect in the diet, drainage, furniture, ventilation, warmth or other arrangements of the infirmary"; does that take up much time?—A great deal of thought and time.

23903. Is the drainage in good condition?—Fairly so. It is now under consideration by the Infirmary Committee.

23904. Has there ever been a complaint of the drainage?—There have been smells now and then; it has always been remedied.

23905. Never any illness from that cause?—Never any outbreak, but sore throats and small ailments.

23906. Is the water supply good?—Yes.

23907. Is it constant?—It is good now. We had an artesian well, but we had it stopped.

23908. What is the depth?—Five hundred feet to the bottom of the bore; it is 100 feet and 10 feet in diameter.

22909. That must have been a great waste of money the making of that; now you are using the public water?—Yes.

23910. One of your duties is "to keep a medical relief register and case book." That must be done

4 L 4

18 June 1891.]

Mr. LUNN.

[Continued.]

Earl Cathcart—continued.

done by a medical man no clerk could post it up, I suppose?—Yes, he only copies from the cards; it takes a good many hours.

23911. "To cause the birth of every child born in the infirmary to be entered in a register kept according to the Form No. 4." Why do you have children born in the infirmary; I thought they were born in the workhouse?—It only occurs now and then; in the infirmary there may be half-a-dozen in the year.

23912. And besides, "To sign and furnish to the steward daily a written statement or requisition of the diet and extras required to be supplied for the paupers in each ward"; is that done by yourself?—By myself and colleagues as we go round in the morning.

23913. It strikes me that with three medical officers to 600 patients you must have your day pretty well filled up with work?—We are always at it.

23914. May I ask what your salary is?—It is now 500 *l.* a year.

23915. It has been raised lately?—It was some three years ago, three years after I had been there.

23916. And you have a house?—A house.

23917. Coals?—Yes.

23918. Gas?—Yes.

23919. And probably you are married?—Yes.

23920. You have good accommodation, have you?—Fairly so.

23921. And how are your subordinates paid?—My first assistant is paid 130 *l.* a year, with gas and coals, washing, and board.

23922. And the next man?—In the case of the next man it is only a six months' appointment.

23923. What was your employment before you took your present post?—I have been a resident in hospitals; I started at Victoria Park Chest Hospital; then I attended at Moorfields, and then at the Children's Hospital. I came back to St. Thomas's as resident.

23924. You have had experience both medical and surgical?—Yes, in every way.

23925. Now we heard a great deal on Monday about numerous serious operations performed in infirmaries; have you many operations?—Yes, a good many, about 100; minor operations most of them.

23926–27. Removing limbs?—Yes.

23928. And ovariectomy?—Yes, I have done ovariectomy.

23929. Have you ever tried it yourself?—Yes.

23930. We were told that, in some of the infirmaries, they were allowed to call in assistants from outside to help at operations, and pay them fees; have you done that?—I have never had them perform the operation; I have had cases where the guardians allowed me to employ consultants to verify diagnosis.

23931. And you have done that?—I have done that from time to time.

23932. You do not scruple with the assistance you have, to perform capital operations in the infirmary?—I do all the operations.

Earl Cathcart—continued.

23933. With your assistants?—With two assistants.

23934. You do not call in people from outside to do them?—No, and that is why they do so well.

23935. For antiseptic reasons you mean?—Yes, we seldom lose an operation case.

23936. In such operations to have too many students about the place is a bad thing, is it not?—I think so.

23937. I have observed that in hospitals abroad, where great operations are performed with great success, they do not allow anybody to be present except the assistants?—That is so; that is where I formed my opinion.

23938. And there the doctors wash and change and put on india-rubber clothes before they go into the operating theatre?—Yes.

Lord Thring.

23939. I should like to be clear about the rules of admission to the infirmary. The ordinary admissions are by orders of the relieving officer, are they not?—Yes; the patient is very ill and a pauper. In these cases they apply to the relieving officer for an order to the infirmary or workhouse.

23940. He brings them the order?—No, they go to him or the friends go to him.

23941. And the patient comes to you with an order from the relieving officer?—And signed by the district medical officer as well.

23942. With that double signature you take him in; you exercise no jurisdiction over those cases?—No.

23943. But take them in as a matter of course?—Yes.

23944. And the great number of patients come in in that way?—The majority.

23945. What are the other cases which come in without an order; are there any patients that come in to you without an order from the relieving officer?—From time to time.

23946. Or the medical officer?—Yes, from time to time.

23947. Will you state what classes of patients those are?—Cases of bronchitis, ulcerated legs, old fractures, and so on.

23948. Where do they come from?—Generally the hospitals.

23949. And what accompanies them?—Sometimes nothing, sometimes a piece of paper simply to certify, "this case is a case for the infirmary," signed by the house surgeon.

23950. When you say sometimes nothing, does a patient simply come and say, "I come from the hospital"?—He says, "I am very ill indeed," and I examine him, and if I find him very ill I take him in.

23951. Do not you ask them where they come from?—All about them, every little detail.

23952. Do you take them in if they have not come from a hospital?—Sometimes, if they are too ill to send away with safety.

23953. Then there is a second class of patients, who come to you without going either to the medical officer or the relieving officer. I come to

18 June 1891.]

Mr. LUNN.

[Continued.]

Lord Thring—continued.

to you, we will suppose, very ill from the parish, and you take me in, simply because I am very ill?—If I thought you too ill to send to the hospital with safety.

23954. And you do not know whether I am a pauper or not?—I should find out.

23955. Before you took me in?—Yes; it is not my duty to do so, but I should find out.

23956. How?—I should question the patient; you can generally tell by their dress, etc.

23957. You would take in a pauper who was very ill?—Yes.

23958. Does the relieving officer have anything to do with that particular class of patients, or not?—Later on. I make a temporary admission order out on a separate paper, and those go to him.

23959. Then you receive a man in such a case without an order from the relieving officer; you, yourself, make out a temporary admission order because the man is very ill, and that order is subsequently confirmed, so to speak, by the relieving officer?—It goes to the clerk of the guardians.

23960. It is confirmed by the guardians' authority?—I report all those cases, of course, to the guardians.

23961. Then I do not quite understand about the patients from the hospitals; how do they come in?—Sometimes the house surgeon or the house physician says to a person, "You must go to the infirmary; you are not a case for us," or "We have no beds."

23962. And how does he come to you, and with what order?—He comes sometimes with no order at all, and sometimes with a slip of blue paper to certify "This case is a case for the infirmary."

23963. And then what do you do; you take him in?—I take him in.

23964. And you make a temporary order of admission?—I make out another temporary order of admission if the case is too ill to send away.

23965. And you get that confirmed as it were?—Later on.

23966. If they are not confirmed, what becomes of the man?—He is discharged when well enough.

23967. Suppose it turns out that the man does not belong to the parish?—Then he is transferred to his own parish.

23968. Then, in fact, all the patients that you receive have either orders from the relieving officer or have orders from you, which are confirmed by the authority of the guardians?—Yes.

23969. And that extends to the whole, every patient?—Yes.

23970. Then there is one point I want to ask you. I understood that we were told the other day that when the hospitals have had an operation, and they are not able to send the case to any convalescent home, they send it to the infirmary?—Yes.

23971. They make a sort of convalescent home of the infirmary, in fact?—Yes.

23972. You do the same there; you make out a temporary order of admission?—In those cases, as a rule, they call in the relieving officer into the hospital; I have done that myself when I was resident at a hospital.

(24.)

Lord Thring—continued.

23973. Then take another case. An artisan, earning we will say 25 s. or 30 s. a week, goes to the relieving officer and says, "I have had a bad burn," and the relieving officer says to him, "Very well, have you got no money?" "No," that is to say he has spent all his money; he comes into your infirmary and gets his burn cured, goes out again, discharges himself when he likes; yet that man would be perfectly able, if he were not taken into the infirmary, to pay a doctor, because he would get credit. Have you had many cases of that sort?—I have never attempted to go into details of that sort; such cases do occur from time to time, they are bound to occur in such a large number as 2,000 admissions in a year.

23974. You cannot give us any idea what number of persons come in who are, I will not say destitute (because they have no money), but I mean persons who could obtain money if they were left to themselves?—No, I could not.

23975. Then you said you could not give any opinion as to whether the extreme comfort of the infirmaries and the extreme skill with which the patients are treated there, does not tend to crush out absolutely the desire of the poor to provide sick clubs for themselves?—No, I do not think it does; not with the strict discipline we have.

23976. What do you mean by the "strict discipline"?—We have no pauper help at all, all paid labour.

23977. But what do you mean by the "strict discipline." You do not mean that your strictness is such as to be deterrent of patients coming to you?—Not to that extent; it is united with kindness. When I, or my colleagues, go every morning to the wards, every patient is by the bedside to be seen by the doctor.

23978. You mean that it is strictly enforced that they should attend to the hours and the rules of the infirmary?—Yes.

23979. And that those rules and regulations are, to a certain degree, a deterrent to men coming in merely for slight ailments?—Yes, and the malingeringer does not like that.

23980. What do you do with the malingeringer, turn him out?—No, we should cure him of his fancied illness.

Earl of Lauderdale.

23981. What is your usual number of patients?—I think the average, all the year round, is 600.

23982. And what is the average length of time that they stay in the infirmary?—I could not say; about 90 never go out, but how long others stay I could not say.

23983. Is there any special disease that prevails among these patients at your infirmary?—We find Bright's disease, and ulcerated leg, and bronchitis, the most prominent diseases we have.

Lord Thring.

23984. Is old age, in itself, a qualification for admission to the infirmary?—Not old age by itself; if they are bedridden then we have them in.

23985. But unless they are confined to their beds they do not come in to the infirmary?—No.

4 M

23986. I suppose

8 June 1891.]

Mr. LUNN.

[Continued.]

Earl of Kimberley.

23986. I suppose you do not take the idiot cases into the infirmary?—No.

23987. They are left in the workhouse?—They are left in the workhouse.

23988. Have you any venereal cases?—A great many from time to time.

23989. Do you think there are a great number of prostitutes that come in solely for the purpose of being confined?—We get them from time to time, because they will not take them in at the Lock if they are pregnant; and *vice versa* at Queen Charlotte's, they will not take them if they have got syphilis.

23990. When they are in childbed they are in the workhouse, are they not?—Yes.

23991. There is no power of detention on the ground of venereal diseases?—Not now.

23992. The woman can take her discharge when she likes?—Yes.

23993. The only cases in which you can detain them are mental cases?—That is all.

23994. I suppose cases of infectious diseases you transfer to one of the infectious asylums?—Yes.

Earl Cathcart.

23995. Dr. Bridges told us on Monday that the extremes on both sides were so great as to the duration of the stay of the patients in the infirmaries that it would be impossible to strike any average?—You could not strike an average.

23996. Some patients, he said, come to stay for life and others only for a short time, that the extremes are so great that it was impossible to strike any satisfactory average. That is so, is it?—That is so. About 90 to 100, as far as I can say, never go out of the infirmary, that is to say, they are bedridden.

Lord Thring.

23997. I do not think it is strictly correct to say you may detain only cases of mental disease; you may detain a person with scarlet fever?—I get rid of him directly by sending him to the Fever Hospital.

Chairman.

23998. About the nursing, who drew up your nursing scheme?—The Marylebone guardians, with Miss Vincent, our matron, and myself.

23999. And who regulated the payment of them?—The Nightingale Committee pay the probationers; that has nothing to do with the guardians.

24000. But the guardians pay the staff of nurses?—Yes.

24001. Who regulated that?—The guardians regulated it, I suppose. The clerk of the guardians will be able to tell you about that.

24002. Do you make any classification of patients?—Yes.

24003. For medical reasons?—Yes.

24004. Do you make any moral classification; would you put a young woman who was a prostitute next to an old one who was of good character?—No, we classify our cases; and we put all prostitutes together and all venereal cases.

24005. One question more as regards receiving patients from the hospital; they are sent to

Chairman—continued.

the infirmary because they are not fit for the hospital?—Yes.

24006. That is, as regards disease, they are not fit cases for the hospital?—Yes.

24007. But you have no power of ascertaining whether they are fit persons for the infirmary in respect of their poverty?—No, I only do it myself on behalf of the guardians. It has happened that I have found people with money in their pockets and therefore not paupers; and when I have told them it will be taken away they have taken their discharge.

Earl of Kimberley.

24008. Is it not an obvious thing that no person should be received in the infirmary without the relieving officer having seen the case?—There are cases so ill that it would not be right to say that they should not be received till the relieving officer had seen them.

24009. But the patient can be detained in the hospital as long as it is necessary for perfect safety, and then they may send him to the infirmary?—Those are constant cases in hospitals. For instance, I have myself, when resident at a hospital, told a patient with a fractured leg, "We cannot have you any longer; we want the bed; your leg is all sound, but it must rest for a few weeks". The patient would say: "What am I to do? and I should send a message down to the steward to send to the relieving officer, who would come and see the patient, and he would make out an order for the infirmary, and that case would go to the infirmary in the usual way. But the class of cases that I mean which we take in without orders are just casuals applying to the hospitals.

24010. I am alluding entirely to cases coming from the hospitals; I do not mean other cases; but with regard to any case which is in the hospital and which for a good reason, no doubt, is going to be transferred by the hospital to an infirmary, I do not see why that case coming from the hospital should not be treated in the same way as the case of any poor person applying for a medical order?—Those, as a rule, do have orders.

24011. Then what are the cases that the hospitals send to Marylebone Infirmary without orders?—The casual ones just applying at the hospital.

24012. You mean those who have not been inmates of the hospital, but who go to the hospital, and the hospital thinks they are proper cases for you?—Yes, but there are cases sometimes where residents in the hospital go out and say, "I am not going to the infirmary," and in a few days they come and say, "How am I to get into that infirmary"; then they say, "You must apply in the usual way. The man shrugs his shoulders and comes to us from the hospital without an order.

24013. Did I understand you to say just now, as regards patients coming without the relieving officer's order, that it is possible that a patient who is seriously ill may go to a hospital and be told that there is no room for him, and then he may come to you and be admitted without an order?—Yes, and the guardians leave it to my discretion to admit him or not.

24014. In

18 June 1891.]

Mr. LUNN.

[Continued.]

Earl of Kimberley—continued.

24014. In fact, you act very much as if you were a district medical officer?—Yes.

Chairman.

24015. You do not want to have students in the infirmary I gather from you?—With regard to students I do not think there would be enough work for them to do. It might be arranged in another way; students coming with the teaching staff from a London hospital. If physicians were allowed to bring their classes round for demonstration purposes, under supervision, then it might be worked; but as to coming to an infirmary and just going round and thinking that they are going to be primed up for a paper for a medical board which they are going to be examined by, that would be a perfect farce.

24016. Then under proper regulations you would approve of it?—If they came under regulations in this way: suppose a medical man was honorary surgeon or physician, and that he could bring those students round, and just demonstrate to them it might answer. As house surgeon and house physician I have had the greatest difficulty with students; they will not come: they turn up at 11 or 12 o'clock when they ought to be going. I used to do their dressing when I was house surgeon rather than wait for them. And there is an interest in the hospital work which you have not got in a poor law infirmary; they would not come.

24017. Would the existing staff of hospitals be willing to come to your infirmary to see certain cases?—Personally I have no difficulty in getting surgeons or physicians to come and see my cases. I think it would be very useful if one was in a position to say, "I will call in anyone I like" for cases one finds difficult. I think there would be great usefulness in that; and those men, I should suggest, should be the men teaching at the different hospitals, and should be able to bring their class to cases that I let them know of as interesting ones. But of course that would give me more work to do.

24018. Is all the food of the nurses and patients supplied from one kitchen?—Yes, all have the same food.

24019. Do the nurses complain of their food at all?—They have only complained of the bread now and then; not as a rule.

24020. Who is responsible for the food that comes into the infirmary?—I am responsible to the guardians, but I have such good officers in the matron and the steward that I have no difficulty in that respect. I make the steward responsible, and if anything goes wrong he points it out to me. I see the meat myself independently of the matron or anyone else.

24021. Is there anything else you would like to state?—No.

Lord Monkswell.

24022. In regard to venereal cases, have you ever tried making an agreement with the Lock Hospital?—No, we do not get many in that way except in the ordinary routine. At the Lock Hospital they will not have anybody that is pregnant.

(24.)

Lord Monkswell—continued.

24023. I believe at Chelsea we send all our cases to the Lock Hospital?—It is not large enough to take all venereal cases if they were sent away by us.

24024. You probably would have some difficulty in making an agreement, you think?—We would.

24025. Do you think it would probably be a good thing, if they had room in the Lock Hospital, that you should be rid of these cases as far as possible?—I do not see anything that would be gained by it.

24026. You would as soon have a ward for these cases in the infirmary?—Yes. The ordinary run of prostitutes do not come; it is only the lowest of the low that we get.

24027. Do they take the lowest of the low in the Lock Hospital?—I cannot answer for the Lock Hospital, but, as an old resident in other hospitals, I can answer that question, that they do not get the lowest of the low in the London hospitals.

24028. Then you say that the only refuge for the lowest of the low is in the infirmaries?—I think so.

24029. You do not think the Lock Hospital would take them in?—I cannot answer for the Lock Hospital.

Earl of Kimberley.

24030. Can you state how it arises that the hospitals, which are termed "charities," will not take cases that are apparently most objects of charity, the lowest of the low. How does that arise?—I cannot possibly tell.

24031. From your experience of general hospitals, they do not take them?—At the outpatient departments we get casuals.

24032. Do those cases that you describe as the lowest of the low, apply to the hospitals?—They do not like going on account of their dress.

24033. Then you mean it is not so much that the hospitals refuse them as that they do not care to apply?—I think so.

24034. Is there not a certain amount of prejudice on the part of hospitals against those cases; is there not a feeling that those hospitals are for the poor, but for the decent poor?—I believe that is so.

24035. Do you think that that is in accordance with the idea of these charities?—No, I think they originally started them for the poorest of the poor.

24036. And for the lowest of the low?—Yes.

Earl Cathcart.

24037. These poor wretched people simply rot at home in their own dens?—They do rot; it is quite a true expression. I had a man the other day who had not had anybody by him for a fortnight, a mass of sores; he was found out by a policeman.

24038. The fact is that venereal cases are nasty filthy cases, and they do not like them in hospitals?—They do not in the ordinary general hospital. I had difficulty in getting a dresser to go into the lock ward to do his dressing when I was house-surgeon at St. Thomas's.

24039. We have been told that it was excessively

4 M 2

18 June 1891.]

Mr. LUNN.

[Continued.]

Earl Cathcart—continued.

sively wrong to employ females to attend male ock cases; what is your opinion about that?—I think they do better than men.

24040. You would prefer it?—I should personally.

24041. Do you think it is fit work for women?—One would not like one's wife or sister to do it. I do not know how they do it, but women keep them under discipline far better than men.

24042. You have no objection in the abstract to the employment of women in those cases?—No.

Lord Thring.

24043. When you talk of the lowest of the low you are only talking of this particular disease; hospitals do not refuse other diseases because the patients are of the lowest of the low, do they?—Perhaps it is wrong to say that they refuse them; they do not like them.

24044. But is there not this to be said, these people are so foul that you must put them in a separate place; you could not possibly put them next to a decent labourer or labourer's wife?—These cases I refer to are cases where they have not changed their clothes from month to month.

24045. Foul not from disease, but from filth?—Filth brings disease.

24046. You do not mean venereal cases?—No.

24047. In answer to Lord Kimberley, you said that you thought that hospitals ought to receive those; I do not deny that, but if ordinary hospitals are to receive them it would be necessary that they should have a separate ward, surely?—Certainly.

24048. You would not mix up these loathsome cases with decent people?—No, certainly not.

Earl Cathcart.

24049. Have you an itch ward?—No.

24050. What do you do in such cases?—We cure them at once, and get rid of them.

24051. How do you manage?—It is a difficult matter; we have three separation wards on each flat.

24052. And you put them in sulphur blankets?—We use sulphur, etc.

24053. And carbolic?—And carbolic. They are most troublesome cases.

24054. They never wish to come back I suppose after that?—We have had them come back sometimes.

Earl of Lauderdale.

24055. What is the population that comes within your sphere?—You mean in the Maryle-

Earl of Lauderdale—continued.

bone parish; I could not answer that; I believe 142,000, but the clerk of the guardians could answer it.

24056. And out of that you receive about 2,000 in a year. Yes, there are a lot of re-admissions over and over again.

24057. How many single cases are there, 1,600?—I could not say. One difficulty we have is a lot of cases like great heavy men, who can work, but will not work, with ulcerated legs who come in, and the next day ask for their discharge; all their clothes have been disinfected; we cannot detain them; they will go out, say, to-day and come back to-morrow, and those fellows receive everything we can give them. In the hospital you simply go up to the ward, and say, "If you cannot behave yourselves here you go out," and we get those cases sometimes. An old hand applies, who is very ill, dangerously ill; he comes with an ulcerated leg; I cannot send that man away when he is dangerously ill, with a clear conscience.

24058. The best remedy would be, would it not, to have some power of detaining cases of that kind?—Just so; we are handicapped; they would not come in if they knew that.

24059. If they knew that they could be detained, you mean?—Yes; I am referring to the class of men and women with a slightly ulcerated leg who keep it open on purpose, who rather like to come to us; it is just convenient to have a nice wash and go out again. It puts all the officers to great inconvenience.

24060. A discretionary power of detention would be of great advantage I suppose in such cases?—Great. If they come in two or three times in one month, we can detain them so many hours, but it is not worth while to do so, because they raise storms and make a fearful noise, unless you can detain them altogether till they are well, they lead you such a dance.

24061. This applies not only to the infirmaries, but also to the workhouses?—Yes, no doubt.

Earl Cathcart.

24062. Did you ever know a patient use halfpence and farthings, and other corrosives in order to keep a wound open?—They are clever at that; they will stuff things like that between their toes. They only want to scratch the wound a little to keep it open.

Chairman.

24063. Have you anything else you wish to state?—No. The clerk to the guardians could answer the questions I could not answer.

The Witness is directed to withdraw.

MR. JOHN KNOX, M.D., is called in; and, having been sworn, is Examined, as follows:

Chairman.

24064. You are the head, the Medical Superintendent, are you not, of the Bethnal Green Workhouse?—Medical officer.

24065. Is there any infirmary at Bethnal Green?—No separate infirmary.

24066. Will you tell us where the infirmary is; is it attached to the workhouse?—Yes.

Chairman—continued.

24067. How many beds have you?—We have about 495 certified beds for the sick.

24068. When was it built?—Some part of it 50 years ago; it was built from 20 to 50 years ago.

24069. There is a scheme, or an idea at any rate, is there not, of building another infirmary?—Yes.

24070. How

18 June 1891.]

Mr. KNOX, M.D.

[Continued.]

Chairman—continued.

24070. How long has that idea been before the guardians, since 1868?—For 20 years, I believe.

24071. You have 495 beds you say; are you one of the workhouses that send patients to the Cleveland-street Sick Asylum?—No.

24072. You keep all your own patients?—Yes.

24073. Are those 495 beds more than you require?—Not at all. Our numbers go up during the winter to 590 sick.

24074. So that you are at times overcrowded?—Very much overcrowded.

24075. Do you ever have the infirmary so full that you have to send people away who are sick?—We never send any sick away; we put up extra beds, and take in additional wards from the workhouse proper.

24076. What medical staff is there for these cases?—Myself and one assistant.

24077. And how many nurses?—One day superintendent and 11 ordinary day nurses, two male and two female imbecile attendants, and three female infirm ward nurses; also one night superintendent, eight ordinary night nurses, one female infirm ward nurse, two night imbecile attendants, and one extra nurse for day or night duty. Those infirm wards are for patients generally over 60 years of age, who are not quite ill enough to be sent to sick wards, and yet not sufficiently well to be sent to what we call the body of the house.

24078. How many beds have you for those infirm patients?—On the male side 70 beds, and on the female side 100.

24079. You only have three nurses you say, for those infirm patients?—They do not require any special attention; they are up all day and not under medical treatment.

24080. These are people who can walk about, I understand?—They are able to walk about.

24081. Are your 11 nurses sufficient for your requirements?—No, not at all.

24082. Are they trained?—All have had previous poor law experience, or asylum experience.

24083. Nursing experience I mean?—Yes; all require to have had previous experience in a public institution, not necessarily hospital training.

24084. That is what I mean; they are not hospital trained?—You confine the word “trained” to hospital trained. They are not hospital trained nurses.

24085. Is the matron a hospital trained nurse?—No.

24086. What was the matron previously?—I think she was previously in a country workhouse.

24087. I want to understand who is the responsible female at the head of the nursing?—The matron of the workhouse.

24088. And she has had no hospital training; and under her she has 11 nurses who are not hospital trained?—I think we have got two amongst them who have had hospital training.

24089. Have you ever made any requisition for trained nurses?—No. Some of our best nurses have been trained in poor-law infirmaries.

24090. You want more?—A good many more.

24091. Do you consider that the medical attendance is sufficient?—I think we require another assistant.

(24.)

Earl of Kimberley.

24092. In addition to the regular nurses do you employ any paupers as nurses?—We do.

24093. Do you find them efficient?—Anything but efficient.

24094. When you are full, how many pauper nurses would you have to employ?—As many as 80.

24095. I suppose you have a large number of lying-in cases?—We had 54 cases last year.

24096. Have you any venereal cases?—None

24097. How do you treat them?—We have none at all, or very seldom any; we have none at present.

24098. Do you mean that there are no poor people at Bethnal Green with venereal disease?—We get about one in four or six months.

24099. How do you account for your having so few of these cases that you have?—I do not know.

24100. Is it not a most extraordinary circumstance?—At first sight it does appear extraordinary.

24101. We have just heard that in a poor-law infirmary, the Marylebone Infirmary, they have a very large number of these venereal cases; you heard that evidence, did you not?—Yes.

24102. How do you come to have none of these venereal cases in your workhouse?—They do not come in; we have only had two this year; as far as I remember we have only had one female case this year.

24103. Where do you suppose they are treated?—I do not know.

24104. Then do you mean to say that in such a large district there are no persons coming in (who are in poverty I mean) who are afflicted with venereal disease?—It is so. It is very rarely that we get a case of recent venereal disease of late years.

Chairman.

24105. What do you do when they do come; do you isolate them?—Yes.

24106. And perhaps that is the explanation of your having so few of these cases; they find it very dull, and therefore they prefer to go anywhere else?—We have only had these two cases this year up to now, and they were only there a short time; it could not have much effect out of doors.

Earl of Kimberley.

24107. Therefore we must conclude that the morality of Bethnal Green is high almost beyond belief?—It must be very high.

24108. Is that so?—That is my experience, as far as disease goes.

24109. Have you many idiots?—We have about 34 lunatics at present.

24110. In “lunatics” you include the whole class?—Yes; we have two male and two female attendants for those cases during the day, one male and one female during the night.

24111. Have you many people coming in with slight diseases and going out again after a short time, going in and out?—Yes.

24112. And then you have a certain number of chronic cases, I presume?—A great number.

24113. You yourself would be in favour of a separate infirmary?—I would, strongly.

4 M 3

24114. Have

18 June 1891.]

Mr. KNOX, M.D.

[Continued.]

Earl of *Kimberley*—continued.

24114. Have you any large hospital in your neighbourhood?—The London Hospital is within two miles; Victoria Park Hospital is quite near.

24115. Do you happen to know whether the Local Government Board are satisfied with the condition of your infirmary?—No, they are not; they are very dissatisfied.

Lord *Clifford of Chudleigh*.

24116. Do you make every effort to get rid of lunatic inmates of the workhouse, as far as possible, by sending them to the lunatic asylum?—All acute cases are sent to a lunatic asylum.

24117. Do you think there are any that you treat that might be drafted into a lunatic asylum?—No, they are certified by a magistrate to be detained in the workhouse.

24118. But are they not sufficiently bad to be transferred to a lunatic asylum?—They are not sufficiently bad; they are quite harmless.

Lord *Monkswell*.

24119. Do you think that pauper nurses could be usefully employed in any nursing capacity at all; do you think that they could be employed at all, for instance to look after the babies?—Not if the babies were sick.

24120. But sometimes there are babies of two months old, not ill?—They would be in the workhouse, probably in the nursery.

24121. Who would attend to them, a pauper?—We call them pauper helps, under the supervision of the nurse.

24122. Would there be any objection to the pauper helps looking after babies not ill, under the supervision of a nurse?—I should think not.

24123. They would probably like to dandle them about and look after them?—I think so.

Earl *Cathcart*.

24124. I am afraid that you enjoy at Bethnal Green the reputation of being the very worst institution of this kind in the metropolis?—We do.

24125. And the whole thing ought to be amended or abolished and reconstituted tomorrow?—Abolished; it would not be possible to amend it.

24126. It is impossible to keep up discipline with 80 pauper nurses?—Utterly impossible.

24127. The fact is that the whole thing is a crying and notorious evil; that is so, is it not?—That is so.

24128. What was the building originally made for that is now occupied as an infirmary?—The workhouse.

24129. It was not that other buildings were taken in for the purpose?—No.

24130. Do you ever perform any operations in this place?—Yes.

24131. Serious operations?—Amputations.

24132. With only the assistance of your single medical assistant?—I call in a friend of mine to assist.

24133. And you are not allowed extra fees or extra payment, or anything on that account?—No.

24134. It takes three men to get off a leg properly, does it not?—Yes.

24135. Therefore you must be underhanded

Earl *Cathcart*—continued.

if you are obliged to call in assistance for the operations you perform?—Yes.

24136. Do you ever do ovariectomy?—Laparotomy, which is next door to it.

24137. What is your salary may I ask?—£. 300.

24138. And a house?—Two rooms.

24139. You are not a married man?—No.

24140. Your assistant, what is he?—Single.

24141. Might I ask what was your medical school?—Belfast and Dublin.

24142. Have you any midwife in the building?—No.

24143. Then all midwifery cases are attended by the two medical gentleman?—We have a nurse, not a certificated midwife; but she has had very extensive experience; she has been with us 14 years.

24144. She delivers the poor women?—She attends to them under the supervision of the medical officer.

24145. She does the delivering, and lets you know if the case requires your attention?—No; we see every case, and remain with them as long as we think necessary.

24146. How far are you away from the river?—About two miles; we are on the banks of the Regent's Canal, close to Victoria Park.

24147. The solitary confinement in the venereal cases actually does discourage people, no doubt, from coming near to you?—I think not; they have plenty of liberty.

24148. It is very difficult to get at the reason why it is you have so few of those cases?—I cannot account for it; it is almost incredible.

Earl of *Arran*.

24149. I suppose that you would report direct to the guardians as to any shorthandedness?—Yes.

24150. Have you ever done so?—Yes; and also as to the overcrowding.

24151. And what answer did you receive?—Everything is postponed till the erection of the new infirmary.

Chairman.

24152. Do you employ other paupers besides those whom you employ as nurses in your infirmary; the servants whom you employ to clean out wards, and so on, are they paupers too?—No, there are nine paid scrubbers.

24153. In fact you have all paupers, except the 11 nurses and two superintendents?—Yes, for day duty.

Earl *Cathcart*.

24154. What would you suggest in regard to a site; where could a site be found if you wanted to build a new infirmary; has anything ever occurred to your mind as to where an infirmary might be built within reasonable distance?—I think it is a very great pity that the guardians were unable to obtain what is called the Poor's Land at Bethnal Green, a space of about 4½ acres.

24155. Why did they not obtain it?—There was considerable opposition to it, and it was decided to leave it as an open space.

24156. But, to your mind, is it impossible that
a site

18 June 1891.]

Mr. KNOX, M.D.

[Continued.]

Earl Cathcart—continued.

a site could be found within a reasonable distance of Bethnal Green?—No, I do not think it is.

24157. And have you got your eye upon any particular site?—Our guardians are in negotiation with the authorities of a piece of ground about a quarter of a mile from the workhouse.

24158. Is it a suitable position?—It would be a suitable position if they can obtain it.

Chairman.

24159. Do you know how long they have been in communication about that ground?—Only last week for this special part.

24160. I think you did not say how long you have been at this infirmary?—Eleven years. I may say that our nurses remain with us a very long time. I do not know if that is an interesting fact. The duration of service of our nurses is on an average about eight years.

24161. At what age do you take your nurses,

Chairman—continued.

engage them I mean?—22, 24, and 25 years of age.

24162. They are young women?—Yes

24163. Does that apply to all these 11 nurses?—Some of them are getting very old now; a good many of them have been there 16, 17, and 18 years.

24164. What is the average age of the 11 women?—They vary from 22 to 65, I think.

24165. Some of the 11 nurses are 65 years of age?—I should think so.

24166. Who appoints the nurses?—The guardians.

24167. Who selects them?—They do.

24168. On testimonials?—They all have testimonials.

24169. With regard to these three people who look after the infirm, what age are they?—The nurse on the male side is certainly over 60, and on the female side she would be 46.

The Witness is directed to withdraw.

Mr. THOMAS SAVILL, M.D., LOND., is called in; and, having been sworn, is Examined, as follows:

Chairman.

24170. You are the Medical Superintendent of the Paddington Infirmary, are you not?—Yes.

24171. How long have you been in that position?—Six years.

24172. Will you tell us where that infirmary is situated?—It is situated in the Harrow-road; that is just beyond the Hyde Park district.

24173. How far is it from St. Mary's Hospital?—It is about a mile and a-half from St. Mary's Hospital.

24174. Is it one of the new infirmaries built under the Gathorne Hardy Act of 1868?—Yes.

24175. Built on the pavilion system?—Yes, with two blocks, one male and one female.

24176. How many beds have you?—284.

24177. Is that sufficient for the requirements of your district?—Together with the sick wards that there are in the workhouse, that is barely sufficient for our need.

24178. Do you, like other infirmaries, take every sort of case, except infectious cases?—Yes.

24179. Will you tell us what your medical staff is. There is first yourself, and have you any assistant?—I have one assistant and one resident clinical assistant.

24180. At the same time, you have all the duties of administration?—Yes.

24181. Do you find those duties too much?—No.

24182. Have you any suggestion to make as to how the organization might be improved?—I regard infirmary administration as absolutely perfect, with two exceptions; I could not possibly suggest anything but those two things; firstly, that the matron should in all cases be a trained nurse, as well as capable in other respects; and secondly, that there should be an augmentation of the resident medical staff.

24182*. To what in the main do you ascribe the general excellence of infirmary administration?—There are many causes, but the two chief are the excellent discipline which prevails when the Local Government Board orders are adhered to,

(24.)

Chairman—continued.

and the fact that these medical institutions are administered by a medical head, who alone is responsible to the governing body.

24183. How would you propose that the augmentation of the medical staff should be carried out; would you have more paid officers in the establishment, or would you have it on the same plan as they have at hospitals, a visiting staff?—I think that the first necessity is to increase the resident medical staff; indeed I am sure that is the first thing that is wanted. I think that it should be augmented also by senior students or newly qualified men, not necessarily resident, who might help in the investigation of cases and in carrying out the line of treatment that is prescribed for them.

24184. Do you mean that it is impossible for you to give sufficient attention to the number of cases under your care?—What is wanted is this, that there should be some assistants to investigate the cases and to carry out treatment, such as passing the catheter (as you know in the case of many old people who get enlargement of the prostate; they require it systematically), and such things as the application of the electric battery for nerve cases, things that dressers and clinical clerks do in hospitals. That is what is wanted; it is not necessarily that more doctors are wanted to take charge of the cases; but what is wanted is, so to speak, some one to investigate the cases more thoroughly, and when they are more thoroughly investigated to carry out the line of treatment that is prescribed for them.

24185. These senior students you speak of would be very useful?—Very useful, because they would take notes about the cases; they would take the family history, the previous history, the history of the present illness, a thing which in many cases, especially bearing in mind the want of intelligence of that class of patient, takes an hour to do thoroughly; but which, when it is once done, is easily read through by a person who is more competent than the student; he then grasps the facts and makes a diagnosis in five minutes; whereas if he has to get out all these

4 M 4

18 May 1891.]

Mr. SAVILL, M.D.

[Continued.]

Chairman—continued.

these details himself he must spend an hour over the case.

24186. Then, I understand, you do not favour distinctly the system of a visiting staff such as they have at hospitals?—I do not think that it is quite feasible in the ordinary way of a hospital; indeed, I am sure it is not; because with the average London pauper it wants some one who is accustomed to him, and knows how to deal with him, and who is thoroughly up, so to speak, in the socio-medical aspect of his case; the amount of work which the man or woman is capable of doing, what class of pauper or what class of invalid or of able-bodied person he or she belongs to. Now I think, indeed I am sure, that without a considerable amount of training (I am just about beginning to learn it myself) a doctor is incapable of grasping all these facts; and an ordinary consulting physician or surgeon who comes in just once or twice a week looks solely at the medical aspect of the case.

24187. Would you think it good for students to be admitted to the wards of these infirmaries?—I think it would be most useful, because they on their part would gain experience, and vast experience, and also experience of those kinds of cases which they will meet with in after life, and which they do not see in hospitals. They would gain that on their part, and we should gain what I have just now been saying, the advantage of having the cases thoroughly investigated and properly and skilfully treated.

24188. Then, without such a visiting staff as they have at hospitals, how would you teach these students; would you teach them yourself?—By the time they get to their fifth year they would not really want much teaching of those very things; what little directions would be necessary I feel fully competent to give them. I may mention, with all deference, that I have been a hospital physician myself; I gave that up for the magnificent field that an infirmary offers; and I possess all the qualifications of a hospital physician.

24189. Which was your hospital; where were you educated?—I was educated at St. Thomas's; I was also house physician, and held other resident appointments there; then I became attached to the West London Hospital as the assistant physician; and then I gave that up, as I say, seeing the magnificent field which is offered by an infirmary.

24190. There was no school at the West London Hospital, was there?—They began to get one up about the time I was leaving.

24191. As regards the nursing, the matron, you say, ought to be hospital-trained; at your infirmary how many trained nurses have you got?—We have 25, with the addition of the night superintendent, the assistant matron, and the matron, making a total of 28.

24192. Are any of those hospital-trained, or are they all trained?—There are three ranks; there is the sister of the ward, who has charge of the ward, there is an assistant nurse under her, and there is a night nurse. The sister is a thoroughly trained hospital nurse of some experience always, and with regard to the other two, the night nurse must have had one year's experience, and the assistant nurses we sometimes take in untrained.

Chairman—continued.

24193. Do you train them yourselves?—We train a proportion of them, the younger ones, ourselves.

24194. You would like to have them all trained?—I would rather train them myself, the younger ones, than have them indifferently trained; that is why we take them as they are; we could get them trained if we wished.

24195. Has there ever been any question of your being annexed to the Nightingale system, as the Marylebone Infirmary is?—The question has never been raised by the Paddington Board.

24196. The question of your training your own probationers has never been raised?—By a regular school, you mean?

24197. Yes?—No; I do not think it has ever been mooted practically.

24198. Is that because it would throw a great expense on the ratepayers?—I think it would throw somewhat greater expense upon the ratepayers; there would be additional establishment expenses.

24199. Will you tell us what the hours of your nurses are?—The day staff are called at six, have breakfast at six-thirty, come on duty at half-past seven, and go off duty at half-past eight.

24200. What time are they allowed for dinner?—They get a moveable luncheon in the morning, then they get dinner from one to half-past, or from half-past one to two, as the case may be; then from half-past four to five for tea.

24201. Do they have to come down to tea, or do they have it in the ward kitchen?—They come down. The only meal they have on day duty in the ward is luncheon; they have it in a little linenry that is attached to the ward.

24202. Then do they have another meal before they go to bed; supper?—Yes, supper at nine.

24203. As to recreation, what have they?—The day nurses get a half-day once a week, from two until ten. They get in addition to that two afternoons from two to half-past four, and they also get either on Sunday morning or Sunday evening time to go to church, and one Sunday in four they get a half-day.

24204. And as regards the annual holiday?—The seniors get three weeks, and the juniors two.

24205. Do you think two weeks sufficient?—I think not; I should like to see them all have three weeks; I think that should be the minimum.

24206. Will you tell us the range of the wages of your nurses?—The seniors get 26 *l.*, rising 2 *l.* annually to 30 *l.*, with uniform, washing, and board. The night nurses get 20 *l.*, rising 2 *l.* annually to 26 *l.*, with the same emoluments; and the assistant nurses get 16 *l.*, rising 1 *l.* annually to 20 *l.*

24207. I do not think you told us the hours of the night nurses; when do they come on duty?—The night nurses come on at half-past eight, and go off at half-past eight.

24208. And do they have a good meal before they go into the wards?—Yes, they have a good hot supper. They have also every morning two and a-half hours for recreation; then they

18 June 1891.

Mr. SAVILL, M.D.

[Continued.]

Chairman—continued.

they retire to their dormitory at eleven, and go to bed at half-past eleven, and they get up at half-past-seven.

24209. Where do they sleep, in dormitories or in separate rooms?—All the seniors have a single room, and some of the juniors, but most of the juniors have double rooms.

24210. What is the size of your wards; how many beds are there in a ward?—There are 32 beds in every big ward, and a small ward is attached to it in which there are generally one or perhaps two special cases.

24211. Does one night nurse look after the wards at night?—One night nurse to every ward, which is rather more than is necessary. We are obliged to do that by reason of our structural arrangements.

24212. Is the position do you think, speaking generally, of the matron and the medical superintendent, a satisfactory one?—In our infirmary it is most excellent; it could not possibly be better; I cannot imagine a more ideally perfect arrangement than that which we have. You know that the medical superintendent is the sole responsible head; but if he is a wise man he does not interfere with the women; and as long as things go on all right, I never interfere with the matron. She gives the extra leave, and she has entire charge of the nurses off duty, without ever my interfering; and in regard to going on duty she never changes a nurse's ward without appealing to me or consulting me, but in other respects she does what she likes; and as long as it works well and no complaint comes to me, I never interfere.

24213. Has she good experience?—She has good experience; she was trained at the Nightingale Home, and then was assistant matron at the Marylebone Infirmary, and lastly she came to Paddington.

24214. How long has she been there?—The same time as myself; but she gets rid of responsibility, you see, in the way I have described; while at the same time she has full authority to manage the nurses.

24215. What salary does she receive?—£. 100 a year and all found.

24216. Is it an increasing salary?—Only at the option of the board.

24217. And your salary is what?—Mine is 430 l.

24218. Does it increase or is it stationary?—When I first went, there was only the infirmary to look after; two years later, I got a very substantial rise, when they appointed me to the sick wards next door.

24219. Is the workhouse then quite close to the infirmary?—There is only a wall separating them.

24220. How many sick beds are there in the workhouse?—Two hundred and ninety-five, including the lying-in beds.

24221. And that practically gives you about 600 beds to look after?—Very nearly.

24222. Do you find that you can manage to do all the medical supervision of these and do your own administrative work into the bargain?—Yes, because a great many of the cases are chronic, and do not need seeing every day, and
(24.) e

Chairman—continued.

a great deal of the work is routine work, once you get accustomed to it. A man coming there fresh would be bewildered; but I have now learnt (it has taken me five years to learn it,) the method of dealing with the average London pauper.

24223. Of course the trained nurses must be of the greatest assistance to you?—Very great,

24224. Before the nurses were trained it must have been almost impossible to thoroughly attend to the cases?—I should think so; judging from my experience in the sick wards of the workhouse, I should say it was.

24225. What staff of nurses have you in those sick wards?—You see I am only a visitor in the workhouse, so I have to think, because, you see, the master there is the head of the workhouse. As you see, I have a dual experience, which is of very great value in comparing the two systems, the old and the new. I see, of course, the old system in the workhouse, in the sick wards there, but I have the new system in my own infirmary. We have in the workhouse about nine nurses, I think.

24226. To nearly 300 beds?—To nearly 300 beds.

24227. Do you think that sufficient?—No.

24228. And are they trained?—Only one of them; the lying-in nurse is.

24229. And but for the lying-in nurse they are absolutely untrained?—Yes.

24230. On what recommendation are they appointed first of all, because it is evidently not possible for laymen to judge of their qualifications as nurses?—That is the outcome of two things. In the first place, of a lay administrator, whom the board look to, as he is the head of the establishment; and in the second place, a board of guardians, when they take nobody's recommendation, and have not got a medical administrator to fall back on, are not (I do not know whether I ought to say so) competent to judge of the qualifications of a nurse.

24231. It stands to reason that none but a professional man can judge of the qualifications of a nurse?—Quite so.

24232. And you are never called into consultation on that subject?—Not as regards the workhouse.

24233. Therefore you have practically the 300 beds looked after by these eight untrained nurses?—That is so.

24234. Who is over these eight untrained nurses?—The matron of the workhouse.

24235. Who is herself untrained?—Yes.

24236. Do they furnish you with any other people; besides these eight people are there any pauper helps?—Yes pauper helps in every ward.

24237. And do they attend to the patients?—Yes, they attend to the personal wants of the patients; they do what I regard as properly belonging to the nurses, attend to the wants of the patients that is to say; give them utensils, and give them food, and give them everything.

24238. Is it part of the business of a nurse to put on dressings?—Yes, of a proper nurse.

4 N

24239. Do

18 June 1891.]

Mr. SAVILL, M.D.

[Continued.]

Chairman—continued.

24239. Do you consider that any one of those women in the workhouse is capable of putting on a dressing?—Not properly, and it amounts to this, that the so-called nurses are not nurses; they have no business, no right, to the style or title of nurse; I do not like to use the word, but they are pauper drivers; they see that these pauper helps in the various wards do certain duties, that is all they do.

24240. They superintend the pauper nurses, you mean?—That is it, that is a much better term for it than mine.

24241. Would you not like to see at any rate some proportion of them trained?—I think they ought all to be.

Earl Spencer.

24242. How are the cases which are kept in the sick wards distinguished from those sent to the infirmary?—It is the duty of the medical officer of the workhouse to allocate the inmates when they come in, and therefore it is the medical officer's duty to select such cases as he thinks suitable for this or that place.

24243. Is that your duty?—It is my duty as medical officer of the workhouse.

24244. Then do you keep the more trivial cases in the workhouse sick wards?—Not necessarily the more trivial cases, but the more incurable and the slighter ones, such as cases of slight but confirmed chronic bronchitis, and cases of confirmed rheumatism.

24245. If you had a larger number of wards in your infirmary would you transfer nearly all these that are now in the sick ward of the workhouse to your infirmary?—Yes, I should.

24246. They would all be proper cases for the infirmary?—Yes, if the infirmary were big enough.

24247. But it being so close to the workhouse, being only separated by one wall, and in the same building, as I understand?—No. There is a distance of 150 yards perhaps.

24248. Then you could not have them under the same management exactly in these wards, as in the infirmary?—I do not quite understand the question.

24249. What I meant is this: If these sick wards are so close to the infirmary why should they not be put under the same management as the infirmary?—That is exactly the question which the Local Government Board have asked my board, with a view to urging them to place the sick wards of the workhouse under the same medical administration as the infirmary.

24250. And what is the answer they have given to the question?—That the guardians regard the present arrangement as sufficient.

24251. It is more economical, I presume?—Well, using the term "economy" as meaning a saving of money for the moment, perhaps it would be.

24252. Can you give us what the difference in actual cost per patient in the sick wards of the workhouse is as compared with the cost per patient in your wards in the infirmary?—No, I could not tell you that.

24253. But though you say that for the moment it may be more economical to put them

Earl Spencer—continued.

in the sick wards of the workhouse, you think that possibly in the long run it may not be economical?—Precisely so.

24254. Will you explain your reason?—The reason I say that is this: When you compare the sick wards with the infirmary that is under my care, you compare the old system before Gathorne Hardy's Act in 1869, with the system that obtains now, and I am prepared to show that the establishment of these infirmaries is a very distinct economy, because although it does not always appear on the surface, by having more skilled nurses about to look after them, and by having better medical administration generally, the cases in these infirmaries are more looked after. Cases which are called, and classed as, incurable, are discovered to be curable; moreover, cases which are curable are more quickly curable. Cases that have been under my care were quoted by Dr. Bridges in his evidence before the Select Committee of your Lordship's House some time ago; cases which illustrate that very point, and to which, if I might be allowed, I should like to refer.

Chairman.

24255. To what committee do you refer?—The Select Committee on Poor Law Relief which sat in 1888.

Earl Spencer.

24256. Will you be kind enough to refer to that evidence?—Dr. Bridges says, in answer to Question 5485: "This is a case reported to me by one of the medical superintendents of an infirmary, and a case which I have myself seen. A woman aged 35 presented symptoms of paralysis, which would have been on the old plan simply classed as paralysis; she would have been allowed to be in the sick ward of a workhouse, and there she would have remained for an indefinite time, perhaps for life. On careful inquiry something peculiar was found in the symptoms presented, both in the form of the paralysis and in the form of the insensibility to pain, and in the character of certain epileptic fits that she had. She had been two years in the sick ward of the workhouse before she was transferred to the infirmary. There she received this discriminating careful treatment, both by massage and electricity, and so on, of which I have spoken, and this woman is now in service and is perfectly well. Another case is that of a woman of 51, who had what was called paraplegia, *i.e.*, paralysis of the lower part of the body. She had had this for 11 years, and for seven years of this period she had been in the sick wards of the workhouse. She was transferred to the infirmary, and she also was treated in a similarly careful discriminating way, and she is now quite well": and that woman (Mary Knight is her name), is now, and has been for the last three or four years in service as an invalid attendant herself. She has been rescued from a chronic sick bed, and put back on the list of able-bodied people. Then he refers to another case that was treated in the same way.

24257. But your case is not that of the old undiluted workhouse system, because you, being in charge of the infirmary, are also in charge of the sick in the sick wards of the workhouse?—

18 June 1891.]

Mr. SAVILL, M.D.

[Continued.]

Earl Spencer—continued.

workhouse?—At that time, when Dr. Bridges mentioned this, it was not so.

24258. But I am speaking now of the other evidence you have given?—I do not know that that modifies it very much, does it?

24259. If you saw these cases in the sick wards of the workhouse, cases which you think could be better treated in the other place, you would not hesitate to send them to the infirmary?—If I saw them; but you see I rely upon the nurses, help to discover such cases; it is practically upon their information, which is my greatest help, that I have to go.

24260. You mean that you cannot so exactly watch and find out the true position of a case without trained nurses to assist you, which you do not have in the sick wards of the workhouse?—Precisely so.

24261. Now you said something about the necessity of learning not only the medical aspect but the social aspect of the cases belonging to the workhouse infirmary. Will you a little further explain what you meant by the social aspect of a case?—The socio-medical aspect I said; I mean by that to know what amount of work a person can do, and more than that.

24262. In the infirmary do you mean, or out of it?—You see there are several classes of paupers. There is the aged and infirm pauper; there are the able-bodied people, who are put to hard work; then there are the half able-bodied, who are put to light work; then come the sick, those are the great divisions; and then outside these, are lying-in cases and lunatics. Well, by the socio-medical aspect of a case I mean knowing which of those classes the person more properly belongs to; when you are confronted with a patient, to know which of those classes he belongs to, whether he is really fit to be put to hard work, or to light work, and so on, or whether he should be classed with the chronic sick or the acute sick, and so forth.

24263. Take the first instance, a man who is a patient and yet can work; he would not go into the sick ward; he might be treated by you in the workhouse and not in the sick ward, is that so?—Well it is not desirable that it should be so; but supposing he has got a little sprain of his wrist, he is inclined to make the most of it; you must judge exactly how much that sprained wrist will interfere with his chopping up wood, or tying up bundles; you must make yourself acquainted with the kind of work they are put to do.

24264. Then are many of your patients doing work within the workhouse?—They are not my patients when they do work; I only see them when they come in, then if I allocate them amongst able-bodied who do light work I ought to have nothing more to do with them.

24265. None of your patients, so-called actual patients, are employed even in the sick wards or in the infirmary?—In the sick wards they are; they help as much as they can, but in the infirmary they are not. The fact of their being in the infirmary frees them from any kind of necessity for work. Our object then is solely to cure them as quickly as possible.

24266. Now with regard to students, you said, in answer to the Chairman that you thought it

Earl Spencer—continued.

desirable that students, when walking the hospitals, should be allowed to study cases in your infirmary; is that so?—Yes.

24267. We have been told that students would not do this, and that they would not care to study cases such as those that are to be found in the workhouse; that is not your opinion?—No, it is not. I am prepared to show that they are willing to come. Perhaps you are not aware that the Paddington Infirmary is the only infirmary in the metropolis where clinical instruction has of modern years been tried.

24268. You had better just describe to us how it was done?—It was done in connection with what is known as the post-graduate course, a course of lectures that was instituted for senior students and practitioners, and the lectures were given by myself and by selected surgeons and physicians who were invited by the Board of Guardians to come and give these lectures and demonstrations. We held two courses of lectures, and they were exceedingly well attended.

24269. By what numbers?—We had something like 25.

24270. From what hospitals did they come?—Most of them were practitioners, but I could not say where they all came from, because I do not know.

24271. Do those classes go on now?—No, they do not go on now.

24272. Why were they discontinued?—They were only done by way of experiment, and the post-graduate association made arrangements for someone else to take them; they go round by rotation.

24273. Does the round go on still?—It is possible that we may resume them again.

24274. Did you consider that they were successful at the time?—Very.

24275. They saw a good many cases that they would not have seen either in the out-patient departments or in the hospitals, is that so?—Yes.

24276. Do you attach great importance to that?—I do.

24277. And would like to see a permanent arrangement of the sort?—Yes, I should; I think it would be a benefit to all concerned.

24278. You would invite other medical men to assist you in the managing of these classes, supposing you had difficulty in doing it yourself?—Certainly.

24279. Men selected from the staffs of the general hospitals, do you mean?—Not necessarily connected with a general hospital; anyone competent.

24280. You have, you think, a sufficient number of interesting cases to give occupation to a class of this sort; not as one witness said this morning, so many cases that really would be of no use at all, or of no interest?—There is a large dilution of cases that would be of no interest, but there are still a very great number of cases that would be of extreme interest from the point of view of education. I wish to point out particularly, that it is the quality of these cases, not only the enormous number of the cases in the different infirmaries that would make them so valuable, but also their kind; they are of a kind

18 June 1891.]

Mr. SAVILL, M.D.

[Continued.]

Earl Spencer—continued.

kind which the student does not see in a hospital, but which he meets with in large numbers in after life in private practice.

24281. Could you illustrate that by giving us some instances?—Yes; cases of chronic bronchitis, which form such a large proportion of the private practitioner's work; illustrations of the different varieties of rheumatism again, and cases such as the ones I was mentioning just now; the enlargement of the prostate from advanced life, where it is necessary to pass the catheter continually, and all those kind of cases. They do not regard them as suitable in hospitals, because they say they stay too long.

24282. Have you at all gone into the question as to whether the persons who come as patients to your infirmary are in a position in life to be able to find medical attendance for themselves by subscription to a provident club, or to pay practitioners?—I do not think that that form of abuse goes on in the Paddington Infirmary to any practical, any appreciable, extent.

24283. You think that in at least the great majority of the cases that are taken in by you the persons are destitute practically, and cannot afford to find themselves medical attendance?—Yes; I am sure of it.

24284. Do you sometimes get cases handed on from hospitals to you?—Yes.

24285. How do you treat those cases; do you treat them as temporary cases to ascertain whether they are really cases which should come under the infirmary?—They are taken in if they are ill, and put in their appropriate place, and then the matter comes under the notice of the inquiry officer. There is a definite inquiry officer, and every case that comes in he inquires into.

24286. Is that the relieving officer or is it a separate person?—It is a separate person's duty; and he brings the case under the notice of a committee which is appointed from the Board, and they investigate every case in that way. This very morning I have been engaged with the chairman of that committee, who came over to see me as he always does before his committee, which sits to-morrow, to ascertain the probable length of stay of each of these cases that have been recently admitted; and unless they are going out directly (when they do not take any more trouble) they ascertain whether they belong to any other parish, or whether they are in a position of life to be capable of paying something, and if so then the committee settles the amount they have to pay.

24287. Are there a great number of cases that pay in the infirmary?—Not a very large number.

24288. Is there any communication with other workhouse hospitals, so that when one workhouse hospital may have empty beds, they can take in by arrangement patients from infirmaries with beds well filled?—I think that that is done sometimes by way of loan, what is called loan of one parish to another, but it is not often done, because the Local Government Board urge the respective parishes to provide for their own needs.

24289. Do you consider that you ought to have additional accommodation for the sick?—I think that we have barely sufficient for our needs.

Earl Spencer—continued.

24290. Does the treatment of the cases suffer from their being overcrowded at all?—I think it does a little.

24291. The patients seem too crowded?—It is only during the winter months when the pressure is heaviest that we really feel the want. January, February, and March are the three heavy months of the year, and it is during that time that we feel the pressure, and the need of something like 50 to 100 more beds.

24292. And what do you do when you have not beds enough; do you refuse them?—No; one cannot do that in an infirmary; there is nowhere else to send them, you must take them in, and as far as possible put the least bad into some other class, and make room for the very bad ones in the infirmary.

24293. But that leads to overcrowding in that class?—That is so, undoubtedly.

24294. Have you made application on the matter to the poor law guardians?—The question is under the consideration of the Board at the present moment.

24295. And you would prefer to have more wards in your infirmary, and to do away with the sick wards of the workhouse?—I think it would be a more desirable plan.

Lord Clifford of Chudleigh.

24296. What medical assistance have you now?—I have an assistant medical superintendent, and a resident clinical assistant, who happens at the present moment to be a lady.

24297. And you think that that is insufficient?—I think that that is not sufficient.

24298. You mentioned, if I understood you rightly, that you wished to have assistance in a certain amount of what you called the socio-medical work?—No, I think that work should rest chiefly with the medical superintendent, and, as I said, it takes some little time to get into the way of it.

24299. But a great deal of the work of your assistant is obtaining information for you, you said, of the previous life of the patient, and information of that kind; that could hardly be done by anybody in the nature of a medical student?—Yes, quite well, for that is the work of a clinical clerk in all hospitals, at the present time.

24300. There is no difficulty in getting medical students to fill that position?—I do not think there would be any difficulty.

24301. What is the medical position of your present clinical assistant?—She is a qualified lady; she is bachelor of medicine of the University of London, and fully qualified, registered.

24302. And how long do you suppose a clinical assistant would occupy that position?—For six months; it would be better for a year, but the Board has decided six months; she only holds the position for six months, but is eligible for re-election.

24303. And how long has that system lasted in your infirmary?—About two or two and a-half years.

24304. During that period, you have had a different clinical assistant every six months?—Yes;

18 June 1891.]

Mr. SAVILL, M.D.

[Continued.]

Lord Clifford of Chudleigh—continued.

Yes; one held office for nine months, but the others only held for six.

24305. Have they been students or qualified practitioners?—They have all been qualified; young qualified men.

Lord Monkswell.

24306. I suppose sometimes in the winter, when the infirmary is very crowded, you do turn out patients before you otherwise would?—Yes, I think that is the result sometimes.

24307. Now we were told this morning by a medical officer of an infirmary that in his opinion there would not be a great deal of use in getting medical students to go over these infirmaries inasmuch as they refuse to attend to chronic cases, and probably even in hospitals they will not take an interest in them?—Then the fault would rest I should say with the medical superintendent not to impart that interest.

24308. You think there would be ways and means of getting them to take an interest in that sort of thing?—Yes, I have had no difficulty at all; they take their cue from the medical superintendent.

Earl Cathcart.

24309. You said a great deal about passing catheters in the case of males; how is it managed under your present system?—We have to have a sort of give and take arrangement; a lady of course cannot do that, so that she has to do a little more work in one direction, and my colleague and I do that work which properly belongs to her post.

24310. And you never employ female nurses for that purpose?—Never.

24311. Then how do you manage in your workhouse department?—We have to do it ourselves; we do the best we can.

24312. Then they have to send to you frequently in emergencies?—Now and then it occurs.

24313. But it is no part of the duty of female nurses to perform that operation in any case?—No.

24314. How came you to select, or who did select, a lady assistant?—The board of guardians; they elect the officers.

24315. And she was selected from a number of other candidates male and female?—I think there were only two in this time.

24316. Were those one male and one female?—Yes, one male and one female.

24317. Do you find that the lady assistant you spoke of just now gets on well with the matron and the nurses?—Fairly; I do not think I have much to complain of in that way.

24318. But do you think, all other things being equal, that a female doctor gets on as well with the matron and the nurses as a male doctor?—No, I do not think so.

24319. You think that the male doctor exercises more authority?—Yes.

24320. Is more in a position of authority?—Yes, or has more weight.

24321. And that the lady doctor is more apt to excite friction with the female staff?—Yes, Undoubtedly.

24322. That is your experience?—Yes.

(24.)

Earl Cathcart—continued.

24323. And difficulties might arise *tête-à-tête* with the assistant?—Yes, that might happen.

24324. But you yourself find it agreeable to conduct business with this lady, and have nothing to complain of?—Personally I have no objection; but I do find it an objection to have the regular work upset, because she cannot do all the duties appertaining to her post; that is an objection to me as an administrator. I do not regard it as a desirable plan that a lady should hold a post she cannot properly fill entirely; the post of a man.

24325. And all things being equal, you would not yourself select a female clinical assistant?—No, I would not have minded having two ladies; they would have been equal perhaps to one man.

24326. Then is the lady clinical assistant cheaper; is that the reason of the guardians appointing her, that she is cheaper, than a male assistant surgeon?—No, she is not cheaper; I cannot quite give any reason.

24327. Then how does she do her messing; does she mess with the nurses, or with the medical staff?—She has her breakfast alone, her luncheon with my other colleague, and her dinner with the matron.

24328. And that in itself is not a very convenient arrangement?—No, it is not.

24329. Being at Paddington, have you any railway men?—Who come in as patients, you mean? Now and then we have.

24330. The guardians recover against them, I suppose; they would obtain the expenses?—From the railway company, do you mean?

24331. No, from the men?—Yes, if they are capable of paying.

24332. I mean they would look out sharply after that?—Yes.

24333. Do you perform operations?—Yes.

24334. Capital operations?—All sorts.

24335. And successfully?—Yes, very successfully. I was getting out a return for the Local Government Board the other day, and I think our death-rate was only 2 or 2½ per cent.

24336. And have you sufficient assistance in yourselves to enable you to perform these operations?—We could do with more.

24337. You do call the lady in as well?—Yes.

24338. That only gives you two assistants; you cannot do without three persons in an important operation can you?—One ought to have three.

24339. Are you allowed to obtain an outside consultant and to pay him fees?—My board will never pay him fees; they object to that.

24340. But you are aware that fees are allowed by some boards of guardians?—I am.

24341. And do you think that is a good plan?—I think it is almost a necessity. I think that it is very hard on a doctor that he should be compelled to do capital operations without the responsibility being shared.

24342. If you had an honorary visiting staff the necessity would not arise for a fee for a consultant?—No, precisely so.

24343. Would there be any difficulty in having an honorary consulting staff?—I see none.

24344. Are there many medical men you would

18 June 1891.]

Mr. SAVILL, M.D.

[Continued.]

Earl Cathcart—continued.

would like to see on such a staff?—Yes, a good many.

24345. Do you take venereal complaints?—No, not in the earlier stages of the disease.

24346. Then how do you manage to eliminate them?—The board of guardians has an arrangement to pay 16 s. a week to the Lock Hospital; so they are transferred there.

24347. And you think that a good plan?—It seems to answer well.

24348. Have you cases of the itch in your infirmary?—We scarcely take them in unless they are very bad.

24349. How can they be cured if you do not?—We sulphur ointment them and administer baths.

24350. You must take them in to administer baths of that sort?—They get them in the receiving ward.

24351. I gather from you that you quite share the opinion of Dr. Bridges that there should be no workhouse beds at all for the sick if it were possible to avoid it?—Quite so.

24352. That such is the advantage of the infirmary system that all the sick should be transferred from the workhouse proper to the infirmary; that is your view?—Precisely.

24353. Pauper nurses are inseparable are they not from workhouse sick wards; the old system of pauper nurses is almost inseparable from those?—Yes.

24354. Having a number of able-bodied women about they employ them in that way; in fact they must employ them?—Yes.

Earl of Lauderdale.

24355. Do you treat many patients in the receiving ward?—Only such cases as I have mentioned.

24356. Practically you say to them that they must go;—No, they will stay in the receiving ward and sleep there; there are a few beds in the receiving ward of the workhouse.

Chairman.

24357. Do you have any paupers to look after the infirm in the workhouse. We are told in regard to another infirmary (I think it was Bethnal Green) that they have three infirm attendants; have you any arrangement of that kind?—I believe there is something of that kind, but the infirm do not come within my official capacity.

24358. Has the matter of consulting medical officers come before your board?—I have laid before them my views; but I do not believe that boards of guardians will ever take up the idea.

24359. Are they afraid that consulting physicians and surgeons would cause the dietary and so on to be much more expensive?—I suppose that is their idea.

24360. In your opinion is that necessary; would it make the dietary more expensive?—No certainly not, with the reservation that as long as you leave the organisation of the infirmary as it is at present, that must rest with the medical superintendent, who is the responsible officer to the board for all those things, and he would be so then, if you leave them as they are set down in the Local Government Board orders at

Chairman—continued.

present, and simply add as I have suggested, the consultant who would see cases in consultation with the medical superintendent, and who would be guided by the ordinary rules of consultation you need upset nothing that exists at present, simply add to it.

Earl of Kimberley.

24361. If you have a consulting physician, he must have some authority; that is to say, he would have the power to say that a patient requires a particular dietary. How would you arrange that? At present, of course, the medical superintendent is the responsible person, and can order such dietary as he thinks the patient requires. Supposing the consultant physician and the resident medical officer differed, that the consultant physician thought that a more generous dietary was necessary, should you give the consulting physician the power of ordering it?—I think that a recommendation of that sort would come with very great weight, and it would save the medical superintendent from any blame that his board might visit him with, and thus he would be almost bound to do it. At the same time, inasmuch as he is responsible to the board, it would not do to take out of his hands the ultimate ordering of that dietary.

24362. The consultant physician would almost *ex hypothesi* be a physician of rather more standing than the resident medical superintendent; would it be possible to maintain for a moment, that if that physician thought a more generous dietary needed, it should be left to the discretion of another officer to give or refuse it?—I do not think that would be so, because in two instances which I can quote, that exists. In the first place, that precise arrangement obtains in the ordinary consultations in private life; it is the practitioner in attendance on the case, who is an ordinary general practitioner of less knowledge and practice and standing than the consultant who is called in, and by the rules of consultation it rests with that practitioner; not with the big man, the authority, who is called in, but with the practitioner in immediate attendance on the patient, to carry out or not the ultimate decision of the two. And in the second place, when I had these consultant gentlemen who came down as part of the post-graduate scheme, I did not find the slightest difficulty of that sort, and the relationship there was practically of the sort which you have named.

24363. What would occur in another case which I will ask you to take. Supposing that the question was one of a very difficult operation, and he desired to have the opinion of a consultant surgeon as to whether the operation should or should not be performed, it being a very dangerous one, and that you differed on it; that the consulting surgeon thought that it ought not to be performed and you thought it ought, and you perform the operation and the patient dies?—I should be a very bold man to do that.

24364. Would it not be an impossible thing for a man to undertake such a responsibility?—I do not apprehend the slightest difficulty in the direction you have named. It is one that one ought

18 June 1891.]

Mr. SAVILL, M.D.

[Continued.]

Earl of Kimberley—continued.

ought to consider, and I have looked at it from all positions for the last four or five years, and I have seen in practice now latterly that the difficulty would not arise. If I did the operation and the patient died you see what an enormous responsibility I should have to incur. But if I follow this man's advice you see I am shielded from any blame from my board or from the patient or from the public; I have him at my back.

24365. Practically the plan would work, you think?—Practically it would work perfectly.

Earl Cathcart.

24366. In what connection, let me ask you; have you any fear at all of the audit; do you act under any fear of the audit; has anything you have ordered ever been disallowed?—Personally I am perfectly free of the auditor; I am almost the only officer who can say that, but the medical superintendent has full authority to order whatever he chooses in the way of diet and physic.

24367. Then in fact your directions as to diet, or hospital comforts, or wine, or anything of that sort, have never been challenged?—Never.

24368. Let me explain that when I use the word "challenged," I mean, have the guardians ever complained to the Poor Law Board, or to anyone else, of anything you have done in regard to ordering hospital comforts?—No, they have never done anything more than ask me for explanations of this and that, which they are, as my masters, fully entitled to do, and which questions I am only too willing to reply to. They tell me, for example, in March (it is periodically looked into), "Your stimulant bill is a little more this year than last year," and then I explain it, and I look back to the returns and find perhaps that there are more cases, or more difficult cases, that year.

24369. And such questioning has no depressing influence on you in regard to the orders you give for hospital comforts?—No, it will not, because it can never be anything more than questioning; they cannot stop me.

24370. But they might complain of you as being extravagant to the Local Government Board?—That would only be done in an extreme case.

24371. But in point of fact that has no practical influence upon you, these questions as to the hospital comforts that you order for the patients?—No.

Earl of Kimberley.

24372. I do not for a moment intend by my question to suggest that there would be anything to complain of in what you yourself did, but I will assume that there is. The guardians might have a strong opinion with regard to the administration of stimulants, and they might be of opinion that stimulants were too largely administered, and there might be a difference of opinion so far, though your discretion remained untouched; therefore it would be possible to the guardians to represent to the Local Government Board that they thought their medical officer was in the habit of prescribing a much larger amount of stimulants than was the case in some other large infirmary which they might quote. I take

(24.)

Earl of Kimberley—continued.

it for granted you have never had any such complaints?—No, never.

34373. That is the only kind of complaint that could be made of you, namely, that the guardians might represent to the Local Government Board that they thought that you exercised an unwise discretion?—That is so.

Chairman.

24374. Do you desire to add anything to your evidence?—There are one or two things I should like to mention. In the first place, as to the figures regarding the number of beds in infirmaries. There are 12,170 beds in all the infirmaries in London, that is excluding the 4,000 in the sick wards of workhouses. Now that amounts to 50,000 patients passing through the infirmaries per annum, and I may be wrong, but it seems to me that it is a very great pity that so vast a field as that is lost for medical education and for medical research, not for experimentation, but for observation simply.

24375. That remark is in support of what you said just now about the admission of students to infirmaries?—Yes. Then as to the mode in which that should be done; after five years of careful thought, I think the best way of accomplishing that would be this: I do not think that anything could improve on the scheme which has been now adopted at the Metropolitan Asylums Board, and which is in consequence of the permissive legislation of the last Poor Law Act. You know that students are now admitted to the fever hospitals and imbecile asylums by the Metropolitan Asylums Board, and that is in accordance with Section 4, consequent upon which the asylum managers have drawn up a scheme which is issued in the form of a letter to the different fever hospitals. The only modification that would be desirable would be, that it should not be permissive but compulsory legislation. I am sure that the Paddington Board is the most enlightened of the boards of guardians in London; it stands alone in possessing no tradesmen at all on the board, and it is the most enlightened of the boards, but I do not believe that there are any guardians who take sufficient interest in the matter to introduce medical education into infirmaries.

24376. Can you shortly describe to us what the scheme is?—Briefly, it allows a student to gain admission to the fever asylums, and provides that he shall pay a fee of three guineas to the clerk to the Asylums Board, and that entitles him to attend for three months. When he is in the place he is to be under the control of the medical superintendent, and then the medical superintendent shall give a certificate of attendance. Any legally qualified medical man who may desire, may also attend the fever hospitals for purposes of medical instruction. That is briefly what it is. The date of that was the 10th October 1890.

24377. You would like to see that applied to the infirmaries?—Yes. I believe that would be the most perfect system that could be arranged, if applied to the infirmaries. The amalgamation idea, the idea of amalgamating hospitals with infirmaries,

4 N 4

18 June 1891.]

Mr. SAVILL, M.D.

[Continued.]

Chairman—continued.

infirmaries, which is an alternative to that, would not, I believe, be workable. In the first place, the medical men attached to a hospital have enough work of their own to do without any addition, and if we want anybody of that sort, there are heaps of doctors who are only too willing to take the post of consulting physician or surgeon to an infirmary, and we might get plenty without amalgamating with the hospitals; the men there have plenty to do. And in the second place, it is not the sort of help that is wanted. Amalgamation with a hospital would not meet the case; what is wanted is assistance from below.

24378. Is there any other point?—I believe it was given in evidence that infirmaries tend to pauperise people, but my experience is directly the contrary of that at Paddington. When I saw that I carefully considered the matter, but the poor law infirmary does not tend to make people more ready to receive either in-door or out-door relief as able-bodied people, and in that sense, as I understand it, infirmaries do not tend to make the people ready to receive relief. The infirmary does not do away with the stigma which attaches to the receipt of pauper relief. They go away, and as in the case of the woman, Mary Knight, whom I mentioned just now, they stop away for four years or longer.

Earl of Kimberley.

24379. You said that infirmaries do not tend to promote pauperism, but is not going to an infirmary, in itself, pauperism?—Well, I do not know; it is sick relief, is it not?

24380. Certainly?—And they do not regard it as receiving relief, so to speak. And then, in point of law, I believe, it has been ruled that sick relief, and being in infirmaries, does not disfranchise people.

24381. You are quite correct; the receipt of medical relief does not disfranchise, though that, of course, is, is it not, also in itself an encouragement to people to become paupers; because the Act of Parliament says that they shall not be considered paupers; that does not make them the less paupers in reality, does it?—No.

24382. It is only a change of name?—Yes.

24383. Is it not the fact that what you state leads to the contrary conclusion from the one which you draw, namely, that the regarding of infirmaries as not pauper institutions leads to this: that it brings a large class of applicants for sick relief on the rates who might otherwise pay for their own medical expenses; if that is so, is not the infirmary a direct encouragement to pauperism?—We are guarded by that very inquiry officer I have named, so that people cannot get in who are able to pay; that is the marked difference between an infirmary and a hospital; that we are guarded by an inquiry officer and an inquiry committee of that sort. And I do not know, of course, so well as your Lordships do, but that is what seems to me the solution of the difficulties of the hospital abuse; but paupers are guarded by an inquiry officer and an inquiry committee. And then as to the question of the pauperism, I think one may legitimately draw a very broad line of distinction

Earl of Kimberley—continued.

between relief as an able-bodied person and relief by reason of sickness; and, I believe, it can be shown that going into an infirmary does not make a person more ready to receive relief as an able-bodied person. That is what I mean; time after time I have seen it that they had just as great a dread as ever of going on to the pauper list as able-bodied people after having been in the infirmary.

24384. I quite agree with you that it would probably have, and has had the effect which you describe, but how would that meet this point. The definition of a pauper is, I apprehend, a man who lives out of the rates, instead of supporting himself?—Yes.

24385. Now, whilst of course able-bodied paupers are a much more injurious form of pauperism than that which arises from sickness; still, if a man is able, out of his own pocket, to provide for his sickness, but finds it in an infirmary provided for him, out of the rates, and he accepts that, is it not *pro tanto* a pauperising of that man; that is to say that he is a man suffering from sickness, but, I assume, is a man who might pay for himself, but, from his not having any distaste to go into the infirmary, which he regards as a hospital, he goes to the infirmary, whereas otherwise, if he could not get relief of that kind, he would simply pay for his own medical attendance?—I see what you mean; I ought, perhaps, to qualify what I said, by saying that my experience is that it does not tend to promote able-bodied pauperism.

24386. I grant that?—As to the other I think it would be rather difficult to get experience on that point.

24387. I take it from your own evidence, which I am very much disposed to agree with, from what little I know, that there is much less distaste to going into an infirmary than there would be if it were connected with the workhouse; so that the effect is this, that a man does not feel himself a pauper by going there. Then there is the other side of the question, that a man is encouraged to go and get relief in sickness from the rates when he might obtain it for himself, and, in that way, has not the infirmary a pauperising effect?—Of course the arrangement of State hospitals for the reception of people in that case, is only what is practically done in all countries but England, and it is a question whether one can stamp out the tendency to pauperism by withdrawing that accommodation, or whether it would not be better to encourage them to practise economy rather than endeavour to prohibit them receiving relief in cases of sickness.

24388. I gathered from you that there was a careful inquiry made into these cases by an inquiry officer?—Yes.

24389. And of course you would say, and justly say, that that is some preventive against abuse?—Yes.

24390. I do not know whether you, as a medical officer, practically know how it is worked; but do you think that these inquiries do prevent people, who ought not to receive relief, from receiving it?—Certainly; it comes daily under my immediate notice in this way: A gentleman named X., a well-known billiard player, has his children taken care of by a Mrs. So-and-so, who lives

18 June 1891.]

Mr. SAVILL, M.D.

[Continued.]

Earl of Kimberley—continued.

lives a little way off from our infirmary; one of the children, in playing pulls the kettle off the fire, and the child is severely burnt. I take him in, under the Order, which enables me to take in urgent cases without any inquiry; then the inquiry officer comes round and finds that this child's father is Mr. So-and-So, in receipt of something like 500*l.* or 600*l.* a year from his billiard playing. The committee at once write to him, and say that they are going to charge him 25*s.* a week for the board and maintenance of his child. Of course he immediately comes to me, and says, "I am going to take my child away." Then I say "You can do it, but you do it at your own risk, because the child is not fit to be removed." He replies, "I will pay my 25*s.*, but will take it out next week if it is well enough;" and the abuse is done away with.

24391. Take the case now of an artisan earning 2*l.* or 3*l.* a week, do you think that an inquiry is made in those cases whether the man could pay?—Yes; he has to appear before the committee, and the committee ask the man what his work is, and what he receives, and they make an order sometimes for 1*s.* a week, sometimes 2*s.*, sometimes 3*s.* a week payment.

24392. Perhaps relief is offered on loan sometimes?—Yes, not unfrequently an order is made to that effect.

Earl Cathcart.

24393. The medical superintendent of St. Saviour's told us on Monday that infinite pains were taken in his infirmary that it should not be mixed up with the idea of a workhouse; that the word "workhouse" was never mentioned at all; that "infirmary" was the word invariably used; and consequently the patients did not think, or perhaps even know, that they really were workhouse cases at all; do you take that same pains?—No, we take pains in an opposite direction.

24294. It would be difficult for you to conduct the same business in the same way, and keep out the idea of the workhouse, as you are connected with the workhouse, with only a party wall between you?—Yes.

24395. Therefore people coming to your infirmary would not have the same impression?—There is another way in which they know. The words "Workhouse Infirmary" are written over our gate, so that they cannot think that they are not coming into a department of the workhouse.

Chairman.

24396. What do you propose to say about general hospitals; we have had a great deal of evidence already as to them?—I suppose, as a matter of fact, it would only be repeating what

Chairman—continued.

you have heard, but there certainly are a great number of general practitioners (I do not know whether you have had many of them), who might come forward to give cases, but do not, owing to professional etiquette, and what they believe to be the relations between themselves and consultants.

24397. I should be glad to hear anything you have to say as to that?—When I was connected with hospitals (I must not mention the name of the hospital), a case came to my notice where a surgeon was paid five guineas as a consulting fee about a case, and then the case came into the hospital under his care, and was operated on for nothing; and it certainly struck me at the time, as it does now, that if the patient was able to pay five guineas as a consulting fee he ought not to have come into the hospital for gratuitous treatment.

24398. It was as part of this gentleman's private practice that this fee was paid, was it?—Yes.

24399. Nothing to do with the hospital?—No, nothing to do with the hospital. There is another kind of abuse which out-patient departments of hospitals are liable to in addition to the one that is so glaring, namely, that it is used by people who come for physic, but who really want food. I used to be very frequently struck with that as assistant physician to the West London Hospital; people would come up, especially women with their children, who were suffering not from want of physic, but from want of food. It is an opposite abuse to the one that is so obvious, where people who are well able to pay a doctor do not pay him, but come to the hospital. This is one where people are starving, who ought really to have food given to them. Then I should like to draw your Lordships' attention to the extravagance of hospitals in the matter of alcohol. If you have the figures before you (they would easily be obtained from the Local Government Board Returns), and compare hospitals with infirmaries, you will see what a very glaring difference there is. There is a neighbouring hospital, a hospital that is very near to mine, that is exactly the same size as my own infirmary; the cost of their stimulants per head is seven times what they cost in my infirmary. Well, now it is replied to that, of course, at once, "We have in the hospital acute cases, severe cases which require stimulants." But that is quite compensated for by the fact that a great many of my patients are old people who require quite as much or more stimulants for the treatment of their complaints than the acute cases of young people in hospitals do. That is a glaring instance of the difference and extravagance in hospitals.

The Witness is directed to withdraw.

MR. JOHN HOPKINS, is called in; and, having been sworn, is Examined, as follows:

Chairman.

24400. You are the Medical Superintendent of the Cleveland-street Sick Asylum, are you not?—Medical Officer of the Central London Sick Asylum in Cleveland-street.

(24.) e

Chairman—continued.

24401. When was that built?—In 1875.

24402. How long have you been there as medical officer?—Twelve years.

24403. What is the Cleveland-street Sick Asylum

4 O

18 June 1891.]

Mr. HOPKINS.

[Continued.]

Chairman—continued.

Asylum; what is the institution for?—It is an institution for the treatment and nursing of the sick poor sent from three unions called the Central London Sick Asylum District, as long as they may need that treatment and nursing.

24404. Not in the nature of a convalescent home?—Not in the nature of a convalescent home, but as a hospital.

24405. It is supported by what?—Supported by the rates.

24406. Is it under the Metropolitan Asylums Board?—It is not under the Metropolitan Asylums Board; it stands in the same position as the ordinary infirmaries.

24407. And who makes use of this sick asylum?—These three unions send their sick to it.

25407. Now how many beds are there?—Two hundred and sixty-four.

24408. Do you ever have to refuse cases because you are over full?—We should have to refuse cases if there were not provision made against that. Messengers are sent up from the workhouses every morning to know if there are any beds for them, and what beds there may be are apportioned to the workhouses, and so these beds are filled from day to day, thus avoiding patients being sent up to us, and then sent back again to the workhouses.

24410. These three unions have a large number of sick beds in their workhouses, have they not?—They have a large number of sick beds, I believe, in all their workhouses.

24411. You do not know that of your own personal knowledge?—I do not know it of my own personal knowledge.

24412. And those perform the same duty as the infirmary?—The same as the infirmary.

24413. Are you, as well as being the medical officer, responsible for the administration?—I am responsible for the administration.

24414. Is there not some plan of building a new sick asylum?—At the present time the intention is to build a new infirmary with 250 beds elsewhere, leaving this as it stands in the meantime, possibly carrying on the two institutions eventually together.

24415. So that it would be 250 beds more for those three unions?—Yes.

24466. Do you find your duties excessive as medical officer and administrator too?—No.

24417. What medical assistance have you?—There is one assistant medical officer who does the dispensing.

24418. And is that all?—That is all.

24419. And then in the way of nurses what staff have you?—In the way of nurses we have an ample number of nurses, though the nursing is not on a very satisfactory footing; originally there were in each ward of 34 beds two women, one a nurse, and the other a ward assistant or ward maid; it was found that this was not sufficient, and so gradually these ward maids have been converted into assistant nurses; all menial work has been taken away from them, they have been put through a certain amount of elementary teaching in nursing, and they have been fitted to assist the nurses in the wards.

24420. Where has that elementary teaching been carried on; in the sick asylum?—In the sick asylum.

Chairman—continued.

24421. Could you mention the number of nurses you have?—The number of day nurses is nine, and then there are one night superintendent, six night nurses, and eight assistant nurses.

24422. That makes a total of what?—That makes a total of 24.

24423. Then, taking away the number of night nurses, there would be how many?—There would be 17 day nurses.

24424. Are those hospital-trained nurses, any of them?—Most of the nine head nurses are; the desire has always been to have trained nurses, but there has been a difficulty in getting them.

24425. Why is there a difficulty in getting them?—They do not respond to the advertisements.

24426. Nursing in poor law infirmaries appears to be unpopular with the profession?—I think so; and no doubt the appearance of the place has something to do with it; whereas the nurses are willing enough to go to the new infirmaries that have a presentable exterior; those infirmaries that lie in back streets, and have not a presentable exterior, they are not willing to go to.

24427. And under whom are these nurses?—Under the matron.

24428. And she is under you?—She is under me.

24429. Is she trained?—No, she has nothing whatever to do with the nursing; she simply exercises a general control over the nurses, without pretending to interfere with the nursing at all.

54430. She is then rather a superior servant, a housekeeper, than a head nurse?—More in the position of a housekeeper than a trained matron.

24431. Then you are responsible for the nursing?—I am responsible for the nursing.

24432. Do you think you have got sufficient nurses?—Yes, we have quite sufficient nurses now, I think; but I should very much like to see the assistant nurses better trained than they are; so far they are in a state of transition from ward maids.

24433. But that tends to get better perhaps?—It tends to get better.

24434. Do you consider that your sick asylum has sufficient accommodation for the patients and staff too?—The accommodation for the patients, speaking generally, is satisfactory, but the accommodation for the staff is very bad indeed.

24435. In speaking of the staff, do you include the nursing staff?—I speak particularly of the nursing staff.

24436. Where are your nurses lodged?—In various parts of the building; the assistant nurses in one block, the night nurses in another block, and the day nurses are scattered about; the head nurse of the ward sleeps next to her ward, and two supernumerary nurses sleep together in a small room next to another ward.

24437. Does that get rid of the whole number of nurses, or do some of them sleep in a number in one room?—There are only two nurses sleeping in one room; in all other cases each nurse has a separate room. I am now speaking of the day nurses.

18 June 1891.]

Mr. HOPKINS.

[Continued.]

Chairman—continued.

nurses. The assistant nurses and the night nurses sleep two in a room.

24438. The rooms for the day nurses and the night nurses are in quite separate parts altogether, are they not; a room occupied by a day nurse at night is not occupied by a night nurse during the day?—No.

24439. Then could you tell us what are the hours that you employ these nurses?—The day nurses are on duty for 13½ hours a day.

24440. Beginning when?—Beginning at 7. They come on duty at 7 in the morning, and they leave duty at half-past 8 at night.

24441. And do not they have any time off duty out of that?—Not out of that time, except on particular days; they get so many days and half days in the course of the month. Altogether the day nurses have a weekly average of 16½ hours' recreation; they are free to have it if they will take it; they do not take that 16½ hours.

24442. Then do they have any annual holiday?—An annual holiday of 16 days.

24443. To all grades?—That is for the day nurses and the night superintendent; but the night nurses and the assistant nurses have 14 days each.

24444. Do you keep your night nurses on as night nurses for six months at a time, or how do you manage?—Perpetually; when once promoted to the post of night nurse they remain so till they are promoted to another post, or leave.

24445. Supposing that a nurse stays in the hospital three years, from the time of her becoming a night nurse, she might be a night nurse all that time?—She might be a night nurse all that time.

24446. Do you think that is a good plan?—They enjoy very good health; they have more recreation than the other officers; they get altogether an average of 37 hours per week outside; during the summer-time, three hours every evening, and during the winter-time three hours every morning, from 9 till 12.

24447. Then, when do the nurses have dinner?—The nurses have dinner in the middle of the day, at half-past one.

24448. For half-an-hour or an hour?—For an hour. They are permitted to remain in the dining-room for an hour.

24449. And when do they have their supper?—They have no formal supper.

24450. Where do they have tea?—They have tea in the small kitchen attached to the ward, and those who do have supper have a kind of supper out of the remains of the dinner; there is no formal supper.

24451. Then, as a fact, after the dinner they have no substantial meal till the following dinner next day?—That is so.

24452. Do you think that is sufficient food for people having this 13½ hours' work?—It has practically proved to be sufficient.

24453. But you have difficulty in getting nurses you have told us?—We have difficulty in getting nurses, and yet the nurses who come to us say that they are more satisfied with the food which they get at the Cleveland-street Infirmary than they have ever been before. That is very largely due to the excellent steward we have,

(24.)

Chairman—continued.

who insists on having all the food that is got in quite up to the contract quality; and the consequence is everybody is satisfied; the food is very good.

24454. Is it so extraordinary a thing that the steward sees that the food is up to the contract in quality?—Seeing that all nurses who come to us from other places, testify to the superiority of our food, I think that is a reasonable inference.

24455. In regard to the night nurses, when do they have their meals?—They have their meals at hours varying according to the time that they go to bed. In the winter time they go to bed at 12 in the day and have their dinner before they go.

24456. That is, when they come out of the wards, you mean?—They have their dinner just before going to bed; that is to say they have it at 11 o'clock; and they have their dinner immediately on getting up in the summer time, at 4 o'clock.

24457. When do they go into the wards?—At half-past eight.

24458. Do they have any tea in the wards?—They have their breakfast and tea in the ward kitchen.

24459. Have you got any visiting committee?—There is a visiting committee.

24460. Do they ever come?—They come every committee day, that is to say once a fortnight.

24461. Do they consider that the feeding of the nurses is sufficient?—From time to time the question of feeding the nurses has been brought before the board and the visiting committee, and there have been improvements made in the diet; they are very much better fed now than they used to be at first.

24462. At any rate you do not receive any complaints?—Now the arrangements are generally satisfactory.

24463. Do you employ any paupers?—We employ the sick paupers that there are in the wards to give the nurses assistance as far as lies in their power.

24464. Just in the same way as occurs in a general hospital where a patient is expected to assist so far as lies in his power?—They are expected to assist as far as lies in their power.

24465. But are all the servants who do the scrubbing, paupers?—The scrubbing is entirely done by women who come from outside for the purpose.

24466. For payment at so much per hour?—For payment at so much per hour.

24467. Do you want any more assistance medically in your sick asylum?—One does not need any more assistance. At the same time there is no doubt if one had more assistance in the shape of clinical assistants, one would be able to find them plenty of work to do.

24468. And as regards the question of students, is there a great quantity of material wasted now in the infirmaries; might they learn with advantage there?—As far as the quantity of material goes, I believe that the hospitals have more than they require. There is undoubtedly material in the infirmaries that might be made use of, but I

4 O 2

think

18 June 1891.]

Mr. HOPKINS.

[Continued.]

Chairman—continued.

think generally there is not the material in infirmaries that would induce students to come for any length of time to attend the infirmaries. Those special cases that are in the infirmaries, that students will not see in the hospitals, are in the infirmaries for months and years; and the students in the neighbouring hospitals would become acquainted with these cases, and after seeing them two or three times, they would not come again.

24469. Some cases that come to 'you remain a long time?—Months, or even years.

24470. Who makes your contracts?—The contracts are made by the board.

24471. It is done by advertising?—By advertising for tenders; these tenders are opened on a specified day, and the lowest contract is generally selected.

24472. I think you said that you thought the number of nurses you had was sufficient?—The number of nurses is sufficient.

Earl Cathcart.

24473. I should like to know how the contributions are made to your sick asylum by the several parishes in the union; is it *pro ratâ* or by population, or by the number of beds, or how?—I am not prepared to answer that question.

24474. You could tell us perhaps what are the three parishes in the union?—There are three unions in union for sick purposes. There is the Westminster Union, the parishes of St. Anne's and St. James, Westminster; the two parishes of St. Giles and St. George, Bloomsbury, forming another union; and the Strand Union again, which is a union of numerous parishes.

24475. Does your housekeeper-matron give leave of absence, and all that sort of thing?—She gives the daily leave of absence to the nurses.

24476. Then with regard to the teaching, how do you teach your staff; is it by means of supernumeraries in the wards or how are they taught?—Their teaching is done in classes. The assistant nurses attend these classes and the night nurses together, at a time when the night nurses are off duty, and whilst the day nurses are on duty in the wards.

24477. Who gives the instruction?—The instruction is given by myself or my assistant.

24478. But you are of the opinion of Dr. Bridges and of everybody else who has given evidence on this matter, that all matrons ought to be trained hospital nurses?—I think it is a very desirable thing that the matron should have been a trained nurse.

Earl Spencer.

24479. Are there many cases in the sick wards of the several workhouses which ought to come to your infirmary?—I cannot speak as to that from my own knowledge, but judging by the number of applications that are made, I should imagine that there always is a considerable number of sick in the workhouses.

24480. You, I suppose, agree with the others, that the treatment in the infirmary wards is very superior to the treatment in the sick wards of

Earl Spencer—continued.

the workhouses?—I think the arrangements for the treatment in the infirmaries are so much more elaborate than in the sick wards of the workhouses that the treatment must necessarily be better in the infirmaries.

24481. You do not know that there is any need in these different parishes of a larger infirmary?—There is a new infirmary about to be built in consequence of need of room.

24482. How is the Central Sick Asylum Board constituted?—It is constituted of members chosen and sent by the boards of guardians of the various unions.

24483. So many from each union?—So many from each union.

24484. Do you know how large it is?—There are 13 members on the Board at the present time.

24485. How often do they meet?—The Board meets once a fortnight.

24486. Do you yourself ever go into the question, or does it come to your knowledge to what position in life the patients in your infirmary wards belong?—I have never had any reason to believe that any of the patients belonged to other than the pauper class.

24487. You have not had any reason to believe that they belong to the classes who can pay for their own medical attendant?—Certainly not to the classes who could pay; not to my knowledge.

24488. Have you any knowledge as to provident medical clerks in your neighbourhood?—I have no practical acquaintance with them.

24489. You do not know whether your infirmary discourages the existence of these?—I cannot say.

Lord Monkswell.

24490. The nurses have 13½ hours off duty you say every day, but they have an hour off for meals; that makes 12½ hours?—I was speaking of 16½ hours; that is the time that they are entitled to be absent from the building.

24491. But you said that they came on at 7, and went off at 8.30; and then your first observation was, that they had no time to themselves between 7 and 8.30; but afterwards you said that they had an hour for dinner; so I suppose we may take it that the longest day is 12½ hours?—Well, I could not possibly say that the nurses are absolutely off duty while it is the hour for their dinner, because they are liable to be called upon in the middle of their dinner to go to their wards.

24492. Then will you also tell us whether the 16½ hours that you mentioned off duty in the week include the meals?—It does not include the meals; that is the time they are entitled to be absent from the building.

Chairman.

24493. Is there anything else you wish to state to the Committee. Do you think there is any way in which the organization of your sick asylum could be improved?—I think in the direction of a trained matron and greater liberty being given to the nurses whilst they are off duty, by giving them a home; a nurses' home; a development

18 June 1891.]

Mr. HOPKINS.

[Continued]

Chairman—continued.

development in that direction would be very desirable.

24494. A nurses' home you say; do you mean by that within the building?—Within the building, but still a place in which the nurses would have a certain amount of home comforts.

24495. Is there no recreation room for them now when they are off duty?—No recreation room and no recreation ground.

24496. And where must the nurse go at such times?—Into her own room if she be a day nurse. If a night nurse or an assistant nurse she has no room to go to.

Earl of Kimberley.

24497. Have you experience of nurses at the general hospitals?—I have no experience of nurses at the general hospitals.

24498. You are not able to compare the condition of your nurses with the condition of nurses at the general hospitals?—I believe I am; for having taken a little interest in the matter, I know that the nurses in general hospitals have of late years very much improved. They have been very often placed under ladies of special training who have taken interest in the matter, and raised the tone of the nursing staff very considerably.

24499. Has it not occurred to you that all the arrangements of your infirmary are less favourable, speaking generally, to the nurses

Earl of Kimberley—continued.

than is usual in general hospitals?—Very much less favourable; so much less favourable that I believe it to be impossible, with the present structure, ever to raise the nursing staff to the efficiency it ought to arrive at.

Chairman.

24500. When were you a student?—I was a student between 1870 and 1875.

24501. Where?—At University College Hospital.

24502. Did you hold any resident appointment?—I held no resident appointment there.

24503. Before you came there, were you attached to a hospital?—No, I was at sea for a while; and previous to that, was the house surgeon of a provincial infirmary.

24504. What is your salary as medical officer of the Cleveland-street Sick Asylum?—My salary is 300 *l.* a year.

24505. And a house?—Coals, and a furnished house.

24506. But you get no food found for you; you merely have your house?—Simply a furnished house with coals and gas.

24507. When you said just now that you had been at sea, you went to sea in your professional capacity, I understand?—I went to sea in my professional capacity.

The Witness is directed to withdraw.

Ordered, That this Committee be adjourned to Monday next, Twelve o'clock.

Die Lunæ, 22^o Junii, 1891.

L O R D S P R E S E N T :

Earl of KIMBERLEY.
Lord ZOUCHE OF HARYNGWORTH.
Lord SAYE AND SELE.
Lord CLIFFORD OF CHUDLEIGH.

Lord SANDHURST.
Lord SUDLEY (*Earl of Arran*).
Lord MONKSWELL.
Lord THRING.

THE LORD SANDHURST, IN THE CHAIR.

MR. THOMAS DUNCOMBE MANN, is called in ; and, having been sworn, is Examined,
as follows :

Chairman.

24508. You are the Clerk, are you not, of the Metropolitan Asylums Board ?—I am.

24509. Could you tell us briefly what the board is ; when it was created in the first place ?—It was created in the year 1867 under the Metropolitan Poor Act, 1867.

24510. How many members are there in it ?—There are now 72 members.

24511. And how do they do their work ; are they divided into committees ?—They do their work as regards general principles as an entire board sitting in London, and they are divided up into committees of management for each of the several institutions under their control.

24512. Would you enumerate the different descriptions of institutions that are under this board ?—In the first place there are three imbecile asylums for harmless pauper imbeciles ; then there are five fever hospitals in London, and one convalescent fever hospital in the North of London ; there are three small-pox ships in the river at Long Reach, and a small-pox hospital on shore at Darenth, called Gore Farm Hospital ; and they also have the Training Ship “Exmouth” for the training of boys chargeable to metropolitan unions and parishes.

24513. Of course this inquiry only has to do with that part of the work of the Metropolitan Asylums Board which is concerned with the care of the sick ; can you tell us how many beds you have for the small-pox and fever patients altogether ?—At the present time in the fever hospitals, including the convalescent hospital in the North of London, there are 2,429 beds available for fever and diphtheria ; and in the hospital ships and the Gore Farm Hospital there are 1,150 beds.

24514. Those are small-pox beds, are they ?—Small-pox beds.

24515. And those are the whole of the beds under the Metropolitan Asylums Board for infectious cases ?—At the present moment, yes.

24516. What diseases do they take in ?—Into the London hospitals, infectious fevers, such as scarlet, enteric, and typhus ; and diphtheria.

24517. Do they take measles ?—No.

(24.)

Chairman—continued.

24518. They do not take any whooping-cough cases either ?—No.

24519. Then what becomes of the cases of measles ; that is very infectious I believe, is it not ?—I believe measles is an infectious disease under the Notification Act if the Local Government Board so direct ; but they have not so directed yet. We have no cognisance of what takes place in measles cases ; I presume they are treated privately.

24520. And whooping-cough the same ?—Whooping-cough the same.

24521. Is the disease of whooping-cough in the same position, as regards the Local Government Board, as measles ?—There is power also to make any disease an infectious disease within the Notification Act, but that does not render patients suffering therefrom eligible for admission into our hospitals ; that is prescribed by our original Act of 1867, and the Poor Law Act of 1889.

24522. Then I suppose these cases of measles and whooping-cough are distributed among the infirmaries ; is that so ?—I imagine that is so ; we do not receive any of them.

24523. They are not within your cognisance at all ?—Not at all.

24524. Have you any powers of detention of patients until they are cured themselves, or free from the risk of giving infection ?—The only power of detention with which I am acquainted is one which resides in the justices of the peace. The 12th section of the Infectious Diseases Prevention Act of 1890 gives a justice of the peace power, in certain cases, to direct the detention in hospital of persons suffering from infectious diseases ; but I know of no other power of detention ; we have no power.

Lord Thring.

24525. Supposing you remove such a person in any public conveyance there is a penalty under the statute ; you cannot remove a person suffering from an infectious disease, such as scarlet fever, in any public conveyance, without incurring a penalty ?—Quite so. That penalty rests upon

4 O 4

the

22 June 1891.]

Mr. MANN.

[Continued.]

Lord Thring—continued.

the individual who chooses to go out against our wishes.

24526. Virtually, that prevents their being removed, does it not?—Practically, I think it does. We have no actual coercive jurisdiction over them in the matter.

24527. But the person cannot get away?—His friends might demand him if they chose, but they would do so at their own risk. I am informed that there have been cases in the past in which people have gone away from the hospitals before they ought really to have done so.

Chairman.

24528. Are these people proceeded against?—We have no power to proceed against them; there is power to proceed against people improperly exposing themselves whilst suffering from infectious disease by engaging in certain kinds of business, or riding in a public conveyance.

24529. Supposing there was a patient in one of your hospitals whom your doctor thought still infectious, and his friends came and demanded the liberation of that patient, you have no power to stop him?—I think we have no power to stop him. We should of course use every moral power that we had, and we should point out the serious consequences that would follow. We have no power ourselves to stop him forcibly.

24530. Will you tell me what the process of admission to your hospitals is?—We now admit and have for the last two years admitted any patient simply upon the order of a medical man.

24531. The medical officer of health do you mean?—No, not necessarily the medical officer of health, any medical man who certifies that the patient is suffering from an infectious disease. It is under the Poor Law Act of 1889, section three.

24532. Perhaps you will read it?—"The managers of the metropolitan asylum district (hereinafter referred to as the asylum managers) subject to such regulations and restrictions as the Local Government Board from time to time make, may admit any person who is not a pauper and is reasonably believed to be suffering from fever or small-pox or diphtheria into an asylum provided by the managers." Prior to that, we could only admit them upon the order of the relieving officer, accompanied by the certificate of the medical officer of the district.

24533. They being paupers?—Yes.

24534. Then on information being conveyed to you that some one is suffering from an infectious fever, what occurs; do you send for him?—Yes, we send for him.

24535. You send in ambulance?—We send an ambulance.

24536. Do you make any charge for the ambulance?—No not in the case of patients removed to our hospitals.

24537. But then at the same time those who are not paupers pay for their keep, do they not?—We charge the cost of the maintenance of all patients to the parishes or the unions from which they are received; but there is power in the guardians of these parishes and unions to recover from non-pauper patients the cost of their maintenance.

24538. Now do you co-operate at all with the charities, with the general hospitals?—We co-

Chairman—continued.

operate with them in so far that we are quite ready to receive any case from their institutions just as we are from private houses.

24539. Do you make the charities pay?—No; in the case of non-paupers we charge the cost to the guardians of the parish or union in which the hospital is situated; and they have the power under the Act of recovering from that person or anyone liable to maintain him.

24540. Therefore you make the guardians in all cases responsible, and not the charitable institution from which you get your patient?—Quite so.

24541. Then have you a number of non-paupers as well as paupers in your hospitals?—Yes, certainly.

24542. And you would take any one of this Committee in if they applied?—Certainly.

Lord Thring.

24543. Under what order?—Simply upon the certificate of the medical man attending the patient.

Chairman.

24544. A private medical man, do you mean?—Upon the certificate of any medical man, under that section which I read to you just now.

24545. Do any students attend at these hospitals?—Yes; we have during the past year been enabled to give medical instruction, clinical instruction, in fevers in the fever hospitals, and we have received at two or three of those hospitals a certain number of students; but at present it does not seem to be very widely known or sufficiently appreciated.

24546. Do they come as individuals or do they come in classes from the general hospitals?—They come as individuals.

24547. Have you any knowledge of the number that attend?—Yes, I may say they have not been very numerous. We have had, I think, as many as 15 in one term at one hospital; that is to say, at the Eastern Hospital there have been, I think, as many as 15 students, chiefly from St. Bartholomew's Hospital.

24548. Then who does the teaching there?—The medical superintendent.

24549. None of the teaching is done by men from outside?—None of it.

24550. None by what is called the honorary staff?—No, none at all.

24551. Do these students increase or decrease in numbers?—The system has been in operation so short a time that it is difficult to form any opinion.

24552. It has been in operation for two years about, has it not?—No; the Act of Parliament authorised it then; but it has not yet been in operation for 12 months; the first students are only just receiving their certificates on completing their course.

24553. Have you ever gathered any opinion as to whether the admission of students into your hospitals is approved by the medical superintendents?—Yes, I think the medical superintendents rather welcome the opportunity of giving instruction, and rather approve of it.

24554. Would you tell us what the staff employed at one of your hospitals is?—It varies of course

[22 June 1891.]

Mr. MANN.

[*Continued.*]*Chairman—continued.*

course in the different hospitals, according to the size of the place, and also from time to time according to the number of patients under treatment; but a medical superintendent with two or three medical assistants may be taken to be the average medical staff of each institution.

24555. And the medical superintendent is responsible for the physical well-being of the patients, and also for the administration of the institution; is that so?—Yes, he is entirely responsible for the general conduct of the entire institution, under regulations laid down by the Local Government Board for his guidance.

24556. What would his salary be; what is the maximum and what the minimum salary that he might receive?—From 400 *l.* to 500 *l.* a year, with allowances of residence, coals, and gas.

24557. Have you ever heard that when your hospitals are full, the medical assistance is insufficient?—No, I think not, because they would at once obtain any further medical assistance if it were necessary. As I say, the number of medical assistants fluctuates; it goes up and down according to the number of patients under treatment.

24558. And how would they get that assistance; by applying to the board, or to their own committees?—The medical superintendent himself would apply to his committee, who would appoint a medical assistant.

24559. What number have you treated in the last 10 years of cases of fever, small-pox and diphtheria?—The total number of fever cases under treatment in the 10 years ended 1889 was 34,433; the total number of small-pox patients was 26,357.

24560. Can you give the numbers year by year?—Yes, I can give them to you year by year: In 1880, there were 2,464 admissions of cases of fever; in 1881, 2,322; in 1882, 2,867; in 1883, 2,720; in 1884, 2,547; in 1885, 1,855; in 1886, 2,197; in 1887, 6,537; in 1888, 5,152; and in 1889, 5,772.

24561. Is that the last year you have got?—That is the last year we have complete. The statistics are now being got out for the year 1890.

24562. You said you had only 2,429 beds, and in the year 1889 you had 5,772 admissions?—Yes.

24563. Do you then find your hospitals at times very much over-crowded?—Of course that does not represent the total number under treatment at one time.

24564. But do you find your hospitals at times very much overcrowded?—Yes we have done so. The largest number under treatment in 1887 was only 2,611.

24565. That is a little more than the number of beds?—Yes.

24566. It gives about 200 more patients than you have beds?—Yes.

24567. How is your system capable of expansion, because in a severe epidemic you might want 1,000 more beds; what should you do in that event?—I believe that in the past when there have been, as in 1887, more patients than the normal condition contemplated, they have

Chairman—continued.

been enabled to provide for them by erecting temporary wooden huts within the grounds of the existing hospitals. They have on two occasions hired the Plaistow Hospital and made temporary use of that.

24568. Where is the temporary Plaistow Hospital?—In the parish of Plaistow, in Essex.

24569. What is that used for?—It is not used at all, I believe, except when we have taken it at various times.

24570. Now, of course, in different times you have different numbers of patients; in 1885, which was the lowest year in the 10 you have mentioned, you had 1,855 patients, and in 1889 you had 5,772 patients. If you have got a very small number like that 1,855, do you keep your hospitals at full pressure with regard to officials and nurses, and so on?—No, a great many of the subordinate officials, including nurses, are discharged when not wanted. The staff is reduced as opportunity offers.

24571. But then this epidemic may come very rapidly, and nurses may be in tremendous request all over London. Have you any difficulty in getting nurses in such a case?—They have obtained nurses, but I believe there has been difficulty in obtaining the exact class of nurses they would desire, at times.

24572. Is there any regulation about all the nurses being hospital trained nurses, or not?—No, there is no such regulation, but I believe that latterly it has been the practice always to give preference to them.

24573. If you can get them?—If we can get them. Of course, in cases of epidemic it is impossible.

24574. Do you know if there ever has been any representation from the medical superintendents that they desire to have hospital trained nurses?—I understand that no such representation has been made.

24575. You do not know of any such?—I do not know of any.

24576. Are the matrons hospital trained nurses?—I believe that all those who have been appointed in recent years are; we have some that are not, I believe.

24577. In fact, you mean to say that, as far as you know, the tendency is, whenever a vacancy occurs among matrons, to fill it up by a hospital trained matron; is that so?—Certainly.

24578. Will you next give us the figures for the last ten years of the small-pox cases. In these 5,772 cases in 1889, and so on, do you include diphtheria, or are they merely the numbers of scarlet fever cases?—Diphtheria has been included only within the last two years. In the 5,152 cases for 1888 are included 99 diphtheria cases, and for 1889, in the 5,772 are included 722 diphtheria cases.

24579. Then there was a most enormous increase of diphtheria in those two years?—The explanation is this: that prior to that year we did not take diphtheria in these institutions.

24580. In 1888 when you had 99 cases, did you only begin to take them towards the conclusion of the year?—The managers were only empowered to take diphtheria by the Poor Law Act of 1889.

4 P

24581. Then

22 June 1891.]

Mr. MANN.

[Continued.]

Chairman—continued.

24581. Then your financial year was through ; is that so?—As these were taken in 1888 I assume they must have taken them as a matter of urgency prior to the passing of the Act, in contemplation possibly of the Act which they knew was coming.

24582. The figures are not quite a clear statement?—The figures are not quite a clear statement.

24583. Do you include typhus in the figures you have given us, with respect to fevers?—I include scarlet, typhus, and enteric.

24584. Could you give us the figures for the different diseases, showing how they increased or decreased?—Yes. Would you like me to hand in this report for 1889 (*producing the same*).

24585. Yes; but will you first give the figures to us that we may have them on the Notes?—In scarlet fever the cases of admission for the 10 years, beginning with the year 1880, were, 1,949, 1,477, 1,850, 1,920, 1,845, 1,353, 1,780, 5,900, 4,408, and 4,518.

24586. That is all scarlet fever?—That is all scarlet fever, for the 10 years.

24587. Now we will take typhus?—Typhus 28, 219, 148, 45, 29, 53, 10, 35, 1, and 23.

24588. Then enteric?—248, 415, 515, 486, 493, 220, 333, 441, 450, and 290. Then there were other diseases included, such as relapsing and certain other fevers, and there were certain other diseases which were cases of mistaken diagnosis, which were received into the hospitals and were too ill to be removed, and therefore were kept there for treatment.

24589. Now, how has small-pox increased or decreased?—The totals I gave you before included also there a few cases of mistaken diagnosis where they were kept for treatment; but confining it simply to small-pox the admissions of small-pox cases within the last 10 years have been 1,982, 8,551, 1,799, 598, 6,363, 6,146, 99, 56, 62, and 5. It will perhaps be as well for me to point out that that startling decrease from the year 1885 onwards is attributed to the entire removal of all small-pox cases to hospital ships in the river, they having been hitherto treated in the London hospitals along with the fevers.

24590. Then how do you get your patients down the river; have you got an ambulance boat?—We have ambulance boats; we established a river ambulance service in the year 1884.

24591. The patient is driven down in an ambulance and put on board this boat?—The patient is moved from his home to, first of all, a receiving room in one of the London fever hospitals for examination, in order to test the diagnosis. If, as it often happens, it turns out to be a case of mistaken diagnosis, of course the patient is at once sent back again; but if it proves to be small-pox, the patient is then removed to the nearest wharf, a special wharf belonging to the managers, and conveyed by one of the ambulance steamers to these ships. I perhaps had better add that that process refers to non-epidemic times. In the case of an epidemic they are removed straight to the wharf, where a special medical

Chairman—continued.

officer is retained for the purpose of the examination.

24592. Now could you tell me what the whole of the cost is of these fever hospitals and small-pox hospitals; it has varied, I presume, during the last 10 years pretty much?—Yes, very greatly. I have here an account for one year, the last year, 1890.

24593. That is the year, is it, when you had 5,772 cases?—No; those years that I have given you are the actual years, ending 31st December. The financial year ends on the Saturday following Lady-day in every year; so that the accounts do not exactly correspond with the numbers of patients.

24594. Do you make out any calculations as to how much they cost per bed or per patient?—We show the cost in the hospital per patient per day.

24595. Perhaps you would tell us what the cost was of the small-pox and fever hospitals last year?—Of course it varies in the different hospitals. Shall I give it separately?

24596. First the whole amount?—The total amount of cost of fever cases for the year ending March 1891 was 110,344 *l.* 16 *s.* 5 *d.*; the cost of small-pox cases for that same year was 7,715 *l.* 8 *s.* 8 *d.*

24597. This is the actual cost of the patients?—This is the actual cost of the patients.

24598. And in that are included salaries and wages and so on?—Yes, everything.

24599. Those are the two kinds of institutions, then, or do you include the enteric and typhus in the fever hospitals?—In the fever hospitals are included all those things I referred to just now.

24600. Can you give us, for that year, what you put the patients cost per day at, if you have it there?—It varies very considerably. I must give it you as regards each separate institution. It costs more in one place than in another, by reason of the different construction of the building and the different manner in which the fluctuation in the numbers under treatment at one time occurs, and several other small circumstances; but I can give you the average daily cost per patient at each separate institution.

24601. Will you please do that?—In the eastern hospital it was 3 *s.* 6½ *d.* per day (these are fever hospitals); in the south eastern, 3 *s.* 9½ *d.*; in the western, 3 *s.* 11½ *d.*; in the south-western, 4 *s.* 4½ *d.*; in the north-western, 3 *s.* 1½ *d.*; and in the northern, that is the convalescent fever hospital, 2 *s.* 6 *d.*

24602. Have you got the numbers treated at each?—The average daily number of patients was 300 at the eastern, the average daily number at the south eastern was 235; at the western, 156; at the south-western, 140; at the north-western, 224; and at the northern, 412.

24603. Now are these all fever cases?—These are all fever cases, and the other things that I included.

24604. And small-pox?—With regard to small-pox I am afraid it is impossible to give you a daily average.

24605. I want to know what you have got?—I can give you the daily cost of the food and clothing

22 June 1891.]

MR. MANN.

[Continued.]

Chairman—continued.

clothing of the few patients that were there, of the patients who were actually received in the ships during last year; it was 1 s. 2½ d. per day.

24603. Have these hospitals got any gardens attached to them, surrounding them?—Most of the hospitals consist of blocks, situate in ample grounds; the grounds of each hospital are about nine acres.

Lord Thring.

24607. With regard to the different cost of these institutions, do you mean to say that the same disease costs in one of your hospitals more than it does in another?—It costs apparently a little more; it is impossible to compare them exactly, because we have to keep up a different staff at one place from that which we keep up in another, in consequence of the nature of the building itself. At the South Western, for instance, it was originally two hospitals, and so the administrative arrangements there are totally different from what they would be at another hospital.

24608. You mean that the difference in cost consists in the difference of the establishment?—In the difference of the establishment.

24609. Not in the difference of cost of the actual maintenance of the patient?—No, but in the difference of the numbers that must be employed to look after the patients.

24610. How many of your hospitals are there; six?—There are five fever hospitals for acute cases in London, and one convalescent hospital, just outside the boundary.

24611. Now take any one of them; give me the name of any one of them?—The Eastern occurs first.

24612. Take any one of them, not the Eastern?—The South Western.

24613. How is that practically managed; who manages it?—The medical superintendent.

24614. And is there no committee over him?—Yes, there is a committee of our board, as I explained at the first.

24615. What does that Committee consist of?—It consists of 14 members of the board who meet fortnightly at the institution.

24616. Are they appointed by the board?—They are appointed by the board.

24617. And they act as governors of that particular hospital in the same mode as the governors of an ordinary hospital?—Quite so.

24618. Are all the accounts brought before them?—We have a finance committee of the entire board, before whom the accounts come finally.

24619. Take the case with respect to the nurses in the South Western Hospital; who appoints the nurses?—The committee.

24620. And there is a matron appointed, I presume?—Yes,

24621. And has the matron full control over the nurses?—She has, I believe, absolute control over the nurses, subject to the control of the medical superintendent, in accordance with the regulations laid down by the Local Government Board; her duties are very strictly defined by the Local Government Board.

24622. What class are the nurses; are they lady nurses?—I think not, as a rule.

(24.)

Lord Thring—continued

24623. You do not train your nurses?—Only by appointing them as assistant nurses, and subsequently promoting them.

24624. Take the case of the South Western Hospital, you do not train the staff of nurses for that particular hospital?—No.

24625. And you get them as you can?—We get them as we can.

24626. I do not understand how you can manage to get proper nurses unless you keep a very large staff of nurses at hand?—We generally have sufficient nurses; in fact, always sufficient nurses in the establishment for the needs of the patients there are.

24627. And who is the judge of whether there are sufficient nurses?—The matron and medical superintendent.

24628. And supposing there are not, to whom do they appeal?—They appeal to the committee.

24629. And do the committee appoint?—The committee appoint.

24630. The committee have power to get any number of nurses?—Yes; I imagine too that in the case of a real emergency the medical man and the matron would themselves appoint, subject to ratification at the next meeting by the committee.

24631. You do not know at all whether nurses object to the infectious hospitals on account of the danger they run in going to them?—I do not think so.

24632. And you do not know at all what the mortality amongst the nurses from these infectious diseases is?—I think we have some statistics on that; I have a return which shows the total illness during one year, the year 1889, amongst the nurses.

24633. And what was that?—There were 49 nurses or servants, subordinate officers generally, warded during that year.

24634. Out of how many?—I suppose the total number is some hundreds, 500 or 600; there are about 100 at each hospital.

24635. You mean there were only 49 ill?—Only 49 separate cases of illness in the subordinate staff of officers during that year.

24636. That would not be more dangerous than in the ordinary nursing?—I am afraid I have not sufficient knowledge of ordinary nursing to say, but it does not seem very high.

24637. What are your nurses paid?—The superintendent nurses are paid 40 l. per annum, rising to 46 l. per annum; the nurses 30 l., rising to 36 l.; and the assistant nurses 22 l., rising to 26 l., in each case with the additional allowance of board, lodging, washing and uniform.

24638. Then your nurses are paid more highly than they are in the general hospitals; you do not know that?—I did not know that as a fact, but that is probably due to the fact that the diseases that they have to do with in our hospitals are infectious.

24639. What is the matron's salary?—The matron generally gets 100 l. a year, in addition to the allowances of board, lodging, washing and uniform.

24640. Then with respect to these nurses do not you turn them out as trained nurses at all; have you no system of certificating them or

4 P 2

stating

22 June 1891.]

Mr. MANN.

[Continued.]

Lord Thring—continued.

stating how long they have served you, or what their capacity is?—Of course we always give a certificate as to their conduct and so on on leaving.

24641. I mean as to their skill?—No, I think not.

24642. Are there any paupers employed in or about the nursing establishment or the subordinate officers at all?—They sometimes render very slight casual assistance, I believe, but it is not recognised at all; they are not employed, in any sense, in the institution by authority.

24643. With regard to the non-pauper patients, I did not quite understand your evidence. Suppose I want to go into one of your hospitals, what do I do?—You apply for an ambulance for the purpose of moving, and your medical man simply has to give a certificate that you are suffering from a disease which entitles you to admission.

24644. Then I go off to the hospital and I lie there; what becomes of me; how do I pay?—The guardians of your parish or union would, if they thought fit, recover the amount from you; they would ask you to pay it.

24645. Then you do not admit me except through the medium of the guardians?—Yes, we do; we admit you direct; but we make a claim for your maintenance against the guardians.

24646. How do the guardians know that I am there?—They are bound to accept our demands. I give them immediate notice of all admissions.

24647. But I live in South Kensington, and I want to go to one of your hospitals; you say that my doctor, the South Kensington doctor, certifies that I am suffering from scarlet fever, whereupon you send me an ambulance, and I am carried off to your hospital; how do they know where I come from, or who I am, or what becomes of me?—Your private medical man certifies where you are resident.

24648. Then you say, "Lord Thring has gone from South Kensington to our hospital," and you make the guardians pay for me, and then they can get it back from me if they can?—You would be moved to the Western Hospital, and I should at once inform the guardians of the fact that you had been admitted, and inform them that you are chargeable to the parish of Kensington.

24649. I am not chargeable to the parish?—But you are, under the Statute, my Lord, in the case you have been putting. It is not poor law relief in any sense; it is simply a statutory debt.

Earl of Kimberley.

24650. But supposing a person is cured, then *primâ facie* he remains chargeable to that parish?—But in no case could he remain after being cured.

Lord Thring.

24651. Only one question with reference to students; perhaps you are not acquainted with the system relating to students?—You mean students in our institutions?

24652. I mean about the medical question, whether you should, or should not, have students in the hospitals?—I have not had very much ex-

Lord Thring—continued.

perience of that, of course. I understand that it is very largely advocated by many prominent medical men.

Earl of Kimberley.

24653. Recovery from the guardians is regulated, is it not, by this clause (*handing the Act to the Witness*), if you will read it; Clause 3 and the first three sections of it?—Yes, it is the Poor Law Act of 1889, Section 3. I have already read the first sub-section: "(1) The managers of the Metropolitan Asylum District (hereinafter referred to as the Asylum Managers) subject to such regulations and restrictions as the Local Government Board from time to time make, may admit any person who is not a pauper, and is reasonably believed to be suffering from fever, or small pox, or diphtheria, into an asylum provided by the managers."

Lord Thring.

24654. You admit any person, as I understand you, on the certificate of the doctor that he is suffering from the particular disease?—Yes, quite so: "(2) The expenses incurred by the asylum managers for the maintenance of any such person shall be paid by the guardians of the union from which he is received, and those guardians may recover the amount of those expenses as a simple contract debt from the said person, or from any person liable by law to maintain him; (3) The said expenses, so far as the same are not recovered by the guardians, shall be repaid to them out of the metropolitan common poor fund."

Lord Saye and Sele.

24655. I should like to know what the average number of deaths has been in all of the hospitals during the 10 years that you have spoken about?—Will the actual numbers do instead of the average?

24656. Yes?—The numbers of deaths from fever and other complaints in the fever hospitals were 328, 334, 380, 385, 392, 219, 224, 613, 679, 736.

24657. And small-pox deaths?—The small-pox deaths during the same 10 years were 288, 1,431, 263, 93, 943, 1,055, 24, 3, 8, and nil.

24658. Do burials take place at the expense of the relatives?—Almost every patient is buried at the expense of the managers, at the common expense; but there are a few cases in which the friends persist in wishing to make their own arrangements for the funerals, and they can, if they like, take the bodies away under certain regulations; there are certain regulations and restrictions.

Chairman.

24659. You do not recover that burial money from the parish?—Yes, it is all charged as part of the common charges.

Lord Saye and Sele.

24660. Is there any cemetery attached to the hospital?—We have, at the small-pox farm.

24661. Has each hospital a separate chaplain?—Yes.

24662. Can

22 June 1891.]

Mr. MANN.

[Continued.]

Lord Saye and Sele—continued.

24662. Can you tell me what the stipend of the chaplain is?—About 100 *l.* to 150 *l.* The chaplain at the Eastern Hospital gets 100 *l.* a year; at the North-Western 150 *l.*; those are the two limits of the stipends. They vary at the different institutions, slightly.

24663. Have you any fund out of which you can help patients on leaving?—No.

24664. No convalescent home?—Yes; I have already referred to the convalescent hospital which is part of the managers' system, at Winchmore Hill, to which we transfer patients when they are convalescent.

Lord Monkswell.

24665. Do you pay Roman Catholic chaplains or the chaplains of any other religious persuasion except the Church of England?—Yes, in one or two cases there is a Roman Catholic chaplain paid.

24666. You give them every facility for coming to the hospitals?—Yes, we do. I believe the Jewish Rabbi attends occasionally also.

24667. How long have you been clerk to the board?—Five months.

24668. You said you would do all you could to prevent a patient who might still convey infection from being taken away by his friends, but you could not prevent it if he insisted on it; but if he infringed the law by going in a cab, would you not tell of him, and try to get the law enforced against him?—I should say certainly we should, if, in our opinion, he was doing that which was improper.

24669. But if he were simply infringing the law, would you not try to get the law enforced against him?—At the present moment, as your Lordship knows, the law is being altered by a Bill. I believe that anyone who is suffering from a disease may now enter a public conveyance, provided he gives the driver notice; but in the Bill before the House of Commons, an attempt is being made to absolutely prevent that.

24670. Now about the cost of these patients; you say you take in non-pauper patients; does the cost of maintaining those patients include interest on capital?—Not at all.

24671. Then non-pauper patients are paid for partly out of the rates, that is to say, they pay exactly the same as the pauper patients?—That is so.

24672. And of course the accommodation is in no respect different?—That is so.

24673. Do you insist on your resident medical men having a London qualification, either of the College of Surgeons or Physicians?—Not necessarily a London qualification.

24674. They may be Edinburgh or Dublin qualifications?—Yes, I think so; they must be qualified to practise in England.

24675. But I suppose an Edinburgh qualification or a Dublin qualification would be sufficient?—If that would entitle them to practise medicine in England.

24676. I do not know whether any medical man from the Metropolitan Asylums Board is going to give evidence, but if not, I should like to know from you what you suppose the explanation is of these ships decreasing the spread of small-pox so much; is it supposed that small-pox patients being sent to the general hospitals,

(24.)

Lord Mundella—continued.

spread the disease there through the hospitals?—I do not know how long it is since they were received in general hospitals; but it is believed certainly that the isolation of them in the ships is much more efficient than the isolation of them in the fever hospitals.

24677. First of all they were sent to general hospitals, and after 1867 they were sent to you, and when were these ships established?—In 1884.

24678. Between 1867 and 1884 you used to receive them in the fever hospitals?—In the fever hospitals, in special wards.

24679. And did you find then that the disease was spread by that course?—I believe it has been alleged that it was so.

Chairman.

24680. About detention of the patients, I want to be quite clear. Supposing there was a boy in a fever hospital, and the parents for some reason, were very dissatisfied, and came and insisted upon taking him away. I understood from what you said just now, that you have no power to detain him?—I believe we have none.

Earl of Kimberley.

24681. What is the case with regard to a pauper. I quite understand that you have no power to detain a non-pauper patient, but (I may be wrong) I was under the impression that a pauper could not discharge himself from the workhouse with an infectious disease; do you know how that is?—The admission of a patient into our hospitals is not assumed to be parochial relief; he is not in the position of an inmate of an ordinary workhouse.

24682. He does not, in accordance with your view (which no doubt is correct), come under the regulations with regard to paupers, even though he be a pauper?—Quite so; as to discharge, certainly not.

24683. Then, supposing he is a pauper in a workhouse, and he comes to your asylum, do you mean that from that moment he ceases to be regarded as a pauper in the workhouse?—In that case, if such a case was received by us from a workhouse, he would certainly be sent back to the workhouse from which he came, and they would have the determination as to whether they had power to detain him or not.

24684. But supposing that he wished to go out, being in an infectious condition, you would not allow him to go out, but would return him to the workhouse?—We should only allow him to go out to the workhouse.

Chairman.

24685. Can you tell me on what principle the chaplain at one hospital gets 100 *l.* a-year, and the chaplain at another hospital 150 *l.*; is that salary determined by the finance committee, or by the committee of the institution?—That is determined by the Board, with the sanction of the Local Government Board, he being a principal officer. The Board has to make all appointments to principal offices, and they are made with the sanction of the Local Government Board.

24686. But, as a matter of fact, one gentleman gets

22 June 1891.]

Mr. MANN.

[Continued.]

Earl of Kimberley—continued.

gets 150 *l.* where another get 100 *l.*; which is the larger institution of the two?—It depends upon local circumstances so much. At the Eastern Hospital for instance the gentleman who is chaplain happens to be vicar of the parish, and so I suppose 100 *l.* a year is considered to be sufficient remuneration under those circumstances.

24687. Who draws up the chaplain's duties, the Board?—They are settled by the Local Government Board. That is prescribed in Article 73 of their General Order of 1875.

24688. Then is the other gentleman who receives 150 *l.*, a vicar or a curate or what?—He does nothing else; I believe he has no other preferment of any kind. There is one gentleman who is chaplain of two institutions, and he has no ecclesiastical preferment.

24689. Then each institution you told us has its own committee, which is formed of members of the Board?—Yes.

24690. Are there any members on that committee who are not members of the Board?—None at all.

24691. Do they have visiting governors who go round these institutions at all?—Only members of the committee; they pay interim visits to the different institutions between the regular fortnightly meetings; and of course the inspectors of the Local Government Board visit.

24692. How often do the inspectors of the Local Government Board go?—That I am afraid I am unable to say; I believe it is at irregular times.

24693. Do they pay a stated number of visits in the year?—I do not think so; I think they go when the Local Government Board think proper.

24694. When they think something requires looking after?—I believe they visit all the institutions within their district with a certain frequency, but I do not at all know what it is; and I think it is irregular.

24695. Is there anything else you wish to say to the Committee?—I might perhaps add, with regard to the detention of patients, as so much has been said about it, that a threat to the

Earl of Kimberley—continued.

relatives is generally sufficient to prevent their taking any further step, I mean pointing out the serious consequences and so on. It is generally in the case of children that the question arises; and a threat to the parents is quite sufficient generally to prevent their taking any further steps in the matter.

24696. A threat as to consequences, you mean?—As to consequences which will follow if they do persist in their determination. I might perhaps clear up one point by stating that the Diseases Prevention (Metropolis) Act of 1883 provides (in Section 7) that: "The admission of a person suffering from infectious disease into any hospital or hospital ship provided by the managers, or the maintenance of any such person therein, shall not be considered to be parochial relief, alms, or charitable allowance to any person, or to the parent of any person, and no such person or his parent shall, by reason thereof be deprived of any right or privilege, or be subject to any disability or disqualification." I think that rather meets the point as to the power of detention on the ground that they were inmates of the workhouse.

Earl of Kimberley.

24697. I conclude that you would not return a patient to the workhouse till you considered him free from infection?—We do not let any patient go out if we can help it, till absolutely free from infection.

24698. You would not return a man to the workhouse who was not free from infection?—Of course not.

Chairman.

24699. Have you anything else you wish to state?—[Since giving my evidence I find that the Local Government Board in 1888, (Oct.) authorised the managers to take diphtheria, in view of the Bill they were about to introduce]. Shall I put in the volume containing the Report of the Statistical Committee for 1889?

24700. Yes. (*The Witness hands in the Volume.*)

The Witness is directed to withdraw.

Mr. WILLIAM TULLET HOWARD is called in; and, having been sworn, is Examined, as follows:

Chairman.

24701. You are Clerk to the Guardians of Bethnal Green, are you not?—Yes.

24702. The other day we had Dr. Knox here, the Medical Officer of Bethnal Green Workhouse Infirmary, and in his evidence he gave us to understand that the workhouse is very much overcrowded at times?—It has been for several years. We have, I think, now over 200 more than our number.

24703. Has the question of building a new infirmary been before the guardians?—Yes, for a long time.

24704. For 24 years?—Oh dear, no.

24705. Since 1868, is that so?—About six or seven years; not since 1868; certainly not more than ten years.

24706. But why has this long delay taken place?—From the difficulty in obtaining a site.

Chairman—continued.

We did hope to obtain a site on what is called the Poor's land, and in fact we went so far as to offer a sum of, I think it was, 15,000 *l.* for this site, but an opposition was got up in the parish, and the Charity Commissioners now refuse to sanction the sale. That delayed it for quite two years. We are now in treaty with another party, but whether we shall be successful or not of course I cannot say.

24707. But was there an election cry against spending this money?—No, it was a cry for open spaces. They said we were going to build on an open space which the poor ought to enjoy as a playground; that was the question.

24708. Are there compulsory powers for buying?—We have compulsory powers to purchase anything that adjoins, but not otherwise.

24709. Adjoins

22 June 1891.]

Mr. HOWARD.

[Continued.]

Chairman—continued.

24709. Adjoins what?—Adjoins our present workhouse.

24710. Have you ever had any complaints made about your workhouse infirmary by the Local Government Board?—Yes, they are urging us to build a new infirmary.

24711. Here is a question that was put to Dr. Knox: "I am afraid that you enjoy at Bethnal Green the reputation of being the very worst institution of this kind in the Metropolis," and he said, "We do;" that is at Question 24124; is that your opinion too?—I should not like to confirm that; I should rather doubt it.

24712. Do you know any infirmary which has a worse reputation?—Well, you see, we have no separate infirmary.

24713. I ought not to have called it an infirmary; but it is a place for the treatment of the sick?—You see our house has been built something like 40 to 50 years; formerly, I believe it was considered almost the model workhouse in London, indeed, I am sure that it was; but it has been enlarged and patched, and that sort of thing, and now it is not up to the present date; no doubt of that.

24714. That was in answer to Lord Cathcart at Question 24124; then said Lord Cathcart at 24125, "And the whole thing ought to be amended or abolished and reconstituted to-morrow?" and Dr. Knox said, "Abolished; it would not be possible to amend it:" do you corroborate that?—No; and I may say that we have had the two inspectors of the Local Government Board, and the question was mooted, and Dr. Bridges said that at a certain expense it could be made into a suitable infirmary.

24715. At the same time Dr. Knox is the medical officer who certainly ought to be able to form an opinion about his own workhouse?—Medical officers sometimes have peculiar notions, I think not quite right. Dr. Bridges is, of course, a physician, and he expressed that opinion which I have just mentioned.

24716. Do you know how long that gentleman, Dr. Knox, has been medical officer, is it 14 years?—Eleven years.

24717. Then he was asked another question which is this: "It is impossible to keep up discipline with 80 pauper nurses?" and his answer was "Utterly impossible;" can you form any opinion on that?—I was not aware that we had any pauper nurses.

24718. Then here is another thing to which I will call your attention; in the next question, 24127, Lord Cathcart asked: "The fact is that the whole thing is a crying and notorious evil; that is so is it not?" and Dr. Knox's answer is "That is so." What do you say to that?—The house is overcrowded; but otherwise I should say things are not so bad; the wards are kept clean.

24719. Are you able to form any opinion as to the quality of the nursing or not?—None whatever.

Earl of Kimberley.

24720. It appears by Dr. Bridge's evidence at 24073, that you have 495 beds, and that you sometimes have as many as 590 sick; do you suppose that there is any workhouse or infirmary (24.)

Earl of Kimberley—continued

in London in that discreditable condition?—I am not in a position to say.

24721. Do you think it likely?—It is possible; I think not to the same extent, certainly.

24722. Now do you not think that that is a very crying evil?—It wants amending, certainly.

24723. No, I want an answer to my question; is it not a crying evil?—I should say not.

24724. You do not think it a crying evil that there should be only 495 beds with 590 sick?—That might happen but for a very short time.

24725. Is it, do you suppose, the opinion of your guardians, that is not an evil?—We all admit that.

24726. But I asked you whether it is not a very crying evil; is not that a state of things which is most distressing and discreditable?—I cannot say.

24727. Then I suppose I may take it that the opinion of your board, and your staff is that such a state of things is not discreditable?—The opinion of our board is that we want a new infirmary.

24728. I want to know whether the opinion of your board is that the state of things is discreditable and distressing?—The opinion of the board is that we are overcrowded, and that it is quite necessary to obtain fresh accommodation; and they are trying their hardest to do so; but we cannot refuse to take people in, and let them die at their homes; that is our difficulty.

24729. But, perhaps, what your guardians would say for themselves would be, that it is a discreditable state of things, but that it is not their fault?—They would say it is a very unfortunate state of things, and it is not their fault.

24730. Because they are desirous of building a new workhouse, but they have not been able to find a site?—Exactly, that is so; and if we were not rather overcrowded sometimes, we should simply have to leave the people to die at their own homes; we are between the two evils.

24731. Would it not have been possible to make an arrangement with any other infirmary or workhouse in London to take the surplus that you cannot accommodate?—We have written to every one that is at all likely, and they are all full.

24732. You have not been able to make any such arrangement?—No; we board out some able-bodied and get room in that way, in several workhouses.

24733. Would it not have been possible for you to hire a temporary building?—No, we have cast about here and there, and every place is full.

24734. Do you mean that there is no possibility, in a large district like yours, of hiring a temporary building for the sick?—I think not. We have just purchased a building, but we have been obliged to use it for old people; that is an extra workhouse, which we opened about six months ago: that relieves us considerably; we get rid of about 160 people in this new place; but then the Local Government Board said that

22 June 1891.]

Mr. HOWARD.

[Continued.]

Earl of Kimberley—continued.

it is not fit for the sick; so we could not send our sick there.

24735. Still that relieves your numbers?—It relieves our number to the amount of 170 or 180.

24736. That, of course, gives you more accommodation for the sick?—Yes.

24737. Did you ever suggest to the Local Government Board whether it would not be possible for them to obtain special compulsory powers for you to get a site?—We have never mooted that question. Of course it would have been necessary to come to Parliament for that.

24738. No doubt; but that has not occurred as a possibility to you?—No, I hardly know where we should find a place; Bethnal Green, as you know, is a very crowded neighbourhood altogether.

24739. Of course, I only ask you whether you have ever made the suggestion?—No, we have not.

24740. Of course, if such compulsory powers were given, a spot could be found for you to erect the building when you please?—Yes.

Chairman.

24741. The following letter has been received from Dr. Knox addressed to the Clerk of this Committee, and dated the 18th of June: "I am not sure if a note was taken in my evidence to-day of the number of night nurses here in addition to those on day duty, and beg to forward the enclosed list showing the complete staff: On day duty—One superintendent, 11 infirmary nurses, three infirm ward nurses, and four imbecile attendants. Night duty—One superintendent, eight infirmary nurses, one infirm-ward nurse, and two imbecile attendants." As far as you know, is that a correct statement of the staff?—That would be correct, I believe.

Lord Thring.

24742. I understood Dr. Knox to say there were 80 pauper nurses in addition to the trained

Lord Thring—continued.

nurses; do I understand you to say that there are none, or that there are any, or what number?—They would not be recognised certainly by the board. The nurses are supposed to do the nursing; I believe there are some women there to do the scrubbing and that sort of thing, but they are not supposed to interfere with the nursing, certainly.

24743. The doctor told us positively that there were 80 pauper nurses or 80 pauper women assisting in nursing; do I understand you to say there are not 80 or any number whatever?—No, I would not say that, because I know nothing of the nursing arrangements.

24744. You do not deny his statement on that point?—I was not aware of it, and I do not think the guardians know.

24745. I understand you are not aware of the details of the nursing in the workhouse?—That is so.

24746. Therefore you cannot either affirm or deny the statement as to the pauper nurses?—No. I might say that Dr. Knox has never made any official report to the guardians of scanty nursing, or anything of the kind, which it would be his duty to do if we had not sufficient.

Lord Monkswell.

24747. In regard to this Poor's land, is it not the fact that this Poor's land is held subject to a trust not to build?—Yes.

24748. So that you would have to go to Parliament, or at any rate to the Charity Commission, to get rid of that trust?—No doubt we should have to come to Parliament. Part of it is already built upon, as your Lordship is aware, by the Museum; I think they got powers from Parliament to build that.

Chairman.

24749. Is there anything else you wish to say?—No.

The Witness is directed to withdraw.

MR. WILLIAM VALLANCE is called in; and, having been sworn, is Examined, as follows:—

Chairman.

24750. You are the Clerk to the Whitechapel Board of Guardians?—I am.

24751. How long have you occupied that position?—Twenty-four years.

24752. Have you been able to form any opinion as to how far medical relief of various kinds is adequate to the requirements of London generally?—I am not prepared to express any opinion except as regards the Poor Law itself. I am of opinion that the present system of poor law medical relief in London adequately meets the needs of the poorest class of our population, that is those who require medical aid and are destitute of the means of providing it. It secures to the destitute poor prompt medical attention by doubly qualified and registered practitioners, who are remunerated for their services alone, the medicines and appliances being provided by the guardians. It is also

Chairman—continued.

connected with a separate infirmary system which provides skilled medical treatment, nursing by paid and trained nurses, and maintenance; these combining to aid the out-door medical officer, to increasingly attract the sick poor, and to improve the chances of the recovery of patients.

24753. In giving that answer, do you allude to London generally, or are you speaking more particularly of your own union?—I am referring to London generally.

24754. That is what my question was directed to. And now as regards Whitechapel itself, how is that off for medical relief?—The same answer will apply.

24755. Now, in addition to that medical relief which you say you consider sufficient for the destitute poor, have you any hospital relief, charitable

22 June 1891.]

Mr. VALLANCE.

[Continued.]

Chairman—continued.

charitable relief in your union?—The Charity Organisation Committee do occasionally supplement the poor law relief in the direction of the grant of surgical appliances, where the circumstances of the applicant appear to place him outside the poor law help, and where he appears to deserve being saved from poor law relief of any kind.

24756. But have you any general hospital in Whitechapel?—The London Hospital is within the Whitechapel Union.

24757. Now does not that relieve the poor law of a good many cases?—I am afraid I cannot answer the question positively; the fact is it may relieve the poor law, at the same time it may feed it. It attracts, it must necessarily attract, sick poor to that part of London; and such cases as are found not to be admissible to the London Hospital are frequently referred to the infirmary, as poor law cases; and therefore it is difficult to say whether it relieves or increases the number of poor law cases.

24758. In your answer to my first question you said that all the poor were provided with what you called paid and trained nurses?—I was speaking then of the infirmary system.

24759. I think we have had evidence here to show that only a portion of the nurses at the infirmaries are hospital trained nurses?—I believe I am absolutely correct in saying that in the Whitechapel infirmary the whole of the nurses are paid and the whole of them trained. Partly by reason of structural arrangements, and partly from the accession of numbers of late, we may be a little understaffed. The medical superintendent has very recently expressed his opinion to the infirmary committee that the staff of nurses will require augmentation, and he has already received instructions to formulate these requirements so that they may be considered.

24760. Can you tell me whether the matron of your infirmary is a hospital trained nurse?—She is.

24761. Perhaps you would like to see that the case in all the infirmaries?—Decidedly.

24762. And that extends to the nurses too, does it not?—That extends to the nurses too.

24763. We had a statement made to us the other day by the medical superintendent of St. Saviour's Infirmary to this effect: that he considered that the present infirmary system had a pauperising effect, because as soon as a patient got into the infirmary he practically said: Now I need not take the trouble to provide against sickness because if it comes I have this place to come to. Have you ever formed any opinion in that direction?—The only sense in which it can be said that our present infirmaries have a pauperising effect is in the fact that they have led to an enormous increase in the number of indoor sick poor; but, after all, "pauperising" is a relative term, and if it be said that the present infirmaries are increasingly attractive to those who are living under insanitary conditions, or to those who would otherwise be in receipt of outdoor relief, and when it is borne in mind that, attractive as they may be, these infirmaries are in themselves sufficiently protective against serious abuse, I am not prepared in unqualified terms to say that the infirmary system is pauperising.

(24.) e

Chairman—continued.

24764. Have you ever heard of the case of a man being so pleased with an infirmary, having been once there, that he has domiciled himself in that union so as to be able to go to the infirmary when old age overtakes him?—I have never had my attention drawn to such a case; I can understand the possibility, in some cases, of London infirmaries being attractive to such people; at the same time I should think such cases would be very few, quite exceptional.

24765. Is your Whitechapel Infirmary one of the new ones under Gathorne Hardy's Act?—It is a separate infirmary under an infirmary order, but not specially erected as an infirmary; it was adapted from an original workhouse; but as an adapted institution we consider that it is a tolerably efficient one.

24766. Then it is not built on the pavilion system?—It is not built on the pavilion system.

24767. Then as regards the duties of the medical superintendent, I suppose in your case, the same as in others, the medical superintendent is responsible for everything that goes on in the infirmary?—He is.

24768. He is responsible, therefore, for the physical requirements of the patients, and at the same time for the administration of the establishments. Now have you ever considered whether that is putting too much on him, to this extent, I mean, that a man may be possibly a very good doctor and a very bad administrator; or again he may be only a good administrator, and therefore his patients may suffer from his neglect?—Yes, such a thing is possible; at the same time where the medical superintendent is wise in his administration, he will delegate to the matron, say, the whole of the domestic arrangements, exercising control and interposing only through the matron, not going between the matron and the subordinate staff with regard to the duties to be performed. So with the steward, if the medical officer is wise he will leave the steward free in his own department, only interposing when there is fault to find, or direction to give, and then to the steward himself, and not going between the steward and his subordinate staff; in this way exercising a general control, and still leaving details to the two departmental officers, his time is not severely encroached upon, and the patients need not necessarily suffer in regard to medical attention.

24769. In fact, really successful administration and successful medical treatment depend entirely upon the tact shown by the medical superintendent?—Yes; in fact I may say that when the present medical superintendent was appointed, I was so impressed with the importance of this, that I advised him to see both the matron and steward and arrange as to their departmental duties with a view to relieving himself and avoiding anything like friction; and I think the result has been very successful.

24770. How long has that medical superintendent been there?—About four-and-a-half years, I think.

24771. And the matron about the same time?—No, the matron has held office not more than a year and a-quarter. Some four and a-half years since, just before the present medical officer was appointed, I prepared a memorandum which I

4 Q

have

22 June 1891.]

Mr. VALLANCE.

[Continued.]

Chairman—continued.

have here, of a scheme then under the consideration of the guardians for placing the administration of the infirmary upon the same footing as a general hospital; and, as bearing upon the subject, if I might be allowed, I would put it in, assuming it to be of any service to the Committee.

24772. It would be very useful to us, I think; but could you give us briefly what the points are?—The plan would involve the appointment of a non-resident consulting physician, and the like consulting surgeon, and, probably, two resident assistants. The authority of the consulting physician and surgeon would be supreme in the treatment (including diet and nursing) of the patients; but, subject to that authority, the resident assistants would be held responsible for the medical care of the sick poor. Other possible advantages would be an improved classification of the sick, a better record of cases, a higher standard of nursing and increased means for the efficient training of pupil nurses. The arrangement would also afford to medical students a field of study which is said to be greatly needed, since the visiting physician and surgeon respectively, would be allowed to introduce for accompaniment with them through the sick ward, such pupils as they might desire. After commenting upon this, the memorandum refers to the Manchester Parish Infirmary, which is nominally connected with the workhouse, and administered by the master of the workhouse, but really administered by the matron under some such system as I have shadowed forth. Then the concluding paragraph is to this effect: "But it may be that the guardians whilst favourably regarding the proposal are not prepared to revolutionise their infirmary administration, and to give permanency to the arrangement by means of newly-framed regulations, in face of the possible risk of non-success." "It remains to inquire whether there is not an alternative which will combine the advantages of the proposed scheme with a less revolutionary disturbance." "The question may, perhaps, be answered affirmatively thus: Adopt the proposal so far as regards the appointment of a visiting physician and the like surgeon; but instead of appointing two resident assistant medical officers, appoint a resident medical officer and a resident assistant. The effect of this modification would be that, in the treatment of the sick, the medical officer would be subject to the control and direction of the visiting physician or surgeon, but in all other respects, he would be the chief controlling and responsible officer of the infirmary." Then the memorandum goes on to suggest, that it might be well to more clearly define the duties of the matron and steward.

24773. But that rather leads me to ask, is it your opinion that the medical men are not sufficient in number in the infirmary?—I received the impression that it would be a great improvement, and would be better for the poor and the administration, if we could bring medical men from outside, who would be presumably more abreast of modern medical science; but, after consideration, the guardians came to the conclusion that it would be well to leave things as

Chairman—continued.

they were. They would not take the responsibility of initiating a new system.

24774. May not one of the reasons why the guardians did not acquiesce in your plan be, that they were afraid that the outside men might cause more expense in the diet and in dressings?—That point is referred to in the memorandum, and it is one that was raised, but I do not know whether any opinion in that direction was seriously expressed.

24775. The guardians, at all events, thought it better to let well alone?—Yes, that is so.

24776. Did you ever consider at all, supposing students were admitted under your scheme, together with a non-resident consulting physician, by whom they should be taught; should they be taught by the resident as well as by the consulting physician?—I have not really thought that out. The impression I received then was, that they would accompany the physician or surgeon in their clinical work.

24777. You would have them under some very carefully considered organisation?—Clearly.

24778. Not that they should drop in whenever they happened to be free?—Certainly not.

24779. You would like to see students in the infirmaries in any case?—I think it would not only be of great service to the profession itself, but improve the administration. The students would come in with very critical eyes; and the result would no doubt be to keep the medical administration up to the mark.

24780. The objection has been raised sometimes that the poor object to be examined by a large number of medical men, that is to say, having their wounds or whatever they may be examined by students as well as by the doctors; and the opinion has been expressed here that there is nothing in that objection; have you any opinion upon it?—I am not prepared to say that there is very much in it. I have understood from the relieving officers that such statements have been made by the poor, and that they prefer the infirmary to the London Hospital for that reason; but I am not prepared to attach very much weight to that.

24781. Did you not once try to effect a co-operation between the London Hospital and the Whitechapel Union?—I cannot say that we ever made any attempt to formulate an arrangement. First of all, we send no cases to the London Hospital, other than such as are recommended by our own medical officer as requiring surgical operations, and those patients we pay for at the rate of 2 s. 6 d. a day; but they are very few indeed, there is rarely more than one there on an average. And, on the other hand, some years ago we had reason to complain that patients, when they ceased to be suitable patients for the London Hospital, were too readily transferred to our infirmary; but that complaint has been now removed, inasmuch as the hospital authorities take precautions themselves by receiving undertakings upon admission for removal or burial, or by seeing that the patients have homes to which they can be removed, and having them removed there; but we get very few cases now of transfer from the London Hospital, by reason of the improved

22 June 1891].

Mr. VALLANCE.

[Continued.]

Chairman—continued.

improved arrangements which they have adopted.

24782. Do you think any co-operation between the charities and the poor law is possible?—I think it is very desirable indeed that there should be a clear understanding as to the classes of cases which are suitable for admission to the general hospitals, and as to the cases suitable for the poor law infirmaries, because, as poor law infirmaries for destitute sick poor, they are almost on a level of general hospitals. I have often felt that it would be well if there were some qualification of disease, rather than of poverty, for admission to general hospitals under which suitable cases could be transferred from the infirmaries, or from the provident dispensaries, or from private practitioners under prescribed conditions. That is the only idea I have ever formed.

Lord Thring.

24783. Perhaps you can clear up a difficulty about the question of chargeability to the guardians. I understand that when I go into one of the metropolitan infectious asylums, I can go under the order of my private doctor, stating that I have got small-pox, for instance; then I understand that the metropolitan asylum receives me on that private order; and then I understand that a debt is created on my going in, between the parish to which I belong and the asylum. For instance, I belong to South Kensington; I understand that on my going into the asylum, South Kensington becomes liable to pay the asylum for my maintenance and cure; and then I understand that the guardians of South Kensington have a right to recover from me the expense they have paid to the Metropolitan Asylums Board; but that there is no debt between me and the Metropolitan Asylums Board at all. That is the state of the case, is it not?—There is no doubt that that is so. Upon admission of a patient without a poor law order, notice is sent to the guardians of the admission of the patient, and with a notification that the patient will be charged, say, to the Whitechapel Union. That notice in ordinary course I hand to the relieving officer, and he is required then to enter in his report book the fullest particulars he can obtain in regard to the circumstances; and upon a report of those circumstances the guardians adjudicate. Say, for instance, that a patient has considerable means. They would estimate that a patient would not be in longer than a given time; in a case of fever they would perhaps say two months; in the case of small-pox a shorter period. Then they would declare a certain sum to be upon loan, 20 s. or 50 s., or whatever it may be, and the usual steps would then be taken with a view to recovery.

24784. Only one or two more questions, to complete it with respect to the expense. I go in, say, to one of the Metropolitan Asylums, and I say "I belong to South Kensington;" supposing that I stated wrongly that I belonged to Kensington, who is at the expense of determining to which parish I belong?—The last known address or the last stated address would be taken to be the address to the Union of which your maintenance would be chargeable.

(24)

Lord Thring—continued.

24785. And would that be conclusive for the purposes of the Metropolitan Asylums Board?—It is not a question, I take it, that would ever be disputed.

24786. Then one question more. With regard to the expenses of my cure, my maintenance or whatever you like to call it, the expenses of my residence at the hospital, do I rightly understand you that they pay only the cost of my cure, or that they pay the cost, including a certain sum for expenses of establishment, or on what they base the estimate?—As far as the Whitechapel guardians are concerned, they arrive at the sum to be assessed, having regard to the equities of the transaction; but legally if they were compelled to take proceedings to enforce repayment, they certainly could not recover more than the actual maintenance.

24787. They could not recover any establishment expenses?—No establishment expenses at all.

24788. And then, supposing they put too little on loan, cannot they recover beyond their estimate?—No.

Earl of Kimberley.

24789. You say "upon loan;" what necessity is there for its being upon loan, because the Act of Parliament says it is to be recovered as a contract debt?—Perhaps I was wrong in using the words "on loan," I was rather bringing it within the category of loans.

24790. You are thinking of cases where it would be on loan; in this particular case the Act says that it shall be recoverable as a contract debt?—The declaration of loan is unnecessary, but practically we bring it within the category of a loan.

Lord Thring.

24791. Then practically I am thrown, to a certain extent, upon the rates in that way, because the expenses of the building and of the establishment are not really included in the sum charged by the guardians to me, though they are expenses which they incur for me?—That is so.

Lord Monkswell.

24792. You said just now that in their agreement with the Whitechapel Union the Metropolitan Board would look to the equities; what do you mean by that?—The relieving officer reports that a child which has been admitted to the fever hospital is the child of a tradesman, say, and that this tradesman pays 40 l. or 50 l. a year rent in a certain street, and that he has two other dependent children at home. That is the representation of the circumstances; and upon this representation, the guardians would, perhaps, say at once, "You will pay 40 s." or "60 s." as the case may be, simply to make the recipient feel that there is a responsibility attaching to him for the maintenance of his child; but in estimating the 40 s. or 60 s. the guardians would not make any estimate of the actual cost of provisions and necessities, included in the term "maintenance," but they would deal with the equities of the question as a whole, by disregarding the legal claim,

4 Q 2

22 June 1891.]

Mr. VALLANCE.

[Continued.]

Lord Monkswell—continued.

claim, and declaring a specific sum to be by way of loan.

24793. What would be the fixed charge of the Metropolitan Asylums Board; is it altered from time to time?—It is altered from half year to half year.

24794. What is it, about?—Each asylum varies.

24795. What is the highest and what the lowest?—It varies from about 2*s.* 3*d.* a day in infectious hospitals to about 10*d.* a day in imbecile asylums.

24796. About 10*s.* a week?—Yes, as an average.

24797. That is the maximum they are allowed to charge you; in fact they always do charge you a fixed sum?—Yes.

24798. And children the same as adults?—Yes.

Lord Thring.

24799. But take the case of my sending a servant, for whom I am willing to pay the actual cost, would that be estimated in the same way?—I am afraid there is no uniform system adopted by boards of guardians in dealing with such cases, and I therefore am not aware of what system is adopted in other unions. I only say that that is the arrangement we adopt.

MR. FRANCIS MEAD CORNER is called in; and, having been sworn, is Examined, as follows:

Chairman.

24807. You are a resident in East London, are you not?—I am.

24808. Would you tell me what qualifications you hold?—I am a Member of the Royal College of Surgeons, England, and hold the Society of Apothecaries' Degree.

24809. You are a surgeon then?—Yes.

24810. Do you call yourself a general practitioner?—I am in general practice.

24811. How long have you been resident in East London?—Thirty-four years; I have been in my present parish 34 years.

34812. And what post have you held in connection with hospitals or local institutions in that locality?—I have been surgeon to the Poplar Hospital for Accidents during the whole of the time I have mentioned, 34 years. I am the senior surgeon there; and I have held the appointment of surgeon at the hospital for the term that I have lived in Poplar.

24813. Then have you lived in Poplar 34 years?—I have.

24814. Then you are well acquainted with the condition of the poor in that district?—I am. I am also medical officer of health, which post I have held for the last 12 years, which gives me a further knowledge.

24815. Have you any information with respect to the feeling of general practitioners in the East of London as regards the out-patient departments of general hospitals?—Yes; there was a conference within the last month bearing upon the question now before this Committee, and the universal feeling is that there does exist a great deal of abuse, especially amongst the out-patient departments.

Earl of Kimberley.

24800. I suppose it comes to this: the maximum of course is the actual cost; in a case where the parent of the child is evidently a person in very easy circumstances you would charge the whole?—If it was found that there was a willingness to pay.

24801. I suppose, independently of willingness to pay, in the case of a person specially well off you would charge the whole of it, of course?—Yes, but we should be unable to recover by legal process beyond the actual maintenance.

24802. What you mean by the equities, is that you would proportion the sum short of the whole of it, to what you thought, on the whole, the person might be able to pay?—Yes.

24803. And you would accept that from them without having recourse to legal proceedings?—Yes.

24804. If it was necessary to go to legal proceedings that would be another matter?—Yes.

24805. In fact, you deal with it as in the other poor law cases where you think the recipient ought to pay?—Precisely in the same way.

Chairman.

24806. Is there anything else you wish to say to the Committee?—I think not.

The Witness is directed to withdraw.

Chairman—continued.

24816. On what do they base that conclusion?—They have come to that conclusion from their own personal knowledge of cases.

24817. Cases which had been to them and they had got on their books, and then had left them, do you mean?—Yes; or patients who had been attending the hospitals as out-patients, and had got too bad to be able to attend them longer, and then came under these practitioners in the ordinary course of treatment.

24818. And then were perfectly able to pay?—Quite able to pay.

24819. In the case of some who have been first to practitioners, and then to the out-patient departments of the hospitals, is it not possible that they may have expended all their means in paying the doctor?—Quite so; that I know to be the case not infrequently.

24820. Could you check that enormous flow to the out-patient departments in any way, do you think?—Yes; I think by the use of an agency in each district. In Poplar we have a very good agency, that of the Charity Organization Society. I think that such an agency would, if more developed, check these cases and another class of cases, that is where persons go to the hospital for very trivial ailments, ailments for which they would never think perhaps of going to their own medical man; there are not a few of those.

24821. Is the tendency of hospitals to encourage those trivial ailments in order to increase their returns?—There is such a tendency, though in our neighbourhood that is not necessary. The London Hospital has such a flux of patients that they do not need to multiply their numbers.

24822. Is

22 June 1891.]

Mr. CORNER.

[Continued.]

Chairman—continued.

24822. Is the London Hospital close to the Poplar Hospital?—It is nearly two miles distant.

24823. Then the competition has reduced the fees of these general practitioners, has it not?—I should say it has to some extent; I should think probably their competition with each other has also had its influence.

24824. What part do clubs and provident dispensaries take in the treatment of the sick in Poplar?—We have a provident association in Poplar, I think probably the oldest in London; but it is very meagrely patronised; it is a provident association that admits of attendance by thoroughly skilled men in the district for the whole family, including midwifery, and the cost of that is something under a pound a year; but it is practically very little used.

24825. But would not that compete also with the practitioner?—If proper selection were made of the persons joining it, I do not think it would.

24826. Then, so far as your experience goes, this provident association has failed?—It has to a great extent, simply because persons, somehow or another, do not care to belong to it. There is the opportunity of their getting to the hospital, and there is not the need of their making this provision for themselves.

24827. Does the provident association pay its own medical officers?—Yes; through the fees of the members.

24828. We have heard in this inquiry something about what they term doctors' shops; have you anything to say on those?—Yes; those are what I suppose are meant by the cheap dispensaries; they have multiplied very greatly within the last 10 or 15 years in the neighbourhood, very greatly indeed; I mean such dispensaries as charge 6 *d.* for a consultation, including medicines.

24829. What is your objection to them?—I have no serious objection to them, because in one sense I think they do a great deal of good. Prior to their establishment the poor people were in the habit of going very largely to druggists and being prescribed for, and I think practically that has become extinct; but I do not think that, for the charge made, justice can be done to patients.

24830. You mean they do not get value for their money?—I do not think they do.

24831. When they went to the druggists, no fee was paid, but they only paid for the medicine, I suppose?—I think about the same fee used to be charged as is now paid to the local practitioners.

24832. Still, as regard that, a man has as much right to start a doctor's shop as any other shop, has he not?—Yes; I may say that the feeling of this conference the other day was, that if medical men would unite and come to a common understanding, it would be quite easy for them to get double what they are now charging, as what the working population of our district at present receives make a very large amount of money, and they could very well pay much larger fees.

24833. When you say they make a lot of money, have you any idea of the average wage?
(24.)

Chairman—continued.

—I hear a great deal from the leading hands, and no doubt they earn from 30 *s.* to 4 *l.* or 5 *l.* a week many of them.

24834. Are those the class of people who become your patients, do you think, at the Poplar Hospital?—A good many of them go to the Poplar Accident Hospital for Accidents; our numbers are very large there, and I am afraid (I do not know whether it is necessary to publish this) from rather reprehensible causes. I might mention to the Committee, that in the year 1889 there were brought to the hospital 325, and in the year 1890, 493 persons under the influence of drink, and we got a good many assaults that I daresay are connected with the same cause; in 1889 we had 710; in 1890 we had 676.

24835. But how does the number of cases of persons brought in, in a state of intoxication, bear on the question?—It bears on the question in this way, that a large amount of their earnings goes in the consumption of drink. The premiums of some of our public-houses that have changed hands lately go from 20,000 *l.* to 30,000 *l.*

24836. Then do these out-patients departments give surgical appliances, such as trusses, and so forth?—No, generally not; only for some special case. At the Poplar Hospital for Accidents, we supply them if the patient is not in a position to supply them himself; but at the out-patient department of the London Hospital, I think they are not supplied, unless for some very special reason.

24837. That is a portion of the cure, is it not?—A most essential portion in many cases, especially if the result of accident is distortion.

24838. Do you think a good many people go to out-patient departments who are suffering from want of food as much as from want of physic?—Certainly; those are stopped by the working of the Charity Organization Society in my district. They refer in nearly every case applying for a hospital letter to me or to some responsible medical man in the district, and if it be found that the person is suffering from insufficient food or a bad home, or that kind of thing, and has not the means of improving himself, it is advised that the letter be not given, but that the case be referred to the parish, so that a considerable check is placed on the misuse of letters in that way.

24839. Then you do try and check, in Poplar, this crowd of people going to the out-patient department?—Yes; the agency of the Charity Organization Society is a very efficient one there, and the clergy work with it, as well as the medical men; and the medical men are very willing to give certificates to any case referred to them by this organisation, as to the fitness of the case for a hospital or what hospital, or whether it is a convalescent case or what not.

24840. Now, in Poplar, you have the Poplar Hospital for Accidents, and not very far off you have the London Hospital?—About two miles off.

24841. But now take another district of London, Berners-street, where the Middlesex Hospital is; there are a large number of hospitals we are told in that district with over 2,000 beds,
4 Q 3 in

22 June 1891.]

Mr. CORNER.

[Continued.]

Chairman—continued.

in a radius of one mile, and an unlimited amount almost of out-patient departments. Would such an organisation be possible in a district crowded with hospitals like that?—I think so. I do not see why London should not be cut up into districts and worked through agencies. I see no other way than that of checking abuse or misapplication of letters. I think it would be quite practicable if the agencies of, say the Charity Organization Society were more used, because I never knew of any instance where a case needed a special letter or special help in any way, in which they did not get it through the Organisation when applied for.

24842. Then you would, if possible, make the inhabitants of a district go to a hospital in that district?—That would not apply to ours, because we are insufficiently supplied with hospitals; but, by this agency, and by the energy we meet with at the board, the whole of the hospitals of London are put under tribute; we make use of all of them more or less; but it is only by a great effort on the part of the philanthropic workers there.

24843. Then, according to that, the hospital accommodation in your district is insufficient?—I should say distinctly so. As regards the Poplar Hospital, a movement is going on now, and in all probability within a year we shall have our accommodation doubled. We only have accommodation for 40 beds now, and there is no accommodation for a women's ward at all; so that we are going to double our beds and make accommodation for a female ward as well.

24844. But will that anything like supply the amount that you require?—Purely for accidents, it will.

24845. Would you like to see anything in the shape of a licensing body, to prevent hospitals being built at the caprice of anybody who might wish to build one?—There should be some controlling body, especially in the starting of a new hospital or the extension of an old one.

24846. That is to say, you would have some voluntary body who should recommend for a license?—Yes; or I think the Local Government Board has on its staff experts of the highest standing in connection with hospital matters. I should trust them. I think, in preference to any other body known to me.

24847. But supposing a man puts down a large sum of money to build a hospital, and a large sum of money to endow it, you could not interfere with him, could you?—No; but I should have greater trust in that money being well expended, if I knew that the Local Government Board had some hold over what was the selection of the site and the character of the building, so that the best results would accrue from the expenditure.

24848. But supposing people gave a certain sum to start the building of the hospital, and had to beg for the remainder of it, and also have to beg for the money to keep it going, would you like to stop that, do you mean?—Yes, I should; and for the reason that that building would very likely be put where it is least wanted. For instance, take in our own district, the Victoria Park Hospital, for consumption and diseases of the chest; it is a hospital to which a great number

Chairman—continued.

apply, and from the prevalence of lung troubles they very often have to wait a long time before they can get admitted. Now I have understood that Brompton Hospital is a very rich hospital, and if funds were forthcoming I think that in our own neighbourhood there is a particular need for such a building; we are distinctly short in accommodation in respect of beds for consumption and diseases of the chest.

24849. Do you think that the poor go about from hospital to hospital very much?—Yes, they do.

24850. That there is an overlapping of charity, so to speak?—Yes; they will go, for instance, from the London to Bartholomew's, and from Bartholomew's to Guy's.

24851. Have you any idea why they do that?—They are chronic cases, and they imperfectly recover, and I daresay they get tired of attending to such cases at one hospital, and they move them to another; or they do it from caprice themselves.

24852. Would you like to see an inquiry officer at every hospital, in addition to your Charity Organization Society?—I think that if the local agency were properly carried on, the other would scarcely be needed.

24853. At some of the hospitals we have been told they do limit their number of cases by making inquiries?—Yes, I think it results well; but to my mind, if the inquiry were made in the district where the person resides he would be fairly dealt with, and I think the inquiry would be more thorough.

24854. Is not that inquiry sometimes rather a lengthy proceeding?—That is one of the charges that is made against the office of that particular society that the inquiry is too minute.

24855. I do not make the charge; I merely ask the question?—I think, perhaps, it is excessive in some instances; but if it is a fair case, I do not see any serious objection to it.

24856. Then you would not refuse a case first treatment?—No, certainly not. Any person going to the hospital (this is the case in the Poplar Hospital) is seen once; and if not looked upon as a proper case, an accident or an emergency case, is referred to their own medical attendant, or to the Poor Law.

24857. Now do you have any students at the Poplar Hospital?—No.

24858. You have a very large out-patient department, have you not?—A very large out-patient department. The attendances of out-patients in 1889 were 34,730; in 1890 they were 30,700 odd.

24859. Therefore there is a large field unused for medical instruction?—Yes, it is so.

24860. But would you not like to see students admitted there?—It has been mooted, but it stands over for the extension of the hospital. I think when that is accomplished, in all probability there will be that addition.

24861. Have you ever considered the case of convalescent homes at all?—I have a great deal to do in passing these cases to convalescent homes; I see, perhaps, daily one or two cases, as to their fitness and the filling in of certificates.

24862. But is there a sufficiency of convalescent homes?—Yes, I should say as far as our needs

22 June 1891.]

Mr. CORNER.

[Continued.]

Chairman—continued.

needs go; but I think a great deal is due to the energy of those who undertake to provide letters for them. The clergy are very active, and we have a branch of the St. John the Divine Nursing Institute in working operation in our district; they are in touch with their centre, and a wide circle of influential people; and the same would apply to the Charity Organization Society. So that really I do not think any case needing special convalescent treatment would stand out for any great length of time.

24863. You said just now you have had 30,000 attendances at the out-patient department in one year; does not that give very small time to the attention and diagnosis of cases?—Well, a great proportion of them would be simple dressings afterwards. They are accidents, so that the attendants in the receiving room, the nurses, are able to do a great deal of that work.

24864. What assistants have you got in that particular department?—There are three surgeons for the out-patients; there are two house surgeons, and there are generally two porters, who are excellent dressers, and a female nurse.

24865. The porters are dressers, you say?—Yes, it is so.

24866. They come to that by practice?—Yes, by practice.

24867. Is that as much assistance as you require?—There has been no application for more; I think that is sufficient; the house surgeons do a great deal of dressing.

Lord Zouche of Haryngworth.

24868. What would be the composition of this controlling authority for licensing the hospitals?—I have not thought it out, but I think the Local Government Board as the existing authority, or the county council; but the Local Government Board having such an excellent staff of reliable men to advise them, I think would be an acceptable authority to all persons; and being the health authority, I think it would probably be the best selection.

24869. You would prefer it to the county council?—I should.

24870. Could you describe, very briefly, how your local agency of the Charity Organization Society is worked?—They have a permanent agent and visitor paid, and a committee, and any one wishing for a hospital letter or convalescent home letter makes application there, and then the circumstances are taken down and inquiry made; and if the person be a fit person, the case is usually sent, for reference either to the medical attendant of the case or to me, if there be no particular medical man, and on my report or on

Lord Zouche of Haryngworth—continued.

the report of the medical man, the case is sent forward, a letter being given to a hospital or a convalescent letter provided.

24871. But how do they practically make these inquiries; have they a staff of people who go round to the different houses of the applicants?—Yes, that is so; and as a rule the members of the committee who attend know the cases before they are brought up; they are very often sent by members of the committee.

24872. They know from experience?—Yes, they know of the case really before the application is made, often; but, if not, the inquiry is conducted by the officers; they have two who go to the homes.

24873. And you find there is no practical difficulty in carrying it out?—No, no serious difficulty at all; I think it works exceedingly well, and I think the really deserving, whether it be the person or the case, does get help and fairly promptly.

24874. And do you think that it excites any jealousy among the poor in the neighbourhood, these inquiries being made?—Yes, I think some resent it; but the gain is so palpable that my impression is that opposition will gradually lessen. It is the same with instruments; a large number of instruments are supplied from the Organization to persons which otherwise they would have a very great difficulty in getting.

Lord Clifford of Chudleigh.

24875. Are these instruments supplied on payment?—If they are in a position to pay towards them, they are expected to do so.

24876. But they are furnished by the hospital on the recommendation of the Charity Organization Society; is that so?—No; as a rule we refer the cases to the Charity Organization Society, and the Charity Organization Society makes the inquiry and supplies the instrument.

24877. On such payment as they may be able to get?—Yes, according to the means of the patient. And I may mention too, perhaps, that the east of London hospitals have to supply hospital accommodation for what is known as West Ham, Canning Town; that is immediately over the border from Poplar, and has now a population of some 200,000 persons, practically without any hospital provision whatever.

24878. I suppose you have a very large proportion of accidents, do you not, in that neighbourhood?—A great number of accidents, and a great number come from this district to which I refer, the West Ham district.

The Witness is directed to withdraw.

MR. T. BEATTIE CAMPBELL, is called in; and, having been sworn; is Examined, as follows:

Chairman.

24879. You are the Secretary of the Royal Westminster Ophthalmic Hospital, are you not?—I am.

24880. Where is that hospital situated?—At the corner of Chandos-street and King William-street, West Strand.

(24.)

Chairman—continued.

24881. And would you tell me when it was founded?—It was founded in the year 1816.

24882. Do you have beds there?—Yes, we have beds there for in-patients also.

24883. Do not you act as a sort of annexe or adjunct to Charing Cross Hospital?—Not at all;

4 Q 4

we

22 June 1891.]

Mr. CAMPBELL.

[*Continued.*]*Chairman—continued.*

we are in no way connected with them, except in this way: that as they do not deal with eye cases there, they simply send them on to us; but our institution was founded before theirs, and is an older institution.

24884. As a special hospital you co-operate with a general hospital?—Yes.

24885. You are practically the special department of that hospital?—No, not at all.

24886. That is to say as regards the eye cases which they do not treat, and which they send to you for treatment?—Only so far; but then we have cases from all over London, and all over England as well, quite independently of Charing Cross.

24887. I will come to that in a minute; but so far as Charing Cross Hospital is concerned, there is co-operation between you, as a special hospital, and the general hospital as regards those special cases which you treat, eye cases?—Yes.

24888. There is no eye department at Charing Cross Hospital, is there?—No.

24889. Does the Charing Cross Hospital support you in any way by funds?—Not at all; we are entirely distinct.

24890. Are any men at your hospital on the staff of the Charing Cross Hospital?—One of our assistant surgeons is also an assistant surgeon at Charing Cross.

24891. Are you a medical man yourself?—No, I am not.

24892. How long have you been at this hospital?—I have been seven years secretary.

24893. Have you ever found any difficulty or friction on account of these cases coming from one hospital to the other?—Not as far as I am aware.

24894. Then could not that co-operation be extended to other special hospitals by other general hospitals, so that they could work in with one another in the sense of give and take with one another?—They could I believe, but several of them have eye wards of their own, and would take cases there; but we claim that they cannot treat them so efficiently as we can.

24895. And the Charing Cross Hospital send all their eye cases to you?—Yes.

24896. Is yours a free hospital?—Entirely free.

24897. And how many beds have you?—We have 30 beds.

24898. And what number of out-patient cases do you attend; that is to say, what is the number of attendances in your out-patient department?—The approximate number of the attendances as far as we could estimate it last year was 56,000; but the actual number of patients was 9,172 last year.

24899. That was the number of new cases?—New cases.

24900. Do not you keep any register of the attendances?—We do not keep a register of the total attendances; they receive a letter, and then a case will attend probably five or six times; say six times, some more.

24901. If the number of attendances were registered that would accurately give the work of your out-patient department, would it not?—It would be rather difficult to form a system of

Chairman—continued.

registering each attendance, after the first one, unless we took the letters. The patients take the letter themselves at our place, and bring it with them at each attendance.

24902. But there is no note made when a case attends after it is a new case?—No, not more than appears on the letter.

24903. But would it not be a good plan to have some means by which you could actually tell what the number of attendances was that took place in your out-patient department, because otherwise are the statistics very valuable?—We get at it pretty closely.

24904. How many attendances do you provide for in a letter?—That letter would be good as long as the patient attends for a year, and we should not renew that letter inside the current year.

24905. Well, if a patient obtains a letter from you on the 1st of January, he could come till the 31st of December of that year?—He could come twice a week, or as often as he required to attend.

24906. Where do you get your funds from?—From the public by appealing; we have a certain amount received from annual subscriptions and donations, and the Sunday Fund, and the Saturday Fund, and dividend on a small amount of funded property. I can give you the figures.

24907. What was your expenditure last year?—The expenditure last year was 2,169 *l.*

24908. And your income last year?—The income last year was 2,272 *l.*

24909. So that you had a small surplus?—We had, last year.

24910. And then what were your donations?—The donations were 940 *l.*

24911. And annual subscriptions?—Annual subscriptions, 670 *l.*; received from the Sunday Fund, 116 *l.*; and from the Saturday Fund, 124 *l.*; from dividends, 341 *l.*; and other incidentals amounting to 82 *l.*

24912. Did you get any legacies?—We did not receive a single legacy last year.

24913. Did you look upon that as being exceedingly unfortunate, or does it often occur?—It is one of the difficulties of special hospitals, I have found, that we do not get as many legacies as general hospitals, and that was a very unfortunate year.

24914. Do you pay your staff?—No, they are all honorary.

24915. And do the patients pay anything?—Nothing. There is a donation box on the table to which they can contribute, but there is no payment asked.

24916. Does that amount to anything in the course of the year?—Last year the donation boxes were 174 *l.*; but that is not all actually given at the hospital; we have other donation boxes out in the Strand, and different places; that includes all the boxes.

24917. Have you only 30 beds?—Those are all the beds we have available for in-patients.

24918. And how many of those do you generally keep filled; what is your working average about?—Twenty-six.

24919. And how is your hospital managed; is it managed by a committee?—By a committee, consisting

22 June 1891.]

Mr. CAMPBELL.

[Continued.]

Chairman—continued.

consisting of 20 gentlemen; Sir Rutherford Alcock is the chairman.

24920. And how often do they attend; do they attend once a month, or once a fortnight?—Once a month, and then there are sub-committees; there is a finance committee which meets once a month, and sub-committees which meet as occasion may require.

24921. What do the sub-committees do; are they special sub-committees?—There is a standing committee which looks into any arrangements in regard to repairs of the building, and any question that may have to be considered as to the nursing and domestic arrangements.

24922. Would you call that standing committee the executive of the hospital?—No, the committee of management at its monthly meeting would be the executive committee.

24923. Does the finance committee examine all the small books, and the account books, and so on?—Yes.

24924. They are not merely laid on the table?—No, they initial them.

24925. Have you a public audit?—Yes, every year.

24926. By a member of the Society of Chartered Accountants?—Yes, Messrs. Theobald Brothers and Miall are the auditors.

24927. Do you give any of your governors or subscribers letters for the recommendation of patients?—No, we do not demand letters of recommendation from the patients. We would give the governors letters if they asked for them specially, but no letters are required from the patients. We were the first hospital to establish the principle of relieving the poor without letters of recommendation.

24928. Do you make any inquiry at all into the position of those who apply?—Yes, we question them with regard to their means before registering them; and if any were considered not fit subjects for medical relief we should reject them.

24929. But do you ever reject them?—Very occasionally; not many.

24930. Then you do not take any steps beyond just asking the patient a certain number of set questions, I suppose?—No; we can pretty well judge the class of patient. I do not think that that department is much abused.

24931. You do not think that this charity is abused?—No.

24932. You have 30 beds, you say; then you have some nurses?—Yes.

24933. Where do you get your nurses from?—They are trained nurses. Those we happen to have at the present moment were three years in an ophthalmic hospital before they came to us; three of them are thoroughly trained.

24934. Then an ophthalmic nurse requires special training; is that so?—It would be a great advantage. That is one of the advantages that we claim over a general hospital, that our nurses are specially trained in the work which they have to do.

24935. Do you get patients sent to you from any other general hospital besides Charing Cross; from Middlesex, King's College, University College, or St. Mary's?—No; I think that Middlesex and University College have eye (24.) e

Chairman—continued.

departments of their own; we treat a great many cases from subscribers to those hospitals on account of the patients preferring to attend a special hospital; I presume because they get better advice.

24936. I was going to ask this question: It might occur that a case presented great complication which an ophthalmic surgeon at one of the general hospitals might not feel himself competent to deal with; would then that hospital send such a case to you, or has that thing never occurred?—I am not aware of such a case; it might have occurred.

24937. Would you go so far as to say that, with the exception of Charing Cross, you consider that your special hospital is looked upon rather jealously by general hospitals owing to the fact of your being a special hospital?—I would not say that altogether. We are a hospital of very old standing, and take a position of our own, as it were.

24938. Is your senior ophthalmic surgeon a man of very high reputation?—Yes; he is also the senior surgeon at Westminster Hospital.

24939. Senior surgeon, or senior ophthalmic surgeon there?—He is senior surgeon at Westminster Hospital, and the senior ophthalmic surgeon with us.

24940. Then it is generally the case that general hospitals have such distinguished men as their ophthalmic surgeons?—All our ophthalmic surgeons must be thoroughly qualified, and must be Fellows of the Royal College of Surgeons; even the assistant surgeons have to be Fellows of the Royal College of Surgeons before they can be appointed to our hospital.

24941. That is what we call at the general hospital the honorary staff, is it not?—The honorary staff.

24942. You are not singular in that respect, are you, because we have been told here that it is useless for a man to try to get on to the staff of a general hospital unless he holds these qualifications?—I am not aware as to the practice with regard to other hospitals.

24943. How many nurses have you?—We have four nurses, that is to say three nurses, one of whom is a night nurse, and a probationer; and the matron of course supervises.

24944. Are these eye cases cases which require comparatively little attention, as compared with the accident cases, and so forth, in general hospitals?—They require very careful nursing and attention, especially cataract cases in the first three days after operation.

24945. Is the one nurse sufficient then at night?—Yes; the bulk of the patients would be asleep at that time, unless they were very bad cases which required considerable attention.

24946. And the medical men never raise any objection on that point?—No; we find our one night nurse is sufficient.

24947. Then who superintends these four nurses?—The matron.

24948. You have a matron then; what salary does she receive?—£. 60 a year, and board and lodging.

24949. What salary do you receive?—I receive 280 l. a year.

4 R

22 June 1891.]

Mr. CAMPBELL.

[Continued.]

Chairman—continued.

24950. And then, as regards the feeding of your patients, and so forth, who live in the hospital, do you contract for your food?—We have an arrangement; we contract with some of the local tradesmen, and are supplied in that way by contract.

24951. Do you invite contracts, or do you advertise?—We invite them from the special tradesmen that we have had dealings with, and in fact we have dealt with for a good number of years, and we find that we get better supplied in that way.

24952. But have you ever compared your prices with those of other hospitals?—Yes; we find that we are very much about the current rates that are charged. Of course ours is a small hospital, and possibly we would not get all the advantages that a large hospital would get in contracting; but, on the other hand, we never have any complaint from our patients with regard to the food. I may say that our patients are always thoroughly satisfied, and they say that they are better fed and treated in our hospital (those of them who have been in other hospitals) than elsewhere.

24953. Do you ever get any complaint from your subscribers as to the prices paid?—No.

24954. Who invites the tenders, do you, as the secretary?—Yes.

24955. And who makes the contract?—The committee.

24956. On your recommendation?—Well, provided it were the lowest tender; but, as I say, we have dealt with the same firms for some years and have been well supplied, and there has been no question raised about it.

24957. Is there anything else you wish to state to the Committee?—I would just like to say something with regard to the hospital, that being near the Strand, we get a good many printers and compositors from the different publishing offices and tailors employed by the West End firms, and every year there is an increasing demand for more accommodation; and we get a large number of the poorest class from the densely populated districts of St. Giles and Seven Dials and Covent Garden and Drury-lane; there is no other eye hospital within two miles.

24958. You draw from a large area?—Yes, we get cases from all over England, and many of the unions.

24959. With regard to those who come from the unions, do you make the unions pay for them?—The unions which send cases usually subscribe to the hospital. And I may say, also, that special hospitals labour under a disadvan-

Chairman—continued.

tage in getting in funds; it is usually more costly than at a general hospital; and of course the expenses of maintenance are generally a little larger in proportion.

24960. In regard to that, is not your receipt from the Hospital Sunday Fund a small one, about 116 l. a year?—Yes.

24961. At the same time the Hospital Saturday Fund is a larger one?—It was more last year. The Saturday Fund, I may explain, got in considerably more money last year than they did the previous year. I do not know on what principles they divide. I might also say that the hospital is very valuable for a school of ophthalmic surgery; we have a school connected with it.

24962. You have students?—Yes, and it is largely used by medical men in practice, students who have recently qualified, and also medical officers of the army and navy. Medical officers of the army and navy, I may say, are free to attend the classes; that is one of our rules.

24963. In regard to that I will ask you this question. Do private practitioners send you cases?—Yes, very frequently.

24964. Then you co-operate with certainly one general hospital and with many private practitioners?—Yes, I may say that the ordinary run of general practitioners do not understand much about eyes. And there is one point that gives us an advantage over the general hospitals in attending to these cases. We have a resident house surgeon who is devoted entirely to ophthalmic work, whereas the resident house surgeon at a general hospital might, or might not, know very much about eye cases. I could give you the figures with regard to the attendance of the students.

24965. I should like to know how many students you have?—We had 58 last year; out of that number there were 51 qualified medical men, four in the different services, and three students unqualified.

24966. How do those students come to you; do they come from a general hospital?—Some do. We have an arrangement with Charing Cross and Westminster Hospitals by which their students come to us.

24967. Is there any thing else you wish to state?—Sir Rutherford Alcock, our Chairman, went rather thoroughly into the question of special hospitals, and made a speech at the Mansion House in March 1889, which is contained in that report (*handing in a report*).

The Witness is directed to withdraw.

Die Lunæ, 29^o Junii, 1891.

L O R D S P R E S E N T :

Earl of LAUDERDALE.
Earl CATHCART.
Earl of KIMBERLEY.
Lord CLIFFORD OF CHUDLEIGH.

Lord SANDHURST.
Lord LAMINGTON.
Lord SUDLEY (*Earl of Arran*).

THE LORD SANDHURST, IN THE CHAIR.

MR. FREDERIC ANDREW, is called in ; and, having been sworn, is Examined, as follows :

Chairman.

F 24968. YOU are the Secretary, are you not, of the Royal Hospital for Incurables?—Yes.

24969. Where is that situated?—Near Putney Heath.

24970. And it has an office in London?—At 106, Queen Victoria-street.

24971. Do you apply to the Hospital Sunday Fund for assistance?—We are excluded from that by one of their rules.

24972. I will come to that in a minute ; I only wanted to know whether that is so or not. When was this institution founded?—In 1854.

24973. How was it founded?—It was founded at a public meeting at the Mansion House.

24974. And whence came the funds by which it was founded ; was it founded by public subscription?—By public subscription.

24975. How long have you been connected with it?—From the 2nd of October 1854.

24976. You became connected with it at the commencement?—At the commencement.

24977. May I ask what salary you are paid?—At present 500 *l.* a year.

24978. And board and lodging?—No.

24979. You live out of the place?—I live out of the place.

24980. For how many patients have you room?—Two hundred and eighteen inmates.

24981. And what relation do the men bear to the women?—The men are 38 only, and the women are the remainder, about 180.

24982. And are there two separate wings, or are they divided off?—There is a communication entire throughout the whole building. The apartments used by the male patients are, however, distinct, and at one end of a large wing of the building.

24983. Now, would you tell me how the institution is managed ; have you an annual meeting of governors?—There is an annual meeting of governors, at which a report is presented, and a statement of the receipts and expenditure of the year.

24984. And who presides at that meeting?—The treasurer.

24985. Who is the president?—The Earl of Aberdeen.

(24.)

Chairman—continued.

24986. And you have a number of vice-presidents, I presume?—We have about 20 vice-presidents.

24987. Then anybody who is a governor is able to attend this annual meeting ; is that so?—Everyone who is a governor ; and a subscriber of half-a-guinea a year or a donor of five guineas at one time is a governor.

24988. There is an annual meeting, you say ; do you have any quarterly meeting?—Not quarterly ; we have half-yearly elections, public elections, of candidates.

24989. Do you mean for inmates?—For inmates and pensioners.

24990. Then have you any committee of management?—A committee of governors are appointed, a portion of them, every year. I will, if you please, show you a list of them. (*The Witness produces it.*)

24991. How many of these governors are there?—Twenty on the board of management.

24992. Of that board of management what is the quorum?—Five.

24993. And what is about the average attendance?—At the board of management it varies very much ; sometimes it is less than the quorum, in which case the minutes are not confirmed until a quorum sits. These meetings occur regularly twice a month, and there are meetings of the house committee (who are from the board of management) at the institution every week.

24994. How many members attend the meetings of this house committee?—Six or seven.

24995. And what do they do?—They take cognizance of all main things that go on in the house. The matron, who is the principal officer, reads her journal. The steward, who has charge of the stores, and particularly of the male division, and the male attendants, also reads a report. I should say that those reports are read every other week, but the meetings are held every week. The house committee then have cognizance of requests for leave of absence, any question of complaint, or any matter in which the matron or the steward desires the advice and direction of the committee.

24996. Out of this body are there any visiting governors ;

4 R 2

29 June 1891.]

Mr. ANDREW.

[Continued.]

Chairman—continued.

governors; is there anybody who visits otherwise than once a week?—No, no fixed visiting governors. The house is opened at all times, of course, to the board of management, and it is also open at all times to the public.

24997. But now do you get many of the governors; do any of them come round on other days than the board days?—Not very frequently. I must correct myself. We have some governors who are living in the neighbourhood who frequent the house a great deal.

24998. You mean to say coming at all sorts of times?—Coming at all sorts of times.

24999. And have you any ladies who visit at all?—Not appointed to visit; we have many who do visit the house, but they have no official standing.

25000. Casual visitors?—Casual visitors.

25001. In the case of a complaint how would that be carried to the committee, and would the committee see the individual who wanted to complain?—Certainly. Probably if it were a serious complaint the patient might send in a letter desiring to see the committee.

25002. Is that ever done?—Oh, yes; or a patient may desire that a member of the committee would be so kind as to visit him or her in order to speak to him or her. Besides that the matron has a book of requests in which any complaint can be entered; but should any complaint be made against herself, or should it so happen that a patient would be in fear of entering it (though I do not think that would happen) the patient could address the chairman of the committee of the board by letter at once.

25003. You mean to say in the committee-room?—In the committee-room.

25004. Has that ever been done?—Yes, a letter was addressed the other day to the chairman of the committee by a patient.

25005. And was the grievance gone into?—I am afraid I cannot speak from memory as to the issue, but it was not a very serious thing.

25006. But it was ventilated?—It was ventilated; and any patient having a grievance can approach the committee in that way. I have several instances that have come to my knowledge within the last one or two months. For instance, there have been complaints made, rightly or wrongly, in connection with our seaside-house branch. Well, they have come before the committee, they have gone into the matter, and the matron has been up before them, and has been asked to give her account of the whole thing.

25007. Is there not a great reluctance on the part of these incurable patients to address the committee?—There is, naturally, that.

25008. And would they not get on much better if visiting governors were appointed to sift the matter for themselves and report to the committee?—They have many opportunities of doing that. For instance, the other day a private gentleman living in the neighbourhood was written to by one of the patients, and he brought that matter before the committee at once, although it was a letter addressed to him, and he saw the patient; and we are so situated that several active members of our committee live in the immediate neighbourhood of the hospital, and

Chairman—continued.

are practically, on that account, visiting governors, although not delegated to visit.

25009. Now, as regards your nursing, how many nurses have you got?—May I say that we have two grades of nurses. The matron herself is a trained nurse, a Nightingale nurse.

25010. Before we go to that, I will ask you a question as to this committee of management that meets once a week; do they have all the books of the institution before them?—They have what we call the provision book, which contains an account of all the consumable things received, and the amount expended on them during the past week, and the cost carried out week by week according to the then number of inmates in the house.

25011. And is that checked by them; do they see it; or is it merely laid on the table?—They see it and sign it. With regard to the checking, the committee do not go over all the items, because that would be a work which would occupy them a long time; but, with regard to the checking, before any quarterly accounts are paid, that book is gone over by a gentleman from our office, and every delivery note of provisions or consumable things is compared with the entry in his book, and the amount expended is added up and the balance carried forward; so that we have that check upon the provision book.

25012. But then the committee themselves do not check anything, I understand?—They do not in that way; it would be a work of a considerable time to go over it all.

25013. How long does this committee generally sit?—About three hours.

25014. About three hours a day?—About three hours a day, (*i.e.*, on the day of weekly meeting, *see* (Q.) 24,993.)

25015. Now as regards your nursing, are your wards big wards or small wards?—Small wards.

25016. How many beds do they contain?—Not more than six.

25017. What is the position of the matron?—The matron is the principal officer of the house.

25018. Is she supreme in your absence?—She is supreme there altogether in the absence of any of the committee or of the secretary; but I do not claim myself to have authority in the house; that is her province. Of course she applies to me for advice, and I take cognizance of everything and anything that goes on.

25019. What is the matron; is she an English woman?—She is a German lady, who has resided in England for the best part of her life.

25020. And has she any knowledge of hospital management?—A very good knowledge of it. She was at Sir Patrick Dunn's Hospital in Dublin before she came to us, and she was trained I believe at St. Thomas's, and she is a member of the Nightingale Nursing Body.

25021. Then she is a trained hospital nurse?—A trained hospital nurse.

25022. How long has she been there?—Ten years.

25023. And she came from one of these institutions that you have named?—From Sir Patrick Dunn's Hospital in Dublin.

25024. What salary does she receive?—£. 200 a year.

25025. And board and lodging?—And board and lodging.

25026. As

29 June 1891.]

Mr. ANDREW.

[Continued.]

Chairman—continued.

25026. As regards your nurses, are your nurses trained? You were beginning to say that you have two grades?—We have two grades. There are what we call divisional nurses, one nurse superintending a corridor; there are three of those on duty in the day, and one at night; and one appointed to the male side. Those are all trained nurses.

25027. And how many trained nurses are there altogether?—Five besides the matron.

25028. Then the second grade; what are they?—The second grade are assistant nurses who are not trained. They are to a great extent personal attendants upon the patients under the matron. I need not say that they have, many of them, acquired a very good notion of nursing and the treatment of invalids, because of being under trained nurses.

25029. Would it not be better to have more trained nurses?—They would not be required.

25030. Do you mean to say that these incurables do not require trained nurses in the same way as accident cases do?—Clearly so; they are only permanent invalids.

25031. Is the divisional nurse, as you term her, responsible for her corridor?—She is responsible for the good nursing and good order of the corridor.

25032. How many wards has she under her charge; take an average case?—I am just trying to picture to myself a corridor. About 15 wards.

25033. This one nurse would have under her about 15 wards?—Yes.

25034. And how many beds would there be in each ward?—From four to six; some of them have only two.

25035. There would be about 60 or 70 beds under her; is that so?—It would not come to so many. I would prefer to find that out by the number of patients. We have 218 patients altogether. If we take away 38 from them, that would leave the female patients, who are the majority; and amongst those female patients there would be three day nurses, each having charge of one corridor; that is practically one-third; and one night nurse who, with two assistant night nurses, attend to the patients during the night.

25036. But with regard to the day nurses, you have got your divisional nurse who has, at any rate, about 40 beds we will say under her?—Yes.

25037. And she is the only trained nurse in charge of that corridor?—The only trained nurse in charge of that corridor.

25038. And do you think she can exercise a sufficient supervision over that corridor?—Clearly; we have experience of that.

25039. Do your nurses stay long with you?—Some of them a considerable time; we have some who have been there some six or seven years.

25040. And do you keep the same nurses in charge of the same patients, as a rule?—Yes, unless the needs of the house require a change.

25041. Then except on some extraordinary occasion, you would not take a nurse away from a patient?—No; the nurse comes to regard a

Chairman—continued.

patient as her patient, and the patient comes to regard a nurse as her nurse.

25042. Is there any nursing committee?—No.

25043. That is entirely in charge of the matron?—Entirely in charge of the matron and the medical officer.

25044. And would complaints be made to the committee by a patient with regard to the nursing, or to the matron?—To the matron.

25045. And then it is her duty to communicate it to the committee?—It is her duty to remedy it herself if the thing is within her own judgment and power.

25046. Does she give any account to the committee of her control of the nurses?—She reports to the committee all the changes that take place, with the reason of them.

25047. How many of these assistant nurses have you?—Thirty-one I think the number is.

25048. And who selects them?—The matron selects them.

25049. She engages them, in fact?—She engages them; she reports the engagements, and reports the dismissal or leaving, and what the cause of it was.

25050. And she has absolute authority with regard to these nurses?—Subject to reporting everything to the committee.

25051. But a nurse may be dismissed before the committee know of it?—She reports giving notice; but a nurse may be summarily dismissed for misconduct, and the committee would then hear of it after it was done.

25052. I mean to say, is there any possibility of appeal by the nurse to the committee?—The thing, practically, does not happen.

25053. Have you any isolation wards?—We have one ward on the male side which we call the cubicle ward; it is divided part of the way up by strong partitions, and a separate space private from the rest can be allotted to the inmate. They are fixed cubicles. On the female side, the more general practice is to separate a patient that requires separation as best it can be done. There are rooms which hold only two, and sometimes a patient is relegated to one small room, if need be; and then screens are in use in the house frequently. In speaking of nurses, might I add in regard to our men patients that with the exception of the female trained nurse who has charge of the nursing of the men, they are attended to by men attendants.

25054. And what are they generally, commissionaires or old soldiers?—Mostly old soldiers, or persons who have been in lunatic asylums or public institutions of some kind.

25055. You mean trained, to a certain extent?—Trained, to a certain extent.

25056. Do you take in any patients who suffer from cancer?—Yes.

25057. And do they occupy a general ward?—We have no case of cancer at present, and it is very rarely that it occurs.

25058. Would the committee put it in the general ward if such a case occurred?—When the cancer became clearly developed we should remove it into a separate room.

25059. Would you tell us what your medical staff is?—The medical man who visits the hospital

29 June 1891.]

Mr. ANDREW.

[Continued.]

Chairman—continued.

pital is Dr. Woodhouse. His duty is to come to the hospital every week day, and at any time, week day or Sunday, day or night, when special services may be required of him.

25060. Then you have no resident medical man?—No resident medical man; there would not be employment for him.

25061. And this one gentleman is at the beck and call of the hospital when required?—Yes; and besides that, a consulting staff and specialists, whenever occasion requires, are called in.

25062. You have a number of men on the consulting staff?—Yes. Your Lordships will see them on the list before you.

25063. Is it a fact that the patients suffer much from bed sores in your hospital?—Not very much; we have occasional instances of bad bed sores, but the cases are quite infrequent.

25064. Very infrequent?—Very infrequent indeed. In some cases bed sores have been got rid of entirely by the care bestowed upon them, but there are certain cases in which it is impossible to avoid bed sores—in bed-ridden cases and cases of great attenuation. I mentioned that we had now one case of bed sores, a patient named Miss Lewis.

25065. You mentioned just now that you have a steward; what salary does he receive?—He receives 150 *l.* a year, and board and lodging.

25066. What are his duties?—His duties are to take in all provisions, and account for all provisions, and to issue them. His duties lie altogether with the male staff, the porters and the male attendants.

25067. Does he receive the provisions?—He receives the provisions.

25068. Do you get your food by contract?—By contract.

25069. And who makes those contracts?—What we term the finance committee.

25070. Do you advertise for tenders?—No; we send to a select number of tradesmen.

25071. Who chooses those tradesmen?—The choice of them has the sanction, of course, of the finance committee, and I may say that we select those who have been named to us at one time or other, or have, at previous times, served the institution fairly well. We are willing to take in any new name, but experience goes extremely against our issuing tenders broadcast, and then, taking a person merely because he wants to supply the institution. We have found that people have an idea that certain goods will do for us, because we are a public institution. We insist the other way, and are, if I may say so, extremely particular in getting the conditions of the tender observed.

25072. Now, for instance, has the contract for meat been in one man's hands for a long time?—It has been in the last man's hands for some few years. Previously to that, it was in the hands of another man and this man alternately.

25073. And the making of those contracts is done by the recommendation of the finance committee?—Entirely.

25074. But then, if you do not advertise for tenders, do you ever compare the prices you pay with the prices paid by other institutions?—We have done so, but not very frequently, because we are our own judges in the matter, and we

Chairman—continued.

have every reason to believe, at least we have good reason to believe, that the tenders are genuinely put in.

25075. But then, if you do not advertise for tenders, and do not compare with other institutions, how can your committee be satisfied that there is economy?—May I say that some little time ago a new man was proposed to us by the treasurer of a large institution in the city, and from the prices that he gave for meat we were induced to send him a form of tender. The first time he did not send in at all; the second time his prices were greatly in excess of what we had been in the habit of paying; we concluded that he had come to know that we required good things, certain things which perhaps would not be, as a rule, supplied to a public school, and he was out of it in price.

25076. Now do any of your committee of the board of management ever inspect the food?—Yes.

25077. How often do they inspect the food?—Occasionally, not at any stated times; they go and see the stores.

25078. I mean this: does any gentleman who acts as visiting governor ever go into the wards at any time and see the food?—Yes; we have known it done several times.

25079. And has he found everything satisfactory?—No, not always. He has seen things to be remedied.

25080. Do the patients complain of their food very much?—Not very much; but we do occasionally hear of complaints, as, I presume, is the case almost everywhere.

25081. As regards the diet, there is a variety of diet, I suppose; the doctor orders special diets in some cases?—The medical officer, Dr. Woodhouse, orders all sick and special diets.

25082. Who sees that they are carried out?—He writes them on a card which is attached to the patient's bed, and it is the duty of the divisional nurse to see that those things are given to the patient. She requisitions the steward, and they are sent up for the patient's use.

25083. Then the responsibility for the diet, or the change of diet, rests with the medical officer?—It rests with the medical officer.

25084. Therefore supposing a certain diet is kept on for too long a period, that is his business?—That is his business, but we expect the doctor to revise his lists about once a month, at least.

25085. Does he do so?—I believe so.

25086. Who knows what exact diet is being ordered; do the committee see that?—They will see in the provision book everything put down; wine, for instance; the wine and the spirits and the kind of wine are allowed each a column in the provision book; and besides that, the committee, being a little jealous of the administration of spirits, have the whole thing brought down and separately accounted for in the provision book.

25087. Then with regard to vegetables, have you a kitchen garden?—We have a large kitchen garden.

25088. Does it supply all your wants?—Not quite; it does not supply sufficient potatoes; it supplies a large quantity of fresh green vegetables, and the rest we have to buy.

25089. Do

29 June 1891.]

Mr. ANDREW.

[Continued.]

Chairman—continued.

25089. Do you estimate in your accounts the value of those vegetables that you supply from the grounds?—We put down in the account under the head of “housekeeping” the amount expended in getting the produce of the farm. We call it the farm; of course, it is a small thing. When we have the proper number of cows we have 10, and that is nearly sufficient for the wants of the house, because the steward is not allowed to mix any water with the milk to eke it out.

Earl of Kimberley.

25090. You do not give the patients much milk diet, I suppose?—Sometimes the doctor orders milk rather freely.

25091. With 10 cows and 218 patients, it could not be a large quantity?—Our cows now are yielding 16 quarts a day each cow.

Earl of Lauderdale.

25092. Are all 10 cows in milk at the present time?—Eight at present.

Earl of Kimberley.

25093. Do they supply you with milk only, and not with butter?—Not butter, milk only. We find that the place is very well supplied with milk.

25094. When you say 10 cows, you mean 10 cows actually in good yield?—Yes.

Chairman.

25095. The great proportion of your patients are women, because they are about 180 as compared with 38 men?—One hundred and eighty against 38.

25096. Has it ever occurred to the committee that it would be well to have female visitors or a female committee?—It certainly never has.

25097. Have you ever had the suggestion made from outsiders?—We have heard it made.

25098. Have you ever heard the wish expressed by a patient for a female committee or female visitors?—Not that I can remember.

25099. Because obviously there are a good many things that a woman would hardly like to complain to a man about?—Naturally. We have, as I already hinted, a good many lady visitors. The house is freely open; no order is required, not even that the person should be a subscriber.

25100. But then a person walking into a hospital which is an incurable home, cannot possibly tell anything about what goes on in the institution, can they?—May I say that they often know a very great deal, and sometimes (I say this without wishing to make any reflection) by their rather injudicious way of carrying on with the patients, they produce complaints which have very little foundation. Some of our patients are a little injured by over-sympathy.

25101. But then at the same time you would do away with that evil if you had official female visitors. I think it would be very disastrous indeed to have a ladies' committee. A thoroughly competent matron, a skilled woman such as we appear to have now, would, in all probability, not at all please a ladies' committee.

25102. Why not?—In the nature of things it would be so. She has skill and knowledge of her own, which no ladies visiting could have;

(24.)

Chairman—continued.

and the tendency most probably would be to attempt to, may I say, coerce the matron, and to produce a state of things which would be very undesirable indeed.

25103. Then you think that a large number of ignorant lay governors is preferable to having an intelligent female committee?—I cannot admit that the lay governors are ignorant.

25104. Do you think that lay governors can form any opinion, beyond checking the accounts, in regard to these complaints?—Would not ladies be lay governors too?

25105. But I am speaking of the female side of the institution; would you think that the male lay governors are capable of investigating female complaints?—Most clearly there is a very great limit to the investigation of female complaints; but we are very fortunately placed in having very competent people about us; and there is always the salutary expectation, fear, perhaps I may say, of public opinion. Our place is open as the day, and if things went wrong we should not only have complaints but scandal.

25106. Have you got your balance sheet, your accounts of receipts and expenditure?—Yes (*producing the same*).

25107. What was your expenditure last year?—The expenditure is divided into heads. The expenditure upon the hospital, leaving out shillings, was 12,999*l.*; the expenditure upon the seaside house at St. Leonard's, where 10 patients are accommodated, was 1,097*l.*; the amount of pensions paid was 11,129*l.*, outdoor pensions. Then, with regard to the total expense of management, perhaps the headings should be read to make it clear: rent and attendance at office, 331*l.*; salary and commission, and office and election expenses, 1,672*l.*, including clerks and collectors; printing and stationery, 294*l.*; advertisements, 227*l.*; postage, 178*l.*; travelling expenses, 37*l.*; professional auditor, 26*l.* 5*s.*; law charges, 42*l.* 4*s.*

25108. I do not think you need go through the rest of the details; what is the total under that head of expense of management?—£. 3,415.

25109. That makes the sum total of how much, about 28,000*l.*?—About 28,000*l.*

25110. And then your receipts?—The total receipts last year were 44,509*l.*

25111. You had a handsome balance; what funds did those receipts come from?—Annual subscriptions, 7,472*l.*; life subscriptions, 5,175*l.*; donations, 1,941*l.*; bequests, which were unusually large, 26,210*l.*; collections, 336*l.*; dividends, 2,657*l.* Some payments for cases (a few cases are taken on payment; they are the remnant of an old arrangement), 520*l.* Then there occurs a special item, “compensation for removal of cattle”; we had our cattle taken away because of the disease.

25112. That brings it up to 44,000*l.*?—That brings it up to 44,000*l.*

25113. You said, in mentioning your expenditure, that the expenses of salaries and commission, &c., were 1,600*l.* odd; does that 1,600*l.* include your salary, and the clerks and collectors?—Yes.

25114. Who gets this commission?—The collector gets a slight commission; it is not much; he gets partly paid in salary, and partly by a commission.

4 R 4

29 June 1891.]

Mr. ANDREW.

[Continued.]

Chairman—continued.

commission. I may say that the collector is almost superannuated; he is now upon a kind of part-time allowance and work, having been with us nearly as long as myself.

25115. Does anybody else receive commission besides the collector?—No, they only receive salaries.

25116. You, yourself, receive no commission?—No commission.

25117. What is your property that yields a dividend of 2,600 *l.* a year?—I have a list here of the purchases of stock from the earliest period.

25118. It is from stock, not property in land or houses?—No, not in land or houses.

25119. Is the 26,000 *l.* odd from legacies exceptionally large?—Quite so. It arises principally under the head of one particular bequest.

25120. Have you any idea what the average of the last 10 years of your legacies would be?—I should not like to speak without book, but I should think about 10,000 *l.* a year.

25121. You mentioned just now a large sum paid away in pensions, about 11,000 *l.*; is that a system of out-door relief?—Practically it is, though we do not adopt the name. The original scheme at the very outset was twofold; it was to be a home for those for whom a home was most needed, and there was to be a pension of 20 *l.* a year (it was not quite that amount at the beginning) to persons in their own homes in London and the country.

25122. Any part of the country?—Any part of the country.

25123. How do they get these pensions; are they elected to them?—They are elected the same as the inmates; they are elected in one catalogue of names.

Earl of Kimberley.

25124. With regard to the complaints that may be made, as I understand the matron does not necessarily report those complaints?—Not if they are matters which she can arrange by herself.

25125. And if the inmates are dissatisfied with her mode of dealing with the complaints, they can apply to the committee themselves?—Clearly. I should myself, if a letter came addressed to the chairman of the house committee, not open it.

25126. From whomsoever it might come?—From whomsoever it might come.

25127. Now I gather from your answers to previous questions that your system is really that you put implicit confidence in the matron; there is no check on her at all?—There is the check of the control and oversight of the committee and of a report to the committee. The committee make themselves acquainted with all that goes on in the house; she is the servant of the committee.

25128. But I understood you to say, or I gathered from you, that you objected to a ladies' committee, because you thought that a ladies' committee would interfere with the matron. Therefore, I assume that your committee does not interfere with the matron?—She is the servant immediately of our committee.

25129. But I gathered from you that you objected to a ladies' committee, because you

Earl of Kimberley—continued.

thought that such a committee would interfere with the matron. I think I am right in saying that?—May I say that that is only a personal view. The committee have never had submitted to them an offer of service by ladies that I know of, except in very early days; not in the memory of many of our committee; they have never had submitted to them an offer which they have exercised a judgment upon and declined afterwards. I am merely expressing the impression which I believe prevails that a ladies' committee would be objectionable.

25130. But what I want to get from you is this: whether your opinion is that the matron ought not to be carefully supervised by any one, or whether your opinion is that a committee, such as you have, of lay governors, can supervise her better than a committee of ladies?—I think they could.

25131. And might I ask why; is it because they have better experience in the management of women patients than ladies could have?—No, I cannot admit that; but one must take the working of the house as it stands, and one must have the experience of years gone by to help; and it is upon that that the committee rely, and not upon a theory. They have had many years' experience of matrons, and they appeal to the general well-being of the house, and the comfort of the patients, and say that it is a scheme which answers well, and does not require such an intervention as has been suggested.

25132. Is it not sometimes the case that after the services of an official have been going on for a very long time, on the application of a little new life, things are not found to be perfectly satisfactory; after things have gone on in one groove for a long time, with perfect satisfaction, when a new eye comes does it not sometimes discover that all is not right?—I hardly know how to answer a general question of that kind.

25133. Is it not possible that that may happen?—Certainly, it is possible; and it is always to be expected that things will want mending, and that things going on in one groove will inevitably get wrong.

25134. Do you not think that if you had a ladies' committee they might very likely discover a good deal about the matron and the management that you do not now know?—I think very likely they would.

25135. Do not you think it would be very desirable that your institution should try that experiment; it might increase the confidence of the public?—I do not know what may be in your Lordship's mind upon the matter, but I do say, as I said just now, that it is proper, I think, to look upon the actual working of the thing, and inquire whether, considering the kind of patient you have, chronic invalids, and therefore with something of a predisposition to complain, it would be possible for a place to be very much better managed, or very much more free from evils than our own is, because we are open (as I have ventured to say more than once already) to the visits of everybody; and if ladies come and become acquainted with the patients, or hear things about the matron which they think ought to be inquired into, they will be treated, and their

29 June 1891.]

Mr. ANDREW.

[Continued.]

Earl of Kimberley—continued.

their story will be treated, with all possible respect, as it should be.

25136. The impression left upon my mind is, that you put implicit confidence in your matron?—Certainly not; not in anybody; but we have a very fair and a warranted share of confidence in her. I should be extremely sorry to say anything to lead to the impression that we thought we were perfection; on the contrary, we can only hope to be finding out things that require continual mending in some way or other.

25137. So that you think a committee of lay governors can well supervise the management of these female patients?—I think they can, with the help of the medical and professional assistance which they have. A medical officer is a privileged man with access to the secrets of the maladies, or supposed maladies, of all the patients, and with him at their elbow, and the matron and her staff of nurses, there is more likelihood of getting at the real way of treating patients, it seems to me, than by encouraging a number of ladies to come in and offer their opinion about the cases.

25138. You do not think their opinion would be much worth attending to if it were against the matron's?—You are rather driving me to conclusions, which I am not answerable for. I say, that taking the institution as it is, and submitting its management and the details of it to any impartial person, and satisfying all reasonable inquiry, the thing would be found to work as well as could be expected, and much better than might be hoped for by the introduction of a ladies' committee to control the movements of the matron; because, I think, the ladies would not get a first-rate matron to submit to them.

25139. I cannot help thinking that it comes to this, that in your opinion you ought practically to place yourselves in the hands of the matron, because if anybody supervised her she would not submit to it?—No, I did not express myself so.

25140. I understood your opinion to be that if you had supervision of the matron by such a committee of ladies she would not submit to it?—Yes, that is my opinion.

25141. Then your practice is to appoint a matron whom you consider a good matron, and then to put implicit trust in her?—I must demur to those general and comprehensive terms.

25142. You do not think that it does amount to that, when you say "implicit" confidence?—We put implicit confidence in nobody, but we have very great confidence in the matron; she has faults like everybody else, and these faults, like other people's faults, are capable of being mended. We are getting very good service out of her, nevertheless.

25143. I understand that you do not theoretically put implicit confidence in her; but practically is it not the case that you do act as if you had implicit confidence in her?—I do not see how implicit confidence can be inferred when the matron is made to report all her actions to the committee, and to justify them, and to be interrogated upon them.

25144. What guarantee have you that the matron does report all things to you?—This is what is really done. She keeps a daily journal,

(24.) e

Earl of Kimberley—continued.

in which the events and incidents that happen in the day are put down; and I suppose she is like a trusted officer in any other place. You place a very great deal of confidence in such people, and when you find out that the confidence is misplaced, then you find fault and think differently of them. It is a very considerable responsibility that attaches to her post. We have crises happening in that house; we have sudden accessions of disease, and things which require great presence of mind and skill, or we might almost have sudden death occasionally; and she is a woman of resources. She is there, she can be called, and can be at the bedside at any moment in the night or the day in the case of something happening; and she must needs have knowledge of a greatly superior kind to the lay ladies who might be deputed to form a committee; and she would not be likely to submit her better knowledge to their less knowledge. If she is wrong, consequences will happen.

25145. Does the matron make regular visits to all parts of the institution, day and night?—Yes, she visits the patients; she sees them all in turn, but not at stated times.

25146. Does she sometimes visit the hospital at night?—She is often round at night and about with serious cases; but the nurse who has charge of the night nursing, the divisional nurse, is herself a trained nurse; and she is generally selected because it is a duty which requires rather more confidence to be reposed in the nurse chosen than in the day nurses. We have three nurses including the divisional nurse who are all night in attendance going to and fro, besides a male attendant, who is the night attendant and who is up all night on the male side.

25147. I think the matron is the principal officer who has control and management apart from the committee of the institution?—Yes, the principal resident officer.

25148. In the abstract, except when the committee attend or have business to do, she is really the responsible person?—Clearly so.

Lord Clifford of Chudleigh.

25149. Does the medical officer make any reports to the committee upon the management of the hospital?—He makes a professional report on the general state of health and upon the particular cases that are upon what we term his sick list. With regard to the general management of the hospital he is not asked, in a regular way, to report. Everything that comes under his notice he might report upon; for instance, bad food he would report upon if he heard of it.

25150. Would patients be likely to make any complaints to him as to the treatment they receive at the hospital?—I do not know whether they would or not. He is a man that has their confidence; he has been 20 years there.

25151. You have known of no instances of that?—I do not call any instances to mind of complaints having come formally and officially through him.

25152. I want to ask one question about the ladies' committee; is one of the objections to it that a ladies' committee would not be likely to use a wise supervision over the matron, or is it that the matron would object to any supervision of

4 S

that

29 June 1891.]

Mr. ANDREW.

[Continued.]

Lord Clifford of Chudleigh—continued.

that kind?—I think the general opinion of the committee is that it would not work well for the welfare and the harmony of the house.

25153. That is not quite an answer to my question; my question is what is the reason of their thinking so; is it that they think the supervision would not be a wise one, or is it that any good matron would resent any supervision by a committee of ladies?—One hardly ought to pledge the committee to an opinion on a general question of the kind that has never come before them. I think you see the difficulty of one's position in answering a question put in that way. The committee has not, excepting in an instance where a suggestion was made many years ago, had the matter before them in a form in which to exercise their judgment upon it. My impression is that they believe it would not work, but I should be wrong in conveying the impression that that is the expressed and decided opinion of the committee; it would be altogether wrong for me to let that go forth from this room.

25154. What is your own opinion?—My opinion is that it would not work well, for the reason I have given, namely, that in matters of nursing, and particularly those things which your Lordships have referred to here, as proper for the supervision and inquiry of women, their knowledge would be very inferior to that of a trained nurse, and still more inferior to that of a trained nurse and a medical man together. Then, too, their suggestions might clash with the views of the matron and the medical officer. Ladies are extremely prone to make suggestions which are not always the most appropriate or suitable.

25155. Then the medical man does not interfere at all with, he exercises no supervision as to, the matron's management of the hospital?—I do not quite follow.

25156. I asked you just now whether the medical man ever gave any report as to the management of the hospital, except purely medical ones, and you told me he did not?—He gives only a professional medical report; the committee hear anything he may have to say, but he is not called upon to report upon the general management of the hospital; it is hardly in his business to do so. He does express an opinion; he says it is very splendidly managed.

25157. Do you think that it is possible for a wise supervision to exist by persons who have less technical and detailed knowledge than the person they are supervising?—It would produce a very great difficulty, I think, in the nature of the case, and a difficulty which one would not see one's way through at all. The matron has under her charge all these people with extremely various maladies and many different peculiarities which have to be studied. She has to study very carefully how she places even a single new patient that comes, where her room is to be; and she says to the committee, "I think the best plan is to place her so and so," or "I have temporarily placed her so and so." That is according to her experience and knowledge of the different cases. A ladies' committee, particularly if a new patient happened to be a little hysterical and attractive and gained everybody's ear, would perhaps, have a little different opinion, and try

Lord Clifford of Chudleigh—continued.

to enforce it against the better judgment of the matron.

25158. Does it not come to this, that it is your opinion that the supervision of the ladies' committee would go into detail instead of being confined to judging upon broad principles?—Most probably.

Earl of Kimberley.

25159. If the medical officer saw anything that he thought was an abuse in the house, would he report it to the committee, something apart, I mean, from medical treatment?—I have no doubt he would. I should say that as a gentleman concerned with the interests of the place, he would report it.

25160. Though you are so well satisfied at present, it might happen that abuses crept in, but if they did do you think he would report any abuses?—I think he would; but I object to its being said that we are "so well satisfied."

25161. Now does the medical officer attend in any way to the sanitary condition of the house, apart from the actual treatment of the patients; would it be his duty to attend to the sanitary condition of wards and the house generally?—The sanitary condition of the house generally is the duty of the steward, who is particularly entrusted with the health relations of the house.

25162. Has the steward any experience in such matters, any special knowledge of such things?—He has a very good general knowledge as to drainage.

25163. With regard to the condition of the ventilation of the wards, who would report upon that?—It would not be specially reported upon unless there was something which happened to bring up the subject of the ventilation of the wards.

25164. But who is the person in the house that you consider responsible for seeing that the wards are properly ventilated?—The matron principally.

25165. Is she experienced in the matter of the construction of wards and the ventilation of wards?—Yes.

25166. Would she consult the medical officer upon the question?—She would, if she thought fit.

25167. Only if she thought fit; do you mean that the medical officer would not, if he thought the wards imperfectly ventilated, consider it part of his duty to make a report about it?—He would probably speak to the matron about it, and the thing would be remedied. If he thought there was anything faulty in the construction of the wards or in the habits of the patients which tended to lessen the ventilation, he would bring it to the notice either of the divisional nurse, whom he sees every day, or to the matron, or if nothing could be done he would bring it to the committee.

25168. Now with regard to the drains; that is left to the steward, you say?—That is the steward's business.

25169. Is the steward a sanitary engineer?—No.

25170. Has he any experience beyond that which any person who looks at drains occasionally has?

29 June 1891.]

Mr. ANDREW.

[Continued.]

Earl of Kimberley—continued.

has?—He is a man of very excellent judgment in those matters.

25171. I want to know whether he has any knowledge at all of such matters?—Not as an engineer; we should consult our architect if the drains wanted revising.

25172. Who is responsible for seeing that this drainage is all in good order from day to day?—The steward.

25173. And does he inspect it constantly?—Yes, he has it coming continually under his supervision.

25174. Has he any knowledge at all of the mode in which a sanitary engineer inspects drains?—He has.

25175. Does he inspect the drainage in the way in which, if you called in a sanitary engineer, he would inspect it?—I cannot quite answer that question, but if he found anything beyond his power to discover—

25176. You must know enough about the present system of the inspection of the drainage of houses to know that there is a regular process by which drains are inspected, and by which it is ascertained whether they are in working order. I want to know whether your steward inspects them in that way, or do you know what he does?—I do not know the actual things that he does, but I do know that the drains are ascertained by him and known by him, soil pipes and all that, to be in a clear and efficient condition, and that he sees that they are. I do not know what further he does.

25177. Is it long since the house was built?—We have been there since the year 1863; and there have been different drainage works carried out as parts have been added to the building; those drainage works have been designed and carried out by the architect constructing the building.

25178. Is he a sanitary engineer?—He is an architect.

25179. Do you think he knows anything about sanitary engineering?—I think a great deal.

25180. As much as an architect does generally?—Yes.

25181. That is nothing. Have you ever thought that it might be desirable, merely as a security, to have a yearly inspection, such as many people have of their private houses, by a sanitary engineer, merely to see that your drains are in good order?—No, we have not.

25182. Do not you think that that would be a security, and a good plan?—Possibly. We have our machinery overhauled year by year in that way.

25183. Have you ever had an outbreak of diphtheria in your house?—No.

25184. Or any infectious disease?—One case of typhoid some time ago, but I believe that is not considered infectious.

25185. You have not had any serious outbreak of any kind?—No. We have had two or three cases of influenza this spring; only three cases amongst the staff; no cases amongst the patients.

25186. Is your staff of nurses in good health as a rule?—Yes.

(24.)

Chairman.

25187. Have you any map or plan of your drains?—Yes.

25188. Which you keep up to date?—Yes.

Earl of Kimberley.

25189. How do you get your water?—From the Southwark and Vauxhall Water Company.

Earl Cathcart.

25190. Considering the special nature of your institution, that it is an institution for incurables, do you find that that causes a depressing influence over the patients and the staff generally, and the servants?—I am almost fearful of being thought to be a confirmed optimist, but I may say that our house is a very cheerful house. I should be extremely glad to take your Lordship, or any of your friends, over the place, to show you all the patients.

25191. You mentioned some difficulty that you had in regard to your seaside home; what was the difficulty there?—I mentioned that there was a case in which some of the patients complained about the matron.

25192. What exactly did they say; what was the complaint?—The complaint was chiefly on the score of her being not of a very good temper, and things were said about her being away from the premises.

25193. And what is the name of the matron?—Mrs. Morfee.

25194. Has she been long there?—Three years.

25195. And has there been an inquiry?—There has been an inquiry by the committee.

25196. Did the committee examine the patients who made the complaint?—Will you let me say that in this particular case certain patients thought fit to write letters to individual members of the committee, or rather to, I think it was their wives, on the understanding, and with the hope that they would not be asked personally to give evidence, they being persons who were ill.

25197. They wrote to the wives probably because they thought that women would be more sympathetic in such a case than men?—Probably they did.

25198. If they wrote to the wives of the committee, instead of to the committee themselves, they probably thought that women in such a case would be more sympathetic than men. And what was the result of the inquiry by the committee?—The matron came up to the committee, she was told the nature of these complaints, and her explanation was given. The particular request of the patients, that they should not be named in the matter, was respected by the committee; and under those circumstances all that they could do, and what they did, was to give the matron to understand very explicitly the lines on which they expected their institution at St. Leonards to be managed and conducted.

25199. Did they reprimand the matron, and tell her that she ought to be kind and gentle to the patients?—They reminded her of the intention of the place; that it was to be, if I may be allowed to say so, a place of rest and recreation for the inmates, and that they expected it to be

4 s 2

conducted

29 June 1891.]

Mr. ANDREW.

[Continued.]

Earl Cathcart—continued.

conducted entirely in accordance with that idea; but with the complaints in a sort of way unproven, without any evidence being tendered which could be tested in any way, the committee felt that that was as far, on that occasion, as they could possibly go.

25200. Have there been any subsequent complaints, subsequent to that inquiry. About when was that inquiry?—About two months ago.

25201. Have there been any complaints, subsequently?—Nothing, but what relates to that state of things.

25202. I understood you to say that you thought a matron was the proper channel through which complaints ought to come to the committee; do you think that the matron would be a proper person to bring complaints against herself?—I do not think that is what I said. I said that the patients themselves were perfectly free, and were expected, in case of grievance, to address the committee, passing the matron by and addressing a letter to the chairman of the committee.

25203. But supposing the seaside patients made complaints to this matron, do you think there would be much prospect that this matron would bring them to the committee?—That is a question I can hardly answer.

25204. Have you a personal acquaintance with her?—Yes.

25205. Has she pleasant, gentle, and amiable manners?—Yes; she was selected from others by recommendation; she was a stranger before she was selected; there was no previous knowledge of her.

25206. I will change the subject. You are aware that lady visitors in hospitals are not supposed to interfere at all with the discipline and management of the hospitals, but are supposed to go there to read books and comfort the patients; and that is the case at your hospital; there is a general understanding that when they go there it is not to interfere with the discipline, but to comfort and instruct and read to the patients?—To read to the patients and be a comfort to them is doubtless the first reason why they are welcomed there; but if the patients choose to confide in them (and it is very desirable that they should be on such terms), the ladies receiving such confidences are perfectly free to see into the matter.

25207. Do you tell me positively that ladies who did interfere with the discipline and receive complaints would not be snubbed and have their visits stopped; is that your impression, or is it not; I will take your answer, yes or no?—May I ask what the question is again.

25208. The question is, do you mean to say that if ladies went to your institution and acted otherwise than in merely instructing and comforting the patients, if they interfered with the discipline and asked questions about diets and other things, their visits would not be discouraged?—Certainly not, we should not discourage them.

25209. And you think that on the part of the matron, and on the part of others, if ladies were known to come in to make inquiries into diet and discipline, the visits of those ladies would

Earl Cathcart—continued.

not be discouraged?—I do not see why they should be.

25210. I ask you yes or no; you can answer the question, and I will take your answer?—I do not know that I can. We have not any case in point. These general questions are very difficult to answer.

25211. I merely asked you for your opinion; I will take your answer?—They would not be discouraged. If there was anything like what your Lordship is pleased to call interference, any undue interference with the discipline of the house ought to be discouraged; but a reasonable and proper way of making complaints and hearing what the patients have to say would not be discouraged.

25212. Now supposing that such a visitor as Miss Twining came to you as a lady visitor, she being so experienced a person, would not any observation that she might make be of the greatest possible use to your committee?—Possibly it might, but as I have said before, the committee have taken care to provide themselves with a person in whom these requisites are, to a great degree, found without disparaging anybody else.

25213. You do not hold with Miss Twining's opinion when she said that she would think nothing of a matron who disliked a ladies' committee?—Miss Twining is welcome to her own opinion.

25214. Please answer my question; you do not agree with Miss Twining, or you do?—I do not agree with her, certainly.

25215. What is the name of the matron of the main institution?—Mrs. Linicke.

25216. Why should your committee have chosen a German when there are hundreds of English ladies qualified for the post?—Mrs. Linicke is an English woman by nation, although a German by birth.

25217. Was she brought up in Germany?—Yes, I think so; I am not acquainted with her history. She has been many years in England; she was at Sir Patrick Dunn's Hospital, and I think previously to that she was the matron of a school for children of missionaries.

25218. Can you give us any reason why she, being a foreigner, was appointed to that post; is there any particular reason why the committee appointed her?—Because of her apparent qualifications and the recommendations that she had.

25219. Were there a great many candidates; was she selected from a great many candidates?—No.

25220. Then why did you not invite a great number of applications?—This lady was introduced as a person who desired to be a candidate for the place, and the committee, having seen her and heard all her recommendations, appointed her.

25221. Whom was she introduced by?—Mainly by a gentleman of the committee, Mr. George Frederick White, who had known her.

25222. Did you advertise for candidates?—I think not at that time.

25223. Was Mr. White a very influential member of the committee?—He is an influential member of the committee; he is a very good friend of the hospital.

25224. What

29 June 1891.]

Mr. ANDREW.

[Continued.]

Earl Cathcart—continued.

25224. What knowledge had Mr. White of this lady; had she ever been in his service in any way as governess or anything?—I believe she had been in his family as a governess at one time.

25225. To take care of his little children?—To educate his daughters.

25226. And she had given satisfaction in that position?—I cannot say.

25227. But if she had not given satisfaction in that position, Mr. White would not have recommended her for the post of matron?—I cannot say what Mr. White might or might not have done.

25228. I want from you yes or no; did Mr. White really nominate and appoint this lady?—No.

25229. Or was he instrumental in appointing this lady?—He was only instrumental as a member of the committee in bringing her forward.

25230. And was she a young person at that time?—Her age, we understood, was 45 at the time she was appointed.

25231. But you, yourself, now cannot suppose that a German woman could have the same taste, instinct, and everything else, and the same sympathy that an English woman would have with English women?—She was long resident in this country, accustomed to English society and to English ways, and it was not considered that her origin should be a bar to her appointment, if her appointment was in other ways desirable for the sake of the institution.

25232. But you did not advertise, and did not call in any candidates beyond this one lady who was nominated?—I cannot call to mind at this moment the circumstances.

25233. Please brush up your memory; I want to know?—I am being asked questions on the sudden, without having any idea what questions would be asked. I believe there was no advertisement at the time; that the committee were desirous of filling the vacancy with an efficient person; that they were quite aware that, in answer to advertisements, they would be very likely flooded with persons who were not efficient, and so on.

25234. If anybody said that this lady was a terrible person with a terrible temper, they would be saying that which was not true, would they?—They would be saying a very improper thing indeed.

25235. I ask you whether it would be totally untrue if such a statement were made?—No doubt the lady has a temper, as other ladies have; but, I think, for it to be said that she was a terrible woman with a terrible temper would be a libellous thing.

25236. A wrong thing to say?—A wrong thing to say, certainly.

25237. But the lady was a lady with a great deal of temper; I understand from you that she has exhibited temper on many occasions. I will take your answer, whatever it is; I understood, from what you said that she was a lady who did exhibit a great deal of temper?—Yes, she can exhibit temper.

25238. Have the patients made complaints of the matron's temper to the committee?—A com-

(24.)

Earl Cathcart—continued.

plaint was made some time ago by one of the patients, certainly.

25239. How long ago?—Two or three years ago.

25240. What was the nature of the complaint?—That the matron spoke violently to her.

25241. What did the matron say?—The matron admitted it, and pleaded an extremely irritating cause.

25242. And do you say that during the two or three years since then the matron has not lost her temper with the patients?—I am not there to see, and do not visit the house.

25243. But, within your knowledge, has there been complaint of the matron having lost her temper with the patients since the period you refer to, either through outsiders or to the committee direct; have there been complaints made by the patients of the matron's temper. (*After a pause*). I ask you for an answer, yes or no?—May I ask, do you mean have the patients complained to the committee?

25244. Have they complained through outsiders to the committee, or have they complained direct to the committee of the matron's temper since that period when she was reprimanded?—I can hardly call any case to mind. I know of one case in which I believe the matron has had occasion to be a little sharp with the patient; I believe, in one case, but I do not know any other.

25245. Do not you think that with incurable people, and people in that position, a matron ought to be a person firm but of a fine temper, and not one to lose her temper with such patients?—It is very desirable to have a person like that.

25246. Are you, then, prepared to produce the matron's diary, or is she going to produce it herself, for the last few years; you told us that the matron keeps a diary?—She keeps a journal.

25247. That journal can be produced?—If it is desired.

25248. If it is called for?—Yes.

25249. And is that document very fully entered up; does it go into circumstances; you have seen the book, have you?—I see it every week.

25250. Does it go into all the details of everything that goes on?—Not into all the details.

25251. But it goes into details at some length?—At very fair length.

25252. Is it a diary that would give their Lordships an idea of how her duties are conducted?—I should think so.

25253. Is there anything in the nature of a defaulters' book of the nurses kept?—No.

25254. Any record of offences committed by the nurses?—No. Any offence committed by them would be dealt with as a mistress deals with her servant's faults.

25255. It would be dealt with by the matron, you mean?—By the matron.

25256. Off-hand?—Off-hand it may be.

25257. Perhaps in a passion, if the lady is, as you say, a person or rather infirm temper. Have there been any complaints from the nurses that they had been treated in a high-handed manner by the matron?—Scarcely any. There was one

4 s 3

the

29 June 1891.]

Mr. ANDREW.

[Continued.]

Earl Cathcart—continued.

the other day, that the matron would not let her go out at a certain time, but I have not really known of more than one or two incidentally happening.

25258. But if a nurse did complain of the matron, or was thought to be about to complain, she might be dismissed without the matter coming before the committee at all, might she not?—I do not know that that would happen.

25259. Do not you think that as, in other hospitals, there ought to be a defaulter's book of nurses, a record of offences by nurses, and how they are dealt with?—Possibly.

25260. And do not you think that somebody else than the person actually brought in contact with the nurse should adjudicate upon it?—I am not sure of that, because if the matron's fair authority is to be upheld, the nurses must feel in a proper manner towards her.

25261. Have you ever heard complaints of the matron in regard to the disposition of disagreeable cases, and even dying people alongside of others, that the arrangement has not been satisfactory to other patients; I refer to scrofulous cases, and other disagreeable cases, and cases of dying people; that she has placed them in a bad position; and that the classification of the matron was not judicious?—No; no complaints that I know of.

25262. You told us that the matron is responsible for the classification of the patients?—Mainly responsible.

25263. Do not you think that would be more the duty of a resident medical officer than of a matron?—If the medical officer saw that the patient was in such a state that he or she should be separated, he would give orders to that effect.

25264. Now in regard to the food, there are constant complaints of the food; is that so?—No, not so; there are not constant complaints; there are occasional complaints.

25265. It is only natural that with many incurable cases of that nature there would be many complaints, that appetities would be capricious and all that sort of thing; but you say you do not receive complaints?—We have not recently; the last complaint (and that was not a specific complaint) being as to New Zealand mutton. That the meat was discoloured was the complaint, and the committee have discontinued receiving it; they do not tender for it at all.

25266. But considering the number of your incurable patients, may it not be that complaint is natural?—I cannot tell.

25267. Do you think it is so?—I have no reason to think that they are in the habit of making them.

25268. Why do you have men nurses; there is a reason for that, no doubt?—Because it is more fitting more suitable. The cases are very heavy and require strength; and it is thought more fitting that they should have all these offices to do about people of their own sex; but as I have said before, the nursing of the male side is under the immediate superintendence of a trained female nurse.

25269. So the men nurses are mainly employed because of the lifting of heavy patients?—Lifting, and other offices.

25270. Have you not complaints of the women

Earl Cathcart—continued.

nurses being weak and unfit to lift the female patients, and causing suffering to those patients; have your committee received any complaints of that nature?—I think not; I do not remember any.

25271. Would not those be the sort of complaints to which lady visitors would particularly attend, as being more sympathetic?—The matron ought to be as good a judge of that as anybody else if she is up to her work.

25272. Are you of opinion that there ought not to be a resident medical officer?—Clearly.

25273. And for what reason?—Because he would not find work enough to do.

25274. You have 218 patients, I think you told us; assuming that you have 200 patients, and that the doctor gave to each of them five minutes a day, I think that would make 16 hours and 40 minutes?—He is not required to see every patient every day. The cases are of that chronic nature that the actual ailments, in many cases, are so few and far between that medicines are not so much required. A case of chronic paralysis or chronic rheumatism does not want to see the doctor every day. But nevertheless the doctor sees every patient once a week; every day he sees all the patients that he thinks he should see, or that desire to see him, or that the divisional nurse wishes him to see.

25275. It is quite contrary to all evidence that we have received here before to-day to suppose that 218 patients would not require a resident medical man; you are against the world in that respect; and you mention emergencies constantly occurring which the matron has to attend to; surely those should be treated by a medical officer?—When your Lordship says it is against the evidence of the whole world, I understand that what is in your mind is hospitals generally. Ours is not of the nature of a hospital; it is an asylum, more like a large almshouse.

25276. But with 218 patients you are not of opinion that there is sufficient work for a resident medical officer?—I am clearly of opinion that there is not work enough. Our people get what any person in a private house, and with command of money for medical fees, would get himself or herself, a visit whenever necessary and general inspection, so that the case is always under the doctor's purview more or less.

25277. What do you pay your medical officer?—£. 200 a year.

25278. You could get a resident medical officer for 200 £. a year. Was your medical officer nominated by a member of the committee or selected after an advertisement for candidates?—There was an advertisement, I believe, about 22 years ago, and he applied voluntarily; he was not known, I think, to any member of the committee.

25279. This is a most important point; do not you think that a resident medical officer would be a very valuable check upon your matron; please answer me yes or no?—I have no experience of that kind of thing.

25280. But I asked you for your opinion; you have been there many years, and you must be able to form an opinion one way or the other. Do not you think that a resident medical officer would

29 June 1891.]

Mr. ANDREW.

[Continued.]

Earl Cathcart—continued.

would be a valuable assistant and an important check upon the matron?—I think that in a place like ours (and it is not to be compared, as I have just said, which seems to be done, with general hospitals, where you have cases of accident and active disease) a medical officer would not find employment for a great deal of his time.

25281. Not with 218 patients?—No; he certainly would not.

25282. The absence of bed sores is a test of skilled nursing, is it not?—You are almost asking me a professional question.

25283. But having been there 20 years, you must have a good idea on the subject?—I have this idea, that bed sores can be in certain cases mitigated, but in certain cases they appear to defy the skill of the medical officer.

25284. Have you every sort of proper appliance in the way of water and air beds to prevent bed sores?—Yes, water beds for all patients as soon as they are found to require them.

25285. Have you at this moment a number of cases of bed sores in your hospital?—Personally, I only know of one reported as having bed sores, a person named Lewis.

25286. Are the bed-sore cases mentioned to the committee every week?—The doctor mentions them in his general report, and says what he thinks is necessary.

25287. They are not filed?—They are reported verbally, but he keeps a history of every case and its treatment in his own book.

25288. Is that book summarised?—It is under the different cases. He has the history of every case that comes in, and its treatment.

25289. But he makes no written report to the board?—He makes no written report to the board.

25290. Is not that rather a loose way of transacting business?—The cases are well known, and those reported as ill on his sick list are mentioned, and special cases are mentioned, and his report is taken down in writing by myself in the minutes of the house committee.

25291. Does he report once a week, on the board day?—Once a week.

25292. Would it not be better if he made a regular formal report, which was filed, or a report in a book, for the information of the committee?—It might be desirable; however, there is a great deal of sameness in the reports.

25293. If you had a resident medical officer you would expect him to make a report. Does your medical man take outside practice besides?—Yes.

25294. And supposing one of his private patients wanted his assistance in a labour case, the hospital would have to wait till he had got his labour case over?—No; he has a partner whom he could send.

25295. Do you see one partner one day and the other the other day?—It is very seldom that the partner is required to come.

25296. But the doctor has other work out of doors?—He has his general practice.

25297. And you think that in an institution with 218 beds it is a better plan to have an outdoor doctor, with a general practice to look after?—It is found to answer very well at the house.

(24.)

Earl Cathcart—continued.

25298. Who has found it to answer well, the committee?—The committee, who are in a position to judge.

25299. Now, with regard to visits, I gathered from you that the visits of the committee to the dinners were not habitual, but only took place occasionally?—Occasionally.

25300. "Occasionally" is how often?—They have not been in the dining rooms as a committee; individual members may have gone in.

25301. But the point is, that you appoint some members to visit during the week?—The house committee themselves visit as a body once in the week.

25302. How often do the house committee visit the dinners?—The times are so occasional that I cannot offhand give you an average.

25303. But how occasional are they; are they once a year?—Oh yes, oftener than that.

25304. Are they twice a year?—Quite twice a year, I should say.

25305. Do not you think that it is a serious neglect of their duty that they should visit the dinners twice a year rather than twice a week; do not you think that twice a week would be reasonable for the visiting committee?—I think it would not be reasonable; because that would be calling gentlemen from their homes, or from London, to do that which they would not have time to do.

25306. What distance are you from London?—About seven miles from the City.

25307. But have you no members of the board who live close to the hospital?—We have some, as I said before.

25308. Do they not come in to visit the dinners?—They have done it frequently; but they have done it as individual members.

25309. Is there any book in which these individual members record their visits?—They record their visits in the lodge book.

25310. And that book could be produced?—Yes.

25311. How often is the house visited by the visiting committee?—The house committee, once a week.

25312. Do they always go round the house once a week?—They do not always go round the house; they separate, and go about the house.

25313. But they are not conducted round formally by the matron to see every part of the house once a week?—No.

25314. Why do they not go round to the dinners as well on the board day; because they do not think of it; is that it?—It is not their practice, that is all I can say.

25315. Now, through evidence that has been given this year, we have heard of the importance of beef tea; do you take any precautions to ascertain that the beef tea is always up to the mark?—The doctor frequently tastes it; and then besides beef tea we have what is of the same nature, Brand's Essence of Beef, in rather considerable quantities.

25316. Do you ever inspect the meat supply yourself?—I have done so.

25317. Do you do so constantly, at regular times?—When I have done so it has been at irregular times.

25318. Do you consider it part of your duty to

4 s 4

29 June 1891.]

Mr. ANDREW.

[Continued.]

Earl Cathcart—continued.

to inspect the meat supply and other supplies?—No, I do not.

25319. You leave it entirely to the steward?

—The committee, whenever they please, visit these stores.

25320. Are you anywhere near the hospital yourself?—You mean where I reside. I live about a mile from the hospital.

25321. Have you ever been sent for in any emergencies out of office hours?—I do not think I have; not in any serious emergencies, certainly.

25322. Have you had occasional complaints from the nurses of their food not being sufficient, and not being of good quality?—I have never heard of its being insufficient; I heard of the general complaint there was about the New Zealand mutton, which involved everybody in the house. It was not thought that that complaint was so extremely well founded as it was made out to be; and it was rather against the colour, and the mutton was changed.

25323. But do you mean to tell us that as a general rule the nurses have not been dissatisfied with their diet?—I do not think they have; we have not had complaints from them.

25324. Now you have correspondence and complaints through outsiders occasionally, that is to say a patient in the hospital will not speak to the matron or to one of the board, but will represent it or write to an outsider, who brings forward a complaint occasionally; have you had many cases of that nature?—One recently, and one I can remember some time ago. In the recent case the gentleman bringing the complaint was asked to come to the committee, but was first of all to give details and names, which he declined to do, and then he was asked to come and see the committee, which he also declined to do.

25325. And what was the nature of the complaint?—It was not made to me personally; it was made to a gentleman of the committee.

25326. It was not made to the committee as a body?—No, it was made to a gentleman of the committee.

25327. And did he bring it before the general body of the committee?—I must think on that point. Yes, he wrote, I believe, at first to a gentleman of the committee. Substantially it was brought before the committee. He was asked to be so good as to give his informant's name, which he declined to do; he said he could not do that; and then he was asked by this gentleman, who was resident in the neighbourhood, to come and see the committee, and explain what these complaints were, but he did not do it.

25328. The gentleman did not attend?—No.

25329. Now when there are all these roundabout ways of communicating complaints, does not it rather show to your mind that complaints are snubbed by the authorities; if people have to go so much roundabout to make complaints, does it not show that they have no particular direct way of making complaints?—They have a direct way; it is free to any patient to make a communication to the committee, or ask for anything to be investigated or seen into; but I do not infer that, because complaints come through

Earl Cathcart—continued.

visitors, who perhaps may be over sympathetic, therefore there are a large number of suppressed complaints; I do not think there are.

25330. But do not you think there is a general impression on the part of the patients that if they complain some one in authority will be down upon them?—I have no idea of that: I have no evidence of that.

25331. Now with reference to the water supply, there was a complaint about the water supply; about the quality of the water, was there not?—I do not remember any; we have had a better system of filtration for drinking water, but we have had no complaints of the general quality of the water.

25332. When did you get this new system of filters?—About six months ago, the new system. We had had a system in use for some years before that.

25333. Under the old system did they say that the water was nasty or stinking, or full of animalculæ?—No, I never heard of that.

25334. Why should you get a new system of filters?—It was very much insisted upon by a gentleman of our committee; he was particularly strong on the subject of water and filtration.

25335. Who was the gentleman?—His name was Mr. Seaman.

25336. Is he a professional gentleman?—No.

25337. What did he say; that the water was foul?—That it was not properly filtered, that the system was imperfect.

25338. Did he say that the water was cloudy or bad to the taste?—That it was not thoroughly filtered.

25339. And if it was not thoroughly filtered it was dirty; that was what he meant (and that it was disgusting to the patients)?—With a flavour about it. It seemed to me to be Mr. Seaman's idea, but we never heard it was disgusting to the patients.

25340. Had he much difficulty in convincing his colleagues?—They were quite ready to look into it and have the system changed.

25341. They had the water up in bottle and tasted it, did they?—I believe they did.

25342. And spat it out?—I do not know.

25343. At all events they said it was nasty?—I do not know that they did.

25344. At all events they got a new system of filtering?—Yes.

25345. You will not be surprised to hear that I have heard complaints of the water; you in fact admit that the water was not what it should be?—Mr. Seaman, the gentleman I referred to, considered it was not so; I think there was not much the matter with it.

35346. We have not heard anything about your chaplain; what do you pay him?—We have no paid chaplain.

25347. Then how do you see to the cure of souls of these poor incurables?—The vicar of Putney, the honourable and reverend Robert Henley, has given gratuitous services since he has been at Putney. He comes up every Sunday afternoon and conducts a service. He administers the Holy Communion both in the large room to the patients who wish to communicate, and also in different parts of the house, and he sees any patients who wish to see him. On the Sunday

29 June 1891.]

Mr. ANDREW.

[Continued.]

Earl *Cutheart*—continued.

Sunday evening there is a service generally conducted by a Nonconformist minister. On a week evening we have a service conducted alternately by clergy and ministers in the neighbourhood of the hospital.

25348. Considering the number of your patients, and your having a turnover of something like 51,000 *l.* a year, do you think it right that you should not have a regular chaplain?—It would raise the religious difficulty which has never occurred in the history of the hospital. Very many of our patients, and a very large bulk of our subscribers, are Nonconformists, persons to whom, there is reason to believe, the appointment of a paid chaplain with what might practically be a monopoly of the religious offices of the buildings, would be extremely objectionable, and likely to raise a difficulty with the governors, a difficulty which has never occurred, and which it might be extremely difficult to get over if it was allowed to occur.

25349. To put it in the other way, is it not rather hard perhaps upon the reverend gentleman at Putney to lay such extra obligation upon him?—It was his own offer; he did it willingly, and carries it on; and I have reason to know that he does it with the greatest possible pleasure to himself; that it is a thing he would not be deprived of. In fact, when we left old Putney house and came into the parish of Wandsworth, where we now are, he said, “I hope I shall be allowed to come to the hospital in the new parish as I have always done here.”

Earl of *Kimberley*.

25350. The house committee always visits the hospital, I understand, once a week?—Once a week.

25351. What do they ordinarily do?—They first of all hear the reports of the medical officer; they then hear what his requirements are in the way of drugs and appliances; they then take a report from the seaside house; then the next business is to attend to requests, requests for leave of absence, or requests on the part of the patients for anything they may desire, perhaps for a surgical apparatus, sometimes they ask that themselves directly. The next thing in order is the examination of the staff gate-book, to see how the members of the staff have kept their hours, and, if any have been unpunctual. Then any matter which arises comes under the notice of the committee, and there are often many matters. Then there is the matron after that; the matron makes her report and the steward makes his report.

25352. They make it personally?—They make it personally, reading their journals.

25353. They make written reports, and make them personally?—Yes.

25354. And answer any questions?—Yes.

25355. Then I understand that the house committee does not go over the whole or any part of the house?—Members of it, individually, do.

25356. Is there no sub-committee, no visiting committee whatever, appointed of the house. I mean, not for the work that is to be done in the board-room; is there no visiting committee of the house committee itself?—The house com-

(24.) e

Earl of *Kimberley*—continued.

mittee consider themselves the visiting committee.

25357. It appears that they do not visit?—They visit, as I said, by individual members going round; and then there are the visits of members of the committee who happen to reside in the neighbourhood, which I have reason to know are very frequent, and all over the house.

25358. I was not wishing to know what took place so much, but as to whether there was any regular visiting committee of any kind appointed to visit the house at a board time or at any other time?—None beyond the house committee itself.

25359. They do not visit?—Not as a body; they frequently have not time.

25360. And these gentlemen that visit the house occasionally, do they make a written report?—No.

25361. Has it never occurred to you that, in accordance with the practice of every institution under the sun, you ought to have a visiting committee, who should visit once a week and make a written report?—It might be advisable.

25362. And, as to the food, I understand you have had the same butcher for a good many years?—For several years; for three or four years the same man has had the contract.

25363. Did you contract with this butcher to furnish you with New Zealand mutton, or did he contract to furnish you with mutton; and, finding New Zealand mutton cheaper, send it to you?—Not at all; the contract for it was made at a separate price from the English.

25364. How came you to supply your patients with New Zealand mutton; were you under the impression that it was the best that could be obtained?—At that time there was a very large quantity of good New Zealand mutton in the market.

25365. Were you under the impression, I asked, that it was the best mutton that could be obtained?—We believed that it was practically equal to English mutton; not superior, not better.

25366. You thought it was cheaper?—Yes.

25367. You told me in one of your answers that you did not ask for tenders, because you were anxious to supply your patients with the best of everything; did you consider that the New Zealand mutton was the best?—That was not quite the question put to me. The question was whether we asked for tenders.

25368. And you said that you did not, because you wished to get the best of everything?—That we wished to get good things; therefore we did not advertise; that is to say, throw the institution open to the trade, but to people we had reason to know were respectable butchers.

25369. I asked you whether you thought that getting New Zealand mutton was quite compatible with that desire of yours?—We thought so at the time, because it was generally believed that a great deal of New Zealand mutton was sold as English meat, and the difference not known.

25370. But you found that it was not satisfactory?—We found afterwards that it gave way in colour, and created a prejudice; and it was discontinued.

25371. Do you get English meat, or Australian frozen

4 T

29 June 1891.]

Mr. ANDREW.

[Continued.]

Earl of Kimberley—continued.

frozen meat?—We get both English and foreign; we have an alternative contract and an alternative price, so that the committee may take as much of each as they think fit.

25372. I do not quite understand what is meant by “foreign meat”?—American meat or Australian meat, or Australian beef.

25373. Did you mean by foreign meat frozen meat?—Yes; foreign killed meat.

25374. It is frozen?—It is frozen.

25375. Now are you of opinion that that meat is of such a quality that you ought not to supply it to your patients?—In point of fact some of it is scarcely to be known from English meat.

25376. Still when you say scarcely to be known, you supply them with an inferior article easily distinguishable from the other?—The committee do not think themselves bound to give the highest price if they can get an article of equal value.

25377. Is it of equal value?—I believe practically, it is.

25378. Is it cheaper?—It is cheaper.

25379. And, I suppose, the price is a pretty good indication of its value, is it not?—I am not sure in the matter of meat. The prices are so very different for foreign meat; it has risen from 4 *d.* a pound to nearly double.

25380. What do you pay now a pound for foreign meat?—Eight pence I think; 8½ *d.* for English.

25381. Do you supply your patients with the best joints or inferior joints?—The contract price is for ribs and sirloins of beef and for legs of mutton; for necks of mutton we have a different price; for other parts of beef we have a lower price.

25382. Now is there a contract for your butter?—Yes.

25383. Do you give your patients foreign butter or fresh English butter?—We give them fresh English butter. When we had a multiplicity of tenders and the trade found that they could have their prices listened to, we got no satisfaction; we now have tenders, but practically we have fallen upon one contract for some time past. Nobody's butter is equal to his that we can find, it comes to us in the two pound lots in which it is made in Somersetshire; and the baskets from Honiton come to us.

25384. In short, you supply the patients with English butter?—With the best English butter we can find.

25385. With regard to your groceries is that put out to tender or do you simply take some neighbouring tradesman?—That is put out to tender.

25386. Have you ever had any complaints of your tea?—Lately we had some complaints of the tea not being of the usual strength. I think that complaint does not exist now. I am not quite sure whether there was ground for its existing then. We deal with a house that has a name to support, for whatever that may be worth.

25387. What wine does your medical officer order; do you know at all?—He does not order much, if I may say so first. Port wine; in some cases of great exhaustion he orders champagne.

Earl of Kimberley—continued.

25388. You supply, I suppose, whatever the medical officer considers necessary?—Yes, certainly.

Chairman.

25389. Did you hold a fête last year of any description or a bazaar?—We have yearly a sale of the inmates' work; it is for their benefit; not for the funds of the hospital.

25390. This is not for your funds?—Not for the hospital.

25391. Who opened that last year; who presided?—Last year the Duchess of Portland opened it; this year the Duchess of Westminster opened it.

25392. Did you have any communication from the Duke of Portland to the effect that the place was so badly managed that it was a question whether the Duchess of Portland would open it or not?—We had a communication from the Duke of Portland after the bazaar.

25393. What was the nature of that communication?—There were several general complaints, and also the question of the chaplaincy was raised. That letter was answered at some length, but we did not get any further communication from the Duke of Portland.

25394. But did your committee of management take any steps to investigate whether there was any ground for these complaints?—They did; and they gave an answer to the Duke of Portland what they believed to be, and intended and hoped to be a full and satisfactory answer on all the points.

25395. Did they have a sub-committee to investigate the various charges?—They went into it as the house committee on the spot.

25396. And whose evidence did they take?—I cannot tell you at the moment whom they asked.

25397. Did they take any other evidence besides that of the secretary and the matron?—I gave no evidence at all, because they were not matters within my cognisance.

25398. Did they take the evidence of the matron?—Yes; they heard what she had to say, and the various points that were referred to by the Duke of Portland were carefully considered; information was obtained upon them, and that was communicated to the Duke of Portland, from whom I may say we did not hear afterwards. We did not know whether to gather from that that his Grace was convinced, or satisfied, or not.

25399. You are the secretary of this institution, and you attend the meetings of the house committee and take the minutes?—Yes, of both that and the board.

25400. And, therefore, you attended the investigation?—Yes, I am always present there.

25401. Do you not remember who gave evidence besides the matron?—I do not think it was a matter in which the committee felt it necessary to call many witnesses. The facts were within their knowledge, and they answered the Duke of Portland according to the knowledge which they had of the various things. I cannot charge my memory with everything; you see I am called upon a little suddenly to answer these questions.

25402. Should

29 June 1891.]

Mr. ANDREW.

[*Continued.*]*Chairman*—continued.

25402. Should you call that sort of investigation a very searching investigation?—I think it dealt very fairly and fully with all the points.

25403. Then practically it came to nothing else than this, that there was an answer from the committee and no investigation at all?—I do not think that the complaints were anything more than complaints of that general kind that it was extremely difficult to answer. As in the case of the gentleman complaining lately, there were general complaints without the names of the persons who made the complaints. I know that the Duke of Portland very much insisted upon the want of a chaplain, and that was a matter on which we answered him according to the facts.

25404. Could you furnish the Committee with a copy of the letter of the Duke of Portland which called attention to various shortcomings on the part of the institution?—I could do so.

25405. Will you put it in, and of course the answer to it also?—

Earl Cathcart.

25406. You have had the misfortune to have a great deal of newspaper correspondence at one time and another with regard to complaints made about your hospital; I am not speaking so much of recent times, but of earlier years?—I should be glad to know what is referred to.

25407. I refer to various complaints made at different times; you have had newspaper correspondence with people?—No, not much. I do not know what time your Lordship refers to.

25408. I will take you back to the year 1879; you had a battle royal in the year 1879; all the newspapers in London published letters?—Was that the “*Athæneum*” correspondence, may I ask?

25409. In the “*Athenæum*,” “*Standard*,” and all the papers. There was the Captain Stringer case; in his case complaints were made by the board of guardians of his treatment?—They were, but the complaints of the board of guardians did not state the whole of the case.

25410. I will only ask you, were there complaints, in Captain Stringer’s case, of improper treatment?—There were complaints, but we were the parties who had the greatest complaint against Captain Stringer.

25411. There was the Davis case, and several other cases; there were several other complaints mentioned in the newspapers at the time, in the year 1879?—There were complaints made about a man of the name of Davis, I know.

25412. This is what I want to lead up to: the Prince of Wales was coming down to Putney, and he refused to come till you got whitewashed; is not that so?—No.

25413. What did his Royal Highness do?—The Prince of Wales was coming down to lay the first stone of the new wing. I believe it was just in this way: a Mr. Alsager Hill wrote to the Prince of Wales, suggesting that he should not do it, because of certain things he chose to allege against the hospital.

25414. What were those certain things; what did he allege?—I cannot call to mind, except (24.)

Earl Cathcart—continued.

that there were a number of general charges he chose to make.

25415. Reflecting upon your management?—Yes, completely reflecting upon our management. This letter was placed in the hands of the Archbishop of Canterbury, and he was seen by the late Sir Charles Reed, Mr. White, and myself, who submitted an answer generally to him, which satisfied him; and the Prince of Wales laid the first stone.

25416. In other words, you asked the Archbishop of Canterbury to make an inquiry for you to satisfy the Prince?—The Archbishop of Canterbury urged upon us to give an answer to Mr. Alsager Hill’s letter, which we did, and having given that answer the Prince of Wales kept his appointment.

25417. But, in point of fact, the Archbishop did make an inquiry?—Yes, the Archbishop of Canterbury made an inquiry.

25418. Through his private secretary. Now, a busy man like the Archbishop would hardly be a suitable person to charge with an inquiry of that sort in the hospital?—He undertook it himself.

25419. And the result of the inquiry was that he suggested that the Prince of Wales might properly attend the laying of your foundation stone?—Yes.

Chairman.

25420. Is there anything else you wish to state?—I had thought that, perhaps, the Committee might inquire as to the cost of the patients at the hospital; I have taken out the cost for the last year on an average of 215 inmates, and I find that the cost, including maintenance of the seaside house, was 65*l.* 11*s.* 3*d.*, of which the seaside house bears per head over all the inmates 5*l.* 2*s.* 1*d.*, leaving the cost of the hospital proper 60*l.* 9*s.* 2*d.* for the year.

25421. Does that include rates and taxes, and building repairs, and so forth?—Yes, we include rates and taxes, supply of furniture, repairs, maintenance of the grounds, supervision of the water-service, and the maintenance of the lifts and machinery, laundry expenses, and so forth.

25422. How much are you assessed at?—Our net assessment is 1,863*l.* I had thought that, perhaps, the Committee might wish to know the per-centage of the cost of management to the income of last year, because last year was rather an exceptionally good one. The general cost of management (it is in the report under a separate heading), the 3,425*l.*, gives 7*l.* 13*s.* 6*d.* per cent. of the total income. With regard to the office salaries and commission, which amount to 1,540*l.* out of the sum given as 1,672*l.*; that is to say, my own salary, our two collectors, and four regular clerks, including occasional clerks for our election work; those amounts come to about 3*l.* 9*s.* 2*d.* per cent.

25423. Is that all you wish to say?—That is all.

The Witness is directed to withdraw.

29 June 1891.

MR. JOSEPH E. ALLEN, is called in; and, having been sworn, is Examined, as follows:

Chairman.

25424. You are the Secretary of the Hospital for Diseases of the Speech and Ear?—An institution, we call it, for affections of the speech and ear.

25425. Is that a hospital with beds?—No, only for out-patients.

25426. How was it started in the first instance; when was it started?—It was started in the beginning of 1885, and by a committee, many of whom were private patients of Dr. Abbott's.

25427. And then you started this dispensary?—An institution we called it; we never called it a hospital.

25428. For these special diseases?—At first it was only for the speech; about two years after we took ear cases.

Chairman—continued.

25429. How many out-patients did you get in the last year?—Between 700 and 800.

25430. Is this institution in existence still?—It is not.

25431. Why has it ceased to be in existence?—For want of support, and the doctor became ill; he met with a railway accident, and we could not find a successor to perform his duties gratuitously, so we decided to close it.

25432. And there is no prospect of its being re-opened?—No.

Chairman.] Then I need not trouble you further; I am sorry you should have had the trouble of coming here.

The Witness is directed to withdraw.

MR. JOHN MACCOMBIE, M.D., is called in; and, having been sworn, is Examined, as follows:

Chairman.

25433. You are the Medical Superintendent, are you not, of the South Eastern Hospital?—Yes.

25434. That is under the poor law?—Yes.

25435. How long have you been superintendent there?—Since 1878.

25436. And when was your hospital built?—It was built in 1876 and 1877.

25437. For what purpose is it used?—For fever, and a limited number of small-pox cases; not exceeding five small-pox cases at present.

25438. Do you take any case of fever?—We take all kinds of fevers.

25439. Do you take diphtheria?—We take diphtheria, typhus fever, enteric fever, and scarlet fever, and relapsing fever.

25440. What amount of medical assistance do you have?—I have two or three assistants, sometimes two, with a clinical assistant, who is an unpaid officer; or three assistant medical officers without the clinical assistant.

25441. Are those medical officers paid, or are they an honorary staff?—They are paid.

25442. You, of course, are a salaried officer; what salary do you receive?—£. 500 a year.

25443. And board and lodging?—No, I have a furnished house, and I pay for my board.

25444. How many beds have you got?—Four hundred and sixty-two.

25445. At times are there a very small number of patients?—At present there is the smallest number I have had for years; 150 or thereabouts; usually we do not have less than 200.

25446. Do you keep up the same staff for the 200 or 150 patients as you would for the 400?—No, the medical staff would then be myself and assistant medical officer, and a clinical assistant.

25447. I am speaking more of the nursing staff; would you keep up the same?—No, we should reduce the nursing staff.

25448. Then of course you would require a very large increase of your nursing staff when all the beds were occupied?—Yes.

25449. Would you have considerable difficulty

Chairman—continued.

in getting them?—We have considerable difficulty in getting them

25450. Do you take nurses other than those called hospital trained nurses?—Yes, we take untrained women, and engage them as assistant nurses, but most of our charge nurses are hospital trained.

25451. Those are all, of course, under you, as the head of the establishment, but the matron has supervision over the nurses?—Yes, she has, they are under the control of the matron, and she is under my control.

25452. As a matter of fact, does she arrange all the details of the discipline?—No, she does not arrange all the matters of discipline, but she would arrange the nurses who are to take duty in a certain ward, submitting the names to me for my approval.

25453. You would be guided by her?—To a great extent.

25454. Is she a hospital trained nurse?—She is.

25455. Then could you explain to us what the organisation of the hospital is. There is yourself, and your assistant, and the nurses; are there any other officers?—Commencing with myself, next come the steward and the matron, and then the housekeeper, and then there is a laundress and a cook; and of course all these officers have others under them.

25456. Do you find that your administrative duties interfere with your medical duties?—No.

25457. You can carry them all on?—Yes.

25458. Students are admitted, are they not, now?—Yes, students are admitted; we have not very many at present.

25459. That has only been the case for two years, has it not?—It has not been a year yet.

25460. Do they come in classes from the hospitals, or do they come individually?—I have only had one class, and they came from St. Thomas's Hospital; they attend at a certain hour, subject to my convenience and their own; I arrange a certain hour for them to attend.

25461. Do

29 June 1891.]

Mr. MACCOMBIE, M.D.

[Continued.]

Chairman—continued.

25461. Do you have sufficient medical assistance?—At present I have.

25462. What has been the largest number of beds you have had occupied at one time?—Four hundred and sixty.

25463. And then was the medical assistance sufficient?—We had very hard work, we could not have gone on for 12 months as we were doing, I should have required more assistance.

25464. Do you ever train your own nurses?—We train a certain number of those that we take on as assistant nurses; we train some of these to become fever trained nurses.

25465. Those whom you call hospital trained nurses have been trained in a general hospital?—Yes.

25466. And who know nursing in all its branches?—Except fevers. In general hospitals the nurses acquire little knowledge of fever nursing.

Earl of Kimberley.

25467. Have you any difficulty or embarrassment from the admission of students into your asylum?—In what way?

25468. A suggestion has been made that there was difficulty; I wanted to know whether you thought there was any inconvenience or difficulty likely to result from that?—No, I do not think so; I take them round and demonstrate the cases to them, and they never go into the hospital unless I am present.

25469. You see no objection to their admission?—None whatever.

Earl Cathcart.

25470. Where was your previous experience; what were you before?—I was assistant medical officer at the Homerton Fever Hospital.

25471. And what was your own hospital?—Aberdeen.

25472. You were not in any London hospital?—No.

25473. You were selected from a number of candidates, were you, for this appointment?—I was selected from a number of candidates for the Homerton appointment, and then I was offered this appointment.

25474. Will you kindly explain what this means in Burdett's Hospital Annual: "Visitors are only admitted in cases of extreme urgency;" what is your rule for that?—The managers' rule is, that visitors are only admitted to patients who are dangerously ill.

25475. Then you do admit people to visit cases that are highly infectious?—Yes, as a rule only to those who in the opinion of the medical officer are so ill that it is necessary to allow their friends to see them.

25476. Do you take any precaution as to the disinfection of such visitors?—They put on an over-all and a hood before visiting the ward, and before they leave the hospital they wash their hands and faces with carbolic soap.

25477. Have you ever traced any case of infection being conveyed by a person leaving the hospital who had been admitted as a visitor?—I cannot remember a case at the present moment.

(24.)

Chairman.

25478. You have a committee of management, have you not?—Yes.

25479. That is from members of the Asylums Board?—Yes.

25480. What do they do?—The committee of management meet once a fortnight, and they transact the business of the hospital. They first of all read the minutes and approve of the minutes of the previous meeting; and then they consider the correspondence of the central board, and they take the officers' reports, that is to say my own report, the report of the stewards, and the report of the matron. Then they have the steward's requisition book which contains the requisitions of the provisions, the clothing, and everything likely to be wanted during the succeeding fortnight; and that has to be approved of by them before the goods can be ordered.

25481. Then do they receive complaints from the patients or the staff?—Yes, they will receive complaints from patients or staff, if any. Of course I have to report to the committee the number of patients, any defects in drainage, or any other matter which I think the committee should know of. They are the managing body of the asylum, and in their absence I am their deputy.

25482. What pay does the matron receive?—£. 100 a year.

25483. Could you tell us what is the range of pay of the different nurses?—The nurses commence at 30 *l.*, rising to 36 *l.*; there is no fixed rate of increase, and they may have the maximum when engaged. For instance, with regard to diphtheria nurses they get the maximum when they come, on account of the very dangerous nature of the duties.

25484. What do the assistant nurses get?—The assistant nurses get from 22 *l.* to 26 *l.*; the ward servants have 18 *l.* a year.

25485. Did you draw up the scheme for the nurses, their hours of duty, and so forth?—The managers have arranged the hours of the nurses; before they did so, I drew up a scheme for my own hospital, but since then they have made a uniform system of hours for all the hospitals under their control.

25486. And you have difficulty in getting nurses you have told us?—Considerable difficulty, sometimes very great difficulty; at times suitable nurses are hardly procurable.

25487. Is that because of the dangerous nature of the duties?—Partly on account of the dangerous nature of the duties; some women are timid, and in other cases their parents or relations will not allow them to come; but it is partly on account of the social isolation which fever nurses and all officers at fever hospitals are subject to; one is socially isolated as it were from one's friends.

25488. But the pay is better than in ordinary hospitals?—It is better; if it were not we should not be able to get nurses at all.

25489. At the same time the pay of the matron is rather less than in the general hospitals?—It is not so great as in many general hospitals I know.

25490. Is that the maximum pay, 100 *l.*?—That is the maximum at present.

4 T 3

25491. Is

29 June 1891.]

Mr. MACCOMBIE, M.D.

[Continued.]

Earl Cathcart.

25491. Is there some regulation about the nurses taking baths before they go out?—Yes.

25492. Is that carried out?—Yes.

25493. I thought it was impossible to carry that out always?—The regulation does not say absolutely that they are to take baths before going out, but in practice they all do so, unless under exceptional circumstances.

25494. But there are exceptional circumstances when they cannot?—Precisely.

25495. Have you had any cases of mixing diseases; that is to say, when a patient has come into the hospital with one disease, and gone out after having suffered from another?—Sometimes.

25496. That will happen?—Yes.

25497. Is it common at all?—No, it is not common, but it does happen.

25498. We were told in the case of another asylum, that such cases did occur; a man coming in with measles, for instance, and going out with scarlet fever?—We sometimes have measles introduced to a ward; a patient will develop measles a few days after admission, and that case may form a centre of infection for others in the same ward; it occurs in that way.

25499. Is it the case that two acute diseases cannot run concurrently in the same system?—Some acute diseases can run concurrently, not all.

25500. Are you very particular about the way the patients are bathed, not to use the same water?—There are printed directions in each bath room, enjoining upon the nurses that only one patient is to be bathed at one time, and that the water is to be run off immediately after the patient has had the bath.

25501. Have you had complaints about the diet of the patients?—Sometimes I have had a complaint about butter, or some little complaint, but no serious one.

25502. But you have read the account of the evidence given before the assistant commissioner the other day; there had been complaints about diet and that sort of thing in one of the asylums?—Yes.

25503. Nothing of that sort has occurred

Earl Cathcart—continued,

with you?—No; but I have sometimes to object to articles sent to the wards.

25504. Such as bad fish, over kept?—No, not fish. The steward has to see the goods, and he is supposed to reject any food that is unwholesome, or not in accordance with the terms of the contract.

25505. About sterilising the milk; do you sterilise the milk?—We scald the milk in the summer.

25506. Does that make it distasteful to the patients?—Some of them do not like it.

25507. Do you keep the milk in the corridors?—In the corridors in the open air.

25508. The result of that inquiry the other day would be no doubt to brush up all the other asylums very much, and put everybody on the *qui vive*?—If they wanted brushing up.

Chairman.

25509. Is the health of the nurses good?—Sometimes we have a great deal of illness, as you may naturally suppose, from the treatment of dangerous infectious diseases.

25510. They take these diseases easily?—Some take fevers very readily; some will take enteric fever and typhus fever very readily, also diphtheria; and with regard to scarlet fever, of course those who have not had it before are liable to take it. During the year there is a good deal of illness, more especially in the autumn months.

25511. Amongst a certain class of the staff?—Amongst nurses and ward servants, all those engaged in the wards, and to some extent amongst those engaged in the laundry.

25512. Where do these nurses sleep?—They partly sleep in the centre of the administrative block, and partly in cubicles built over the new bath-room and kitchen of the ward at the end of the wards.

25513. Then they sleep very close to their cases then?—Some of them. The entrance to their cubicle is from the corridor, and the rooms are above the level of the roof of the wards. It is a covered way, not a corridor; simply a slated roof over it.

The Witness is directed to withdraw.

MR. GEORGE BROWN is called in; and, having been sworn, is Examined, as follows:

Chairman.

25514. You are a General Practitioner?—Yes.

25515. Will you tell me what qualifications you hold?—Member of the Royal College of Surgeons of England, and licentiate of the Society of Apothecaries, London.

25516. And you are chairman of the General Practitioners' Union, are you not?—I am.

25517. Would you tell me what that union is?—It is a union which has recently been formed, chiefly, I may say, in view of this inquiry. We found that there was no other medical organization which took up the question of hospital abuses in a public manner, with a view of giving evidence or securing reforms. Not-

Chairman—continued.

withstanding that a committee was appointed at the annual meeting of the British Medical Association last year for that very purpose, they have not met during the whole year. I was appointed a member of that committee, and other gentlemen thinking, as I do, that general practitioners ought to have an opportunity of expressing their views on this subject, we decided to form an independent general practitioners' union; and in March last we commenced our operations; and I may say that the association has met with a very great deal of support from the profession, especially in London.

25518. How long have you been in practice?—Seventeen years.

25519. Chiefly

29 June 1891.]

Mr. BROWN.

[Continued.]

Chairman—continued.

25519. Chiefly in what district?—Chiefly in the north of London. I have been in general practice in Islington for nearly the whole period.

25520. Are you surrounded by hospitals?—There are a great many hospitals, but not so many in the north of London as in Central London. I am not practising in North London at this present time; I sold my practice there.

25521. Where are you now practising?—In Threadneedle-street, in the City.

25522. You have no hospital close at hand there?—I do not see patients in the evening, chiefly in the day now.

25523. Is it your opinion that the charity of the hospitals is abused?—Decidedly, very much.

25524. On what do you base that opinion?—Well, both on my observations as a student when at Charing Cross Hospital, as a house surgeon at Charing Cross Hospital, as a resident medical officer at the North Eastern Hospital for Children in the Hackney-road, and also on my long experience as a medical practitioner.

25525. With regard to your experience as a medical practitioner, have you found this, that patients left you and went to a hospital?—I have found that at times; my patients have occasionally done that.

25526. And that many people go to the hospitals who could well afford to pay?—Yes; many people go to the hospitals who could well afford to pay.

25527. On what do you base that opinion?—From their position, being able to keep carriages and that sort of thing.

25528. Do you think that many people go to the hospital who keep carriages?—I have known a patient who has kept several horses send his children to the hospitals. People in good position have sent their children by their servants. I do not suppose that the hospital authorities knew; I do not suppose they could have made inquiries. I had one case in particular at the Ophthalmic Hospital, Moorfields; a gentleman holding a very good public position in London, I should think his income amounts to, or I suppose he is spending a matter of, 1,000*l.* or 1,500*l.* a year, and the children were sent to Moorfields, and attended there, my own patients.

25529. Now have you any suggestion to make by which that could be put a stop to?—Well, I should have a strict system of inquiry at all hospitals, so as to stop the indiscriminate admission of out-patients. I mean to say that people who come to apply for letters frequently are admitted on the first application, as a rule, without any recommendation. I should stop that entirely, and no case should be admitted to an out-patient department unless it was either by a certificate from a medical man outside, or a clergyman, or some organisation such as the Charity Organisation Society, that the person applying for relief was a fit and proper person to have charitable relief.

25530. Then would you treat them once, or send them away, if they came without any recommendation at all?—If it were an unsuitable case I should not treat them at all, but send them about their business. Hospitals should not be for every loafer or person who fancies himself ill to come into a hospital and stop for

(24.)

Chairman—continued.

two or three hours by a nice fire and have a chat and gossip with the people about; a great deal of that is done.

25531. Was it your experience at Charing Cross Hospital that a large number of trifling cases came to the hospital?—A majority of quite trivial cases, cases of people not having much appetite, cases of “wind” by the hundred; one would give them a rhubarb mixture and a mixture containing salts and peppermint, and send them away with a large bottle as much as one would like to drink in a month.

25532. There were many serious cases among them?—There were many serious cases among them; the physicians had to discriminate them, and they would give them a fair examination; but the others would be “knocked off” at the rate of 50 or 60 cases an hour. I have myself seen cases at the rate of 60 an hour, and have been obliged to do it to get through the number.

25533. What sort of cases would those be?—“Got a little cough, Sir,” “cough in the morning,” “a little sickness in the morning”; a great many women, who are gin drinkers, will come with dyspepsia and “wind.” In many hospitals time is wasted in the most reckless manner in that way. The hospitals being free to the poor, they come in in rags and tatters, and they say they feel queer inside; they get a little medicine and are sent away. Under the present system that is inevitable.

25534. Then the time of the doctors is wasted in these cases?—Perfectly wasted.

25535. Could that be put a stop to by organization?—It could be put a stop to by appointing a medical officer to regulate the admission of out-patients at the door when they come in. They would be handed over to the secretary; then he would send them up to the doctor, who would see at once whether it was a suitable case; he would take their temperature, to see whether it was a fever case, and one that should not be admitted with other patients, because a great many infectious diseases are conveyed by people sitting together in hospitals; he would take the temperature, and see if the case was suitable, and if it was a suitable case he would say: “This is sufficiently grave to occupy the attention of a consulting physician.” It is a simple waste of a physician’s time to sit hour after hour writing “repeat mixture” for these trivial cases, and they should not be called upon to do it. That can be done better outside, at dispensaries, provident dispensaries, or by the local practitioners, or the poor law infirmaries.

25536. Have you known any cases that have been wrongly treated in the extreme hurry that there must be under the present system?—I have.

25537. How did you come across them?—In my practice at Islington, I had two cases of dislocation of the shoulder-joint in one week, which had been attended at different hospitals. In the one case, which was an able-bodied fine man, very stout, over 40 years of age, he dislocated his shoulder; he had been attended at a hospital, and from what I could elicit, he had not seen any surgeon, “young fellows” he described them as; probably they were dressers. They treated him first by putting his arm in a sling and giving him

4 T 4

29 June 1891.]

Mr. BROWN.

[Continued.]

Chairman—continued.

him embrocations to rub it. He was a patient of mine. I happened to be in the West of England, taking my usual summer holiday. At the end of a month I came back, and in the following week he came to see me. I found his arm was dislocated; no attempt had been made to reduce it, and the man would have lost the proper use of his arm for the rest of his days. I reduced it under chloroform, with the assistance of three other medical men. And I had another case come to me in the following week, which had been at another hospital; that had been of such long standing, and he was such an old man, that I would not attempt to reduce it.

25538. Was that wrong diagnosis owing to the great crowd of out-patients, and the insufficient time to devote to them?—Owing to the facts of these patients being turned over to be seen by students, or clinical clerks, or junior resident officers, who really are not competent.

25539. But in a well-organised hospital would patients be seen by dressers, and clerks, and junior officers?—They often are.

25540. There might be an emergency, and the regular man might be called away?—The casual cases often are treated like that. You see you cannot always have a first class man at hand, at least you have not always, as a matter of fact; you have not always a senior surgeon, or one of the regular honorary staff on the premises, and these accidents happen, and they must see whom they can.

25541. You think that general hospitals are abused; are special hospitals also abused in your opinion?—Yes, more than the general hospitals.

25542. How do you account for that?—At the special hospitals, I think the secretaries are over desirous to increase the number of patients they get in order to make their advertisements very taking to the public. "So many cases attended last year," 15,000 or 20,000; if they can make it 50,000 so much the better; and I have found people well able to pay who had been received at special hospitals, and received attendance, paying as much as 2 s. 6 d. a week; I have known that amount taken from them.

25543. But now in the part of Islington where you practised, what was the ordinary fee; how much a visit?—Two shillings and 2 s. 6 d. a visit would be the fee for the working classes in the North London district, where I have had most experience.

25544. Is that a very poor district?—No; a working class and middle class district. Of course you will have better fees from the middle class, but 2 s. and 2 s. 6 d. have been the fees; but of late years the doctors have been obliged to take lower fees in consequence of the increase of hospitals and dispensaries; frequently 1 s. and 1 s. 6 d. may be taken.

25545. Then you think that the special hospitals are an evil?—I think they are a great evil, an evil all round.

25546. That their work is done by the general hospitals?—It should be.

25547. Do you call the Lock Hospital a special hospital?—Well, it is a special hospital for a

Chairman—continued.

specific disease, and I should like to see lock hospitals established; I should like them maintained, and I should maintain them in connection with the Poor Law. In my opinion persons who are suffering from those diseases are not proper objects for the public charity, and to send round the collecting boxes in churches and chapels for. If they cannot afford to pay for the private attendance of venereal diseases they should be consigned to the pauper institution, to the lock wards of our pauper infirmaries.

25548. Would you like to see the power of detention given in such cases?—As a sanitary measure, I should; I think it is most desirable in the public interest.

25549. Are the special hospitals little attended by students?—Very little; students cannot attend the general hospitals and the special as well; there are so many lectures and classes to attend; and there is the going round the wards and so on so that students have not really much time to go round to the special hospitals.

25550. You said just now that you, as a general practitioner, were unfairly competed with by all this free charity?—Yes, very unfairly. Within the last 20 years the fees of medical men have come down very much. I have known men who had been in fair practice and have been obliged to start cheap work at certain hours to see the poor people, at 6 d. and 1 s. a visit and so on.

25551. Do you see many patients in the evening?—I do not now; but I used to see a great many; I have given up the evening work.

25552. Would it be a good thing if the general hospitals could open their hospitals in the evening?—I think it would crush out general practice altogether; I think it would be a very bad thing indeed. The class of cases who want hospital treatment can apply in the day, and would be sent in the day. General practitioners are not opposed to the hospitals if they are properly managed and worked; indeed medical men would send and do send patients if proper patients. Whenever we find we have a patient who cannot afford to go on with attendance, or whose case is of such a nature as to demand more expensive appliances or different treatment from that which they can find in their own homes, we are only too glad to send them to hospitals and find beds for them.

25553. You would like to see the out-patient departments used as consulting departments?—Yes; for cases which can be made of use for the education of medical students.

25554. May I gather that your union is opposed to the springing up of special hospitals?—Most decidedly; and we advocate the forming of a central board.

25555. To be composed of what?—It should be composed of representatives of the hospitals, of the public, as represented by the Charity Organization Society, and of general practitioners as well, whose interests are largely concerned. I think also that on this board the Government should appoint a certain proportion of the members. There would be work for a large board; it might be composed of some 60 members, a sixth of whom might be appointed by the representatives of hospitals, a sixth by the representatives of the Hospital Sunday Fund, who are well acquainted with

29 June 1891.]

Mr. BROWN.

[Continued.]

Chairman—continued.

with how hospitals should be worked, and their abuses; representatives of the Hospital Saturday Fund, which comprises a large number of working-class people who would see that their interests were properly looked after, and that the hospitals were not unduly closed against them; I would also include the Charity Organization Society having perhaps a sixth; general practitioners should have a sixth in the representation, and the Government a sixth. In that way you would have an independent body who would, I think, see that the money devoted to public charities in London was expended for the objects for which it was contributed.

25556. Would you like to see the hospitals put on the rates?—I do not think it would be necessary.

25557. But if you had so many doctors on this board they would have the right to supervise the hospitals?—Yes, it is the duty of the Government to supervise and protect the public against imposition and abuses. I should take that as part of their duty.

Earl Cathcart.

25558. You are aware that many venereal cases are cases of innocent persons who have contracted the disease from the misconduct of others?—There are undoubtedly some; I will not say many.

25559. You think there are not many such cases?—Not many; they would scarcely be accounted many if you took the percentage.

25560. But there are such cases?—There are cases of the kind undoubtedly.

25561. Innocent women infected by their husbands for instance?—Yes.

25562. And also infected through the foetus?—Yes; but they scarcely apply for hospital treatment; they find their way into the hands of general practitioners, I think, more than into hospitals.

Earl of Arran.

25563. What would be the duties in your opinion of a board constituted in such a way as you have just described?—To see that the funds are properly expended, that is so say in the general administration, the purchasing of the stores in hospitals, food and so on, because I think a great deal is done at present in the way of purchase and sales that would not stand investigation. Also to give a license or grant for a hospital to be established. At present anyone can start a hospital. I know houses of which I suppose the rent is not 25 *l.* a year, where they have bills up, "Hospital for Treatment of Disease of the Skin," or some special affection; the upper floors let out in tenements, and the doctor attending in the morning and taking his money. It is really a fraud upon the public, and it should be stopped. No one should be allowed to call a private shop a hospital, which implies that it is a public institution. The name should be sacred.

25564. As regards your first object of the board, the superintending of the buying and selling, and so on, would you not then be superseding the ordinary board of management of the hospital, to a great degree?—That is to say, they should have power to supervise in order to

Earl of Arran—continued.

see whether there are any abuses. We know that the cost of working a hospital varies very considerably, and that must be due either to bad management, bad buying, or even sometimes worse.

25565. In your opinion what would be the effect of the establishment of a board of that sort upon the subscriptions of the public; do you think they would be equally ready to subscribe?—I think they would be more ready to subscribe if they knew that the money was being well administered. A good many people will not give to hospitals now, because they know that the money is spent in a way they would not desire, and in a way which is really not charity.

Chairman.

25566. How do they know that the money is not well spent?—I suppose everyone who has had experience in London must have known cases of friends or neighbours of their own going to hospitals and having treatment, who were not really entitled to it; it is so common.

25567. Because of their pecuniary position, not entitled to it, you mean?—Yes. I have had cases brought to my knowledge of people getting 500 *l.* a year who have gone to hospitals. Who would subscribe to a hospital if they knew that that class of person obtained relief to any great extent? I have a case before me here which went to King's College Hospital. "A patient of mine" (writes a doctor in Kensington) "consulted a high authority for piles and paid him two guineas. He was told that 50 guineas would be charged for a private operation; he waited a time and was then admitted to King's College Hospital, and successfully operated on by the surgeon whom he had previously consulted. This patient died worth more than 50,000 *l.*" Knowing such a fact as that I would never subscribe a penny to a hospital that admitted such cases.

25568. And you think that that is the opinion of the public, too?—That is the growing opinion on the part of the public. I find it so among my better-class patients.

25569. Have you got anything to say about the mode of starting special hospitals?—Yes. The general mode (and I have devoted a great deal of time to this subject, and written a great many articles on it in medical papers) is that these special hospitals are started by a medical man who either has failed in getting on appointment at his own hospital, or has had a quarrel with the staff, and has seceded from the hospital that he was formerly connected with; and he has got his friends together to form a committee, and they have taken a private house and started a hospital, and immediately appealed to the public for funds, and called it by some high-sounding name, say "The Royal British Hospital for the treatment of so-and-so" or "The Universal Hospital for so-and-so," and it is put before the public; and it is found that if you circularize the public you are bound to get a certain percentage of returns. They are started for private purposes, and not really for purposes of public charity. You have had evidence, I think, in regard to hospitals already, somewhat to that effect. I have read the evidence before you

29 June 1891.]

Mr. BROWN.

[Continued.]

Chairman—continued.

you relating to some three or four hospitals, hospitals for fistula, and some of our throat hospitals.

25570. Then as regards dispensaries have you any opinion about them; they are really large out-patient departments, are they not?—Yes, large out-patient departments.

25571. Do they make any inquiry?—Not sufficient; but Dr Dawson, a member of our association who is in attendance here to-day, is living in the midst of a very large district supplied by dispensaries, having more dispensaries within half-a-mile of his practice I think than can be found in any other part of the metropolis, and he knows a great deal about their work, if your Lordships like to examine him latter on to-day or another day.

25572. Are you able to trace by your books patients who have left you and gone to a hospital?—Yes, patients who have gone away temporarily to a hospital and have come back again.

25573. Who have gone for consultation there, you mean?—Yes, I should take it that they were people who would have been able to pay for consultation. If the consulting doctors had done as I am happy to find that they are doing now, if they had made inquiries, I should have been able to have got them a consultation fee for the work they did for nothing. I may say that since this inquiry it has come to my knowledge, whether through our association or its agents I cannot say, that physicians are making a little inquiry.

25574. You mean the physicians of hospitals?—Physicians of hospitals. Some of them are making inquiries into the position of patients and refusing to attend. This letter, which is dated the 11th June, was put into my hands a few days ago, and was sent by a consulting physician at one of our hospitals to a doctor who is a member of the executive committee of our association. He writes, "Dear Dr. . . . , At my out-patient department to-day a Mrs. N. brought her little girl for my opinion. She said she has had her child under your care. She struck me as able to pay for medical advice in an ordinary way; so I did not encourage her to come again, but said I would write to you, as I do not approve of hospitals robbing practitioners in the wholesale way that is somewhat the fashion now. I advised her to send the child to its grandmother's at the seaside at Whitstable, to let her walk for some time, &c. I shall be glad to have a line from you on the subject. Hoping I have acted for the best, believe me to be yours very truly." Your Lordship can see the name if you like (*handing the letter to the Chairman*). Well, if that were done generally, we, as general practitioners, should have nothing to complain of, but I think that physicians very often lack moral courage to do it.

25575. If you abolished special hospitals would you view with satisfaction the extension of special departments of general hospitals?—Certainly, the special departments should be extended, and it is most desirable in the interests of medical education. At present, at many of our hospitals, we have very few opportunities indeed of studying some of the most important diseases which

Chairman—continued.

we are called upon to treat in medical practice. Of course, infectious diseases necessarily cannot be studied at the general hospitals; they could not be admitted. I refer, of course, to cases of small-pox, measles, and similar diseases. Many medical men are qualified and yet have never seen a case. That state of things, of course, should not be allowed to exist; students ought to be compelled to take out a course at one of our infectious hospitals, a three or six months' course, so as to become acquainted with the appearance of those diseases. I have known medical men make great mistakes, sending measles cases off to the small-pox hospitals, for instance, through not being properly educated in the recognition of infectious diseases. Then, again, take cases of the eye; in some of our small hospitals it is impossible to study diseases of the eye; the students do not see the cases, because they do not come to the general hospitals. So too with cases of the peculiar diseases of women, abdominal tumours and that sort of thing; they never see them at some of the small general hospitals; they go off to the special hospitals. In my own case, for instance, I never saw the operation of ovariectomy performed whilst I was a student. Skin diseases again, they have not the proper opportunity of seeing; those cases go to the special hospitals. I would suggest that such hospitals as the skin, eye, and other special hospitals should be affiliated to the general hospitals nearest to them; for instance, the Orthopaedic Hospital and the Throat Hospital in the Portland-road, and the Hospital for Paralysis in Queen-square, Bloomsbury, might all be affiliated to the University College Hospital, and the students there might have an opportunity of studying these diseases.

25576. That is more with regard to the educational part of the question?—As to the educational part. If students wish to study such cases now they have to pay extra fees, which makes it very expensive and deters them. At University College they have not really sufficient beds for the students to act as clinical clerks; they have such a large number of students; they want to extend the hospital, but that might be remedied by affiliating the hospitals in the immediate neighbourhood already existing, which would give ample opportunities.

25577. You have had great experience of London; do you think that the medical relief is adequate for the requirements, taking both the poor law medical relief and the charities; first, is the poor law relief sufficient?—The poor law relief is sufficient for the poor; it has been much improved of late; they have excellent dispensaries and a very good medical staff equal to anything; but there are difficulties in obtaining a letter for relief I think put in the way of those who are deserving, and they can only get it at certain times; there ought to be greater opportunity for their getting relief at the public dispensaries; I mean at the poor law infirmaries. With regard to the facilities for medical relief, I think there are more than London requires; that is to say the hospitals and dispensaries at present existing are more than the public need.

25578. Therefore, you think that new hospitals are not required?—Perfectly unnecessary. Of course there are certain districts in London which

29 June 1891.]

Mr. BROWN.

[Continued.]

Chairman—continued.

which are not properly supplied with hospital accommodation; for instance, there is that huge district in and about the Old Kent-road, near the Bricklayer's Arms Station, utterly unprovided with hospital accommodation; whilst in the Central district we are over-supplied; we have King's College, Westminster, Charing Cross, and St. Bartholomew's, all within reasonable distance of one another, within a very short distance. One of those could certainly be moved to another district; in fact two of them I think might be. King's College might very well be moved to St. Pancras, in the neighbourhood of the great railways in the north of London, where it would be useful, and Westminster might very well be moved to the south side of the river.

25579. Is the south side of the river very deficient in hospital accommodation?—The south side is more deficient than the north side; they are very deficient on the south side. The effect of the crowding of these hospitals in the central district is to annihilate general practice in the Central district of London. If you take a radius bounded I may say by a line drawn from Oxford Circus along Oxford-street to Holborn, and on through Newgate-street to Cheapside, and then again draw a line from Newgate-street to the Thames, and a line from there till you get to Whitehall and Oxford Circus again, there are only about 40 or 50 general practitioners in that whole district, which ought really to be able to keep 200 medical men hard at work; and even these I speak of would not be able to live in the district were it not that many of them hold poor law appointments for the St. Giles', and Strand Union, or police appointments or some public appointment which gives them an income independent of general practice.

25580. In fact the location of the hospitals in your opinion wants to be altered?—Yes, it does. I would not suppress a general hospital at present existing; only I would have them placed where a central board wanted them. Such a board would be very useful indeed in deciding upon the localities where they should be placed. Of course King's College can fill its beds, but how does it fill them? With patients sent from the country.

25581. Is there anything else you wish to state to the Committee?—I do not think of anything else now.

Lord Lamington.

25582. About the location of hospitals we had evidence that it did not matter much where a hospital was placed, because patients would come miles to a particular hospital that they liked?—Yes, but I think you will see that it is desirable not to take patients who have been crushed on a railway or who have met with street accidents, many miles over the London streets to take them to the hospital; the hospital should be brought as near as possible to where the accidents are happening.

25583. You do not think that would hurt the receipts of the hospital?—Not at all.

25584. At present in the district of St. Pancras there is only one small hospital, the North Western Hospital, and St. Pancras has a huge
(24.)

Lord Lamington—continued.

population of a quarter of a million, I suppose?—That hospital has not been in existence long enough to gain a reputation or name.

25585. Do not you think that it is its distance from the centre of London which prevents its getting support?—No, if one of the other hospitals was moved up to that neighbourhood, and put on the ground where the North Western Hospital exists, it would be much better supported.

25586. Or a hospital might have a small hospital there, a department for accidents, for cases requiring immediate attention?—I think it is better to have a general hospital, because the staff could attend to the whole class of patients at the same time. It would not be an economy of force to take a physician or surgeon from Harley-street down to the Old Kent-road to see two or three, or half-a-dozen patients, when he might go through and see 20 or 30 all at the same time. Neither would it be of so much value for education. These small hospitals would be of very little value for educational purposes; you want a hospital with a large number of beds for educational purposes.

25587. What would be the advantage of having 200 or so practitioners in this particular district you were mentioning just now, instead of the 40 or 50 that there are there at present?—The advantage would be that 200 medical practitioners might be earning an honest living instead of living in distressed circumstances, as many are now. I know medical men who have been in practice now upwards of 20 years, who would be glad to earn 25*s.* a week. A short time ago there was a sanitary inspector advertised for in a district in the east of London, and among the applicants, though I think the salary was only about 80*l.* or 90*l.* a year, there were a large number of medical men. That I had from the medical officer of health of the district.

25588. If you moved a hospital to a crowded part, the professional men in that district would equally object to it, I suppose?—If the hospital were equally abused as at the present time; but if the suggestions which we make, and which I hope your Lordships will see the force of, are carried out, it does not matter where you move the hospitals, the medical profession in the district cannot be hurt. The medical men are only hurt by the abuse of hospitals.

25589. Supposing you had this board that you have mentioned, what penalty would you suggest if there were abuses?—If there were a clear case where persons having an income of 500*l.* or 1,000*l.* a year by any means obtained admission to a hospital and received treatment, I would empower the board to recover the expenses and the fees as if they had been treated privately as private patients.

25590. If a patient paid to a hospital, would you object to that?—We object to the paying system in out-patient departments *in toto*; we think that it is subversive of all medical charity, and that it is demoralising.

25591. The fever hospitals are an exception?—Yes; I do not object to the paying system in hospitals established for such purposes, such as home hospitals, but a medical charity should

29 June 1891.]

Mr. BROWN.

[Continued.]

Lord *Lamington*—continued.

be a charity pure and simple, and its benefits should be free as the air we breathe to all who require them and are deserving of assistance.

Chairman.

25592. Then you do not object to a hospital having paying beds, but to a free hospital being used by persons who are able to provide medical attendance for themselves?—If it is a free hospital, it should be free entirely. I would establish home hospitals in the various districts of London, so as to supply every part, because it is very necessary indeed in many cases for people of moderate income to be able to get hospital treatment; to be put into a place where they can get good nursing. Supposing a gentleman is earning his 150 *l.* to 200 *l.* a year, and he is in lodgings, and is taken very ill, you cannot have a staff of nurses around him at the lodgings, or in a boarding-house; they wish to get him out, and the hospital is the place for him. If there were home hospitals, he would elect to go to one of those, and have his own doctor, no doubt. At the present time he is driven into a hospital. In the same way, the Dean of Lincoln, for instance, the other day was obliged to avail himself, after an accident, of the Charing Cross Hospital; at the same time it is almost a prostitution of medical charity to give it to the Dean of Lincoln, and to put boxes round in the workshops of the metropolis, and to ask working men, printers and tailoresses, and that sort of people, to contribute their penny or halfpenny a week to maintain an institution for the medical treatment of such persons as the Dean of Lincoln; I think it is not a proper thing to do.

25593. You do not know that he has not given a sum of money to the hospital?—He may have done so; but if there were those other institutions, home hospitals established, which there should be, such a case might be sent to one of those.

Earl of *Kimberley*.

25594. In the case of a serious accident the person must be taken to the nearest hospital?—Yes.

25595. Then it would not matter whether he were Archbishop of Canterbury or a man earning a few shillings a week; you would not shut him out?—No; I would not shut the hospitals against any case of a serious accident, but as soon as the patient is fit to be removed he should be discharged.

25596. May I ask you this question: do you think that the medical profession is more over-stocked than other professions?—I do think so.

25597. Why?—From the enormous number of medical men who are not earning their living by the practice of their profession.

25598. But if we were to have successive witnesses from successive professions, do not you think that everyone of them would inform us that his profession was largely over-stocked?—I have no doubt that others would find that there were too many; that there was too much competition; I daresay every profession would, but other professions do not suffer under the same disabilities as the medical profession. We have not free legal institutions, for instance, where one can get free legal advice; if the legal profession had to compete with a number of law

Earl of *Kimberley*—continued.

institutes where every comer could get legal advice for nothing, I think you would soon find the legal profession crying out as we do.

25599. The legal profession generally consider themselves over-stocked, do they not; I daresay you have heard that?—Yes.

25600. Now supposing that these institutions, hospitals, were to be reduced, which for some reasons, perhaps, they ought to be, to a narrower limit, is there any reason to suppose that the medical profession would not be just as full as before, that it would not fill up exactly to the demand upon it?—I have no doubt that the supply will always be more than equal to the demand.

25601. Is there any reason to suppose that the supply would not out-run the demand exactly as now?—They would not have the same reason for complaint.

25602. But the complaint arises from the profession being over-stocked; is there any reason to suppose that under any circumstances whatever the profession would not, in the circumstances of this country, be filled up to the brim as it were; in other words, if there was more work to be done there would be more practitioners?—Yes, the supply will always be equal to the demand, and be regulated by the demand to a great extent.

25603. Do you really think then that there is much in that argument at all about the profession being over-stocked?—I certainly think there is a great deal in the argument, where a medical man finds himself in practice, and he has been in the habit of receiving a certain income for years, say that his average has been 1,000 *l.* a year, and then he finds that, through the starting of hospitals as he believes, his income is suddenly reduced to 750 *l.*, or even less.

25604. What you would consider a real grievance, is that a medical man who has an established practice suddenly finds it cut away from him by the establishment of hospitals?—That is a real grievance. But then there is another grievance in this; I look out for grievances, I am rather accustomed to it, I think; but I think it is another grievance when a man wishes to start a practice, and to work up a practice, as I should have liked to have done a few years ago, in the West Central district, near the Strand, for him to find that the ground is already covered by free institutions, and that if I put my door-plate up in the neighbourhood I should not get one patient to call in 12 months by seeing it.

25605. Do you think there is any real foundation for that. Assuming (observe, I only say "assuming") that the patients are treated in the best possible way in hospitals, is there any reason whatever why, for the sake of somebody who is wanting to establish a practice, we should put an end to the system; upon what ground would you base that?—If the best treatment is given for nothing to people who can well afford to pay I think there is a reason.

25606. I am assuming that there exists a hospital which gives most satisfactory treatment to the patient who applies to it, and I will further put aside altogether, for the purpose of this argument, the question of pauperising patients; then putting aside those two arguments,

29 June 1891.]

Mr. BROWN.

[Continued.]

Earl of Kimberley—continued.

ments, has the community any interest whatever in letting a practitioner start in a particular place where he is not wanted; what is the interest of the community in it?—I do not see that it has any interest in it whatever.

25607. And supposing it was found that any practice which is now carried on by private practitioners could be better done by some large institution, apart from the grievance (which I fully admit) of cutting away from a person a practice already existing, is there any possible reason why the community should busy itself about the question whether new practitioners could establish themselves or not; is not that entirely a matter of no interest to the community at all?—It is a matter of interest to them if the community are appealed to for funds to carry on a medical charity.

25608. But supposing the community said, "That is the best way to expend funds," who has any interest in preventing it?—I have an interest in that institution not being called a charity. I object to that institution being called a charity.

25609. That is the general objection; an objection with regard to the institution having a pauperising effect, or any objection of that kind, is quite apart altogether from the question you have raised of the difficulty of any new medical practice being established, and I ask whether the community, society in general, has the slightest interest in the matter; whether it is of any consequence to anybody that this particular business should be established any more than that of any other trader?—If I choose to come to a place where I see patients for nothing it is no concern of anybody's if I choose to do it out of my own pocket.

25610. And if you cannot do it for nothing, it is no concern of anybody's, is it?—If I start an institution, and appeal to the public for charity, I think the public have the right to step in and say, "You are not carrying out a charitable object, you are serving your own ends, and we shall put a stop to it."

25611. That is quite a different matter. It may be very undesirable for charities to be extended to a certain class of people; I am on the question of the injury to a practitioner, and I want to know what interest the community has in the practitioner establishing himself in a particular place where he is not wanted?—Patients who cannot afford to pay a doctor are of no use to him. No doctor would attempt to establish a practice in a district where the people cannot pay him.

Lord Lamington.

25612. I asked you a question before, and you partly answered it; what penalties would you suggest to be imposed upon hospitals which broke the regulation; supposing people started a hospital, how would you punish a hospital that did not come up to the requirements of the Board?—I should caution them. A complaint would be made, and you would hear what they had to say upon the matter, and then if they persistently neglected the recommendation of the central board, I would take away from them their right to exist as a hospital, that is to say, if they appealed to the public for funds.

(24.)

Lord Lamington—continued.

25613. You see that you would want an Act of Parliament for that; how could you prevent an institution from appealing to the public?—I think that this board should be empowered, either by Act of Parliament or by an Order in Council, to regulate the establishment of hospitals in London, and to authorise the use of the term "hospital," or "infirmary," or "dispensary."

25614. You would have the hospitals under the Government entirely?—I would have them under a central board.

Chairman.

25615. I understand you to mean a central board with statutory powers?—Yes.

25616. It would not necessarily be a portion of the Government, but it would be necessary for it to have compulsory powers by Act of Parliament?—Yes. Of course the public would, I take it, be well represented on that board in such a way as I have described.

25617. Is there anything else you wish to state to the Committee?—I think I might have mentioned something in regard to hospital letters. I do not think that that is a desirable system. I think that it is very much abused; and speaking of letters for in and out-patients, I may say that I have known many large firms, and I have known banking establishments, subscribe to hospitals in the neighbourhood as a sort of insurance of their own employes and servants, and send them to the hospitals.

25618. How many members have you got in this union of yours?—Between 150 and 200.

25619. And how many practitioners are there in London?—I should think there are 3,000.

25620. That is rather a small proportion?—Yes; but we cannot expect them all to come in within a month or two.

25621. It has only been started lately, has it?—Only since March; we are getting applications every day for membership.

Earl of Kimberley.

25622. What sort of limits should be drawn as to wages between a patient who ought to pay, and a patient who was a fit subject for charitable relief?—It depends upon the number of children in the family.

25623. Take a single man; what sort of wages of an artisan ought to disqualify him from receiving relief, except of course in some special accident?—Of course it depends a great deal upon the case. A man earning 1*l.* a week could pay 1*s.* 6*d.* a week for three or four weeks; but if it were a serious case, a man earning 25*s.* or 30*s.* a week if single would be a proper subject of charitable relief; I mean in the case of an illness which would confine him to bed. He would not be a proper object if the ailment were a simple cut or an attack of diarrhoea.

25624. You would not admit such a case as an ordinary out-patient?—No, I would not.

25625. But of course you would admit him in the case of a long illness?—Yes.

25626. I was rather thinking of the out-patients; you would not admit such a man as an out-patient?—No. If he were earning 12*s.* or 15*s.*, or even up to 1*l.* a week, he might be admitted, but if a man is earning over 1*l.* a week

29 June 1891.]

Mr. BROWN.

[Continued.]

Earl of Kimberley—continued.

week he can afford to pay his 1s. or 1s. 6d. to a doctor for a trifling ailment; and in the case of the great many men who are earning from 25s. to 2l. a week, of course they could afford it. But I find that it is not the working classes getting that money who abuse the hos-

Earl of Kimberley—continued.

pitals most. I find the greatest abuse in going to general hospitals, and also to special hospitals, is in the case of people who wish to save a consultation fee; they wish to save that two guineas.

The Witness is directed to withdraw.

MR. WILLIAM EDWARD DAWSON, is called in; and, having been sworn; is Examined, as follows:

Chairman.

25627. You are a member of the General Practitioners' Union?—Yes.

25628. And you are an officer of it, are you not?—I am a member of the committee, and probably shall be the secretary of it in a few days. I had the first offer, but was not able to accept it then.

25629. Did you hear what the last witness said?—Yes.

25630. And do you generally indorse what he said?—Yes, I generally indorse all he said.

25631. He mentioned that there was one subject, public dispensaries, which you know a great deal of?—Yes, not private dispensaries, but charities. We have got eight within half a mile of Aldersgate Station, besides St. Bartholomew's Hospital, and three maternity charities.

25632. Do those dispensaries give all their advice and medicine for nothing?—No, unfortunately they have lately taken to what we designate as a system of twopences; that is to say, they are giving advice for 2d. and 3d. and 6d. a week, which is infinitely more injurious to me as a local medical practitioner than the former system of gratuitous medical relief.

25633. You think the people who did go to general practitioners now go to these places?—Yes, they use the charity, just the same as if they had a 2d. or 3d. butcher who was subsidised by charity, and a 1s. butcher who lived by his trade; they would leave the 1s. butcher and go to the 2d. one.

25634. Where did you get your medical education?—At the London Hospital and the Queen's University, Ireland.

25635. Did you find that persons used the hospital where you were educated who were not proper objects of charity?—I think I could give one instance to illustrate that. I was clinical clerk under Dr. Langdon Down at the London Hospital, and there was an instance of a bed being occupied for weeks together by the footman of a nobleman, who had the gout. That is one instance I recollect; and I recollect another instance in the out-patients' department, where one of our physicians said to a poor woman, "Hospitals are not intended for people like you; you must go to the infirmary."

25636. But how did this footman obtain admission?—By a governor's letter.

25637. Did they treat the man for gout as an in-patient?—Yes, certainly, in the medical ward.

25638. Do these dispensaries do nursing and visiting?—Visiting, not nursing.

25639. Is there anything you particularly wish to draw attention to beyond what Mr. Brown

Chairman—continued.

told us?—More particularly to this congestion in my special neighbourhood, the E.C. district of London, that is to say, within 1,000 yards, say, of Aldersgate-street Station on the Metropolitan Railway, there is not only St. Bartholomew's Hospital, but there are eight public dispensaries.

25640. Those are what you call the twopenny dispensaries?—The "copper" dispensaries they are locally known as.

25641. And those are almost entirely out-patient departments?—Those are entirely out-patient departments.

25642. And that cuts away your practice from you?—Yes, the working classes to me as a private practitioner are absolutely worthless, either for maternity or private practice. It is only in cases of emergency, when these dispensaries are shut up, that they will come and want to take me out at night.

25643. May I ask what the lowest fee you charge is?—My average fee is about 2s. 6d. for a visit, if paid at the time. The lowest possible fee I would accept from the poorest working man would be 1s., if paid at the time, for a bottle of medicine.

Earl of Kimberley.

25644. Where do you think this footman you have mentioned ought to have been treated?—I think the probability is that that man was earning 30s. a week, or its equivalent. The question just now put to Dr. Brown illustrated his case.

25645. And how would he get treated, according to your plan?—I think that, as he contracted this disease in a certain house, they should have kept him there till he got better.

25646. But it might have been entirely impossible for the master in that house to have kept him there?—Then he should have provided a nurse for him.

25647. If you know anything of the establishment of a London house, you may know that there are only a certain number of beds in it, and many of those are occupied in such a way as to make it impossible for a person having an illness to remain there; how would that person be treated, according to your idea?—A good many persons are treated with this complaint in lodgings; and certainly he could live for 30s. a week; and no doubt he had friends, or a mother, or sister, or someone of that kind, to look after him.

25648. Do

29 June 1891.]

Mr. DAWSON.

[*Continued.**Earl of Kimberley*—continued.

25648. Do not you think that that case would be more properly met by the master paying his expenses in the hospital?—Yes, it might.

25649. It is commonly supposed that it is very hard upon domestic servants to send them to a hospital, but may there not be something special

Earl of Kimberley—continued.

in their position that renders a hospital the only place where they can be sent?—There are paying wards to which people can go for a guinea a week, and get medical attendance and nursing.

The Witness is directed to withdraw.

Ordered, That this Committee be adjourned to Saturday next, at Eleven o'clock.

Die Sabbati, 4^o Julii, 1891.

LORDS PRESENT:

Earl of LAUDERDALE.
 Earl CATHCART.
 Earl of KIMBERLEY.
 Lord ZOUCHE OF HARYNGWORTH.
 Lord SANDHURST.

Lord LAMINGTON.
 Lord SUDLEY (*Earl of Arran*).
 Lord MONKSWELL.
 Lord THRING.

THE LORD SANDHURST, IN THE CHAIR.

MR. HENRY CHARLES BURDETT, is called in ; and, having been sworn, is Examined,
 as follows :

Chairman.

25650. You are the Secretary of the Stock Exchange, are you not?—Of the Share and Loan Department of the Stock Exchange.

25651. And you have for some considerable time given great attention to the medical relief of the metropolis, have you not?—Yes, and of the whole country.

25652. And have you had a practical experience of hospitals as well?—Yes, I have been resident in various hospitals for 15 years. I have held many offices in the hospitals, from superintendent to the minor medical appointments, and I have also been registrar of a medical school, so that I have gone through every phase of the administration of the hospitals personally ; and I am a governor of most London hospitals, and I am or have been on the committee of several of them, and am also an active member of the Council of the Metropolitan Hospital Sunday Fund.

25653. Speaking broadly, should you say that the work of the big general hospitals is well done?—Very well done. I ought perhaps to add to my previous answer that I have been in many countries throughout the world, and have inspected the hospitals of importance in every country. I am familiar with the working of continental and foreign systems and American and colonial systems. I may add that I have written a good deal on the subject, am the author of several books, and have now nearly completed a book entitled, “The Hospitals and Asylums of the World,” on which I have been engaged for the last 12 years, which deals with the whole question from first to last ; so that I really have had exceptional opportunities of understanding and knowing how matters stand with reference to medical relief in all parts of the world at the present time.

25654. And you say that on the whole you consider the work is well done by the big general hospitals ; I will take first the hospitals with schools?—I should say certainly.

25655. Is there any particular line where you could suggest improvement?—I think that as far as the London hospitals are concerned, and you are only speaking of London hospitals now I understand—

(24.) e

Chairman—continued.

25656. We are confined to London hospitals?—The great weakness of the London hospitals is their committees, and that is due to a distinct absence of self-denial on the part of the rising generation, the younger men of the class who ought to take seats upon the boards. There can be no doubt that any intelligent man who has had to manage hospitals, must recognise and regret the absence of self-denial on the part of many governors who ought to give time to administer these charities. The consequence is that it is a most difficult thing to get the right men to serve upon those committees, and all of us who are interested in the matter feel, and I think it is quite correct to say, that although of course there are hospitals which are exceptionally circumstanced in that respect, yet, taking it generally and broadly, the best thing that could happen to the voluntary hospitals would be a re-awakening of public interest to the extent of giving personal service to the work ; and that is one of the things which we particularly wish to see, especially amongst the younger men.

25657. Then as regards the charges of extravagance which have been frequently made, too high a payment of the staff and secretaries and so forth, do you consider that there is anything in them or not?—I think that anyone who looks to the condition of the labour market and to the requirements with regard to service from those who have to administer the hospitals as paid servants, will say that the remuneration is moderate ; and if anybody doubts that, I do not think it would be difficult to demonstrate by actual facts that that is literally true.

25658. How does the hospital accommodation, in your opinion, compare with the population of the metropolis ; do you think it is sufficient or that it is insufficient?—In the course of the evidence that I am going to give, I propose to deal with that question with reference to London, to provincial cities, and to large towns throughout the world. I have got out the figures showing you the proportion of beds to the population.

25659. If you like to give your evidence in your own way you can do so?—I wish, first of all, to begin by putting in the population of London at the present time, and during the last
 4 X
 10 years

4 July 1891.]

Mr. BURDETT.

[Continued.]

Chairman—continued.

10 years showing its growth. I have figures here which have been sent me from the Registrar General's office, giving the population of London, of the outer ring and of greater London, in the years 1881 to the year 1891 inclusive. I will only read two lines. In 1881 the population of London amounted to 3,831,719; that of the outer ring to 960,137.

Lord Thring.

25660. What does the outer ring mean, and what does "London" mean?—London is I fancy, an area within seven miles of Charing Cross, and the outer ring is the postal district. The total in 1881 for greater London is 4,791,856. Now in 1891 (and these are the estimated populations in the middle of each of the years) London proper amounted to 4,492,707, an increase roughly of 550,000 people. (*Lord Thring makes an explanation to the Committee.*)

25661. When you are talking of London you say that is an area of seven miles from Charing Cross?—I meant that I believed that that was so, but, in the face of your explanation, that it probably means the old metropolitan district.

25662. I think your population must be wrong. If it is sent by the Registrar General, the Registrar General has no means of calculating the population within seven miles of Charing Cross that I know of; when he is speaking of London he means something else?—Probably the old Metropolitan Board District. But, if you will allow me, I will ascertain exactly what the areas are that are covered by these terms.

Earl Cathcart.

25663. The metropolitan area is the term used in our order of reference?—Then that would take in greater London, the whole area.

(*After some remarks by the Earl of Kimberley.*)

Witness.] I have no doubt the Registrar General meant by London proper the County of London, and that the outer ring includes the whole of the Metropolitan Police District. These figures were obtained from the Registrar General's Office. I unfortunately left behind the letter which gave me a description of what these two things comprised, but I will let you have it.* I have said that in 1881 the population of greater London was 4,791,856; in 1891 London proper contained 4,492,707; the outer ring contained 1,384,683, making a total for greater London in 1891 of 5,877,390, as compared with a total in 1881 of 4,791,856, being an increase of about 1,100,000 in the 10 years. Now I should like to bring as forcibly as I can to the minds of the Committee my view that the criticisms with reference to the voluntary hospitals of London have been very largely unreasonable. I take it that no one ought to criticise anything unless he takes the trouble to go and investigate it for himself, to look into it, and to understand it; and I may say for myself that before, and since this Committee has been sitting, I have made it my business to follow up very carefully the criticisms which you have heard in this room, and to try and test the accuracy of

Earl Cathcart—continued.

many of the statements which were made. I have visited the hospitals, I have gone specially into those departments which have been most severely criticised, and I can only tell you, in the light of my experience of 25 years in their management, that I am surprised and thankful to find how efficient is the condition of the institutions which have been most criticised. It seems to me that an attack upon the hospitals in this country is in one way a good thing, because it will necessarily excite a certain amount of interest in the hospitals, and no doubt the result of the criticisms will be to do good, because it will awaken a certain amount of indignation and thereby brace up those who take an interest in our voluntary system. We thus often obtain by criticism a larger support and a better administration if it be possible, although necessarily the administration of great institutions like our hospitals must continuously progress, or else we shall get great inefficiency. Now I want to try and bring to your mind what a day's work represents in the voluntary hospitals of London. I find that the voluntary hospitals (excluding St. Bartholomew's and St. Thomas's Hospitals), contain at the present time 8,094 beds, of which 6,143 are constantly occupied during every day in the year; every day 3,800 out-patients are relieved; and the total cost of keeping all this machinery going amounts to 1,800*l.* per diem. In the work we have engaged 6,000 people, consisting of 1,350 honorary medical officers, 350 who are resident and paid; 2,100 nurses, 170 dispensers, 70 stewards and housekeepers, 50 chaplains, 200 secretaries, clerks, and accountants, and 1,700 various other employes, male and female. In addition to this you have constantly in training some 3,000 to 4,000 medical students, and something like 1,500 probationary nurses who are learning their work, and who are qualifying to do that work, either in the institutions or outside. I think that it must be admitted that the importance to the public (apart altogether from the poor) of the work of our hospitals is so great that certainly no thinking man would willingly do anything to make it more difficult to promote and continue the work as it has gone on so successfully for many years. I think, further, that in this connection I ought to point out that the great feature of the voluntary hospitals, as opposed to rate-supported hospitals, in my view, and their value, is, that they are always open to inspection. You can never go to a voluntary hospital in this country, if you ask to see anyone who is in charge, without being taken round and allowed to see everything or anything that you may be specially interested in. Now you cannot do that in a rate-supported institution; you find it immensely difficult to get into it; the friends themselves find it difficult. And I think this entire publicity is one of the great beauties of our voluntary system of hospital support in this country. In addition to the work which I have described as being done by voluntary hospitals, we have a system of rate-supported hospitals, and every day you have 1,800 fever beds maintained by the Metropolitan Asylums Board, and you have every day 13,203 beds available for the poor in the poor law infirmaries. Beyond this there are the sick ward beds which are contained in the work-houses

* *Note*—This letter states: "Inner or registration London is co-extensive with the administrative County of London, except that it includes the Hamlet of Penge. The outer ring includes the whole of the Metropolitan Police District that lies outside inner or registration London. Greater London includes both inner or registration London, and the outer ring being co-extensive with the Metropolitan and City Police Districts."

Mr. BURDETT.

[Continued]

Earl Cathcart—continued.

houses in some metropolitan districts where they have no poor law infirmaries under Mr. Gathorne Hardy's Act of 1864. Now I should like here, in passing, to say one thing in reference to the criticisms. You must remember that we have had really no serious criticisms, nothing which seriously affects the public confidence in our institutions in all the criticisms which have been made against the voluntary charities; but if you turn to the rate-supported institutions and look at the experience of 10 years in regard to them, you find that the criticisms, the official inquiries which have been held, and the results of those inquiries, prove that they would not stand, and they cannot stand the test that voluntary hospitals have stood in relation to their administration. I will only give one instance as an example. Lord Rosebury pointed out in 1888 that "the Eastern Hospital, which is one of the London State-supported infectious hospitals, was a place flowing with milk and honey, or rather with champagne and claret and Burgundy, and things which somebody liked better than milk and honey. It was consequently found that the patients there cost three times as much as those in any other hospital. The result of a short inquiry held, as regards the officials paid out of the rates, was that the superintendent resigned, the clerk of the committee absconded, the medical superintendent was suspended, and the clerk of the managers was cautioned. That puts in a sufficiently glaring way to appeal to any common sense, the difference between a hospital supported by rates, the expenditure of which no one particularly cares to look after, and that supported by voluntary subscriptions which it is the interest of every subscriber to see well spent. I do not pretend to say that all the rate-paid hospitals are like this; but what I do impress upon you is that there is more risk of jobbery, and extravagance, and culpable management in a rate-supported than in a voluntary hospital." Only the other day, it will be in the remembrance of the Committee, this very same hospital, the Eastern Hospital, was again put in the crucible, but as the Commission issued by the Local Government Board has not reported I will not express my view upon the evidence; but those who saw the evidence will see that in the main the same charges were there produced against this same institution which were found to be proved on a former inquiry 10 years ago. I only want to put that in evidence, so that the Committee may have clearly before them the fact that we have two classes of institutions in this country, voluntary hospitals and rate-supported hospitals, and that when the two are compared, with regard to management and administration, as shown by the criticism (and you have been sitting here two years, so that you will have had all the discontented people coming here to give evidence), when tested by the facts, you find that the voluntary hospitals come out of the enquiry practically unscathed, and the rate-supported hospitals leave very much to be desired. That is all I propose to say with reference to a day's work in the hospitals. I do not know whether it would be convenient to ask me any questions on what I have stated, before I go on to the next point, which is the total income and expenditure of the hospitals.

(24.)

Earl of Kimberley.

25664. You have come apparently to this general conclusion from the evidence about one rate-supported hospital?—I only allude to the evidence on one rate-supported hospital here, but there have been serious complaints in regard to other similar hospitals.

25665. Where have they been heard?—They have been heard in London and elsewhere; there have been complaints from time to time about the administration of them.

25666. But we have not heard of them that I know of, and is it not rather a hazardous thing to come to so sweeping and general a conclusion upon the evidence as regards one out of a large number of institutions?—Not when it is backed, as in my case, by closely and continuously following the work of rate-supported hospitals, and the results which have been obtained by them.

25667. You said just now that no serious criticism was heard of voluntary hospitals; have you heard anything about certain drains at St. Bartholomew's Hospital?—Yes.

25668. Would it be a right thing to conclude from the fact that the drainage of St. Bartholomew's has been extremely ill-attended to, that therefore the voluntary hospitals in general are inefficient in their drainage?—No, it would not. I am going to give evidence on that point of drainage.

25669. If it is rather hazardous to draw that conclusion from the evidence about one voluntary hospital is it not rather risky to draw a conclusion from the evidence about one rate-supported hospital?—It would be if it stood by itself and was not supported by other evidence.

25670. Will you produce the other evidence?—I will at another time; I have not got it with me, with reference to other rate-supported hospitals.

25671. You mean that you can give evidence yourself on that subject?—Yes, from the public records of it.

25672. What records do you refer to?—There have been official inquiries held about the administration of some of them.

25673. Some other hospitals?—Yes, of some other hospitals, among the rate-supported hospitals.

25674. Do not you think it might be the case that if there were official inquiries from time to time about the voluntary hospitals a good many things might come out that are not known to people who make casual visits to them?—No, I think not, because the charges against the rate-supported hospitals shows that there is sometimes gross peculation, shameful from first to last, which causes the patients to suffer very much.

25675. In a particular hospital?—In a particular hospital.

25676. From that you conclude that they are all to be condemned?—Not all, nor from that one alone, because similar charges have been made against other rate-supported hospitals.

25677. What other hospitals?—I cannot tell you the others at the moment, but I can get them for you.

25678. I am not now wishing you to understand that I have come individually to the conclusion that the voluntary hospitals may not be superior to the others; I am only asking you whether it is not rather too sweeping a conclusion

4 x 2

to

4 July 1891.]

Mr. BURDETT.

[Continued.]

Earl of Kimberley—continued.

to draw from the evidence which you seem to have trusted to entirely in regard to a particular hospital?—You see I have not relied upon that; I have relied simply upon following the working of these institutions, as I do continually, and on my knowledge of what has occurred with reference to them. I have confined myself to-day to Homerton, or the Eastern Hospital as it is now called, as being one of the most notorious of a group; and I may tell you that the system is wrong. They have a plan of leaving the election of the resident medical officer in the hands of the local committee. The consequence is that the medical superintendent is under control of a local committee, and these hospitals have broken down through the inefficiency of the local committee. If the Metropolitan Asylums Board would take into their own hands, as a body, the election of the medical superintendent and make him free of the local committee, then you would get, I believe, as good administration in the Metropolitan Asylums Board hospitals, the rate-supported hospitals, as you get elsewhere; because many of the managers of that board are as anxious as any men in London to have them efficient, and give as much time and attention to the making of them efficient as those in the voluntary hospitals. I do not want to criticise individuals but rather to bring out what the results of the two systems have been as we have seen them in the last twenty years.

Chairman.

25679. You said that other places had been inquired into; were those inquired into by the Local Government Board?—Yes, they were inquiries under orders issued by them. There was the small-pox camp hospital, you remember, where there were various charges made as to want of discipline and the general state of things.

Earl of Arran.

25680. And were they proved?—Yes, certainly, and were admitted to be correct. I remember Sir Edmund Currie telling me about it, and the difficulty he had in the matter; and in fact Miss Stuart, who is now the matron of St. Bartholomew's Hospital, in some measure owes her appointment to the fact that she nobly and courageously went down there and took hold of the thing, and really brought it into order and reduced it to something like a state of discipline. At one time it was reported to be as bad as bad could be.

Lord Monkswell.

25681. But I thought you said that the committees were the weak point in the voluntary hospitals as well?—What I spoke of was the difficulty of getting the right men.

25682. Then does not your objection apply just as much to a voluntary hospital as to any other hospital; any hospital, whether voluntary or rate-supported, may have a bad committee, may it not?—I did not wish it to be inferred that the committees of the voluntary hospitals were bad, but that it was immensely difficult to keep up the number by electing efficient men.

25683. That means that sometimes they are inefficient; therefore these scandals may, I suppose, go on in voluntary hospitals and not be

Lord Monkswell—continued.

found out for a considerable time?—Well I have taken great pains to look into the whole question and I have never been able to find anything of that kind in the voluntary hospitals, nor have you had evidence to that effect.

25684. You began by saying, as I understand, that the voluntary hospitals are much better than the rate-supported institutions; but if the objections that you raise to the rate-supported institutions can be done away with by simply putting less power in the hands of the local committee and more power in the hands of the Metropolitan Asylums Board, or simply by changing the management, surely the rate-supported institution might be just as good as the voluntary institution?—It might be just as good so far as the absence of speculation and immorality in the administration went, but it would never be so efficient if we are to judge by the results of rate-supported hospitals all over the world; because there is an absence in them of public spirit and of crisp administration in consequence. You see the difference at once; it is just the difference between a smart regiment and a slovenly one.

25685. I thought you told us that you considered that the Metropolitan Asylums Board were an exceedingly efficient body of men; is it not possible for them to introduce such reforms as would make the hospitals under their jurisdiction as efficient as the voluntary hospitals?—Efficient so far as the general administration goes, but not so far as the actual comfort and surroundings of the patient go. The rate-supported hospitals never in my judgment can be so comfortable; you cut off all public interest in them.

25686. I should have thought if you had 50 or 60 men interested in this work, and specially selected to perform it, they would be just as good a body of men to set these hospitals right, if they set to work in the right way, as the general outside public, who might perhaps be swayed by prejudice?—Undoubtedly; but the rate-supported hospitals have not got public opinion behind them in the same way as the voluntary hospital has which is supported by members of the public.

25687. I should have thought the opinion of the Metropolitan Asylums Board would have been just as valuable as public opinion?—But in practice the effect is different. No one can have inspected the institutions and gone over them without seeing exactly what I mean at once.

Earl of Kimberley.

25688. Perhaps you will kindly tell us what are the means of judging of these hospitals which you have individually; I mean those which you were speaking of, the voluntary hospitals; you said that you had seen them or inspected them?—I have inspected, I think, most hospitals in this country, some more than once.

25689. And been through the hospitals?—Yes, I have been through the hospitals, and been through them at different times.

25690. Do you think that going through a hospital really enables a person to form an opinion as to the real state of the institution?—Yes, of you understand hospital management.

25691. Do

4 July 1891.]

Mr. BURDETT.

[Continued.]

Earl of Kimberley—continued.

25691. Do not you think it is impossible to tell whether an institution is well managed unless you have the power of examining all the officers?—I do not think so; I think I could tell you that this institution is efficient, and that that one is relatively inefficient, from my experience as a hospital administrator.

25692. By a casual visit, do you mean?—By a visit which goes from basement to roof, as I am accustomed to do.

25693. You could judge, for instance, could you, whether the sanitary condition in regard to the drains was good?—Yes.

25694. By applying the tests?—I should do that if I had any suspicion.

25695. Have you any experience as a sanitary engineer?—I am a fellow of the Sanitary Institute of Great Britain.

25696. Have you ever applied these tests?—Certainly; I have applied the test, so that at Fitzroy-square, where we have introduced the new system, a private house has been made sanitariously perfect, so far as its drains are concerned. I am speaking really as a practical man with thorough knowledge.

25697. As far as my experience goes upon the matter, whether you understand the subject or not, cursory inspection by outsiders does not reveal the real state of an institution?—If you inspect it with the knowledge of an expert, and with a desire to get really at the facts, I think you can ascertain the real state of things. I will give you an example which comes to my mind. Lord Sandhurst is the chairman of the Middlesex Hospital; and the Middlesex Hospital's drainage was altered in consequence of my investigations and inquiries there. I wanted a plan of the drainage of the Middlesex Hospital, and they had some difficulty about it; ultimately they consented to let me have it, and when we looked into it we found that there were defects in the drainage. The committee took it up in Major Ross's day, and in the result the hospital was re-drained; and that has happened in the last 10 years at several institutions as the result of my procuring the drainage plans of all these institutions, for 10 years ago the majority had not a correct plan of the drainage at all.

25698. That seems rather to lead us to this, that in order to keep these voluntary hospitals in order it would be necessary that there should be an outside inspection. You have apparently very efficiently done this duty as a volunteer, but you could not be sure that there would be persons like yourself who were willing to take this trouble or who had the knowledge requisite. Therefore your conclusion seems to lead to this, that unless there is an outside inspection there may be many duties in voluntary hospitals not detected by the Committee?—I should say no, because the outside inspection comes from the intelligent public interest behind them.

25699. It appears that at the Middlesex Hospital the local committee would not have found out that defect in the drainage unless you had discovered it?—Not so soon, probably. I was only a member of the public in the matter, and took up the matter from that point of view, and many other people do the same thing; and in the provinces especially nearly all our reforms have come in that way; and that is why I say that
(24.)

Earl of Kimberley—continued.

the voluntary hospitals are so much more efficient.

25700. I understand that you have made these inspections, and I have no doubt with great advantage to the hospitals. If these inspections seem to lead to these results, would it not directly point to this, that in order to keep these hospitals in good order it is necessary to have an outside inspection?—I do not think it is necessary.

25701. Then how does it come about that your inspection has been so useful?—Because you must remember that the interest in hospitals has been of comparatively recent growth, say, a quarter of a century ago. When I knew hospitals originally, when I began my hospital experience, they were more like workhouses than hospitals.

25702. That is not an answer to my question; that may be true, but why was your inspection so valuable to the hospitals if you are of opinion that the hospitals can go on without a regular system of inspection?—Because the public interest is sufficient to keep them efficient.

25703. And what reason is there for supposing that, when you have shown by your own experience that your inspection has led to results which you have no reason to suppose would otherwise have been attained?—Simply because this is an imperfect world and everything is progressive. The defect in the drainage to which I referred just now was the result of an institution being built many years ago, and most of our institutions are old, and the question of the drainage had possibly gone out of sight. But an outsider coming in and looking at it saw it and dealt with it. But I think that an official inspection gives, as far as I can find out an air of false security, because it too often degenerates into a perfunctory discharge of duties, as we can see by testing the only example of this system we have got in this country, and it is not nearly as good and effective as outside criticism by those people who give their money to support the local hospitals, of which they are proud and in which they take a genuine interest.

25704. Therefore your opinion is that it is better to trust to chance inspection by people who may or may not have experience, and who may or may not have time to give to it, than to trust to regular inspection?—On the whole, I should say that the present system has answered a great deal better than any system of paid inspectors could possibly do.

25705. When you spoke of the rate-supported institutions which you think are not well managed, did you extend that remark to the poor law infirmaries in London?—I should say, speaking of the poor law infirmaries in London, that there are two distinct classes; there are excellently administered infirmaries, and there are some not so well administered. For instance, if you take the Marylebone Infirmary, or even the Paddington Infirmary, or many others instituted under Gathorne Hardy's Act, you will find there everything as complete and efficient and excellent as you can find in any hospital in the world. There is no doubt that in these instances we have a most splendid equipment in regard to the poor law infirmaries, and there is little
4 x 3
that

4 July 1891.]

Mr. BURDETT.

[Continued.]

Earl of Kimberley—continued.

that you could wish for that they have not provided; they have not spared any money; and in respect of their officers, and in every way, they are efficient as they can be. I went to Birmingham to see the new poor law infirmary there, and I am sure that any member of this Committee who is interested in hospitals should make an opportunity of paying a personal visit to see that hospital. It is remarkable in many ways, and especially in regard to its nursing arrangements.

25706. Then it seems that notwithstanding your condemnation of all these rate-supported institutions, there are some extremely well managed?—Certainly. I guarded myself against wholesale condemnation of rate-supported hospitals for this very reason.

25707. That is not quite consistent is it with your view?—I think it is quite consistent, because these are all new buildings or comparatively new. They have been established under a new scheme with a desire to reform; but I believe that it will be found that the effect of the system, that is the absence of direct public interest in them, unless we can get an affiliation of hospitals, and so have a public interest in all groups, will gradually make them deteriorate.

25708. Did you ever visit the Hospital for Incurables at Putney?—I have not, but I have had a remarkable experience in regard to that institution. It is the only institution in this country which has placed great impediments in the way of giving information as to how it is managed, and what its internal arrangements are; I wanted to get a plan, and they would not give me a plan, but I was able to get a plan ultimately, and then I wanted to put the beds on that plan so that I might see whether the internal arrangements relatively to hygienic principles were proper. I asked that I might go myself; I asked that my architect might go; I asked that one of my secretaries might go; and they declined in every way to allow anybody to enter the wards of that institution; I then wrote to the committee, and pointed out that in dealing with the subject I should have to draw attention to the fact that the very absence of permission to allow an outsider who was perfectly disinterested to go into their wards seemed to me to condemn the arrangement, and that I should have to publicly state that. That is now some three years ago I suppose, and I have concluded that there must be something inside the institution which would not give the public satisfaction; I do not know whether I am right, but my experience would lead me to think that I must be right. It was a most amusing experience because it is unique; and it is unique in the sense that even in Russia they gave me greater facilities for entering the hospitals than I could get out of the Royal Hospital for Incurables at Putney. Therefore, I think there must be some good ground for all this secrecy and locking of doors.

Earl Cathcart.

25709. Your analogy about the inspection of regiments rather struck me; I have been present many times at inspections of regiments, and I am sure that a general officer of experience knows at once whether the regiment which he inspects is smart or otherwise; from what he sees at the

Earl Cathcart—continued.

inspection, and from his examination of the books he knows whether it is in a bad or in a good state; the same with regard to a ship. Now I understand that in some of the hospitals which are supported by rates, there is altogether a want of fresh air, a want of inspection of all kinds, both by the public and otherwise; because we had it in evidence that there is only about one inspection a year by Dr. Bridges, and it was said that sometimes there were three inspections in two years; and therefore the good management of those hospitals depends rather upon good luck in having secured a very first-rate medical superintendent?—And also a first-rate lady superintendent.

25710. You mean a matron?—Because the best boards of guardians have insisted upon having those officers; and that is the secret of the whole thing, for if the *personnel* of the board of guardians alters there may be an alteration for the worse in the management of the institution.

25711. Was the evidence in the recent inquiry into the Eastern Hospital printed?—Yes.

25712. And if their Lordships ask for a copy it can be supplied?—No doubt if the clerk of the Metropolitan Asylums Board is summoned he would produce documents relating to all the inquiries that have been held.

25713. And supposing their Lordships called for a return of the number of inquiries that have been held, say, in the last five years, such a return could easily be produced by the Local Government Board?—Yes, or by the Metropolitan Asylums Board; but I would suggest 10 years.

25714. Rather supporting what you said just now, I have a cutting from a newspaper of 21st February 1891, in which there is "a painful story of how the poor live and die"; it was the case of a poor woman who was sent backwards and forwards by mismanagement from St. Bartholomew's Hospital to the Lambeth Infirmary; I need not go into it further, except to say that that was an inquiry by Mr. Hedley, the result of which inquiry is not stated; that is the sort of typical case, such as you have referred to?—You see in that case, as I gather, a voluntary hospital is equally implicated, is it not?

25715. No; St. Thomas's seems to have done its best; and the woman was sent to the infirmary, and then sent back again to the hospital; there was a Poor Law inquiry on the subject, under Mr. Hedley?—I would like to suggest with reference to the questions that have been asked me that some steps should be taken for some members of the Committee, if possible, to visit the sick wards in a union like St. Giles', so that they may really see for themselves what the condition of affairs in this country is in some places provided for the sick poor.

25716. What we were told the other day in evidence was that the state of affairs at the Bethnal Green sick wards was as bad as it could be, that it could not be amended, and that the whole system of having patients in the work-houses ought to be abolished?—I think that is quite true; there are several of them so bad, and it is perfectly horrible to think of.

Lord Thring.

25717. You spoke of the difficulty of getting into rate-supported hospitals; do I understand that

4 July 1891.]

Mr. BURDETT.

[Continued.]

Lord Thring—continued.

that the public have no right to go in?—There are certain visiting hours once a week generally, or once a month I think they have in some places now, because they say that the poor people make such a mess; friends thus go once a month.

25718. Do I understand then that a friend can only see a patient once a month?—In some of the institutions. Of course each board of guardians makes its own regulations. Sunday is a usual visiting day at the voluntary hospitals.

25719. I, for instance, cannot ask to go in and see one of those hospitals?—If you went as Mr. Brown I do not suppose you could; if you went in your proper capacity they might admit you if you sent in your card.

25720. There is no right of admission you mean?—No free entrance, as it were.

25721. You would recommend, I suppose, as a matter of course, that there should be such a power of seeing the rate-supported hospitals. By the way, do you distinguish between the rate-supported hospitals and the infirmaries?—The infirmaries are rate-supported, but they are the very best type.

25722. You include them, in the rate-supported hospitals, in your language with reference to them?—Certainly. I do not condemn all of them. I am only speaking of my view as to the relative condition of voluntary and rate-supported hospitals.

25723. But you have seen cases where the rate-supported hospitals are rather too good; in other words, that the poor go into them as a luxury?—I should not say too good; only in some of them the arrangements are excellent.

25724. Your accusation then extends to sick wards in workhouses and to certain rate-supported hospitals?—Yes, certainly.

25725. Not to the majority of the rate-supported hospitals?—I do not want my evidence to go forth as condemning particular hospitals, but I condemn a particular system; that is the system of rate support. I am quite against that.

25726. Do I correctly understand you that you would have no poor-law infirmaries at all?—I would have poor-law infirmaries, but I would have the whole system of medical relief affiliated, so that all hospitals might be in touch one with the other, and then the leaven of the voluntary system and the competition of the voluntary system when brought alongside of the rate-supported hospitals (because we must have a certain number of rate-supported hospitals; that goes without saying) would bring about the average efficiency and crispness in the administration which we ought to have everywhere.

25727. You see I do not quite understand you. I am fully in favour, and I know the value, of voluntary contributions as against rates; I am not disputing that at all; but we have been told over and over again, and I suppose truly, that the medical relief of the poor in London has been, I will not say increased, but revolutionised by the rate-supported hospitals; that the chronic cases which were so numerous, were ill-treated or carelessly treated in the unions and now are well treated, and not only well treated, but that they form a school which ought to be taken advantage of for the purposes of medical education; and we were told that that was as good a system as could be.

(24.)

Lord Thring—continued.

Now I want to know what you propose; what you mean by affiliation?—Well I mean this: We have got now, in this country, this sort of system or want of system; any man can at any time decide that he will open a house anywhere and call it a hospital for the treatment of any disease he chooses to favour. That is our arrangement; that is the condition that we are in now. We have then certain rate-supported hospitals on the one hand, like the Marylebone Infirmary, which is as efficient an institution as you can get at all under any circumstances, and as intelligence, knowledge, kindness, and money can make it; you have on the other hand the poor-law sick ward of the workhouse, which is an abomination. Now what I should like to see is this: I wish to see a combination, a system which would bring in touch all these systems by means of some body which should be representative of the administration as a whole. You must always have separate administrations in rate-supported hospitals and voluntary hospitals; but there is not the slightest reason why you should not have a central board of inspection, or supervision, or reference, or whatever you like to call it, which might simply be unpaid and which should consist of the best minds to be found among the administrators of all the systems of hospitals.

25728. Then I understand you to mean what we have been recommended before, that you would have a central sanitary board or central hospital board, partly State appointed and partly representative, of the different hospitals, which should have the management of all the hospitals in London, voluntary and poor-law also; is that the plan?—No, not quite. I do not want to interfere with the freedom of the government of the institutions at the present time; but I do want to get, by the action of those who are responsible for the administration of the hospitals, a common means of communication for the general good, which would bring them up to an average level of efficiency, so that you would educate, as it were, the least efficient to a higher and better knowledge, and so get the desired result; and I think that might be done by utilising a central body like the Metropolitan Hospital Sunday Fund Council.

25729. This is a practical question, and I want to know what you would actually do. Take the case of a Poor Law infirmary and St. Bartholomew's Hospital; would you have a body, however elected or chosen, which should have some power over the Poor Law infirmary and St. Bartholomew's Hospital?—Where it should have the right to visit the institutions and make representations to the authorities, certainly.

25730. A right of inspection but not of control?—Not necessarily of control.

25731. But that is what you mean?—That is what I mean.

25732. Have you at all considered the difficulty which has been so often mentioned before us of getting such a body, or how would you form it?—Yes; I have considered that, and I propose to give some evidence on that later on. But I want this to be clear; what I have been speaking about now is this: There has been a cry for some years growing up in this country, that the only thing we can do for our hospitals

4 x 4

is

4 July 1891.]

Mr. BURDETT.

[Continued.]

Lord Thring—continued.

is to make them all rate-supported. Now I am strongly of opinion that the day that England has nothing but rate-supported hospitals, will be the worst day we ever saw for England's poor. I wish to address myself to the question of entirely rate-supported hospitals, which I am very much against.

25733. When you speak of rate-supported hospitals, I must ask you do your observations apply or not to existing poor-law infirmaries; would you do away with the existing poor-law infirmaries, and endeavour to get them supported by voluntary contributions?—No, certainly not; you cannot do that.

25734. There I do not quite follow you?—My point is this: that the cry to throw all the hospitals on the rates—

25735. But I do not think you need trouble yourself with that; I do not think that any of us here want to throw all the hospitals on the rates; we want from you, as a man of very great experience, to know what practical scheme you would recommend for getting us out of the difficulties in regard to the rate-supported hospitals. I understand you to say that you would have a central body; then we want to know the nature of that central body; whether it is to be a body of inspection, or of inspection and control, or of inspection without control; whether it would be elective, or whether it would be State appointed, or partly one and partly the other?—I have got the terms of it; I will give in that later on if I may do so; but I am on the general principle of rate-supported as against voluntary hospitals.

25736. I think we had better have your plan at once. The Committee here are not in favour of rate-supported hospitals?—But a good many of the lower orders in this town are, and you cannot go amongst them as I have done without knowing that.

25737. Would you kindly give us your scheme?—"The possibility of the use of some sort of board of supervision" is one of my headings; that is the point you want to hear evidence upon?

25738. Yes?—Now we have an example in Ireland of a board of supervision which has been at work there now for some 30 years, since 1856; the Act is dated the 29th of July 1856; and this Board exercises supervision and control over those hospitals in Dublin which have (as many Dublin hospitals have) both a grant from the corporation and a grant from the Imperial funds. Now, if you take the report, and go through the report of the board of superintendence of the hospitals you will find that year after year they simply call attention to defects, and they make their statements, and issue the same figures, but the net result is nil, absolutely nil; and so much is that the effect that Dr. Haughton, of Trinity College, who is one of the most eminent of the Dublin citizens, in reference to this, stated: "For many years he had been one of the governing body of two Dublin hospitals, one of which received a grant from the State, and the other did not. The State inspection by the Government officer once a year he did not regard as having the slightest beneficial effect on the State-aided hospital. It was such a formal matter that he attached no

Lord Thring—continued.

weight to it. The other hospital where there was no State supervision was equally well managed." Now that is Dr. Haughton's evidence, and the result of that was that the managers of the voluntary hospitals took up the matter themselves and decided to institute their own independent inspection; and in Dublin they have a most active council of the Hospital Sunday Fund, and this Hospital Sunday Fund has instituted a visiting committee as well as a committee of distribution, and this visiting committee divides itself into sub-committees which inspect all the Dublin hospitals in turn and make a report every year, and upon those reports the distribution is based. In the early days before the institution of the visiting committee the attention of the council of the Hospital Sunday Fund was called to the fact that there was not a single hospital in Dublin which was properly nursed. When I inspected the Dublin hospitals in 1876, I found them in such a condition that I was obliged to state that if I wrote what I found it would be so serious that the probability was that most of the hospitals must either have been closed or that they would have locked me up or entered an action for libel, they were so indefensibly bad. The Dublin Hospital Sunday Fund determined to alter this state of things and instituted a system of bonuses (all this was a voluntary movement) which they gave to those hospitals which began to put their nursing into a state of efficiency. It commenced about seven years ago, and in the last report, that for 1891, it was stated that "all the hospitals now with one exception are efficiently nursed," and the consequence is that the bonus system has been abolished. The reports of the visiting committee of the Hospital Sunday Fund show that if they report a serious defect one year, which is not found to be in process of remedy at the next inspection, it is shut out from a grant, or the grant is diminished, and in that way, in the case of the Dublin hospitals, the voluntary agency of the Hospital Sunday Fund, having touch as it has with the public, and consisting of people who support hospitals and take an active interest in them, has produced great results for good in the last 10 years; whereas, so far as I am able to judge, no such results have been produced by the board of supervision. I should like Lord Powerscourt, who is the chairman of this board, to give evidence on the subject; because I only can judge from the documentary evidence produced by the board, but the impression given to me is that little or no practical results can be shown as following from the institution of this board of supervision by the Act of July 1856.

25739. I want to ask you this: You have stated that State interference in Ireland was futile, that voluntary efforts in Ireland were very successful; but the question I will ask you to answer is this: how would you make the voluntary system act on the poor-law infirmaries; are you prepared to say that you would give the volunteers power to manage or control or inspect the poor-law infirmaries, or would you have State interference or mixed interference?—This is what I propose: that an attempt should be made to strengthen existing hospital committees by enlisting the sympathy and the personal service of the more active

amongst

4 July 1891].

Mr. BURDETT.

[Continued.]

Lord Thring—continued.

amongst the governors. I am speaking now of London hospitals because I want to say in passing that this difficulty does not exist in the provinces; there it is regarded still as an honour to be on a hospital committee, and there all the best minds are to be found, as a rule, representative of every class on that committee; but in London that is not the case. In London a man has come more and more to say that if he gives a guinea a year, and if when he is bothered about the hospital he makes it two guineas, he has done his duty. They seem to have lost the feeling that personal service is far the most valuable thing that can be given.

25740. The first thing you want is to strengthen the hospital committees?—To strengthen the committees by the introduction of some of the more active and the younger members from the governing body. The next thing I should do is to educate those members who take part in the administration of the hospitals, to qualify as members of the council of the Metropolitan Hospital Sunday Fund, which now includes the more active managers of the hospitals, an attempt being made in filling up a vacancy to select only those who have taken an active part in the administration. I then should develop the control over voluntary and rate-supported hospitals, through this body, on the Dublin system.

25741. Would you, with your very great experience, have an Act passed that voluntary people should have power over the poor law infirmaries or not?—No, I am not for giving them power over the poor law infirmaries, except by making some such body as the Metropolitan Hospital Sunday Fund sufficiently representative of the whole hospital system to be in a condition to inspect the whole of these institutions, and to issue an annual report. I believe that the effect of that influence on public opinion would be sufficient to keep all these institutions efficient.

25742. What you mean by affiliation then is this (I dare say it would be very desirable): you wish that a strong voluntary body of competent men should be set up in London, that that body should be given a power of inspection, but no power of control over the poor law infirmaries?—Nor over other hospitals either.

25743. The inspecting body should have no control, but should be composed of volunteers?—Yes, they should be volunteers.

25744. But that they should have power given them by the State to inspect the State hospitals?—Inspect and report thereon; and then if it were found thereafter that without control you could not get the desired result, you might give them control; but my experience is that the desire of everybody, including the best of the guardians, who is actively employed in the administration of these poor law infirmaries, is to do the best they can; and, I believe, very often the want of success is due to a want of knowledge.

Lord Zouche of Haryngworth.

25745. How are the council of the Metropolitan Sunday Fund appointed or elected?—
(24.) e

Lord Zouche of Haryngworth—continued.

They are elected under the laws of the constitution which vest the election in the hands of the representatives of the contributing congregations; two laymen and a clergyman are sent from each congregation that contributes to the fund; only so many vacancies occur in the year, and for the filling up of them the council practically nominates, and, therefore, practically elects.

Earl of Kimberley.

25746. If you were to give this voluntary body a right to inspect the rate-supported infirmaries and hospitals, would it not follow as a natural corollary that you would give the State the power of inspecting the voluntary hospitals?—Yes, certainly, if the State wished it; I am sure nobody would object to that.

25747. Are you sure that no one would object to it?—I do not think they would.

25748. Do you think the subscribers to voluntary hospitals would, without any objection, welcome an inspection of the Local Government Board?—I do not think they would object to it, provided that you do not couple it with the power to hamper them, and to interfere with their work, and to tell them that they are not to erect this building, or that they are to pull that about.

25749. I suppose you will at once see that the moment you begin to inspect, if abuses were discovered, the public would demand power to insist on reforms as well?—Certainly.

25750. Therefore inspection would naturally bring control?—I do not think it would, for this reason: That my view is, that the salvation of the hospitals is the fullest and freest publicity.

25751. That may be, but did you ever know any institutions that were inspected by law, where the inspection did not involve control; did you ever hear of any?—It might ultimately result in that.

25752. Would not that make the difficulty in the whole matter, that inspection, without control, is practically an impossibility?—My answer would be this: That the Government inspection of the poor law sick wards has so broken down, and is so condemned by the existing state of affairs, that I do not think Parliament would be inclined to force a government inspection, with control, upon the voluntary hospitals.

25753. What do you think would be the feeling; would it be hostile or otherwise on the part of the bodies elected by the ratepayers of having an expense to meet caused by voluntary inspectors?—I have had an experience this week with reference to the London county council about another matter, the ambulancing of London. There are voluntary agencies existing, and also the county council, and I made a proposal there that we should have a combined committee which should embrace the voluntary agencies' and ratepayers' representatives; and they fell in with it at once, and thought it an excellent idea. I hope the whole of London will now be ambulated under a joint committee consisting of the representatives of voluntary associations and the London county council.

25754. Your scheme would rather mean that
4 Y you

4 July 1891.]

Mr. BURDETT.

[Continued.]

Earl of Kimberley—continued..

you should have some body on which both were represented?—Yes.

25755. And in that case it would have the result that I suggested, that this body would inspect both the voluntary hospitals and the rate-supported hospitals?—Yes, on the Dublin Hospital Sunday basis, because I want to get the combined experience of all those who take an active interest in hospitals available for the institutions. If you take a hospital, and take its history for 20 years, it would prove that the desire is to get efficiency, and light and help from anybody who could give them. I should not like to have said that 15 years ago; but I think I am justified in saying it now. The desire is, while the managers like to have independence, still they desire to get information from everywhere to benefit and improve the administration.

Lord Thring.

25756. Then you wanted, in fact, to do something like what the Charity Organisation Society recommend so much with regard to the poor law; they recommend that the charities should work hand in hand with the poor law; you want that the State hospital organisation should work hand in hand with the Charitable Organisation, and that they should assist each other?—Certainly, that the charities should work hand-in-hand with the poor law, because I hope to be able to show you that they now prey on one another, or rather that the poor law preys on the voluntary hospitals, which I want to stop. I hope I have made it clear that I am opposed to control as popularly understood; but I am strongly in favour of control in what I believe to be the right way, that is winning people to accept it, and act loyally under it; and I am sure that may be done by the exercise of a certain amount of statesmanship and care.

Chairman.

25757. You said just now that the rate-paid hospitals preyed upon the voluntary hospitals?—I am going to show that by the figures. The next thing I want to put in is the total income and expenditure of the voluntary metropolitan hospitals for five years; and to show it fully, I should like to hand in that table (*handing in a table*). That is the work for one year, last year. The figures that you find in that table are simply for the last year, 1890. You find a summary of the whole of London at the end of it; that does not include St. Thomas's and St. Bartholomew's, because, although they are called voluntary, they are not voluntary in my sense of the word, because they are endowed; and I am inclined to think that an institution has come upon evil days when it has so much invested income that it is independent altogether of public control. Now I have here a return for five years. The total expenditure last year was 606,258 *l.*; the total income, exclusive of legacies of 100 *l.* a year, and upwards, was 522,085 *l.* The income is made up as follows: "From charitable" revenue, that is subscriptions and donations, and the Hospital Sunday and Saturday Fund grants, 320,662 *l.*; from invested property, interest on funds invested, 151,229 *l.*; and from patients' payments 50,194 *l.* Then I have a table for five years showing the same figures. I find that, as you will see from

Chairman—continued.

the table, the charitable income has not progressed in anything like a proportion to the income derived from invested property, and from patients' payments. The charitable income on an average for the five years is 316,144 *l.*, and the income in 1890 was, as I have already said, 320,622 *l.* The income from invested property on an average is 124,880 *l.*; and in 1890 it was increased to 151,229 *l.* as compared with 87,424 *l.*, the interest from invested property in 1886. Then the patients' payments, which average for the five years 44,334 *l.*, amounted to 50,194 *l.* in 1890, as compared with 38,045 *l.* in 1886, a very considerable growth. Well, now, in each of the five years there were the following deficiencies between the ordinary income and the ordinary expenditure of our voluntary hospitals in London. In 1886 there was a deficiency of 104,255 *l.*; in 1887 of 89,206 *l.*, in 1888 of 53,855 *l.*; in 1889 of 74,724 *l.*, and in 1890 of 84,173 *l.* That represents an average deficiency of 81,242 *l.* every year for the five years. Of course if this were to go on the voluntary hospitals would cease to exist, especially as they have to meet new buildings and other expenses. The question is, where is the money derived from to keep them going? It is really derived from legacies over 100 *l.* not included. These in 1888 amounted to 231,384 *l.*; in 1889 to 163,294 *l.*; and in 1890 to 237,497 *l.*, giving an average of 210,725 *l.* from legacies of 100 *l.* and upwards on the average of the last three years. I have not got out the figures for the first two. Now you will see from those figures that whereas the general public, following what is found to be the case with reference to hospital committees, a course of rather lessened personal interest in their welfare, have not kept up the subscriptions or increased the subscriptions at the same rate as the other income has grown, the hospitals have been saved by the interest which is begot by those who have taken an interest in our hospitals in the past; and it would be a very curious, and I am afraid a very serious thing, to watch how far the legacies will keep up; because the voluntary hospitals are largely living at the present time upon the credit of the past rather than on the awakened interest of the present, a fact which ought to be borne in mind. Now there is one other thing in that table. I have got a list of the patients, and I find the average number of in-patients treated was 70,954 and the average number of out-patients was 1,040,363, all these being patients and not attendances, an important point. Now if you look at the figures you will find that there is no very great increase, that there is not an increase much out of proportion to the growth of the population, in the in-patients or the out-patients during the first four years, but in 1890 both jump up at once to 78,000 in-patients and 1,158,000 out-patients.

25758. Could it be accounted for by the epidemic?—I think, no doubt, myself, that the influence of the epidemic must be remembered. Those figures are very interesting and instructive, I think, as showing that we are dependent really upon the credit of the past, and also upon the altered circumstances of the hospitals, because the patients' payments (about which I shall say something later) are steadily increasing, steadily growing up. They have increased 12,000 *l.* a year

4 July 1891.]

Mr. BURDETT.

[Continued.]

Chairman—continued.

year in the London hospitals during the last four years. I have got here, if anybody cares to see them, the whole of the details for every year in connection with every hospital; but I do not suppose you will have time to go carefully into them.

25759. Have you any table showing, or any knowledge of, how the annual subscriptions to the hospitals have fallen off?—I do not think they have fallen off. I think, in London, they remain about stationary.

25760. In all the evidence we have had, we find that the annual subscriptions proper are a very small proportion of the income of the hospital?—That is because the London managers have never understood the power of the guinea. It is a remarkable fact that, if you go to a provincial hospital, you will find that the backbone of their income is annual subscriptions. In London it is not so. St. George's is a notable exception, and St. Mary's, of recent years, owing to the fact that, two secretaries have followed one after the other, who have been taught the importance of the guinea, who have set to work to get it, and so have succeeded; and also the Seamen's Hospital in Greenwich, where the income has been brought up about 7,000 £. in a few years. The division of London into districts would be a means that might be utilised by the managers of these institutions to quicken the interest of the people who reside near the hospitals in a particular institution. I have tried it successfully in south-east London and west London, and elsewhere, and if it were generally tried, I am sure the subscriptions might then be quadrupled.

25761. Would it not be rather difficult about that Tottenham Court Road district, where you have three or four large hospitals all clustered together?—No, because you find that these hospitals minister to a wide radius, and their patients come from some distance. If they used their out-patient register to show the work done for the different districts, and then circulated the results in those districts in a tabular form, they would bring home to each person the work that was being done for them. That is how money is obtained in the provinces, and the difficulty in London has been to show how to bring out in a brief and telling way the fact that a particular institution was helping Jones's neighbour, and therefore Jones ought to give a guinea; but it can be done in the way I suggest. Now the next thing I want to put in is two tables; one showing the proportion of out-patients to the population, and the other showing the proportion of in-patients to population in the chief towns of Great Britain and Ireland.

25762. What are these calculations taken from; from the hospital returns?—From the hospital returns. Now if you take London you will find that the number of out-patients per 1,000 to population is 274, at Liverpool it is 383; at Birmingham it is 336; in Dublin it is 459, and in Newcastle it is 289; in Leicester it is 345; in Brighton it is 285, and in Wolverhampton it is 220.

25763. With the exception of Wolverhampton, London is the lowest?—Yes; in Glasgow it is 151, and in Edinburgh it is 365. Now the proportion of in-patients to population is 18.5 per

(24.)

Chairman—continued.

1,000 in London, it is 29.1 in Glasgow, 38.4 in Edinburgh; 20.1 in Manchester; 30.1 in Birmingham; 45.9 in Dublin; 14.1 in Belfast; in Bristol it is 30.2; in Newcastle it is 22.5; in Leicester it is 21, and in Wolverhampton it is 32.5. Those are the two tables; they show in a rough sort of way how far the people avail themselves of the different kinds of medical relief. Of course this point can be studied in detail better on the tables when you have them before you.

25764. Now do those figures include the poor law relief?—No, these are only hospitals outside the poor law relief. It is very difficult indeed to get the figures of the poor law relief. I find that the Local Government Report does not contain them; they are all put together as in and out relief, and they do not seem to have given them separately except in a very imperfect way. Now you have got the actual figures at which the hospitals are worked, the number of beds and the number of in-patients, and the number of population. Then I was asked something about the registration of out-patients. I do not know whether you wish me to give evidence on this point. I should be glad to give evidence on it.

25765. Is the registration of out-patients possible?—It is done in many hospitals. For instance, they have a complete system at the Great Northern Central; anybody interested might go there and see it; it is a little compact system easily understood, and it works admirably.

25766. Have they really a complete system at the London?—Yes, for registration.

25767. How is it worked; can you explain it?—The patients are not allowed to take away the out-patient letters, only cards. When they arrive they take their cards to the office, which is specially set apart, where a clerk sits; he then takes in the number, and hands out to them a case which contains their prescription paper, and the history of the case, and all the particulars about it, with which they go to the out-patient hall, and wait their turn.

25768. Their object being to prevent the abuse of the charity?—Their object being to keep a complete system of registration of what they call out-patients.

25769. What is the object of the registration of out-patients, is it to prevent an abuse of the charity?—Not in that case; simply to ensure a thorough treatment of the case, and an accurate representation of the numbers. But a partial system of inquiry is carried out at St. Bartholomew's Hospital, and at some of the other hospitals too. They have a man who is paid on purpose to make investigations.

25770. Are you in favour of inquiry into the circumstances of the applicants?—No, I do not think it is any good. I think it breaks down. I think there is a better system than that, which I propose to explain to you.

25771. Will you do so now?—It comes up better in the evidence I have to give about the paying system; I would sooner take it then, if I may.

25772. Will you follow your own order?—Then the next thing I have to say is, that I want to put in something on the question of income

with,

4 July 1891.]

Mr. BURDETT.

[*Continued.*]*Chairman—continued.*

with reference to the Hospital Sunday Fund. It is a very popular idea, and sounds very well to say that Hospital Sunday is a sort of parasite which eats into voluntary contributions, and lessens the income of all the hospitals. It is supposed that the plate on Sunday which receives a half-crown causes the pocket to be buttoned up when the collector comes round for the annual guinea. Now I should be one who would advocate the closing of the Hospital Sunday movement at once if it had any such effect; but I have taken the trouble to go into this question and test the figures. In the case of the Miller Memorial Hospital, at Greenwich, they had a strong local controversy in South-east London once, and also in the case of St. Mary's Hospital. Mr. Thomas Ryan, the late secretary, went into the matter too; in the case of Queen Charlotte's Hospital, and in every case, it has been proved by actual figures that the Hospital Sunday Fund has been very beneficial, and that the subscriptions have increased; and not only that, but that the actual grant which is received by the individual institutions from the central fund is considerably larger than that represented by the aggregate amount received from all the churches that had sermons for the benefit of the charity under the old system. This matter has attained some importance lately from the fact that Canon Duckworth has stated that his experience is, "that however much Hospital Sunday may succeed in provincial towns, it has been, and threatens to remain, a great failure in London. We know perfectly well that there is a very large class of the community who have a great dislike to putting their hands into their pockets, and who are only too glad to find any excuse not to put their hands in that direction." Well, I have written to Canon Duckworth about it; I have asked him to give me the figures on which he has based the statement. He is a good friend of the hospitals, but he is a public man also. As the statement, if allowed to go out uncontradicted, is calculated to do much injury, I want to state publicly that I have written to him three times, that he has not produced his figures, and that I have told him that I should take an opportunity of calling attention to the fact that his assumption is erroneous, and that if anybody doubts it that I am prepared to show by figures, in bulk or in detail, that it is entirely erroneous and has no solid foundation. Now the next point that I want to take up is the distribution of hospitals and so on in London. We have here a map on which I have marked all the hospitals of every kind. I do not know whether the Committee can see from that distance, but you have on this map general hospitals with a black cross, children's hospitals with a blue circle, women's hospitals with a green triangle, consumption hospitals, fever hospitals, special hospitals, and poor law infirmaries; and I want to bring out this point, that, having regard to the population of London, the position of our medical institutions is altogether wrong. *Here* you have the inner circle, that is one mile from Charing Cross; the outer circle is two miles, and *here* is the four miles radius. These are the voluntary hospitals with a cross, and if you look at them and take them all out,

Chairman—continued.

you find that nearly three-fourths of the beds are within the two miles circle. If you go outside and see how they have placed the poor law infirmaries, which are necessarily put where the population are, you will find that at least half of them are outside even the four miles radius, and that the others are scattered fairly well within the four miles radius. Then if you take another test, the test as to whether the people are likely to want isolation, in case of infectious disease, you will find that the fever hospitals are all placed in the different parts of London all round the circle; and that map in that way shows very forcibly that it must be wrong to expect all these people to get, without loss and hardship to themselves, to the hospitals, which are miles and miles away from their own homes. Now the map reveals an attempt on the part of some parts of London to get over this difficulty, to improve it. For instance, in North London you have the Great Northern Central, which has been moved some two miles further out in order to meet the requirements of the people in the district. You have in South-east London, also, another illustration of it. Formerly there was no hospital between Woolwich and Guy's at London Bridge. Now they have the nucleus of a larger hospital which has been put down in Greenwich, the Miller Memorial Hospital. What ought to be done, in my opinion, is exemplified by the action of the authorities of the Seamen's Hospital. They have determined to put outpost hospitals in the centres where their seamen are, so that the accidents may be at once taken to the hospital without the risk of injury to the patients by being carried long distances. You have a branch of the Seamen's Hospital, therefore, at the East and West India Docks, another at Wells-street, and another at Gravesend; and they are now contemplating putting one at Tilbury. That is the system. Either the old hospitals must be removed altogether or they must be made to minister to the requirements of the population by establishing, at any rate in and around London, a sufficient number of outpost hospitals for the reception of severe accident cases, to which they may be brought on a proper ambulance.

Earl of Kimberley.

25773. What do you suppose is the furthest distance that any district in London is from a hospital?—I should think six to nine miles. I have known, as a student at Guy's, of more than two or three urgent cases where persons lost their lives owing to the distance they had to be brought and the jolting of the conveyance.

25774. In the country, where there is usually a district of 80 miles long and 40 broad, but one hospital, how do people manage without these hospitals?—They have cottage hospitals in most counties now.

25775. But I say, where there is only one hospital in such a district, how do they manage?—But they have cottage hospitals.

25776. I suppose you are aware there are a good many counties where there is only one hospital situated in the county town; where there are large towns there may be more than one of course, but in counties with a rural population

4 July 1891.]

Mr. BURDETT.

[Continued.]

Earl of Kimberley—continued.

population and with no large towns there is probably only one hospital in the whole county?—There are now over 500 cottage hospitals, and Leicester is the only county, I believe, with no cottage hospital.

25777. In rural districts you must be aware that the people are often a very great distance indeed from the hospital?—Yes, and they suffer in consequence.

25778. That is what I want to know: is their percentage of deaths at all larger in those districts than it is in the towns?—There are no figures to show that that I know of, but any experience of any hospital would certainly produce cases which, to say the least, have not been helped by the travelling they have had to submit to.

25779. But I daresay you are aware that in these rural districts accidents are not taken to the hospital, but are attended to by the local practitioner?—Yes, and attended to very well.

25780. But I have never been able to see, and I should like to know, the reasons why it is thought that in the large towns everybody must have a hospital close at hand, whereas out of the large towns it is not found in the least necessary; what is the explanation?—I think that you are not quite correct about the rural districts because of the enormous growth of cottage hospitals; we have got now, I suppose, quite 600 cottage hospitals.

25781. You may take it from me that there are many districts in England where there are not these diffused hospitals, and where the people are attended to by the ordinary practitioners in case of accident, and I want to know whether the result is any great evil, and what is the necessity of all these large institutions in towns; I have always wanted to know, and have never been able to find out?—In large towns the accommodation at home, in the case of families occupying one room, is absolutely inimical to the recovery from the accident; in the country the cottage is very likely the best place. Sir James Simpson took the trouble to prove that a man had 30 per cent. better chances of recovery in his own home than in the Royal Edinburgh Infirmary.

25782. That would apply in the country, too, would it not?—If you go into the dwellings of the poor in the country, I find they have not got merely rooms, they have houses. I have got one other point in reference to distribution, which I want to bring to the attention of the Committee. I have here a set of plans of the sites of some of the chief hospitals in London. I consider that it is a matter well worthy of your consideration, and the consideration of the authorities of the hospitals, as to the congested state of their institutions, and the circumstances of the site. For instance, if you take St. Thomas's Hospital, you have a site area per bed of 652 feet. Now, if you take the Charing Cross Hospital you have a site area of only 86 feet per bed, and in the case of University College, one of the most important schools, you have a site area of only 123 feet; and so you may go on through the different hospitals of London.

(24.)

Chairman.

25783. Would you say that the space at Charing Cross is very much too little?—I should say that Charing Cross is too little; of course Charing Cross has spent a great deal of money, and they have taken a great deal of care, and have done exceedingly well, because they have been very zealous and anxious to do their best; but they would be infinitely better circumstanced for treating disease if they could acquire the whole of the rectangular space entirely surrounded by open streets, on a portion only of which the hospital now stands.

25784. Would you say that the amount of space at St. Thomas's is too large, 652 feet?—Not if you can afford to pay for it; but, I think, having regard to the expenditure, it is a very large one for a town like London. Then the case of University College is really a pressing one. They could complete the square of their site by purchasing the existing buildings and throwing the whole into the site of the hospital, as has been done now with one little tiny exception in the case of the Middlesex Hospital. It is entirely surrounded by streets and therefore is a self-contained site. I do think, in these days of large gifts to hospitals, any philanthropist would do a great deal of good if he would direct his attention to the site of a hospital like University College or Charing Cross, or even St. Mary's, which is now going to be extended, and see if he could not purchase and give the remaining site to the hospital authorities for the benefit of the poor.

Earl of Kimberley.

25785. Upon the subject of the location of the hospitals and the deficiency of room in them, may I ask what remedy would you suggest, apart from these generous donors, whom every one would like to see come forward?—I should say that they ought certainly to expend some of their money in establishing out-post hospitals; the larger voluntary hospitals themselves ought to have out-post hospitals.

25786. Have they the means, many of them?—Yes; they have invested funds.

25787. Many of them have a deficiency. Take University College Hospital, which, as you say, has a site much too small for it; what possible remedy can be suggested in that case?—To do what they are doing; to buy the site as rapidly as they can, and, having acquired enough, to re-build the hospital.

25788. But you know they have not the funds to do what is necessary. It would be far better to build a new hospital, but they have not the funds; can you suggest any remedy?—The remedy is to get the funds; but I believe myself, in the case of University College, if they were actively to make their requirements known and put them forward, the whole of the money would be forthcoming.

25789. But do you really think there is money enough available now in London to create all these additional hospitals, money enough available for hospitals I mean?—Yes, I think, with what we have and what might be obtained by a re-arrangement of the system of getting money on the basis I have recommended, founded on the experience of those hospitals that have

4 Y 3

adopted

4 July 1891.]

Mr. BURDETT.

[Continued.]

Earl of *Kimberley*—continued.

adopted it, the public would give all the money needed.

25790. At present anybody may open a hospital anywhere who can get funds for the purpose; is that so?—That is so.

25791. Do you think that there should be any limit to that power, or that there should be a board which should be able to determine whether a hospital was not wanted in a certain district, and was wanted in another; have you any such plan or system in your view?—Yes, I have a plan which I was going to speak about.

25792. Will you give it us now?—I think that what the hospitals want briefly is this: I think there should be a short Act of Parliament to assist the managers of reputable charities, by enacting that no one shall have the power to open a building wherever they please, and whether it is wanted or not, for the treatment of patients, too frequently misnamed a hospital, unless or until they have satisfied the authorities, *first*, of their *bona fides*; *secondly*, of the necessity for such an establishment, and the suitability of the building and site selected; and, *thirdly*, of the competency of the promoters to provide the necessary funds to secure its proper administration. These points might be determined to the satisfaction, say, of the county council of the district. I say the county council of the district, because it seems to me that they represent the ratepayers, and they should know what are the requirements of the district in regard to hospital accommodation. You do not want to create a host of new authorities, but to try and utilise the existing system, at least, that is my view. If it were preferred you might delegate a central body like the Local Government Board, who should have power to issue a license or permit to the promoters, and the latter should then be left free to manage the new institution in the ordinary way; but without that permit they should not be allowed to establish a hospital.

Chairman.

25793. And is that permit to be recommended by anybody?—That permit would be recommended by the officers of the board, which would investigate and consider.

Earl of *Kimberley*.

25794. How would that work with regard to special hospitals?—When the application came before the county council they would consider it on its merits; they would hear the case for the promoters, and that for the other institutions, and they would decide in the ordinary way.

25795. Would there not be a danger that what I may call the vested interests of the hospitals would have considerable influence in such a body, and would prevent the establishment of perhaps some desirable hospital for the treatment of a special disease?—No, I do not think so, because I think the public at large would be keen enough for their own interests. Besides, in reference to special hospitals, the danger that formerly existed does not exist now. The establishment of them was originally justified by the action of the old hospitals that would not establish special departments. But that has been

Earl of *Kimberley*—continued.

all altered of late years; the great hospitals have seen the necessity of special departments, and you will find that the better managed hospitals have these special departments.

25796. You are aware that there is a distinct difference of opinion on the subject, and that some persons think that special departments will never meet the necessities of the case, and that there will always be room for special hospitals; that is the opinion of some competent persons?—I know that, but I do not share their view, because I think that on the whole, after studying the work of the two, fair-minded people would see that the special departments are better.

25797. If we assume for the moment the other view, do you think there would be a fear that such special hospitals would not get permission to be opened?—I think not, because there is now an awakened public interest in these matters, and I do not think the public would stand it.

25798. Take this body, the county council of any given place, would it necessarily contain any persons well qualified to judge on this point?—If you take the existing council you find that it has hospital surgeons and other active promoters of hospitals and poor law infirmaries upon it. If you take the local bodies themselves you find that the active men of the locality generally come forward, and that most interests would be found fairly represented on all the boards.

Earl *Cathcart*.

25799. And you have the existing machinery, that of the surveyor and architect and other officials?—Yes.

Earl of *Kimberley*.

25800. But supposing there were on the county council two or three medical men, perhaps very competent men indeed, who would merely be put upon the committee to advise the council on matters of this kind, there would be immediately great jealousy on the part of all the rest of the profession, would there not?—I think not, because it affects the question simply of building, whether they are or are not to have a new institution, and the medical profession would be heard like every other body on that. They would express their views, no doubt, by a memorial or deputation, and the council would not act till it had gone thoroughly into all those questions, and heard everything that could be said, in the same way as the Board of Trade acts now where it has similar powers.

25801. Looking at it from that point of view, do you think there would be no fear that such a control would check subscriptions?—I do not think so.

Earl *Cathcart*.

25802. There are any number of private hospitals set up in all directions that do not collect subscriptions; you mean institutions that would collect subscriptions from the public?—Of course, you cannot prevent a man calling his own house a hospital.

25803. You should insert in your definition of hospitals "institutions which intend to collect subscriptions from the public"?—Certainly.

25804. You

4 July 1891.]

Mr. BURDETT.

[Continued.]

Chairman.

25804. You will not forget to say what you were going to say about the pay system?—I was going to say something of the causes that led to the growth of hospitals. There has been an enormous growth in the number of patients relieved at the voluntary hospitals during the last 30 years.

25805. An increase out of proportion to the increase of population, do you mean?—Altogether out of proportion to it; it bears no proportion at all to it; in fact it has increased at something like the rate of 300 per cent. more than that in some cases. It is due, of course, to the increased amount of attention which has been drawn to hospitals, and to the increased confidence of the public in hospitals, due to improved hygienic and other arrangements, and also to the introduction of the antiseptic system. Now that has produced an enormous revolution, and you can understand from one statement how it has affected the whole attitude of the public towards treatment in hospitals. In my early days of hospital work, in 1865, numbers of people among the poor were prejudiced against hospitals, and nothing would induce them to enter them; they had only a little less objection to go to a hospital than to a workhouse, but that has all died out now, and there is a desire, in towns especially, to get into a hospital, because they know they will be so well cared for there. Now, with reference to the introduction of the antiseptic system, and the general improvement that has taken place, I should like to state that the saving of life owing to the adoption of the antiseptic or Listerian treatment of wounds is as follows: A mortality of 41·6 per cent. in 1868, and a mortality in 1872, according to Professor Eerichsen, of 37·8 per cent. in the larger metropolitan hospitals, and of 25·7 per cent. in University College Hospital, had fallen in Germany under the Listerian method to 4·36 per cent. in 1880. These figures are so remarkable as to be almost incredible. The results attained in different classes of operations have been equally noteworthy.

Earl of Kimberley.

25806. Has it fallen in London?—That is so, only I have given you those figures, because they are recognised and accredited figures which govern the whole system.

25807. What has been the fall of the mortality in London?—The results in London have been equally good, I have no doubt we should find, if we had the figures. So that the mortality in major operations has gone down from 40 to 4 per cent. Now I want to say something about the growth of hospitals. I have not attempted to get out all the figures for many years, because it is tedious and troublesome; but the London Hospital, which is our largest hospital in London, does give an account of its patients for a number of years; and I find that in 1861 the in-patients were 4,169, and in 1871 they had increased to 4,871; in 1881, they went up to 6,860; and in 1890, to 9,193. Now if you take the out-patients, the increase is still more remarkable; they were 27,911 in 1861, 66,448 in 1871, 58,307 in 1881, and 120,158 in 1890; so that they increased from 28,000 in

(24.)

Earl of Kimberley—continued.

1861 to 120,000 in 1890. And those figures prove, and the history of other hospitals proves to my mind in the same way, that there is something radically wrong in the out-patient departments, in the way that people are allowed to come in and take their medicine in the way they do. It is an injustice to the medical profession and an injury to the poor. The out-patient department in my judgment is becoming largely a school for pauperism, and I for one should like to see it closed altogether. If we got it closed altogether we should then probably get something like a fair examination of the whole question, and a better system evolved. If you take the poor law institutions in the metropolis the numbers relieved in the three years were as follows: Poor law dispensaries &c. (that is those not seen at home) in 1887, 64,654; in 1888, 64,401, and in 1889, 64,565. That is to say that the out-patients in the poor law dispensaries for the whole of London do not represent more than half the number which actually goes through the out-patient department of the London Hospital alone. They have practically decreased; they have not increased; the tendency is downwards. And in the case of those patients under the poor law who were seen at home the figures were as follows: in 1887, 51,613; in 1888, 51,817, and in 1889, 48,507; a falling off of 3,000 as compared with two years back. Now I consider that to be a very remarkable and instructive fact.

Earl Cathcart.

25808. But we must not lose sight of the teaching aspect of the case; you will come to that very likely?—I will come to that presently. But the secret of all this, I believe, is to be found in a very simple matter which seems to have escaped public attention. It struck me very much. In order that I might see the working of the system I sent for a complete set of the papers which are issued by these poor law dispensaries; and I find that they are made out as follows: "Name of Pauper"; so that wherever this man goes with this out-patient paper it absolutely bears on the face of it that he is "pauper" Jones. I think that is a very unnecessary, one may almost say insult, and one which may act detrimentally. Then if you take the man who is seen at his own home, he has issued to him an order of attendance at the "pauper's" home. And so if you go on through the papers. The man is ear-marked, though he may simply want a bottle of physic for his child, as a pauper. I do not know whether I am correct, but I believe that medical relief is not a disqualification for the franchise, and certainly the relief to parents in regard to children in district schools is not; and I fail to see by what exercise of fair dealing or direct reasonableness these papers are sent out in this way.

Earl of Kimberley.

25809. Are you an advocate for indiscriminate medical relief to the population without any reference to whether they are paupers or not?—No.

25810. Then why do you object to that practice which you have just described?—Because it makes the pauper proper, or the poor law case,

4 Y 4

go

4 July 1891.]

Mr. BURDETT.

[Continued.]

Earl of Kimberley—continued.

go to the hospital out-patient department; whereas if you had a less objectionable form which you gave to the man who went to the poor law dispensary, my view is that the thousands of cases that now go improperly to the hospital would be taken up by the poor law dispensary.

25811. You want, I understand, to throw a large number of these cases that now go to the hospitals on to the rates?—Yes.

25812. Why?—Because they properly belong to the rates, and would be more careful, I think, of taking medical relief if they had to go to the rates.

25813. According to your system it seems to me that you are advocating a universal system of medical relief?—We have a universal system of medical relief now in the out-patient departments of hospitals; I want to get the patients classified and sorted, so that those men who really belong to the poor law should go to the poor law.

25814. Should not that be done by the hospital authorities. You seem to propose to break down the check or application for relief from the rates?—I do not think you would break down any check by omitting this word “pauper” from these papers.

25815. You say that you look upon it almost as an insult. Therefore, it acts as a check. Is it not almost the only check that exists; that people feel that they rather lower their position by applying for medical relief from the poor law?—But they make application to an hospital, and get treatment there when they do not properly belong to the hospital.

25816. That is the fault, is it not, of the hospitals; but it would be illogical to break down the poor law system of administration on that account?—I do not think you would break down the poor law system of administration by the alteration I suggest, and the poor law system would then be adequate.

25817. What you yourself say is that the present mode of administering the poor law medical relief to the poor is deterrent; you want to make it less deterrent; if you make it less deterrent, that is another way of saying that you are going to break down the present mode of administration and open the door to a very much more extensive medical relief at the expense of the rates. Is not that the wrong end to begin; is not the proper thing to see that the hospitals do their duty, and not to remove a check, which at present exists, on the lavish administration of the poor law?—I am quite opposed to any lavish administration of the poor law. What I want to insist on is, that poor law cases should be treated by the poor law and not by the hospitals.

25818. And my point is, that the hospitals should by all means be prevented from pauperising the applicant, but it is not, therefore, necessary, is it, that you should weaken the administration of the poor law. I should like to know what you propose that the hospitals should do; not what the poor law should do; but what you propose that the hospitals should do?—I should propose that the hospitals should adopt the plan both for in and for out-patients which has answered so admirably in America. I will de-

Earl of Kimberley—continued

scribe it. In this country with our old-fashioned notions, when a man comes to us for relief we begin to make independent inquiries, and spend time and money in trying to find out who and what he is. The American is much more direct in his method. He says: “If you want free relief you must bring your credentials and show that you are entitled to it; and if you do not, you will not get it”; and by throwing the burden of proof on the patient you get rid of all these difficulties. Nobody can have gone into American hospitals, and seen the proportion of beds there as compared with the population, without being struck with the fact that their system has done a great deal for them. Of course we have, as an old country, an enormous number of charities, where people have grown up accustomed to charities; but in America people have had to find their own way about, as it were.

25819. Would you explain a little more the American system. We must put the consideration of urgent cases and accidents aside, because those cases, no doubt you would agree, must be attended to at the hospitals; they could not send away anyone suffering from a sudden accident; in that you would agree I take it?—No, they could not send away those cases.

25820. A patient comes wanting admission to a hospital with some ordinary disease; he would, on the American plan, have to bring with him proofs, I understand; what sort of proofs do they bring in America?—In the case of accidents—

25821. Not in the case of accidents; if it is an accident or an urgent case, I understand that he would be received in America as much as here?—Yes; but I wish to take the accident as the unit. An accident is brought to the hospital; the superintendent receives the man, and he is admitted to a bed; he is not then allocated to a poor bed or a free bed, but he is put to bed. At every hospital there is a committee of visitors, two of whom take duty for a week, with the superintendent, and their business is to see the friends of the patient, and to go into the circumstances of the patient, and the evidence he is able to produce, and to allocate the case, *i.e.*, they can put the man into a one-dollar or five-dollar or ten-dollar bed, according to the circumstances. The accident case differs from the other case in this sense only, that in the accident case all these arrangements are made after admission; but in other cases they are usually made before admission, because the friends come beforehand, and the circumstances enable it to be done. The board sit every day, and decide, on the facts produced by the patient as to what payment he shall make. In the absence of the board the superintendent decides.

25822. Is there in America a power by law to recover the amount so placed upon the patient?—I do not know; but I have never heard of any bad debts, and as the proportion of income in their hospitals from paying patients is so large, I have no doubt they get their money.

25823. Still, I suppose, there is a power of recovery?—I daresay there is.

25824. And you think that that system might be introduced here, and that it would work well?—Absolutely. The only thing is to get the attitude of mind that is needed. It is very difficult

4 July 1891.]

Mr. BURDETT.

[Continued.]

Earl of *Kimberley*—continued.

difficult for us to take a new attitude. Our attitude is that we must investigate Mr. Jones. The real attitude to take is that Mr. Jones must investigate himself, and bring us proof of what class he belongs to.

25825. It seems to come to much the same thing. Whether he brings the evidence to you, or whether you make inquiries into the case, you have in any case to investigate it; do you think you could get a daily committee here to investigate cases?—I think you could. The visitors do it you find, in provincial hospitals; they have a regular visitors' book, and they take a great deal of interest in it.

Earl of *Lauderdale*.

25826. Did you not begin by saying that you were not an advocate for out-patient departments at all in the London hospitals. I understood you to say that you would abolish the out-patient department altogether?—I believe that it would be the best thing that could happen to the hospitals if they could be entirely abolished.

Earl of *Kimberley*.

25827. We have been told that a certain number of outdoor patients are indispensable for medical education?—Yes, I know that is the contention; but my view is that we should be able to deal with that question if we were to go in for a paying system; it is a feature of the American system, that every man should have the privilege of paying what he can, if it is only a shilling a week in all hospitals, and we might with advantage go a step further and say that no doctor had a right to give his services unless he was paid for them; that is to say, I am in favour of all the medical officers being paid throughout the whole of our institutions; because until you get to that condition, you will never be able to administer them on the best lines, because you are met with the argument that it is not fair and reasonable if gentlemen give so much time to the work, to make alterations, and so on. Then in another way, this is important. In the large hospitals we find that the younger men have to do most of the hard work, and they have practically to struggle on in their early years in a way that is most undesirable, and most harmful, I think, to the profession, and to the public; whereas, if they were adequately paid (and all these doctors are paid at some of the hospitals like St. Bartholomew's), we should then get into a state where we could look at this question on its merits, and we should know what is the best thing that can be done all the way round in the public interest, and in the interest of the hospitals. The great thing is to interest the whole of the people in the question.

25828. Might not the difficulty be met by limiting the number of out-patients to that indispensable for medical education, which I understand from the evidence we have had, would not be a very large number?—There are two answers to that. In the first place, that the doctor will tell you, that you ought to have every patient you can get, because he cannot get the material he wants, unless he has the widest possible field of selection. If you go into

Earl of *Kimberley*—continued.

hospitals as I have gone, and watch the practical working of this "limited" system of admission, it comes to this, that in those hospitals which adopt it, very often a mother with a sick child is elbowed away because of the dry character of the case from the medical point of view, and so the case really most important to treat, in so far as charity is concerned, may not get in at all.

25829. I am asking the question from the point of view of medical education. I suppose that must be looked upon as of importance, and indeed, as of paramount importance. We are told by experienced practitioners that for the education of a number of medical students it is essential that they should see a considerable number of ordinary common cases, because these are the cases that they will have to deal with when they go into practice, and that they should not only see the more difficult cases that are treated in hospitals. Do not you think that for that purpose it will always be necessary to have a certain number of out-patients?—That I quite admit, but we might get them perfectly well from the poor law infirmaries and the poor law dispensaries, and it would have this advantage, that the students would then be able to attend some of the cases at their own homes.

25830. Still the poor law infirmaries would not admit largely such cases as I am referring to. You could hardly carry on a good medical school, could you, apart from the hospitals, and without the students having the means of seeing these cases?—They could get the means in their district as they do now in their midwifery cases. What I mean by saying that I would close the out-patient department is this: I do not think that the injury at the moment of a temporary closing of the whole of the out-patient departments would do any anybody any harm, and then such a system as you suggest of a limited admission might be brought in, on the basis of a selection of cases from the existing dispensaries, poor law and others, or by direct applications to the hospitals.

25831. You know that there are hospitals in London at present which limit the number of out-patients!—Yes, I have seen the working of it, and do not approve it.

25832. You do not think it has worked well?—Not from the point of view of the poor.

25833. But here we are not talking of the poor. The objection you make to this large system of out-patients is that it tends to pauperise the population, and therefore has a very evil effect; but now we are looking at it from the point of view of medical education, and that has nothing to do with the poor, except so far as the poor supply the doctors with the cases necessary. Is it not quite possible that you might without any hurt to the poor, or any detriment to the institutions, admit, as you do in the case of midwifery, just as many cases as you require for instruction?—You would have to devise for the hospital purposes a means of selection. My means of selection would be this: I am a strong advocate for encouraging the working classes to contribute directly to hospitals. I believe that if, on the Birmingham basis, every workshop were to have a box into which the workmen put their

4 July 1891.]

Mr. BURDETT.

[Continued.]

Earl of *Kimberley*—continued.

weekly contributions, and when one of the workmen got ill, or a member of his family, and wanted hospital help, they took the money out to pay the ordinary sum for a ticket of admission to the hospital, and send them off there or to a general practitioner, a system might be evolved by which, instead of sending a man in the first instance to the hospital he would be sent to the local practitioner whom he employed, who would see the case; and if he thought it would be a case of sufficient interest he would then send it on to the hospital, which would gladly take it.]

25834. I am not competent to discuss mere medical questions, but, as I understand, it is not cases of "interest" that are wanted, but a certain number of quite ordinary cases, such as a young practitioner would see every day in a country town; that they are not interesting cases to be selected with any view to some special treatment; they may be common cases of sore throat, common cases of diarrhoea, and so forth; and we are told (and it seems to one that it must be so) that young men should see those common cases?—But when you have got all the hospitals in touch, as I hope will be the result of this Committee, you would have among them all the materials which are wanted of that kind drawn from the poor law infirmaries and dispensaries and other existing dispensaries.

25835. Does not that assume that you are to make the infirmaries and the poor law institutions regularly available for all students (not in a special way as is now done) in the medical schools in the metropolis, and would not that be a very difficult thing to do?—I do not think so, having regard to the location of the different buildings all round, and their juxtaposition to the various medical schools; you would only take one or two of those institutions near the big hospitals that have schools.

25836. In infirmaries you would not find those common cases which we are speaking of, which might, no doubt, be perfectly well treated by any local practitioner as well as in hospital, and I cannot see that you could possibly get the instruction required in such cases for your medical students without bringing those cases to the hospital, or a certain number of them?—A certain number might be sent by the dispensaries or by the local practitioners. That could be arranged for; that is simply a question of organisation; but you would have in addition the large numbers of these very cases which would be sent properly to the poor law and which now improperly enter the out-patient departments of hospitals. The mere time given to these cases shows that they are of such a trivial character that very likely the man would be better if he never went to the out-patient department at all.

25837. What possible motive would a man whether a general practitioner or a poor law medical officer, who could have treated a case in five minutes, have to send it to the hospital?—He would be in touch with the hospital, and the hospital would help him to build up his practice, because he would have access to it to send other cases, difficult cases, to it.

25838. I cannot see what inducement there would be to a general practitioner, or to a poor law medical officer, or a dispenser to send off

Earl of *Kimberley*—continued.

some person who had come with an ordinary sore throat to be treated, to a hospital?—His motive would be this, that when he got a difficult case later on he would have ready access to the hospital, and the hospitals and the general practitioners would thus co-operate and work together. That is found very much to be the case in one hospital I know.

Earl *Cathcart*.

25839. The exact words of the hospital authorities were, "We want trivial cases from their inception for the purposes of study"?—That is admitted; but they do not want an unlimited number of trivial cases, and the means of getting the exact number of trivial cases requisite for teaching purposes might readily be found.

Earl of *Kimberley*.

25840. In fact you agree that in some mode or other a certain number of trivial cases should be supplied?—Yes.

25841. And the question is as to the mode of supplying them; and what you desire is such an arrangement as would pauperise people as little as possible?—Exactly. My point is that it is a very costly plan to treat these cases by the existing system. With regard to the question about the social position of patients attending the out-patient departments in general and in special hospitals, I think it is desirable in dealing with the question of out-patients to take this social position as the point from which we should start. Of course, if the patients could not afford to pay, or if they are all in such a condition that they are not willing to pay, that settles the question as far as the pay system is concerned. On that question I have not only had a large experience in the out-patient department at Guy's, where I had all the patients passing through my hands, on the medical and surgical side, during my student's career, some years ago; but with a view of settling the question for myself, I have since then made it my business to go to some of these special hospitals, and to attend in the out-patient department, and to follow the applicants for relief from their entrance into the hospital to their departure after they have been treated; and in that way I have been able to compare the social position of patients attending the out-patient departments both of special and general hospitals. This is important, because it is largely contended by some people that the condition of an out-patient in a special hospital, where they take some payment, is altogether above the level of those that attend a general hospital, where they take none; and it is necessary in dealing with these questions to get a clear idea as to whether that view is correct or not. My own view about it is this: That there is practically no difference; that the hospital out-patient of London is pretty much the same, if you average him, whether he is in a special department of a general hospital, or in a special hospital, or an ordinary out-patient of a general hospital. I may say that I personally investigated a number of cases which I found attending an out-patient department. There were about 60 people waiting to be seen when I arrived at half-past 7 in the evening. I think perhaps I had better give you the

4 July 1891.]

Mr. BURDETT.

[Continued.]

Earl of Kimberley—continued.

the cases which I took up. They were these. First a workwoman, shop woman, milliner, earning from 7 s. to 13 s. per week each, and living at home, agreed to pay, in each case 1 s. per week for attendance at the hospital. In the second batch was the wife of a carpenter not in regular work; agreed to pay 2 s. 6 d. every 14 days. A third was a labourer's wife, who paid nothing as she was unable to pay anything; her husband was ill and receiving 12 s. per week from a club. The fourth was a carpenter's child, one of twelve children, ten living at home, weekly earnings of family 52 s.; he paid 1 s. a fortnight. Then there was this case: "A carpenter, not always in full work; earns 38 s. a week; wife and daughter have been at the hospital before; pays 2 s. 6 d. every 14 days." The last case was this: "A law writer living at home with parents, earns 14 s. per week, pays 1 s. per week to the hospital for attendance. These were the cases just as they presented themselves, and I am bound in fairness to say that if special hospitals be needed by the poor, this hospital appears to be doing good among that class of patients who alone ought to receive advice for a nominal sum.

25842. What hospital was that?—That was a special hospital, the Central London Ear and Throat Hospital, which I picked out on purpose. I have also the occupations of the whole of the 4,056 out-patients who attended the same year at that hospital, and they are as follows:—Labourers, 720; clerks, 377; bricklayers, 191; servants, 179; carpenters, 159; milliners, 120; porters, 114; washerwomen, 113; French polishers, 69; travellers, 67; plasterers, 57; needlewomen, 57; bookfolders, 51; sailors, 49; foremen, 45; bar-men, 44; photographers, 43; flower-makers, 40; governesses, 40; compositors, 40; shopmen, 39; butchers' men, 39; fishmongers, 38; machinists, 37; telegraph clerks, 36; painters, 36; charwomen, 35; tobacconists' assistants, 34; harness makers, 34; gardeners, 33; guards, 33; masons, 32; tailors, 32; hawkers, 31; letter sorters, 31; lithographers, 30; bus drivers, 29; pupil teachers, 29; vocalists, 28; cabmen, 27; milkmen, 27; engine-fitters, 27; zinc-workers, 23; lace-workers, 22; musicians, 22; carmen, 22; shoemakers, 21; postmen, 21; cigar-makers, 20; engine drivers, 20; workers in factories, 20; errand boys, 19; billiard markers, 19; laundresses, 19; bakers, 18; policemen, 18; piano-forte makers, 18; schoolmasters, 17; instrument makers, 17; salesmen, 16; signalmen, 14; waiters, 14; stokers, 13; wheelwrights, 13; furriers, 12; opticians, 11; glaziers, 11; packers, 11; nurses, 10; engravers, 10; green-grocers, 10; gas-fitters, 9; gun-makers, 9; sawyers, 9; architects' clerks, 9; watermen, 8; smiths, 8; hairdressers, 8; organ-makers, 7; tin-workers, 7; tripe dressers, 6; card-makers, 6; coopers, 6; stewards, 5; vellum binders, 5; whip-makers, 4; sweeps, 3; silversmiths, 3; coppersmiths, 3; and of no occupation, 168. Total, 4,056. I would say this, that the system there is the system I was trying to explain. Practically the patient goes first of all to the dispensary window, and is there seen by the dispenser; the dispenser cross-examines him, questions him a little, and asks him whether he is prepared to pay anything, and if so, what;

Earl of Kimberley—continued.

and then, after talking it over, they decide what sum the patient can pay, and that sum he does pay; or they say they cannot pay anything. In those cases where they say they cannot pay anything, it is customary to write to the vicar, or some minister of religion, or to a doctor in the neighbourhood, to ask if they know anything of the case. Now you would say that that is no check, but I particularly noticed one case which showed how the check works. A man presented himself, and said he was a potman at a certain tavern, and the dispenser asked his name; he then turned up the Directory and found that instead of being the potman he was the innkeeper; and that man was expelled from the hospital by the porter at once, because there was the evidence for the dispenser that this man was an improper person for any relief. It seems to me, having followed this system out, and been to America and seen it in working there, that it is really the true system. Say to your patients, "Classify and assort yourselves, if you cannot afford to pay, for the relief is freely yours provided you are entitled to it; but, if you can pay for it, for goodness' sake make the effort, in your own interest even, rather than in the interest of the charity." Now the growth in the pay system in the last twelve years has been very remarkable in this country. In 1877 we had a considerable agitation as to whether it was possible, or even legal, to admit paying patients into voluntary hospitals, and the general outcry was that it was neither legal nor possible. In the result some of us determined that we would establish a pay hospital, that is a hospital where everybody should pay, and we would thus show that it was possible to conduct a hospital on paying principles and to finance it without any help at all. This hospital, Fitzroy House, was opened in Fitzroy-square, and has been at work ever since, and it has been used by thousands of people, and all the chief medical men in London have had patients in it.

Lord Zouche of Haryngworth.

25843. Is it a general hospital or a special one?—We take any case there, except infectious cases. We have chiefly surgical cases for operation, because the class of people who pay three guineas a week and upwards at a hospital, if they are medically ill, stop at home.

25844. And would the lowest scale of payment at that hospital be at the rate of three guineas a week?—Three guineas a week. I do not think, as a matter of expense, that in London, certainly in a central district like Fitzroy-square, you could afford to work the institution for less than that. At St. Thomas's here, in the pay wards, they pay 8 s. a day. That charge of three guineas is inclusive of everything except the doctor, but every patient pays his own doctor, and has who he likes.

Chairman.

25845. They pay three guineas a week, which includes dressings and everything, and they pay the doctor too?—Yes.

Lord Zouche of Haryngworth.

25846. Does their own doctor come to the institution?—Yes.

4 z 2

25847. And

4 July 1891.]

Mr. BURDETT.

[Continued.]

Lord Zouche of Haryngworth—continued.

25847. And if they want any operation performed they employ their own surgeon?—Yes; the object of establishing that hospital was really not only to meet the wants of a class of people, who, although they were in one sense well-to-do, were still helpless in the day of sickness; we had the far wider idea of trying, as an educational means, to show that you could open and conduct a hospital on paying principles which would be entirely successful, and meet a felt want, and be a good thing. That is what the Fitzroy House Home Hospital has done. Then we wanted to go further: you had on one side of the highway of medical relief a pillar, so to speak, *the pay hospital*, and on the other side you had a pillar, *the voluntary hospital*, and we wanted to build a bridge between those two pillars, namely, *the paying ward*, so that the people who could pay something should be able to have hospital care, and at the same time have the privilege and right of paying that something. We have succeeded, I think; because you must recollect that at that time not one per cent. of the income of the hospitals was derived from any source which could be credited to patients' payments. That is to say, 12 years ago there were very few institutions, practically no institutions, which took paying patients. Since then large institutions like St. Thomas's and Guy's receive them. St. Thomas's devotes a whole wing to the pay branch; and Guy's Hospital has a double system of admission; admission of patients into a general ward on payment, and admission at a fixed sum into a separate ward or cubicle, where they can be specially attended; and in addition to that, a hospital like the London, promoting a special Act of Parliament and carrying it through both Houses, empowering them to admit paying patients. That shows that the idea did attract attention.

Chairman.

25848. Do you see any objection to having paying patients and charitable patients in the same building?—None whatever. I do not see it. I know at the present time many managers think it would be impossible. (That view is not as strongly held as it used to be.) But when you go into those institutions where it is adopted you find that they work perfectly well; the only distinction being that the patient in one of the pay beds does not do any ward work, that is to say, he is freed from any claim for service; whereas those in the free beds do render such service as they may be able to render. Now the cottage hospitals, starting a new system in this country as founded by Albert Napper in 1859 adopted the pay system; and you will find that at every cottage hospital every patient had to pay something, and the result was that 12 per cent. of their income was thus derived from patients' payments.

Lord Zouche of Haryngworth.

25849. What is the name of that hospital in Fitzroy-square of which you are just now speaking?—"The Home Hospitals Association for Paying Patients" is the title, but Fitzroy House is the name. Since the establishment of the pay hospital in 1877 there has been a great growth in the institutions that have adopted the paying system. Thus out of 159 institutions in London,

Lord Zouche of Haryngworth—continued.

the provinces, Scotland, and Ireland, 78 now admit paying patients, and receive a portion of their revenue from this source. Then of hospitals with medical schools in London, five out of 11 now admit paying patients; in Scotland all this class of hospitals admit paying patients; in Ireland three out of four of them. Of the general hospitals, 20 out of 53 situated in the provinces, and 38 out of 80 in the whole of the United Kingdom, admit paying patients. Of 52 special hospitals in the United Kingdom, 29 now admit paying patients.

Chairman.

25850. Is it part pay, as a rule, or the whole pay?—Some of them have wards specially for those who pay wholly, and in some they pay partially; some may apply the pay system only to the in-patient department; some apply it both for in and out-patients too; that is I am excluding now all registration fees. Of the revenue in London 5 per cent. in the case of special hospitals, in the provinces 15 per cent. of the revenue of special hospitals is obtained from paying patients. In Ireland 9 per cent. of the income of hospitals is derived from patients' contributions. That states, I think briefly, the position of the paying system. There is one recent remarkable development of the pay system which has taken place by a special order of the Local Government Board in relation to the poor law infirmaries.

25837. Do governors, as a rule, object to paying patients?—They have all sorts of objections; but I think the one objection at the bottom of the whole thing is this, that their idea is that they are voluntary hospitals, and they are intended only for those people who cannot afford to pay, and they would rather confine them to that class; but as they admit the people who can afford to pay, and admit them free, that makes the difficulty, and I think that if any patients in a hospital can afford to pay they should have the privilege of being allowed to pay.

25852. What is your definition of a person who is a proper person to be received into a hospital as a free patient?—The object of the hospital is to cure with the smallest number of beds the greatest number of cases in the quickest possible time. The people who are entitled to free relief are those who are able to maintain themselves independently of all extraneous assistance until the hour of sickness, when the breadwinner, for instance, is struck down, or the added expense of sickness in the home renders it necessary that the hospital or dispensary should step in. Now with reference to the poor law infirmaries, they have taken up the pay system in a remarkable way. I have given evidence, and the Committee have emphasized the fact, that the poor law infirmaries, the best of them, are excellently conducted. The result has been that now if an accident happens near a poor law infirmary, the case is taken into the infirmary. Under the old regulations, if the man was not a pauper, he was refused; but there have been such a number of cases of hardship arising from the old rule that the Local Government Board have now issued a special order to admit accidents in urgent cases occurring to any member of the community, and subsequently it is the duty of the medical

4 July 1891.]

Mr. BURDETT.

[Continued.]

Chairman—continued.

medical officer to assess the payment which the friends shall make on behalf of the case. So that you have now obtained in that way, owing to the increase in the efficiency of poor law infirmaries and the growth of the pay principle, a system of payment for patients even in the poor law infirmaries of this country. Now it seems to me that a solution of our difficulties might be founded on the model of the Norwegian and Swedish system. Their institutions are excellently conducted and quite remarkable for their efficiency in many ways. I have been very much struck with them. They are beautifully clean, and excellently administered; and they have a complete system by which everybody, whether he is a pauper or whether he is a peer, pays when he goes to the hospital. And their system is this: they have grades, and the lowest grade is the poor man, the pauper, and that man is admitted and he is graded, and is paid for by the poor law authorities. Other people select their own grades, and they pay according to the accommodation that they have, whether they are in a ward with three beds in the ward, or in one with 10 beds in the ward. And it seems to me that that system would be quite an ideal solution of the difficulties in this country, simple of adoption, and readily adaptable, if we secure something like co-operation or concentration or combination amongst all the agencies for the relief of the sick. Our great difficulty is this disintegration.

25853. Are those Norwegian and Swedish hospitals State-supported or are they supported by voluntary contributions?—They are supported partly by the State, partly by voluntary contributions, the principle being that the Government subsidises them; that the deficiency every year is made good by a subsidy from the Government.

Earl Cathcart.

25854. In many cases the commune pays for the patient?—That would be the lowest grade or the second grade where the commune pays.

Earl of Kimberley.

25855. Then are these hospitals controlled by the State?—They are largely controlled by the State.

25856. Would not such a system as that be open to the objection which you raised at the commencement of your examination, to rate-supported hospitals?—That only dealt with the administration of hospitals. I should not propose to interfere with our system of administration, but only to adopt the system of admission which I have described.

25857. You mean that you would let the voluntary hospitals admit paupers and make the board of guardians pay for them?—They do that now in this country.

25858. I know they do occasionally, but would you get rid of the infirmaries and have hospitals for these paupers to be treated at?—I think that would be a very excellent arrangement in those places where they have not new infirmary buildings. In the case of Guy's Hospital, previous to Gathorne-Hardy's Act, all the severe pauper cases were treated there and paid for. Now that we have many excellent poor law infirmaries these payments are not continued, but in places

(24.)

Earl of Kimberley—continued.

where there are much larger poor law buildings than are required you might sell them and utilise the local hospitals.

25859. You said that the boards of guardians paid the hospitals now. Is it not more usually the case that the boards of guardians subscribe to the hospital, and then send in the patients, in the same way as a private subscriber would send them in?—No; the Local Government Board allow the guardians to give an annual subscription, it may be ten guineas a year, sometimes 50 guineas a year (that is a rare thing); but in addition to that, guardians do in some cases pay a weekly rate for the treatment of cases sent to the hospital by the poor law authorities.

25860. You know very well, as I understand you, that where boards of guardians subscribe and send in their patients to the hospitals they have exactly the same privileges as private subscribers have; and is it not also the case that the patients are therefore treated free?—I am aware that they do subscribe, and they would of course have the same privileges as other subscribers to the amount of their subscription, but my experience is that the subscription does not interfere with the payment on the part of the guardians for cases which are sent in, which are usually of an expensive and special character, requiring operations. There was a great controversy when cottage hospitals were started, and it was then decided, after interviews with the Local Government Board, that the guardians should pay for these cases, though they often subscribed too. The subscription is relatively small. Of course, if a board of guardians subscribed 50 *l.* and then only sent 10 cases to the hospital, I do not suppose they would pay anything further. However, the two systems prevail still.

Earl Cathcart.

25861. You know that country boards of guardians do send to London, they send to Guy's and they pay 2 *s.* a day there?—It used to be 1 *s.* 6 *d.* That is all I have to say on the subject of the pay system, I think. I come now to the relative cost of maintaining certain hospitals. Now there are metropolitan hospitals without medical schools and metropolitan hospitals with medical schools, and of course those with medical schools are necessarily more costly, that is, there is every reason to think they should be more costly than those that have no clinical instruction to give; and I think that is the general fact throughout the country. I have here an analysis of all the metropolitan hospitals with medical schools and without medical schools, showing on the average of the three years 1887, 1888 and 1889, the actual cost of the whole of the work done. The average cost of each bed occupied is shown, and that is arrived at by dividing the total expenditure after deducting 1 *s.* for each out-patient. Then the average cost of each bed occupied on the total expenditure, which is arrived at by dividing the total expenditure without any deduction whatever. Now I believe the Committee have had some figures before them already on this subject, but these are the latest figures, and I think I have an intimate knowledge of the cost and relative expenditure and the degrees of

4 z 3

efficiency

4 July 1891.]

Mr. BURDETT.

[Continued]

Earl Cathcart—continued.

efficiency in the hospitals, and I cannot explain why it is that there is this difference. For instance, taking the two institutions exhibiting the highest and lowest average cost amongst the London hospitals with medical schools, of which there are 11, King's College, on the three years' average, costs for each bed occupied, 101 *l.* 6 *s.* 6 *d.*; whereas the London only costs 74 *l.* 1 *s.* 1 *d.* Of course you have to make allowance for the fact that there are 635 occupied beds at the London Hospital, and only 159 at King's College; but still that cannot account for the whole difference shown. Well, now I have no doubt you have had evidence on that point. What I have tried to do is to break up the expenditure, and so I give you a detailed analysis of expenditure under all heads.

Chairman.

25862. We have had a great deal of evidence to show the different cost of beds, and, as far as we can make out, no two of them are on the same basis, and therefore comparison is useless?—This comparison is made on the same basis in every case, the same items being included under the same head. I have brought you up for your satisfaction the working-out of all the calculations. We have not included anything without a letter passing on the subject; we have taken great care, and it has been a work of considerable labour and, of course, cost. But I do stand by these figures, and I think they will bear any amount of challenge you like. They are on the same basis and we can show every figure and the detail of it. Now, I will follow those two hospitals out through the different heads. They are provisions, alcohol, surgery and dispensary, domestic expenses, salaries and wages, pensions, repairs, extraordinary expenses, and incidental expenses. Now, taking the London Hospital, the cost per bed occupied for provisions is 23 *l.* 9 *s.*; at King's College it is 26 *l.* 17 *s.* 8 *d.*, a difference of 3 *l.* 8 *s.* 8 *d.* Now I think that is a matter which should certainly make the authorities of the institutions concerned hold a special inquiry.

25863. Are these made out from your own calculations all on the same basis?—Yes; now the alcohol; alcohol costs 2 *l.* 6 *s.* 1 *d.* per bed, at the London, and 1 *l.* 16 *s.* 8 *d.* at King's; that is only 10 *s.* difference; domestic expenses cost 11 *l.* 8 *s.* 8 *d.* at the London, and at King's, 25 *l.* 13 *s.* 3 *d.*; surgery and dispensary at the London cost 12 *l.* 11 *s.* 8 *d.*, and at King's College, 14 *l.* 1 *s.* 8 *d.*; so that they are pretty nearly the same; salaries and wages 23 *l.* 1 *s.* 9 *d.*, at the London; 23 *l.* 9 *s.* at King's College; pensions, 16 *s.* at the London, and nothing at King's; repairs cost, 3 *l.* 14 *s.* 8 *d.* at the London, and 6 *l.* 9 *s.* 5 *d.* at King's.

Earl of Kimberley.

25864. Was that for a particular year?—That is on the average for three years 1887–8–9. I have prepared them out on a three years' average.

25865. But with reference to repairs, would not that be quite misleading, unless it was for more than three years. Certain considerable repairs come at long intervals, and they might occur in the one hospital, and not in the other

Earl of Kimberley—continued.

during that particular three years?—That is quite true, but the outside of the buildings is re-painted every three years, and that is usually the great item.

25866. Are you sure that they are re-painted every three years?—That is the usual practice.

25867. I think you will admit that the repairs are very uncertain?—Certainly.

25868. We can hardly trust that comparison, therefore, unless it is over a much longer period?—We have “extraordinary expenses,” which places all the repairs not ordinary under “extraordinary expenses.”

Chairman.

25869. Are these “repairs” under a certain sum?—They are simply structural alterations and renewal of buildings not additions or any great undertakings. The extraordinary expenses include the larger items, and the London cost 7 *l.* 13 *s.* 8 *d.*, whereas King's costs 19 *l.* 7 *s.* 7 *d.* Under incidental expenses, the London cost 4 *l.* 14 *s.* 6 *d.*, and King's 8 *l.* 13 *s.* 1 *d.*

25870. What do you include in incidental expenses?—All the other expenses that are not specified and included under any other head.

Earl of Kimberley.

25871. It is not the fact that the London hospital is double or nearly double the size of King's; and if so, that in itself accounts, does it not, for a great deal of the discrepancy?—I stated, to begin with, that there were 635 occupied beds in the one case and 159 in the other.

25872. Then it is even more than double; would not that account at least for a great deal of the difference?—No, I think not because if you compare King's with Westminster you find that these large differences exist still. Thus the average cost of each bed occupied at King's College, where the daily average number of beds was 159, is 101 *l.* 6 *s.* 6 *d.*, and at Westminster, where the daily average number of beds occupied is 174, 65 *l.* 16 *s.* 1 *d.*

25873. But as regards the comparison you have been making, is it not very fallacious to compare a large establishment with a small one, inasmuch as certain expenses in all small establishments are necessarily larger in proportion than in a large one?—Yes, that will have a certain weight but it will not amount to 100 per cent. Now Lord Sandhurst asked me the question, what is included in “incidental expenses”? You will find them here (*handing in a paper to the Chairman.*) You will find that it sets out the income and expenditure account. You have got provisions, alcohol, surgery and dispensary, domestic expenses, salaries and wages and so on, and then incidentals; are those not included under the others?

25874. Have you ascertained that none of the expenses for out-patients are included in any of these?—All the expenses are included of every kind.

25875. Then you must take into consideration the number of out-patients in one or the other; I mean that a large out-patient expenditure may have affected the figure per bed?—The figures I have given you are after deducting 1 *s.* for each out-patient, which, as far as I am able to

4 July 1891.]

MR. BURDETT.

Continued.

Earl of Kimberly.

to ascertain after years of experience, is a good all-round sum for representing fairly the cost of an average out-patient.

Earl Cathcart.

25876. The evidence on the whole is, that it is 1 s. 6 d. ?—I think that is too high; that is a very disputed cost; they are high figures so far as the London hospitals, not having medical schools, are concerned. Of course, with reference to the two hospitals, as I have shown, there is a marked difference in the provisions. I ought to state that at the London Hospital it has been the practice never to give poultry of any kind or description, and the patients there have to provide themselves with tea, butter, and sugar; but still that would not account for a difference of 35 per cent.; it may account for a difference in the provisions as far as it goes, but that will not represent the whole cost. Now I do not think that I will go with the Committee into the question of the other returns which I have here of general hospitals without medical schools in London, showing equally astonishing differences. For instance, the average cost of a bed occupied in a London hospital not having a medical school is 70 l. 4 s. 6 d., and the average cost of the whole having medical schools is 80 l. 7 s. 9 d. Then if you take the provinces and Scotch and Irish hospitals with medical schools, you will find that the average cost at the provincial hospitals for each bed occupied was 52 l. 9 s. 3 d., and the average cost at the Scotch and Irish is 49 l. 5 s. 5 d., showing a steady decrease all the way through. I propose to hand in these tables, and I think as I have got all the figures and details there, when the Committee have seen them in type, I might be re-called, if necessary, to answer any questions that members might like to put to me as to the way in which these are made up or to explain and amplify any points objected to or questioned by any of the hospitals included in them (*handing in certain tables*).

25877. How do you account for the difference in cost between the hospitals having schools and those having no schools?—One great difference is the class of cases. You see at the schools, especially in the London schools like University College or King's, where there is only a small number of beds, and a large number of students, they have to pick all the cases, and every case is a special case, a serious case, and consequently most costly.

25878. I ask you the question because it has been said in evidence here that all the appliances where there is a school are more expensive and costly than where there is not; but you do not mean to assert that, as I understand?—Of course where there are more operation cases there will be more appliances, in the sense of more lint and so on, but relatively no more orthopædic appliances I should think. Still the evidence you refer to is generally accurate. Then I have got out returns for all the other hospitals with 100 beds and upwards, but I thought if I put those in you would have such a multitude of figures that you would not know how to deal with them, but you can have them if you wish.

Chairman.

25879. Of course you would like to see something of this kind pursued throughout the (24.)

Chairman—continued.

hospitals with a view to secure uniformity of accounts?—Yes, and I will take that point next; what you want is a basis of account. The difficulty has been that everybody has made up his accounts not only in a different sort of way but under different heads. What we really want to get is some simple system which shall include the same things under the same heads, and give the details of income and expenditure on the same lines. Now this that I am putting in now is the form which has been suggested for adoption by all the London hospitals. It is at the present time under their consideration, and no doubt with some few modifications it will meet the whole case.

25880. Is there not a committee sitting of secretaries of the various hospitals?—Yes, but as usually happens in all these matters, there is a split; I believe about twelve of the secretaries are sitting, but the others will not come in at the present time. However, the Hospital Sunday Fund Council have the matter in hand, and when both camps have worked out their ideas there will be a conference; and on a simple matter like accounts there should be no room for friction. Now here we have the details of the accounts put out in a very simple way. Where you have got down bedding, and fuel, and laundry and washing, and so on, it seems simple to classify the thing, but directly you begin to take the items every secretary will have a different idea of what head he shall put each item under. So one school of secretaries has gone for a glossary, and the other school objects to that term and calls it an index of classification. But they have come to this much agreement, that it is desirable to get a list of all the articles used for hospital purposes and to classify them for purposes of account in a sort of directory to which everybody may refer; so that all who will agree to the system of accounts may know that they are producing under the same heads exactly the same items; and that would I think greatly solve the question. As to balance sheets and other forms in connection with the accounts of hospitals, I myself do not attach much importance to them per se. All I should like to see is that no account of annual subscriptions or donations or grants from special funds or receipts of any kind should appear in the accounts as a lump sum unless a reference is given to the page in the report where the details which go to make up that total sum are given, including the names of those who have contributed; because in the process of years I have had to investigate a number of frauds upon charities in connection with the late Mr. John Ball, of Quilter, Ball and Company, and Mr. Gleg of the same firm; we have had nearly all the charity cases before us, and we found that in every instance bribery and fraud were effected by simple means. The parties immediately implicated had published accounts, and they had accounts which were not published; for your speculator always wants to have a building account or a bazaar fund, or some special fund of some kind, which is not in a condition for the accounts to be published; and it is perfectly clear to me that where special appeals are being made, it should be compulsory to publish a special appeal account giving not only the amounts received and the amounts expended, but

4 July 1891.]

Mr. BURDETT.

[Continued.]

Chairman—continued.

but a list, as in the case of the general income and expenditure account, of each item which goes to make up the total sum. If that is done (and it is a very simple reform) fraud of that kind would really be impossible. And so far as the uniformity of accounts goes, the introduction of the glossary or the index of classification, and the acceptance of a simple form of income and expenditure account, such as I have put in, would for all practical purposes solve our difficulties, and enable anybody interested to get a fair statement of the actual and relative cost of our institutions.

Earl Cathcart.

25881. You must insist upon a hospital year?

—Yes.

25882. What would you make the hospital year?—Most of them make it up to the 31st of December; in some of the hospitals, a few country hospitals, the year ends on the 30th of September.

25883. There should be a uniform hospital year?—Yes, but that after all is not an important point.

Chairman.

25884. Now as regards your heading of Pension Fund for Nurses, most of the hospitals do not pension the nurses?—You will see in those returns that I have put in that practically there is no such thing as pensions. The practice with hospitals has been this, that they say: "Provided a person remains a member of the staff for a sufficient number of years and becomes incapacitated, then we will provide for them, or we will look after them." Now, I have sat in a hospital board-room for a quarter of a century, and I have seen a great many of these cases dealt with, and I never remember a case where some committeeman has not objected, and fairly objected. "I think that the funds of the hospital were not given for the purpose of pensions; they were given for other purposes, and we have not the power to vote a pension." That is the initial objection that is taken. In the result, there is generally a compromise arrived at, which gives a gratuity of an inadequate amount probably to a faithful servant whose best years of service have very often been given at a time which was critical to the institution, but at a time also when the majority of the members of the then committee did not belong to it, and they will therefore personally have no knowledge of the long faithful service, because the members who had governed the affairs have died or passed away, so that, in actual practice, however faithful may have been the service, there has never been an adequate provision for nurses nor for any member of the staff, up to a few years ago. I will mention one case by way of illustration: A nurse was in attendance upon a typhoid case, a Swede, a sailor, who was, for a Swede, a very bad sort of man, and he was annoyed with the nurse in some way, and he spat into her mouth. The nurse, who had an assistant with her, did not drop the man, but she waited till his bed was put ready for her to place him in his bed comfortably; she then spat it out, and rinsed her mouth out with Condyl's fluid; but in the result she had typhoid fever. She recovered from the typhoid fever, but it was a particularly malignant kind of fever, and she

Chairman—continued.

lost the use of her hip joint and one knee joint, and so became permanently incapacitated as a nurse. The institution took charge of her for two years, and then they granted her a gratuity; and in the result that women died in the work-house. I do not know how that strikes you, but it struck me as being a great injustice, and something which ought to be remedied. I felt that an attempt should be made to establish a fund upon a legal basis under the Insurance Companies Acts and the Limited Liability Companies Acts, which should provide for nurses and hospital officials, &c. Of course, initially, it had to be considered whether the basis should be a provident basis, or whether it should be a philanthropic basis, and it was determined that it should be only or mainly provident. And ultimately a fund was established, and 20,000 £. was deposited, and the National Pension Fund, now known as the Royal National Pension Fund for Nurses and Hospital Officials, was instituted some three years ago. This pension fund is so arranged that it constitutes a savings bank as well as an insurance company, and the idea is that if nurses will contribute, or if the hospital officials will put by a fixed sum per annum, they can pay it in on the returnable scale, that is to say, so that at any time they can on giving notice draw out their savings if necessary. They will also have in addition to their interest of 2½ per cent., which they will get if they withdraw it, bonus additions. These bonus additions are made up from the profits on the working of the fund, it being a mutual fund, and from the Donation Bonus Fund, which is a fund which has been contributed by those who are interested in workers in hospitals, and now an income of 40,000 £. With the object of providing for all cases of distress, so that in case a nurse was ill, and could not keep up her premium, or in case an old woman from no fault of her own, withdrew from the pension fund, being in want, and had no opportunity of providing a pension for herself, a benevolent fund was instituted which now has 10,000 £. invested, and an income of 400 £. a year, for the benefit entirely of this class of workers. Now the Royal National Pension Fund has been working for three years, and the result is that voluntarily 2,000 people have joined the fund already, and the invested funds amount to upwards of 100,000 £., so that we who are connected with it believe that we shall have 1,000,000 £. probably invested in 10 years. Lord Rothschild, Mr. Hambro, and Mr. Henry Hucks-Gibbs, M.P., are the trustees of the fund, and they take an active part in the management. The late Mr. Junius S. Morgan was also a trustee.

25885. What is the amount of the premium?

—The amount of the premium is based entirely upon the age at which a nurse or other official joins. The best table is the Table F., which provides sick-pay and pension on a returnable rate. The difficulty was to find out what sum a nurse could afford to save out of her wages. After a great deal of consideration it was decided to take the Napoleon Code, which provides that no man should expend more than an eighth of his income on house-rent; and it was thought that the nurses might be reasonably asked, as they have no house-rent to pay, to put by one-eighth of their income. If we got an eighth of 25 £. a year, that would be 3 £. 2 s. 6 d., and then the question was, what can we give a nurse for 3 £. 2 s. 6 d. a year who joins

4 July 1891.]

Mr. BURDETT.

[Continued.]

Chairman—continued.

joins the fund at 25 years of age; and we find that for 6 s. 10 d. a month we can give her 10 s. a week practically for life, because she has 10 s. a week in case of sickness, and she will have, we hope, 10 s. on retiring at 60 years of age; and in calculating the tables the actuaries have found, according to the experience of the friendly societies, and all the experience we could get that was available (for this is a new field), that we must be prepared to expect that at about 54 years of age something like 66 per cent. of all our contributors would be permanently in receipt of weekly payments. Well, in order to help the institutions, it has been decided to have a system of affiliation, and this system of affiliation provides that any institution can enter into an arrangement with the Royal National Pension Fund, and can have a separate trust into which it will pay half the premium of its nurses, the nurse paying the other half under certain rules; after five years' service or more the hospital allows the policies which are issued in virtue of the half premiums which they pay to go to their nurses as a reward for faithful services. In the case of those nurses who do not remain five years, or whose premiums lapse, the money paid in by the hospital authorities will still remain to the credit of the institution, and will accumulate at compound interest, so that it is hoped that in time the affiliated institutions will have a fund within the present pension fund which will get them over all the difficulties with reference to provision for their workers, and make them, by adding 10 per cent. to their present wages, have a pension fund strong enough and big enough to provide adequately for all their staff for all time. If that is done I think you will agree that a great work will have been accomplished in a simple way; and it is one which the hospitals are most grateful for, and so are the workers. I think it is a remarkable fact, considering the smallness of nurses' wages, that they should to the number of 2,000 have simultaneously come in within less than three years, and that 1,000 of them should have joined since this time last year, when the Princess of Wales received the first thousand at Marlborough House. The Princess will receive the second thousand on Saturday fortnight.

Earl Cathcart.

25886. Are nurses' lives considered to be average good lives?—I can only give what I hear is the experience of the trained nurses' annuity fund which Lady Blomfield established; it is for nurses of 15 years' service above a certain age, who pay so much and get 15 l. a year allowance. They have never had anybody die yet; the ages of the 12 annuitants are over 80; and I am told on medical authority that none of these ladies are likely to die; they will gradually dry up, and until they do so they will draw their pensions. The medical explanation is this: that a woman when she ceases to work, if she is placed in a position of comfort, that is of freedom from anxiety as to the means of subsistence, will go on placidly for many years, *i. e.*, until the vital energy is wholly exhausted. I do not know whether that is correct, but with a view of being quite safe in our calculations our actuary took the Post Office rates, and we have thought it better to have higher rather than

(24.) e

Earl Cathcart—continued.

lower rates, because safety was essential, and as it was a mutual fund, if we overcharged, any surplus would be returned to the nurses in due course. I think that is all I have to say about the Royal National Pension Fund, which has proved in practice a remarkable success in every way. Now there is the question of the registration of nurses. I have got to hand in some documents which I think it better to give you relating to that rather than to tender much evidence.

Chairman.

25887. We have already had evidence more than once on that subject; we had evidence from Mr. Bedford Fenwick as to it?—You have got the original memorial against nurse registration, which contains a few signatures; the original memorial as signed represents something like 150 institutions. Then there is the medical memorial signed by all the teachers in the nurses' training schools throughout the country, and the signatories to it.

25888. Is that in favour of registration?—No, against registration. Then there is Miss Nightingale's opinion, which you have not got, and ought to have; I thought it would be well if I handed in these documents for the use of the Committee.

25889. The registration affects the nurses after they leave the hospital, does it not?—If it affected them only after they left the hospital, there would not be the objection to it that there is; but it gives a bogus complexion to an untrained nurse, and makes the public liable to believe that she is trained when she is not.

25890. You can put in the documents if you like to do so?—All I have to say is that the subject of registration is in a nutshell. You have at present registration in regard to all nurses adequately trained; that is to say, that nearly every nurses' training school keeps a register of its nurses, and issues a certificate to all who have had three years' service. Well, if the public want to know if a nurse is trained, they have only to ask her to produce her certificate from her nurse-training school; that is evidence of her registration pure and simple, and such a certificate is a voucher that they can rely upon. If they are dissatisfied with the nurse they can write to the matron of the school where she was trained, and then the matron will go into her case, and if necessary she will call up the nurse and deal with it. So that the public really have adequate protection in that way. The contention is that they have not, and in order to put things right an outside body, which has had nothing to do with the training of nurses, proposes to issue, and has indeed issued a certificate to such nurses as it pleases to arbitrarily select, these nurses paying a maximum of 10 s. per head for the privilege. So that it happens that I have seen the case of a nurse who did not get a certificate at her hospital, because she was discharged for having in her possession the property of a probationer, and so her certificate was refused, who now goes out as a trained nurse with Princess Christian's name to a certificate as her authority for representing herself to be an honest and capable nurse, when in reality she is not. I consider that to be a very great evil, and so do the nurses' training schools, for which the Royal British Nurses'

5 A

4 July 1891.]

Mr. BURDETT.

[Continued.]

Chairman—continued.

Nurses' Association is alone responsible, besides being a serious danger to private families and the public. We say: If the public wish to have evidence of who are trained nurses, by all means publish, under the authority of a properly constituted committee appointed by the authorities of the nurses' training schools and others who train nurses, an official directory of trained nurses, which will contain the name of every woman who has had hospital training, which must also state precisely where she had it, and why her name has been included in such directory.

Earl Cathcart.

25891. You do not want to destroy the hospital *esprit de corps* but to keep it up?—Yes, we want to keep it up; and we want the public to understand that, unlike doctors, it is the character of the woman herself that is the essential matter in regard to nurses. The difficulty now is that when you get nurses into your houses they may be like the east wind; they may be excellent institution nurses, but utterly unfitted for private nurses. Now the matrons who trained the nurses, knowing the character of the women from the first to the last, are able to sort the nurses to the cases; and in that way the doctor and the public get exactly what they want. But to take a nurse because she is entered on a register as a nurse, may be to introduce the east wind into your house. I do not think I need trouble you any further on this question of nurse registration, because practically the question is dead. So far as the public are concerned, I think they understand it better and they see that registration in the form proposed by the British Nurses' Association is undesirable and dangerous to the common weal. The hospitals themselves took it up and were rather smitten with the idea at first; but the Hospitals' Association examined it carefully, and they found on inquiry that for practical purposes it would be harmful rather than beneficial.

25892. Have you exhausted your programme?—Yes. I have other matters, but as it is getting so late I will pass them over.

25893. You told Lord Kimberley that you would say something about the drainage of St. Bartholomew's?—I have got here a list of those hospitals which have been re-drained, which I want to give you, and it shows that the result of inquiries which I have made for plans has brought about practically the re-draining of more than 200 institutions in the last ten years. I am about to publish the plans of all these institutions showing their drainage, and the London was one and St. Bartholomew's is another, which had not a plan of their drainage and could not show it. Both would have come out in this book, "Hospitals and Asylums of the World," as hospitals without drains. A hospital without drains in the year 1891 is an anomaly, and it is no doubt a condition of affairs which ought not to be continued.

25894. Do you think that St. Bartholomew's is a sweet hospital as regards drainage?—Certainly not.

Earl Cathcart—continued.

25895. With regard to the management of these endowed hospitals are you in favour of the system under which the governors elect each governor, or would you throw the door open and let more fresh air into the governing bodies?—I should say certainly I am not in favour of the first-named system, having regard to the experience of Guy's Hospital, to which I belong and which I am interested in; I think it works harmfully and destroys the possibility of any new life in the institution and allows it to fall into the hands of the treasurer for the time being, which may be a life appointment, and he may gradually go to sleep.

25896. What would you do to admit fresh air; how would you reconstitute the Board of Governors?—That is rather a difficult question. I should think, having regard to the new departure which the treasurer of Guy's Hospital has taken, in making a general appeal to the public for funds, that the remedy in that case would be to give the right of election to the governors, that is to those people who have given them this large sum of money. They have been asking for money and they have obtained large sums of money; hundreds of people have been brought in as donors, and therefore there now exists what did not exist formerly in the case of Guy's, an electing body.

25897. You would not have anything in the nature of representation from outside?—I should be very glad to get representation; only the difficulty in my mind is to find any basis that would afford reasonable ground to hope for improvement.

25898. But your opinion is that something ought to be done to improve the governing bodies of endowed hospitals?—Yes, to get life into them and new blood, as in the case of the poor law, life and light.

25899. Ventilation in fact?—Ventilation.

Chairman.

25900. You desire to add something with reference to drainage?—Yes; the London Hospital is now being entirely re-drained; St. Thomas's, being a new one, was drained properly at the building of the hospital; St. Mary's was re-drained in 1887; the Seamen's re-drained in 1888; King's College re-drained in 1882; the Great Northern Central, the Miller Memorial, and the Seamen's Albert Docks hospitals, were all drained properly at the time of building, the hospitals having been built within the last three years. The Children's Hospital at Great Ormond-street was re-drained in 1884; the Samaritan Free Hospital for Women, and the Hospital for Women in Euston road, which were opened last year, were drained at the building of the hospital, and the Hospital for Women in the York-road, Lambeth, was re-drained in 1887. The Brompton Hospital for Consumption (old building) was re-drained in 1887–88.

The Witness is directed to withdraw.

4 July 1891.

MR. REGINALD BRODIE DYKE ACLAND, is again called in ; and further Examined,
as follows :

Chairman.

25901. You want to correct something in your former evidence?—I desire to correct an unfortunate mistake which I made in the evidence which I gave on the 8th of June, to which my attention has been called. In answer to Question 22822 I gave certain figures with regard to some small hospitals with an average number of beds occupied under 35, and included among them the National Hospital for Epilepsy. This is incorrect. The hospital to which I intended to refer is the hospital for Epilepsy and Paralysis, Portland-terrace, Regent's Park. The figures for that hospital should be : Average number of beds occupied, 21 ; cost of maintenance, 1,817 £ ; management, 403 £ ; proportion of cost of maintenance to cost

Chairman—continued.

of management as 18 is to 4 ; amount received from patients, 909 £ ; per-centage of amount spent in maintenance received from patients, 50. The National Hospital for the Paralysed and Epileptic is a large first-rate institution with 170 beds (which number is shortly to be increased to 190), and is one which in no way depends for its existence on amounts received from patients. I think it will be clear to anyone who reads my former evidence carefully that some mistake has been made, but I am anxious to correct the mistake publicly as it has been brought to my knowledge that it has been considered to cast an undeserved slur on an admirable institution.

The Witness is directed to withdraw.

Ordered, That this Committee be adjourned.

Die Lunæ, 13^o Julii, 1891.

L O R D S P R E S E N T :

Earl SPENCER.

Earl CATHCART.

Earl of KIMBERLEY.

Lord CLIFFORD of CHUDLEIGH.

Lord SANDHURST.

Lord THRING.

THE LORD SANDHURST, IN THE CHAIR.

MR. WILLIAM RATHBONE (a Member of the House of Commons), is called in;
and, having been sworn, is Examined, as follows :

Chairman.

25902. YOU are a Member of Parliament, are you not?—Yes.

25903. And you have been a member of the executive committee of the Liverpool Infirmary for many years?—For about 30 years.

25904. And president of the Liverpool Training School and Home for Nurses, which nurses the infirmary?—Yes.

25905. And for more than 25 years you have been a member of the workhouse committee of the Liverpool vestry and of its nurses' committee?—Yes.

25906. Who have the charge of the hospital, which contains how many beds?—Over 1,200 beds.

25907. And also you have been for many years a trustee and a member of the executive committee of the Nightingale School for Nurses, which nurses St. Thomas's Hospital?—Yes.

25908. What is your impression as regards the comparison of hospitals 30 years ago and now?—Thirty years ago they were in a very wretched state. There were only two hospitals in England that had a proper system of training nurses or a training school for nurses. One was St. Thomas's, which trained only for hospitals, the other was King's College, where under the charge of the St. John's Sisters there was a very good training school for private nurses. There were some very good nurses in the large hospitals who trained themselves, but there was no system of training or preparing nurses, they just engaged the best woman they could get, and she trained herself practically upon her patients.

25909. And she began as caretaker more than as a nurse?—She did. There were a few, but only very few comparatively, that were nurses at all. I may mention as an instance, our Liverpool Infirmary, which I believe was one of the best managed local hospitals. The origin of the reform in that hospital was this: I went to them to ask whether they could train us women for nursing the poor in their own homes, and they said they could not; that they had given their

Chairman—continued.

matron power to raise the wages from 10 l., which used to be the only rate, to 16 l. a year for any nurses that were worth it; and they had only three nurses in that large hospital that she considered worth giving 16 l. a year to, and she could not get any more; the others she said got their 10 l. a year, and if they gave them any more, the probability was they would get drunk the first holiday. That was the state of the hospitals generally in the country; and I am afraid that the London hospitals were not a very great deal better.

25910. But that state of things has been very much improved?—Very much indeed. Perhaps I might just state what happened in Liverpool, because I suspect that it is very much a type of what has happened elsewhere. I went to the chairman, Mr. Gibbon. The hospital was then managed, as it is now, by a committee of merchants and lawyers, and Mr. Gibbon (who was the son of a man who in the previous generation had really managed the hospital), was the chairman, and a most efficient manager as far as his materials would admit.

25911. Was this hospital supported entirely by voluntary contributions?—Entirely. There was a small endowment, not a very large one, 2,000 l. or 3,000 l. a year, and they had to spend 11,000 l. or 12,000 l. I wanted him to give me some nurses; he said he had none to give; and I then ventured to suggest under Miss Nightingale's suggestion that they should train nurses. He said "We have no means of training them for ourselves"; and it ended in our building them a home; and then they undertook to introduce the Nightingale system of training into that hospital, and since that time we have steadily improved under Miss Nightingale's guidance. We found more and more that the nearer we approached to her opinions in the hospital management the more satisfactory the working became. The plan that we pursue now, partly on the old system and partly on the new, is this: There is a general committee who have the general management of the hospital, and meet once a fortnight. Every

13 July 1891.]

Mr. RATHBONE, M.P.

[Continued.]

Chairman—continued.

fortnight they choose one committee-man whose duty it is to visit for a month; so that you see there are two visitors always visiting, one of whom has visited for a fortnight previously, and the other is a new visitor. This plan you see keeps a certain continuity of information and inquiry. They are expected to visit the whole of the hospital twice a week, and to record the results of their visitation, and any recommendations they may have to make, in a visitors' book. Then we have a medical staff, which consists of three visiting surgeons and three visiting physicians; each of these has under him a young house physician or surgeon, who is a man who has just gone through his pupillage; and each of the visiting surgeons or physicians has a female and a male ward. The medical staff are entirely responsible for the medical treatment of their patients. Then we have a matron who is sometimes called matron, sometimes lady superintendent; and I may mention that we first began the new system with a matron who had charge of the linen and all the housekeeping and everything of that kind, and a lady superintendent who had charge of the nurses. We did not find that a good system, and when the old matron was superannuated we changed the system, and we have ever since placed the whole under the charge of the lady superintendent of nurses who controls and manages the entire female staff of the establishment and has charge of the stores, linen, &c. She has under her a housekeeper, and she has also two assistant superintendents, one of whom lives in the hospital and does most of the hospital superintendence under the lady superintendent; the other corresponds to the home sister of St. Thomas's Hospital; she lives in the nurses' home and gives regular systematic instruction to the nurses, who also attend lectures given for their benefit by the medical staff; there is also a night superintendent. Then there is a secretary, who is a sort of general manager, who keeps the books and pays the bills, and does all that sort of work, but who has no power to interfere with either the doctors or the matron.

25912. Have you anybody there called a medical committee?—There is a medical committee which consists of the doctors, and two of them sit upon the general committee with those who are elected by the subscribers.

25913. With regard to these two visiting governors of whom you have spoken when do they visit; on certain days?—No, they visit either alone or together; they generally visit together, but on any days that are most convenient to them. They are very busy men and they choose their times; sometimes in the middle of the day, sometimes in the evening; but that is left entirely to their discretion. The engagement, the dismissal, and the management of the nurses rests entirely with the matron, but the Committee have power in case of injustice or complaints to consider appeals to them. But I wish to say this, that with men and women as they are, the great difficulty is not any likelihood of injustice to the nurses owing to a wrongful dismissal. The great difficulty we have always found, even with the most stern matrons, has

Chairman—continued.

been to induce them and encourage them to dismiss promptly enough nurses who are not competent for their work. And that is very naturally so; because these nurses have friends, and matrons naturally do not like a row; and the matron naturally does not like to turn away a probationer or nurse. I have never in my 30 years' experience, and after having been concerned in the management of three hospitals, known a case of wrongful dismissal; but I have been often struck with the fact that we did not get rid of the nurses as often as we ought to have done. One other thing I may also state: the matron during the first month's probation keeps or dismisses the probationer, without ever putting her on the books; except that once a year she reports the number that have been refused, and if necessary why; but we do not require her to give any account of it. But in the case of the nurses and the sisters she has to report it to the committee. But I would venture to point out this: that it is almost impossible to prove the very best reasons for dismissing a nurse. For instance, there is nothing so important in a nurse as that she should have the power and habit of correct observation of the symptoms of her patients, and everything that goes on, and the power of correctly reporting them. The matron who has from the superintending sister constant reports of a nurse, finds out very soon if that woman has not the natural faculty for a nurse; but it is almost impossible to prove it; and yet anyone who is deficient in that ought to be sent away immediately. I have had a great deal to do with organization of various kinds. I have had the management of a large shipping business, and I have also had a great deal to do with the selection of nurses and their promotion, and I do not hesitate to say that I would as soon sail in a ship in which a committee of passengers or a committee of shippers interfered with the management by the master of his crew or had anything to do with the management of it, as I would have anything to do with a hospital where the matron had not full power to deal with the management of her nurses. In both cases it is a case of life and death, and anything which interferes with the discipline of the matron or of the captain is I think a wrong to both the patients and the passengers. We have more and more learnt by practical experience to place full confidence in our matrons, and we have not found it abused, and I believe the more we have done it the better we have reformed the management of our hospitals. The doctor or the visitor is bound not to call the nurse to account before her patients, but to report to the matron, and to act through the matron. If we have not a matron who is to be trusted to do that the sooner we get rid of her the better, that is the only way to do it.

25914. But how are you to know that the matron is to be trusted?—Our visitors go round twice a week, and talk to the patients and ask them whether they are comfortable. They are sure to hear of any complaints. How does the captain of a vessel know?

25915. I can understand a patient complaining to the visitors; but how do you find out if a nurse is dissatisfied with her treatment by the matron?

13 July 1891.]

Mr. RATHBONE, M.P.

[Continued.]

Chairman—continued.

matron?—Because the nurse can complain to the visitors, just as much as any one else can.

25916. But if you give power to the matron to dismiss whomever she wishes, do you think that nurses are likely to complain of her?—Certainly, if they are dismissed wrongfully. I did not say that we had not had complaints, but I do not remember a single case in which complaints have been found to be truly founded, and we have had some pretty stiff experience, because when the new system was first introduced we found that the doctor sometimes did not agree with the matron as to the dismissal of nurses; and we found it very important to support the matron even against the doctors, because the matron had to do with the moral discipline as well as with the clinical treatment; and sometimes a woman might be a very good nurse but a frightful cause of evil in the establishment. Where you have a large number of young women, and a lot of young men about them, it is of the utmost importance that you should have some one who can act in cases where it may not be well to have a public scandal.

Earl of Kimberley.

25917. You have a perfect belief I see in a benevolent despotism?—Yes, I have in hospitals; and I think I have done as much as most people for the improvement of the condition and comfort of the nurses; but I think that at present there is a great deal of nonsense talked about them. People talk as if the hospitals and everything in them were there for the amusement and the pleasure of the nurses; and we get, in consequence, the fact that nursing has become fashionable. It is very good in certain ways but very dangerous in others. We get a very mixed set of applicants; young ladies who think that when they have passed their probation they will be under much less control than at home, and that they may come to the hospital as a sort of town house, where they may have a good time. I can assure you it is not at all an easy matter, the management of a hospital now. It is very much easier in this respect that we have a much better set of nurses; but we have a great deal more difficulty in choosing our probationers, and perhaps in keeping them, than we had previously.

25918. Of course, in this hospital, naturally there is a committee, which, apart from the nurse question, deals with the management of the hospital, the food and so forth?—Yes.

25919. Have you a steward, or perhaps a secretary who acts as a sort of steward?—Yes, a secretary.

25920. Do you give him full power also, as you do to the matron?—No, he is under the committee.

25921. Why should you not, on your principle, give the same power to the secretary; the argument is just as good for the one as the other, is it not?—Because the secretary has not to do with the question of life and death, which the matron has; and also we have more practical knowledge to control the secretary. Most of us
(24.)

Earl of Kimberley—continued.

are housekeepers ourselves and know something about it; and the secretary's work is quite different from that of the matron.

25922. But, according to your principle, it would be much better that there should be a despotic power in the secretary?—He has very little to do with the men or the women either.

25923. I suppose the food is probably ordered by a steward or secretary?—The food is ordered by the secretary; but the matron would call him to account if the food was wrong.

25924. In the hospital who is responsible for the food?—I should think the matron and housekeeper would be responsible for the food being good; but we have a system of having tenders at the commencement of the year, which are submitted to the committee, and the committee take those tenders, and if there are any complaints they go very strictly into them.

25925. What I want to know is whether the duty of seeing that the food is sent in as it should be is left to the secretary or the steward or the matron?—The matron and the housekeeper would probably have most to do with that. We take care ourselves to look into it if there is anything wrong.

25926. Why should you interfere with the matron; *ex hypothesi* it is a benevolent despotism, as I understand you?—As near thereto as we can conveniently get in business. We get the best matron that we can; but we should interfere with the matron if anything went wrong.

25927. I quite understand that it is essential to support a matron's authority and not unduly interfere, but I do not understand its being desirable that any person whatever should be left without control or superintendence; it seems to me to be unsafe, and I do not quite understand the argument?—Excuse me; I hardly said that. I said that you ought to act through her as to dealing with her officers, the officers under her charge. If a nurse does wrong, for instance, and you think from what you see of the patient that there is something wrong in the nurse's management, the right thing is to go to the matron, and say, "I think this is wrong; what are the grounds of this?" She perhaps agrees with you, and then puts it right. But it is not for the visitor who is comparatively ignorant on these subjects, or on the technical part of them, to scold a nurse for what is wrong.

25928. My mind was rather on what you told us with regard to the probationers, that they are not only selected by the matron, but that they are dismissed by the matron without any more protection than a report by her once a year; that is what I understood you to say?—That is the case.

25929. Does not that put in the power of the matron to do cruel injustice?—What object has she to do other than justice?

25930. May she not have favourites, and take a dislike to a probationer without reason?—I am not prepared, as one of the committee of the hospital, I was not when I was attending to it weekly, to go into the question of every one of these ladies. The matron is a much better judge of the materials out of which nurses are to be selected.

5 A 4

25931. Probably

13 July 1891.]

MR. RATHBONE, M.P.

[Continued.]

Earl of Kimberly—continued.

25931. Probably, you would as a rule, follow the advice of the matron; but if these cases are in no way reported, how are the committee to judge whether she does her duty or not?—But how are the committee, who are very busy men, to go into the case of every one of these probationers? It is simply impossible.

25932. That may be a reason for some alteration in the committee, but it seems to me to be extremely improbable that any woman in the position of matron would not, from time to time, commit injustice, whether from taking dislike to women or from favouritism, and I understand from you that if she did you would know nothing whatever about it?—In regard to the selection of these women, I may say that I know no administrative business which I have ever been connected with which could be managed on any other principle. If we were to attempt to choose all our own sailors, and not leave it to our overlookers, we should have a nice set of sailors; and in the same way, if we were to take our own probationers we should have a very incompetent set.

25933. I never for a moment suggested that you should choose the nurses; I only want to know whether it is not a dangerous thing that you should not know what the practice of the matron is, in regard to these matters that you blindly trust her?—I do not think we blindly trust her. We trust her as we do any of our other officials, after observing her for some time, and knowing that she is thoroughly trained for the work. I do not think you will find any large administrative business; I have never been connected with any, in which the central body attempts to deal with all the details, such as the selection or dismissal of the nurses. They have always the power of appeal to the committee if they please, and they would appeal fast enough if they had any ground to do so, but I venture to say, at the beginning, that I feel as certain as I do of anything that has ever come under my management, that the danger you have in this work is not that the matron would not take a good probationer if she could get her, because it is only too difficult to get good probationers, but the difficulty is that we often get probationers and carry them on for months and months, merely because the matron dislikes to dismiss them as soon as she ought to do in the interests of the patients. The object in all these institutions is not to find patients for a number of nurses; it is to nurse the hospitals, and the sick must be our first object, and for nursing those sick, you must give every facility for the selection of the very best woman you can get for the purpose, and even if one or two were thrown out and not allowed to come into the hospital, they have no right to come into the hospital; they offer themselves as probationers as the most likely material for making good nurses for saving life and health, and our object is to save life and health, and I say, unhesitatingly, that if we were to attempt to have every case reported to us we should neglect that business or some other business; we should pretend to do that which we should not do, and I give you the results of the experience of three large hospitals.

Earl of Kimberly—continued.

In not one of them, does the matron report the probationers. I can refer to another large hospital which I have had a great deal to do with the organising of, and which is now one of the best managed workhouse hospitals, and which is in fact the model on which all the reforms of the workhouse system are carried out; we have the same system there.

Chairman.

25934. Have you ever considered whether it would not be as wise only to give the power of suspension to the matron, and to keep the power of dismissal in the hands of your committee?—I say with confidence that it would be a mere pretence, that at the present moment the work of managing those hospitals is imperfectly performed, because the central authority has too much and not too little to do, and if you give them more to do if you give them a special thing to do that they are not particularly fitted for, the only effect will be that the work will be scamped and that even when it is done it will be done less effectively.

25935. But if the work is “scamped” does that not point to an inefficient committee?—You must get the best committee you can. At Liverpool we have a remarkably efficient committee, because Liverpool is not as large as London; we all know one another, and naturally a seat on the committee has been an object of ambition to some of our best men; and, therefore, we get good men; but if we were to attempt to do more than we do now we should make a mess of it; and yet there you have a chairman who has devoted most of his time to it (I should think he is there once a day) and a treasurer who has done the same, and a committee who have at heart that which they do as their duty; and I am satisfied that every one of them would say to you if you asked them to have all their nurses and probationers reported to them, their dismissal and engagement, “We cannot do it half as well as the matron.” We should merely be relieving her of responsibility, which, in practical administration, is one of the worst things you can do. In a not unsuccessful experience in the administration of business, political, local, and otherwise, I have always found that if you want to succeed the great thing is this: you must concentrate a considerable part of your attention on selecting and training the best men and women, and then you must throw the responsibility on them; you must not unnecessarily interfere with them. I think that is the fundamental rule of successful administration.

Earl of Kimberley.

25936. But does not the whole of the force and wisdom of the rule turn on the word “unnecessarily,” and that is a matter of opinion in each case, is it not?—But this is not a matter of opinion. The experience of three of the largest hospitals in the kingdom (and I believe that I shall be confirmed by all the other large well-managed hospitals) corresponds with mine. You will find that if there is any pretence of the committee really managing the selection and dismissal of the nurses, it is only a pretence. I may

13 July 1891.]

Mr. RATHBONE, M.P.

[Continued.]

Earl of Kimberley—continued.

may give you now the results of another large hospital. I had occasion to visit the sick in one of the worst districts of Liverpool. I found that from the horror that the people had of going into the workhouse infirmary it must be a very dreadful place. I went to Mr. Cropper, Mr. Forster's brother-in-law—

25937. May I interrupt you to ask, is the workhouse infirmary in Liverpool a separate institution, as is the case with many infirmaries in London, or are you speaking of an infirmary in the workhouse?—The infirmary I am sorry to say is in the workhouse, but it is in separate buildings.

25938. You know the system which has been adopted in London, of having a separate building; I wanted to know whether there was anything like that adopted in Liverpool?—No; at the time I am speaking of, it was one of the best managed and built infirmaries on the old system; now the building is rather obsolete, but the management was as careful as the circumstances would permit.

25939. On the old system?—On the old system. I said to Mr. Cropper, who was then one of the active managers of the vestry, and I think chairman of the workhouse committee: "I think from the horror the poor have of going into the workhouse it must be an infamous place." He said, "It is, but what are we to do. The only officers are two young ladies who walk about with gloves on and never do a hand's turn of nursing themselves, and the whole of the nurses are pauper nurses who will get drunk whenever they can, and of course you may imagine that the state of things is very bad." I said, "Are not you afraid of a scandal?" He replied, "Of course we are; if only it was known we should get into no end of a scrape, but what can we do? There are no nurses." I said, "There is nothing impossible in this world, and this is a thing which ought not to be impossible." And it ended in the vestry allowing a number of Nightingale nurses trained in St. Thomas's hospital to come into the hospital, with Miss Agnes Jones at their head, to nurse the hospital on the new plan.

Chairman.

25940. How long ago is that?—I think it was about 1867 or 1868. We introduced the system into our general hospitals 30 years ago, but I think in the workhouse hospital it was a little over 20 years ago. Gradually we grafted on to the system that then existed, which is a good deal similar to our system in the general hospitals, the system that you have in St. Thomas's Hospital, which is probably the most complete one, and that which we have in the Liverpool Infirmary. They built a home for the nurses, and they have a superintendent, and she has practically the entire appointment and dismissal of the nurses, which has, however, to be reported to the Local Government Board: but we have practically adopted, I was going to say, the same system in the hospital. The matron engages the probationers and tries them for a month or so, and, if they are likely to be suitable, she brings

(24.) e

Chairman—continued.

them up before the nurses' committee, and the nurses' committee then engage them for three years, as we do in the other hospitals, subject to their good behaviour. In the same way the workhouse committee appoint three or four of their number every week, who go round the different parts of the workhouse, taking in turn the hospital; they cannot visit the whole workhouse every week, because it is a place capable of containing three or four thousand people, and the hospital itself has 1,200.

25941. But is not the principal officer the medical superintendent in this workhouse infirmary?—In the workhouse infirmary we have four resident doctors.

25942. Who is the responsible officer; one of these resident doctors, or who is it?—Those doctors are responsible partly to the governor and partly to the workhouse committee. The governor is nominally the head of the whole thing, but everything practically comes back to the vestry, or to the workhouse committee rather first, and then to the vestry. They visit every week and make their reports; and it has gradually come to the same state of things; that is to say that, practically, though of course there are more formalities in the workhouse hospital than there are elsewhere, we back up the matron in the selection and discipline of the nurses, and have less and less interfered with her as time went on.

Earl Spencer.

25943. How does the vestry in Liverpool manage the workhouse; is there not a board of guardians?—The select vestry is the board of guardians.

25944. You are under a special Act in Liverpool?—Yes, we are under a special Act. The select vestry select the workhouse committee; the workhouse committee select the nurses' committee; and in that way there is a certain division of labour. I was asked a question just now about the stores. The guardians really manage them themselves. They are a very representative body. They generally are chosen for their important specialities; we have one or two grocers, one or two leather merchants, one or two of different kinds of tradesmen; and they have what they call a contract committee which meets every week and they pass all the stores themselves, and they take a great deal of interest in it, and they really manage it themselves; and in turn they visit the workhouse and report things. Generally the chairman of the workhouse committee takes a very great interest personally, and does a great deal himself, and is there not merely at stated times, but at all times and seasons; and we have found that that practically is the best way of working the hospital.

Earl Cathcart.

25945. This is a vexed question; how would you like to have a committee of strong-minded ladies to assist the matron?—I am afraid I should not.

5 B

25946. And

13 July 1891.]

Mr. RATHBONE, M.P.

[Continued.]

Earl Cathcart—continued.

25946. And why, because it would interfere with her responsibility?—Yes, exactly so. I think a committee of ladies are very useful to assist but not to interfere. I am not a soldier or a sailor, but I have been very strongly impressed with the necessity of almost a similar discipline in hospitals to that which exists on board a ship or in a regiment.

Earl of Kimberley.

25947. But in a regiment the colonel has not power to appoint or to dismiss an officer?—I do not know anything about regiments, but I know something about ships and about hospitals. I ought not to have put in the regiment in my remarks as I know nothing about regiments.

Lord Thring.

25948. I understand that you represent in the main Miss Nightingale's views on nursing, do you not?—Yes, I went over the whole of my evidence with Miss Nightingale herself and with Mr. Bonham-Carter, who is perhaps one of the most experienced hospital managers in the kingdom, because from the commencement he has been the honorary secretary of the Nightingale Fund Training School, and he is one of the most active of the committee of St Thomas's Hospital.

25949. And they agree with you?—They agree with these views in the main. They are not responsible for all my indiscretions, but in the main these are their views. In fact I would not come to give you evidence simply upon my own opinion till I had talked the matter over carefully with them, and with any of the other best hospital managers that I knew.

25950. One question with respect to the capacity of nurses; I understand you to say, and I daresay it is the fact, that the capacity of a nurse depends upon a number of small things?—Yes.

25951. For example, her noting small symptoms?—Yes.

25952. And probably being good natured, or being ready; and that the capacity for noting those small symptoms appears in the reports which the nurse makes to the matron?—Yes.

25953. Consequently, if you wished to try the question of whether a nurse or probationer or a young nurse showed a capacity for nursing, you would have practically to go through the whole of the reports she had made to the matron, and to test them?—Yes; and after the reports that she makes daily, the incidental remarks that she makes about her nursing are perhaps as valuable as any others. I used to find that when I was visiting the hospital.

25954. So that really and truly the committee could not test the capacity of a nurse in the sense in which I put it, because they really would not have the evidence before them?—No. You have really struck upon one of the great mistakes that is made upon this question of nursing. The quality of a nurse depends almost more upon moral than upon intellectual considerations; you cannot test it by examinations. Very often we find that those nurses who pass the best examinations are very inferior to a nurse who passes a very much worse examination, but

Lord Thring—continued.

whom her matron knows to be thoroughly reliable, night or day, in sight or out of sight, and to have that sort of kindness and care of patients that is so important.

25955. You say, in fact, that nursing is a practical question and only to be learned by a number of small experiences?—Certainly.

25956. And that those small experiences can only be ascertained by a close supervision of the matron over the individual nurse?—And what is more, I have become more and more impressed with the fact that a great many of our sex have not that sort of tact which is required to deal with matters of this kind. I am satisfied that very often women may be taught very advantageously by men, but they can really only be governed and controlled and regulated by women.

25957. And then I understand you to say, if a nurse had really cause to complain of injustice, for instance, of unjust dismissal, she would have a right of appeal to the committee?—Yes, and the thing would get round. I believe, except the Lobby of the House of Commons, there is no greater gossip shop in the world than the nursing world. You have a lot of unmarried women; a great deal of their time is not taken up in actual bodily work, and they have time for gossip; it is a very unfortunate thing that it is so, but if you are at all in the way of the nursing world you hear probably the character of every matron that is about, whether she is kind or not.

25958. And as I understand it, you say that even if a nurse or probationer were now and then dismissed not quite justly, it would be very much better that that should happen than that the discipline of the hospital should be subverted by inquiring into every case brought before the committee?—Yes, I think so. After all it is the patients mainly that we have to look at; and if it did happen that a nurse was not able to go on in a particular hospital, and that the matron was mistaken as to her qualifications, it is far better that such a case should occasionally occur, than that you should have innumerable bad nurses who cause death and other things which are worse than death, in hospitals. There is one point (if I have not wearied the Committee), which I do think requires improvement, and that is this: we have training schools for training nurses, but we have no adequate system of training for lady superintendents; and of course, from what I have already said, you see of what immense importance it is, that the superintendents should be really competent for their work. I do not believe any one else can do it, but it is necessary that we should have superintendents well trained for their work.

Chairman.

25959. Have not superintendents or matrons generally passed through a hospital training?—Yes, but what I mean is trained in superintendence, trained and tested in the qualities which make a superintendent, which are of very considerable importance. The whole system of the trained workhouse nursing which is now spread over the whole country almost, had very nearly

13 July 1891.]

Mr. RATHBONE, M.P.

[Continued.]

Chairman--continued.

nearly broken down, because, on Miss Agnes Jones's death, we could not find a competent superintendent anywhere. Since that time I have always, if possible, found and placed in St. Thomas's Hospital at least one lady, a cultivated woman of promise, had her trained as a nurse there, and if possible, then placed her as an assistant superintendent, either in the workhouse hospital in Liverpool, which is a training school itself, or in the Liverpool Infirmary. I bound them to me for three years, and they were bound to go anywhere, and do anything in the nursing world. They got in that way regular training in the duties of superintendence, and in the management of a hospital. And that it was not useless is shown by its success; no less than seven of the principal hospitals of the kingdom, including St. Thomas's itself, are now under the charge of these ladies; and others of them are in charge of district nursing homes. But the fact that they have been found fit to be promoted to so many of the highest posts, shows the advantage that there really is in having a regular system of training; and I think it ought not to be left to an individual, because he may make mistakes, or may die, but there ought to be some system of passing the ablest of our nurses through training, as assistant superintendents, and keeping them in sight, so that if they turn out superior they may be available for superintendents; because certainly sometimes I have seen that women have been appointed to positions in hospitals whom I happened to know were certainly not fit persons to be in such positions.

Earl Spencer.

25960. Would it not be rather difficult to have a school, as you may say, for superintendents; would there be enough of such people to make the school efficient?—I do not mean a school; I mean the system which would have to be adopted. I have an arrangement with the guardians in Liverpool that they will take a nomination of a lady from me for two years as an assistant superintendent; she is under an engagement to me, and I am under an engagement to her for maintenance and salary for three years. Then she has to go anywhere; and I should like to see that done in several of the principal hospitals by some body who would keep these ladies in view.

25961. Is it not the fact that in almost every large hospital where there are a good many nurses the matron selects the best and most competent nurses and they get training as assistants?—I would rather not speak of any particular hospital, but some of the very best hospitals were deficient in such arrangements: they had not sufficient assistance and a great deal too much was thrown upon the superintendent or matron; which was very advantageous sometimes for the hospital as long as she kept her strength, but was very apt to break down the matron if she was not very strong. I do think there is not a sufficient amount of assistance in many of the large hospitals for the matron; and I think they would be perfectly willing very

(24.)

Earl Spencer--continued.

likely to take in an additional assistant in the way I have described as an assistant superintendent if the thing was brought before them in a proper way.

25962. The best mode probably of carrying it out would be that other institutions should follow your example; I do not well see how you are to have a central body on purpose to do it?—No, I do not exactly see how it is to be done, I have never worked out how it is to be done, but I certainly do think that that is one of the great difficulties in the good management of hospitals, that there are not a sufficient number in training for that work, and there are not sufficient means of getting to know who are the best adapted for the position, or I am sure that some of the appointments that are made would not be made.

Lord Thring.

25963. But supposing there was a central body such as that for sending out nurses to parishes which was charged with the duty?—I think if you could have the principal matrons and managers of the hospitals formed into a sort of intelligence committee or something of that sort, there might be something done in that way; but I confess I can only state the difficulty. I have not had any large share in the management of hospitals in London, which would be the centre, and I would rather it was such a council as Miss Nightingale, or some one of authority suggested, stating how the difficulties were to be met. There is another part of hospital management which has been to me incomprehensibly bad, and that is the chaplaincy. I have never been able to understand why, but I never met with any but one hospital manager who could put his finger on one hospital chaplain who had been satisfactory, either in workhouses or hospitals.

Chairman.

25964. Is that partly owing to their being too long in one place, do you think?—Yes, I was coming to that. I think there is something intensely depressing apparently in the position; they have nothing to do but with death and disease. The people under their care are all ill, and their minds are probably in a weak state, and it requires a great deal of active energy in a clergyman to overcome the depressing tendency.

Earl Spencer.

25965. They have the nurses also?—Sometimes they are too fond of talking to the nurses, but they ought not to have anything to do with them. What are they to do? they are waiting for people to be ill or die during a considerable part of the day; they have nothing to do with life; it is always death and illness, and they get so depressed that they all become either incompetent or busy bodies. If they are active they are often an awful nuisance, worse than if they are passive, because they are centres of gossip and everything of that sort. As a general rule they are very worthy people, but I would not allow a hospital chaplain to be appointed for more than three years. Our guardians in Liverpool this last time have gone to the bishop and said, "We

5 B 2

cannot

13 July 1891.]

Mr. RATHBONE, M.P.

[Continued.]

Earl Spencer—continued.

cannot legally appoint a man for only five years, will you recommend us three or four to select one from, letting us have some arrangement by which he should not hold the appointment for more than five years."

25966. You are in favour of a limited appointment?—Yes, a limited appointment on account of the amount of depression to which chaplains are exposed, who hold the appointment for a long time.

25967. Would you say five years or three?—I would rather it were only three.

Earl of Kimberley.

25968. There are a great many Nonconformist patients, and they are not attended to by the chaplain?—No.

25969. Do you find that it works well, having a minister of their own denomination to visit them?—We have no complaints; I think they are pretty well attended to. But the best thing to compare it with is that which happens with the Catholics; we have a good many Catholics, and there is a Catholic priest appointed to look after them; and I have never heard the same complaints of him.

25970. Is he paid in the same way as the Protestant chaplain?—He is not resident.

25971. Is he paid?—I believe he is paid, but he is not resident, and he is not permanent; he has other work to do; we have nothing to do with him so long as he is always there to attend to patients when wanted. I believe he is changed from time to time.

25972. Would it not work as well, if you had no chaplain and trusted entirely to voluntary attendance as appears to be the case with the Catholic priest?—I am not prepared to give evidence on that subject, because I am myself a Nonconformist; but I believe it would be a far better plan, if we are to have a chaplain, to let us have him only for three years. A young man, I believe, who came there full of energy and enthusiasm would do an immense deal of good. I believe you really would find that a lot of these poor fellows in illness are quite ready to take better resolutions and go out better for their illness; but you must have the chaplain full of energy and enthusiasm to be able to do that.

25973. Without any reflection on individuals, the danger is that the performance of these duties tends to be a mere routine; that is very apt to be the case?—Yes, that is very apt to be the case with no change of duties at all; it is a very bad system; but at the same time I should wish to add that if you could get the right man with short appointment it would be most useful. And it would be very good for him too. It is one aspect of human nature; it would be a great lesson.

Chairman.

25974. Is there anything else you wish to say to the Committee?—There is only one more thing I should like to give evidence upon, that is, with respect to the London Hospital. I never had anything to do with its management; I never was in the London till after this row. I

Chairman—continued.

hardly knew who were the managers or anything about them, but I did know a great deal of its management because I happened to have had a number of friends who had been there as nurses in various positions previous to this outbreak. One of those was my own daughter. I need not say that I had about as good information about the London hospitals as any outsider could possess, and I would not have allowed my daughter to go to a hospital where such things occurred as have been stated to have occurred in the London Hospital. She went there two years running during her holiday, for three months, because she had been in charge of a poor district in Liverpool where we had a trained nurse nursing and she wished to be able to superintend her work thoroughly; so she went as a regular paying probationer to the London Hospital without any introductions or anything of the sort and served twice for three months in each year in her holiday. She returned to us more robust and looking stronger and better than I ever saw her return from any other holiday. When this row broke out I wrote to her to ask her what her experience about it had been; and as it is very short I should like to read to you what she said, because I think she puts the whole question rather well. "I was at the London Hospital as a probationer for three months in the winter of 1886-87, and three months in the winter of 1887-88. I have often since visited the hospital, and talked to the nurses and the sisters, and my experience and impression are in every way opposed to the evidence given. The nurses and probationers seemed to me to be very well cared for, and were a healthy looking set of people. The home has only been built a few years and is very comfortable. The food was very good; it was abundant, well cooked and well served, and there was a great deal of variety. The matron paid great attention to the nurses' diet; she had introduced great reforms into the housekeeping of the nurses' home, and their health had, I heard, very much improved in consequence. Any one who was ill was well looked after. There was a very good sick room, and in cases of severe illness the nurses were nursed in a small ward off one of the wards of the hospital. I have often seen nurses in both places, and they seemed to be thoroughly well nursed and taken care of. They were attended to by one of the visiting physicians. Nursing is of course hard work, and not fit for delicate people, but for those who are strong I believe it is a very healthy life. I think if you take a hundred nurses they would compare very favourably with a hundred women earning their own living at any other trade or profession. The mischief is that many young women try to take to nursing as they do to teaching in elementary schools, without natural fitness, because they think it will raise their social position. The hours on duty in a hospital sound long. They must be, as the 24 hours must be divided between two sets of nurses; but the work is not continuous like factory work, and a nurse on duty has change of work, and can often rest a little, some days of course more than others. I wish women in shops and

13 July 1891.]

Mr. RATHBONE, M.P.

[Continued.]

Chairman—continued.

and offices and schools looked as healthy as nurses do." She found when she first went there that the standing was very trying, but after she had been there a month or two she got over it and enjoyed perfect health. Now I have probably had the engagement of as many nurses and superintendents as most people, and I have been perfectly astonished at its being as healthy a life as it is. I could name to you, if it was not taking up your time, many instances of ladies who have come to me wanting to be nurses and I have objected to them as not being strong enough, and to my surprise they have developed into very strong healthy women. In addition to my daughter, one of my nieces has been a nurse for nine years in the London Hospital; she has been through almost all the different stages; she was not a paid nurse, but she spent something like eight months in the year doing duty in various positions. She is one of the most completely trained nurses in Europe; she has had every kind of certificate that is to be had; and she gives the same evidence that my daughter does; and in fact, it was a great deal on her evidence, that I allowed my daughter to go there. Another friend of mine who has been there, is from a very delicate family; her father is a man who has had very large administrative experience, and is a man of considerable fortune, and rather to my surprise, considering the delicacy of the family, he allowed one of the daughters to go as a nurse. After trying as a probationer, she became a regular nurse and sister in the London Hospital; and she is the only one of her family who has enjoyed really strong and vigorous health: Her hospital life certainly has not harmed her; and that has been my experience of nursing. Of course we always require a medical certificate before we engage any of these nurses to send them to St. Thomas's; but in more than one case where the doctor has seemed doubtful, and the lady has been bent upon doing it, and has taken the responsibility of doing it rather against my advice, they have become strong people. Of course it requires a certain amount of strength, but as a rule, I should say that women who are nurses in a well managed hospital more frequently become stronger women than break down.

Lord Thring.

25975. With respect to the performance of their duties we have heard a great deal about nurses being called upon to perform menial offices, such as scrubbing the floors and particularly, if I recollect right, polishing brass basins and polishing brass in the wards and cleaning inkstands. I presume you would be of opinion that those menial duties should not be performed by nurses?—I doubt if they are in any well-managed hospital; I do not think they ought to be.

25976. We had evidence about those menial duties being performed by nurses, and the question I asked you is, whether, assuming that evidence to be true, you do not think that a great waste of force?—Very great; and anything like scrubbing the floors damages their hands for nursing. But I should think if that has ever of late years happened in any large hospital

(24.)

Lord Thring—continued.

it has been an accidental thing; that they have put their hands to it to help in case of need.

25977. We have indubitable evidence that they cleaned the inkstands, that they polished the brass of something or other, and in one case which particularly struck me, where they had what I believe is best possible system, that of polishing the floors, the nurses in some cases polished the floors not all over the wards but in some parts; which seemed to me to be a singularly improper employment for a nurse?—I should think if ever it was done the nurse had done it voluntarily or lent a hand to it because it had not been done, I suppose just as we have seen in our own families, ladies take up little things and polish them as an amusement.

25978. If menial duties are performed by nurses do not you think it wrong?—I should think it very wrong, and should be surprised to learn that, in any well-managed hospital, those were duties imposed upon them.

25979. With respect to the hours, it certainly did occur to some of us that 14 hours on duty was too much for a woman; I understand that to be as you say, because they must divide the day into two shifts, and one shift must overlap the other; but would it not be possible by some means to have three shifts, to prevent the overlapping?—I daresay it would be possible if you give them the money; but the public does not give us the money.

25980. That is exactly the question I wish to ask you: Is it not very long hours even for a strong woman to have, as we repeatedly have had evidence is the case, to be on duty, not continuous labour, but on duty for 14 hours?—Well, it depends entirely upon what the duty is. Part of that duty was probably sitting in her own room, which they each of them have got.

25981. Then I will put another question to you. We all know that a certain disease in the feet, that of flat feet, is produced by over-standing?—Yes; I think that that ought to be very carefully guarded against; it is a great danger no doubt; but I am afraid it is a danger much more in our shops than in our hospitals.

25982. But is it right that, in order for a hospital to be economical (I will put it in the best way), it should so work its nurses that they should have flat feet or should overwork themselves?—Certainly not.

25983. Would it not be better that part of the subscriptions should be applied to the good of the nurses as well as to the good of the patients?—The good of the patients is the good of the nurses. That is rather an abstract question and I could hardly answer it. I think that the patients are our first objects in hospitals, and if hospital work is such work that a woman of ordinary health and strength can do it and remain in health, at least as well as she could in other work by which women have to earn their livelihood, I think you then have done all that you are bound to do until the public gives you money to do more.

25984. I will put then a concrete case to you; supposing that in a particular hospital, by striking off 10 beds, you could so adjust the

5 B 3

nurses

13 July 1891.]

Mr. RATHBONE, M.P.

[Continued.]

Lord Thring—continued.

nurses that they should not be liable to this flat-foot disease, or whatever it is called, and that they should not work 14 hours, do not you think it would be quite justifiable to strike off that number of beds for the benefit of the nurses?—I should think it probably would be. Of course you must take into consideration where the hospital is. The hospital might be in a place where there is a great deal of sickness, and where women, like soldiers, must go into the post of danger and take the consequences.

Earl of Kimberley.

25985. But we have legislation to prevent women in factories working more than a certain number of hours; why should women work more than a certain number of hours in hospitals?—Because the work in a factory is more exhausting and continuous work than the work in a hospital.

25986. More continuous, perhaps, but do you think more exhausting?—Yes, I should think so to a person in ordinary health; I should think with the dust and the bad atmosphere.

25987. Would the air of a hospital be better air than that of a factory?—It ought to be. Our old hospital in Liverpool would not have been, and therefore we pulled it down; but the air of our new hospital would be or we should be very much ashamed of it.

25988. But considering that nurses are exposed to an atmosphere where there is disease, and that many of them will have very long hours at night, is not there quite as good a reason for limiting the hours of nurses as of these who work in factories?—If it were found that the work of a nurse was as prejudicial, or more prejudicial than the work of other trades in which these women would have to earn their livelihood if they were not in hospitals, there would be a reason; but if that was not found to be the case, I should say that there would not be a reason for dealing with it by law. I think public opinion ought to force upon hospitals the gradual improvement of the state of nurses as far as their means will allow; but I am not at all in favour of legislation until it is proved to be absolutely necessary.

Lord Thring.

25989. I want to put it to you in this way: We have been told over and over again that it is a sort of law or necessity that these nurses should be worked in this way; when we investigate it, we find there is no law or necessity at all, but it is a mere question of expense; then we are told that the subscribers would not stand, I suppose, making sufficient contributions to enable the nurses to be properly treated. It is not like a place where people necessarily have to do a certain amount of work for their money; almost every hospital in London could, if it had more money, treat its nurses better; and all I ask you is, would it not be better that instead of spending so much money on their patients they should spend a little less in respect of the patients, and a little more in respect of the nurses?—I should like it very much if one of these tremendously rich hospitals, which would have really the money to spare, would try the three-shifts system.

Lord Thring—continued.

25990. Why should not St. Bartholomew's with its 60,000 *l.* of income try the three-shifts system?—I see no reason whatever, if you could persuade them to do it; I should be delighted if they would.

25991. You think it would be worth a trial?—If you were to ask me, I would rather, if I were your Committee, summon half-a-dozen of the ablest of the hospital matrons and ask them that very question. I am not at all sure whether it could not be done by sending out a letter to them, and inserting queries, and asking them to give their opinion on those points.

25992. At all events you think it is not an absurd thing to do?—I think it is a thing very well worthy of consideration, and if on consulting with three or four of the best hospital matrons it is thought to be necessary, I should certainly like to see it tried in one of the largest hospitals.

25993. Then from your great experience, do you think that the public would support a hospital if nurses were overworked by giving more contributions to prevent that overworking?—I think if you could make out your case that they were overworked, the nation would and must find the money; but you have to make out a strong case, because up to this time we who are dependent upon voluntary subscriptions, are all out of pocket, and do not know how to go on from year to year getting the money that we have done.

Chairman.

25994. And the health of the nurses, is it good?—The health of the nurses on the whole is good. I think that statement which I read to you is a very fair statement of the condition of the nurses in the principal hospitals in London and the country.

Earl of Cathcart.

25995. You would not be surprised to hear that that very question about the three shifts has been put to nurses over and over again in this room, and in every case that I can remember they have said that the three-shifts system would not be so convenient; that would be consistent with your experience?—I should go by that opinion then. If the three-shifts' system would not be so convenient, unless that evidence could be upset I should be guided by that.

25996. So far as I remember there was only one hospital where the nurses scrubbed the floor, and that was only partially; that was the Brompton Hospital?—I am very much surprised to hear that because they have a very good matron there, and I know the patients are very well treated there. A connection of my wife's, who was not very strong was there, and they wanted her to remain there as a sister and she gave us no account of any ill-treatment. She seemed to be of opinion that they were very well-treated there. Might I say one thing more? A great deal has been said about the importance of improving the state of nursing. I do think that there is a very great danger of the evidence that has been given affecting the subscriptions; some of the evidence that was given about the London Hospital, some of which was absolutely untrue
(I do

13 July 1891.]

Mr. RATHBONE, M.P.

[Continued.]

Earl Cathcart—continued.

(I do not mean to say intentionally untrue but very inaccurate and misleading), has very much diminished their subscriptions. How are they to carry on and improve unless you, having gone into the matter (on which I do not express any opinion), summarise the evidence and acquit them of anything that deserves blame.

Chairman.

25987. Is it the case that their subscriptions have fallen off?—Yes, I am told that their sub-

Chairman—continued.

scriptions have been very much diminished. There is a regular sort of persecution going on.

25998. That is very different from what I hear as to the subscriptions?—I was told so. I am very glad to hear you say that it is otherwise, because although I am not prepared at all to justify the management of the hospital some years ago, Miss Lückes has improved it enormously, that I know. If she got the chance and had the money, I think she would persuade the committee to do a great deal more. In that case the matron has been the great reformer.

The Witness is directed to withdraw.

The REVEREND NATHANIEL BROMLEY, is called in; and, having been sworn, is Examined, as follows:

Chairman.

25999. You are the Warden of King's College Hospital?—Yes.

26000. And you come here on behalf of King's College Hospital, do you not, to contradict a statement as to certain figures put in by Mr. Burdett the other day?—Yes.

26001. Have you got the number of the question?—Yes.

26002. Would you give it?—It is number 25861.

26003. Will you read the question?—The answer seems to have no relation to the question. The question is, "You know that country boards of guardians do send to London; they send to Guys', and they pay 2s. a day there"; but Mr. Burdett's answer to that question goes into quite another subject, showing the relative cost of the "London" and "King's College Hospitals."

26004. It is on page 734 that the evidence to which you refer occurs?—Yes.

26005. "For instance, taking the London hospitals with medical schools, of which there are 11, King's College on the three years average, costs for each bed occupied 101 l. 6 s. 6 d.; whereas the London only costs 74 l. 1 s. 1 d. Of course you have to make allowance for the fact that there are 635 occupied beds at the London Hospital and only 159 at King's College; but still that cannot account for the whole difference." Now would you tell us what the real cost is?—The truth is that for the last three years, 1888, 1889, 1890, the expense per occupied bed in King's College Hospital, the average number of occupied beds being 169, is 93 l. 16 s. instead of 101 l. 6 s. 6 d.

Lord Thring.

26006. Is that on exactly the same data as the other calculations?—No. I find that Mr. Burdett has taken in the previous year, 1887, when we spent 9,000 l. in enlarging the hospital by raising the roof, and adding practically a floor for the accommodation of the nurses, the hospital being formerly nursed by St. John's House, then a great number of the sisters and nurses slept there; when St. John's House gave up nursing the hospital we had to provide

(24.)

Lord Thring—continued.

accommodation for the nurses in the hospital. Until we did so, we slept them in two wards which were closed; but in 1887 Mr. Walpole left us 9,000 l., of which we spent about half in building this floor (that is really what it was) for the accommodation of the nurses.

26007. Then you mean that Mr. Burdett put into his calculation 9,000 l., which was extraordinary expenditure?—Yes.

Earl Cathcart.

26008. But it is only fair to Mr. Burdett to say, that he told us, I think, that he took the average of three years?—Yes.

26009. And he took that expensive year in the three years.

26010. But he told us he was so anxious to be correct that he did not take one year, but the average of three years?—Yes; and that, including the 9,000 l. which was spent in building, would make the cost per bed 101 l. for that period.

Lord Thring.

26011. It is only an explanation?—An explanation; but it is unfair to say that it is an average expenditure; because that 9,000 l. was a solitary expenditure which does not occur every three years. Take any other three years and you will find the beds under 90 l. a year.

26012. What you charge Mr. Burdett with is with saying that he charges against you in the three years that he takes so much of an extraordinary expenditure instead of throwing it over a greater number of years?—Yes; and having had his attention called to it beforehand. I wish also to call your attention to another statement of Mr. Burdett's, in answer to the next question on the same page. He says, "Now taking the London Hospital the cost per bed occupied for provisions is 23 l. 9 s.; at King's College it is 26 l. 17 s. 8 d., a difference of 3 l. 8 s." Now I have carefully gone into the three years and I find that our average is 16 l. 12 s. 9 d., and not 26 l.; and I can only account for Mr. Burdett saying that it is 26 l., by the fact that he may have added on the board of the nurses; but he has not done so with regard to the London Hospital.

5 B 4

26013. Do

13 July 1891.]

Rev. N. BROMLEY.

[Continued.]

Lord *Thring*—continued.

26013. Do you wish to contradict anything about the price of the alcohol in the next answer? — No, that is a very small question. And with regard to the domestic expenses he puts us down at 25 *l.* odd as against 10 *l.* odd at the London. But then the London, has an enormous laundry and they do all their washing themselves; we pay 1,000 *l.*, a year for washing; and you will see of course that in the items which Mr. Burdett has put down there is no

Lord *Thring*—continued.

such item as that appearing in his list. Then on the other hand the wages and salaries at the London (I do not wish to disparage the great work of the London Hospital, but I only want to justify ourselves in comparison) are put as about equal with King's; but they have 630 odd beds to divide the salaries and wages between, whereas we have only 180; so that King's compares very favourably indeed.

The Witness is directed to withdraw.

Ordered, That this Committee be adjourned to Saturday next, at Eleven o'clock.

Die Sabbati, 18° Julii, 1891.

LORDS PRESENT:

Earl CATHCART.

Earl of KIMBERLEY.

Lord ZOUCHE OF HARYNWORTH.

Lord CLIFFORD OF CHUDLEIGH.

Lord SANDHURST.

Lord LAMINGTON.

Lord MONKSWELL.

Lord THRING.

THE LORD SANDHURST, IN THE CHAIR.

MR. BEDFORD FENWICK, M.D., called in; and, having been sworn, is Examined,
as follows:

Chairman.

26014. YOU wished to come and give evidence, I believe, in regard to the registration of nurses?—I do.

26015. You understand that we must not go into any fresh controversial matters at this stage of our proceedings. If you wish to contradict anything put by a former witness you may do so?—I desire to contradict briefly the statements made by Mr. Henry C. Burdett, on July 4th, with reference to the registration of trained nurses, and the statements made in the papers which he handed in.

26016. Will you give the number of the question?—It is at No. 25889. Mr. Burdett stated that the registration “gives a bogus complexion to an untrained nurse, and makes the public liable to believe that she is trained when she is not.” The register shows that that statement is inaccurate; the registration only affects nurses who have been trained. It cannot give “a bogus complexion” to anyone; it cannot make the public believe a nurse is trained when she is not, because the training a nurse has received is stated plainly against her name.

Lord Thring.

26017. Is this book which you have given me a copy of the register?—That is a copy of the register. Then in answer to Question No. 25890, Mr. Burdett says: “You have at present registration in regard to all nurses adequately trained; that is to say, that every nurses’ training school keeps a register of its nurses, and issues a certificate to all who have had three years’ service.” That is very inaccurate; because some nurses’ training schools do not issue certificates, and a good many do not train for three years. Then, in answer to the same question, he goes on to say this: “Well, if the public want to know if a nurse is trained, they have only got to ask her to produce her certificate from her nurses’ training school” (she cannot produce a certificate which she has not got), “and that is the registration pure and simple, which

(24.) c

Lord Thring—continued.

is a voucher that they can rely upon.” That is very inaccurate, because a certificate in a nurse’s pocket is not registration of that certificate in a published book. Besides which, it is a very common fraud to steal or forge a hospital certificate; and even medical men and nurses have accepted such as genuine, without being able to detect the difference. Only quite recently it was discovered at a London infirmary that a nurse had been admitted and obtained a responsible post on the strength of a certificate from St. George’s Hospital. It was printed and looked perfectly genuine; but inquiries had to be made about another matter, and it was then discovered that the nurse had had this certificate printed for her.

Chairman.

26018. It was forged, in fact?—In other words, it was a forgery. It is a notorious fact, unfortunately, that such things are frequently done. In the same answer, Mr. Burdett goes on to say: “If they are dissatisfied with the nurse they can write to the matron at the school where she was trained, and then the matron will go into her case, and, if necessary, they will call up the nurse and deal with it.” That is very misleading. For example, if a nurse has never been trained at any hospital (and there are hundreds of nurses who are at work who have never had any training at all), she cannot refer to her training school; and in the next place, when a nurse obtains her certificate and leaves her hospital, she becomes a free agent; the hospital has no further control of any kind over her. It is absurd to state that the matron can call up and deal with a person who is not under her authority. That is a well-known thing. One great complaint which is made is that when a hospital has once given a certificate, the certificate becomes the nurse’s property, and it cannot be recalled, and however badly that nurse behaves, even if she is convicted of serious crimes (as unfortunately sometimes certificated

nurses

18 July 1891.]

Mr. FENWICK, M.D.

[Continued.]

Chairman—continued.

nurses have been), as soon as she is released from prison she can go to work again upon the strength of that original certificate. "So that the public really have adequate protection in that way," Mr. Burdett adds: I deny that altogether, and I say that the object of the register is to give the public some measure of protection. Mr. Burdett proceeds to say: "The contention is that they have not, and in order to put things right, an outside body which has had nothing to do with the training of nurses, proposes to issue, and has issued, a certificate to such nurses as it pleases to arbitrarily select, these nurses paying 10 s. per head for the privilege." That is inaccurate in many ways. The registration board does not issue a certificate to "such nurses as it pleases"; any nurse who can prove that she is trained, and is of good character, is eligible for registration upon that list, and she simply receives a certified copy of the entry upon the register; she receives no other certificate. The nurses pay 10 s. 6 d. per head "for the privilege." The registration board, which is given upon the second page of that register which is before you, you will see consists of a number, not only of well-known medical men who have taken considerable part in the training of nurses, but also of matrons who are in active work at present in training nurses. The answer goes on: "So that it happens that I have seen the case of a nurse who did not get a certificate at her hospital, because she was discharged for having in her possession the property of a probationer, and her certificate was refused, and now she goes out as a trained nurse, with Princess Christian's name as her authority for what she does." I do not like to characterise that statement as I think it deserves. If it is true, it means that a hospital has allowed a nurse who it knew to be a thief to go out and work among the public without being able to prevent her doing so; and the usefulness of a public register therefore is proved. We are told, though we have been unable to obtain the nurse's name, that this nurse was trained at the London Hospital; and the statement therefore we have been unable to verify, because we have been unable to obtain any great assistance from the London Hospital in the work of the Association; any assistance has been definitely refused to us from the London Hospital. It is stated that "she goes out as a trained nurse, with Princess Christian's name as her authority." That is quite untrue; she has simply been working all this time, evidently, as a trained nurse. All the register does is to say that she was trained at whatever hospital it was, and that is said upon the authority of the written and legal statement made by the nurse herself, and tested by the board. Princess Christian's name is not mentioned in any way, except that Her Royal Highness is a member of the registration board; and I may add that medical men believe that when the truth becomes known the public will express their deep gratitude to Princess Christian for the work she has done in helping to bring about a reform which is greatly needed. Mr. Burdett then says, "If the public wish to have evidence of who are trained nurses, by all means, under the authority of a properly constituted body,

Chairman—continued.

namely, those who train nurses." That is misleading, because, before the association undertook the work, it applied to every nurse training school in the country, asking it to take part in it. It also applied to the General Medical Council, which gave the principle their direct sanction, but said that they were unable to undertake the work of registration of nurses. The association undertook it because it could not get anybody else to do the work, and it has only undertaken it until it can prove to Parliament that it is an urgent danger that the public should have no protection against the women who now practise as nurses; and then the association would be only too glad to have the work taken out of its hands. The registration is a purely voluntary matter. The nurses make application for registration of their own free will; their names are placed upon an alphabetical list, and as free subjects of this realm they have a perfect right to have their names entered on the register. That is all the association does; it certifies to the public, after due inquiry, that a nurse has obtained a technical training; it states that she has been for such a time in such and such a hospital.

26019. Have you any more comments to make upon the evidence of Mr. Burdett?—In answer to Question No. 25891, in the middle of the answer, he says this: "Now the matrons who trained the nurses, knowing the character of the women from the first to the last, are able to sort the nurses to the cases." The great majority of nurses leave their hospitals, and either undertake private nursing on their own account as private nurses, or affiliate themselves to various nursing institutions. Comparatively few remain on the private nursing staff of the hospital where they were trained; consequently the matrons who trained the nurses are only in very few instances able to "sort the nurses to the cases." A little further on in that answer he says, "practically the question is really dead." The register is published; it is before your Lordships; it is before the public; it is being bought; medical men are accepting it, and expressing their acknowledgments for the assistance it gives them. One-fifth of the nursing profession, nearly 3,000 nurses, have joined the association in order to pay for the system being carried out; and the register will be published every year until Parliament takes the question up. Therefore the question is not "dead." Exactly the same thing was done in the case of the Medical Register. In 1846, after a good many years striving to protect the public against men who called themselves doctors and were not doctors, a medical directory was published by private effort, and in a few years it was found to be so useful that it led to the passing of the Medical Act in 1858, which made registration of medical men compulsory, exactly on the same lines as nurses are now being registered. That is all that I wish to correct in Mr. Burdett's evidence.

Earl of Kimberley.

26020. I see, looking at your list, that a great many of the nurses are not certificated; it is stated so?—It is distinctly stated so.

26021. With

18 July 1891.]

Mr. FENWICK, M.D.

[Continued.]

Earl of Kimberley—continued.

26021. With regard to those that are not certificated, I observe that your rule was, in the first instance, to give a period of grace during which you admitted nurses without requiring that they should have been three years engaged in nursing the sick, and then I observe this statement: "At the end of that period of grace three years' hospital service was made an essential condition, and will henceforth be the rule," therefore I conclude that henceforth, at all events, all the nurses who are entered upon this register, will either be nurses who have got a certificate, which is stated upon the register, or nurses whom you believe to have been trained three years in some hospital?—In that register your Lordships will find eleven nurses who were, most of them, in work before 1870, some before 1860. They have not undergone hospital training, because in those days hospital training was practically unknown. It was thought to be only fair to include those nurses at the commencement of the work of registration, together with the others who are on the list as having had hospital experience.

26022. Though they are not certificated they have all been at a hospital for the period stated against their names?—Yes, every one of them.

26023. Now I take, quite by accident, one case of a nurse, and against her name it says "London Hospital, 1884–86; Poplar Hospital in 1886." She might have been only a month in Poplar Hospital?—That is one thing that we wished to be most accurate about. If a nurse was only 11 months in a hospital, we should say that she had been there "in" that year.

26024. But that is not expressed on the register. I could not have known that from reading this register; you know that I should not have known it; but in this particular case (which I took quite by accident) all I see is that the nurse was registered on such a date, and then against her name I see "London Hospital, 1884–86; Poplar Hospital in 1886." Now that does not give one the means of knowing how long she was trained in either hospital?—Poplar Hospital is not a training hospital; it is a hospital for accidents. Of course I do not know what case your Lordship is referring to.

26025. It is the eleventh name from the beginning?—That is the form which is filled up (*handing a form to Lord Kimberley*).

26026. You see my point. My point is this: I am a person inspecting the register; I see this nurse's name; in the first place I could not possibly know, being a person unconnected with hospitals, that Poplar Hospital is not a training institution; I should suppose it was one. Again, with regard to the London Hospital, I should only know that she was trained from 1884 to 1886; she might only have been 13 months there, might she not?—Exactly.

26027. That is not definite information?—That is definite information, that she was training in the London Hospital in those years.

26028. But that does not tell me how long?—At present that would be useless, because there is an immense variety in the different hospitals in England as to the length of time that is given to the training of their nurses.

26029. But it is quite evident that the nurse

(24.)

Earl of Kimberley—continued.

did not pass her full time at the London Hospital?—Yes.

26030. And therefore, knowing what I know about hospitals, I should view that case with suspicion; I should say that that nurse might have been dismissed from that hospital; there is no information in the register to tell me as to that?—No.

26031. And the inference I should draw, from what I know of the circumstances, would be this: unless I had further information about that nurse, I should doubt her competence?—Yes.

26032. But would the public generally draw such an inference as I, from the knowledge which I have derived in this Committee, should draw?—It must be remembered that every nurse has to produce evidence of character, and that evidence of character and evidence of hospital training is carefully inquired into before she is put on to the register.

26033. In the case of the person mentioned just now who was discharged from the London Hospital, and whose name is entered upon your register, so far as that entry is concerned, it is not thoroughly trustworthy?—We have not been able to obtain information from the London Hospital as to the character of the person; but we have in every case obtained information that a nurse has been at the hospital for such a time before we have stated that fact on the register.

26034. Still, a nurse may have been at the hospital, and may have been trained there, and yet she may have proved herself very incompetent?—Yes.

26035. Does your register give any means to one of knowing that?—Yes, because we have inquired into the character of every nurse before she was enrolled.

26036. That is proof of her moral character, is it not; but you have no means of knowing whether she proved herself to be a satisfactory nurse unless she had a certificate?—I have explained that some hospitals do not give certificates, and that is a very difficult thing to deal with.

26037. So that there again your register is very imperfect in its information; for example, any person reading this list would naturally infer that the certificated nurses were those that had really proved themselves efficient in training; but it appears from your statement that there are other hospitals which do not give certificates, and therefore there might be nurses perfectly competent to nurse, and yet they would not appear with certificates against their names?—Yes.

26038. Is not that an unsatisfactory result?—We think that that is one great reason for a register, to bring about some uniformity. That really proves our case; this absolute lack of uniformity, not only in training, but in guarantee to the public that nurses are trained. We have to deal with things as they are at present, and are trying to bring about improvements. The register is valuable if it makes plain the grave defects of the present methods.

26039. Do you undertake from time to time to ascertain that these nurses continue to be of good character and efficient; because, for example, a nurse might be registered in the year 1891, and

5 c 2

in

18 July 1891.]

Mr. FENWICK, M.D.

[Continued.]

Earl of Kimberley—continued.

in the year 1901 she would be still upon your register; and unless you had made inquiries, and found that she was still efficient and trustworthy, she might be a most inefficient and untrustworthy person?—We hope that before 1901 registration will have been undertaken by the State; but we have no means of keeping in personal touch with our nurses; we must accept them, and we register them on their technical training and on the evidence we have received that they are of good character when they are registered. If they become untrustworthy we hope to hear of it. Medical men are registered by law exactly under the same conditions.

26040. I understand that the real object of this registration is to bring about a close corporation of nurses?—I think not quite that. We want to protect the public against incompetent and ignorant women who are now practising as nurses, and to have some control over certificated nurses.

26041. I rather gathered from you that whilst at present this, from the necessity of the case, is a mere voluntary registration of nurses, what you are aiming at, the object of your association, is that there should be an Act of Parliament making it illegal for any person to call herself a nurse unless she has been registered?—I think the Act would have to say that a nurse could not call herself a registered nurse, that is to say, a trained nurse, unless she had been registered as trained; but I take it that it could not possibly say that no woman should nurse unless she had been trained; I do not think that could be done. I am sure we have no idea whatever of doing it. We know that there are very grave dangers to the sick at present; medical men are feeling that every day; and we wish, as soon as possible, to bring about some remedy.

Chairman.

26042. Lord Kimberley has put it to you that it is possible, according to this register, that you might have a nurse on the register who has been dismissed from the hospital; but then, do you mean it to be assumed that the fact of her being on your register is a warrant that she is a person of good character, and has not been dismissed?—We have obtained evidence of her personal good character; that is to say, we insist upon and have always received recent testimonials.

26043. The fact of the nurse being upon your register, if the nurse is not certified, should be a warrant that she is qualified, both as to character and as to nursing capabilities?—It is a warrant that she has gone through the specified course of technical training.

26044. What do you call the specified course of technical training?—To take the case quoted just now: "London Hospital, 1884-86; Poplar Hospital in 1886."

26045. But that might possibly be only 13 months in the London Hospital, as Lord Kimberley has pointed out, might it not?—If I had the particulars here I could tell you exactly, but I do not think so; in fact, I am sure that it could not have been only for 13 months, because in that case it would be said "in 1884"; and "in 1885"; it would not be "1884-86."

Chairman—continued.

26046. But that would be less than three years' training in any case, would it not?—I do not know when that nurse was registered, but I feel sure she must have applied by the end of June 1890.

26047. But that leaves it open to the public to infer that she has had less than three years' training?—That was the period of grace; during the period of grace nurses who had not had three years' hospital training were eligible for registration; since that time every nurse has had three years' hospital work before being registered.

Lord Clifford of Chudleigh.

26048. When did the period of grace expire?—Nominally, on 30th June 1890; but there were a number of nurses who applied in June whose cases were not considered by the Registration Board for some time, and therefore they were not entered on the register for some weeks after. Of course, if an application arrived on the 30th of June, we could not refuse to accept it.

Lord Monkswell.

26049. Do I understand you to say that, supposing you happened to find out through the public press, or in any other way, that a nurse had been convicted of crime, you would still keep her on the register?—Certainly not.

26050. You would strike her off, would you?—We would at once call the facts to her attention, and say that she must appear either by a friend or herself before the Registration Board and explain the circumstances, and if she did not prove her innocence her name must be removed from the register. Every nurse has signed a paper, a copy of which I have handed in, allowing the Registration Board to remove her name from the register if it considers it necessary to do so.

26051. And, practically, you would call upon the nurse to do so if you received any evidence that you thought convincing of bad conduct on her part?—If we received the slightest evidence of any misconduct, we should at once call upon her for an explanation. Of course the case would have to be proved against the nurse before we should take such a serious step; she would have every chance given her to explain.

26052. I understand that you object very much to the hospitals not having any means of recalling a certificate when once granted; have you made any suggestions with reference to that?—It is a fact that has often been complained of.

26053. Your association has not made any suggestion on the matter?—Distinctly not, because we hold that we have no right to interfere with the nurse-training schools. We never register a nurse till her training is over, and we hold that we have no right, as a private outside body, to interfere with the nurse-training schools.

Earl Cathcart.

26054. Will you, if you please, hand in that paper that you put in just now, that Form of Declaration of the nurses, so that it may appear on our Notes?—Yes.

[The Paper is handed in, and is as follows:—]

18 July 1891.]

Mr. FENWICK, M.D.

[Continued.]

"REGISTRATION OF TRAINED NURSES.

"EXTRACTS FROM THE BYE-LAWS.

"No nurse shall be registered until she or he has produced such proof to the board, of professional knowledge and moral character, as the council shall from time to time require; nor unless application for registration is made upon a special form supplied for that purpose.

"The Registration Board shall have the power to direct the registrar to erase from the register of trained nurses the name of any nurse who shall, after full inquiry, appear to a majority of two-thirds of a meeting of the board to be unworthy to remain thereon. But no name shall be erased for this cause except by order of a meeting of the board specially summoned to consider the matter, and at this meeting fifteen shall be the necessary quorum. Provided always, that any nurse whose name it is proposed to erase shall have the right to appear in person, or by proxy, before the board, to show cause why such erasure should not take place, and shall, moreover, have the right to demand that, before the name is removed from the Register, the matter shall be referred to a meeting of the Council, whose decision shall be final."

FORM of Application for Registration.

I,¹ of²
hereby request the Registration Board to enter my name upon the register of trained nurses. I forward herewith the necessary fee, testimonials and certificates, and I promise, in the event of my being so registered, and in consideration thereof, to be bound by, and to conform in all respects to the rules and regulations for registration for the time being in force. And I undertake to return my certificate of registration to the registrar, if I am called upon to do so by the Registration Board.

Earl Cathcart—continued.

26055. Suppose I wrote to you to tell you that nurse So-and-so had been drunk on a certain occasion on duty, would a communication of that sort be actionable?—We should ask you to be good enough to verify your words.

26056. What verification would you ask for?—We should ask you to be good enough to give us the opportunity of acting legally upon it.

26057. Then it would render me liable to an action if the thing were not exactly proved?—We should take it for granted that you would be able to prove your statement.

26058. Then I might say that she was drunk, meaning that she was "military drunk," that is to say, so far drunk as not to be fit for duty; and a certain other person might say that she was not drunk because she was not under the bed?—That is a difficulty; but we should hope the public would, for its own sake, tell us the facts and be willing to support their statements.

26059. I am not mentioning now that which is hypothetical, but that which is a matter of fact. It is a difficult thing to prove that a nurse was drunk, though, as a fact, she was unfit for duty, and very likely snoring in the chair. Now, on another matter; with regard to the registration of midwives, do you register them?—No.

26060. Do you register monthly nurses?—Yes.

26061. There is a very slight distinction, is there not, between midwives and monthly nurses?—There is more distinction than there seems to be on the surface. A monthly nurse almost invariably acts under the orders of a doctor;

(24.)

Earl Cathcart—continued.

a midwife almost invariably acts on her own responsibility.

26062. And how do you draw a distinction if the midwife has had training as a nurse?—If a midwife has been trained as a nurse we should register her as a nurse, and if she held the diploma of the Obstetrical Society of London, as many of our nurses do, we should add that diploma on to her registration.

26063. Then do you register midwives?—We say that nurses hold diplomas from an obstetrical examining body.

26064. So that anybody wishing to get a midwife, looking down your list, can see who are midwives and who are not?—Yes; but it is not a separate registration for midwives; we only register nurses.

Lord Zouche of Haryngworth.

26065. These certificates that the hospitals grant are not renewed, I understand you to say, from year to year?—Never; they are granted and given away, and become the nurse's property.

26066. Would not that renewal be a good thing if it could be brought about?—A very good thing.

26067. Do you see your way to bring it about?—I do not.

26068. That would be an almost certain protection, would it not?—No; the public then would have no guarantee against a nurse who possessed no certificate, and there are hospitals which give no certificates; and the public would

5 C 3

have

18 July 1891.]

Mr. FENWICK, M.D.

[Continued.]

Lord Zouche of Haryngworth—continued.

have no guarantee against a nurse who forged or stole a certificate.

26069. You can never be quite safe against forgery, of course?—It is only quite recently, as I said before, that a nurse got into a large London infirmary with her certificate accepted, and something caused inquiries to be made, and it was discovered that the certificate, which was nominally from St. George's, had been forged. She had deceived even experts.

26070. Are there many hospitals in London which do not grant certificates?—St. Thomas's Hospital, I believe, does not grant certificates, and that is one of the best known hospitals in the kingdom.

26071. Are there many others besides?—Not in London; there are many others in the country, I believe.

Lord Thring.

26072. I should like to ask you one or two questions on the subject of registration. Of course everybody can see at once that the objects of your association are most desirable, and if your rules carried them into effect they would be most efficient. Now you put down in your register that a nurse has been in a hospital for a particular time, I do not care what the time is, but for a particular time; an outsider, that is to say, a person who saw but one case of that sort, would imagine that that would be a guarantee that she was trained. Now it may be exactly the contrary; it may be that she has gone to the hospital and she has either been discharged or has left that hospital under a proof either that she is not competent or that she is not a good nurse, or not a good temper, or 50 other things. Hence the fact of her having been in that hospital is no guarantee at all that she is a good nurse, and unless you have got a certificate it is absolutely misleading, or may be so, to put her on the register?—I think not: I think we simply state that she was in a hospital where technical instruction is given, for a certain length of time.

26073. But follow my question: A person who is not accustomed to the question of nurses, would imagine that the fact of her being in a hospital meant that she was being trained in the hospital, would they not?—So it does.

26074. Suppose that, instead of her having benefited by her training, she has shown herself in that hospital to be utterly unfitted to be a nurse; surely the fact of her having been in that hospital is no guarantee of her having been trained?—But she has been in that hospital, and that hospital does train nurses, and it would be impossible for anybody, even a legal body, to so interfere with that hospital as to say, "We do not think that this nurse is sufficiently trained."

26075. That is not my point; but you will admit that it is still misleading in fact?—I cannot see it; it may be my own fault.

26076. Let me put it to you in this way (I am not blaming you or your Association at all): I am a man in the country, I know nothing about hospital training, and I look into your book, and I see that every person whose name is registered there received a certificate under the seal of the association. Mary Jones comes to me with the seal of your association?—Upon what? upon a certified copy of the entry in the register.

Lord Thring—continued.

26077. True. Then I find that the certified copy of the entry in the register is that she has been three years in a particular hospital. The fact turns out to be that she was not a good nurse, and that she left that hospital as being incompetent. Would it not be misleading to me, an ignorant person, that she has got your seal and is stated to have been three years in a hospital?—If she was incompetent she ought not to have been kept in the hospital, and if she was discharged from a hospital as incompetent, I am certain she would not have been able to produce the testimonials which made the Registration Board enter her on the register.

26078. She might not have been discharged as incompetent. We know that probationers and other nurses constantly leave a hospital, not because they are discharged as incompetent, but because they have not the capacity to be good nurses; in fact they are indifferent nurses. Therefore, is not the statement misleading; I do not say you can avoid it?—If it is made; but it is impossible on the one hand to say that anyone can inquire into the training of every particular nurse—

26079. I do not ask you that. It is only to lead up to another question. I ask you, as it stands, whether, taking an ordinary person, the statement that a nurse has been trained in a hospital does not lead that ordinary person to think that she has been really trained?—I cannot say that it does, because there are no two women alike. Some women will learn very much more than others in a given time. The responsibility of how much she is taught rests on the hospital which teaches her.

26080. Supposing a servant came to you and said that she had been trained to clean plates, would you not draw the inference that she had been trained to clean plates well?—If I had a guarantee from somebody who had seen her clean plates.

Earl of Kimberley.

26081. That guarantee is exactly the point. Does not that lead to this conclusion, that it is not really safe to register a nurse in this way unless she has a certificate; that no registration is safe which has not the guarantee of a certificate from the hospital where the nurse has been trained?—That would be so if every hospital gave that guarantee.

26082. Is any register a safe register unless it is confined to a register of certificated nurses?—Or nurses with testimonials of efficiency.

26083. Certificates or testimonials; you know what I mean; such a certificate as a hospital that gives certificate awards to nurses who are satisfactory?—If it was a legal matter there would be a distinct compulsion upon every hospital to give that guarantee, but while some hospitals do not give certificates, although they do train nurses, it is impossible to have a register of only certificated nurses without doing injustice to well trained women who are not certificated through no fault of their own.

Lord Thring.

26084. Now, then, comes the question which I want to put to you, and I direct your particular attention to it. I altogether approve of the objects of your society, but it appears to me that your

18 July 1891.]

Mr. FENWICK, M.D.

[Continued.]

Lord Thring—continued.

your register is distinctly misleading, unless you introduce a statement at the beginning, such as that which you have given us here, that when you say a nurse has been trained in a hospital you do not guarantee that that training has been efficient?—We distinctly do not guarantee the training in the hospital.

26085. I do not ask whether you do or do not; I say an ordinary person would consider that when you talked of a training in a hospital you meant a competent training; I assume that, and what I say is that, in my opinion, to make this catalogue of yours, this register of yours, otherwise than misleading, to make it a most useful document, you ought to state what you have stated here, that when you say in this register that a person has been trained in a hospital, you merely mean that she has been in the hospital?—That is precisely what we do state, and it would be quite impossible for any outside body to appraise the value of the training given at any particular hospital to any particular woman.

Lord Thring—continued.

26086. I say you ought to preface that to your register as an explanation of your entry; that is the point I wish to bring before you?—I think it is a very important-practical point.

26087. Most important; and it is one I insist upon extremely, because I happen to take a very great interest in this question?—I think it would be a very important thing to add; but it is taken for granted that when a nurse has been in a training school she has received technical training.

26088. I ask whether you do not think it would be very desirable that you should have a preliminary statement or preface prefixed to your list or directory, explaining the entries, in the form in which you have explained them here?—We have a preface.

26089. I asked you whether you do not think it requires more explanation?—I think it is a very valuable suggestion, and I am sure that the committee of the association would be very glad to take it into consideration.

The Witness is directed to withdraw.

MR. CHARLES STEWART LOCH, is called in; and, having been sworn, is Examined, as follows:

Chairman.

26090. You are the Secretary of the Charity Organization Society, are you not?—Yes.

26091. And you have followed the evidence that has been given before this Committee?—I have, more or less closely.

26092. On certain points?—On certain points only.

26093. Such as the need of organisation in the out-patient work?—Yes.

26094. And also the possible need of a central board of supervision?—Yes.

26095. We have had a great deal of evidence to show the difficulties that occur from the large number of out-patients, and some witnesses have spoken of evils that have occurred in their out-patient departments. Have you formed any opinion as to how they could possibly be met?—One would have to work, I suppose, from the state of things that at present exists, to a certain extent; and I think that it would be best to mention just one or two plans, and one or two suggestions. First of all, there is the plan of inquiry by an inquiry officer; and that is adopted, as I understand, mainly to keep away people who could pay; a sort of preventive mendicity check. I myself think that it is defective, partly because it is so limited as a check; the trivial cases, and the poor law cases, will pass in just as before; and as a check on the so-called “undeserving” cases, I think that after a little while, it loses its force. Then, further, it has no organising element at all; it does not lead to a better distribution of cases to the poor law and other quarters; and in fact it leaves the organisation of the out-patient department very much what it is. And I think, also, that when you consider the large number of cases that come to an out-patient department, and sometimes the large area from which they are drawn, it is impossible for the inquiry officer to do more than a very small
(24.)

Chairman—continued.

amount of work, unless he is connected with people in the locality to whom he can refer, and that, as a rule, is not the case. So that I conclude that that system of inquiry, though it has good features, cannot effect the sort of change that is wanted. Next, there is a plan of inquiry which was described by one of your witnesses as “inquiry entirely confined to the evidence of the applicants themselves.” This I think very defective and unsuitable. And next, there is the pay system. As a check on the out-patient department, I think it is open to objection for various reasons. It is contrary to the *raison d'être* of many hospitals; they are charitable institutions in the broadest sense, and, at any rate, in some instances, they are managed on the terms of a deed of incorporation, which requires them to be free. It also leads, I think, to a growing opinion that medical relief is to be had as a right, because to a certain extent it is paid for. I think also that the effect of the pay system, if the payment is of a small amount, soon wears off in so far as it can be a deterrent (I think, at Guy's, that has proved to be the case); and on the other hand, I think that you will find that the pay system is one of the best means of getting support for private venture hospitals (some of which have come before your notice). So that I, myself, would set that system aside, and would rather advocate what I think is a practicable plan, a plan of limitation, with what I should call the help of an almoner.

26096. Limitation of what?—Limitation of cases, limitation of the number of cases to each medical officer, in the manner now in force at St. George's and St. Thomas's. The old system at the hospitals was that the governors, at St. Bartholomew's the almoners, admitted and discharged the patients; and I think that was established for the very good reason of bringing in
5 c 4

the

18 July 1891.]

Mr. LOCH.

[Continued.]

Chairman—continued.

the kind of discrimination which is so very much wanted. That system has fallen out of use, partly because of the large increase of the numbers that come to the hospitals. Yet, under new conditions it might well be revived. Limitation, with the help of an almoner, serves many good purposes. First of all, I think we must accept the fact that the out-patients are necessary for medical education; and by this system those cases that are required for that purpose are admitted. Next, it can pass into the hospital those cases that are distinctively charitable, as apart, I mean, from those which are required solely to meet the needs of medical education. And next, if it is adopted, there can be referred to the poor law cases which are poor law cases distinctly, those for instance who may already have been at a poor law dispensary, or may rather be in need of food from the relieving officer than of medical relief. And then again by this method it is possible to distribute the work both of inquiry and of relief, instead of concentrating it at the hospital. It seems to me that at present it is an impossible task to deal with these cases, except often very hurriedly from the medical side, and not at all from any other side; whereas the other plan would localise the work of the hospital, and thus strengthen the connection between the hospital and the locality. That is done to a certain extent at St. George's Hospital: there they refer the cases very frequently either to the clergy or to our own district committees; and very much more care is taken, I think, to assist the case if assistance is required from another than the medical point of view.

26097. Will you tell me who inquires in that case; is it done by the medical officer?—I think it is done by the secretary and the chaplain; the chaplain takes a great interest in it. Then again, if needful help is wanted, it can only be got by co-operation on the part of the local people. It is impossible from a Samaritan fund, which is not, as a rule, available for out-patients, to do what is required; they can get a small amount of relief, but many points which it is desirable to attend to in good charitable work must be set aside. And I think also that, by working in this method, better terms would be come to with general practitioners, which would all tend towards organisation. So that, taking the various plans that are to the front, I think that on the whole this system, which imposes the conditions necessary in almost all good charity, should be adopted.

26098. How do you define an "undeserving" case?—I used the word, so to speak, in inverted commas, to imply what people meant, particularly when they said that a person should not have relief, on the ground of being able to pay; from a hospital point of view, I presume an undeserving case would be a case in which payment could be made by the patient for his treatment.

26099. Is there any reason why that case should not go to the Poor Law?—The test of the Poor Law is destitution. The question from the point of view of charity is, I think, whether you can prevent destitution or suffering in the future, absolutely if possible.

Chairman—continued.

26100. Who is the proper person, in your opinion, to go to a free hospital?—I should leave it open to anyone to go. I do not think that the question of going there, in the first instance, matters so much; and I could not very well define absolutely the persons who should go there. I should say that, first of all, cases in which Poor Law relief was required should not go there, unless they are wanted for medical purposes; so that there is that distinct distinction. Next there are a certain number of cases of people who can make provision for themselves, and who go to the hospital casually; they should not go there. When you pass beyond these more or less clear lines, you get to a somewhat indiscriminate mass, in which you would have to judge each individual case.

26101. Have you ever considered the question of having any wage limit?—Yes, I should not myself take an arbitrary line like that; I think it is almost impossible to apply it fairly.

26102. Have you ever considered whether you could have any possible organisation between the free hospitals and the Poor Law, the infirmaries that is?—Such an organisation do I understand you to mean as that by which they send to the infirmaries cases that are unsuitable for the hospital?

26103. Yes?—Yes; I think a very little would make it possible, provided certain geographical conditions prevail; if they do not prevail, then I think there is a difficulty. But where a hospital and an infirmary are in the same district, and the infirmary is the infirmary for that Poor Law area for that union, then there is already, I take it, a great deal of shifting of cases from the hospital to the infirmary; and on that side, so far, I should have thought there might be organization; but I do not know that it would be possible or desirable to have the counter transfer of cases from the infirmary to the hospital, if you are contemplating that. I say so, because to my mind the Poor Law system ought to be kept as an independent system, and not merged in a charitable system.

Earl of Kimberley.

26104. I suppose, however, you would not exclude cases where very difficult operations had to be performed from being sent from the Poor Law institution to the hospital?—No; those medical grounds seem to me to have their own reason.

26105. There might be very difficult operations which a man, otherwise in good circumstances, could not possibly pay for, though he is a man who could afford to pay for the treatment of all ordinary illnesses?—Yes.

26106. Those cases would be a separate class?—Yes.

26107. With regard to the wage limit, it comes to the same thing, does it not, namely, that you must consider each case in itself. A wage limit must apply in regard to the circumstances of the family, the number of the family, the time that a person may be ill, the regularity of his work, and so forth?—Quite so.

26108. Still, his wages would be taken into consideration?—Yes. There are perhaps a dozen facts which come together, and make your judgment up.

26109. The

18 July 1891.]

Mr. LOCH

[Continued.]

Earl of Kimberley—continued.

26109. The real point is whether the man is in such circumstances that he might reasonably be expected to pay for his own medical attendance?—Certainly.

Lord Lamington.

26110. You do not approve of the idea of doing away with the out-patient department?—No, I do not think it is practicable.

26111. Have you ever inquired into those cases where it does not exist, as at Edinburgh; I understand that there they have no out-door department?—I have heard about it; I have not been on the spot to inquire; I could not give an opinion on it as a well-informed critic.

26112. Your idea of retaining the out-patient department is partly founded on the consideration that it is required for the sake of the medical students?—Yes.

26113. In Edinburgh they have to have a certificate of having attended the dispensaries for such and such a period, as qualifying them?—It seems to me that if you do admit of that, you have a dispensary which is an out-patient department in another form. In the last century the dispensaries of London were very extensive, as, for obvious reasons, the people did not resort to hospitals as out-patients in the same way as they have done in this century; and the out-patient work of the schools was very much done then in dispensaries.

26114. But if you had such a system in London as I have mentioned of attendance being obligatory at dispensaries, would not that meet the requirements of medical education?—I think, from the point of view of the teachers, it would be very much more inconvenient, and I think that the convenience of the medical officers is a very great factor in any arrangements. At the same time I think that the dispensaries, particularly in certain cases where they are near hospitals, might be utilised by arrangement; and I am in hopes that with good organisation they will be; and if that were done it might be that the growth which you contemplate might, in certain instances, where it was convenient, take place.

Earl Cathcart.

26115. In cases where the number of out-patients has been limited, I have asked the medical men whether they would shut the door when the number was exceeded, in the case of acute cases, and they have said they would not; therefore would there not be a difficulty in carrying out the limit?—I think you must work it humanely.

26116. In fact, whatever limit you have, you must allow a margin?—Yes, but the fact that you have a limit is decidedly beneficial.

26117. We have been told that food is wanted more than medicine very often in the out-patient department?—Yes, I should say so in certain cases.

26118. And for such cases we were told that in the case of University Hospital they had a soup kitchen attached to the out-patient department?—I think that is a great mistake; I think, so far as general relief is concerned, it is better that it should be in the hands of other people than the hospital. It is impossible for the hospital with all its duties to undertake that as well.

(24.) e

Earl Cathcart—continued.

26119. Suppose a medical man saw that the patient wanted not medicine but a basin of soup?—On my plan, if there were anybody in the shape of an almoner attached to the hospital, the case would be referred to him; and the almoner, being a trained man (or woman), would ask a few questions to the point, and then possibly it might be a case for immediate reference to the relieving officer. Possibly it would appear at first to be a charitable case which might be proceeded with in the ordinary way.

26120. Lord Kimberley has exhausted that matter of the wage limit which I was going to ask you about. I have received a letter from an eminent medical authority, who has gone a great deal into these matters, saying that the wage limit and the wage question, so far as our Hospital inquiry was concerned, was entirely fallacious, because so many things have to be considered in regard to the income and outgoings; and when Lord Kimberley asked you the question, you answered him, that the wage limit cannot be taken without going into the whole of the circumstances of the particular case?—I quite agree with that view.

Lord Thring.

26121. I should like to ask you a question on a matter which interests me very much; I mean about the class of poor men above the class of people whom you ordinarily call poor men. I will take the case of a poor clergyman or a poor professional man who requires a very expensive operation to be performed; I want to know what your society do in cases of that sort, or whether they attend to them at all, or whether they can be attended to?—Cases quite of the type you have mentioned do not come to us. I hope that they are usually dealt with privately.

26122. Would you exclude men of that sort from the benefit of a hospital?—No, I should not.

26123. I only wanted to have your opinion on the point. In fact, I will take a clergyman's son who has to have his leg amputated; the father is a man with 200 l. or 300 l. a year, and has ten children; you would not, judging from what you said, wish to exclude that man from hospital treatment?—Not the least; I cannot find a line that would be absolute in these matters.

Earl of Kimberley.

26124. In such cases as those, it would depend very much upon the course the medical practitioner took; the probability is that the clergyman would have his doctor, some medical practitioner who would recommend him to send his son to a hospital, and who would take the necessary steps to obtain an order of admission, and his opinion that the case was one which ought to go to a hospital might be fairly taken?—Yes; I think that is the way it would happen. I thought that, perhaps, I might say a word as to the type of person who might undertake the duty of doing the almoner's work which I have described.

Chairman.

26125. Yes, if you please?—Hitherto the persons employed in connection with general charity in hospitals have been, to a very large extent, inquiry officers. The inquiry officer is good for his own work, and some of these men, no doubt,

5 D

18 July 1891.]

Mr. LOCH.

[Continued.]

Chairman—continued.

doubt, are doing very good work; but in order to do the kind of work that an almoner would do, it is essential that they should have some training in general charitable work. When the patients come into the rooms at the outset in a rather large crowd, there is generally an assistant physician, or some officer who has a similar title, to make things ready for the physician; and at that time it seems to me, by consultation with an almoner, those cases should be divided so that the assistant physician would take the cases required for medical work, and the almoner would, in any case in which they needed assistance, put himself into communication with people in order to get it. In other instances, knowing the district, and knowing what the Poor Law meant, and so forth, he would be able to refer cases that did not require assistance without delay to the proper authority. It would be impossible to make a systematic inquiry into the hundred and one cases that come into a hospital with very great speed; but by using local agencies, such as our own committees or local clergy and other people, the work could be distributed; and I think also that this would lead up to a very much more careful organisation of the out-patients from even the medical side; a better register would be kept, more care being spent on the individual case. Without organisation it is not possible to deal with so many cases; improvement in the quality of the work is in itself a check upon the want of discrimination. The organisation is in itself a kind of limitation, and a limitation that is reasonable and right. There are, for instance, a certain class of flimsy cases in which the applicants do not want much trouble taken about them, and if you begin to take trouble about them they say, "We will go elsewhere, thank you." I just wanted to say so much as this as to the kind of person who should be employed as almoner, because it will show that I am trying to bring in a better quality of officer, or, at any rate, a different type of officer, and a different type of work, and that I rather rest upon that as the true solution of the question; and I think that medical men, interested as they are in their cases, would appreciate good work of this description; I am sure they would.

26126. You mentioned the question of the radius; is it not the case that a very large proportion of the patients in general hospitals come from very long distances?—That is true. At the same time it is also true that a very large number of patients come from the immediate area around the hospital. I may give two or three instances. Here is one, that of the Charing Cross Hospital, mentioned in our memorandum (this is from a return given in by the hospital itself). To begin with, their largest entry is 228,686 cases from St. Martin-in-the-Fields, which is in the immediate vicinity. So, too, if you consider the locality of the other parishes mentioned in the return, it is quite clear that the bulk of their patients come from the immediate vicinity. Some indeed come from Kennington, Camberwell, and Stockwell, and a rather large number from Battersea, Clapham, and Brixton, and the neighbourhood, and another large number from the environs of London and the more remote parts of the country. Still,

Chairman—continued.

there is a large majority that come from the immediate district. And I think that the Evelina Hospital for Children found the same to be the case; they say that of 416 cases received at the hospital, 263 were local; 91 from the suburbs of South London; 38 north of the river, and 23 from the country, showing that there is a very large *clientèle* in the immediate area.

26127. Would you draw any hard-and-fast line so that it should be possible for patients to be sent from one hospital to another in the vicinity of their homes?—I do not think it is possible to do that as matters stand; but if the limitation system were adopted by a hospital, I do not think the hospital authorities would resent cases that they did not want, and which were charitable cases, going to the local hospital. It seems to me that it turns upon getting a system of limitation adopted by the medical men on their own behalf.

26128. One of the difficulties is that the medical men like getting hold of the good cases?—Yes, they like getting hold of the good cases for their own purposes; but if the case was not admitted as amongst those necessary for that hospital, it would not be one of the cases they wanted.

26129. What is the principal work of the Samaritan fund?—The Samaritan fund would ordinarily give minor relief to an in-patient on leaving the hospital, so as to help him to start rather better; it would also I think give relief to the family of an in-patient; it would probably also I believe give surgical aid.

26130. Instruments you mean?—Yes, surgical apparatus and so on; it is a sort of miscellaneous fund.

26131. And the amount of those funds varies at different hospitals?—There is the greatest variety as to the amount of the funds, and I should think also, if one knew about it, in the details of management, as to the cases, for instance, of which they take charge in one hospital, as against the cases they would deal with in another; but yet after making all allowance on this score, when you consider what are the needs of a special case, and then the number of the in-patients, the Samaritan funds, taken as a whole, are, it is evident, very small compared to what one might expect would be wanted in this kind of general charitable work.

Earl Cathcart.

26132. Some of the witnesses said, in regard to the Samaritan fund, that the patients would go out naked if it were not for the Samaritan fund; that their clothes often had to be destroyed because they were so bad?—I think that a fund of that kind is wanted in the hospital for what you might call minor purposes; but I do not think you can rely upon it for the general relief of the patients other than medical.

26133. We have heard a great deal of evidence about patients passing one hospital to go to another; is that within your experience?—It is within the experience of our district committees.

26134. And the Charing Cross Hospital secretary told us that they had a great many patients coming from the Charing Cross Station, which is near the hospital, who came from the country, especially

18 July 1891.]

Mr. LOCH.

[Continued.]

Earl Cathcart—continued.

especially from Sussex?—Yes, I daresay that is so. There is the large number of 234,000, out of the 895,000, entered as from the “Environs of London and more remote parts of the country and parishes unknown.”

26135. The secretary told us they had a good many cases from the country, because they are in the neighbourhood of Charing Cross Station?—Yes.

26136. You have not said a word about the injured poor practitioner; have you any strong feeling for the poor practitioners injured in consequence of the out-patient department?—I am inclined to think that, taking the matter in the gross, there is likely to be the injury, but it is very difficult to speak with sufficient detail in regard to that. The fact that a very large proportion of the people are getting this free relief must, I should imagine, affect them. I think that Dr. Corner's evidence, guarded as it was, was very much what I think would be in the minds of many people who would judge fairly on the matter; and I think that possibly one result of the out-patient department is that many general practitioners like to have shops, so to speak, and deal with a large number of cases, and make a small gain out of each case; and when you have the crowding there, you have the same kind of conditions of difficulty as in an out-patient department. So that there are various forms of reaction from a free system which are difficult to deal with; very difficult to define without minute inquiry.

26137. But the vast majority of out-patient cases are not those cases that would be of any pecuniary value to the poor practitioner?—I am not so sure of that. From seeing some of them, I should be inclined to say that there were many of those cases which had been paying a practitioner, and so to a certain extent had classified themselves as such, but which come to the hospital for special advice, and, so far, were legitimately at the hospital, though ordinarily and properly general practitioners' cases.

26138. But take the case which is of common occurrence in the country where a man runs up a bill for 5*l.*; he cannot afford any more, and then he falls back upon the poor-law, or upon charity?—Yes.

Chairman.

26139. There has been a great increase of poor-law medical relief, has there not, lately?—Yes, I think that is generally admitted; but we want returns with regard to poor-law infirmaries, as apart from workhouses, in order to get a better gauge of it; and we want also more careful returns as to the number of persons as against the number of admissions, in order to gauge it more thoroughly still; the number of persons in the year in an infirmary, we will say, as against the number of admissions to the infirmary.

26140. You mean to say to test the length of stay?—To test the length of stay and class of case, though of course on the face of it there must be a large increase, taking at any rate 15 or 20 years ago as your unit of time, for these poor-law dispensaries have been established, while the other dispensaries go on as they were before.

(24.)

Earl of Kimberley.

26141. But to a considerable extent they are employed as a substitute for the workhouse infirmaries?—That is true; but the bed accommodation seems to have risen in the process.

Chairman.

26142. Have you been able to form any opinion whether the medical relief in London is sufficient for the requirements of the population?—I do not think you can come to that sort of conclusion about it without the minute evidence of the kind I have mentioned. On the face of it I should say that these figures in our memorandum would show that it was sufficient, but that it was probably not well adjusted to the localities. When one thinks of the very large income that is spent on relief of this kind, and the large amount of supplementary medical relief, such, for instance, as convalescent homes and other charities that do not appear in this memorandum, one cannot help concluding that the demand is met, and one might almost say more than met, by philanthropy, by all these charitable voluntary associations. But I think that it is a question whether it is adjusted so as to be most suitable to the needs of the people. Still, locomotion no doubt is extremely easy, and the difficulties of going to a centre are not so great, I think, as an outsider might imagine, judging from the way that people do come long distances.

26143. You say that all this is met, and perhaps more than met, by philanthropy; do you mean that the poor-law medical relief is excessive altogether?—No, I did not mean that. I had in my mind the voluntary side of the question. There has been also the extension of poor-law relief, and that may increase to any extent that the people may demand, it seems to me.

Earl of Kimberley.

26144. I suppose, though I do not know the precise working of the different boards in London, some discrimination is exercised as to giving orders for the infirmaries, that they are not given to those who are *primâ facie* destitute?—I think there is; but one is struck by this sort of statement, *apropos* of Whitechapel: “We have an increasing migratory population; the 8,000 or so beds in common lodging houses, shelters, and refuges feeding our infirmary with sick, and mounting up the admissions sometimes to startling figures. Last half-year the admissions averaged nearly 100 a week, whilst the average number at one time would not be more than 600 or thereabouts.”

26145. It is, however, I believe the fact that there is rather a belief prevalent that medical relief may be given to the poor in a different way from other relief without pauperising them?—I think that is an opinion that is growing.

26146. Do you share that view?—No, not at all.

26147. And do you agree with me in the opinion which I have endeavoured to carry into practice, that every case where medical relief is given ought to be scrutinised in the same way as where other relief is given?—Yes, certainly.

26148. Though of course there may be many cases

18 July 1891.]

Mr. LOCH.

[Continued.]

Earl of Kimberley—continued.

Cases where medical relief might properly be granted, and other relief not properly granted?—Yes; the pauper who receives medical relief is a pauper with a privilege.

26149. He may be able to maintain himself otherwise, but cannot do without medical relief?—Yes.

26150. It comes to this, that each case must be considered on its merits?—Yes, certainly.

Earl Cathcart.

26151. Is there any limit to what the Charity Organization Society would undertake or does undertake?—There is the limit of its development and strength.

26152. And means?—Yes, and means. I meant that all branches of new work, such as the Charity Organization Society is undertaking, require time and the experience that is only acquired in the course of time and development.

26153. But when a hospital applies to you, do you expect them to pay you fees at the same time?—No; the medical men at the hospitals would send cases as they thought desirable to us.

26154. But then you would expect them to contribute at some time or other?—Not the medical men themselves; very often the hospital itself would. For instance, they might give a grant from their Samaritan fund towards other moneys that we raise for the case.

26155. And do you hope or expect to affiliate a great many hospitals in the course of time?—I hope that the sense of the use of general charity in connection with medical work will grow, and that with that will grow a combination.

26156. You find it has grown greatly in the past?—Greatly in the last five or six years.

26157. Your operations have vastly increased?—They have increased in quality. The number of cases actually dealt with are rather dependent upon other circumstances, such as general want; but the number of cases that we get from people at hospitals is larger than it used to be.

26158. Take your staff as a standard; has your staff greatly increased in the last five years?—It has been altered in many ways, and we have many more voluntary helpers.

Lord Zouche of Haryngworth.

26159. In your opinion has the poor-law medical relief increased out of proportion to the increase of population; have you any means of forming an opinion as to that?—I am afraid I cannot answer that question; I should like to, but it is difficult to answer it, except in this way: the poor-law medical relief, if there is less destitution, should become less and less; if the poor-law is well administered it will only grow where there is destitution; but the pressure of opinion such as has been referred to would be against medical relief merely given in cases of destitution, and in favour of medical relief given outside that line. Therefore if you set aside the principle of the poor-law you may have a large demand for relief, which would have no reference whatever to population.

Lord Monkswell.

26160. Have you formed any opinion as to provident dispensaries as subsidised by subscrip-

Lord Monkswell—continued.

tions?—My opinion is this: I should like provident dispensaries managed as benefit societies are, quite independently of subscriptions, to all intents and purposes; but I cannot think that in the long run the charitable provident dispensary, if I may so call it, can hold its own. It is neither the child of the working class nor altogether the child of the upper class.

26161. You would say, I suppose, that the same sort of objection applies to that as to pay hospitals?—I think you run a risk of having the same evils.

26162. With reference to pay hospitals, do you consider it to be altogether advisable that a rich man should be quite unable to get treatment if he is willing to pay for it outside his own house; might it not be desirable that a rich man should have institutions to go to without putting his family to great inconvenience; I mean on paying a reasonable price?—I quite understand that; I think that is the use of a hospital like the Fitzroy; and I think it may be a very good use to make of part of the accommodation at St. Thomas's for a specific purpose. I was rather speaking of the out-patient department, which is the main issue.

26163. You would say that at St. Thomas's, where a considerable part of the hospital has to be shut up, it might be utilised in that way rather than shut up?—Yes.

26164. And it might be made paying; they might have revenue from it?—A hospital hotel, so to speak, quite as a business.

Earl Cathcart.

26165. What was your profession, may I ask, before you took to this organization of charity?—I was for some time a clerk at the College of Surgeons when I left Oxford, and at that time I worked voluntarily for the Charity Organization Society; and eventually, about 1875, I was appointed secretary. I am also a member of the Inner Temple, but I have never been called to the bar.

Chairman.

26166. Have you formed any opinion as to the advisability of a central board of supervision?—Yes; it is a matter one has had constantly before one. A central board, it seems to me, is necessary if we are to get any organization, the organization that comes partly of good suggestion and imitation. And I should like to submit that to you at the outset, as I did before in another part of my evidence, in some detail. First, there are points in which uniformity would be desirable. As a mere matter of instructive statistics, for instance, we ought to be able to know more clearly how hospitals are managed and what are the lines of improvement. Now, as I understand it, the calculations we ordinarily have of the cost of an occupied bed are at best merely very good guesses. We had in this memorandum to take an arbitrary figure for the cost of an out-patient, make a deduction for that, and then calculate what the in-patient would cost. It seems to me it ought not to be impossible to get at a true figure for an out-patient which might be fairly accepted. If, for instance, a week were taken for calculation at two different parts of the year, as they do in poor-law returns,

18 July 1891.]

Mr. LOCH.

[Continued.]

Chairman—continued.

returns, rate, rent, and taxes might be omitted altogether from the calculation; then we might work out the actual cost of drugs, service, lighting, and firing; and taking those two weeks, I think one might say that one had a fair average. Then one would work out the in-patient expenditure similarly and distribute the management expenses *pro rata*. I am told that that is a very difficult thing to do unless it were done, so to speak, once and for all, by way of experiment. Still if there were a central board, I think that points of that kind would be more or less insisted on. In the Paris returns they give you, with regard to each hospital, the net cost per patient per diem, and you have in that way what is an official standard, which you can learn more about if you ask for further information. But there it is. Then there are points as to which uniformity only is by no means the main issue. By a central board, I think, in the case of the out-patients, reforms as to a better register being kept, and other matters, would be promoted. We have a great deal of information from the medical side with regard to the in-patients; but as to out-patients, take a point like this. We were anxious to know how many of the out-patients at a hospital were cases of epilepsy, or cases in which there is what we call feeble-mindedness, something short of imbecility or idiocy; but we could not ascertain that at all; and yet one would have thought that, as these children are not at school and are probably looked after by some doctor, if you went to the hospital, you would find it to be as good a place as any in which to obtain the information you wanted, and speaking from that information, you could say that of so many patients admitted to this hospital there were so many cases of the kind in question. That would be very good statistical information on an important subject. But we cannot get the data. We get general statements of value but not statistical evidence; the cases of epilepsy would be merged amongst the other cases, although they are very clearly distinct. Next, with regard to the system of supervision. There are two methods. We may either have the method of the power of the purse, or the method of inquiry and report. Now the method of the power of the purse, it seems to me, will be suggested by persons who would wish the Hospital Sunday Fund to take the matter up. The method of inquiry and report would be the method which would probably be adopted by any public body, such as the Assistance Publique in Paris. There are of course many advantages which would come of it. I have referred to some which would affect the internal arrangements of the hospital. Outside the hospital there would be, I think, by degrees, greater co-operation; dispensaries could be used in a better manner, and there would be co-operation very likely in lectures and other matters, in regard to which there has already been some partial co-operation. We are working, it must be remembered, with the old-fashioned dispensary system. These institutions are many of them endowed, a very important point. They were placed in districts which spread almost all over London, so that if we had merged our charitable system into our poor-law system, as some people would have done abroad, we should have used these dispensaries of

(24.)

Chairman—continued.

the last century as fixed points for an improved organisation. Now a new organisation, such as the central board, if it be endowed with any credit and power, would very likely by degrees give new uses to these dispensaries, which in many ways would be very valuable institutions. However, to return to the question of method, I speak with all respect for the Hospital Sunday Fund; I believe as a collecting agency it is most useful; I believe it has done a great deal of good in many ways. It has brought about a sense of organisation, and a sense of the need of organisation that there never was before; but at the same time there is the question whether it is the right body to carry out such a piece of work as this; and my reasons for thinking that, good as it is, it is not a desirable body for the purpose, are these: I think it is not strong as a supervising agency. One matter which may not be taken as sufficient in itself, but which shows the kind of difficulties that would meet it is this: In 1873 they said that they would get the accounts of hospitals into something like uniformity in a year or two. Of course we know that that is a moot question at the present moment. Then, again, there are hospitals which are entirely outside its influence, you may say; take St. Bartholomew's and St. Thomas's, two most important hospitals, and at Bartholomew's, of course, there was but the other day that question of the drainage. Then comes the series of hospitals which are at the lowest fringe; these little shams, as they were called by Mr. Sedgwick Saunders at the very start of the Hospital Sunday Fund, seem to me to escape their meshes quite. It appears to me that if they apply, they do not get the grant, and if they do not get the grant the worst that can happen to them is that they are gibbeted at the end of the report of the Hospital Sunday Fund with "nil" against their names; and as we know they simply pass the fund by, and raise money, possibly quite as well, in other ways. So that I think, from the point of view of guaranteeing public control, good as the Hospital Sunday Fund is, it cannot do the work that would really be demanded of any supervising body. And then, again, I think that their policy has, owing to the force of circumstances, necessarily taken another direction. For instance, here is a resolution which they passed in 1885; it is in the report of their general purposes committee. "The Hospital Sunday Fund was called into existence to solicit, and as equitably as possible to administer to all institutions doing hospital work in London, contributions from the churches and chapels of all denominations within the metropolitan area." That seems to be a very good definition of their *raison d'être*. "(2.) The hospitals of London, participating in the distribution of the Hospital Sunday Fund, are diversified in character, constitution, and administration, a diversity fully recognised in the organisation of the fund, and in its administration to the present time." Then come these two resolutions which seem to me to clench the matter. "(3.) In the light of these facts and principles, the members of the general purposes committee have considered the question referred to them, and have unanimously come to the conclusion that matters relating to the internal administration of hospitals

5 D 3

18 July 1891.]

Mr. LOCH.

[Continued.]

Chairman—continued.

pitals are beyond the jurisdiction of the Hospital Sunday Fund. It could not interfere with such matters without involving itself in insoluble difficulties, imperilling the existence of the fund itself, and exceeding the authority with which the constitution of the fund invest it. (4.) In the judgment of this committee, beyond the requirement of certain conditions of financial administration essential for the prevention of abuse, the sole function of the council is the equitable distribution of the funds entrusted to it, based upon the hospital work done by each institution relatively to its resources, and all matters of internal administration, are the sole responsibility of the hospital themselves." That seems to me to put very clearly the lines which they have taken as the pursebearer, and it would be difficult, I think, for them to take the line of amicable adviser outside the financial conditions which are imposed on them. Then, again, it is useful as an agency for collecting letters for hospitals. It is an association, in a sense, of donors, of congregations and others, for placing in the hands of their clergy letters for hospitals. Though, of course, it is clearly understood that they take only half the amount that would be due to them on an ordinary donation, yet they are in the position of an ordinary subscriber, though that does not appear at first sight. Then, again, I do not think that the Hospital Sunday Fund is representative, not representative for the purposes that a body of supervision should be. The council is divided into two divisions, the lay and the clerical. The clerical obviously come forward as representing the donors in the arrangement; the lay members are persons of eminence, who are sometimes very much interested in hospitals, but who are, I think, rather members for the reasons which the Hospital Sunday Fund was created for, than for reasons of what one might call hospital supervision. That can be more or less tested by reference to the list of the council. Then, of course, there is to be said, on the other side, that here you have a going concern, and that possibly it is as well to utilise it. But, on the whole, my judgment is against it; and I do not think that a combination of the Hospital Saturday and Sunday Funds would be, on the whole, better for the purpose. With regard to the Hospital Saturday Fund I will not go into that in detail unless you desire it.

26167. You mentioned the Assistance Publique of Paris; is it not the case that everything in all the Paris hospitals is furnished from the Assistance Publique; first of all the patients are sent by it, and every conceivable thing, to the buttons on the coats of the hospital servants, is furnished from there?—Yes.

26168. Would you advise the adoption of such a centralised system in London?—Not at all. I would only say that the composition of that body suggests, in some degree, what should be the composition of the controlling body that we want to see here.

26169. You would not like to see the individuality of hospitals done away with, would you?—Not in the least; the very reverse. I accept absolutely the principle that the supervision must be voluntary and not municipal. But, I think, that from the Paris arrangements good sugges-

Chairman—continued.

tions can be drawn for working out a system of supervision on our own lines.

26170. Is it not the fact that that answers really to our poor-law system?—Yes.

26172. Because in Paris there are no really voluntary charities, are there?—Yes, there are voluntary charities.

26173. There may be, but that is the main part of the relief?—No. Their method is that the charitable endowments are held on behalf of the State. Then, in addition to that, there is a large contribution from, in this instance, the city of Paris and the Department interested. Besides the Assistance Publique, which is thus maintained, there are voluntary associations, but these voluntary associations are known to the authorities, and given a sort of license, if one may so call it, and being approved, they work in connection with them; they have to co-operate with them. In the volume before me (*Administration générale de l'Assistance Publique à Paris en 1889*) it is stated that the municipality made to the Assistance Publique in Paris a subvention in the year 1889 of, for ordinary expenses, 17 million francs. I do not think I need go into the details; they are here to be handed in if you wish. The subvention is not for hospitals only, it is in support of the whole system of relief. To resume: in Paris in 1848 they came to see the necessity of further reorganisation, and it was decided to establish a special council to take charge of the whole of the poor relief of the municipality of Paris. The Council of Supervision was formed as follows: there was the Préfet of the Seine, who was the chairman by right; there was the Préfet of Police, who was a member *ex officio*; there were two members of the Municipal Council; two Maires or Maires Substitute; two administrators of the Bureaux de Bienfaisance (which would be the poor relief committees of the system as localised, so to speak); a Councillor of State; a member of the Court of Appeal; a doctor at hospitals or infirmaries in practice; a surgeon in similar hospitals and infirmaries in practice; a professor of the faculty of medicine; a member of the Chamber of Commerce; a member of the Conseils de Prud Hommes, which are councils for arbitrating in working men and trade questions; and five members "pris en dehors de toute catégorie"; that is, as we might say in English, co-opted. Then the system of election is this: each body represented submits the names of three nominees, and the President of the Republic chooses out of them one.

26173. Do you know if that is a paid body?—I understand it is not; of course there are paid officials on it. It was only the suggestion that a central board might be constituted on similar lines which I wished to submit to you. It seems to me that it brings together all kinds of interests in a manner good alike for hospital and for general charitable purposes. I should mention incidentally that a third of the body retires every two years, and that those who retire are eligible for re-election. The Assistance Publique at Paris has a department for administrative purposes connected with hospitals; it was no doubt to this you referred when you alluded to the centralization of the system. Next as to the special

18 July 1891.]

Mr. LOCH.

Chairman—continued.

special conditions under which the suggestion might be applied to London. You would have of course to make various changes in order to adopt it. First of all it is necessary that the voluntary institutions should, *quâ* the Board of Supervision, have some sort of status, and, *vice versâ*, of course the Board of Supervision would have a corresponding status. I thought that by an act of incorporation a *nexus* might be formed between the voluntary hospitals and the council. With regard to the constitution of the governing body, it seemed to me (this has all been before our committee, but I am speaking personally at the moment) that three or four different sets of interests would have to be dealt with. First of all, there is what may be called the professional interest, represented by the Royal Colleges, the Society of Apothecaries, and the general practitioners and others. Then there is the distinctively hospital, and the hospital school interest. Then there is the general interest, which is municipal, the City Corporation, for instance, the Local Government Board, and so on. And then there is the interest of the general public, as represented by the two large funds, the Hospital Saturday and Sunday Fund, and as represented by other societies, such as our own, and by other persons who might be co-opted. A sufficiently large and manageable governing body would, I thought, be a body of 33, adopting the plan which is adopted in Paris, of the retirement every two years of a third. So far as the hospitals are concerned they could be grouped for purposes of representation; and there should be what they call in Paris a *réunion*, and at it the men concerned in each group of hospitals could choose representatives for the central body. In that way a body would be created which would, I think, be very much more representative of the real medical and charitable interests of London than any body formed for another and particular purpose; and it would, I think, have the confidence of the hospitals, and all would come into it; it would also have that kind of status which, I think, would make it an honourable ambition to serve upon it. That is what I would say about the constitution. Then as to the duties which the board or council would undertake, I would propose that there should be visiting and reporting, and that this should be done by officers so far as may be desirable, and also by members themselves, with the object of submitting to the hospitals suggestions for better management, and publishing the results annually. I think that the publication of an annual report is a *sine quâ non*; that was the plan suggested by the Poor Law Commissioners with regard to the then proposed permanent Poor Law Commission. Dovetailing with the annual report of the Council of Supervision should be a system of annual reports in connection with each institution. In the annual report of the council, certain specific information should be published in regard to each hospital (I think that very important), as well as a report of special action taken in the year with regard to the co-ordination of hospitals and other matters. For instance, the Putney Hospital for Incurables is in many senses a hospital, but it is a voting charity and stands altogether outside

(24.)

Chairman—continued.

any kind of supervision, and yet the treasurer of the Putney Hospital is on the Hospital Sunday Fund. Such a hospital would have to report, and would, in turn, be reported on. Other points would be: the number of patients in the year; a *bonâ fide* good return of accounts and finance; sanitation; management; attendance at committees, and nursing. All these points would be dealt with as a mere matter of course with regard to each hospital. In this connection the report of the Board of Superintendence of Hospitals at Dublin is suggestive. I have the last report here, and would submit it, though I know that the Dublin plan is criticised. Now it may be that such a report as this is merely published, and that there is in Dublin an inert public opinion which does not take advantage of it; but if you compare it with the Hospital Sunday Fund report (perhaps it is not a fair comparison as things stand), the contrast is striking. In the Dublin report it is proposed, for instance, that the Lock Hospital there should be removed; just the point at issue in reference to some of our London hospitals. Next take Steevens's Hospital at Dublin; this is the entry: "We regret to understand that in consequence of the defalcations of a registrar of the hospital, referred to in our last report, a severe loss has been sustained by the institution. It is to be hoped that in the new arrangements which have been made for the financial management of the hospital, due precautions have been taken to prevent the possibility of the recurrence of such a loss." That that should be known is an advantage. Then comes such a remark as this with regard to the Lying-in-Hospital: "We impressed on the officials the advisability of frequently inspecting the basement floor to ascertain that this part of the hospital is in a sanitary condition. Effluvia from kitchens, cellars, or sculleries are often unsuspected causes of unhealthiness," &c. &c. Then the question of the government of the hospital is referred to, and so on. Besides the notes in regard to individual hospitals, there are tables showing the cost of the beds and giving other useful information, not all the information one would wish, but still a great deal that is of value. Now, it seems to me that if a report of that kind were published in London with regard to all the hospitals and sent to all the papers, and known to be a sort of compendium of information, its effect indirectly would be very great indeed. There is one more point, namely, the question of the establishment of new medical charities. I am inclined to think that it would be enough if the supervising body had to report publicly upon every proposal for establishing a new hospital or other medical charity. The public, who are now very ill-informed as to the actual need for a new hospital, would know at any rate what certain responsible persons thought about it. The parties connected with the hospital might choose to go their own way; the public would have been informed, and I think I would allow them to go their own way. After that if it was necessary to take any more strict line, such as licensing new hospitals, I should fall back upon that as a further resource, but I should prefer to avoid it at the

5 D 4

outset

18 July 1891.]

Mr. LOCH.

[Continued.]

Chairman—continued.

outset. I do not think that it would be fair to give up the voluntary system owing to a difficulty on that ground. The report of such a body, as I have described, would be a document of great importance. Then as to the Hospital Sunday and Saturday Funds, I should hope that in time their awards might be made in consultation with the proposed council; and if it is desirable to connect the distribution of grants to hospitals with the business of supervision, possibly it would be well to give to the council power to act as a trustee for sums left, not to any particular hospital, but to hospitals in general. As to finance; I think personally that the best way of providing the money would be to require by the Act of Parliament, which, I take it for granted it would be necessary to pass, that a certain sum from the City parochial charities should be made available for maintaining this board of supervision. I think that it is most appropriate to use those charities for the purpose, and out of their very large funds it would be quite fair to take, say, 1,500 *l.* a year or so for that end; and if that fails, it would be necessary, I presume, to fall back on voluntary help and try and raise a special sum; but the former course seems to me perfectly just and most desirable.

Earl of Kimberley.

26174. Beyond the powers of inspection and report would you give any powers to this body?—You mean of compulsion?

26175. Yes?—I am inclined to think not. There is one suggestion that they might report to some superior body on a particular dilemma, such as the General Medical Council or the Local Government Board, and that in that case the body that receives the appeal should hear both sides and publish their view. I am not in favour myself of pushing that.

Earl Cathcart.

26176. It should always be remembered that the Dublin Board of Supervision have the whip-hand, inasmuch as they have a large public subsidy to administer; is not that so?—I quite admit that; my hope would be that by a co-operation between the Hospital Saturday and Sunday Funds and this body there would be a good understanding, which so far as a subsidy is of value in the matter, would have the same effect.

26177. But, to some extent, it affects the analogy?—It does.

Earl Cathcart—continued.

26178. We heard from Mr. Burdett about out-post hospitals; that rich or large hospitals, instead of extending, should establish out-post hospitals where hospitals are very much required; has that idea ever occurred to you?—No, I do not think it has in the way that Mr. Burdett submitted it to you. I have rather looked at the local hospitals rising in the various localities as needed, just as the Great Northern, for instance, and the Metropolitan have been established.

26179. It was a novel idea to me; and you may take, for instance, St. Bartholomew's as an example of a very rich hospital; that had some idea of purchasing a large piece of ground for a very large sum of money; according to Mr. Burdett, it would be more desirable that St. Bartholomew's should establish out-post hospitals where hospitals are required?—Yes, I think there is a great deal to be said for that if the interests of the medical school are not made a difficulty, and, if I remember right, St. Bartholomew's in the old days had, for a certain class of cases, a separate institution; that is going back a good long time; it was given up.

26180. But where you have 600 beds all in one spot, it is probably not desirable to increase the number of beds exactly in that spot?—No, but it is not desirable possibly to accept an unit of so many beds as sufficient in that spot; for having done that, could the staff and the conditions of management, from the point of view of the medical school and so on, be organised so as to meet the demands of several out-post hospitals? That is my difficulty.

26181. I was asking your opinion as to that suggested plan of out-post hospitals?—I dare say it may be possible, but I think there are more difficulties in it than at first sight appear unless one is to have a string of hospitals localised with a sort of central board, what you might call district hospitals connected with one particular hospital.

26182. But Mr. Burdett started what I may call a fresh fox, and I wish merely to ask your opinion upon Mr. Burdett's idea of out-post hospitals?—I think it is a good idea; possibly it might be developed in time with other similar plans, but I should not accept it as one by itself.

Chairman.

26183. Is there anything more you wish to say?—No, unless there is any particular question you wish to ask me about in the evidence given to you as to any of the hospitals.

APPENDIX A.

PAPER handed in by Mr. *Richard Thorne Thorne*, M.B., F.R.S., 16 February 1891.

TO THE TREASURER OF ST. BARTHOLOMEW'S HOSPITAL.

IN compliance with your request that I should submit some Report as to the results of my inspection of the drainage and sanitary circumstances of such of the hospital buildings as I have as yet been able to examine, I beg leave to lay before you the following preliminary statement.

Having regard to the special incidence of diphtheria and allied throat disease on the nursing staff, I have, with Mr. I'Anson's assistance, inspected the two Nurses' Homes and a number of the wards, including some of those in which the nurses in question had been on duty.

As to the Little Britain Home, I am of opinion that, with the exception of two minor points to which I shall refer, the drainage and general sanitary arrangements are as perfect as they well could be. Two suggestions only are called for:—

1. In the larger courtyard there is a drain, receiving in its course the contents of a group of water-closets, which for a length of some 18 to 20 yards is unventilated. The head of this drain abuts on the "Nurses' Kitchen Wing," up to which a ventilating shaft should be erected.

2. Certain sinks in the Little Britain Home deliver into a drain ventilating pipe, which descends at the back of the building abutting on the smaller courtyard. Since it is intended that drain-air shall constantly ascend this pipe, it would be much better that the sink-pipes should empty into a separate drain-pipe delivering over a properly trapped drain inlet in the yard below.

With regard to the Duke-street Nurses' Home, I am unable to speak in similar terms of approval. Although much has been done to lessen risk from faults attaching to the original system of drainage, the drains, which throughout the greater part of their course lie beneath the buildings, are not provided with a satisfactory form of aerial disconnection from the main drain of the hospital. They also present other defects, but short of their entire re-construction, all these could not be dealt with.

Dealing next with the general drainage arrangements of the three principal ward-blocks forming part of the hospital square, I find that the soil-pipes and slop-water pipes leading from the so-called "sanitary" projections are not only unprovided with any air break between the interior of the ward buildings and the interior of the main drain, but that these pipes deliver into traps which, instead of being arranged so as to facilitate the rapid discharge of their contents into the drain, are so contrived as to store up a not inconsiderable quantity of excreta and liquid filth; and it is with such pipes, one end of which always stands in an accumulation of filth, that the waste pipes from the ward sinks, &c., are connected. Such an arrangement cannot be too strongly condemned. Very similar condemnation applies to the soil pipes from the water-closets in the ward kitchens. The remedy here needed is the provision of disconnecting chambers similar to that referred to in connection with the Little Britain Home, and the provision of means of ventilation for these chambers other than any which might be afforded by means of the down pipe from the sinks, &c.

I have also made a somewhat careful inspection of the sanitary circumstances affecting the wards themselves in the three blocks referred to, and there are certain points relating to them which call for serious consideration.

The first has to do with the so-called "sanitary" projections. When these were designed it was, I assume, intended to secure the same result as is usually arrived at by such projections in the case of hospital buildings, namely, the provision of a cross-ventilated lobby between the water-closets, &c., and the wards; the closets themselves being in their turn also provided with independent means of cross-ventilation. But the internal fittings of these projections have been so contrived as to defeat both these objects. Neither the water-closets nor the lobbies have independent means of cross-ventilation, and it is probably because this object had not been attained, that a further, and to my mind a perfectly useless enclosed lobby has been projected into each of the wards themselves. And not only so, but where the water-closets have been placed behind a paneling of woodwork on the distal side of the inner lobby, the ward slop-sink is throughout retained in this lobby. These "slop-sinks" are both as to their use and construction similar to water-closets, but they need even more careful aerial separation from the wards than the water-closets themselves, and this because it is at these slop-sinks that

bed-pans, containing the infectious excreta of such patients as those suffering from typhoid fever, are intended to be cleansed.*

After consulting with Mr. I'Anson, I am of opinion that a sufficient remedy for these several defects may readily be attained. The remedy will involve the removal of the "slop-sinks," such re-construction of the fittings of the water-closets as will adapt them also to serve as slop-sinks, and certain modifications of the panelling at the side of the water-closets, together with the enclosure of the upper part of the space allotted to the baths. When this has been done, the space containing the combined water-closets and slop-sinks will be provided with means of cross-ventilation, and an entirely independent cross-current of fresh air will be secured for each lobby between the water-closets and the wards. The small lobbies projecting into the wards which serve to box in stagnant air which, under existing circumstances, tends to be the reverse of wholesome, might, if thought fit, be so far got rid of as to only leave so much of the side panelling as will serve to screen the end beds from the doors leading to the sanitary projections. When these changes are carried out, the D traps fitted to the sinks, lavatories, &c., should be replaced by U bends.

But by far the worst feature relating to the wards has to do with the position of the water-closets used by the nurses. While at one end of each ward an attempt has been made by the provision of the "sanitary projection" to prevent the passage into the ward of foul air from the closets, conditions tending to ensure this very evil have been left altogether uncontrolled in connection with the ward kitchens at the other end. Not only are the nurses' water-closets so placed as to ventilate directly into kitchens opening into the wards, but the unfavourable conditions thus induced are aggravated by the fires which it is necessary to maintain in these kitchens. And the evil is the more important because in these kitchens the nurses have to take one of their meals. I may add that I received, during my inquiries, testimony as to recurring offensiveness in connection with these closets.

If it were possible, these kitchen water-closets ought to be altogether done away with. But I apprehend that this would involve considerable inconvenience and difficulty, and hence I would suggest that the hospital architect be consulted as to the practicability of projecting each of these closets beyond the kitchen in such a way as to secure between the closet and the kitchen a narrow lobby having means of cross-ventilation into the outer air.

Such inquiry as I have been able to make into the state of the main drains of the hospital is largely derived from information received from Mr. I'Anson, the clerk of the works, and his employés, as also from plans, and it has led me to the conclusion that whilst these drains are in point of size, direction, and otherwise, by no means such as would be now regarded as proper ones, yet with the exception of one short length where the invert has sunk, they can without difficulty be kept clean and free from deposit. And since I anticipate such material advantages from the works which I have recommended as regards the drains leading from the several buildings named into the main drains, I am not at present prepared to advise that any re-construction of the main drains is called for.

Since the date of the series of inspections to which this provisional Report relates, I have had an opportunity of seeing Mr. I'Anson's Report of 11th December 1890, and, in so far as that Report and this one deal with the same subjects and the same buildings, it will be seen that we are in full agreement.

Whilst making the investigations referred to, I observed certain processes which are carried on behind the south wing, and it would be impossible for me to avoid reference to these in any statement bearing upon unwholesome circumstances affecting the hospital. I refer to the processes of scavenging which go on at the back of that wing. Uncovered tubs, containing ward ashes, ward sweepings, &c., were, at the moment of my visit, being thrown down in an uncovered enclosure, with the result that the wind immediately carried a cloud of this stuff back again to the ward windows. Happily these windows were closed at the moment. Much the same objectionable result must almost necessarily ensue when the scavengers cart away this refuse. On the same occasion, I observed that somewhat similar receptacles, containing vegetable and wet refuse, were so dealt with as abundantly to litter the wet ground around with this material, and it is hardly possible that the soil can be other than fouled by the repetition of such a practice day by day. Other tubs, uncovered and exposed to rainfall and sun, stood by, which apparently contained dirty bandages, poultices, and other ward refuse. From what I saw I was led to make inquiry as to the results of these scavenging processes, and complaints of offensive odours in the wards near by were found to be very general. Indeed, it is hardly possible to conceive of arrangements more calculated to render unwholesome the air about the ward windows of this wing than those which are carried out at this point. As to this, I would recommend that, unless it should be found practicable to erect a small incinerator (constructed on the same lines as one recently provided for the Middlesex Hospital) at some suitable point, pails fitted with flanged air-tight covers should be used for the removal of all ward and other refuse brought to this yard, and that these should never be opened between the time when they are closed down in the hospital buildings and the ultimate discharge of their contents into the City furnace.

Since

* These "slop-sinks" are quite different from the ordinary sinks contained in these projections.

† I am not yet prepared to discuss the question of their ventilation and flushing.

Since my inquiries have primarily been concerned with the recent prevalence of diphtheria, I would, in conclusion, state—

1. That the sanitary circumstances of the Nurses' Home in Little Britain are such as to forbid the belief that they can in any way have been concerned in the production of disease.

2. That, whilst I am unable to speak with equal confidence as to the Duke-street Home, I have no grounds for believing that diphtheria has been induced by any of the sanitary conditions of that building.

3. That, as regards the drainage of the ward blocks, and the internal arrangements of those buildings, conditions do exist, and this notably in the ward kitchens, which tend to unwholesomeness, and which have been known to produce "sore-throat"; and that, even if this form of sore-throat be not in its beginnings regarded as of a specific character, it is certain that those suffering from it are, to an exceptional degree, liable to contract diphtheria when the disease is prevalent.

This statement is, however, not intended to prejudge the question as to the origin and diffusion of the infection during the recent prevalence, as to which the necessary data are not yet forthcoming.

R. Thorne Thorne, M.B., F.R.S.

PROPOSED SCHEDULE OF HOSPITAL ACCOUNTS, No. 3.

AUDITORS' CERTIFICATE.

WE have examined the accounts and account books of the Hospital, and have verified the securities mentioned in the annexed Balance Sheet, and we hereby certify that we have satisfied ourselves that the accounts are correctly kept, and truly set out the financial condition of the institution as at the , and its income from all sources and expenditure on all accounts during the year which ended on that date. The abstract statement of Income and Expenditure, and the Balance Sheet annexed hereto, and to which we have appended our signatures, are correctly made up from the books of the institution, and truly represent the contents of the same.

We have adopted in our audit of the accounts the tests mentioned in the accompanying report, to which also we have appended our signatures.

A. B. of _____
C. D. of _____

AUDITORS' REPORT.

WE have in the course of our audit examined and ascertained the income of the under its various items, as enumerated in the accompanying statement of income and expenditure, by means of the following tests :—

- Item a. Annual subscriptions, tested by (say) the collector's receipt book.
- „ b.
- „ c. &c.

We have in like manner examined the expenditure by means of the following tests :—

- Item 1. Food supplied to patients tested by (say) the Steward's accounts.

The total amount for which credit is taken in the Steward's accounts in respect of food and coal is vouched by tradesmen's receipts to the amount of £. . The balance of £. unpaid at the date of closing the accounts is duly entered in the Balance Sheet.

We have also verified the statement of liabilities contained in the Balance Sheet, and have ascertained that the amount set down to Hospital Estate agrees with the amount so entered in the Balance Sheet issued last year, making allowance for the depreciation and additions shown on the statement of Income and Expenditure :

For Convalescent Hospital Fund, &c., &c.

As to the securities enumerated, we have relied for the value of the freehold property on the report of Mr. , the Hon. Surveyor to the Institution ; and as to the title under which they are held, we have been advised by Mr. , the Solicitor. As to the various Stocks and Consols, we have seen the certificate in the custody of Mr.

&c. &c.

APPENDIX H.

PAPER handed in by Mr. *W. Vallance*, 22 June 1894.

WHITECHAPEL UNION.

MEMORANDUM explanatory of the Scheme for a revised form of Medical Administration of the Baker's-row Infirmary, which is now under the consideration of the Guardians, together with a statement of possible difficulties which will have to be met, and points which will have to be considered in relation thereto.

The Infirmary is certified for 689 sick poor and has, up to the present, been under the control of a Medical Superintendent (with a subordinate staff), and regulated by an "Infirmary Order" of the Local Government Board; but a vacancy in the office of Medical Superintendent having occurred by the resignation of Dr. J. J. Ilott, the present question has been introduced and is accordingly engaging the attention of the Guardians.

Having regard to the extreme importance of the proposal, the following statement is commended to the careful perusal of every guardian; it being, at the same time, understood that the statement is not to be taken as complete, but merely suggestive.

The discussion upon the question will be resumed at the Ordinary Meeting of the Guardians on the 2nd of November, and a decision probably taken at the then next Ordinary Meeting on the 16th of November.

The scheme which is now under the consideration of the guardians may be shortly stated to be one for placing the medical administration of the infirmary upon the same footing as a general hospital, and for bringing the utmost medical and surgical skill to bear upon the treatment of the sick poor. Such an arrangement, if found to be practicable, would no doubt be popular with the medical profession, since it would open a large field of experience in the treatment of diseases which are not usually met with in general hospitals. It is also claimed for the proposal that it would not only raise the status of the infirmary as a poor law institution; it would not only increase the facilities for medical education, but that it would prove of the greatest benefit to the patients by their being brought into direct contact with the highest form of modern medical and surgical science.

The plan would involve the appointment of a non-resident consulting physician and the like consulting surgeon, and, probably, two resident assistants. The authority of the former would be supreme in the treatment (including diet and nursing) of the patients; but, subject to that authority, the resident assistants would be held responsible for the care of the sick poor and for due attendance upon cases which, by reason of their chronic nature or otherwise, might not have been dealt with by the visiting physician or surgeon. Other possible advantages would be an improved classification of the sick, a better record of cases, a higher standard of nursing and increased means for the efficient training of pupil nurses. The arrangement would also afford to medical students a field of study which is said to be greatly needed, since the visiting physician and surgeon, respectively, would be allowed to introduce, for accompaniment with them through the sick wards, such pupils as they might desire.

Now, assuming the guardians to be satisfied in the abstract that advantage would accrue from the proposed change, the question naturally arises whether administrative difficulties present themselves and, if so, whether they are surmountable. That there are difficulties to be overcome and points of importance to be considered will be admitted. To begin with, in the present system the medical and general administration of the infirmary are combined in the hands of the medical superintendent who is the responsible head, and, theoretically at least, this is the more perfect arrangement; whilst, in the adoption of the proposed scheme it will be necessary to transfer the control of the internal administration from the medical officer to the matron, to limit the duties of the resident assistant medical officers to attendance upon the sick, to more clearly prescribe the duties of the steward, and, generally, to readjust the relations of the medical staff, matron and steward, respectively. Then there are the probabilities as regards statistical and financial results. Will the infirmary patients be likely to make a more rapid recovery to health and so be fitted to return to the labour market earlier than at present, or will the system entail an increase of pauper sickness by attracting to the infirmary patients who do not now resort to it? An affirmative answer to the latter portion of this question is not to be implied by the form in which it is put, since it may reasonably be urged that only the destitute sick

poor within the union are eligible for admission to the infirmary, and that, if they are sick and destitute, there ought to be no barrier to their admission. Then again, it may be argued that the scheme will be costly, and that the guardians will be unable to control and restrict, in the same way and to the same extent as at present, the expenditure upon medical comforts, appliances, &c. On the other hand, it may as strenuously be contended that an efficient and reasonably liberal treatment will be as protective of the ratepayers' interests as it will be conducive to the help and health of the patients; and again, that not only will the character of the medical administration be raised, but that it will prove actually, and not by any process of comparison or deduction, the more economical system. It will also be matter for consideration how far the visitation of the infirmary by a consulting surgeon may affect the policy of the guardians (and, indeed, of the Local Government Board also) as regards surgical operations, the performance of which in the infirmary has hitherto been discouraged and all such cases transferred to and paid for in the London Hospital.

The only instance, so far as I am aware, of a system approximating to the one now proposed in a poor law institution is the Manchester Parish Infirmary, at Crumpsall, constructed to accommodate some 1,400 sick poor, and which is virtually administered by a hospital-trained matron, the resident medical officers being restricted to the duty of medical attendance upon the sick under the control and direction of a non-resident physician and surgeon. This infirmary is unquestionably one of the most admirably designed and efficiently administered institutions of the kind in the country, but whether its success is due entirely to the system, or to the *personnel* of the staff, or to both, may be left open for discussion. It should be added that the nominal, although responsible, head of the infirmary is the master of the workhouse, within the curtilage of which establishment, although at some distance, the infirmary is situate, and, as an officer of exceptional power and intelligence, doubtless imparts a sort of backbone to the infirmary administration. Still, it is strictly correct to say that the management of the infirmary is virtually in the hands of the matron.

The broad principle of the present scheme, that of opening poor law infirmaries to the view of the medical profession and of giving the poor the benefit of the highest form of treatment, is one which, standing alone, will be largely accepted; the only question being, how far is it possible to engraft the system upon the poor law. Upon this point it may be interesting to note that the guardians of another metropolitan parish are at present engaged in the consideration of the same question, the circumstances of that parish leading them to seek another direction in which to apply the principle. A vacancy having occurred in the office of assistant medical officer, the guardians are considering the expediency, instead of appointing a successor to the permanent office, of employing two assistants for a limited term of six months and of paying to each an honorarium of 25 guineas. The advantages which are anticipated include the "introduction into the infirmary from time to time of the advances and improvements which are continually being made in the scientific treatment of disease," the giving of "experience to young medical men at the commencement of their career," and "by a continual influx of men of enthusiasm and energy, to afford the means of combating the lethargy which is so apt to settle down upon isolated institutions such as ours, to the detriment of the sufferers therein."

But it may be that the guardians, whilst favourably regarding the proposal, are not prepared to revolutionise their infirmary administration and to give permanency to the arrangement by means of newly-framed regulations, in face of the possible risk of non-success. For instance, experience may show that a poor law infirmary is not on "all fours" with a general hospital and cannot be similarly administered, and that high-class physicians and surgeons and medical pupils are not attracted to it. This is not said in anticipation of any failure, since if once adopted, the guardians will no doubt promise themselves that the arrangement shall succeed. Still, it remains to inquire whether there is not an alternative which will combine the advantages of the proposed scheme with a less revolutionary disturbance and with a greater security for efficient administration, whilst enabling the guardians to adopt it experimentally and to command a means of easy retreat in case the result should not prove satisfactory. And the question may, perhaps, be answered affirmatively thus: Adopt the proposal so far as regards the appointment of a visiting physician and the like surgeon, but, instead of appointing two resident assistant medical officers, appoint a resident medical officer and a resident assistant. The effect of this modification would be that, in the treatment of the sick, the medical officer would be subject to the control and direction of the visiting physician, or surgeon, but in all other respects he would be the chief controlling and responsible officer of the infirmary. At the same time, it may be well to more clearly define certain duties of the matron and steward, in order to fix precise authority, to prevent overlapping and to promote good order and discipline. For instance, as regards the nursing staff and female servants and the domestic arrangements of the infirmary, the control might be placed definitely in the hands of the matron, and, as regards the stores and subordinate male servants (other than male nurses who should remain under the direct and sole control of the medical officer), the authority might be as definitely placed in the hands of the steward. This arrangement would leave the medical officer in the same position and relation to the matron and steward, respectively, as regards those specific duties as that

in

in which the master of a workhouse stands, under existing regulations, to the school-master or schoolmistress, in regard to the discipline and arrangements of their schools; and, seeing that it would remain the duty of the medical officer to report any negligence or misconduct, on the part of either matron or steward, he would be left as the chief governing officer. Subject to modifications, the existing regulations would remain in force, and, in the event of this alternative scheme being adopted experimentally and, after a fair trial, found not to succeed from one or other of the causes already indicated, the only fresh disturbance would be the transfer of the authority given to a visiting physician and surgeon to a resident medical officer.

As to the question of cost of staff under each, or either of the proposed arrangements, it is scarcely necessary at this early stage to attempt any precise calculations, suffice it to say that, in either case, the cost would probably not much, if at all, exceed that of the present system.

Whitechapel Union Offices,
Baker's Row, E., 19 October 1886.

W. Vallance,
Clerk to the Guardians.

APPENDIX I.

PAPER handed in by Mr. *F. Andrew*, 29 June 1891.

3, Grosvenor-square, W.,
13 June 1890.

Sir,

I THINK it my duty to bring to your notice the very general complaints which I hear on all sides about the management of the Royal Hospital for Incurables at Putney. Please believe that I do so in no hostile spirit, but rather from a warm feeling of friendship to your institution. I had intended to do so before we opened the bazaar on Tuesday last, but on reflection I thought it better to postpone doing so until after that occasion.

For your information I will classify these complaints under the following heads:—

1st.—*Food.*

It is stated that the meat is frequently most indifferent, the milk is very inferior, and the patients are stinted in their supply of vegetables. The bacon is far from good.

2nd.—*Want of Supervision.*

No member of the committee ever visits the hospital at meal times, and that therefore the committee has no opportunity of judging of the quality of food supplied to the patients. It therefore seems that the whole control of the commissariat lies in the hands of the steward.

3rd.—*Management.*

I am led to believe that no proper system regarding the contract for butchers' meat is adopted, it being stated that the same butcher has for many years past monopolised the contract.

4th.—*General.*

It is also stated that sufficient time is not allowed for the patients' meals; though they are not actually compelled to leave the table, such moral pressure is put upon them that they are unable to comfortably finish their food.

That the religious needs of the inmates are much neglected, there being no regular chaplain, and no facilities are given to patients desirous of attending an early celebration of the holy communion, for though there is a church just outside the gates they cannot go to an early service because it interferes with breakfast; neither are they allowed to stay for the celebration after morning service because of the dinner hour.

I regret very much to have to write in these terms, but I think it is only my duty to do so, and I hope you will bring my letter to the notice of your committee, and believe that

I am, &c.
(signed) *Portland.*

None of these complaints were made to us by the patients on the day of our first visit, but have all reached my ears from the outside world.

106, Queen Victoria-street, E.C.
27 June 1890.

My Lord Duke,

I AM desired, on the part of the treasurer and the board, to thank your Grace for kindly bringing to their notice matters affecting the management of the institution, as represented to you. They regard the trouble your Grace has taken to communicate them at length, as a proof of the friendship you have shown on several occasions, and they have felt it their duty to make inquiry into the subjects of complaint. They beg respectfully to submit the result to your Grace.

They wish, however, to express their surprise that the complaints should be, as you observe, "very general" and heard "on all sides," as no tangible complaint has reached them, although the house is at all times open to visitors, from whom the committee would be glad, at any time, to listen to a friendly representation of a grievance believed to exist.

To the points of your Grace's letter:—

1st.—*Food.*

It is likely that the meat is occasionally somewhat hard of mastication, which is owing to its being freshly killed; New Zealand mutton has often a dark colour, though the meat is sound;

sound; the committee cannot accept the statement that the meat is "frequently most indifferent."

With the exception of a small supplemental supply from a local dairy of good repute, the milk is furnished from 10 cows kept on the property, and used without removal of cream. Your Grace has seen the cows grazing, and can perhaps bear witness as to their condition. The complaint of inferior milk cannot have been seriously made.

Potatoes are supplied to some extent, and green vegetables to a large extent, from our own kitchen garden. Green vegetables are put on the tables three times a-week, and there is generally some left unconsumed.

The bacon and butter are from Mr. Clarke, of Kensington, and are of excellent quality.

2nd.—Want of Supervision.

It is true that the Committee do not pay stated visits to the dining room; but it is not true that no member of the committee ever does so. The committee are, however, much obliged to your Grace for drawing attention to the food supply, and will be happy to act upon your suggestion for a more frequent personal visit at the dining hour.

3rd.—Management.

The contract for butchers' meat is made, like others, by the committee themselves; the steward has no voice in the selection of persons invited to tender, or the acceptance of tenders. The meat contracts are for three or six months only; nearly always the latter, and are the subject of competition. For obvious reasons the contracts are not thrown open to the trade, the persons invited to tender being those on whom the committee have reason to rely in the matter of quality. One man has succeeded in keeping the supply for some years, his prices being found to be the lowest; but he certainly has not a monopoly.

4th.—General.

As to the want of proper time for meals. One is again obliged to say that no complaint has been made. The committee are assured that the patients do not rise till all have comfortably dined; male and female nurses are in attendance to serve, and, when needful, to cut up the food and feed the patients; this expedites the meal, which may give, perhaps, the idea of haste. It is the wish of the committee that the important meal of dinner should be enjoyed in comfort, and they will certainly keep your Grace's hint before them.

The Holy Communion is celebrated every week by the vicar at Putney, the Hon. and Rev. R. Henley, in one or another part of the house, so that every patient who desires to partake has a stated opportunity of doing so. Mr. Henley conducts a public service on Sunday afternoons; he has laboured gratuitously for thirty years among our inmates.

Patients, nurses, servants, are free to attend early or mid-day Communion at Holy Trinity, outside the gates, and no obstacles are placed in the way of their doing so; but, with the opportunities within, not many desire it.

As to the alleged neglect of the religious needs of the patients, I may add that we have a public evening service on Sunday, also on Friday, at which ministers of the Church of England and of Nonconformist churches officiate. Will your Grace kindly read the paragraph on page 6 of the enclosed report on this subject?

The committee, perhaps, have no right to inquire as to your Grace's informants, or the sources from which their statements have been drawn, but they need hardly suggest that, starting of necessity from some of the patients, they are liable to be influenced by the temperament of the narrator, itself perhaps affected by long-continued disease, and are not to be implicitly received without inquiry.

The committee are very glad your Grace has made inquiry, and they trust this note may be regarded as fairly meeting the objections that have been raised.

Mr. Allcroft begs me to express his regret that, being called into the country to attend a funeral, he is unable to sign a letter to you himself.

I have, &c.

His Grace the Duke of Portland.

(signed) *F. Andrew*, Secretary.

APPENDIX K.

PAPERS handed in by Mr. *H. C. Burdett*, 4 July 1891.

— I. —

MEMORIAL of the Nurse-Training Schools and Hospitals throughout Great Britain.

MEMORIAL OF NURSE-TRAINING SCHOOL AUTHORITIES.

WE, the undersigned, beg the favour of your insertion of the following statement, which we think it desirable to make, in view of a paragraph which has been published on the subject of the registration of nurses, in which we note with surprise the statement that the main object of the British Nurses' Association "is in conformity with a great public want, and a widespread professional demand."

We would wish to point out that those who represent the largest nursing interests in the metropolis and throughout the country, and who have the most to do with the training and examination of nurses, have not only declined to take part in the association, but consider that its proposed enrolment of nurses in a common register, if carried out, would (1) lower the position of the best trained nurses, (2) be detrimental to the advancement of the teaching of nursing, (3) be disadvantageous to the public, and (4) be injurious to the medical practitioner.

We hope that a final judgment upon this important matter will be postponed until the views of those who are opposed to the aims of this association have been expressed and examined. We further consider it our duty to state that if a charter be applied for on the lines stated in the prospectus of the British Nurses' Association, we shall feel it to be incumbent upon us to offer thereto all legitimate opposition in our power.

FIRST LIST—LONDON HOSPITAL AUTHORITIES.

St. Thomas's Hospital and Nightingale Fund Training School.

D. H. Stone, treasurer of the hospital.

Harry Verney, chairman of the Nightingale School.

W. Bowman, F.R.S., member of council of Nightingale Fund, and of council of St. John's House and Sisterhood.

W. Rathbone, trustee and member of council of Nightingale Fund, president Liverpool Training School and Home for Nurses.

H. Bonham-Carter, secretary of the Nightingale Fund.

J. S. Bristowe, M.D., F.R.S., senior physician of St. Thomas's Hospital, and lecturer in Nightingale School.

A. L. Pringle, matron of St. Thomas's Hospital and superintendent of Nightingale Fund Training School.

M. S. Crossland, sister in charge of the Nightingale Training School.

Guy's Hospital and Training School.

E. H. Lushington, treasurer.

E. C. Perry, M.D.; G. Newton Pitt, M.D., assistant physicians and instructors of probationer nurses.

J. C. Steele, M.D., superintendent and instructor of nurses.

Westminster Hospital and Training School.

Westminster, chairman.

Rutherford Alcock, vice-chairman.

J. J. Troutbeck, D.D., hon. treasurer.

Mary E. Thynne, hon. secretary of Committee of Management of Training School.

W. H. Allchin, M.B., physician to the hospital; Thomas Bond, F.R.C.S., surgeon to the hospital; lecturers to the nursing staff.

Mary J. Pyne, matron of hospital and lady superintendent of nurses.

St. Bartholomew's Hospital and Training School.

Norman Moore, M.D., assistant physician; Harrison Cripps, F.R.C.S., assistant surgeon; instructors of probationary nurses, St. Bartholomew's Hospital.

Charing Cross Hospital and Training School.

John B. Martin, treasurer and chairman of committee.

Frederick Willcocks, M.D., assistant physician and lecturer to nurses.

Stanley Boyd, F.R.C.S., senior assistant surgeon and lecturer to nursing staff.

Hughina A. C. Gordon, lady superintendent.

King's

King's College Hospital and Training Schools.

Henry Wace, D.D., chairman of Committee of Management.

Richard Twining, treasurer.

Nathaniel Bromley, A.K.C., secretary.

John Curnow, M.D.; Nestor Tirad, M.D.; physicians to the hospital, and examiners and lecturers to the nursing staff.

Katherine H. Monk, matron.

Clara S. A. Peddie, house sister and teacher to the nursing staff.

London Hospital and Training School.

F. C. Carr-Gomm, chairman of House Committee.

J. H. Buxton, treasurer.

A. Ernest Sansom, M.D.; Frederick Treves, F.R.C.S.; James Anderson, M.D., examiners and lecturers to the nursing staff.

Eva C. E. Lückes, matron.

St. Mary's Hospital and Training School.

T. Pycroft, chairman of House and Finance Committee.

M. Handfield Jones, M.D., assistant obstetric physician; A. J. Pepper, F.R.C.S., assistant surgeon; S. Philips, M.D., assistant physician; A. Q. Silcock, F.R.C.S., assistant surgeon; lecturers to the nursing staff, and examiners.

M. A. Medill, matron.

St. George's Hospital.

Hugh M. Macpherson, F.R.C.S., chairman of the Committee of Nursing; Charles

T. Dent, F.R.C.S., assistant surgeon, lecturer to the nurses.

St. Marylebone Infirmary and Training School.

John R. Lunn, F.R.C.S., medical superintendent.

Elizabeth Vincent, matron.

SECOND LIST.

London Hospitals.

Accident Hospital, Poplar.

Emma Pilcher, matron.

Alexandra Hospital for Hip Diseases.

Lucia Moore, lady superintendent.

Army Hospitals.

W. A. Mackinnon, Surgeon-General, Director-General Army Medical Staff.

British Lying-in Hospital.

E. J. Freeman, matron.

Cancer Hospital, Brompton.

Alex. Marsden, consulting and senior surgeon to the Cancer and Royal Free Hospitals; A. Rogers, matron.

Cheyne Hospital for sick Children.

J. Prince Bartlett, senior surgeon; J. Macready, surgeon; E. N. Elam, lady superintendent.

Children's Hospital, Great Ormond-street.

Arthur Lucas, vice-chairman; Adrian Hope, secretary; K. Phillipa Hicks, matron.

City of London Hospital, Victoria Park.

K. S. Hetherington, matron.

City Orthopædic Hospital.

Isley Pollard, matron.

East London Hospital for Children.

Charles Cheston, chairman; H. B. Donkin, M.B. Oxon., F.R.C.P.

Great Northern Central Hospital.

Mary Hall, matron.

Her Majesty's Hospital for Sick Children, Stepney.

S. A. Warburton, matron.

Homerton Hospital, Metropolitan Asylums Board.

Alex. Collie, M.D., medical superintendent; Emily Aston, matron.

Hospital for Consumption, Brompton.

William Beckwith, chairman; C. Theodore Williams, M.D., senior physician; Henry H. Taylor, F.R.C.S., resident medical officer and lecturer to nurses; Florence Abbott, lady superintendent.

Italian Hospital, Queen-square.

W. Elgood, chairman.

Mildmay Nurses and Hospital, Stoke Newington.

James E. Mathieson, honorary superintendent and treasurer; J. F. Woodruffe, M.D., medical superintendent; Louisa Maxwell, matron.

Nursing Sisters' Institution, Devonshire-square, E.C.

G. M. Walrond and E. Still, members of committee; E. Rashdall, honorary secretary; A. B. Keeley, lady superintendent of nurses.

Middlesex Hospital.

A. Pearce Gould, M.S., F.R.C.S., assistant surgeon and lecturer to nurses.

Queen Charlotte's Hospital.

M. A. Phillips, matron and instructor of nurses.

Royal Chest Hospital, City-road.

M. L. Smith, matron.

Royal Free Hospital.

E. F. North, chairman; Samuel West, M.D., senior physician, assistant physician to St. Bartholomew's Hospital; A. Boyce Barrow, F.R.C.S., surgeon and lecturer to nursing staff.

Seamen's Hospital, Greenwich.

W. Johnson Smith, principal medical officer and lecturer to nurses; A. G. Cooke, matron.

Smallpox Hospital, Highgate.

S. Crockett, matron.

St. Pancras Infirmary.

Wm. Adams, F.R.C.S., J.P., chairman; C. Macann, medical superintendent; Ellen Jean Moir, matron.

Sydenham Hospital for Sick Children.

Edith Elmes, president; Georgiana Chapman, treasurer; E. Meadows, matron.

Temperance Hospital.

W. J. Collins, M.D., M.S., medical officer.

District Nursing.

Chelsea and Pimlico.

A. Hughes, superintendent.

East London Nursing Society.

Percy Wigram, treasurer; M. Curshaw Corner, medical officer; Louise Taylor, senior matron.

Metropolitan and National.

S. de Lüttichen, senior superintendent.

Paddington and Marylebone.

K. Persie, superintendent.

Medical Homes.

Beresford House, Portland-place.

Judith L. Stubbs, lady superintendent.

Devonshire-street, Portland-place, Nottingham-place, and Sevenoaks.

Catherine A. Veare, lady superintendent.

Gloucester-place, Portman-square.

Ellen Monk, lady superintendent.

Mansfield-street, Portland-place.

Bessie Boswell, lady superintendent.

Moutague-place, Russell-square.

Bertha B. Moir, lady superintendent.

Upper Woburn-place.

Mary Cassal, lady superintendent.

Weymouth-street.

Mary Pollock, lady superintendent.

THIRD LIST.—PROVINCIAL HOSPITALS AND NURSING INSTITUTIONS.

- Bangor Nursing Institution.
Mabel N. Scate, lady superintendent.
- Barrow-in-Furness, North Lonsdale Hospital.
Alicia Race, matron.
- Birmingham : Queen's Hospital.
Mary Seymour Roberts, superintendent of nurses.
- Birmingham and Midland Ear and Throat Hospital.
S. H. Thompson, chairman ; Chas. Warden, M.D., senior medical officer ;
Geo. Panton, F.R.S.E., hon. secretary.
- Bolton Infirmary.
E. C. Kingsford, senior house surgeon and lecturer to probationary nurses ;
Noemie Armit, matron.
- Burslem : Haywood Hospital.
J. W. Powell, clerk to governors ; C. Moore, matron.
- Carlisle Infirmary.
Carl A. Allen, matron.
- Cheltenham General Hospital.
C. E. Kroker King, treasurer ; E. T. Wilson, physician ; K. E. Tatham,
matron.
- Darlington Hospital.
Frances A. Hunt, lady superintendent.
- Dudley ; The Guest Hospital.
M. A. Jennings, matron.
- East Kent Nursing Institution.
T. Whitehead Reid, surgeon to Canterbury Hospital, and lecturer to nurses.
- Enfield Cottage Hospital.
Elizabeth Mary Washten, matron ; Frances Manning, sister.
- Essex and Colchester Hospital.
Horace E. Green, chairman ; Alexander Wallace, M.D., physician ; Emma
Appleton, matron.
- Fairford Cottage Hospital.
Daniel Isles, surgeon.
- Frome Cottage Hospital.
M. Maria Olive, matron.
- Glamorganshire and Monmouthshire Infirmary, Cardiff.
Franklen G. Evans, M.D., chairman ; A. Sheen, M.D., hon. surgeon to infirmary
and lecturer to nursing staff ; Jno. Thomas, M.R.C.S., &c., house surgeon to
Cardiff Infirmary and lecturer to nursing staff ; A. M. Francis, matron and
superintendent of nurses.
- Gloucester County Hospital.
T. S. Ellis, consulting surgeon ; Raynor W. Batten, senior physician ;
H. E. Waddy, senior surgeon ; Oscar Clark, physician ; E. Yates, matron.
- Hammerwick Cottage Hospital.
Arthur Sopwith, chairman ; Harriet H. Pidgeon, matron.
- Harrogate Cottage Hospital.
N. Williams, F. N. Ozanne, and A. F. Dimmock, hon. medical officers ;
A. E. Jones, matron.
- Hemel Hempstead Hospital.
Jane Aylin, matron.
- Hull Royal Infirmary.
E. H. Bodger, lady superintendent.
- Kendal Memorial Hospital.
F. Warren, matron.
- Isle of Man General Hospital.
S. E. Ransford, matron.
- Leeds General Infirmary.
R. Benson Jowitt, treasurer and chairman ; A. F. McGill, F.R.C.S., hon.
surgeon ; H. Littlewood, resident medical officer and instructor of nurses ;
L. M. Gordon, lady superintendent of nurses ; E. Fisher, assistant
superintendent of nurses.

- Leeds Trained Nurses' Institution.
Frederick Baines, chairman ; M. J. Dawson, superintendent of nurses.
- Lewes : Victoria Hospital.
F. M. Gravely, matron.
- Liverpool Northern Hospital.
E. H. Dickenson and James Barr, physicians ; Chauncey Puzey and Damar Harrison, surgeons ; J. B. Anderson, matron.
- Liverpool Royal Infirmary.
H. B. Gilmour, chairman.
- Liverpool Training School and Home for Nurses.
William Rathbone, president ; Charles Langton, chairman of committee ; Elizabeth Staines, superintendent of training school.
- Liverpool Workhouse Hospital.
J. W. Cropper, chairman of nursing committee ; R. Robertson and William Alexander, medical officers ; Margaret Stewart, superintendent of nurses.
- Liverpool Royal Southern Hospital.
George H. Horsfall, president ; John Cameron, M.D., chairman of medical board ; M. Gordon, matron.
- Llandrindod Wells Cottage Hospital.
E. Jeffrey, matron.
- Macclesfield General Hospital.
Thomas Lockett, chairman ; H. M. Fernie, senior medical officer and lecturer to nursing staff ; Sarah A. Yoke, lady superintendent of nurses.
- Manchester : Crumpsall Infirmary.
E. S. Hanan, lady superintendent.
- Manchester Nursing Institution.
Louisa Potter, hon. secretary ; M. Nicholls, lady superintendent.
- Middlesborough Fever Hospital.
J. A. Malcolmson, M.D. ; E. W. Goring, matron.
- Moreton Cottage Hospital.
Leon R. Yelp, J. Moore, S. Hurlbutt, and R. E. B. Yelp, medical officers ; R. Home, matron.
- Newcastle Nursing Institution.
Fanny Forrest, lady superintendent.
- Newcastle on-Tyne : Nursing Home and Training School.
Fred. Page, surgeon, Royal Infirmary ; Esther Emery, matron.
- North Hants and South Beds Infirmary.
Sophia Sawyer, matron.
- Oswestry (Salop) Cottage Hospital.
H. Williams, matron.
- Pembroke Dock Infirmary.
Morgan Saurin, chairman ; Henry Leach, member of committee ; W. Jones, hon. secretary.
- Portsmouth Royal Hospital.
A. Tillet, matron and superintendent of nurses.
- Reigate and Redhill Cottage Hospital.
E. F. Stanton, lady superintendent.
- Royal Berks Hospital.
A. Baxter, matron and superintendent of nurses.
- Royal Infirmary, Stirling.
N. Falconer, matron.
- Sevenoaks Hospital for Hip Disease.
Emily Jackson, nursing superintendent ; Mary Rose, secretary and nurse.
- Shaftesbury Hospital.
Louisa Waud, matron.
- Sheffield : The Jessop Hospital.
Rhoda Ashlerr, matron.
- Southport Infirmary.
J. C. Barrett, chairman ; W. Walker, vice-chairman ; Mary Lambert, matron
Spalding :

Spalding: The Johnson Hospital.

Martin Perry, M.D., senior physician; Jane Spragge, matron.

Stratford-on-Avon Nursing Home and Children's Hospital.

Chas. G. Sepp, chairman; T. W. Norbury, surgeon; Emily Minet, superintendent of nurses.

Tenbury Hospital.

T. Glyscouth Smith, vicar of Tenbury, chairman; W. Berkeley and Chas. E. Ross, medical officers; E. Mary Ferry, matron.

Victoria Home.

E. T. Fenn and R. Piggott, lady superintendent.

Wallamy Cottage Hospital.

W. Bell, hon. surgeon; A. Sarvin, matron.

West Norfolk and Lynn Hospital.

E. Brightman, matron.

Winchester: Royal Hants County Hospital.

R. Jones Bateman, chairman; B. N. Earle, M.D.; W. M. Harman, M.D., F.R.C.S.; T. C. Langdon, F.R.C.S., resident medical officer, and lecturer to and examiner of nurses; W. P. Terry, major, secretary; E. Suckling, matron, and superintendent of nurses.

Worcester Infirmary.

W. Strange, M.D., senior physician; Horace Swete, M.D., hon. physician, and Rory Fletcher, house surgeon, instructor of nurses; Jane Maclelland, matron; Emily Bartlett, assistant matron.

Worcester: St. John's House Nursing Institution.

Edmund A. H. Lechmere, secretary-general, Order of St. John of Jerusalem; John Gott, D.D., Dean of Worcester, and chairman of committee; the Lord Bishop of Ely, and Florence Compton, members of committee; G. W. Crowe, M.D., and Tom Bates, M.R.C.S., members of the Council of the Order of St. John; Janet Topping, lady superintendent of nurses.

*Some Scotch and Irish Hospitals and Institutions.***Banff: Chalmer's Hospital.**

Robert Duncan, treasurer; W. Ferguson, visiting surgeon; A. S. Ingrew, lecturer to nurses; E. M. C. Gray, matron.

City of Dublin Hospital.

Susan Beresford, lady superintendent.

City of Dublin Hospital—Nursing Institution.

Gerald Fitzgibbon, Lord Justice of Appeal; J. D. Pratt, F.R.C.S., honorary secretary; E. L. Fitzgerald, M.D., and R. W. Harley, directors; Annie Fitzgerald, manager.

Edinburgh Royal Infirmary.

Thomas Annandale, regius professor of clinical surgery; John Duncan, lecturer on clinical surgery, senior ordinary surgeon; J. O. Affleck, M.D., lecturer on clinical medicine and ordinary physician; J. Halliday Croom, M.D., lecturer on diseases of women, and ordinary physician; A. G. Miller, ordinary surgeon; John Chiene, professor of surgery; P. H. Maclaren, ordinary surgeon; Andrew Smart, M.D., senior assistant physician; Alexander James, M.D., assistant physician; Charles W. Cathcart, assistant surgeon; F. E. Spencer, superintendent of nurses; Annie Grant, assistant superintendent of nurses and teacher of probationers; C. H. Fasson, D.S.G., superintendent.

Glasgow Fever Hospital.

Amelia Sinclair, matron.

Glasgow Royal Infirmary.

Hugh Brown, chairman; M. Thomas, M.D., medical superintendent; Annie Eleanor Wood, matron.

Glasgow Western Infirmary.

William Kerr, chairman; James Finlayson, M.D., physician, formerly lecturer to nurses; Hugh Cameron, surgeon; John Alexander and David Newman, lecturers to nurses; A. W. Russell, M.D., medical superintendent; Elizabeth Clyde, matron.

— II. —

To the Right Honourable the President of the Board of Trade.

The humble Petition of the undersigned Physicians and Surgeons, who are directly concerned in, or have given large attention to, the Education of Nurses in the Nurse-Training Schools of Great Britain,

Showeth, as follows :

It has recently come to our knowledge that a self-constituted body of ladies and gentlemen, styling itself the British Nurses' Association, has applied to the Board of Trade for a license under the 23rd section of the Companies' Act of 1867, and that under Clause 8 of its Memorandum of Association it proposes—

“To form, control, and carry on,—

- (1.) A register of trained nurses.
- (2.) A register of certificated midwives, and to determine from time to time what tests shall be specified by candidates for registration, as evidence that they possess skill and knowledge in their profession ; ”

or, in other words, that the British Nurses' Association aims at exercising, under cover of a license from the Board of Trade, the power of granting certificates of competency in nursing, and so of controlling the education of nurses, a power such as has hitherto only been conferred on really representative bodies, by Royal Charter, or by special Act of Parliament, and is not within the scope of the Companies' Acts.

Against this scheme of registration we desire to protest on the following grounds :

1. That a self-appointed association, such as the British Nurses' Association, is not a fitting or competent authority to determine, in the interests either of the nursing profession or of the general public, who should be put on the register, or who should be excluded from it.

2. That no written or oral examination of nurses in the technical details of their duties can possibly lead to any approximate estimate of their real fitness and competence as nurses, and least of all an examination conducted apart from hospitals, and by persons not specially qualified ; for a nurse's qualifications depend mainly on practical experience, or natural gifts and moral qualities, which a mere examination, however well conducted, can never adequately test.

3. That the effect of the proposed register of nurses, by granting certificates of competency professing to be authoritative, while being necessarily imperfect and untrustworthy, would be to mislead instead of guiding both the public and medical practitioners, and to lower the standard of nursing by placing numbers of insufficiently trained and inferior nurses on the same level as their highly-trained and thoroughly competent sisters.

4. That the authorities of the nurse-training schools are alone in a position, from their experience and special knowledge, and from their intimate acquaintance with the individual nurses who have been trained under their care, to certify who are fit and properly-trained nurses, and that the certificates of efficiency given by them are sufficient, and are infinitely more valuable and trustworthy than any certificates otherwise acquired could possibly be.

5. That no association, having for its object to test and guarantee by certificate the educational and other qualifications of its members, has ever yet had accorded to it such powers and privileges as the British Nurses' Association aims at acquiring, until it has been shown by actual results that its action has been beneficial to the public and to the body it purports to represent, and that it has the support of the leading members, as well as of the large majority of the rank and file, of that body. The large nurse-training schools of Great Britain, including the Nightingale School, to whose labours the vast improvement which has of late years taken place in the education and status of the nurses is wholly attributable, are, almost without exception, unrepresented in the British Nurses' Association and are opposed to its registration scheme.

MISS NIGHTINGALE AND THE REGISTRATION OF NURSES.

AT a meeting of the representatives of hospitals and training schools recently held at St. Thomas's Hospital, Mr. Rathbone, M.P., speaking on behalf of the Nightingale Training School for Nurses, against the recognition by the Board of Trade of the establishment of a registry of trained nurses by the Royal British Nurses' Association, said :—

"I regret extremely that we are deprived to-day of the presence of Mr. Bonham-Carter, who has been, from soon after its foundation, the Secretary of the Nightingale School, the parent of so many of the nursing training schools throughout the kingdom, and of the reform of hospital nursing. It is at his request, and in accordance with the wish of Miss Nightingale, that I attend here to-day, as one of the Executive Committee of the Training School of the Nightingale Fund, to say in Miss Nightingale's own words, that she does 'not think that a system of registration such as that proposed, is for the benefit of the nurses.' It would be most unfortunate if personal antagonisms and rival claims should be mixed up with the vital question as to a system of registration, such as that adopted by the British Nurses' Association, being for the benefit either of the nurses themselves, or of the public. There seems an almost complete consensus of opinion on the part of all those who have done most of the training and improvement of nurses during the last 30 years, that the scheme of a general register would tend to confuse and mislead the public, and, so far from promoting the improvement of nursing in this kingdom, that it would tend to check its further progress; nay, more, that it would tend seriously to lower the standard which we have, to some extent, attained, and to stereotype a standard of nursing dangerously low for both rich and poor. Such results could not be otherwise than injurious to the interests of both nurses and the public. It is certain that the plan proposed will recommend to the confidence of the public a great number of utterly untrustworthy, incompetent nurses, and it will be practically very difficult to take their names off the register, though they may have proved themselves unworthy of such confidence. If it be asked, what alternative have we to propose in order to protect the public from incompetent nurses, and guarantee to them efficient nurses, I should reply, that it would require the most careful consideration, and the combined wisdom of those who have been so long at work in raising the standard of nursing and the supply to the public of good nurses, to contrive and organise a safe alternative. It is only about 30 years since the public, or even the hospital authorities, became alive to the necessity of thoroughly trained nurses. The number of good, well-trained nurses is increasing rapidly, but they are still very few, in comparison to the large majority who are imperfectly trained or incompetent. As Miss Nightingale has said, '20 or 30 years hence, when so much progress has been made, that our present time is looked back upon as the time of bad nursing, this registration might do.' In a recent letter to me on the subject, Miss Nightingale says, 'You cannot select the good from the inferior nurses by any test or system of examination. But most of all, and first of all, must their moral qualifications be made to stand pre-eminent in estimation. All this can only be secured by the current supervision, tests, or examinations, which they receive in their training school or hospital, not by any examination from 'a foreign body' like that proposed by the British Nurses' Association. Indeed, those who came off best in such would probably be the ready and forward, not the best nurses.' It is not only that those experienced in nursing work consider the proposal dangerous, but I believe it is without precedent to give public official recognition to a body like this, who have no successful experience to produce against the protest of the great body of those who have been most instrumental in raising the standard of nursing and improving and elevating the position of nurses.

APPENDIX N.

PAPER handed in by Mr. *Henry C. Burdett*.

ROYAL NATIONAL PENSION FUND FOR NURSES.

FEDERATION FORM FOR HOSPITALS AND INSTITUTIONS.

The _____ in Agreement with the ROYAL NATIONAL
PENSION FUND FOR NURSES.

1. THE committee of the _____ have decided to federate with the Royal National Pension Fund for Nurses, to enable them to assist the matron, superintendent of nurses, and all sisters, staff nurses, or private nurses of the hospital, under 40 years of age, who may desire to join the Royal National Pension Fund for Nurses, by paying one-half of their annual premiums while they remain in the service of the hospital, subject to the rules given hereafter.

2. The committee hereby agree that the hospital shall, in its own name, or in the name of the treasurer of the hospital for the time being, take out with the Royal National Pension Fund a policy for a pension of 10*l.* on the life of any matron, sister, or nurse of this hospital under 40 years of age, who, in her own name, takes out a policy with the pension fund for a pension of not less than 10 *l.*, making in all a pension of 20 *l.* per annum. [As to further additions, see Rule No. 4 on page 09.]

3. The committee agree to continue to pay premiums on the hospital pension policies and the sick assurance policies only so long as the nurse remains in the service of the hospital.

4. The committee are prepared to consider what help shall be given to members of the nursing staff over forty years of age, with the view of making such arrangements as may seem best in each individual case.

5. Nurses withdrawing the premiums paid in under their own policies, while in the service of the hospital, or within 12 months after leaving the hospital, will forfeit all right to the policies taken out by the hospital on their behalf.

6. After a nurse shall have been in the service of the hospital for five years, whether as probationer, nurse, sister, or otherwise, the benefit of the policy effected by the hospital on her behalf shall, if she has complied with the rules herein laid down, be considered as belonging to her (or in case of her death, to her legal representatives) and will, in accordance with the preceding rule, be formally assigned to her 12 months after leaving the hospital.

7. It is understood that should a nurse contribute any premium on behalf of the hospital policy during the 12 months after leaving the hospital, and still not become entitled to the full benefit of the hospital policy, the committee undertake to return to the nurse on her demand, the premiums so paid.

8. Nevertheless should a nurse leave the service of the hospital before the expiration of five years, the committee may, in their absolute discretion, assign the policy to the nurse, or otherwise make such *ex gratia* allowance therefrom as in their discretion they shall think fit.

9. All premiums shall be paid monthly or quarterly through the committee of the hospital, or their appointed officer for such purpose, and a nurse's acceptance of the plan of federation shall be sufficient authority for deduction to be made from her salary for the payment of the premium on her policy.

10. The committee reserve power to alter both the amount of their contributions and the conditions thereof if in their opinion it should be necessary to do so hereafter.

11. One of the conditions endorsed on the hospital policy is, that in case a nurse forfeits her right to the policy, it shall be surrendered to the Pension Fund as trustee, and all premiums which shall have been paid thereunder shall, with interest thereon, from the date of deposit, be placed to the credit of the separate trust fund of the hospital or institution federating with the Pension Fund, to accumulate at interest and to be disposed of by the committee of the hospital or institution in accordance with the society's regulations governing such trust funds.

12. These regulations are as follows:—

1. All moneys paid into the Pension Fund by any hospital or institution, together with all interest thereon, are to be devoted for the sole benefit of the members of the paid staff of such hospital or institution, as the committee thereof shall by resolution from time to time determine.

2. The benefits referred to in the foregoing rule are to be dispensed through the Pension Fund in accordance with its objects as defined in the memorandum of association. These objects include pensions, sick pay, *ex gratia* payments, gratuities, and so forth.

13. In order to assign the policy to the nominee (*i.e.* the nurse), the nominor (*i.e.* the hospital's representative) should write on the back thereof:—"All the interest in the within written policy is now vested in the nominee." This endorsement must be signed and dated by the nominor; and the

the nominee must take care to have the policy delivered to her and to register the endorsement with the Pension Fund.

The foregoing scheme is to be read in conjunction with the following rules :—

1. For the tables of rates and the conditions of the Pension Fund nurses are referred to the prospectus of that society ; and it must be understood that all rules made by the committees of hospitals or institutions federating, must be subject to the rules and conditions that from time to time govern the Pension Fund.

2. Both the hospital's and the nurses' policies must be taken out on the "returnable premium system," and, under Table B., payable at 50, 55, or 60. If the latter age be adopted the committee will, in addition, contribute on behalf of the nurse the premium for sick pay assurance of 10 s. per week.

3. Probationers are invited to join the Pension Fund on their own account as soon as possible, for a pension policy of 10 l. On their appointment on the permanent staff, the hospital policy will, in accordance with these conditions, be taken out on their behalf.

4. All pension policies taken out (a) by the nurse on her own behalf or (b) by the committee of the hospital on the nurse's behalf, will, subject to the rules, participate in the profits of the society and in the donation bonus fund.

5. Nurses desiring to take out additional policies on their own account, for either pension or sick pay, are invited to send in additional forms of proposal to the Pension Fund.

SPECIAL NOTE.

Although this scheme of federation mainly provides for the members of the nursing staff of a hospital or kindred institution, it must be distinctly understood that all officials, other than nurses, employed in the work of such hospital or institution are eligible to join the Pension Fund on the half premium principle, though not to participate in the benefits of the donation bonus fund, but only in the profit bonuses.

The within proposals were agreed to at a meeting of the Committee of the
_____ on the _____ day of _____
189__

Signed on behalf of the Committee,

Chairman.

APPENDIX P.

PAPER handed in by Mr. *Henry C. Burdett*.

NURSES' FOOD, WORK, AND HOURS OF RECREATION.

MEMORANDUM by Mr. *Henry C. Burdett*.

I AM old enough to remember hospitals and nurses as they were when Miss Nightingale first commenced her crusade of charity and reform. Looking back only a quarter of a century, however, those of us who know the state of affairs then and now, may thank God and take courage. In 1865 our hospitals left very much to be desired. The nursing, such as it was, presented features which must have proved inimical to the patients in many ways. The nurses of those days were, for the most part, uneducated and untrained. The moral tone was low, or often wanting altogether, the accommodation for the nursing staff in many cases was shameful and nearly always insanitary, whilst the food was inadequate, of poor quality, and badly served. When I first took responsible charge of a large hospital in 1868, most of the nurses slept in the basement in damp and ill-ventilated rooms, some with brick or stone floors, and in all the light was very defective. These rooms were in fact cellar-dwellings. The day nurses were nearly all old women, of the charwoman class, and there was no regular staff of night nurses at all. A very large proportion of them could not write their names, and had to make a cross when they received their wages. The night nursing was usually done in those days by old women, who consented to sleep in the hospital wards instead of in their beds at home, for which service they received 1s. 6d. a night, or about 10s. a week. Nearly everywhere a similar state of affairs prevailed, and in one of the largest London hospitals the nurses were placed in cupboards or dens on the staircases, where neither quiet, privacy, proper air, nor light could be provided. So recently as 1871 a leading hospital authority defended the system which made each nurse scrub the floors of her wards, on the ground that, if the scrubbing was to be discontinued, there would really be little or nothing for nurses to do. This fact will more forcibly illustrate the then condition of matters in regard to the nursing than anything which can be written.

THE GROWTH OF NURSING.

In 1868 it was asserted that our attempt to introduce young and intelligent women as probationer nurses into a large provincial hospital was foredoomed to failure on moral, social, and physical grounds. Morally, because of the temptations of a clinical hospital, with its host of medical students; socially, because a better class of women would regard many of the duties as menial, and the position of a nurse as beneath them; and physically, seeing that the physique of the higher grades of young women would not stand the strain incidental to the proper discharge of a nurse's duties in a hospital. It is now, no doubt, needless to say that the first objection was never justified, and that although the last two interfered with the development of the new system during the first 10 years, since that time the number who have applied to be admitted as probationers has so far exceeded the demand for their services that the strict medical examination now enforced by most training schools reduces the physical objection to a minimum. For years the proportion of applicants who failed after a preliminary trial was enormous, and it is surprisingly large still. At the outset, from some records I kept at the time, I found that out of 100 women who applied to be admitted as probationers, only four became trained and certificated nurses. Mrs. Wardroper used to say that that the Nightingale School from 30 to 40 out of every 100 probationers would, from one cause or another, fall out of the ranks during the period of training. It is desirable to remember these facts, as they illustrate how many who desire to leave home from one cause or another (very many young women regard nursing from a distance as an easy and pleasant pastime), are in practice utterly unsuited for the calling of a nurse. Few callings are more honourable, but I believe none to be so exacting and onerous.

MISS NIGHTINGALE'S OPINION.

Miss Nightingale is universally recognised as the queen of the nursing world. She is the one woman of this century who has effected a social revolution in every civilised country throughout the world without bloodshed or commotion. Indeed, the quietness of her methods is apt to make us overlook the radical character of the reforms resulting from her example, life, and work. It is greatly to Miss Nightingale's and to Mrs. Wardroper's credit that the system of nursing known as the Nightingale, wherever it has been introduced, has never been followed by a row or any public protest of any kind. Always practical, patient, thorough, and kindly, seeking no success for herself, but only the enforcement of sound principles by the introduction of a methodical system of nursing the sick, Miss Nightingale and her lamented sister, Lady Verney, have won for themselves immortal fame and gratitude. What, then, is Miss Nightingale's judgment upon the charges which have recently been made against the London Hospital with regard to the food, work, and hours of recreation of its members? She, like many of us, has procured and read the evidence given before the Lords' Committee, as anybody who was interested could and can do for a small payment, and has caused it to be publicly stated that "Miss Nightingale has satisfied herself that the charges made are without foundation." Miss Nightingale added that "no lady stands higher in nursing circles in England," or in the hospital world, "than Miss Lückes," the able and devoted matron of the great London Hospital.

GENERAL

GENERAL CONSIDERATIONS.

Before giving the facts which justify Miss Nightingale in her opinion it may be wise to state a few general considerations which must be borne in mind. First, then, although the House of Lords' Committee have not expressed any opinion, I feel called upon to say that the method of procedure so far adopted by that body is not calculated to bring out the true facts. In the first place, it must be patent to everybody that, if the discharged servants and nurses of every metropolitan and provincial hospital and poor-law institution are to be permitted to attend before the Lords' Committee and to air their grievances, the work of this committee will not be ended in our generation. I venture to think, and to say, that the only effectual way of sifting charges of this kind to the bottom is to request the complainants to formulate their grievances in writing, these should then be reduced to order under the authority of the Lords' Committee, and a copy of them sent to the authorities of the institutions immediately concerned, with a request that they will give their answer in writing also. All the documents on both sides should be verified by statutory declaration. With the two statements before them, the Lords' Committee could decide on the facts, if any, and what further steps should be taken, and how far, if at all, evidence should be admitted on the points at issue. In this way much valuable time would be saved, none but carefully prepared statements would be forthcoming, and so the Committee would be spared the oceans of voluble nonsense which they will otherwise have to face.

So far as the public and the medical profession are concerned, they have come to recognise, I believe, that whatever is good and advantageous in our present nursing arrangements is due to the wisdom and liberality of the authorities of our nurse training schools and hospitals and to their officers. Who is it that has made it possible for the public to have trained nurses at all? Who have raised the status of the nurses' calling, and by wise regulations and thoughtful care made nursing what it is to-day? Who are the nurses' best friends, to whom must the medical man and the head of a family look when it is essential to have a specially qualified nurse for a patient's case? Surely the nurse training schools. Hence the existence and efficiency of the nurse training schools are essential to the safety and welfare of the nurses and also of the public. The matron of a training school knows exactly where a particular pupil excels and where she is wanting. And as the duties of a nurse consist in tending the sick, as opposed to those of the doctor, which involve the treatment and the prescribing of medicine, so it is essential to the comfort, nay, sometimes to the very recovery of a patient that the nurse selected should possess the qualities and capacity for tending the case in the best and special way the doctor requires. The nurse is sure of better and juster treatment at the hands of her *Alma Mater* than from others, because her school authorities know all about her, and it is to their interest, as well as to her own, that she should always give satisfaction, and so achieve the maximum of success. Neither the medical profession, the nurses, nor the public can do without the nurse training school, and it behoves us to unite these four interests in every possible way. A very great responsibility therefore rests upon the nurse training school authorities, and I will now proceed to consider how far their action has justified Miss Nightingale in her verdict that the recent charges are without foundation. I have divided my subject into three heads; and purpose to consider each in turn. To enable me to do justice to the subject, I placed myself in communication with all the great hospitals (metropolitan and provincial), and some of the representative poor-law infirmaries, and I am deeply indebted to the matrons and secretaries who have so kindly supplied me with the facts I am about to deal with.

NURSES' FOOD.

The statement has been made, and widely circulated, that the food supplied to nurses, and especially to night nurses, is insufficient and unsuitable. The grounds for this assertion are, that on one night in a particular hospital the night nurses on duty had sardines and marmalade for breakfast before going on duty, and pickled mackerel with bread and butter to sustain them during the night. It is interesting in this connection to point out that when Miss Twining read a paper before this Association in May 1885, she suggested a reduction in the amount of meat, and the substitution of farinaceous food and soup in lieu of the best joints, poultry, &c. Here, therefore, is an amazing conflict of opinion, with the notable circumstances that the trained and experienced authority, Miss Twining, demands less meat, whilst the new-born enthusiasm of the amateur and inexperienced critic declares such food to be insufficient and unsuitable, and so cries out for meat, more meat. Let us see what food is, as a matter of fact, supplied to the day and night nurses of the hospitals of this country. I have tables here which give the details of the diets supplied to nurses at nearly all the chief hospitals, and it is entirely at the service of the meeting. They show that the food is not only not unsuitable or insufficient, but that it is varied and bountiful. To bring this out clearly, I will summarise the returns and give a list of the articles on the diet tables for day and night nurses at every meal. Taking the day nurses first, we have—

Day Nurses' Menu.

For Breakfast.—Tea, coffee, cocoatina, bread and butter, bacon and eggs (in one case new-laid eggs are specially imported from Lincolnshire), ham or tongue, haddocks, sardines, kippers, potted lobster, marmalade, potted meat, pickled pork, sausage-rolls, cold bacon, and broiled bacon.

Lunch.—Beer, coffee or milk, cheese, pudding, bread and butter, treacle, odds and ends.

Dinner.—Soup, meat, hot dishes (two courses), stews, beef-steak pie, fish, haricots, rabbits, geese, chops, made dishes, cold joints (in summer with salad), occasionally poultry and game; vegetables (two kinds), puddings, stewed fruits, beer, porter, milk, and cheese.

Tea.—Bread and butter, cake, jam, marmalade, treacle, sometimes salad.

Supper.—Soup, meat (cold or hot), puddings, milk pudding, salad, bread and cheese, hash with vegetables, sausage or fish pie, mince, fried bread and bacon, scones and cheese, porridge, made-up dishes, curries, pickles with cold meat, coffee, beer, porter, milk, bread.

Night Nurses' Menu.

Supper or Breakfast.—Soup, meat, eggs, fried bacon, mince and mashed potatoes, stew, sardines, cold bacon, broiled bacon, fish, puddings, marmalade, bread and butter, tea, coffee, milk, and beer.

Dinner.—Hot joints, cold joints, or made dishes, fish, steaks, chops, cold joints (in summer with salad), vegetables, puddings or tarts, bread and butter, cheese, beer, porter, coffee, or milk.

Tea or Luncheon.—Bread and butter, cheese, cake, jam, treacle, occasionally tea, ale, milk.

Night Meals taken in Ward Kitchens.—Tea, coffee, or cocoa, fish, eggs, meat, bacon, sausages, kippered herrings, German sausage, corned beef, boiled bacon, meat pies, curries, cutlets, sardines, bread and butter, vegetables, puddings, cold meat, jam.

Of course these menus include all the items on the diet tables of the hospitals, but if the various dishes are given in turn, surely there must be enough variety to satisfy the most exacting appetite. The regard which is shown for the varied tastes of the nurses seems proved by such notes as the following: "Meat for nurses in diphtheria wards"; "Variety studied as much as possible"; "Have very few routine dishes, and vary puddings as much as possible." Even the ancient tradition concerning Friday is remembered, for I find the note from one hospital runs: "Friday, hot fish and cold meat"; and again, that from another, "Fish one end of table on Friday, and meat at the other." The preponderance of fish on Fridays in a hospital like the London, which numbers many Roman Catholics on its staff, is solely due to consideration for the nurses. I have only one other remark to make on this head. It is proverbial that a bountiful Creator sends us food, and someone else, who shall be nameless, sends us cooks. Now, although I am convinced, from personal observation, that the cooking has everywhere vastly improved, owing, in the case of the larger hospitals, to the establishment of a separate kitchen and staff for the nurses, still, no doubt, the best of cooks will everywhere find a hearty welcome. An obliging correspondent, an able hospital secretary, suggests, therefore, that, as it is difficult to get a good cook, it might be well if some of the thousands of applicants who aspire to be nurses would turn their attention to cooking, and then everybody ought to be pleased and thankful.

Speaking generally, I should venture to state that at the larger hospitals throughout the country, the food arrangements for nurses are decidedly good and sufficient. No doubt, individual governors might, with advantage, call at the hospitals they may support, any day about 12.45, the hour at which the nurses' dinners are served. They would, I know, be welcomed by the matron, who would show them into the nurses' dining room, and so they would be able to judge for themselves. Hospital committees would be well advised to take care to remember the importance to be attached to a knowledge of housekeeping on the part of the matron when making such appointments. It has not been possible for me to go into the food supply of nurses at the smaller hospitals, some of which it is declared have not yet displayed sufficient interest in this important question. Be this as it may, I hope one result of this paper may be that every hospital committee and matron, however small the institution, will look into this matter with a view to remedying any defects, should such be found to exist.

HOURS OF WORK.

In considering this point we must remember that nurses are not nearly so hard worked nowadays as they were formerly. There must now be at least two, and sometimes even three nurses on the permanent staff for every one formerly employed. Then the work used to be far harder and rougher in every way. In order to understand the labour demanded of a nurse, it is necessary to remember that there are hospitals and hospitals. In non-clinical hospitals, *i.e.*, hospitals not connected with medical schools, the work is usually much lighter than in others. Again, in clinical hospitals the students do much of the work which devolves upon the nurses at the smaller institutions. I am by no means certain that some non-clinical hospitals do not turn out the best nurses in consequence. Then, in the provincial hospitals it is usual for the honorary medical staff to visit the wards in the early part of the day, the consequence being that in the afternoon the work is light, and a nurse, as a result, has much more time to herself. In the large London hospitals, on the contrary, the honorary medical staff visit the wards in the afternoons, a practice which greatly increases the strain on the nurses employed. These and many other considerations must be borne in mind, as it is impossible to deal with this question as affecting all hospitals alike, or to compare any two hospitals without a full knowledge of the special features of each. I should have been in a difficulty on this point, as I have purposely avoided mentioning any particular hospital, had it not been for the fact that Miss Isla Stewart has written an excellent article in "Murray's Magazine," for August 1890—which everyone interested in these questions ought to read—in which she gives full particulars concerning the hours of work at St. Bartholomew's Hospital. She states the facts to be as follows:—

"A DAY'S WORK AT ST. BARTHOLOMEW'S HOSPITAL.

"They (the nurses) go on duty at 7 a.m., and for the next three hours they really work hard, making beds, scrubbing lockers, sweeping, polishing, dusting, and doing the hundred-and-one things that produce that air of comfort and cleanliness so characteristic of a well-kept hospital. After 10 o'clock there is a considerable pause. The patients having been well attended to, and having had

had their lunch, are rarely in want of anything, and the nurses now have leisure to do a little sewing, or other ward work. The house physician, or surgeon, makes his round without creating much bustle. At noon the nurses go to dinner, and at 12.30 the patients' dinner is usually served. Then the ward is tidied up and made ready for the visiting physician or surgeon, who always produces a pleasurable excitement as he goes from bed to bed, followed by his class of students. Tea for the patients is served at 4 p.m., and for the nurses at 4.30 p.m. Then follows a very quiet time till 6 p.m., when a sort of miniature repetition of the morning's work is done. All being finished at 8 p.m., the gas is turned down and the nurses wait in quietness until 9 o'clock, when, on the arrival of the night nurses, they go off to supper. I do not say that nurses have never more to do than this. I know there are times when they work hard all day, and have hardly a moment to sit down; but I know also there are times when they have not even so much to do as I have stated; but as the exigencies of a ward vary very much, and as we can never hope to reduce human ailments and wants to a machine-like regularity, the evils arising from this variability must be endured. Looked at in this light, the 14 hours' work does not seem such a hardship, and there is apparently no help for it at present, as I doubt if any of the authorities in hospitals would feel justified in incurring the enormous expense which would necessarily be entailed by the increase of the nursing staff sufficiently to allow of shorter hours."

Miss Stewart tells us in another place that probationers at Bart.'s during their three years' training are off duty each month, during the first week on three days only, viz., twice for two and three-quarter hours, and once for three hours. During the second week once for two and three-quarter hours, and once for six and three-quarter hours. In the third week twice for two hours and three-quarters, and once for three hours, and in the fourth week once for two and three-quarter hours, and once for thirteen and three quarter hours. They also are allowed three hours off duty on Sundays.

It will thus be seen that at St. Bartholomew's Hospital on three days in each week, and sometimes for four days in each week, the nurses are kept on duty for 14 hours in each day, with no intermission, except at meal times, and there can be no question that Miss Stewart is right in stating by implication that the nurses have reason to grumble at the shortness of their off duty time.

It will thus be seen that during the four weeks, representing 28 days, a Bart.'s nurse is on duty 334½ hours, or nearly 12 hours per diem. That is to say, that after deducting the time allowed for meals, and the hours off duty, a Bart.'s nurse is kept continuously at work for nearly 12 hours on every day throughout the year, with the exception of 14 days, when she is away on her annual holiday.

Every hospital nurse ought to have two hours off duty every day at the very least, and in addition to this she should have one day and night off (*i.e.*, a clear 24 hours) per month. In the case of probationers, I think it would be wise to make arrangements to allow them to have three hours per day off duty, in addition to one day and night off per month. It is satisfactory to note that very many hospitals have recognised this fact, and that it is the practice to allow nurses at least two hours per diem off duty, in addition to meal times. I am of opinion that a fair day's work for a nurse is 10 hours, the working day to extend from 7 a.m. to 9 p.m. I should divide the day as follows:—

Breakfast	-	-	-	-	-	-	-	-	6.30 a.m.
On duty	-	-	-	-	-	-	-	-	7 to 11 a.m.
Lunch	-	-	-	-	-	-	-	-	11 to 11.30 a.m.
On duty	-	-	-	-	-	-	-	-	11.30 a.m. to 1 p.m.
Dinner	-	-	-	-	-	-	-	-	1 to 1.30 p.m.
On duty	-	-	-	-	-	-	-	-	1.30 to 3 p.m.
Off duty	-	-	-	-	-	-	-	-	3 to 5 p.m.
Tea	-	-	-	-	-	-	-	-	5 to 6 p.m.
On duty	-	-	-	-	-	-	-	-	6 to 9 p.m.

To enable this programme to be carried out, some of the nurses would, however, be on duty from 2 to 5 p.m., taking their time off duty from 6 to 8 p.m.

This gives a working day of 10 hours, and might be readily arranged in all hospitals where the honorary medical staff do not visit their patients in the afternoon. It is a time-table which might be adopted by nine-tenths of the hospitals throughout the country, and is already in force in several of them. It is sad to state that there are some homes and hospitals which work their nurses regularly for 14 hours, and it is to be hoped that the fuss before the Lords' Committee will cause all hospital authorities to inquire into the hours of the nurses in the institutions which they manage. Miss Stewart has already made it clear that in our oldest hospital, where the nurses appear to be on duty for more hours in each day than elsewhere, there are quiet times, as well there may be, for the nurses, and it must not be concluded that a nurse is always kept constantly on her feet and at work during the whole time she is in the wards. This may happen in a few hospitals, and in busy times; but it is by no means the rule, or nurses would have to be made of something much more robust than flesh and blood.

One word as to the night nurses. It is the almost universal opinion of hospital matrons at the present day that night duty should be undertaken for a period of three months, and no longer, when day duty should be resumed. Thus, in some hospitals a probationer is put on night duty for three months, and then on day duty for a similar period in the same ward. She is then moved to another ward, where she serves three months on night duty, and three months on day duty as before.

HOURS OF RELAXATION.

I have already stated that every nurse should be allowed at least two hours per diem for relaxation, in addition to one day off duty per month. In addition to the two hours per diem, some hospitals, the London amongst others, have the excellent arrangement of giving the sisters power to grant a nurse four hours off duty once a week, as circumstances will permit :—the matron has the power to grant late passes to those who wish to go to a concert, or perhaps dine with friends. Every nurse should be allowed three weeks' holiday in the year, which should be taken in periods of not less than one week at a time. Sisters should have at least 31 days' leave, to be taken in the same way and under similar conditions.

The question arises, how can nurses spend their leave, and what can they do with themselves in the heart of a great city? I find that they are, not unnaturally, so tired that most of them do not care to walk. The top of an omnibus or tramcar, and the deck of a steamboat, in fine weather, are therefore very favourite methods of taking the air. When a nurse has four hours, she likes to get away to the West-end to see the shops, the picture galleries, or to go to an afternoon concert or theatre. I am inclined to think, however, that much good might be done in an inexpensive way by many wealthy people if they were to give a thought to the busy and exacting life that nurses lead in our hospitals. In summer, at very little expense, one or more of the wealthy governors might arrange to give the nurses attached to the hospital they favour, an occasional picnic to Kew Gardens, to their own country seat, or to some other locality where fresh air and country scenes can be provided. Again, an occasional theatre does the nurse a great deal of good, and I think I may with confidence bring this fact to the notice of the managers. The managers of some of the principal theatres already send tickets to the matrons for the nurses from time to time. Many people have boxes at the Albert Hall, at Drury Lane, and elsewhere, which they cannot always occupy, and which might be filled by hospital nurses and sisters, if the owners would send their pass in turn to the matrons of the various hospitals. It has been suggested that ladies and gentlemen might send their carriages to the hospital by arrangement with the matron, and so give nurses an airing. Some few kind souls have already adopted this course, and continue to keep it up with commendable regularity. It is an idea, however, which does not seem to have grown in favour, partly, I believe, because nurses are independent enough to desire to spend their hours of recreation in their own way. Many a nurse would like to go for a drive by herself, or with a friend, who would not care to go if she had three other nurses with her. After all, this is a matter of detail, which a little tact could set right.

In 1884 I took great pains to ascertain whether the establishment of a Holiday House or Home of Rest for Nurses in some salubrious locality would be a step in the right direction. I sent a letter to every matron in the country, and in the result the opinion generally held was that of Mrs. Bedford Fenwick (*née* Manson), who wrote to the effect that "A Holiday House would be useful, but as a retreat for hospital nurses it would have great drawbacks. What is required is a permanent home for nurses incapacitated by old age or sickness."

The truth is, that when a nurse goes for a holiday it is essential for her health that she should escape from what is vulgarly known as "the shop." She does not want to meet other nurses in some central home, where the talk will be eternally about hospitals and cases, and all sorts of details of the daily life and work she leads in the hospital. She wants rest, she wants change of scene, of ideas, of companions, and of surroundings. Without these her holiday is relatively unsuccessful, and her health is not re-established to anything like the extent it would have been had she avoided institution life, and gone elsewhere. For these reasons, I believe that the scheme propounded by Miss Philippa K. Hicks, of the Great Ormond Street Hospital for Children, which has proved such a great success, is one worthy of the generous support and cordial approval of all who are interested in nurses. Experience shows that when sadly needing a few weeks' rest and holiday, many nurses have neither friends nor relations whom they can visit, hence Miss Hicks started the idea of getting ladies in the country to invite one or more nurses during the year to stay in their families. By this means a more complete time of rest, relaxation, and change is obtained than by a far longer stay in some institution.

The plan has been tried for some years, and has proved so great a boon to the nurses in many of our large City hospitals, that the time has arrived when an endeavour should be made to secure its extension by getting more ladies to offer a fortnight's change to those who need it. The ladies who have so far co-operated, state that in large houses such an addition to the household makes no difference, whilst others, who have but small means and large hearts, full of charity and love towards those whose lives are devoted to the sick and suffering, maintain that the admission of the nurse into their household for a short time is no inconvenience. Miss Hicks is a practical woman, who carefully arranges the details and sends her nurses to houses where the circumstances of hostess and guest will best assimilate. The scheme deserves the utmost measure of support and sympathy, because it enables nurses to get quite away from the sad routine of sick nursing into fresh scenes and new surroundings, which is the most invigorating stimulant to renewed energy for work.

Of course, Miss Hicks has only been able to undertake to provide for a limited number of nurses. I see no reason, however, why the honorary secretaries of the Hospitals Association should not set to work, and, by a little self-denial, collect particulars, both of the nurses who desire a change, and of those who are prepared to receive nurses when on their holiday. In this way every nurse who desires rest and change might ultimately be accommodated, to the mutual satisfaction of all concerned.

Reverting

Reverting for a moment to the general question, I may state that I have recently been visiting some of the large provincial hospitals, and have been struck with the cheerfulness with which everybody fulfils their duties, and have been forced to the conclusion, that after all there are few places in the world where the earnest life-work of a devoted man or woman can be more happily or usefully performed than within the walls of one of our hospitals. Here a useful and busy life can be spent under the most pleasant auspices, as every worker has the right to feel if they do their best, that the daily round is, in their case, not only hopeful to others, but entirely satisfactory to themselves.

GENERAL SUMMARY.

I will now summarise the opinions of the ladies who have charge of the principal hospitals in this country.

It is considered that the remedy for long hours will be found in the proper arrangement of the work of the nursing staff. It is generally held that for each set of wards containing 30 beds there should be provided at least—

- One sister ;
- One staff nurse, in her second year of training ; and
- Three probationers.

In a few of the large clinical hospitals in London an effective remedy for long hours would be to arrange for the visiting physicians and surgeons to pay their visits in the morning. This practice generally prevails outside London, and it is also met with in some of the special hospitals in London. I am afraid, however, that the difficulties in the way of its general adoption are considerable. Further, where each nurse is allowed, exclusive of meal-times, two hours off duty per day and one day and night per month, a remedy for long hours has been effectively applied.

It is generally allowed that 10 hours on duty in the wards is not too long a time, and that to reduce the hours below this point would have very serious disadvantages, and not be calculated to promote the best interests of either the nurses, the patients, or the hospitals. After all, it is essential to good nursing that each sister and the charge-nurse should take a personal interest in her cases, and to secure this they must have practical charge of them from first to last, for which purpose it is necessary that they should be on duty for at least 10 hours in each day.

On the question of food, where there is a nursing institution attached to the hospital and a nurses' home, it seems desirable that there should be a separate kitchen and *cuisine* for the nurses. Although a printed diet table, setting forth the meals to be provided for the nurses each day for the period of a month, has advantages, it is generally held that as much variety as possible should be aimed at, the better plan is to keep a record of the meals supplied each day, without having a fixed diet table.

The best arrangement of meals of night nurses appears to be : Breakfast from 8 to 8.30 p.m. ; two meals during the night, and dinner on coming off duty at 9 to 9.30 a.m. In some hospitals the night nurses have milk, or some light refreshment, before going to bed. The meals during the night are served in the ward kitchens ; breakfast and dinner being served in the nurses' dining hall.

Although some matrons hold that it is better for a nurse to be permanently engaged on night duty, the general opinion seems to be that it is best for the health of the nurses and for the efficiency of the nursing that they should alternate day and night duty, changing over every three months.

Finally, there seems to be a general consensus of opinion that the matron should either preside during the nurses' dinner hour, or that she should, at any rate, frequently inspect the meals served in the nurses' dining hall.

APPENDIX Q.

PAPER handed in by Mr. *T. D. Mann*, 22 June 1891.

METROPOLITAN ASYLUMS BOARD.—FEVER AND SMALLPOX HOSPITALS.

STATEMENT of the Amount expended on Capital Account in erecting and fitting up the
Fever and Smallpox Hospitals.

<i>Fever Hospitals</i> —(six in number):	£.
Cost of Land - - - - -	92,512
Cost of erecting Buildings, Engineering Works, Fixtures and Fittings, } Furniture and Bedding, Professional, and all Charges - - - }	447,745
	£. 540,257
